| 1  | JBNET-2391  | Is this something we really want to add to the CSP or simply add to existing functionality within Issue-Tracker?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBNET-2391">https://issues.jboss.org/browse/JBNET-2391</a> |
| 2  | JBNET-2376  | mike, Got a couple of questions from reading the "Expected tasks". Please read inline: > - create script to set all groups to default "false" preference Should it be setting "Force private comments when escalated form another group" to "true"? > - create script to set desired JBoss and MetaMatrix groups to "true" preference Should it be setting "Force private comments when escalated form another group" to "false"? Lisa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBNET-2376">https://issues.jboss.org/browse/JBNET-2376</a> |
| 3  | JBNET-2375  | Mike, Who in IT/HC I can work with? Thanks, Lisa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBNET-2375">https://issues.jboss.org/browse/JBNET-2375</a> |
| 4  | JBNET-2372  | Frank, attached, portal_part1.csv are tables (with columns shown) not used/referenced by I-T. Could you please go through them and see if any of the columns are deprecated? Can the deprecated columns be dropped for this iteration? Thanks, Lisa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBNET-2372">https://issues.jboss.org/browse/JBNET-2372</a> |
| 5  | JBNET-2372  | Frank, One more favor from you please. Can you review the attached, portal_part2.ods file and see if the csp-team references any of the columns that are colored in Red? The colored columns are no longer used by I-T any more. Hopefully dropping them off the schema won't break CSP... thanks, Lisa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBNET-2372">https://issues.jboss.org/browse/JBNET-2372</a> |
| 6  | JBNET-2292  | The translation fix of the login.html/logout.html, could please do a replacement: s/Please complete a // and this will be the fix. IWO, only the "Please complete a " words are unnecessary. Please note there is a space after "a". Both the pages seems to be non-static page because I can see sessionid are embedded in the pages and I guess we have a template but I'm not sure. Will upload the translated csp help page later.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBNET-2292">https://issues.jboss.org/browse/JBNET-2292</a> |
| 7  | JBNET-2273  | Jessica, is this a request for SEP or the CSP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBNET-2273">https://issues.jboss.org/browse/JBNET-2273</a> |
| 8  | JBNET-2240  | Is there another jira for the logic used to decide who receives each notification?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBNET-2240">https://issues.jboss.org/browse/JBNET-2240</a> |
| 9  | JBNET-2123  | Lisa, did you just complete the analysis or did we commit these changes at some point?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBNET-2123">https://issues.jboss.org/browse/JBNET-2123</a> |
| 10 | JBNET-2099  | Does you new table include the label you're using for the drop-down? i.e. "Customer Service Asia/Pacific" label <= "Customer Service APAC" product                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBNET-2099">https://issues.jboss.org/browse/JBNET-2099</a> |

| 15 | JBNET-1990  | The skus were added as part of the work for JBNET-1878. Should this issue remain open until the skus are added in prod?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBNET-1990">https://issues.jboss.org/browse/JBNET-1990</a> |
| 16 | JBNET-1945  | frank, is this one regarding aliases like matamatrix-support@redhat.com? I discovered a unforeseen bug with this one. If we are to use those aliases instead of tao@ for internal users, it breaks the email interface. email updates bounce if internal users try to update tickets that are opened by customers through those aliases... Things still work if internal users email tao@redhat.com Let me know where we are heading regarding this complication. Lisa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBNET-1945">https://issues.jboss.org/browse/JBNET-1945</a> |

| 22 | JBNET-1927  | What are you guys using as a driver for your load testing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/JBNET-1927">https://issues.iboss.org/browse/JBNET-1927</a> |
| 23 | JBNET-1916  | This issue has the same situation as JBNET-1915. The label on the list view table is generated within three steps. 1. From \$_REQUEST variable. If you altered the view only for this session, the changes will not be stored in database. 2. From database. If you altered the view for not only this session, the changes will be stored in database. The list view on Groups page works this way. 3. From hard codes. If there is no label information available from \$_REQUEST and database, it will read from the hard codes. The list views on My Opened, My Assigned, My Subscribed and My Recent pages are using this way. For the third step, I can change it without problem. For the second step, it is not easy to update all the data in database. But it can be easily changed on list view page by replace the string when it needs to be displayed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/JBNET-1916">https://issues.iboss.org/browse/JBNET-1916</a> |

| 25 | JBNET-1915  | (from Marvin via email) Hi, Mike: I investigated this issue and JBNET-1916 thoroughly. I found that the label on the list view table is generated within three steps. 1. From \$_REQUEST variable. If you altered the view only for this session, the changes will not be stored in database. 2. From database. If you altered the view for not only this session, the changes will be stored in database. The list view on Groups page works this way. 3. From hard codes. If there is no label information available from \$_REQUEST and database, it will read from the hard codes. The list views on My Opened, My Assigned, My Subscribed and My Recent pages are using this way. For the third step, I can change it without problem. For the second step, it is not easy to update all the data in database. But it can be easily changed on list view page by replace the string when it needs to be displayed. Marvin                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBNET-1915">https://issues.jboss.org/browse/JBNET-1915</a> |
| 26 | JBNET-1896  | Don't we already do this? Or is this for Issue-Tracker?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBNET-1896">https://issues.jboss.org/browse/JBNET-1896</a> |
| 27 | JBNET-1815  | set up group accounts (all noted on the Intranet URL below) where we encourage RH employees to set up their access to our systems and products we offer. This ensures only current employees have access to the free subscriptions (admins deactivate users when they leave the company), and allows us to enter 10 or 20 orders total to give RH employees free subscriptions as opposed to potentially thousands a year. The sku noted below is set up to open up access to all Red Hat/JBoss/RHX products available, and is currently updated by Matt Webbink when new products are set up. Anyone who has asked for an Employee login on one of the RH Employee accounts noted on the Intranet page below will have access to these (all Red Hat) products after they are set up by the admin on the account. I'll leave it up to you guys to decide what's best, but as a fair number of JBoss employees have logins in the Red Hat systems, we thought it might be best to send a note so we can spend less time migrating the free access for internal folks to ensure they are set up the right way in the Red Hat Systems. These users are unique in the respect they will not renew like a customer will, so their account issues won't likely "go away" at renewal time. It almost makes sense to just have these folks request access to the Red Hat accounts set up now rather than migrating. We have tried our best to match current employees to existing Red Hat Employee accounts (thanks Edith) as part of the migration but it is likely there will be others who need/want access, and we wanted to be sure there was a clear way how to do this. That being said, you are the engineer, so please do what will be easiest for your teams during the migration! Jessica and Edith are available anytime if you need additional assistance from Customer Service. Regards, Deborah :) Frank Merenda wrote: > Hi Deborah! Long time no hear! > > We do not recognize this SKU. I just searched email, and I don't see this SKU anywhere. Not an issue, see below. > > I sent Jessica a list of red hat and jboss employees on Friday who currently have access as customers, which she is updating for our data migration with the correct account numbers. I am "assuming" that these accounts will have the magical SKU enabled for it, and all our employees will have access via that mechanism, is that correct? > > Which products does this sky allow access to? Should I assume it's all products? > > Cris, I added this to Jira: http://jira.jboss.com/jira/browse/JBNET-1815 > > > -f- > > Deborah Curtis wrote: > > Hi Chris, Frank! > > > Jessica was kind enough to draft this email for us to notify former JBoss folks with access to the JBN that they will need to get access on an existing Red Hat Employee Subscription account to access JBoss subscriptions through the Red Hat CSP. Please make sure the CSP is accurately recognizing the Employee Subscription skus ( SYS/SVC 0395 Red Hat Employee Subscription), and assist us in getting this communication to the right folks so we can make sure access for JBoss products/support for anyone who needs it is in place before the migration go-live date. Thank you! > > > Regards, > > Deborah > > > > > > > Hello, > > > > You are receiving this email because you are listed as one of the active employees with current access to JBoss subscriptions on the CSP. The JBoss and Red Hat systems are merging to consolidate all accounts into one database. Beginning October 16th, you will be able to access JBoss employee subscriptions using your Red Hat website/RHN login_only, rather than your current login for https://network.jboss.com . If you wish to continue using your JBoss employee subscription, please verify that you have access to a Red Hat Employee Subscription, which will grant you access to JBoss products. Please check with your manager or visit the following link for more information on accessing employee subscriptions: > > > > > http://intranet.corp.redhat.com/ic/intranet/wiki.html?wikicat=Customer%20Service%3aEmployee%20Subscriptions&master=00138&toggle=00160 > > > > Please email global-customerservice@redhat.com , (INTERNAL ONLY alias), with any questions regarding this process. > > > > Have a great day, > > > > Jessica > > > > Customer Service > > > Red Hat, Inc. > > > -- Deborah Stumpf Curtis Manager, Customer Service Red Hat, Inc. 1801 Varsity Drive Raleigh, NC 27606 888-733-4281, Ext 44225 | <a href="https://issues.jboss.org/browse/JBNET-1815">https://issues.jboss.org/browse/JBNET-1815</a> |
| 28 | JBNET-1812  | ...this is 1812...did you mean JBNET-1813?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBNET-1812">https://issues.jboss.org/browse/JBNET-1812</a> |
| 29 | JBNET-1782  | Frank, Do we want to hand-fix those duplicates after they go alive in PROD? Or having the migration script check if an user email exists in portal or not before entering the insertion to the DB? Lisa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBNET-1782">https://issues.jboss.org/browse/JBNET-1782</a> |

| 34 | JBNET-1481  | <p>&lt;gdouglas@redhat.com&gt; Subject: Re: downtime announcement (was [Fwd: Re: ESP 1.3 Status Follow-up, 5/29]) I thought this was going on the login page itself, not on the landing page after login? more below, this all has changed this week because of our two releases, so please bear with me..... Mike Amburn wrote: &gt; Can one of you provide me the data points: &gt; &gt; - what exactly is happening? (i.e. going down, going slow, etc) for 1.3: - Nothing. no users yet. Deploying new web app to production for Command Center users only, but none currently exist. We don't need any changes at this time. I am going to move the jira task to 1.3.1. sorry about this confusion. Gail, Marty needs to know that the front page of the site is final for 1.3. Again, sorry about this confusion. We will send him the 1.3.1 site for approval when it is completed. for 1.3.1: - JBoss users will experience the whole new portal, from the old one of SF to the new one. Support will be down for all *legacy jboss* users for most of the day that saturday when we deploy. network.jboss.com will redirect to our new URLs. &gt; - when is it happening? 1.3: June 9th, all day. no current users. nothing needs to change 1.3.1: TBD. depends on data migration issues. &gt; - when will everything return to normal? as soon as the site comes back up that day. Probably 5 hours for data migration for 1.3.1. &gt; - what other information do you want to communicate? The changes will be two fold: - Command Center users ---- will not notice anything except the outage for the 1.3.1 deployment. -JBoss Users (1.3.1 release - not 1.3) --- will be coming to the new site for the first time. They will see all the new changes for the first time. We should put up a blurb about the new stuff, I listed some of it in the jira task. Sorry about the confusion between these releases... -f- &gt; &gt; &gt; On May 30, 2007, at 5:55 PM, Frank Merenda wrote: &gt; &gt; &gt; &gt; Gail Douglas wrote: &gt;&gt;&gt; Mike, &gt;&gt;&gt; I would like for you to read the email string below... it has info &gt;&gt;&gt; for you in two areas: &gt;&gt;&gt; 1) final feedback on UI text changes, and after that change is &gt;&gt;&gt; made we'll have the GSS approval John Arnzen was waiting on &gt;&gt;&gt; 2) if you already have that nifty text that will appear upon &gt;&gt;&gt; logging into CSP, and you can share that with Marty to get his &gt;&gt;&gt; approval, then we can put that issue to rest as well. If you don't &gt;&gt;&gt; have the text yet, we'll have to take another approach to getting you &gt;&gt;&gt; and Marty in sync. And if you don't have that proposed text yet, let &gt;&gt;&gt; me know and I can get people together to decide quickly. &gt;&gt; &gt; Mike doesn't have this yet. He's getting knowledge transfer from John &gt;&gt; today in ATL. &gt;&gt; &gt; Mike, can you throw together some new text for the login page. You &gt;&gt; don't have to worry about i18n for this new text for the 1.3 release. &gt;&gt; I have put this in jira for you, &gt;&gt; http://jira.jboss.com/jira/browse/JBNET-1481. &gt;&gt;&gt; We could get Marty to do this, but it would take a while, so we would &gt;&gt; prefer if you can whip it up. Thanks! &gt;&gt;&gt; &gt;&gt;&gt; Please let me know your thoughts on these. If you want to chat, I &gt;&gt;&gt; should be in the office and on IM pretty early tomorrow. &gt;&gt;&gt; Thanks! &gt;&gt;&gt; Gail &gt;&gt;&gt; -----</p> <p>Original Message ----- &gt;&gt;&gt; Subject: Re: ESP 1.3 Status Follow-up, 5/29 &gt;&gt;&gt; Date: Wed, 30 May 2007 14:31:28 -0400 &gt;&gt;&gt; From: Martin C. Messer &lt;marty@redhat.com&gt; &gt;&gt;&gt; Organization: Red Hat, Inc. &gt;&gt;&gt; To: gdouglas@redhat.com &gt;&gt;&gt; CC: Frank Merenda &lt;fmerenda@redhat.com&gt;, Iain Gray &gt;&gt;&gt; &lt;igray@redhat.com&gt;, Lee Mewshaw &lt;mewshaw@redhat.com&gt; &gt;&gt;&gt; References: &lt;465C521A.5040201@redhat.com&gt; &gt;&gt;&gt; &lt;465DBB35.70408@redhat.com&gt; &lt;465DC02A.3020101@redhat.com&gt; &gt;&gt;&gt; Gail Douglas wrote: &gt;&gt;&gt;&gt; Hi Marty, &gt;&gt;&gt;&gt; Thanks so much for your quick response to my email below. Just &gt;&gt;&gt;&gt; wanted to &gt;&gt;&gt;&gt; get your feedback on a couple of items... &gt;&gt;&gt;&gt; &gt;&gt;&gt;&gt; For the externally affected users during the outage...because CSP, &gt;&gt;&gt;&gt; Issue &gt;&gt;&gt;&gt; Tracker, their shared db, and Gatekeeper will be down during the &gt;&gt;&gt;&gt; outage, &gt;&gt;&gt;&gt; I assumed we should send external notification of the outage to CSP &gt;&gt;&gt;&gt; and &gt;&gt;&gt;&gt; Issue Tracker users. Also, we will be pushing all of the bug fixes in &gt;&gt;&gt;&gt; Issue Tracker on the 9th, so users may notice a change as a result of &gt;&gt;&gt;&gt; those. I am looking for a list of external users that we can send only &gt;&gt;&gt;&gt; outage notification to...we are looking into creating a short blurb &gt;&gt;&gt;&gt; after CSP login that will notify users that the software has been &gt;&gt;&gt;&gt; updated,</p> | <a href="https://issues.jboss.org/browse/JBNET-1481">https://issues.jboss.org/browse/JBNET-1481</a> |
| 35 | JBNET-1390  | Ahmad, Need some details for this task please: regarding browse the FTP dir part, which FTP service are we talking about here? Lisa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBNET-1390">https://issues.jboss.org/browse/JBNET-1390</a> |
| 36 | JBNET-1207  | Use this to show how many are RH logins vs how many all unique logins query above Red Hat user count select count(distinct(log_user)) FROM group_users,logs where log_time BETWEEN extract('epoch' FROM '2007-02-07'::date) AND extract('epoch' FROM '2007-02-14'::date) AND log_type='logins' AND group_users.userid=logs.log_user AND group_users.gid = 72;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBNET-1207">https://issues.jboss.org/browse/JBNET-1207</a> |
| 37 | JBNET-1198  | I'm not sure I understand the problem. If I'm logged in as mamburn and create an issue, then I should show as the owner of the ticket. How can you not know the owner?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBNET-1198">https://issues.jboss.org/browse/JBNET-1198</a> |
| 38 | JBNET-1198  | Mike, If RH employee X opens an Issue for customer, then yes he is the owner of the ticket. But, if X then needs something from the customer, this will have to be done by person Y from customer staff. So, if there was a customer owner field in addition to the existing RH owner field, then tech Y on the customer side could not hide behind his organisation and claim "oh, I did not know this was for me to do" (happens rather frequently. That is why I made the request, I want to see clearly ownership on the customer side in addition to the ownership we see on the RH side. Does this make the request clearer?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBNET-1198">https://issues.jboss.org/browse/JBNET-1198</a> |
| 39 | JBNET-1198  | I still don't quite understand. Suppose Mike is a Red Hat employee and Joe is a customer from Company XYZ. Is Mike opening the issue for Joe in the Company XYZ Issue-Tracker group and not under Joe (so that the ticket has no direct customer attachment)? Is that the problem?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBNET-1198">https://issues.jboss.org/browse/JBNET-1198</a> |
| 40 | JBNET-954   | Is this ticket done? I thought these were created.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBNET-954">https://issues.jboss.org/browse/JBNET-954</a>   |
| 41 | JBNET-907   | Hua Li began testing using one of our stock users. Here is the feedback I've received thus far: There are some mistakes that I can't find file to modify. 1. the title of http://10.10.29.31:8080/jbosnetwork/restricted/main.html now the title of main.html is "JBoss?????????", should be modified to "JBoss????????". 2. the title of http://10.10.29.31:8080/jbosnetwork/help/zh/help-main.htm can't be correctly shown. Please check it. title of help-main.htm 3. please access http://10.10.29.31:8080/jbosnetwork/restricted/knowledgeHome.html I don't know what is "?????" ? what is "?????" ---- Addressing what I can for these now. Will work with Hua for items needing more translation and clarification.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBNET-907">https://issues.jboss.org/browse/JBNET-907</a>   |
| 42 | JBNET-891   | Notes on that meeting with Lisa: 1. (Lisa) Create event_types table with the following event types: 0 - Unknown 1 - State Change 2 - Comment 3 - Attachment 4 - Task (for recording time spent on a ticket) 5 - Notification 2. (Lisa) Create event_type field of type integer in the event table 3. (Ahmad) Update CSP schema and mappings 4. (Ahmad) Change all queries for CSP and GK 5. (Ahmad) Change case migration 6. (Lisa) Change IT to store events in correct types 7. (Lisa) Change Notifications to pull from events that are type 5 8. (Lisa) Change migration so that all events are type 5 9. (Lisa & Ahmad) Update dev and wendyc-t                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBNET-891">https://issues.jboss.org/browse/JBNET-891</a>   |
| 43 | JBNET-873   | Lamon, Can you add Active Entitlements to the IssueTracker Batch Process and start testing this? IM me for details. Ahmad                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBNET-873">https://issues.jboss.org/browse/JBNET-873</a>   |
| 44 | JBNET-831   | <llu> what's the possible values for 'Type'? <fmerenda> let me get them one sec <fmerenda> "Question", "Problem" and "Feature Request" <llu> Problem == bug? <fmerenda> could be a problem in - for example - their production environment, and they need help, may be that it is not a bug <fmerenda> one sec looking up details <fmerenda> llu, when we add cases we usually set to "Problem", unless it is dev assist, or question when they submit the case, then it's a "Question". <fmerenda> your UI just needs to be able to change the type <fmerenda> We only use it for information, not for queueing or anything like that                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBNET-831">https://issues.jboss.org/browse/JBNET-831</a>   |
| 45 | JBNET-830   | Question: How do we want to define and map the filter that will UNBIND all customer URLs when they are accessed? Do we care (i.e. something other than /files/customer/* )?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBNET-830">https://issues.jboss.org/browse/JBNET-830</a>   |

| #  | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | URL                                                                                                   |

| 46 | JBNET-755   | frank, what's the difference between software and products? what does repository do? The page for creating/editing products is avai. today in Issue Tracker production. Lisa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/JBNET-755">https://issues.iboss.org/browse/JBNET-755</a>     |
| 47 | JBNET-755   | Frank, how high priority is this task? Need it to be done before the integration? Lisa                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/JBNET-755">https://issues.iboss.org/browse/JBNET-755</a>     |
| 48 | JBNET-309   | Question on this: What is happening when you try to update/create an object? Not compatible? Is this a salesforce-connector issue or an actual Axis issue? Has anyone tried to work with the SForce API directly using Axis 1.3?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/JBNET-309">https://issues.iboss.org/browse/JBNET-309</a>     |
| 49 | ENTMQBR-667 | This is needed to get Artemis working with Fuse 7. Can you get it into one of the next AMQ patches?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/ENTMQBR-667">https://issues.iboss.org/browse/ENTMQBR-667</a> |
| 50 | ENTMQBR-644 | [~]bertram] thanks for the info, my bad that I considered SSLv2Hello to be SSLv2 use. I need to gain more knowledge of that. I'll have a closer look at your comments after the A-MQ 7.0 GA is out of the door. This was proposed to 7.0.1 and we are currently very busy now. Just one note right now: \\ when I run a client twice, ie: {code} # openssl s_client -connect \$(hostname):5671 -cert /opt/A-MQ-certificates/client_cert.pem -key /opt/A-MQ-certificates/client_private_key.pem -pass pass:changeit -tls1_2 # openssl s_client -connect \$(hostname):5671 -cert /opt/A-MQ-certificates/client_cert.pem -key /opt/A-MQ-certificates/client_private_key.pem -pass pass:changeit -tls1_2 {code} Broker log contains two INFO messages regarding disallowing SSLv2Hello: {code} 23:32:41,507 INFO [org.apache.activemq.artemis.core.server] AMQ221053: Disallowing use of vulnerable protocol 'SSLv2Hello' on acceptor 'netty-ssl-acceptor'. See http://www.oracle.com/technetwork/topics/security/poodlecve-2014-3566-2339408.html for more details. 23:32:44,517 INFO [org.apache.activemq.artemis.core.server] AMQ221053: Disallowing use of vulnerable protocol 'SSLv2Hello' on acceptor 'netty-ssl-acceptor'. See http://www.oracle.com/technetwork/topics/security/poodlecve-2014-3566-2339408.html for more details. {code} This seems to me in contrast with what you are saying (logging is done when the acceptor is started, not on every connection). Am I missing something? Thanks in advance for explanation. | <a href="https://issues.iboss.org/browse/ENTMQBR-644">https://issues.iboss.org/browse/ENTMQBR-644</a> |
| 51 | ENTMQBR-539 | I understand why you may want to configure a max size on a per destination basis, however there is currently no scenario where 1 queue paging will stop another. Queuees are never starved no matter what state paging is in across the broker. Could you provide more information?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/ENTMQBR-539">https://issues.iboss.org/browse/ENTMQBR-539</a> |
| 52 | ENTMQBR-526 | Hi Karl, What kind of clients are the user having in their test (OpenWire or others) and do you have a test case? Howard                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/ENTMQBR-526">https://issues.iboss.org/browse/ENTMQBR-526</a> |
| 53 | ENTMQBR-526 | Ah. I noticed the following in from the customer in the open ticket #01782533: We have clients both using JNDI: Sample property files content: java.naming.factory.initial=org.apache.activemq.artemis.jndi.ActiveMQInitialContextFactory connectionFactory.ConnectionFactory=(tcp://artemis-1.test.iggroup.local:61616,tcp://artemis-2.test.iggroup.local:61616,tcp://artemis-3.test.iggroup.local:61616,tcp://artemis-1.test.iggroup.local:61716,tcp://artemis-2.test.iggroup.local:61716,tcp://artemis-3.test.iggroup.local:61716)?clientId=1234 And code-ally String connectionUrl = "(tcp://artemis-1.test.iggroup.local:61616,tcp://artemis-2.test.iggroup.local:61616,tcp://artemis-3.test.iggroup.local:61616,tcp://artemis-1.test.iggroup.local:61716,tcp://artemis-2.test.iggroup.local:61716,tcp://artemis-3.test.iggroup.local:61716)"; URIFactory parser = new URIFactory(); ActiveMQJMSConnectionFactory cf = new ActiveMQJMSConnectionFactory(parser.expandURI(connectionUrl).toString());                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/ENTMQBR-526">https://issues.iboss.org/browse/ENTMQBR-526</a> |
| 54 | ENTMQBR-512 | If [~]joef551] will not manage to test this, will you manage this sprint [~]dlenoch]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/ENTMQBR-512">https://issues.iboss.org/browse/ENTMQBR-512</a> |
| 55 | ENTMQBR-496 | [~]opiske] what do you mean by purge?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/ENTMQBR-496">https://issues.iboss.org/browse/ENTMQBR-496</a> |
| 56 | ENTMQBR-496 | [~]opiske] what would you suggest?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/ENTMQBR-496">https://issues.iboss.org/browse/ENTMQBR-496</a> |
| 57 | ENTMQBR-486 | shouldnt we wait for a QPID-JMS JMS 2.0 to be released before we start raising Jiras?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/ENTMQBR-486">https://issues.iboss.org/browse/ENTMQBR-486</a> |
| 58 | ENTMQBR-486 | Bumping this one before PM call. Any idea what to do with this [~]ataylor]? Are we ok for not 100% support JMS 2.0? Release notes for Beta2?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/ENTMQBR-486">https://issues.iboss.org/browse/ENTMQBR-486</a> |

| #  | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | URL                                                                                                   |

| 59 | ENTMQBR-422 | <p>As a follow-up, I've updated the QE results parser to skip all the issues identified here and in the parent issue ENTMQBR-417. There are still few failing tests that were not investigated yet and thus _may_ indicate a real broker issue: {code} 1) test: N8activemq4test8openwire270OpenwireTempDestinationTestE::testPublishFailsForClosedConnection (F) line: 369 activemq/test/openwire/OpenwireTempDestinationTest.cpp expected exception not thrown - Should throw a InvalidDestinationException since temp destination should not exist anymore. - Expected: cms::InvalidDestinationException 2) test: N8activemq4test8openwire260OpenwireXATransactionsTestE::testXAResource_Exception1 (E) uncaught exception of type N3cms11XAExceptionE - 3) test: N8activemq4test8openwire260OpenwireXATransactionsTestE::testXAResource_Exception2 (E) uncaught exception of type N3cms11XAExceptionE - 4) test: N8activemq4test8openwire260OpenwireXATransactionsTestE::testXAResource_Exception3 (E) uncaught exception of type N3cms11XAExceptionE 5) test: N8activemq4test8openwire180OpenwireSimpleTestE::testWithZeroConsumerPrefetchAndZeroRedelivery (E) uncaught exception of type N8activemq10exceptions17ActiveMQExceptionE - AMQ119025: Cannot delete queue.jms.queue.testWithZeroConsumerPrefetchAndZeroRedelivery on binding.jms.queue.testWithZeroConsumerPrefetchAndZeroRedelivery - it has consumers = org.apache.activemq.artemis.core.postoffice.impl.LocalQueueBinding 6) test: N8activemq4test8openwire200OpenwireAdvisoryTestE::testConcurrentTempDestCreation (F) line: 177 activemq/test/openwire/OpenwireAdvisoryTest.cpp assertion failed - Expression: thread1.isNoErrors() {code} *^^ These are regression between ER2 and ER3 and still persists on ER12 (except testConcurrentTempDestCreation that is passing again on ER12)* {code} 7) test: N8activemq4test8openwire230OpenwireTransactionTestE::testSendSessionClose (E) uncaught exception of type N8activemq10exceptions17ActiveMQExceptionE - AMQ119017: Queue.jms.queue.testSendSessionClose does not exist {code} *^^ These are regression between ER4 and ER6 and still persists on ER12.* {code} 8) test: N8activemq4test8openwire180OpenwireSimpleTestE::testDestroyDestination (F) line: 306 activemq/test/openwire/OpenwireSimpleTest.cpp assertion failed - Expression: false - CAUGHT EXCEPTION {code} *^^ These are regression between ER7 and ER8 and still persists on ER12.* following test are failing occasionally: {code} 9) test: N8activemq4test8openwire240OpenwireQueueBrowserTestE::testReceiveBrowseReceive (F) line: 81 activemq/test/QueueBrowserTest.cpp assertion failed - Expression: enumeration-&gt;hasMoreMessages() - should have received the second message (OR sometimes: - should have received the third message) {code} Reproducibility ~25% {code} 10) test: N8activemq4test8openwire240OpenwireQueueBrowserTestE::testBrowseReceive (F) line: 137 activemq/test/QueueBrowserTest.cpp assertion failed - Expression: enumeration-&gt;hasMoreMessages() - should have received the first message {code} Reproducibility ~25% Also worth mentioning that following tests were fixed from ER2 (were failing on ER2 but are passing on ER12) * N8activemq4test8openwire180OpenwireSimpleTestE::testMultipleConnections * N8activemq4test8openwire180OpenwireSimpleTestE::testMultipleSessions * N8activemq4test8openwire180OpenwireSimpleTestE::testReceiveAlreadyInQueue * N8activemq4test8openwire270OpenwireTempDestinationTestE::testBasics [~ataylor] I expect that you want to treat these as separate issues? I'll create a separate Jira's for them on Monday if not requested otherwise. Thanks in advance for helping me sort the supported CMS tests out.</p> | <a href="https://issues.iboss.org/browse/ENTMQBR-422">https://issues.iboss.org/browse/ENTMQBR-422</a> |
| 60 | ENTMQBR-422 | Hi Petr, I followed the steps given by you but after I did 'make check', I couldn't find the executable activemq-test-integration. I do see a lot of object files generated though. What could be the reason for the missing executable? Thanks Howard                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/ENTMQBR-422">https://issues.iboss.org/browse/ENTMQBR-422</a> |
| 61 | ENTMQBR-418 | [~ataylor] Can you please add more documentation for user drop down box "in the top right hand corner" and items as "Connect, Console Logging, Core, Editor, Git, Jolokia, Plugins, Reset, Theme". Or only send me more information about this options.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/ENTMQBR-418">https://issues.iboss.org/browse/ENTMQBR-418</a> |
| 62 | ENTMQBR-418 | Some typos found: In the section *deploying the plugin* [standalone subsection] https://github.com/rh-messaging/artemis-hawtio/blob/master/docs/user-manual.md#standalone] ??To deploy standalone refer to the Hawtio documentation on installing plugins. for e?? - hanging leftover *"for e"* Adjacent section [Logging in to the Artemis console] https://github.com/rh-messaging/artemis-hawtio/blob/master/docs/user-manual.md#logging-in-to-the-artemis-console] ??If you have installed Hawtio standalone and want to connect to a remote broker you will need to connect to it by clicking on the connect tab and entering the Jolokia path?? - typo in *Jolokia* Subsection *##Sending a message to a Queue* ??Sometimes it is desirable to test an installation by sending a test message or to simply just send a message. To do this choose the Queue from the JMX tab that you want to send the message to and click on the send tab. Fill in the message content and any headers and click on the Send Message` button, like so:?? - lost styling at *Send Message*?`                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/ENTMQBR-418">https://issues.iboss.org/browse/ENTMQBR-418</a> |

| 64 | ENTMQBR-412 | Did we get any feedback on what the preferred directory is here. On Ubuntu based systems there's not always an /etc/sysconfig but I think on RHEL based systems the sysconfig tends to be preferred over /etc/default.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ENTMQBR-412">https://issues.jboss.org/browse/ENTMQBR-412</a> |
| 65 | ENTMQBR-411 | Seems like [~ataylor] moved this one from test to ready to release. Was that a missclick? If not, we could mark it with label "internal" or close it as a duplicate of ENTMQBR-523. What do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ENTMQBR-411">https://issues.jboss.org/browse/ENTMQBR-411</a> |
| 66 | ENTMQBR-379 | Thanks, Andy. Is the blue cylinder at the top a message store? Where does the aspect of persistence come into this scenario? The steps w/ descriptions of what's happening are good.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ENTMQBR-379">https://issues.jboss.org/browse/ENTMQBR-379</a> |
| 67 | ENTMQBR-379 | I agree - the audience will understand your visual. Maybe just a short sentence about the msg store? (I'm a pain, I know.) Do you want to share with Ted and Justin before modifying to reflect the logging with persistence using Topics scenario? Let me know if I can help.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ENTMQBR-379">https://issues.jboss.org/browse/ENTMQBR-379</a> |
| 68 | ENTMQBR-379 | [~sJayatredhat] the logging scenario will be a different document, I'll get to that soon. [~tedros] [~justi9] guys you can review what I've done if you like, also I'm not sure if we mean the same thing when we talk about the logging with persistence scenario, what were you thinking of?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ENTMQBR-379">https://issues.jboss.org/browse/ENTMQBR-379</a> |
| 69 | ENTMQBR-379 | [~rhn-support-pfestoso], I'm not certain if I've shared these mock-ups with Amanda yet? Can you please check what she returned for the Intro recently and share these with her if they're not in that batch? Muchos gracias.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/ENTMQBR-379">https://issues.jboss.org/browse/ENTMQBR-379</a> |
| 70 | ENTMQBR-378 | - If user try extending the "org.apache.activemq.pool.PooledConnectionFactory" as attached and then they with the help of following spring configuration it can be achieved. {code} <!-- The ActiveMQ JMS connection pool The actual pool implementation is 'org.apache.activemq.pool.PooledConnectionFactory', but this doesn't expose any details at runtime, so we use a subclass to provide some information. --> <bean id="activemq-jms-cf-tx" class="custom.activemq.pool.MonitorablePooledConnectionFactory" init-method="start" destroy-method="stop"> <property name="maxConnections" value="\${amq.pool.size}"/> <property name="connectionFactory" ref="activemq-jms-connection-factory"/> </bean> <!-- Expose ActiveMQ JMS connection pool statistics via JMS --> <bean id="activemq-pool-monitor" factory-bean="activemq-jms-cf-tx" factory-method="createPoolMonitor"/> <bean id="exporter" class="org.springframework.jmx.export.MBeanExporter" lazy-init="false"> <property name="beans"> <map> <entry key="custom.activemq:name=activemq-jms-pool" value-ref="activemq-pool-monitor"/> </map> </property> </bean> {code} - Can the similar functionality be implemented so that customers need not to write custom code.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ENTMQBR-378">https://issues.jboss.org/browse/ENTMQBR-378</a> |
| 71 | ENTMQBR-376 | [~ataylor] [~ganandan-Redhat] I have stumble across this issue. Is it still valid? If so, for what version do we target? etc... Thank you                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ENTMQBR-376">https://issues.jboss.org/browse/ENTMQBR-376</a> |
| 72 | ENTMQBR-376 | The following is taken from the SFDC case (comment #12): {quote} Created By: Jason Meyer (2/26/2015 10:30 AM) Akhmad, Good morning! This enhancement has been approved and is targeted for the next major release, which is A-MQ 7.0. Schedule-wise it is too soon to tell. We can probably expect A-MQ 7.0 to be released around a year after 6.2. Since this has now been approved we can track it via the enhancement request. Do you have any issues with me closing this out now? We will still be tracking the progress through the enhancement request. Let me know if you have any questions! Thanks. -Jason- {quote} Akhmad is no longer with Nielsen - he's moved on to Raymond James Financial - so I really don't know where this stands wrt the customer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ENTMQBR-376">https://issues.jboss.org/browse/ENTMQBR-376</a> |
| 73 | ENTMQBR-366 | QE currently do not have any knowledge of the scheduler, could you possibly point us to a documentation for scheduling messages? Thanks in advance. [~ataylor]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ENTMQBR-366">https://issues.jboss.org/browse/ENTMQBR-366</a> |

| 74 | ENTMQBR-362 | QE is not sure how to verify this issue, could you possibly provide verification scenario? QE may do some performance testing, but this do not really verify the reuse of the context objects. [~dbosana]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ENTMQBR-362">https://issues.jboss.org/browse/ENTMQBR-362</a> |
| 75 | ENTMQBR-362 | [~ataylor], we don't currently re-use the context object for the LDAP connection. [~jcordes], have you run a particular benchmark to determine this is a performance bottleneck or is this simply based on a reading of the code?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ENTMQBR-362">https://issues.jboss.org/browse/ENTMQBR-362</a> |
| 76 | ENTMQBR-358 | Hello Justin, the configuration reloading is documented in [Apache ActiveMQ Artemis User Manual https://activemq.apache.org/artemis/docs/1.5.2/book.pdf] (page 99), right? Do we have another subscription of this feature, please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ENTMQBR-358">https://issues.jboss.org/browse/ENTMQBR-358</a> |
| 77 | ENTMQBR-358 | According to [Apache ActiveMQ Artemis User Manual http://activemq.apache.org/artemis/docs/1.5.2/config-reload.html] automatic configuration reloading should work for these modules of "Broker.xml" configuration file: * Address Settings * Security Settings * JMS Queues * JMS Topics Configuration reloading works for "Address settings" and "Security Settings" modules, but the new addressing model do not have a separate JMS configuration and changes in "addresses" module are not reloaded. Is this an expected behavior, please? Note: I already created a Jira to update the Artemis User Manual: [Apache ActiveMQ Artemis User Manual http://activemq.apache.org/artemis/docs/1.5.2/].                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ENTMQBR-358">https://issues.jboss.org/browse/ENTMQBR-358</a> |
| 78 | ENTMQBR-355 | Wrt to the comment above, shouldn't this be really closed as a duplicate then? Otherwise it will still appear in 7.0.0 queries and will be synced to Polarion. [~ataylor]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ENTMQBR-355">https://issues.jboss.org/browse/ENTMQBR-355</a> |
| 79 | ENTMQBR-351 | [~grgrzybek] Can you comment on this? Is it one we can do for 6.2.1?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ENTMQBR-351">https://issues.jboss.org/browse/ENTMQBR-351</a> |
| 80 | ENTMQBR-351 | Are you saying that we already show this in Hawtio?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ENTMQBR-351">https://issues.jboss.org/browse/ENTMQBR-351</a> |
| 81 | ENTMQBR-351 | Is this issue for AMQ6 or AMQ7? According to "Target release" it is for AMQ7, but all the talk is about AMQ6 if I am correct. [~garytully] [~ataylor] could you please make it clear for us? if it is for AMQ6, could you please move this item to ENTMQ project, where it belongs? Thank you :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/ENTMQBR-351">https://issues.jboss.org/browse/ENTMQBR-351</a> |
| 82 | ENTMQBR-348 | Hello Justin, could you possibly add any description about this enhancement, how is it implemented or how to test it, please? Thank you in advance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ENTMQBR-348">https://issues.jboss.org/browse/ENTMQBR-348</a> |
| 83 | ENTMQBR-348 | Justin, thank you for your clarification of this enhancement. I already can understand how it should work (I hope ;)). I am very sorry, but I have other questions: 1. Is this enhancement specific for durable subscribers only or is it relevant also for non durable ones? 2.How shall I configure the security-setting in broker.xml file? Could you possibly add any example, please? 3. Where can I find any documentation of this enhancement (how it is implemented)?                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ENTMQBR-348">https://issues.jboss.org/browse/ENTMQBR-348</a> |
| 84 | ENTMQBR-341 | What should I pay attention to when testing it? What is the sign of self-discovery?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ENTMQBR-341">https://issues.jboss.org/browse/ENTMQBR-341</a> |
| 85 | ENTMQBR-331 | Approved - will try to schedule for future release                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ENTMQBR-331">https://issues.jboss.org/browse/ENTMQBR-331</a> |
| 86 | ENTMQBR-331 | Assessment effort started. There are pending questions: * Is certification for both GFS and GFS2 needed? * What platforms are we going to include in certification, all (RHEL5 i686/x86_64, RHEL6 i686/x86_64, RHEL7 x86_64)? * What is desired cluster configuration? (2/3/more nodes?) At the moment it is clear that effort will be manual and that's why those question matter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ENTMQBR-331">https://issues.jboss.org/browse/ENTMQBR-331</a> |
| 87 | ENTMQBR-325 | The issue retested with latest jboss-a-mq-6.2.0.redhat-114.zip with same results.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ENTMQBR-325">https://issues.jboss.org/browse/ENTMQBR-325</a> |
| 88 | ENTMQBR-325 | Additional details: When JBoss A-MQ finds there is a problem to bind to any of ports specified as transport connectors then waits until all ports are available. Once all ports are available to bind then JBoss A-MQ continue to load transport connectors. The issue is still there but probably lower severity, feel free to adjust. The key point of this defect is that no transport connector is loaded until *ALL* transport connector ports specified in broker configuration are ready to bind. Broker is not ready to operate. Possibly two ways to resolve this (sorted by QE preference): * incorporate changes that ALL transport connectors which can be loaded and bind to ports are loaded and can be used, the ones which cannot are waiting and finally failing to initiate after a timeout. This is making sure broker is functional even if one port cannot be bound. * document the current behavior | <a href="https://issues.jboss.org/browse/ENTMQBR-325">https://issues.jboss.org/browse/ENTMQBR-325</a> |
| 89 | ENTMQBR-314 | [~ataylor] We need more info/description. Do you think "Browse message" [https://github.com/rh-messaging/artemis-hawtio/blob/master/docs/user-manual.md#browsing-a-queue-for-messages] ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ENTMQBR-314">https://issues.jboss.org/browse/ENTMQBR-314</a> |
| 90 | ENTMQBR-309 | [~ataylor] Hawtio thing, you mean? Browser just renders what the console plugin and the console itself give it. If this won't be fixed downstream, should I report it to upstream hawtio, as Ernie suggested on the original DISPATCH-422?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ENTMQBR-309">https://issues.jboss.org/browse/ENTMQBR-309</a> |
| 91 | ENTMQBR-266 | QE assumes that this relates to Hawtio. We expect that Hawtio shall be extended with a browser for management messages. Is that correct? Could you possibly update the components accordingly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ENTMQBR-266">https://issues.jboss.org/browse/ENTMQBR-266</a> |
| 92 | ENTMQBR-262 | Could you please add more description? Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ENTMQBR-262">https://issues.jboss.org/browse/ENTMQBR-262</a> |

| #   | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | URL                                                                                                   |

| 93  | ENTMQBR-256 | <p>+jms-bridge.message-count=The number of messages successfully committed. +jms-bridge.aborted-message-count=The number of messages aborted/rollback. What I observed is that when a message fails to be committed, it gets counted both to messageCount and to abortedMessageCount. Going by the doc strings in that WildFly UI, I'd say it should be counted only to abortedMessageCount. Reproducer output: {noformat} getMessageCount: 0 getAbortedMessageCount: 0 10:43:12,574 WARN AMQ342009: JMS Bridge N/A failed to send + acknowledge batch, closing JMS objects javax.transaction.RollbackException at com.redhat.mqe.bridge.Main\$1\$1.commit(Main.java:114) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatchXA(JMSBridgeImpl.java:1382) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatch(JMSBridgeImpl.java:1285) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.access\$1700(JMSBridgeImpl.java:75) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl\$SourceReceiver.run(JMSBridgeImpl.java:1682) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1142) at java.util.concurrent.ThreadPoolExecutor\$Worker.run(ThreadPoolExecutor.java:617) at java.lang.Thread.run(Thread.java:745) getMessageCount: 1 getAbortedMessageCount: 1 10:43:14,545 WARN AMQ342009: JMS Bridge N/A failed to send + acknowledge batch, closing JMS objects javax.transaction.RollbackException at com.redhat.mqe.bridge.Main\$1\$1.commit(Main.java:114) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatchXA(JMSBridgeImpl.java:1382) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatch(JMSBridgeImpl.java:1285) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.access\$1700(JMSBridgeImpl.java:75) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl\$SourceReceiver.run(JMSBridgeImpl.java:1682) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1142) at java.util.concurrent.ThreadPoolExecutor\$Worker.run(ThreadPoolExecutor.java:617) at java.lang.Thread.run(Thread.java:745) 10:43:16,048 WARN AMQ342009: JMS Bridge N/A failed to send + acknowledge batch, closing JMS objects javax.transaction.RollbackException at com.redhat.mqe.bridge.Main\$1\$1.commit(Main.java:114) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatchXA(JMSBridgeImpl.java:1382) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatch(JMSBridgeImpl.java:1285) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.access\$1700(JMSBridgeImpl.java:75) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl\$SourceReceiver.run(JMSBridgeImpl.java:1682) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1142) at java.util.concurrent.ThreadPoolExecutor\$Worker.run(ThreadPoolExecutor.java:617) at java.lang.Thread.run(Thread.java:745) 10:43:16,551 WARN AMQ342009: JMS Bridge N/A failed to send + acknowledge batch, closing JMS objects javax.transaction.RollbackException at com.redhat.mqe.bridge.Main\$1\$1.commit(Main.java:114) at org.apache.activemq.artemis.jms.bridge.impl.JMSBridgeImpl.sendBatchXA(JMSBridgeImpl.java:1382) at</p> | <a href="https://issues.jboss.org/browse/ENTMQBR-256">https://issues.jboss.org/browse/ENTMQBR-256</a> |
| 94  | ENTMQBR-248 | Lami, would you be able to clarify the details here? Is this from Hawtio? There is a move operation exposed through MBean Operation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ENTMQBR-248">https://issues.jboss.org/browse/ENTMQBR-248</a> |
| 95  | ENTMQBR-244 | WE believe this should not be tested by us - QE. Could devs verify this? Adding "internal" label.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ENTMQBR-244">https://issues.jboss.org/browse/ENTMQBR-244</a> |

| 97  | AMQDOC-2425 | What should QE focus on this item? Is it relevant for QE? If not, please close this one.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AMQDOC-2425">https://issues.jboss.org/browse/AMQDOC-2425</a> |
| 98  | AMQDOC-2408 | Hello Susan, could you possibly send me a link to the document, please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AMQDOC-2408">https://issues.jboss.org/browse/AMQDOC-2408</a> |
| 99  | AMQDOC-2408 | Hi [~psvobodo], Most certainly. :) Because the Portal tools/style sheet specifies all caps for headings in HTML and PDF, it's hard to find "where" one can verify that the capitalization is correct (other than looking at the source)! If you go here: <a href="https://access.redhat.com/documentation/en-us/red_hat_jboss_amq/7.0/html/using_amq_broker/">https://access.redhat.com/documentation/en-us/red_hat_jboss_amq/7.0/html/using_amq_broker/</a> You can browse all of the headings in the grey panel on the left. Thanks for checking it out! Susan                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AMQDOC-2408">https://issues.jboss.org/browse/AMQDOC-2408</a> |
| 100 | AMQDOC-2399 | Hello, Phil, could you possibly send me a link to the document, please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AMQDOC-2399">https://issues.jboss.org/browse/AMQDOC-2399</a> |
| 101 | AMQDOC-2398 | After looking through the content in chapters 8.1 and 8.2, this is a first draft of a 'toc' that may suit the new chapter. It seems pretty basic, but it maps to the content currently available when viewed through the lens of 'Users and Roles'. [~nicole.engard] WDYT? = Users and Roles == Overview == Guest Authentication == 'login.conf' == User Authentication == 'users.properties' == Roles == 'roles.properties'                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AMQDOC-2398">https://issues.jboss.org/browse/AMQDOC-2398</a> |
| 102 | AMQDOC-2398 | A few comments: - "Preamble" should not have its own section heading - <a href="http://file.rdu.redhat.com/~jross/amq7-documentation-contrib/internal-resources/information-architecture.html#general_guidelines">http://file.rdu.redhat.com/~jross/amq7-documentation-contrib/internal-resources/information-architecture.html#general_guidelines</a> - last bullet - Users wouldn't say "adding a guest" because it's really for a class of users - I recommend "Enabling Guest Access" or "Adding a Guest Account" - The section on configuring the roles property file location - is that necessary? If there is a default, users should stick to that in general. Even if we do retain that part, I don't think it should be primary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AMQDOC-2398">https://issues.jboss.org/browse/AMQDOC-2398</a> |
| 103 | AMQDOC-2398 | Thanks for the feedback [~justi9] I've actioned your first two points, but I'm a little unsure about the last one re; the roles.properties file location? While I mention that the 'roles.properties' does not necessarily have to be called that (which I confirmed with an SME at the time of writing the original security content), I don't think that I imply users should do this. On the contrary, a comment left on my initial push of this content called negative attention to how subtly I'd mentioned the option to use a custom filename. Can you elaborate on your take on this? You feel we shouldn't mention this option?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AMQDOC-2398">https://issues.jboss.org/browse/AMQDOC-2398</a> |
| 104 | AMQDOC-2384 | [~jdanek] can this tool be used with A-MQ 6? Or is it just something for our 7.0 beta and alpha users?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AMQDOC-2384">https://issues.jboss.org/browse/AMQDOC-2384</a> |
| 105 | AMQDOC-2224 | Where can I check/verify added documentation for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AMQDOC-2224">https://issues.jboss.org/browse/AMQDOC-2224</a> |
| 106 | AMQDOC-2224 | I don't think there is a relevant equivalent part as in EAP doc. In EAP doc, there is expiring of messages from client POV. In broker guide I have found only expiring messages from broker POV in {{16.2.3. Core Queue Management}} Should I consider it as relevant and what this feature jira added?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AMQDOC-2224">https://issues.jboss.org/browse/AMQDOC-2224</a> |
| 107 | AMQDOC-2171 | [~jdanek], Do you feel that we've worked through the dependencies to ensure that we're tending to ENTESB issues efficiently + reliably? Please mark this Closed or Reopen with other suggestions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AMQDOC-2171">https://issues.jboss.org/browse/AMQDOC-2171</a> |
| 108 | AMQDOC-2171 | [~esammons], what do you think? I know that Petr talked to you about whether we are supposed to do QE verification on the ENTESB Jiras on Monday, this is related. It seems to me that the label=artemis may be enough to mark the Jiras for QE purposes as well. The router is using hawtio too, so we should maybe add the {{dispatch}} label to the filter. We would have to add this to filter so that we don't miss them. Or is it that all issues in Hawtio framework itself get verified by the Fuse QE, so we don't care? I'd like that ;)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AMQDOC-2171">https://issues.jboss.org/browse/AMQDOC-2171</a> |

| #   | Requirement   | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | URL                                                                                                       |

| 109 | AMQDOC-2155   | The sudo note should now be included in every A-MQ 7 doc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AMQDOC-2155">https://issues.jboss.org/browse/AMQDOC-2155</a>     |
| 110 | AMQDOC-2118   | Hi - Just curious....who is the customer for this JIRA?. *Dean Richardson* Middleware Account Executive, Strategic Accounts drichardson@redhat.com (513) 382-9606 (mobile) (513) 231-3530 (office) --                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AMQDOC-2118">https://issues.jboss.org/browse/AMQDOC-2118</a>     |
| 111 | AMQDOC-2118   | I'm getting this too and don't know why. Might be that Jira is spamming everyone.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AMQDOC-2118">https://issues.jboss.org/browse/AMQDOC-2118</a>     |
| 112 | AMQDOC-2118   | So this is a different version of SPAM. Should we open a JIRA ticket for that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AMQDOC-2118">https://issues.jboss.org/browse/AMQDOC-2118</a>     |
| 113 | AMQDOC-2118   | The second page of the PDF is empty, and the third just repeats info on the first/front page, perhaps they can be removed? GW: It is automatically rendered by our publishing software. I think these pages are left blank intentionally. In the TOC, Chapter 1 is listed as being about 'installing', which 1.1 and 1.2 then indeed are, but 1.3 is really for configuration. Perhaps it could be split out as a '2' rather than 1.3? GW: The ZIP package cannot work without subsequent configuration. But you comment do make sense. The Zip installation is likely the more universally applicable, maybe those instructions should be first ahead of the RPM ones? GW; I agree. The RPM instructions in "1.1.3. Installing JMS Client" say to install the C++ client. There is a note below it about the instructions being for Alpha, but that still seems off? GW: Yes. These instructions will be removed after Alpha release. In "1.1.7. AMQP JMS A-MQ 1.0 Java Client" it says "Qpid JMS is a complete AMQP JMS 1.0 and JMS 1.1 client". Should be "AMQP 1.0 and JMS 1.1 client"? The Note below this section seems like it needs updated, it describes it as if there are two separate clients 'both' requiring Java 1.7+, but its just a single client. This section seems like it should perhaps be nearer at the start of the doc rather than mid-installation. GW: Yes. This is confusing. I will figure out better ways to make it more clear. The "1.1.8. AMQP C++ Client" and "1.1.9. Python Language Bindings for AMQP API" sections seem like they should be removed from the document given its JMS focus. GW: I think so. In "1.2. INSTALLING JMS CLIENT (ZIP INSTALLATION)" the initial instructions indicate to download the RPM and extract things from it. I presume the note about alpha means that should be removed from the final, given the instructions in "1.2.1. Downloading the A-MQ Broker ZIP File From the Red Hat Customer Portal" then go on to describe getting the actual zip from the website. The main thing here though was that the title in 1.2.1 should say Client rather than Broker. GW: Yes. Instructions for Alpha release will be removed after the release Downloading packages from Red Hat Customer Portal is not possible and actually irrelevant for the Alpha release. I keep it there as a place holder for future release. | <a href="https://issues.jboss.org/browse/AMQDOC-2118">https://issues.jboss.org/browse/AMQDOC-2118</a>     |
| 114 | AMQDOC-2117   | Hi George, I see that you updated the Status of a handful of doc review sub-task JIRAs to Coding in Progress. I'm not certain if this status is reflective of the activity that's happening in real life. Does it denote you are incorporating SME feedback? Or are you requesting a review to confirm updates you've made? Let's discuss and clarify. I'm sure that our JIRA workflow could use some work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AMQDOC-2117">https://issues.jboss.org/browse/AMQDOC-2117</a>     |
| 115 | AMQDOC-53     | [~tabish121], I get why we have to add this information, but I can't find any mention of the KahaDB Store version setting. I've been looking in the Configuring Broker Persistence doco [1], but there's no mention. I've also been searching the Apache doco but it doesn't seem to be much different. Can you give me a clue as to where this setting might live? Cheers, Nichola [1] <a href="https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_A-MQ/6.2/html-single/Configuring_Broker_Persistence/index.html#FuseMBKahaDB">https://access.redhat.com/documentation/en-US/Red_Hat_JBoss_A-MQ/6.2/html-single/Configuring_Broker_Persistence/index.html#FuseMBKahaDB</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AMQDOC-53">https://issues.jboss.org/browse/AMQDOC-53</a>         |
| 116 | AMQDOC-53     | [~tabish121], I've added the setting to the table. Have a look at [1]. I basically used your description because I couldn't explain it any better myself! Can you let me know if it looks OK? Cheers, Nichola [1] <a href="http://jenkinsat.gsslab.pnq.redhat.com:8080/job/doc-AMQ-6-2-1/lastStableBuild/artifact/publican/Configuring_Broker_Persistence/tmp/en-US/html-single/index.html#KahaDBConfiguration">http://jenkinsat.gsslab.pnq.redhat.com:8080/job/doc-AMQ-6-2-1/lastStableBuild/artifact/publican/Configuring_Broker_Persistence/tmp/en-US/html-single/index.html#KahaDBConfiguration</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AMQDOC-53">https://issues.jboss.org/browse/AMQDOC-53</a>         |
| 117 | ENTMQIC-1925  | [~tedross] - Please review and update the issue. Should this be a bug instead of enhancement?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ENTMQIC-1925">https://issues.jboss.org/browse/ENTMQIC-1925</a>   |
| 118 | ENTMQIC-74    | Thank you for mentioning {{qdmmanage}}, I might've forget that it has this functionality too. I noticed that the upstream project has a management web console. Is the console part of Interconnect as well?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ENTMQIC-74">https://issues.jboss.org/browse/ENTMQIC-74</a>       |
| 119 | ENTMQIC-69    | Hi Ted, could you possibly add a description of this issue? Thank you in advance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ENTMQIC-69">https://issues.jboss.org/browse/ENTMQIC-69</a>       |
| 120 | ENTMQIC-69    | Is this issue in a valid state?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ENTMQIC-69">https://issues.jboss.org/browse/ENTMQIC-69</a>       |
| 121 | ENTMQIC-69    | Is there a problem that Engineering needs to look at?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ENTMQIC-69">https://issues.jboss.org/browse/ENTMQIC-69</a>       |
| 122 | ENTMQIC-58    | Matej, What does "Interior" mode mean? (As opposed to stand-alone mode) I could use a term that better describes this mode. This is in your Mojo doc in the Usage/Differences section.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ENTMQIC-58">https://issues.jboss.org/browse/ENTMQIC-58</a>       |
| 123 | AEROGear-1696 | where is the latest info provided ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AEROGear-1696">https://issues.jboss.org/browse/AEROGear-1696</a> |
| 124 | AEROGear-1665 | Why is that assigned to me? Should I update the plugin names in the XML file? Not sure I understand this ticket                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AEROGear-1665">https://issues.jboss.org/browse/AEROGear-1665</a> |
| 125 | AEROGear-1664 | [~lfryc] ALL platforms in one document ? or one per platform (the later I like)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AEROGear-1664">https://issues.jboss.org/browse/AEROGear-1664</a> |
| 126 | AEROGear-1633 | I believe it was partially resolved as part of other issue. Could you take a look and send a PR for few more changes that are required?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AEROGear-1633">https://issues.jboss.org/browse/AEROGear-1633</a> |
| 127 | AEROGear-1631 | [~mwessendorf] Andres refactored the page as I suggested into one long document with TOC: <a href="http://staging-aerogearsite.rhcloud.com/docs/unifiedpush/ups_userguide/index/">http://staging-aerogearsite.rhcloud.com/docs/unifiedpush/ups_userguide/index/</a> WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AEROGear-1631">https://issues.jboss.org/browse/AEROGear-1631</a> |
| 128 | AEROGear-1616 | Hey Andres, could you perhaps look at this as you work on footer changes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AEROGear-1616">https://issues.jboss.org/browse/AEROGear-1616</a> |
| 129 | AEROGear-1615 | What do you expect other then: "open Visual Studio and press build"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AEROGear-1615">https://issues.jboss.org/browse/AEROGear-1615</a> |
| 130 | AEROGear-1607 | Could you please do a design work and I will make it work javascript-wise?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AEROGear-1607">https://issues.jboss.org/browse/AEROGear-1607</a> |
| 131 | AEROGear-1607 | Here it is: <a href="https://github.com/andresgalante/aerogear.org/tree/new-design">https://github.com/andresgalante/aerogear.org/tree/new-design</a> We need to save vertical space on the sidebar. Can we use that awesome combo selection box?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AEROGear-1607">https://issues.jboss.org/browse/AEROGear-1607</a> |
| 132 | AEROGear-1580 | It would be interesting to have some styling ready for use in blogs: - icons (such as info, warning, danger), see <a href="http://arquillian.org/guides/">http://arquillian.org/guides/</a> - panels (used with icons: <a href="http://arquillian.org/guides/getting_started/">http://arquillian.org/guides/getting_started/</a> ) Another nice sample of panels with icons is on <a href="http://jekyllrb.com/docs/home/">http://jekyllrb.com/docs/home/</a> Wdyt [~agalante], could you prepare such styles? A complete list TBD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AEROGear-1580">https://issues.jboss.org/browse/AEROGear-1580</a> |
| 133 | AEROGear-1580 | [~lfryc] How about something like this: <a href="https://issues.jboss.org/browse/AEROGear-1551">https://issues.jboss.org/browse/AEROGear-1551</a> Jekyll samples are great, should I make something fancier?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AEROGear-1580">https://issues.jboss.org/browse/AEROGear-1580</a> |
| 134 | AEROGear-1557 | anymore info? Autoinstall what?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AEROGear-1557">https://issues.jboss.org/browse/AEROGear-1557</a> |
| 135 | AEROGear-1553 | Let's do the HTML validation once again later before going with Site 2.0 to production.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AEROGear-1553">https://issues.jboss.org/browse/AEROGear-1553</a> |
| 136 | AEROGear-1484 | I thought there already was a theme. Is this not what we see when we use the UPS Admin Console to update user information?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AEROGear-1484">https://issues.jboss.org/browse/AEROGear-1484</a> |
| 137 | AEROGear-1484 | Ah gotcha. Thanks Just curious, what is a mobile theme in regards to KC?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AEROGear-1484">https://issues.jboss.org/browse/AEROGear-1484</a> |
| 138 | AEROGear-1484 | Hey [~sebastienblanc], I believe it is sufficient for demoing at this point, we can expand later. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AEROGear-1484">https://issues.jboss.org/browse/AEROGear-1484</a> |

| 139 | AEROGear-1464 | I have created the project - <a href="https://issues.iboss.org/browse/AGCORDOVA/">https://issues.iboss.org/browse/AGCORDOVA/</a> Matthias, Erik, and Luke admins for now. Erik, could you go in and create the appropriate components, and versions for tracking, and labels as needed. Including marking issues with "Mobile Push 1.0" for issues related to that.                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AEROGear-1464">https://issues.iboss.org/browse/AEROGear-1464</a> |
| 140 | AEROGear-1450 | OK, I see I am able to create it. Does one know why to actually import the repo from passos ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AEROGear-1450">https://issues.iboss.org/browse/AEROGear-1450</a> |

| 147 | AEROGear-1408 | How is purge different from deleting a record from your local store and syncing that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AEROGear-1408">https://issues.iboss.org/browse/AEROGear-1408</a> |
| 148 | AEROGear-1408 | This is what I am thinking <a href="https://docs.google.com/drawings/d/1hY00P-qJZlVn9sIU3j_LxLk4Vm0dWcWqdJH88Ew/edit?usp=sharing">https://docs.google.com/drawings/d/1hY00P-qJZlVn9sIU3j_LxLk4Vm0dWcWqdJH88Ew/edit?usp=sharing</a> How is 'purge' separate from removing a record from your local data and then telling the sync client to sync?                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AEROGear-1408">https://issues.iboss.org/browse/AEROGear-1408</a> |
| 149 | AEROGear-1408 | i do see what you are saying though, but in that case, why do we have remove methods on a store, if save/update can do the same thing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AEROGear-1408">https://issues.iboss.org/browse/AEROGear-1408</a> |
| 150 | AEROGear-1408 | Ahhhh I see now. Basically I wasn't thinking of the sync client spec including data transfer per se when I made this issue. I was more thinking of it as a data inspection API. IE is the data in sync, is there new data? is there data to be pushed, will our syncs conflict, etc. Data transfer is a part of that which I always thought was "move what is new"                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AEROGear-1408">https://issues.iboss.org/browse/AEROGear-1408</a> |
| 151 | AEROGear-1408 | I guess we're focusing right now on sync itself rather than the whole picture, storing offline and then sync local storage with remote. Here we're in sending data (no store involved yet). BTW I didn't watch the JIRa issues so was out of sync with you guys. What about using ML thread: <a href="http://aerogear-dev.1069024.n5.nabble.com/aerogear-dev-sync-To-pipe-or-not-to-pipe-t6135.html">http://aerogear-dev.1069024.n5.nabble.com/aerogear-dev-sync-To-pipe-or-not-to-pipe-t6135.html</a> To <a href="https://github.com/discuss/SyncPipe">gist/discuss SyncPipe</a> API (what luke called DataSync). we need to agree on API/vocabulary. wdyt? | <a href="https://issues.iboss.org/browse/AEROGear-1408">https://issues.iboss.org/browse/AEROGear-1408</a> |
| 152 | AEROGear-1398 | This issue doesn't make sense to me inside an integration tests server. How could the app scan the QRCode? If we don't have anything on the client side, I vote to close it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AEROGear-1398">https://issues.iboss.org/browse/AEROGear-1398</a> |

| 156 | AEROGear-1316 | do this still makes sense in face of our recent discussions? (ag-controller is dead)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AEROGear-1316">https://issues.iboss.org/browse/AEROGear-1316</a> |
| 157 | AEROGear-1297 | Could this please be unassigned from me? I have no permissions to drop it :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AEROGear-1297">https://issues.iboss.org/browse/AEROGear-1297</a> |
| 158 | AEROGear-1279 | Does this mean the AGPUSH project would just be UnifiedPush? If so, that means we remove any SimplePush labeled components from AGPUSH, right? I just want this to be clear so I don't have to keep track of JIRAs for a single "project" across multiple JIRA projects. Just like anything push relates for JS goes in AGJS.                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AEROGear-1279">https://issues.iboss.org/browse/AEROGear-1279</a> |
| 159 | AEROGear-1269 | Could you provide more info on this? Selecting a component and an affected version plus adding a description referencing some links to your code and steps to reproduce your error would be a good start. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AEROGear-1269">https://issues.iboss.org/browse/AEROGear-1269</a> |
| 160 | AEROGear-1189 | what is the desired repo name?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AEROGear-1189">https://issues.iboss.org/browse/AEROGear-1189</a> |
| 161 | AEROGear-1133 | Is there a description / explanation on why we do/want this ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AEROGear-1133">https://issues.iboss.org/browse/AEROGear-1133</a> |
| 162 | AEROGear-1133 | There's an explanation about why we want to get rid of this. Works for you?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AEROGear-1133">https://issues.iboss.org/browse/AEROGear-1133</a> |

| 165 | AEROGear-970  | Push was part of AG 1.1.0 (umbrella) release                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AEROGear-970">https://issues.iboss.org/browse/AEROGear-970</a>   |
| 166 | AEROGear-952  | I can't reproduce this issue. Abstractj or matzew, can you help me work out what is breaking between our systems?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AEROGear-952">https://issues.iboss.org/browse/AEROGear-952</a>   |
| 167 | AEROGear-903  | Could this please be unassigned from me? I have no permissions to drop it :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AEROGear-903">https://issues.iboss.org/browse/AEROGear-903</a>   |
| 168 | AEROGear-888  | Could this please be unassigned from me? I have no permissions to drop it :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AEROGear-888">https://issues.iboss.org/browse/AEROGear-888</a>   |
| 169 | AEROGear-849  | Hi guys, may I close it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AEROGear-849">https://issues.iboss.org/browse/AEROGear-849</a>   |
| 170 | AEROGear-830  | is this still valid as an umbrella ticket? I think AEROGear-1374 fits the bill better                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AEROGear-830">https://issues.iboss.org/browse/AEROGear-830</a>   |
| 171 | AEROGear-829  | is this still relevant?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/AEROGear-829">https://issues.iboss.org/browse/AEROGear-829</a>   |
| 172 | AEROGear-823  | Could this please be unassigned from me? I have no permissions to drop it :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AEROGear-823">https://issues.iboss.org/browse/AEROGear-823</a>   |
| 173 | AEROGear-815  | what name that repo would have? aerogear-examples?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AEROGear-815">https://issues.iboss.org/browse/AEROGear-815</a>   |
| 174 | AEROGear-791  | The current guide has reference to the kitchensink-mobile archetype. If we want to update these guides to be based on the kitchensink-aerogear-js, would we need to also create a new archetype for that, or remove that reference altogether. Also, are the current guides somehow tied to JDF, or can we do anything we want?                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AEROGear-791">https://issues.iboss.org/browse/AEROGear-791</a>   |
| 175 | AEROGear-791  | what's the status of this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AEROGear-791">https://issues.iboss.org/browse/AEROGear-791</a>   |
| 176 | AEROGear-791  | There is no getting started guide for AeroGear Controller, though we do have the User Guide plus the controller demo (which show basic usage). Is that enough or should there be a getting started guide as well?                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AEROGear-791">https://issues.iboss.org/browse/AEROGear-791</a>   |
| 177 | AEROGear-790  | is the fixed by correct ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AEROGear-790">https://issues.iboss.org/browse/AEROGear-790</a>   |
| 178 | AEROGear-786  | So maybe is just a matter of add it at our demos? Let me know, maybe my description was too vague, I can change it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AEROGear-786">https://issues.iboss.org/browse/AEROGear-786</a>   |

| 179 | AEROGear-774 | We have decided to remove the year from the license. JS is done. Android and iOS, where are you at on this? I'll assign this to me for now and just bug you about it until you're done :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AEROGear-774">https://issues.jboss.org/browse/AEROGear-774</a> |
| 180 | AEROGear-772 | Why would we want to create a plugin when we have a javascript implementation for this that works?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AEROGear-772">https://issues.jboss.org/browse/AEROGear-772</a> |
| 181 | AEROGear-768 | Hi Matthias, I'm trying to reproduce the error here. After insert a task with: <script>window.status='Hello World';\</script> Is still possible to add more tasks. Am I missing something?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AEROGear-768">https://issues.jboss.org/browse/AEROGear-768</a> |
| 182 | AEROGear-760 | Is this still relevant ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AEROGear-760">https://issues.jboss.org/browse/AEROGear-760</a> |
| 183 | AEROGear-746 | Is this iOS specific - or more a general thing for the site? (wondering about the two used components)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AEROGear-746">https://issues.jboss.org/browse/AEROGear-746</a> |
| 184 | AEROGear-745 | @Kris what did you have in mind that isn't covered under documentation/guides&tutorials/examples?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AEROGear-745">https://issues.jboss.org/browse/AEROGear-745</a> |
| 185 | AEROGear-734 | Updated <a href="http://corscontroller-aerogear.rhcloud.com/aerogear-controller-demo">http://corscontroller-aerogear.rhcloud.com/aerogear-controller-demo</a> to version 1.0.0.M1.20121217-SNAPSHOT. Was there anything else to be done for this task Bruno?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AEROGear-734">https://issues.jboss.org/browse/AEROGear-734</a> |
| 186 | AEROGear-707 | shouldn't it be aerogear-store-ios, to avoid confusion?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AEROGear-707">https://issues.jboss.org/browse/AEROGear-707</a> |
| 187 | AEROGear-674 | what JS authentication demos? can you provide a link?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AEROGear-674">https://issues.jboss.org/browse/AEROGear-674</a> |
| 188 | AEROGear-664 | Is this task related to AEROGear-680 ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AEROGear-664">https://issues.jboss.org/browse/AEROGear-664</a> |
| 189 | AEROGear-629 | Is there a 'status' for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AEROGear-629">https://issues.jboss.org/browse/AEROGear-629</a> |
| 190 | AEROGear-629 | regarding hypermedia, LINKing was already implemented (server and client). Is there anything else you had in mind ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AEROGear-629">https://issues.jboss.org/browse/AEROGear-629</a> |
| 191 | AEROGear-628 | Is this still on our list ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AEROGear-628">https://issues.jboss.org/browse/AEROGear-628</a> |
| 192 | AEROGear-622 | I noticed that PicketBoxLoadUsers has the following comment: {quote} //TODO this entire initialization code will be removed {quote} Can we remove this class since users can register there own accounts now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AEROGear-622">https://issues.jboss.org/browse/AEROGear-622</a> |
| 193 | AEROGear-611 | Should the title of the Tutorial be changed also, from JBDS 5 to JDBS 6?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AEROGear-611">https://issues.jboss.org/browse/AEROGear-611</a> |
| 194 | AEROGear-607 | nice :) shouldn't the container (jax-rs impl) give a warning ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AEROGear-607">https://issues.jboss.org/browse/AEROGear-607</a> |
| 195 | AEROGear-607 | Could you please elaborate more? I'm not following you                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AEROGear-607">https://issues.jboss.org/browse/AEROGear-607</a> |
| 196 | AEROGear-607 | Ah..... I think I now understand... So.. This: {code} @ApplicationPath("/") public class Foo extends Application { } {code} will mess around with this: {code} public class Routes extends AbstractRoutingModule { @Override public void configuration() { route().from("/") .on(RequestMethod.GET).to(Home.class).index(); } } {code} Or am I wrong ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AEROGear-607">https://issues.jboss.org/browse/AEROGear-607</a> |
| 197 | AEROGear-493 | How should the demo app handle being "offline"? It is not one of the current features of the application - at least not at this point.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AEROGear-493">https://issues.jboss.org/browse/AEROGear-493</a> |
| 198 | AEROGear-492 | Are we going to want the ability for users to build custom builds of past releases? or just the current release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AEROGear-492">https://issues.jboss.org/browse/AEROGear-492</a> |
| 199 | AEROGear-482 | [*]balunas), should we push this to 1.future? I honestly forgot about it and don't think it's a super-high priority if we even do it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AEROGear-482">https://issues.jboss.org/browse/AEROGear-482</a> |
| 200 | AEROGear-475 | Hi Daniel, I saw that you've done it here <a href="https://github.com/danbev/aerogear-controller/commit/e96423550bfd93f8f158bf77273e3601fa05beb1">https://github.com/danbev/aerogear-controller/commit/e96423550bfd93f8f158bf77273e3601fa05beb1</a> Do you want to take a stab at it and send the PR?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AEROGear-475">https://issues.jboss.org/browse/AEROGear-475</a> |
| 201 | AEROGear-475 | Hi Bruno, I've sent a pull request now. I was not able to assign this jira to myself, do you know if this is excepted?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AEROGear-475">https://issues.jboss.org/browse/AEROGear-475</a> |
| 202 | AEROGear-459 | Hi Matthias, what do you think about <a href="https://community.jboss.org/wiki/MavenSettings">https://community.jboss.org/wiki/MavenSettings</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AEROGear-459">https://issues.jboss.org/browse/AEROGear-459</a> |
| 203 | AEROGear-457 | Could this please be unassigned from me? I have no permissions to drop it :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AEROGear-457">https://issues.jboss.org/browse/AEROGear-457</a> |
| 204 | AEROGear-447 | Is it alright if I take this task?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AEROGear-447">https://issues.jboss.org/browse/AEROGear-447</a> |

| 206 | AEROGear-438 | i was able to modify the image <a href="http://blog.holmqvist.org/img/app_types_updated.png">http://blog.holmqvist.org/img/app_types_updated.png</a> got the image from a presentation of matthias's, use it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AEROGear-438">https://issues.jboss.org/browse/AEROGear-438</a> |
| 207 | AEROGear-435 | Could this please be unassigned from me? I have no permissions to drop it :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AEROGear-435">https://issues.jboss.org/browse/AEROGear-435</a> |
| 208 | AEROGear-426 | Hi Bruno, would you mind if I take a stab at this task? Thanks, /Daniel                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AEROGear-426">https://issues.jboss.org/browse/AEROGear-426</a> |
| 209 | AEROGear-412 | Do we want an 'index page', located at <a href="http://aerogear.github.com/">http://aerogear.github.com/</a> ? Right now the JS and iOS (sub)projects have some documentation online: - <a href="http://aerogear.github.com/aerogear-js/">http://aerogear.github.com/aerogear-js/</a> - <a href="http://aerogear.github.com/aerogear-ios/">http://aerogear.github.com/aerogear-ios/</a> Would be nice, to link to those, from an index page. What we need for that is just a github repo called 'aerogear.github.com'                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AEROGear-412">https://issues.jboss.org/browse/AEROGear-412</a> |
| 210 | AEROGear-395 | Does this include moving anything that has changed from the quickstart repo to the archetype? Just want to make sure that is covered somewhere as there are changes in the quickstart that are not yet present in the archetype.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AEROGear-395">https://issues.jboss.org/browse/AEROGear-395</a> |
| 211 | AEROGear-366 | Could you please test it? <a href="https://github.com/aerogear/TODO/commit/ec641e4895592b4126b8f7de844bf6d4221c6e8">https://github.com/aerogear/TODO/commit/ec641e4895592b4126b8f7de844bf6d4221c6e8</a> I did some tests with: curl -v -H "Accept: application/json" -H "Content-type: application/json" -X POST -d '{"title": "test", "style": "mydescription"}' http://localhost:8080/todo-server/rest/project/ curl -v -H "Accept: application/json" -H "Content-type: application/json" -X GET http://localhost:8080/todo-server/rest/project/ curl -v -H "Accept: application/json" -H "Content-type: application/json" -X PUT -d '{"title": "test", "style": "BR0description"}' http://localhost:8080/todo-server/rest/project/1 for i in {1..10} do curl -v -H "Accept: application/json" -H "Content-type: application/json" -X PUT -d '{"title": "test", "style": "Si-description"}' http://localhost:8080/todo-server/rest/project/1 done curl -v -H "Accept: application/json" -H "Content-type: application/json" -X GET http://localhost:8080/todo-server/rest/project/ Optimistic locking is not a requirement for us currently, of course we need to think about it in the future. | <a href="https://issues.jboss.org/browse/AEROGear-366">https://issues.jboss.org/browse/AEROGear-366</a> |
| 212 | AEROGear-362 | Could this please be unassigned from me? I have no permissions to drop it :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AEROGear-362">https://issues.jboss.org/browse/AEROGear-362</a> |

| 214 | AEROGear-342 | Is <a href="https://issues.jboss.org/browse/AEROGear-581">https://issues.jboss.org/browse/AEROGear-581</a> a duplicate of this task perhaps?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AEROGear-342">https://issues.jboss.org/browse/AEROGear-342</a> |
| 215 | AEROGear-338 | Can you please add some more details for your jira? I'm not exactly what your setup is, or what you are using. I'm assuming this is related to the AeroGear Controller, or one of our examples - right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AEROGear-338">https://issues.jboss.org/browse/AEROGear-338</a> |
| 216 | AEROGear-336 | is this out dated since we are deprecating asciidoc on aerogear.org?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AEROGear-336">https://issues.jboss.org/browse/AEROGear-336</a> |
| 217 | AEROGear-326 | In the Readme for the html5-kitchensink app, it says how to run the tests. Is that what the wiki was suppose to be, or a more in depth on? maybe a more General version? using Arquillian Drone?(haven't actually played with it yet)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AEROGear-326">https://issues.jboss.org/browse/AEROGear-326</a> |

| #   | Requirement  | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | URL                                                                                                     |

| 218 | AEROGear-310 | Should these be the same as documented here: <a href="https://community.jboss.org/wiki/JBossProjectVersioning">https://community.jboss.org/wiki/JBossProjectVersioning</a> The current version of aerogear-controller is '1.0.0.Alpha1-SNAPSHOT', which seems like it fits in with what the above document describes (Alpha for early releases that are not API complete). Is this task only related to versioning in Jira/Roadmap?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AEROGear-310">https://issues.jboss.org/browse/AEROGear-310</a> |
| 219 | AEROGear-296 | Hi guys, if nobody's against, I'd like to start these requirements to android libraries. Could you please point me out to the specific documentation on iOS and JS?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AEROGear-296">https://issues.jboss.org/browse/AEROGear-296</a> |
| 220 | AEROGear-253 | What's the status on this ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AEROGear-253">https://issues.jboss.org/browse/AEROGear-253</a> |
| 221 | AEROGear-252 | This is likely caused because the tests and application use the same datasource. During the M2 release we used deployable datasources and I do not believe we had this issue. However we had to remove that functionality because openshift did not support it at that time. Since then it seems the jboss-as archetypes have switched to using deployable datasources and do not have this issue. If we switch to this configuration we need to make sure that jboss-as archetypes/quickstarts will also be released this way, and that openshift, and the target jboss-as 7.1 release support this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AEROGear-252">https://issues.jboss.org/browse/AEROGear-252</a> |
| 222 | AEROGear-215 | Is android/iOS the right component ? I'd assume only Cordova would be appropriate                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AEROGear-215">https://issues.jboss.org/browse/AEROGear-215</a> |
| 223 | AEROGear-215 | Is this now JDF ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AEROGear-215">https://issues.jboss.org/browse/AEROGear-215</a> |
| 224 | AEROGear-174 | Started work in <a href="https://github.com/mbogoevici/as-quickstarts/tree/upgrade-entities">https://github.com/mbogoevici/as-quickstarts/tree/upgrade-entities</a> Some notes: - Changing URL scheme from /{entity}/{id}/json to /{entity}/json/{id} (to allow for /{entity}/json scheme prefixing) - Adding Country CRUD services Open points: Are some of the existing resources still needed (e.g. GET or form-based entity create) or shall we just focus on JSON/XML (which is what the actual example is using)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AEROGear-174">https://issues.jboss.org/browse/AEROGear-174</a> |
| 225 | AEROGear-174 | Is there any way we can get rid of the XML stuff. We don't use it except to show that it's available do we? It's terrible to work with client side as well so everything is done with JSON now. Just a thought. :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AEROGear-174">https://issues.jboss.org/browse/AEROGear-174</a> |
| 226 | AEROGear-160 | I've just tried the kitchensink-html5-mobile quickstart example on android 2.3.6, the member list is vertically scrolled but the one member is not displayed on one line. Did you rethink this or am I doing something wrong?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AEROGear-160">https://issues.jboss.org/browse/AEROGear-160</a> |
| 227 | AEROGear-157 | Kris - this should be two minutes since you already have the env setup. Can you grab this one.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AEROGear-157">https://issues.jboss.org/browse/AEROGear-157</a> |
| 228 | AEROGear-130 | Isn't this resolved? <a href="https://github.com/aerogear/aerogear-parent">https://github.com/aerogear/aerogear-parent</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AEROGear-130">https://issues.jboss.org/browse/AEROGear-130</a> |
| 229 | AEROGear-126 | Must now review and update based on latest updates to archetype - namely dir and url updates. Plus screenshots.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AEROGear-126">https://issues.jboss.org/browse/AEROGear-126</a> |
| 230 | AEROGear-126 | Almost all the updates are already done, but will the latest updates some images need updating ( only archetype related ones in tools ), and we need to mention the sub-module naming changes in archetype. The best bet is to go through the instructions and just see what is not accurate (should not be much at this point) <a href="https://community.jboss.org/wiki/GetStartedWithHTML5MobileWebDevelopmentWithJBoss">https://community.jboss.org/wiki/GetStartedWithHTML5MobileWebDevelopmentWithJBoss</a> <a href="https://community.jboss.org/wiki/HTML5MobileQuickstartArchetypeDeepDive">https://community.jboss.org/wiki/HTML5MobileQuickstartArchetypeDeepDive</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AEROGear-126">https://issues.jboss.org/browse/AEROGear-126</a> |
| 231 | AEROGear-123 | what do you think on having a deployer/handler that do the processing for us on deploy/runtime? (view compilation, minification, etc)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AEROGear-123">https://issues.jboss.org/browse/AEROGear-123</a> |
| 232 | AEROGear-123 | [*qmx] Any projects in mind? Do you mean a servlet filter with GZIP or a static file preprocessor?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AEROGear-123">https://issues.jboss.org/browse/AEROGear-123</a> |
| 233 | AEROGear-121 | What are you thinking for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AEROGear-121">https://issues.jboss.org/browse/AEROGear-121</a> |
| 234 | AEROGear-108 | There was no marketing or spins in my previous comment. In fact, your comment is really not appreciated, specially when I offered to help and provide a nice cool demo. Your reply doesn't even contain a thank you by the way. Politeness will take you a long way, you seem to have none. Our definition of purity also seems to be different. JBoss is mostly used by Java devs. A puristic approach would be to have an end-to-end Java solution. So my statement was by no means intended to be marketing related or spin as you put it, but a more elegant solution or showcase where Appcelerator is used at the end of the day. If you took the liberty of editing my previous comment, you can safely remove now both completely. Best of luck. Alfredo                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AEROGear-108">https://issues.jboss.org/browse/AEROGear-108</a> |
| 235 | AEROGear-107 | Do we still showcase PhoneGap build even though we're using a more standard local build setup?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AEROGear-107">https://issues.jboss.org/browse/AEROGear-107</a> |
| 236 | AEROGear-107 | We should find the JBIDE jira for this and link it. We also need to review phonegap build again and see if this is something we still want to use. I.e. is it keeping up with the core Cordova project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AEROGear-107">https://issues.jboss.org/browse/AEROGear-107</a> |
| 237 | AEROGear-101 | Also are you planning on flushing out the "In The Works" down? They could use some attention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AEROGear-101">https://issues.jboss.org/browse/AEROGear-101</a> |
| 238 | AEROGear-97  | James - Can we get this video up on .org somewhere for AeroGear launch?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AEROGear-97">https://issues.jboss.org/browse/AEROGear-97</a>   |
| 239 | AEROGear-97  | This is the link correct? Does this replace a current video? <a href="http://player.vimeo.com/video/35705170?byline=0&amp;portrait=0">http://player.vimeo.com/video/35705170?byline=0&amp;portrait=0</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AEROGear-97">https://issues.jboss.org/browse/AEROGear-97</a>   |
| 240 | AEROGear-96  | I've managed to get it onto tools, it will be like this once we manage to deploy <a href="https://img.skitch.com/20120206-pftpi1h8wtg1df6q2p21rga88u.jpg">https://img.skitch.com/20120206-pftpi1h8wtg1df6q2p21rga88u.jpg</a> what are the next steps? will we wait for M2 to deploy it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AEROGear-96">https://issues.jboss.org/browse/AEROGear-96</a>   |
| 241 | AEROGear-95  | Comment from the review: The application will be running at the following URL <a href="http://localhost:8080/jboss-as-html5-mobile/">http://localhost:8080/jboss-as-html5-mobile/</a> . Should the context be changed to <a href="http://localhost:8080/jboss-as-kitchensink-html5-mobile">http://localhost:8080/jboss-as-kitchensink-html5-mobile</a> to match the directory and jar name? Other than that it is good. The helloworld quickstart needs to be updated to match however.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AEROGear-95">https://issues.jboss.org/browse/AEROGear-95</a>   |
| 242 | AEROGear-86  | Archetype notes: ----- * Archetype versioning * should it sync with quickstart * referring to the /pom.xml not the one in resources * Do we need the .gitignore, or .factorypath? * Java Packages seem messed up ** <a href="https://github.com/aerogear/as-archetypes/tree/master/jboss-html5-mobile-archetype/src/main/resources/archetype-resources/src/test/java">https://github.com/aerogear/as-archetypes/tree/master/jboss-html5-mobile-archetype/src/main/resources/archetype-resources/src/test/java</a> ** <a href="https://github.com/aerogear/as-archetypes/tree/master/jboss-html5-mobile-archetype/src/main/resources/archetype-resources/src/main/java">https://github.com/aerogear/as-archetypes/tree/master/jboss-html5-mobile-archetype/src/main/resources/archetype-resources/src/main/java</a> * Still showing older quickstart webapp files ** <a href="https://github.com/aerogear/as-archetypes/tree/master/jboss-html5-mobile-archetype/src/main/resources/archetype-resources/src/main/webapp">https://github.com/aerogear/as-archetypes/tree/master/jboss-html5-mobile-archetype/src/main/resources/archetype-resources/src/main/webapp</a> ** Need to get latest from Quickstart here Ideally a project built from the archetype (with the same groupid/artifactid ) should be identical to the quickstart. | <a href="https://issues.jboss.org/browse/AEROGear-86">https://issues.jboss.org/browse/AEROGear-86</a>   |
| 243 | AEROGear-86  | Wesley - as I mention in the comments for AEROGear-88 [1] PR#72 needs to be merged into aerogear/as-quickstarts, and not into /jbossas/quickstarts. Also can you put this change into as-archetypes? Doug already completed this jira. If needed, post launch we can figure out an automated way of doing this, but we don't have that now :-( [1] <a href="https://issues.jboss.org/browse/AEROGear-88?focusedCommentId=12662058&amp;page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12662058">https://issues.jboss.org/browse/AEROGear-88?focusedCommentId=12662058&amp;page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12662058</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AEROGear-86">https://issues.jboss.org/browse/AEROGear-86</a>   |

It don't inherits the license file too, right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AEROGear-78">https://issues.iboss.org/browse/AEROGear-78</a> |
| 245 | AEROGear-64 | sanity check, did you mean ag-archetype and ag-quickstart?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AEROGear-64">https://issues.iboss.org/browse/AEROGear-64</a> |
| 246 | AEROGear-64 | i've did one initial round of git wrestling, can anyone review if this is what you all expected? (only quickstarts for now) <a href="https://github.com/aerogear/quickstart/tree/new-layout">https://github.com/aerogear/quickstart/tree/new-layout</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AEROGear-64">https://issues.iboss.org/browse/AEROGear-64</a> |
| 247 | AEROGear-63 | Can anyone review the page please? Might need some polish, but I think the basics are there.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AEROGear-63">https://issues.iboss.org/browse/AEROGear-63</a> |
| 248 | AEROGear-57 | {quote} On my Android 2.3.6 it showed the mobile version, and the navigation bar also displayed. This was based on code from yesterday though, not sure if that changed. {quote} I forked the quickstart repo today and applied the patch. {quote} We know Android has some quirks here, any idea on the cause? If not feel free to comment in the PR {quote} I am not aware of the quirks since I do not have a 2.3.6 device to test on. {quote} The content flowing out of bounds is a known issue, not with Kris's This in on the portrait version of the list page - right? You or I should enter a jira for that {quote} It flows out on both orientations in list page. I guess you have a list of known issues? Might be better for you to create that one. {quote} Landscape on iOS This unfortunately is another known issue with no fix Its a problem with iOS and how it handles rotation Again we should probably put in a jira {quote} I did not have this problem with the RichFaces mobile showcase. Is this a JQuery issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AEROGear-57">https://issues.iboss.org/browse/AEROGear-57</a> |
| 249 | AEROGear-55 | can you do a simple google docs diagram showing me your ideas on this? You and Burr are the masterminds of this concept and I want to make sure I understand it fully as it plays out in your mind.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AEROGear-55">https://issues.iboss.org/browse/AEROGear-55</a> |
| 250 | AEROGear-54 | Could this please be unassigned from me? I have no permissions to drop it :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AEROGear-54">https://issues.iboss.org/browse/AEROGear-54</a> |
| 251 | AEROGear-45 | do you think this is still needed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AEROGear-45">https://issues.iboss.org/browse/AEROGear-45</a> |
| 252 | AEROGear-44 | I meant to say "What is Aerogear?" section... not the roadmap section. Thanks for clarifying Jay!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AEROGear-44">https://issues.iboss.org/browse/AEROGear-44</a> |
| 253 | AEROGear-40 | This should likely take the form of a wiki page. wdyt?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AEROGear-40">https://issues.iboss.org/browse/AEROGear-40</a> |

Does it look good enough? <a href="https://github.com/qmx/as-archetypes/commit/08487b3bf840d553d4acef9277aafd01d68e55f0">https://github.com/qmx/as-archetypes/commit/08487b3bf840d553d4acef9277aafd01d68e55f0</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/AEROGear-37">https://issues.iboss.org/browse/AEROGear-37</a> |
| 255 | AEROGear-33 | What do we mean by POHS? Just want to be sure I have all the concepts included.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AEROGear-33">https://issues.iboss.org/browse/AEROGear-33</a> |
| 256 | AEROGear-28 | Nice! thanks for the warm comments. I just needed a few ideas from you. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AEROGear-28">https://issues.iboss.org/browse/AEROGear-28</a> |
| 257 | AEROGear-7  | Does this need to be more than the archetype and quickstart already created? The archetype and quick start could be updated for full CRUD - at the moment they are CR not UD                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AEROGear-7">https://issues.iboss.org/browse/AEROGear-7</a>   |
| 258 | AEROGear-7  | Adding this as a subtask of as-quickstart. Should we add this functionality to the current as-quickstart if we end up using a JavaScript MVC. We need a decision on that and if this should be a new demo under AeroGear or added to the quickstart.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AEROGear-7">https://issues.iboss.org/browse/AEROGear-7</a>   |
| 259 | AEROGear-2  | Are you talking about the tweets on the right hand column or the RSS feed at the bottom of the main content pages?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AEROGear-2">https://issues.iboss.org/browse/AEROGear-2</a>   |

| 262 | AGDROID-585 | <p>After update to Android N the app start to crash. I see it's related to Firebase version in Android N, but I did not had too much time to update the AeroGear Android Push library locally to test with new versions. | 263 | AGDROID-574 | I have started the work here: <a href="https://github.com/danielpassos/aerogear-android-pipe/tree/Android-N">https://github.com/danielpassos/aerogear-android-pipe/tree/Android-N</a> What I did: * Bump to Android N * Bump plugins versions (some plugins have Android 23 dependency) * Organize/update travis.yml What I didn't * Bump core version to 3.1.0 (waiting for be on Maven Central) * Update test to the new Android test style                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AGDROID-574">https://issues.iboss.org/browse/AGDROID-574</a> |
| 264 | AGDROID-571 | [~danielpassos] Yep, just realised, sorry about that! So can this just be moved to Done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGDROID-571">https://issues.iboss.org/browse/AGDROID-571</a> |
| 265 | AGDROID-551 | [~supittma] as discussed in AGPUSH-1636, the entire Google section (including screenshots) need to be updated. Perhaps this is something that [~rsmral] or [~ssitani] can assist with ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGDROID-551">https://issues.iboss.org/browse/AGDROID-551</a> |
| 266 | AGDROID-551 | Which doc is this referring to? <a href="https://aerogear.org/docs/unifiedpush/ups_userguide/index/">https://aerogear.org/docs/unifiedpush/ups_userguide/index/</a> , or <a href="https://aerogear.org/docs/unifiedpush/aerogear-push-android/guides/">https://aerogear.org/docs/unifiedpush/aerogear-push-android/guides/</a> ? We need changes in both: <a href="https://aerogear.org/docs/unifiedpush/ups_userguide/index/">https://aerogear.org/docs/unifiedpush/ups_userguide/index/</a> * change mentions of GCM to e.g. "FCM (formerly GCM)" or similar <a href="https://aerogear.org/docs/unifiedpush/aerogear-push-android/guides/">https://aerogear.org/docs/unifiedpush/aerogear-push-android/guides/</a> * the whole "Google Related Setup" needs to be redone for FCM - I believe we (Docs team) could handle this by 3.12 * "Your first Android/Push App" and "Send a Push Notification" - these need updates for FCM too, but would require significant on-ramp for us (docs), so I can't commit to this for 3.12 without Engineering help. That being said - [~supittma], which part are you working on here? (you are assigned and Coding in Progress) Also, why was AGPUSH-1636 closed? It covered the Google-related setup, while this issue seems (by the description) to cover some other part. They don't seem to be duplicates. If we re-open AGPUSH-1636, I can take it into this/next sprint.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGDROID-551">https://issues.iboss.org/browse/AGDROID-551</a> |
| 267 | AGDROID-551 | [~ssitani] can you send a PR with whatever you have? So that [~supittma] and I can continue and solve the doc issue ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGDROID-551">https://issues.iboss.org/browse/AGDROID-551</a> |
| 268 | AGDROID-551 | [~mwessendorff] [~supittma] Small update on our (docs team) availability: at this moment, we have to invest 100% of time on RHMAP 4.2 documentation - there's a lot to write/edit: <a href="https://issues.iboss.org/browse/RHMAP-9018">https://issues.iboss.org/browse/RHMAP-9018</a> I'm unassigning this from [~ssitani] for now. We may be able to do a language review if you can provide a complete draft. WDTY?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGDROID-551">https://issues.iboss.org/browse/AGDROID-551</a> |
| 269 | AGDROID-550 | I think we could add an empty JSON file to the app folder of the demos, and get some documentation out, what's needed to get the file (content) in place                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGDROID-550">https://issues.iboss.org/browse/AGDROID-550</a> |
| 270 | AGDROID-546 | /cc [~danielpassos] So this has some interesting consequences for the UPS life cycle. Right now we assume that when the success callback is called we are registered with all of the categories, have a token, etc. Now happens inside of a service that we extend. However, what does this mean for the register method? For starters, all of the methods we call are non blocking so we can kill the Callback method (YAY!), but this means that failures to connect to UPS are now handled by a service and not communicated to the client (boo!). There are several solutions to this, but none of them are a clear cut winner. 1) We continue to use the callback, but don't call it until the registration state with UPS is determined. 2) We register a handler that is called with the connection state passed to it (similar to how Google's client SDKs work) 3) UPS state is totally handled by our libraries. Developers will tell us what state they want us to be in and the library will fight the good fight keeping the device in that state. wdyt?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGDROID-546">https://issues.iboss.org/browse/AGDROID-546</a> |
| 271 | AGDROID-539 | Should we send the global topic to the push service with the categories payload?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGDROID-539">https://issues.iboss.org/browse/AGDROID-539</a> |
| 272 | AGDROID-519 | [~danielpassos] [~supittma] with Android N coming, will this mean, that there is JDK8 / OpenJDK only ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGDROID-519">https://issues.iboss.org/browse/AGDROID-519</a> |
| 273 | AGDROID-428 | yeah, would be nice, no ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGDROID-428">https://issues.iboss.org/browse/AGDROID-428</a> |

| 274 | AGDROID-421   | [~supittma] Maybe I don't get it but I meant this method: <a href="https://github.com/aerogear/aerogear-android-push/blob/45606e795f10e6a6343183981fd2b12dd17fd49/aerogear-android-push/src/main/java/org/jboss/aerogear/android/unifiedpush/gcm/UnifiedPushConfig.java#L145-L156">https://github.com/aerogear/aerogear-android-push/blob/45606e795f10e6a6343183981fd2b12dd17fd49/aerogear-android-push/src/main/java/org/jboss/aerogear/android/unifiedpush/gcm/UnifiedPushConfig.java#L145-L156</a> There is no way to get the device token from the android libs right? So why can I set it here?                                                            | <a href="https://issues.jboss.org/browse/AGDROID-421">https://issues.jboss.org/browse/AGDROID-421</a>     |
| 275 | AGDROID-421   | [~danielpassos] I took a quick look but this isn't actually used. In the constructor of GCMPPushRegistrar we set the value, but it is always overridden in the .register method. wdwt about removing it?                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AGDROID-421">https://issues.jboss.org/browse/AGDROID-421</a>     |
| 276 | AGDROID-376   | Did you mean 2015?;) Much of the benefit of the GCM/XMPP bridge is that it is a two way communication channel that is managed by Android. Device goes down and comes back up? Messages will make it out and the app won't crash. Last I checked the best Java/Android WebSocket client still needed lots of setup around it. Ideally by the time this hits final we will be able to make all of these choices configurable and/or automatic.                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AGDROID-376">https://issues.jboss.org/browse/AGDROID-376</a>     |
| 277 | AGDROID-376   | [yes, but in a lot of countries delivering data to a 3rd party (which would be the fact here) is not allowed. Have you been spying on me? Because I swear I had this conversation with a different German last night...   Having a solid aerogear-android-websocket repo/library would be benefit for the overall Android community, not just us Writing a solid Android WebSocket library is something I want to do.                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AGDROID-376">https://issues.jboss.org/browse/AGDROID-376</a>     |
| 278 | AGDROID-351   | Most likely can be resolved. Is there any ETA to release 3.0.0 version of this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AGDROID-351">https://issues.jboss.org/browse/AGDROID-351</a>     |
| 279 | AGDROID-319   | Is there anything blocking progress on this issue? Is it a simple matter of replacing the webview invocation with an appropriate intent? If so I'll gladly provide a PR making this change.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AGDROID-319">https://issues.jboss.org/browse/AGDROID-319</a>     |
| 280 | AGDROID-289   | Others, like Google ( <a href="http://blog.chromium.org/2015/02/hello-http2-goodbye-spy-http-is_9.html">http://blog.chromium.org/2015/02/hello-http2-goodbye-spy-http-is_9.html</a> ) or Jetty are deprecating their SPDY support, in fav. of HTTP/2. Perhaps we should close this one? Or is it really worth it?                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AGDROID-289">https://issues.jboss.org/browse/AGDROID-289</a>     |
| 281 | AGDROID-258   | That;s actually a new feature on iOS8 [~supittma] If you want to support that on Android (does it make sense?), we can send that to GCM as well                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AGDROID-258">https://issues.jboss.org/browse/AGDROID-258</a>     |
| 282 | AGDROID-254   | Could you provide a list of which elements you want to test to jumpstart this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AGDROID-254">https://issues.jboss.org/browse/AGDROID-254</a>     |
| 283 | AGDROID-250   | Do we plan to make this gotcha a part of our guides?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AGDROID-250">https://issues.jboss.org/browse/AGDROID-250</a>     |
| 284 | AGDROID-231   | Wasn't [~aemmanou] doing similar already for the Java Sender's Http(s)URLConnection?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AGDROID-231">https://issues.jboss.org/browse/AGDROID-231</a>     |
| 285 | AGDROID-218   | We've moved on to 4.3.0 at this point. [~kpiwko] if this is still a problem please reopen with a link to a failing project in github.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AGDROID-218">https://issues.jboss.org/browse/AGDROID-218</a>     |
| 286 | AGDROID-59    | Was this for a simple demo (PushEEDemo - used by the tutorial)? Or was this the ProDoctor/AeroDoc "topic demo"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AGDROID-59">https://issues.jboss.org/browse/AGDROID-59</a>       |
| 287 | AGDROID-7     | Passos, did you work on this at some point?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AGDROID-7">https://issues.jboss.org/browse/AGDROID-7</a>         |
| 288 | AGCORDOVA-158 | I've been doing some testing: If the app is in foreground, it doesn't appear as open, shouldn't it appear as open as the message is received? If the app is in background it works fine in both iOS and Android. If the app is closed: - It doesn't appear as open for Android. - It can appear as 2 messages open for iOS instead of 1                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AGCORDOVA-158">https://issues.jboss.org/browse/AGCORDOVA-158</a> |
| 289 | AGCORDOVA-136 | Hi ! all of you, I am tested org.jboss.aerogear.cordova.push pluign . this plugin is deprecated with cordova 6.0.0 version right now. This is working fine with till cordova version 5.x , I request to aerogear lead developer to update this plugin for further use. Thanks.                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AGCORDOVA-136">https://issues.jboss.org/browse/AGCORDOVA-136</a> |
| 290 | AGCORDOVA-134 | [~edewit] [~mwessendorf] [~supittma] adding above code resolves android errors however there are iOS errors as well. Please see <a href="https://issues.jboss.org/browse/AGCORDOVA-146">https://issues.jboss.org/browse/AGCORDOVA-146</a> issue for iOS error logs. Is there any way you guys can take a look at this?                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AGCORDOVA-134">https://issues.jboss.org/browse/AGCORDOVA-134</a> |
| 291 | AGCORDOVA-50  | 3) I'm not sure, but I don't think you must have this, on the ios shoot project it's also not there 4) why should these be remove? Isn't it nice to have an example of how to configure it? 5) when you add android platform you get the information about building via gradle in your terminal I must admit I rather have that we didn't require these additional setup steps, but android and ios libraries are not easy to consume in a cordova project.                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AGCORDOVA-50">https://issues.jboss.org/browse/AGCORDOVA-50</a>   |
| 292 | AGCORDOVA-50  | 3) I am not sure if it is required, but Android version of this application has it. 4) Well I guess that this client Ids belong to somebody on our team. What if somebody just copies the project, build their app on top of it and release it with this Ids? This doesn't concern us? And what about the developer? 5) I know and I think it is not sufficient, because you make the first steps once, but you might want to build the application several times and later forget how to do it. I think what we should strive for is a great developer's experience and easy of use of the examples. Complete and clear documentation is necessary to do that. | <a href="https://issues.jboss.org/browse/AGCORDOVA-50">https://issues.jboss.org/browse/AGCORDOVA-50</a>   |
| 293 | AGCORDOVA-50  | I am reopening this, because there are still some problems. Ad 2) Facebook worked fine. But Google & Keycloak buttons still don't work. This time, instead of crashing, their output is alert window with "java.lang.reflect.InvocationTargetException". Does it work for you, am I doing something wrong? With that in mind I just realized that there is no information about the configuration of oauth providers in README. There should probably be a link to Android version which covers setting up the accounts, but it should also mention what changes have to be made in app.js and controllers.js.                                                  | <a href="https://issues.jboss.org/browse/AGCORDOVA-50">https://issues.jboss.org/browse/AGCORDOVA-50</a>   |
| 294 | AGCORDOVA-50  | have you added the extra dependencies? e.g. compile 'com.google.code.gson:gson:1.7.2' compile 'com.google.guava:guava:18.0' I'll add some more to the readme                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AGCORDOVA-50">https://issues.jboss.org/browse/AGCORDOVA-50</a>   |
| 295 | AGCORDOVA-50  | [~pstribny] regarding "information about the configuration of oauth providers in README", can you file a new/different JIRA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AGCORDOVA-50">https://issues.jboss.org/browse/AGCORDOVA-50</a>   |
| 296 | AGCORDOVA-50  | have you updated the plugin with the new version 1.0.1?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AGCORDOVA-50">https://issues.jboss.org/browse/AGCORDOVA-50</a>   |
| 297 | AGCORDOVA-50  | [~pstribny] [~edewit] since the error is slightly different (This time, instead of crashing, their output is alert window with "java.lang.reflect.InvocationTargetException".) should we get a new JIRA for this as well?                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AGCORDOVA-50">https://issues.jboss.org/browse/AGCORDOVA-50</a>   |
| 298 | AGCORDOVA-50  | I've updated the 1.0.1 release with a fix for this, seems I should have tested all the settings not just google. Could you give it another go?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AGCORDOVA-50">https://issues.jboss.org/browse/AGCORDOVA-50</a>   |
| 299 | AGCORDOVA-50  | I deleted the platforms & plugins folder and built the application again and it behaves in the same way. Should I also clear/delete some dependencies?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AGCORDOVA-50">https://issues.jboss.org/browse/AGCORDOVA-50</a>   |
| 300 | AGCORDOVA-35  | what's the status here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AGCORDOVA-35">https://issues.jboss.org/browse/AGCORDOVA-35</a>   |
| 301 | AGCORDOVA-21  | [~edewit] Since the related PR has been merged to a branch, due to the fact that some more work is needed, should the Fix Version be updated to push-1.0.1? Let's not make that part of the initial 1.0.0 release                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AGCORDOVA-21">https://issues.jboss.org/browse/AGCORDOVA-21</a>   |
| 302 | AGCORDOVA-21  | what should be the fix version for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AGCORDOVA-21">https://issues.jboss.org/browse/AGCORDOVA-21</a>   |

| #   | Requirement  | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | URL                                                                                                     |
|-----|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| 303 | AGDIGGER-113 | This is a bit problematic... {{zipalign}} is versioned under {{build-tools}} directory. e.g. on the current Android slave container I checked, it is here: {{/opt/android-sdk-linux/build-tools/25.0.3}} This means, we have to know what version of the build tools are available in the Android SDK container that we mount to Android slave container. [~Irossett] [~weil] what do you think of creating a symlink {{LATEST}} in {{build-tools}} directory in Android SDK container? This should be easy to do with androidctl. However, this brings 2 questions to my mind: 1. Is it ok to use latest build tools all the time, at least in Jenkins Android Signing plugin? 2. Would symlinks in the Android slave container? Note that symlink will be created in Android SDK container, not slave. I cannot think of any other solution except defining the version as an env var in Android slave container's deployment config?                                                                                                              | <a href="https://issues.iboss.org/browse/AGDIGGER-113">https://issues.iboss.org/browse/AGDIGGER-113</a> |
| 304 | AGDIGGER-113 | Shouldn't we just set the "zipalignPath" parameter in the jenkinsfile as the default/recommended version? Users/developers/customers can change it as they want. I think that keeping it as a string with the zipalign path makes it easy and obvious for someone to change it rather than hide it in an env var.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGDIGGER-113">https://issues.iboss.org/browse/AGDIGGER-113</a> |
| 305 | AGDIGGER-108 | [~weil] Are you happy to close this one. Is the installation of the instance on OSM4 sufficient to consider this one verified?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGDIGGER-108">https://issues.iboss.org/browse/AGDIGGER-108</a> |
| 306 | AGDIGGER-108 | [~lfitzgerald] Yeah, I think so. Does the groovy scripts that updates the templates and setup proxy works fine? I am asking because we are seeing some issues with the jenkins-cli in different versions of Jenkins. To make sure, you need to remove the jenkins-cli.jar from the local dir (like /tmp) before running the playbooks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGDIGGER-108">https://issues.iboss.org/browse/AGDIGGER-108</a> |
| 307 | AGDIGGER-99  | [~wtrocki] thanks for the investigation. really good work! It seems that the integration is easier than I thought. 2 questions: 1. {{## Monitor filesystem to check what files were changed}} how easy is it to do this? This is an awesome idea! We can remove created files afterwards. 2. "slaves on demand" is awesome, but I am worried that the queuing could be problematic. We don't want to have our same machine to have 10s of slaves running at the same time and building things. It might be bad in terms of performance and memory. Any experience with that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AGDIGGER-99">https://issues.iboss.org/browse/AGDIGGER-99</a>   |
| 308 | AGDIGGER-96  | Template should support one slave. More slaves can be added using gui (which is no more complicated than environment variables in template) We should document this process. Documentation ticket is here: <a href="https://issues.iboss.org/browse/AGDIGGER-69">https://issues.iboss.org/browse/AGDIGGER-69</a> Can we close this as duplicate and provide more useful information to description. ??We reference the node name (slave name) in Jenkinsfile. But ideally, Jenkins should pick any OSX slave which is not busy. Perhaps: <a href="https://wiki.jenkins-ci.org/display/JENKINS/Compound+Slaves??">https://wiki.jenkins-ci.org/display/JENKINS/Compound+Slaves??</a> That's really good comment. We should make sure that this is documented and tested. We may just say that users would need to specify slave name in pipeline definition or.. loadbalance using mentioned plugin. For now it's best to keep it simple.                                                                                                              | <a href="https://issues.iboss.org/browse/AGDIGGER-96">https://issues.iboss.org/browse/AGDIGGER-96</a>   |
| 309 | AGDIGGER-88  | [~luigizuccarelli] - I would say that for this ticket we do not need to provide any runnable scripts. Best to figure out how we can do this operation on one node (for example using labels) to feed android SDK to the build process. Once we would know the best way to do it we can finish this as part of ansible epic. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGDIGGER-88">https://issues.iboss.org/browse/AGDIGGER-88</a>   |
| 310 | AGDIGGER-87  | What's the status here ??                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGDIGGER-87">https://issues.iboss.org/browse/AGDIGGER-87</a>   |
| 311 | AGDIGGER-80  | How to prepare sandbox definiton files: * Create a sandbox file which traces things: {code} ; file logall.sb (version 1) (debug all) (trace "trace.sb") {code} * Use the file {code} sandbox-exec -f logall.sb xcodebuild arg1 arg2 {code} * Open trace.sb, remove duplicate lines in it * Optimize and normalize things in it * It makes sense to change many {{(path)}} entries with {{(literal)}} entries * Use the new sandbox file and see if the same command works! The way that tracing works is, * it logs only the things that are not normally allowed. * everything is allowed So, you can enable tracing again in the optimized file and in that case you will only see the requests that are not satisfied.                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGDIGGER-80">https://issues.iboss.org/browse/AGDIGGER-80</a>   |
| 312 | AGDIGGER-79  | [~aliok2] Why don't we make "PLATFORM" parameter type - "Choice parameter" and add just valid choices android/ios ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGDIGGER-79">https://issues.iboss.org/browse/AGDIGGER-79</a>   |
| 313 | AGDIGGER-73  | [~wtrocki] Not really sure what you mean. It looks like the DiggerClient is supporting passing the branch info when creating a Jenkins job. Are you saying it is not working? Or did you mean that the we need to integrate the DiggerClient with the platform?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/AGDIGGER-73">https://issues.iboss.org/browse/AGDIGGER-73</a>   |
| 314 | AGDIGGER-71  | [~wtrocki] Not really sure what's this ticket is about. What "client" do you mean here? RHMAP or the digkins Java client?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGDIGGER-71">https://issues.iboss.org/browse/AGDIGGER-71</a>   |
| 315 | AGDIGGER-70  | [~wtrocki] how does this relate to RHMAP-11958 ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGDIGGER-70">https://issues.iboss.org/browse/AGDIGGER-70</a>   |
| 316 | AGDIGGER-70  | what permissions would those normal users have ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGDIGGER-70">https://issues.iboss.org/browse/AGDIGGER-70</a>   |
| 317 | AGDIGGER-63  | ??tell build use "Android 24" image, based on this setting:?? How you see this happening? I would see it as node("Android 24") so you need to specify this as target in your jenkinsfile and do not use actual setting. If we want to extend this idea we can have some function called from Jenkinsfile: {code} var nodeName = "android" + readAndroidVersionFromBuildGradle(); node(nodeName) { ... } {code} ??Perhaps this can be added as a plugin? As a way to tell the kubernetes plugin "launch Android-24 image"?? Kubernetes plugin would have everything for this already. We planning to wrap s2i process into ansible scripts. When images are created then we would need to change kubernetesPodTemplates, but this would happen just once (or better to say every time someone would run playbook). I my missing some context here so correct me if I'm wrong but I think that having plugin here would just complicate things. Let's add this to the topic list for technical discussions and create some additional jiras if needed. | <a href="https://issues.iboss.org/browse/AGDIGGER-63">https://issues.iboss.org/browse/AGDIGGER-63</a>   |
| 318 | AGDIGGER-63  | [~wtrocki] Ok tried the digger-node , the document needs to be updated a bit - It does not show the steps to install node and run it locally - I know what todo but the community will be confused. Also got this error node bin/digkins.js login <a href="https://jenkins-jenkins.192.168.2.194.xip.io">https://jenkins-jenkins.192.168.2.194.xip.io</a> admin xxxxx info: Cannot connect to jenkins instance Error: self signed certificate in certificate_chain at Error (native) at TLSocket.<anonymous> (_tls_wrap.js:1022:38) at emitNone (events.js:67:13) at TLSocket.emit (events.js:166:7) at TLSocket._init.ssl.onclienthello.ssl.oncertcb.TLSocket._finishInit (_tls_wrap.js:586:8) at TLSWrap.ssl.onclienthello.ssl.oncertcb.ssl.onnewsession.ssl.onhandshakedone (_tls_wrap.js:428:38)                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGDIGGER-63">https://issues.iboss.org/browse/AGDIGGER-63</a>   |
| 319 | AGDIGGER-58  | [~aliok2] <a href="https://github.com/aerogear/digger-java/pull/1">https://github.com/aerogear/digger-java/pull/1</a> PR created. Can you review that? I merged that by mistake, any comments would be resolved as different PR .)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGDIGGER-58">https://issues.iboss.org/browse/AGDIGGER-58</a>   |
| 320 | AGDIGGER-41  | [~wtrocki] Could you please write a summary of what we've talked during the backlog refinement meeting?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGDIGGER-41">https://issues.iboss.org/browse/AGDIGGER-41</a>   |
| 321 | AGDIGGER-33  | [~wtrocki] would love to see some instructions with bunch of commands somewhere in our repo? mind preparing one? think about community as well.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/AGDIGGER-33">https://issues.iboss.org/browse/AGDIGGER-33</a>   |
| 322 | AGDIGGER-22  | Is there any reason why ant is crossed out? While there is no ant template at this point, can we ensure there are no Ant based apps currently at customers side? AIUI this would be breaking backwards compatibility with 3.15.0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGDIGGER-22">https://issues.iboss.org/browse/AGDIGGER-22</a>   |

| 323 | AGDIGGER-22 | Q: Where to have the debug keystore? In Openshift? Outside Openshift? In Docker image? etc [~mwessendorf] That's sounds like separate issue for me. Can I create this?<br>A: It is part of the build. We need to provide the debug keystore and users won't provide their own (for MVP) [~mwessendorf] IMHO: That's platform integration part. I have couple ideas for the logic here, but basically we can copy solution we using in old digger.                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGDIGGER-22">https://issues.iboss.org/browse/AGDIGGER-22</a> |
| 324 | AGDIGGER-20 | [~luigiuccarelli] I now have my Openshift cluster working properly. Gave a try, although we now have other pipelines. Same result with you, all good!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGDIGGER-20">https://issues.iboss.org/browse/AGDIGGER-20</a> |
| 325 | AGIOS-439   | is this any longer needed - given that iOS9 is around ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AGIOS-439">https://issues.iboss.org/browse/AGIOS-439</a>     |
| 326 | AGIOS-427   | Why are we removing <a href="https://github.com/aerogear/aerogear-ios-sync-client">https://github.com/aerogear/aerogear-ios-sync-client</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGIOS-427">https://issues.iboss.org/browse/AGIOS-427</a>     |
| 327 | AGIOS-394   | This is the OTP demo, right? <a href="https://github.com/aerogear/aerogear-ios-cookbook/tree/master/Two-Factor">https://github.com/aerogear/aerogear-ios-cookbook/tree/master/Two-Factor</a> It's updated to Swift 3 So, can we close this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGIOS-394">https://issues.iboss.org/browse/AGIOS-394</a>     |
| 328 | AGIOS-347   | how about moiving to future?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGIOS-347">https://issues.iboss.org/browse/AGIOS-347</a>     |
| 329 | AGIOS-343   | Do we really need SockJS ? I'd think that WSS would be good enough here                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AGIOS-343">https://issues.iboss.org/browse/AGIOS-343</a>     |
| 330 | AGIOS-342   | Should the label _sync-1.0.0.alpha.1_ be removed for this task. I don't think this will be included for 1.0.0.alpha.1?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGIOS-342">https://issues.iboss.org/browse/AGIOS-342</a>     |
| 331 | AGIOS-277   | Good morning [~corinnkrych], I couldn't find any good reference on it. Is the section 4.4 from the RFC what do you have in mind?<br><a href="http://tools.ietf.org/html/rfc6749#section-4.4">http://tools.ietf.org/html/rfc6749#section-4.4</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGIOS-277">https://issues.iboss.org/browse/AGIOS-277</a>     |
| 332 | AGIOS-271   | Others, like Google ( <a href="http://blog.chromium.org/2015/02/hello-http2-goodbye-spy-http-is_9.html">http://blog.chromium.org/2015/02/hello-http2-goodbye-spy-http-is_9.html</a> ) or Jetty are deprecating their SPDY support, in fav. of HTTP/2. Perhaps we should close this one? Or is it really worth it ?                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGIOS-271">https://issues.iboss.org/browse/AGIOS-271</a>     |
| 333 | AGIOS-255   | Once this is there, does that mean the 2.x version of the push/registration SDK can be based on aerogear-ios-http? (since that requires http basic to work)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGIOS-255">https://issues.iboss.org/browse/AGIOS-255</a>     |
| 334 | AGIOS-231   | Initial version is: <a href="https://github.com/corinnkrych/aerogear-ios-oauth2">https://github.com/corinnkrych/aerogear-ios-oauth2</a> could you move it to aerogear organization? it contains OAuth2: - request authz code - request access token - refresh token - revoke AccountManger for fluid integration and storage of tokens is tracked in this JIRA <a href="https://issues.iboss.org/browse/AGIOS-253">https://issues.iboss.org/browse/AGIOS-253</a>                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGIOS-231">https://issues.iboss.org/browse/AGIOS-231</a>     |
| 335 | AGIOS-150   | Thanks Corinne. From the description i understand that you are looking for an option to allow uploading a new file to Google Drive and also some way to demo modify/update (i.e. could be just as simple as updating the file title) an existing file. Is my understanding correct? Regards, Yagyesh                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGIOS-150">https://issues.iboss.org/browse/AGIOS-150</a>     |
| 336 | AGIOS-150   | I have started working on this & hopefully by today i could have a PR ready. In the meantime, would it be possible to get this ticket assigned to me. I tried, but looks like i dont have permissions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGIOS-150">https://issues.iboss.org/browse/AGIOS-150</a>     |
| 337 | AGIOS-34    | We already have a branch, that does update the requirements to iOS5 and adds AFN 1.2.1 (as a matter of fact) <a href="https://github.com/aerogear/aerogear-ios/tree/matzew_afn121">https://github.com/aerogear/aerogear-ios/tree/matzew_afn121</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGIOS-34">https://issues.iboss.org/browse/AGIOS-34</a>       |
| 338 | AGIOS-17    | [~corinnkrych] Let's lower the priority for this one. IMO all other 2.2.0 items are way more important. Ok?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGIOS-17">https://issues.iboss.org/browse/AGIOS-17</a>       |
| 339 | AGIOS-11    | we could do it for 1.2.0 as well;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGIOS-11">https://issues.iboss.org/browse/AGIOS-11</a>       |
| 340 | AGIOS-6     | [~abstract] do you recall why we want/need such a parameter ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGIOS-6">https://issues.iboss.org/browse/AGIOS-6</a>         |
| 341 | AGIOS-6     | It's ok :- ) We were not sure as well - let's keep it ... perhaps someday... there is need for it :- )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGIOS-6">https://issues.iboss.org/browse/AGIOS-6</a>         |
| 342 | AGJS-272    | This is now available on master: <a href="https://github.com/aerogear/aerogear-sync-server/tree/master/distribution">https://github.com/aerogear/aerogear-sync-server/tree/master/distribution</a> When _mvn package_ is run the produces jar will be in the format: {noformat} target/aerogear-sync-server-version.jar {noformat} How do you want to use this. Do we need to stick the produced jar somewhere? This is actually not part of the build at the moment (is a manual task) but perhaps it should so you can access snapshots. Let me know what you need and we will sort it out.                                                                                                                   | <a href="https://issues.iboss.org/browse/AGJS-272">https://issues.iboss.org/browse/AGJS-272</a>       |
| 343 | AGJS-261    | the JIRA says PR sent, but the PR was closed. Should it go back to "open" ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGJS-261">https://issues.iboss.org/browse/AGJS-261</a>       |
| 344 | AGJS-260    | [~lucas.holmquist] the JIRA says PR sent, but the PR was closed. Should it go back to "open" ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGJS-260">https://issues.iboss.org/browse/AGJS-260</a>       |
| 345 | AGJS-255    | [~lucas.holmquist] I was digging into a several repositories and was wondering about where the OAuth2 library is located today. Is here <a href="https://github.com/holmquist/ag-google-drive">https://github.com/holmquist/ag-google-drive</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGJS-255">https://issues.iboss.org/browse/AGJS-255</a>       |
| 346 | AGJS-237    | Notifier's API's are event based, so Promises would not be recommend here                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGJS-237">https://issues.iboss.org/browse/AGJS-237</a>       |
| 347 | AGJS-189    | I believe this is comment to AGJS-211 ^, am I right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGJS-189">https://issues.iboss.org/browse/AGJS-189</a>       |
| 348 | AGJS-175    | By dependencies you mean: {code} Pipeline->depends-on-> Ajax then watch/ajax --> run ajax, pipeline, ...)? {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGJS-175">https://issues.iboss.org/browse/AGJS-175</a>       |
| 349 | AGJS-143    | [~lucas.holmquist] do we have any use cases for that? Why current solution isn't sufficient?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGJS-143">https://issues.iboss.org/browse/AGJS-143</a>       |

I have no permissions to drop it :- )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGJS-137">https://issues.iboss.org/browse/AGJS-137</a>       |
| 351 | AGJS-64     | Have a suggestion parked in this [branch] <a href="https://github.com/danbev/aerogear-js/tree/AGJS-64-subprotocols">https://github.com/danbev/aerogear-js/tree/AGJS-64-subprotocols</a> until the SockJS [task] <a href="https://github.com/sockjs/sockjs-client/issues/130">https://github.com/sockjs/sockjs-client/issues/130</a> is completed.                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGJS-64">https://issues.iboss.org/browse/AGJS-64</a>         |
| 352 | AGJS-47     | The QUnit tests reside in the integration repo: <a href="https://github.com/tolis-e/aerogear-js-integration">https://github.com/tolis-e/aerogear-js-integration</a> Execute ./servers/activemqtest/server.sh and then open the tests/notifier/mqttws.html file in a browser. The problem is that it doesn't work in phantomjs for some reason after updating to activemq-5.9.0 (version which supports MQTT). When using the debug mode I can see: phantomjs console Unexpected response code: 400. Looks like the issue is probably related to <a href="https://groups.google.com/forum/#!msg/phantomjs/p4scrV2GwB4/c--SS5owlZUI">https://groups.google.com/forum/#!msg/phantomjs/p4scrV2GwB4/c--SS5owlZUI</a> | <a href="https://issues.iboss.org/browse/AGJS-47">https://issues.iboss.org/browse/AGJS-47</a>         |
| 353 | AGJS-41     | Hey [~sienaluke], would you mind to review this beast? :- )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGJS-41">https://issues.iboss.org/browse/AGJS-41</a>         |
| 354 | AGJS-22     | So, is there a generic way to wrap form data as JSON for PUT/POST to a REST endpoint?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGJS-22">https://issues.iboss.org/browse/AGJS-22</a>         |
| 355 | AGJS-17     | what exactly would it be confused with? If you downloaded the sources and playing around with them, then maybe there would be some confusion since the folder that holds the different types is named adapter. But for a regular developer who is just using the lib, i think type is fine. I think the pay off of this change wouldn't equal the amount of time for deprecation, refactor, etc..                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGJS-17">https://issues.iboss.org/browse/AGJS-17</a>         |
| 356 | AGJS-8      | [~lucas.holmquist] Any update on this? Will it make it in for 1.1 or should we push it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AGJS-8">https://issues.iboss.org/browse/AGJS-8</a>           |
| 357 | AGJS-5      | [~abstract] Any objection to pushing this to 1.2.0? I would like to code freeze 1.1.0 so we can complete tests and docs and release 1.1.0 this week as planned.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGJS-5">https://issues.iboss.org/browse/AGJS-5</a>           |
| 358 | AGPUSH-2121 | [~dimitraz] AGPUSH-2121, AGPUSH-2132 and AGPUSH-2136 look like one task to me. Can you take a look, sum them up in one task and close the others?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGPUSH-2121">https://issues.iboss.org/browse/AGPUSH-2121</a> |

| 359 | AGPUSH-2114 | While we are still researching the CDI model, does it make sense to have any unit tests other than a simple send and receive? This is what I have currently:<br><a href="https://github.com/dimitraz/aerogear-unifiedpush-server/commit/ff104bb98c37876e877b48f0e86f64ef7d82d91d">https://github.com/dimitraz/aerogear-unifiedpush-server/commit/ff104bb98c37876e877b48f0e86f64ef7d82d91d</a> Based on Matthias' 'SimpleTest' class:<br><a href="https://github.com/matzew/kafka-cdi/blob/master/src/test/java/net/wessendorff/kafka/cdi/SimpleTest.java#L83-L88">https://github.com/matzew/kafka-cdi/blob/master/src/test/java/net/wessendorff/kafka/cdi/SimpleTest.java#L83-L88</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGPUSH-2114">https://issues.iboss.org/browse/AGPUSH-2114</a> |
| 360 | AGPUSH-2111 | [~mwessendorf], can you say when it is likely that we start working on this topic?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGPUSH-2111">https://issues.iboss.org/browse/AGPUSH-2111</a> |
| 361 | AGPUSH-2108 | Hi [~ppatiern], can I message you on IRC if thats ok? What channels are you on?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGPUSH-2108">https://issues.iboss.org/browse/AGPUSH-2108</a> |
| 362 | AGPUSH-2105 | [~mwessendorf] What do you think about [spring-kafka] <a href="https://projects.spring.io/spring-kafka/">https://projects.spring.io/spring-kafka/</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGPUSH-2105">https://issues.iboss.org/browse/AGPUSH-2105</a> |
| 363 | AGPUSH-2105 | [~mwessendorf], I have explored the library. Do you have any concrete ideas for extensions you want to add? I think for now and taking into consideration what exactly we have in Kafka-UPS, the library is enough to be used. We can start using the library for integration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AGPUSH-2105">https://issues.iboss.org/browse/AGPUSH-2105</a> |
| 364 | AGPUSH-2103 | After the first consumer is ready, what exactly did u mean by this task? I think the replacement of the counter so that it is based only on Kafka is already done in [[AGPUSH-2102]] <a href="https://issues.iboss.org/browse/AGPUSH-2102">https://issues.iboss.org/browse/AGPUSH-2102</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGPUSH-2103">https://issues.iboss.org/browse/AGPUSH-2103</a> |
| 365 | AGPUSH-2102 | The task is ready [github branch] <a href="https://github.com/polinankoleva/aerogear-unifiedpush-server/tree/installation_metrics_consumer">https://github.com/polinankoleva/aerogear-unifiedpush-server/tree/installation_metrics_consumer</a> . I am waiting for your feedback to make a pull request. Is the implementation what did you expect?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-2102">https://issues.iboss.org/browse/AGPUSH-2102</a> |
| 366 | AGPUSH-2101 | I see that in the updateAnalytics method there's a query to the database and if pushMessageInformation is not null it means the app has been opened. I'm a bit confused as to how to do this without querying the DB. Is it correct to say that if pushMessageId is not null then this is another way to tell if the app has been opened?<br>[~mziccardi] [~mwessendorf]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGPUSH-2101">https://issues.iboss.org/browse/AGPUSH-2101</a> |
| 367 | AGPUSH-2096 | Hi [~mwessendorf] I saw this list of bugs and started resolve. I update this file to version 3.2. Among the changes, the main difference is the best way to use the environment variables, since the version 2 of docker-compose it is not a good practice share the environment variables between services, so I created an .env file that has the variables needed to start the services. I do not know what do you prefer, send the pull request or attach the files here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AGPUSH-2096">https://issues.iboss.org/browse/AGPUSH-2096</a> |
| 368 | AGPUSH-2095 | Hi [~mwessendorf], sorry for the time away. I've seen this task and created an endpoint /rest/sys/info/manifest. I resolved it, reading the manifest file and displaying its information. What do you think? The result looks like this: <a href="#">!manifest-details-maven.png thumbnail!</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGPUSH-2095">https://issues.iboss.org/browse/AGPUSH-2095</a> |

What is the url for the generated docs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AGPUSH-2008">https://issues.jboss.org/browse/AGPUSH-2008</a> |
| 376 | AGPUSH-1988 | A working installation can be found at <a href="http://52.51.162.165:8080/">http://52.51.162.165:8080/</a> What we have done so far: * Installed HBASE on 52.51.162.165 * Installed Tomcat on 52.51.162.165 * Installed pinpoint web and pinpoint collector on the newly installed tomcat * Installed the pinpoint agent into the JBoss instance of the eteam cluster * Configured pinpoint * Made some test to check the pinpoint outcomes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AGPUSH-1988">https://issues.jboss.org/browse/AGPUSH-1988</a> |
| 377 | AGPUSH-1987 | <p>[~mzicardi] found a command tool named [Artillery <a href="https://artillery.io">https://artillery.io</a>] that read a YAML file with some test configuration, for example "create 50 request every second during 1 hour". It's actually very easy and faster than creating a node/java client (it uses UPS's REST API). It also generates some reports. What do you think [~mwessendorf] EDIT: This was to be an example of 10k requests every second during 1 minute but it has gone too bad, UPS is completely down... EDIT 2: This is a test with 100 request every second during 1 minute: {noformat} Complete report @ 2016-12-20T12:24:13.046Z Scenarios launched: 6000 Scenarios completed: 4765 Requests completed: 4765 RPS sent: 48.03 Request latency: min: 487.8 max: 90958.1 median: 20366.8 p95: 33191 p99: 33426.1 Scenario duration: min: 526.5 max: 90997.2 median: 20385.2 p95: 33205.6 p99: 33459.9 Scenario counts: 0: 6000 (125.918%) Codes: 202: 4764 500: 1 Errors: ECONNRESET: 1235 {noformat}</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AGPUSH-1987">https://issues.jboss.org/browse/AGPUSH-1987</a> |
| 378 | AGPUSH-1979 | An idea from [~jusanche]: {quote} If we switch to FCM for iOS too, we shouldn't need to ask for the certificates ourselves anymore, but document that they have to provide them on firebase console, and the same Sender ID and Server Key/token will work for both iOS and Android, so it might simplify the configuration on our part. {quote} I like this idea, and implementation could be quick, since at the end it's really just an "Android Variant". Perhaps we explicitly call it out FCM/APN mapper ? To avoid confusion w/ the pure Android Variant. Or.... we just give them example doc, how to upload the apple things, to use an Android variant. Heck, we should rename it "FCM variant", no ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AGPUSH-1979">https://issues.jboss.org/browse/AGPUSH-1979</a> |
| 379 | AGPUSH-1979 | It seems that the current code can support FCM iOS. Do we have any APN Cert to test it on iOS? This document shows how to push notification to iOS by FCM: <a href="https://firebase.google.com/docs/cloud-messaging/ios/certs">https://firebase.google.com/docs/cloud-messaging/ios/certs</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AGPUSH-1979">https://issues.jboss.org/browse/AGPUSH-1979</a> |
| 380 | AGPUSH-1978 | [~jmesnil] Hi Jeff, does the above ring a bell, or is there something we can improve in our HornetQ usage, generally?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AGPUSH-1978">https://issues.jboss.org/browse/AGPUSH-1978</a> |
| 381 | AGPUSH-1978 | [~kpiwko][~mwessendorf] Looking at PagingManagerImpl and JournalImpl, the objects which got really huge are maps which contain in-flight transactions. Looks like that something started to fail transactions so HornetQ could not finish them. New and new transactions were started but they failed as well (most likely) and this map got really huge causing OOME (OutOfMemoryError). As HornetQ is storing those transactions in file journal as well then when it tries to load journal after restart then new OOME can be thrown as it's putting all "unfinished" transactions to this map again during initialization. By default there is 5 minute timeout for those transactions and then they're removed. But in this case it seems that memory got full before those transactions could be timeouted. At this moment this seems to be a symptom but not the cause. Any idea why the transactions are failing? What are the first error messages in server.log? [~mwessendorf] hornetq-jms.xml just defines which queue/topics should be deployed together with the deployment. I cannot find configuration of the server where this deployment is deployed. Could you help? Is there described what the deployment is doing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AGPUSH-1978">https://issues.jboss.org/browse/AGPUSH-1978</a> |
| 382 | AGPUSH-1978 | [~mwessendorf] Thanks! It's pretty default configuration. Nothing interesting there. Could you share with me the heap dump so I can take the look? I would like to take a look at hornetq journal? By default it's located in \$JBoss_HOME/standalone/data/ directory. You can send me the the whole data directory. I'm interested in following directories messagingbindings, messagingjournal, messaginglargemessages, messagingpaging.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AGPUSH-1978">https://issues.jboss.org/browse/AGPUSH-1978</a> |
| 383 | AGPUSH-1951 | it was resolved as done, is there any produced artifact ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AGPUSH-1951">https://issues.jboss.org/browse/AGPUSH-1951</a> |

| #   | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | URL                                                                                                   |

| 384 | AGPUSH-1951 | [~mwessendorf] This was just to track the time spent on looking into using something like seneca or to use docker & openshift. I had a look at both and decided to use openshift. I went through it with my project supervisor and Leigh also put me on to a couple of graduates who used microservices last year in their college projects to discuss my approach. I plan to break up what I have into the following services: push configuration service, lead service & sales agent service. From studying the code and how it is currently it looks like I can separate out the functionality for each one to be its own service, and seems like the most obvious thing to do. I should have really ran it by you also to get your input, apologies. Does this plan sound ok with you? I have extracted the push configuration service and plan to do the others in the next sprint.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGPUSH-1951">https://issues.iboss.org/browse/AGPUSH-1951</a> |
| 385 | AGPUSH-1898 | can you do an "ls -la" in the deployments folder and paste the result here ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGPUSH-1898">https://issues.iboss.org/browse/AGPUSH-1898</a> |
| 386 | AGPUSH-1898 | In your Apache log I see "Token audience doesn't match domain. Token issuer is http://URL/auth/realms/aerogear, but URL from configuration is https://URL/auth/realms/aerogear", have you changed something around httpS ? Basically keycloak does not accept the token because it has not the same domain origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGPUSH-1898">https://issues.iboss.org/browse/AGPUSH-1898</a> |
| 387 | AGPUSH-1892 | Is it possible, that you use a version that has FCM support already ? Becuase there the Android receivers are not correct :-/                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGPUSH-1892">https://issues.iboss.org/browse/AGPUSH-1892</a> |

Or where ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-1605">https://issues.iboss.org/browse/AGPUSH-1605</a> |
| 389 | AGPUSH-1604 | That's awesome! Mind giving it a shot? The snippets are located in here: * https://github.com/aerogear/aerogear-unifiedpush-server/tree/master/admin-ui/app/snippets/register-device While the related code for rendering is here: * https://github.com/aerogear/aerogear-unifiedpush-server/blob/master/admin-ui/app/scripts/directives.js * https://github.com/aerogear/aerogear-unifiedpush-server/blob/master/admin-ui/app/directives/ups-client-snippets.html Do you want this is a 1.1.3 release? Or do you think the 1.2.0 series is "good enough" ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGPUSH-1604">https://issues.iboss.org/browse/AGPUSH-1604</a> |
| 390 | AGPUSH-1603 | [~mwessendorf] Looking at the PHP sender, it looks like there aren't any code changes needed. The index.php page can have priority keys added to the message object manually and that will get passed correctly. Can you confirm?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGPUSH-1603">https://issues.iboss.org/browse/AGPUSH-1603</a> |
| 391 | AGPUSH-1600 | [~mwessendorf] I just build everything from head and gave it a go. UPS accepted the token and sent a message no problem.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGPUSH-1600">https://issues.iboss.org/browse/AGPUSH-1600</a> |
| 392 | AGPUSH-1596 | Matthias - what about OpenShit Cartridges ? Do they get updated with this issue resolved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-1596">https://issues.iboss.org/browse/AGPUSH-1596</a> |
| 393 | AGPUSH-1559 | [~mwessendorf] This setup assumes the databases inside kubernets. How could I tweak the setup so that: UPS_DB and KC_DB are for instance inside openstack?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGPUSH-1559">https://issues.iboss.org/browse/AGPUSH-1559</a> |

| 395 | AGPUSH-1538 | Alexandre, is this issue also present with the 1.1.0.Final release? We did put a bit of work into the migrator                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGPUSH-1538">https://issues.iboss.org/browse/AGPUSH-1538</a> |
| 396 | AGPUSH-1538 | Nop, I didn't test it. I found it on production environment (1.0.3) . I did not install 1.1.0 because you found some critical bugs on the release stage. Is it safe to move to 1.1.0 now? Can I migrate from 1.0.3 to 1.1.0?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGPUSH-1538">https://issues.iboss.org/browse/AGPUSH-1538</a> |
| 397 | AGPUSH-1538 | we did restage the 1.1.0.Final, after those bug fixes But also now in the middle of 1.1.1 :-> So, that should be out in a few weeks too                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGPUSH-1538">https://issues.iboss.org/browse/AGPUSH-1538</a> |

| #   | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | URL                                                                                                   |

| 398 | AGPUSH-1536 | From the mailing list : "Can I suggest that we have a standard name for what this key is? The docs refer to 'Client ID', 'Server Key' and 'Google Cloud Messaging Key' "In the Wizard after you create a PushApplication, click the Add Variant button and fill out the Android options. You will want to use the Client ID and Project Number from the Google API Console in their appropriate fields:" "On the last screen we are finally get to see the actual value of the generated Server Key, which we will use later:" 'Google Cloud Messaging Key' is on the dialogue box that pops up when you create the Android Variant. I think that 'Client ID', 'Server Key' and 'Google Cloud Messaging Key' are actually all the same key, the one created in this attachment Are they all the same k,ey? "                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGPUSH-1536">https://issues.iboss.org/browse/AGPUSH-1536</a> |
| 399 | AGPUSH-1536 | [~mwessendorf] Makes sense. Does UPS already support FCM? Or is FCM backwards compatible and there was no change necessary?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AGPUSH-1536">https://issues.iboss.org/browse/AGPUSH-1536</a> |

| 401 | AGPUSH-1522 | We could do that depending on what the UPS is actually returning for it's response. [~evanshortiss] what version of the UPS are you using. and what node-sender version are you using.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AGPUSH-1522">https://issues.iboss.org/browse/AGPUSH-1522</a> |
| 402 | AGPUSH-1522 | Hi Guys, I missed this update. Here's the version: AeroGear UnifiedPush Server 1.0.3 and WildFly                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-1522">https://issues.iboss.org/browse/AGPUSH-1522</a> |
| 403 | AGPUSH-1522 | I see this has been resolved. Can you specify the new patched node module version and AeroGear server version that are compatible and will return rich error responses? Sure, will use a mailing list in the future. Can you specify which list specifically?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/AGPUSH-1522">https://issues.iboss.org/browse/AGPUSH-1522</a> |
| 404 | AGPUSH-1522 | Thanks, I still don't feel that the original issue has been resolved though; it can't be without updating the node module to take the AG server response and feeding that as JSON Object or String to the callback along with the status code. Or is there also a separate issue open for that besides this one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-1522">https://issues.iboss.org/browse/AGPUSH-1522</a> |
| 405 | AGPUSH-1496 | I'm been looking into this and trying to figure out why this is happening. The version of UPS in [bbe1c0e#diff-23e531d12489411024ea5c379be1d178R70] https://github.com/aerogear/aerogear-unifiedpush-server/commit/bbe1c0e80a4a5295a3c7cefe66f5e8cc07da66be#diff-23e531d12489411024ea5c379be1d178R70 is 1.1.0.Final-SNAPSHOT: {noformat} git show bbe1c0e:pom.xml {noformat} With the addition of the migrator we now have the requirement to create the data base schema using the [migrator] https://aerogear.org/docs/unifiedpush/ups_userguide/index/#schema and not have it automatically created by hibernate upon application startup. {noformat} ./bin/ups-migrator --logLevel=debug update {noformat} This would populate the database successfully with a clean database. Now, if we take checkout the commit above: {noformat} git co -b migrator-qe-issue bbe1c0e {noformat} Build and deploy against to the server (with a clean mysql database) will create the data base schema, but an incorrect one. Running the migrator against this database will error with the above reported error. At the time of the bbe1c0e commit, there was no migrator yet so letting hibernate create the database schema was the way to do it. Now that the migrator was introduced it should be used to generate the schema. One thought that I had is that you mentioned in the thread that you run an integration test with _runMigrator=false_. Depending on the version of UPS used it might be possible that it is creating the incorrect database schema {noformat} \$ ./gradlew --stacktrace :spacelift:test -Pwildfly8UpsFromSource -Pdatasource=mysql -PrunMigrator=false {noformat} I tried running this on my local machine but it fail but it looks like this is using _1.1.0-beta.3_ which does not contain the migrator. So this could indeed be the case that the schema is created upon application deployment instead of by the migrator. I'm also wondering about the version used to test. Should we not be using a later version to testa against?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AGPUSH-1496">https://issues.iboss.org/browse/AGPUSH-1496</a> |
| 406 | AGPUSH-1493 | We could still make topics work like the old categories, when we apply the alias 'filter' in UPS and then remove the devices that don't have specific alias. Then use the topic to send the message, that way we have the same behavior we used to have with the 'old' categories. How does that sound?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGPUSH-1493">https://issues.iboss.org/browse/AGPUSH-1493</a> |

| 407 | AGPUSH-1490 | [~fturizo] one potential reason behind this could be if the time on your desktop is out of sync with the Keycloak server. Is the Keycloak server on a separate machine? Can you check the date on your machine and the server and let me know what the difference is?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGPUSH-1490">https://issues.iboss.org/browse/AGPUSH-1490</a> |
| 408 | AGPUSH-1490 | Mmm, now that you mention it, the wildfly server and the UPS application are deployed in an AWS server located in the US. West Coast (GMT - 4) and i'm testing in Bogota (GMT - 5). Could this be a reason for this error?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGPUSH-1490">https://issues.iboss.org/browse/AGPUSH-1490</a> |
| 409 | AGPUSH-1490 | Yes, I think so - could you try to set your machine to the same time zone and make sure the time is in sync, then confirm if that fixes the issue? If so I'll figure out some fix for keycloak.js to deal with this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGPUSH-1490">https://issues.iboss.org/browse/AGPUSH-1490</a> |
| 410 | AGPUSH-1489 | The problem is that the protocolType for the windows variant is never set before we go to editing <a href="https://github.com/aerogear/aerogear-unifiedpush-server/blob/6ad62a16bbb9f838acc85c7c3511a0097c90b9f/admin-ui/app/scripts/services/variantModal.js#L70">https://github.com/aerogear/aerogear-unifiedpush-server/blob/6ad62a16bbb9f838acc85c7c3511a0097c90b9f/admin-ui/app/scripts/services/variantModal.js#L70</a> Looks like it's set only when we create a variant, but this info is lost after reload. [~Ifryc] Could you take a look ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGPUSH-1489">https://issues.iboss.org/browse/AGPUSH-1489</a> |
| 411 | AGPUSH-1486 | [~abstractj] [~sebastienblanc] does this somewhat security related ticket make sense for 1.2.0 ? Or should we do it later ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGPUSH-1486">https://issues.iboss.org/browse/AGPUSH-1486</a> |
| 412 | AGPUSH-1470 | [~abstractj] perhaps this could be something already for 1.2.0? Or would 2.0.0 be a more relaxed time-frame ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGPUSH-1470">https://issues.iboss.org/browse/AGPUSH-1470</a> |
| 413 | AGPUSH-1458 | What is the issue here? We could also use yaml instead of xml.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGPUSH-1458">https://issues.iboss.org/browse/AGPUSH-1458</a> |
| 414 | AGPUSH-1452 | Just please consider a need to use alternative delivery network capabilities in underlying impl - I'd much rather implement a http/2 server then http/2 proxy in the future. Seems that pushy support that which is a significant plus from QE perspective!<br><a href="https://github.com/relayrides/pushy/blob/master/src/main/java/com/relayrides/pushy/apns/ApnsEnvironment.java">https://github.com/relayrides/pushy/blob/master/src/main/java/com/relayrides/pushy/apns/ApnsEnvironment.java</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-1452">https://issues.iboss.org/browse/AGPUSH-1452</a> |
| 415 | AGPUSH-1422 | should we move to .Final ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGPUSH-1422">https://issues.iboss.org/browse/AGPUSH-1422</a> |
| 416 | AGPUSH-1422 | [~sebastienblanc] do you need some more input from [~kpiwko] or [~smikloso] on this ? Or should we move to 1.1.x ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGPUSH-1422">https://issues.iboss.org/browse/AGPUSH-1422</a> |

| 419 | AGPUSH-1393 | Should we move to .Final ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGPUSH-1393">https://issues.iboss.org/browse/AGPUSH-1393</a> |
| 420 | AGPUSH-1392 | [~sebastienblanc] [~agalante] Guys, I'd like to know your opinion how this feature should be implemented. In the old UI, the "generate push-config.json" button is little bit independent from the rest of samples. Andres, to get you into a picture, {{push-config.json}} is an alternative mechanism how to configure Cordova based applications. You need to store the JSON file such as [1] side by side your Cordova project sources. It will be loaded automatically when you don't specify configuration in your code. But, the problem is that {{push-config.json}} contains configuration for several platforms, not just one (see the sample [1]). In the old UI we've decided to have a separated button that opened a dialog for variants selection for which you wanted to generate the {{push-config.json}}. Then you was able to download the configuration file or copy its contents. You can see full discussion about this feature here: <a href="http://aerogear-dev.1069024.n5.nabble.com/aerogear-dev-Cordova-push-config-json-generated-in-UPS-Console-multiple-variants-tp9799p9824.html">http://aerogear-dev.1069024.n5.nabble.com/aerogear-dev-Cordova-push-config-json-generated-in-UPS-Console-multiple-variants-tp9799p9824.html</a> My question is whether this is something we want to re-do in a new UI or something that should be re-designed. Could you possibly work this feature in the mockup? | 421 | AGPUSH-1373 | Want me to help on the KC related Screenshots ? Once we got 1.3 of KC in ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGPUSH-1373">https://issues.iboss.org/browse/AGPUSH-1373</a> |
| 422 | AGPUSH-1361 | [~Ifryc] do we need this? Or can we now close it ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGPUSH-1361">https://issues.iboss.org/browse/AGPUSH-1361</a> |
| 423 | AGPUSH-1338 | [~agalante] we check that on the server once the user hits Create button. Is there strong reason to pre-validate that even before? It's technically feasible, but I would personally avoid that.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AGPUSH-1338">https://issues.iboss.org/browse/AGPUSH-1338</a> |
| 424 | AGPUSH-1320 | > Just wondering, is that a constant problem, or did it occur just on those two messages? I don't think any new messages could be sent at that time, so I restarted WildFly today. Some messages were sent correctly a few months ago, then some time passed when I don't think any messages were sent, and then two messages were attempted to be sent in the two past days, and failed. So the WildFly server has been running for a very long time. >Another question is, did a reboot of the WildFly server fix the problem? According to the stack, it's some problem related to the transaction execution. I have restarted the WildFly server now, and will see if that fixes the problem. >Would you be willing to test if the problem occurs on 1.0.3 as well? Yes, I can do that. Thanks, Andreas R.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGPUSH-1320">https://issues.iboss.org/browse/AGPUSH-1320</a> |

| 426 | AGPUSH-1320 | Oh, that's bad. Did migrating to 1.0.3 help?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AGPUSH-1320">https://issues.jboss.org/browse/AGPUSH-1320</a> |
| 427 | AGPUSH-1320 | Just to make sure it isn't related to the payload, could you try to send a push message using the Admin console ? (it will just use the 'alert' field)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AGPUSH-1320">https://issues.jboss.org/browse/AGPUSH-1320</a> |
| 428 | AGPUSH-1320 | <p>the Admin console worked correctly to a test application. I have not tested using the production application, since it is in production. This is a typical log message where the sending fails, which also includes the payload: ^{[0m^[[0m19:53:38,823 INFO [PushNotificationSenderEndpoint] (default task-10) Message submitted to PushNetworks for further processing ^{[0m^[[0m19:53:38,826 INFO [JPAPushMessageInformationDao] (EJB default - 3) Processing send request with &amp;apos;[alert=Rosenborg tapte treningskampen mot Viking. | 430 | AGPUSH-1320 | Andreas, do you have a lot of installations in your production env? I guess the EJB could potentially time out while sending the messages to push networks (depends on your configuration of the wildfly container).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGPUSH-1320">https://issues.iboss.org/browse/AGPUSH-1320</a> |
| 431 | AGPUSH-1320 | > Andreas, I'm trying to identify which Push Network your application uses, could you list types of variants listed in the application that fails? e.g. GCM, APN.. The application in Aerogear push has one variant, which is APN (iOS). > You could also try to fetch a debug log so we could get more insight - here is how you can switch wildfly to debug mode for a little while in production and then turn it back while this "defective" push message is being sent: Thanks, will try that. > Andreas, do you have a lot of installations in your production env? I guess the EJB could potentially time out while sending the messages to push networks (depends on your configuration of the wildfly container). There are many thousand installations in the production env.                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGPUSH-1320">https://issues.iboss.org/browse/AGPUSH-1320</a> |
| 432 | AGPUSH-1320 | > Andreas, do you have a lot of installations in your production env? I guess the EJB could potentially time out while sending the messages to push networks (depends on your configuration of the wildfly container). This is a very likely cause of the problem. Looking at the timestamps in the logs I have attached previously, the sending was aborted after 5 minutes. I logged into the WildFly admin console, and found that in "Container" -> "Transactions" the default timeout was set to 300s (5 minutes). I have now increased this to 7200s, and hope that this will solve the problem the next time a push message is sent. This would also explain why sending worked correctly some months ago, and now the number of device installations has increased significantly. Thanks for the help everyone, I am optimistic now!                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGPUSH-1320">https://issues.iboss.org/browse/AGPUSH-1320</a> |
| 433 | AGPUSH-1320 | This is a push message service for a iOS news app, so it is important for the users that the push-message is sent as quickly as possible. So the users have said that even five minutes is too long. Is there anything I can do to improve sending performance?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGPUSH-1320">https://issues.iboss.org/browse/AGPUSH-1320</a> |
| 434 | AGPUSH-1317 | [~agalante] [~sebastienblanc] what's the status here? are the mocks ready ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-1317">https://issues.iboss.org/browse/AGPUSH-1317</a> |
| 435 | AGPUSH-1311 | Here's a quick overview of the cartridge changes that will be needed: # The binaries for the migration tool will need to be added to the cartridge repository (e.g., in versions/1.0.3/usr/lib/migration/). # The binaries for the migration tool will need to be installed on the gear (e.g., in \$OPENSHIFT_AEROGEAR_PUSH_DIR/usr/lib/migration). This will need to be done in the cartridge's [install   https://github.com/aerogear/openshift-origin-cartridge-aerogear-push/blob/master/bin/install#L23] script. # The migration tool will need to be invoked from an action hook in the cartridge's [control   https://github.com/aerogear/openshift-origin-cartridge-aerogear-push/blob/master/bin/control] script. Once the above changes have been made, they can be tested using the following commands: {code} rhc snapshot save <APP> rhc app delete <APP> rhc create-app --no-git <APP> <CARTRIDGE_URL> rhc snapshot restore <APP> -f /PATH/TO/APP.tar.gz {code} | <a href="https://issues.iboss.org/browse/AGPUSH-1311">https://issues.iboss.org/browse/AGPUSH-1311</a> |
| 436 | AGPUSH-1311 | [~fjuma] with the PR for AGPUSH-1310, most of this is already implemented, on version 1.0.3. What is needed to actually give users with previous versions a chance to upgrade? Or is the best option, to offer migration from 1.0.3 and later? (e.g. also enabling git hooks to manually upload WAR files?)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-1311">https://issues.iboss.org/browse/AGPUSH-1311</a> |
| 437 | AGPUSH-1306 | Looking closer to GCM, looks like they are no "GCM" specific keys for the Push Payload, could [~danielpassos] and [~edewit] confirm this ? If so, I think we can close this one.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGPUSH-1306">https://issues.iboss.org/browse/AGPUSH-1306</a> |
| 438 | AGPUSH-1291 | [~qmx] [~sebastienblanc] Not sure I really get this ticket. Isn't applying the changes implicitly part of the merge exercise? If yes, let's close this as out dated                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGPUSH-1291">https://issues.iboss.org/browse/AGPUSH-1291</a> |
| 439 | AGPUSH-1274 | reopening, since it has not been merged, and therefore is not done                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGPUSH-1274">https://issues.iboss.org/browse/AGPUSH-1274</a> |
| 440 | AGPUSH-1260 | are we going to camelCase those? so titleLockKey, titleLocArgs? or how does the UPS deal with them?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGPUSH-1260">https://issues.iboss.org/browse/AGPUSH-1260</a> |
| 441 | AGPUSH-1259 | [~sebastienblanc] oh yeah. Can you do a a sub-task for this ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGPUSH-1259">https://issues.iboss.org/browse/AGPUSH-1259</a> |
| 442 | AGPUSH-1248 | [~agalante] I would like to have your opinion on this one, what is the best regarding user experience ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGPUSH-1248">https://issues.iboss.org/browse/AGPUSH-1248</a> |
| 443 | AGPUSH-1243 | What's the status here? Looks like the PR is no longer open                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-1243">https://issues.iboss.org/browse/AGPUSH-1243</a> |
| 444 | AGPUSH-1240 | [~mwessendorf] on the UI, we no longer expose descriptions, should we remove that also on database layer?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGPUSH-1240">https://issues.iboss.org/browse/AGPUSH-1240</a> |
| 445 | AGPUSH-1223 | [~kpiwko] It looks like those tests are for the Unified Push server and not the SimplePush server which is the target component for this particular jira. Was the sub-task meant for a different jira perhaps?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGPUSH-1223">https://issues.iboss.org/browse/AGPUSH-1223</a> |
| 446 | AGPUSH-1222 | should we move to 0.11.0 (next release) ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGPUSH-1222">https://issues.iboss.org/browse/AGPUSH-1222</a> |
| 447 | AGPUSH-1221 | Is that still on the bubble? I'd vote nope, to stay in line w/ Mozilla's SimplePush specification                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AGPUSH-1221">https://issues.iboss.org/browse/AGPUSH-1221</a> |
| 448 | AGPUSH-1220 | should we move to 0.10.0 (next release) ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGPUSH-1220">https://issues.iboss.org/browse/AGPUSH-1220</a> |

| 450 | AGPUSH-1216 | Have this working on this [branch] https://github.com/danbev/aerogear-simplepush-server/tree/new-netty-sockjs. These is one issue that I discovered regarding [CORS configuration] https://github.com/netty/netty/pull/2427 and details can be found in this [commit] https://github.com/danbev/aerogear-simplepush-server/commit/b23ada1bdcbb32f339ff3d544838361f3d71a6b8].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGPUSH-1216">https://issues.iboss.org/browse/AGPUSH-1216</a> |
| 451 | AGPUSH-1210 | should we move to 0.10.0 (next release) ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGPUSH-1210">https://issues.iboss.org/browse/AGPUSH-1210</a> |
| 452 | AGPUSH-1205 | The PR for this ticket has been closed; Should we close/reject this ticket as well ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGPUSH-1205">https://issues.iboss.org/browse/AGPUSH-1205</a> |
| 453 | AGPUSH-1189 | Others, like Google (http://blog.chromium.org/2015/02/hello-http2-goodbye-spy-http-is_9.html) or Jetty are deprecating their SPDY support, in fav. of HTTP/2. Perhaps we should close this one? Or is it really worth it ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGPUSH-1189">https://issues.iboss.org/browse/AGPUSH-1189</a> |
| 454 | AGPUSH-1149 | [~kpiwko] [~abstract] for this, the default should stay, as is. and I think it is reasonable to just enable this with a system property, if possible. In case the container is started with -Dorg.aerogear.keycloak.direct.access(=true), the direct access should be there. Using system properties minimizes the risk of users accidently enabling this, by messing around inside of cfg files. What's your thoughts?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGPUSH-1149">https://issues.iboss.org/browse/AGPUSH-1149</a> |
| 455 | AGPUSH-1146 | [~edewit] does that mean we need to change the data model ? Or should we just ignore the ERROR?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGPUSH-1146">https://issues.iboss.org/browse/AGPUSH-1146</a> |
| 456 | AGPUSH-1130 | I think the questions are: * What's next on this? * Do we support a migration from 1.0.0.final to any new release of the 1.0.x series * Does a fix for this ticket need to be included in the 1.0.3 release ? [~edewit] [~qmx] any comments?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGPUSH-1130">https://issues.iboss.org/browse/AGPUSH-1130</a> |

| 457 | AGPUSH-1129 | [~edewit] great work. Can I ask for a small change list screen? - Font size for the text should be 16px, color black 87% (or #212121) and line height 20px - I guess the header is standard windows phone, right? - Dividers lines, if they are not windows phone standard please make them black 12% (or #e0e0e0) - Make padding between the screen and the starting point of the text 16px. - Make padding between the line and the starting point of the text 20px. If they are not easy changes, forget about them :)                                      | <a href="https://issues.iboss.org/browse/AGPUSH-1129">https://issues.iboss.org/browse/AGPUSH-1129</a> |
| 458 | AGPUSH-1127 | [~mwessendorf], yes, absolutely. What's the easiest way for me to reproduce this and issue these statements? Or should we do a short hangout some time this week to discuss it?                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGPUSH-1127">https://issues.iboss.org/browse/AGPUSH-1127</a> |
| 459 | AGPUSH-1126 | [~edewit] can we close this? Or is this still something 'reasonable' ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AGPUSH-1126">https://issues.iboss.org/browse/AGPUSH-1126</a> |
| 460 | AGPUSH-1124 | is this for both? MPNS and WNS ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGPUSH-1124">https://issues.iboss.org/browse/AGPUSH-1124</a> |
| 461 | AGPUSH-1111 | [~abstractj] hey man, do you have an idea how to get this implemented? We could hangout and discuss it /wrt connection to admin console (AGPUSH-1112).                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AGPUSH-1111">https://issues.iboss.org/browse/AGPUSH-1111</a> |
| 462 | AGPUSH-1110 | [~lfryc] for the all new UI - do we have an epic already for this ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGPUSH-1110">https://issues.iboss.org/browse/AGPUSH-1110</a> |
| 463 | AGPUSH-1110 | [~mwessendorf] [~lfryc] New UI is not on Jira yet. Thanks for reminding me of this screen. I'll add it to the new UI. Is there any other "hidden" screen I should know about?                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGPUSH-1110">https://issues.iboss.org/browse/AGPUSH-1110</a> |
| 464 | AGPUSH-1108 | You can see it in action here: <a href="http://andresgalante.com/ups-console/app-detail-variants.html">http://andresgalante.com/ups-console/app-detail-variants.html</a> What do you think?                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGPUSH-1108">https://issues.iboss.org/browse/AGPUSH-1108</a> |
| 465 | AGPUSH-1108 | [~lfryc] this can be moved to ups-1.1.x ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/AGPUSH-1108">https://issues.iboss.org/browse/AGPUSH-1108</a> |
| 466 | AGPUSH-1075 | what's the status here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AGPUSH-1075">https://issues.iboss.org/browse/AGPUSH-1075</a> |
| 467 | AGPUSH-1075 | [~edewit] ok, do we have a JIRA for the actual migration ( <a href="https://github.com/aerogear/aerogear-unifiedpush-server/pull/448">https://github.com/aerogear/aerogear-unifiedpush-server/pull/448</a> ). If not, can you create one for 1.0.3 ?                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGPUSH-1075">https://issues.iboss.org/browse/AGPUSH-1075</a> |
| 468 | AGPUSH-1039 | [~sblanc] [~mwessendorf] [~lfryc] I do think there is a need for it. Should this be just a search box? or also sorting options?                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGPUSH-1039">https://issues.iboss.org/browse/AGPUSH-1039</a> |
| 469 | AGPUSH-1039 | I don't think sorting is required, if yes I would ask which categories it should be based on (username (visible just to admins), # of variants, # of notifications delivered, # of devices registered)?                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AGPUSH-1039">https://issues.iboss.org/browse/AGPUSH-1039</a> |
| 470 | AGPUSH-1032 | Hey [~gcardoso] would you know how to implement this? I can't find any samples in <a href="https://www.patternfly.org/wikis/patterns/navigation/">https://www.patternfly.org/wikis/patterns/navigation/</a>                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGPUSH-1032">https://issues.iboss.org/browse/AGPUSH-1032</a> |
| 471 | AGPUSH-1032 | There is a widget for the horizontal navigation, but no sample for the vertical navigation. What exactly do you need?                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGPUSH-1032">https://issues.iboss.org/browse/AGPUSH-1032</a> |
| 472 | AGPUSH-1032 | The Admin link opens the User Management / Log Out dropdown directly, but in responsive mode, you see the hamburger icon, which, when you click on, reveals Admin link that opens the User Management / Logout. Would you consider that a critical fix? As I see there are changes in bootstrap/patternfly needed to make this work.                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGPUSH-1032">https://issues.iboss.org/browse/AGPUSH-1032</a> |
| 473 | AGPUSH-1000 | [~mhusnain] any hint on how this is wrong ? (e.g. what path)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-1000">https://issues.iboss.org/browse/AGPUSH-1000</a> |
| 474 | AGPUSH-990  | [~lfryc] Done for Keycloak, currently gets the realm name. In our case "aerogear"                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGPUSH-990">https://issues.iboss.org/browse/AGPUSH-990</a>   |
| 475 | AGPUSH-986  | [~lfryc] do we need this for 1.0.x ? Or would that be just fine for 1.1.x ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGPUSH-986">https://issues.iboss.org/browse/AGPUSH-986</a>   |
| 476 | AGPUSH-972  | [~bursutter] I am not sure, but should we explain Xcode/IntelliJ here ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AGPUSH-972">https://issues.iboss.org/browse/AGPUSH-972</a>   |
| 477 | AGPUSH-968  | [~mwessendorf] Regarding timing, wouldn't it be better to investigate this for 1.1 ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGPUSH-968">https://issues.iboss.org/browse/AGPUSH-968</a>   |
| 478 | AGPUSH-967  | [~sebastienblanc] I wonder, do we expect to get anything with the upgrade? I'd incline to reject this and wait before we do some bigger refactoring. Sounds good?                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGPUSH-967">https://issues.iboss.org/browse/AGPUSH-967</a>   |
| 479 | AGPUSH-967  | what's the status here? should we do that for alpha.2 ? or not?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGPUSH-967">https://issues.iboss.org/browse/AGPUSH-967</a>   |

| 492 | AGPUSH-864  | <p>I found another issue which results to build failure: if you kill the build when npm is running, it may result to something like this: {code} [INFO] --- frontend-maven-plugin:0.0.16:grunt (grunt build) @ unifiedpush-admin-ui --- [INFO] Running 'grunt dist --no-color' in /Users/lukasfryc/Documents/workspace/aerogear-unifiedpush-server/admin-ui [INFO] [INFO] module.js:340 [INFO] throw err; [INFO] ^ [INFO] Error: Cannot find module 'findup-sync' [INFO] at Function.Module._resolveFilename (module.js:338:15) [INFO] at Function.Module._load (module.js:280:25) [INFO] at Module.require (module.js:364:17) [INFO] at require (module.js:380:17) [INFO] at Object.&lt;anonymous&gt; (/Users/lukasfryc/Documents/workspace/aerogear-unifiedpush-server/admin-ui/node_modules/grunt-cli/bin/grunt:8:14) [INFO] at Module._compile (module.js:456:26) [INFO] at Object.Module._extensions..js (module.js:474:10) [INFO] at Module.load (module.js:356:32) [INFO] at Function.Module._load (module.js:312:12) [INFO] at Function.Module.runMain (module.js:497:10) {code} the problem here is inconsistent {{node_modules/}}. So cleaning {{node_modules/}} helped. But then, the NPM cache itself was broken: {code} [INFO] --- frontend-maven-plugin:0.0.16:npm (npm install) @ unifiedpush-admin-ui --- [INFO] Running 'npm install --color=false' in /Users/lukasfryc/Documents/workspace/aerogear-unifiedpush-server/admin-ui [INFO] npm WARN package.json ups-admin-ui@0.0.0 No repository field. [INFO] npm ERR! cb() never called! [INFO] npm ERR! not ok code 0 {code} Now we have to refresh the cache (we would normally do that using {{npm clean cache}}) but the build has local cache to avoid conflicts in global cache).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AGPUSH-864">https://issues.jboss.org/browse/AGPUSH-864</a> |

| 494 | AGPUSH-853  | <p>A few items I noticed, while looking at <a href="http://staging.aerogear.org/docs/guides/aerogear-cordova/AerogearCordovaPush/">http://staging.aerogear.org/docs/guides/aerogear-cordova/AerogearCordovaPush/</a> * cordova plugin add <a href="https://github.com/aerogear/aerogear-pushplugin-cordova.git">https://github.com/aerogear/aerogear-pushplugin-cordova.git</a> Should it use the latest release, from the plugin repo, instead of the GH repo? * the HelloWorld/Quickstart explicitly talk about steps required for Cordova installation: ** "npm install -g Cordova" ** "npm install -g ios-deploy" (for iOS) [~edewit] should we do that here too ? * link to "AeroGear Push plugin API doc" seems to present old docs. At the bottom of <a href="http://staging.aerogear.org/docs/specs/aerogear-cordova/Push.html">http://staging.aerogear.org/docs/specs/aerogear-cordova/Push.html</a> it says _Documentation generated by JSDoc 3.3.0-alpha5 on Sat Jul 26 2014 15:37:23 GMT+0200 (CEST)_ - I think this was generated before our last (0.7.0) release</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGPUSH-853">https://issues.iboss.org/browse/AGPUSH-853</a> |
| 495 | AGPUSH-846  | <p>These lines: <a href="https://github.com/aerogear/aerogear-unifiedpush-server/blob/master/push/src/main/java/org/iboss/aerogear/unifiedpush/message/sender/APNsPushNotificationSender.java#L116-L117">https://github.com/aerogear/aerogear-unifiedpush-server/blob/master/push/src/main/java/org/iboss/aerogear/unifiedpush/message/sender/APNsPushNotificationSender.java#L116-L117</a> are invoked in a few cases: * no certificate in the database (e.g. some smart DBA deleted it there) * certificate revoked at the Apple Developer Network site Wondering, if we should replace "No certificate was found" with something like "No (valid) certificate was found. Did you revoke it at the Apple Developer Center" ?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGPUSH-846">https://issues.iboss.org/browse/AGPUSH-846</a> |
| 496 | AGPUSH-785  | <p>Could you [~mwessendorf] find out for which request this is happening. I think there is somehow an invalid json request in there. I cannot reproduce this.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGPUSH-785">https://issues.iboss.org/browse/AGPUSH-785</a> |
| 497 | AGPUSH-782  | <p>I am still trying to figure out how to add a floating action button for "ADD" on ionic. In the mean time here are the screens. Should I create a repository to upload this?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGPUSH-782">https://issues.iboss.org/browse/AGPUSH-782</a> |
| 498 | AGPUSH-782  | <p>Hi Erik Jan de Wit please check out <a href="https://github.com/andresgalante/ionicquickstart">https://github.com/andresgalante/ionicquickstart</a> You'll see the action btn on list.html: &lt;a class="floating-btn" href="#"&gt;ADD&lt;/a&gt; And there is css to style and position it at ionic.app.scss If the action btn is a problem, I added a "ADD" btn on the Action Bar. Also let me know if there is any screen or part missing and I'll take care of it. The floating btn is not fully styled yet, I should add an icon, shadows, etc. If you make it work let me know and I'll update the css. Thanks a lot!</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGPUSH-782">https://issues.iboss.org/browse/AGPUSH-782</a> |

| 505 | AGPUSH-778  | <p>[~mwessendorf] HTML5 app is based on jQuery mobile. I need to learn how to skin jQuery mobile but I always find something to do before. Should I give priority to it? Erik is super busy with FH windows support, I wonder if he can implemente it if I do it.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGPUSH-778">https://issues.iboss.org/browse/AGPUSH-778</a> |
| 506 | AGPUSH-776  | <p>What is the status here ?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-776">https://issues.iboss.org/browse/AGPUSH-776</a> |

| 507 | AGPUSH-775  | Hey [~agalante] could you share the icon and colors used on it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGPUSH-775">https://issues.iboss.org/browse/AGPUSH-775</a> |
| 508 | AGPUSH-775  | Hey [~agalante] what do you think about make splash and registering fullscreen?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGPUSH-775">https://issues.iboss.org/browse/AGPUSH-775</a> |
| 509 | AGPUSH-775  | Daniel Passos this is great! very good implementation. If you can make this minor changes to make it look perfect: 1- Background should be white #fff 2- Good idea on the splash page been fullscreen, I'll make one and send it over. 3- I think we should leave the action bar for registering, is that doable? 4- Registering activity bar, can you make it: Background color: #ffcc80 bar color: #fff980 with: 180dp 5- Font sizes: Action bar: Medium 20sp text in general (all of them): Regular 14sp, Tracking 10, Leading 20 bold text make it Medium weight please. 6- On list, please put a padding top and bottom: 20dp (between the text and the line) 7- Black screen, please make the icon smaller with 36dp height 40dp and color black 40%. All text on that screen is the same spec as text in general, text but leading is 24. 8- Shadow on action bar is too strong. If that is measure in index, it should be level 1. If any of these are hard to do, forget about them :) Thanks a lot!                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGPUSH-775">https://issues.iboss.org/browse/AGPUSH-775</a> |
| 510 | AGPUSH-775  | 1) * Done 2) * Don't need update the mockup. Only to clarify I mean without ActionBar not fullscreen, because fullscreen hide NotificationBar 3) * Done 4) * Background color: Done * bar color: Done * with: I have no idea what it means :D 5) * Action bar: Not sure if is a good idea change the default font size on ActionBar * Text: Added in dims.xml 6) * Done * I also added a little padding left 7) * Make the icon smaller: Done * Image color: I can't apply alpha on ImageView because alpha was introduced on API level 11 and the app is for API level 10. Could you apply that on image and send me? * No sure what you mean by leading on that 8) * Agreed, but it will be a little hard to fix, probably I will need change the ActionBar by toolbar                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGPUSH-775">https://issues.iboss.org/browse/AGPUSH-775</a> |
| 511 | AGPUSH-775  | That ActionBar colour is a little different for the Notifications ActionBar colors. That is the idea? I'm using the same ActionBar colors for registering and notifications for now 6) * Done 7) I have some problem to use *medium* and different kind of fontFamily on this app because the minSdkVersion is 10. so, I add: * "Nothing here" - 14sp + Bold * "rest of text" - 12sp What do you think? | 519 | AGPUSH-742  | where is the URL ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGPUSH-742">https://issues.iboss.org/browse/AGPUSH-742</a> |
| 520 | AGPUSH-725  | [~hbons] I belive this is related to Keycloak User Management screens. Is this really done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AGPUSH-725">https://issues.iboss.org/browse/AGPUSH-725</a> |
| 521 | AGPUSH-725  | [~bruno_oliveira] How do I access these user management pages to be able to work on this? If we can have a link from the sidebar or if you can give me a direct path to it I can have a look.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGPUSH-725">https://issues.iboss.org/browse/AGPUSH-725</a> |
| 522 | AGPUSH-707  | Similar to AGPUSH-268 ? If so, please mark AGPUSH-268 as duplicated; Also, since the PR #207 was merged, should this be marked as resolved:done ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-707">https://issues.iboss.org/browse/AGPUSH-707</a> |
| 523 | AGPUSH-669  | Beside org.iboss.resteasy:resteasy-jackson-provider , the other dependencies mentioned are not in the POM of the Java Sender, how can we align these ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGPUSH-669">https://issues.iboss.org/browse/AGPUSH-669</a> |
| 524 | AGPUSH-669  | You are absolutely correct, those are transitive dependencies. Sorry about that, you may close this issue. What is left is just the use of the aerogear bom ( <a href="https://issues.iboss.org/browse/AGPUSH-663">https://issues.iboss.org/browse/AGPUSH-663</a> ).Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGPUSH-669">https://issues.iboss.org/browse/AGPUSH-669</a> |
| 525 | AGPUSH-661  | np, so when you are trying to import/update 100k devices. are you doing any batching (eg persisting many entities in one bang instead of one and one)? another thing you could look at if updates is an issue is to enable entity caching, looking at what attributes that can be lazy loaded etc. if you're using the same query over and over again query caching would also speed things up. - as always, caching need to be done right, or it might even slow things down :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGPUSH-661">https://issues.iboss.org/browse/AGPUSH-661</a> |
| 526 | AGPUSH-657  | [~hbons] any ETA on a new icon ? Or is this something unrelated to the actual icon ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGPUSH-657">https://issues.iboss.org/browse/AGPUSH-657</a> |
| 527 | AGPUSH-637  | Is that a priority? Or do we have the time to do it for the 1.0.0 ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGPUSH-637">https://issues.iboss.org/browse/AGPUSH-637</a> |
| 528 | AGPUSH-637  | This is not priority for 0.11.0 and since Erik had problems with adopting aerogear.js in UPS, I wonder whether it is doable in 1.0 at all. ---- Here is a branch where Erik started refactoring: <a href="https://github.com/edewit/aerogear-unifiedpush-server/tree/angular-aerogear">https://github.com/edewit/aerogear-unifiedpush-server/tree/angular-aerogear</a> [~edewit], could you please elaborate little bit on what were blockers here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGPUSH-637">https://issues.iboss.org/browse/AGPUSH-637</a> |

| 529 | AGPUSH-637  | Should we move this to 'future', [~edewit], [~lfryc], [~lucas.holmquist] ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AGPUSH-637">https://issues.iboss.org/browse/AGPUSH-637</a> |
| 530 | AGPUSH-629  | Hey Erik, is there anything else we should do about this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGPUSH-629">https://issues.iboss.org/browse/AGPUSH-629</a> |
| 531 | AGPUSH-571  | Most of the content has been already moved out, instead of linking to 'real' documentation, we did link to the old 0.10.x branch                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AGPUSH-571">https://issues.iboss.org/browse/AGPUSH-571</a> |
| 532 | AGPUSH-567  | Is this still relevant ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGPUSH-567">https://issues.iboss.org/browse/AGPUSH-567</a> |
| 533 | AGPUSH-546  | Do you mind to share a link for the main page you are talking about ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGPUSH-546">https://issues.iboss.org/browse/AGPUSH-546</a> |
| 534 | AGPUSH-544  | Right, REST represents the API. However, in various tests we need to generate applications, variants, etc. Java is the language of choice. We are using REST in the end but we need DTO objects. I was thinking of reusing model jar. Do you plan to have model released in Maven Central? Otherwise me would duplicate and make our own DTO objects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGPUSH-544">https://issues.iboss.org/browse/AGPUSH-544</a> |
| 535 | AGPUSH-541  | [~supittma] yeah ... I was asking about the registrationID a device/app gets from GCM; Payload we know: up to 4k - but how long can the actual regID get ? reading some stackoverflow, it seems that 256 is a safe bet (which is what we have, for the registrationid)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-541">https://issues.iboss.org/browse/AGPUSH-541</a> |
| 536 | AGPUSH-530  | Are you saying it works on your iOS7 device? That you are seeing a notification on the lockscreen (using the Cordova plugin) ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGPUSH-530">https://issues.iboss.org/browse/AGPUSH-530</a> |
| 537 | AGPUSH-530  | I think you mean the pull-down/drop-down notification bar, is that what you mean by "touch the notification"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGPUSH-530">https://issues.iboss.org/browse/AGPUSH-530</a> |
| 538 | AGPUSH-530  | [~edewit] everything works fine w/ iOS6 - did you test w/ iOS7 as well ? The interesting part - the native (non Cordova) bits worked on my iOS 7 (7.0.4) device (meaning I did see an "alert" while watching the lockscreen)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AGPUSH-530">https://issues.iboss.org/browse/AGPUSH-530</a> |
| 539 | AGPUSH-528  | Should we import this to AeroGear, on Github?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGPUSH-528">https://issues.iboss.org/browse/AGPUSH-528</a> |
| 540 | AGPUSH-491  | What's the status here ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AGPUSH-491">https://issues.iboss.org/browse/AGPUSH-491</a> |

Is there anything left?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGPUSH-456">https://issues.iboss.org/browse/AGPUSH-456</a> |
| 545 | AGPUSH-456  | [~lucas.holmquist] what's the status here ? and related tickets? Can we close them ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGPUSH-456">https://issues.iboss.org/browse/AGPUSH-456</a> |
| 546 | AGPUSH-446  | [~mwessendorf] This ticket made me think of a useful criteria we could have in the future for the client sender API : some kind of alias exclusion filter. For example : { "variants" : ["c3f0a94f-48de-4b77-a08e-68114460857e", "444939cd-ae63-4ce1-96a4-de74b77e3737" ...], "excludeAlias" : ["john", "maria"], "categories" : ["someCategory", "otherCategory"], "deviceType" : ["iPad", "AndroidTablet"], "ttl" : 3600, "message": { "alert": "HELLO!", "sound": "default", "badge": 7, "someKey": "some value", "anotherCustomKey": "some other value" }, "simple-push": { "version": 123 } } wdyt ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGPUSH-446">https://issues.iboss.org/browse/AGPUSH-446</a> |
| 547 | AGPUSH-400  | Which is the best place to add this reset button ? 1. Add an reset action button/link on the pushApps/variants list 2. Add an reset button on the detail screen of the selected pushApp/Variant , in the section "Authentication Info". My preference is #2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AGPUSH-400">https://issues.iboss.org/browse/AGPUSH-400</a> |
| 548 | AGPUSH-400  | i would say, lets put in that modal box, instead of using the confirm, that is the plan for the other ones too <a href="https://issues.iboss.org/browse/AGPUSH-315">https://issues.iboss.org/browse/AGPUSH-315</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AGPUSH-400">https://issues.iboss.org/browse/AGPUSH-400</a> |
| 549 | AGPUSH-351  | [~sebastienblanc] what is the state of this ticket and the mentioned GIST ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGPUSH-351">https://issues.iboss.org/browse/AGPUSH-351</a> |
| 550 | AGPUSH-343  | how many seconds do we want to use for the default ? Looks like the default could be pretty high...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/AGPUSH-343">https://issues.iboss.org/browse/AGPUSH-343</a> |
| 551 | AGPUSH-343  | I think a really high value is fine. How often are you really changing CORS access parameters? If you're developing and making a CORS change, you can clear the browser's cache manually. I think something like 20 or 30 days is fine. If that feels too long, even a week (7 days) would be good.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/AGPUSH-343">https://issues.iboss.org/browse/AGPUSH-343</a> |
| 552 | AGPUSH-323  | if we are changing things, can we just change the sendTo method to "send" ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGPUSH-323">https://issues.iboss.org/browse/AGPUSH-323</a> |
| 553 | AGPUSH-308  | A few questions: What information is required to connect to a proxy server? Is it like your regular HTTP proxy or something else? Can we test whether the connection is successful somehow?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGPUSH-308">https://issues.iboss.org/browse/AGPUSH-308</a> |
| 554 | AGPUSH-307  | [~craig.brookes] [~pgough] thanks the PR, and the documentation. Besides that, is there more that's needed to support proxy servers ? If this is really all, I'd like to close this JIRA, as done                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AGPUSH-307">https://issues.iboss.org/browse/AGPUSH-307</a> |
| 555 | AGPUSH-287  | Mrunal Patel <mpatel@redhat.com> made a comment on [bug 997108] <a href="https://bugzilla.redhat.com/show_bug.cgi?id=997108">https://bugzilla.redhat.com/show_bug.cgi?id=997108</a> Matthias, Do you know why aerogear cartridge refuses connection over 8443? Thanks, Mrunal                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGPUSH-287">https://issues.iboss.org/browse/AGPUSH-287</a> |

Still get the same result. # openssl s_client -connect tls-bmengdev.int.rhcloud.com:8443 connect: Connection refused connect:errno=111 # rhc app show tls tlsm / http://tls-bmengdev.int.rhcloud.com/ (uuid: 52130e206cec0e079100095d) ----- Domain: bmengdev Created: 2:35 AM Gears: 1 (defaults to small) Git URL: ssh://52130e206cec0e079100095d@tls-bmengdev.int.rhcloud.com/~git/tls.git/ SSH: 52130e206cec0e079100095d@tls-bmengdev.int.rhcloud.com aerogear-aerogear-push-0.8.0 (AeroGear Push Server 0.8.0) ----- From: https://cartreflect-claytondev.rhcloud.com/reflect?github=aerogear/openshift-origin-cartridge-aerogear-push Gears: Located with mysql-5.1 mysql-5.1 (MySQL Database 5.1) ----- Gears: Located with aerogear-aerogear-push-0.8.0 Connection URL: mysql://\$OPENSIFT_MYSQL_DB_HOST:\$OPENSIFT_MYSQL_DB_PORT/ Database Name: tls Password: <Hidden> Username: <Hidden> And when I creating same app on stage, the 8443 port can be connected. | <a href="https://issues.iboss.org/browse/AGPUSH-287">https://issues.iboss.org/browse/AGPUSH-287</a> |
| 557 | AGPUSH-282  | Can Developers create other Developers (users) or should we create another role ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AGPUSH-282">https://issues.iboss.org/browse/AGPUSH-282</a> |
| 558 | AGPUSH-263  | Sounds good. I fixed the URL in <a href="https://github.com/aerogear/openshift-origin-cartridge-aerogear-push/commit/302c4eab79fc50ac92261eb9072b33347d44a6ff">https://github.com/aerogear/openshift-origin-cartridge-aerogear-push/commit/302c4eab79fc50ac92261eb9072b33347d44a6ff</a> and I'm marking this issue as resolved. [~mwessendorf], what would be proper fix version here? Should the issue be moved to a different project if the cartridge has independent versioning? Or do you plan to add versions like *cartridge-0.8.0*?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AGPUSH-263">https://issues.iboss.org/browse/AGPUSH-263</a> |

| 560 | AGPUSH-224  | Can you take a look, or attach, server.log from the instance that does not work correctly? Perhaps there is an error upon startup. The log can be found in aerogear-push/logs/server.log.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AGPUSH-224">https://issues.iboss.org/browse/AGPUSH-224</a> |
| 561 | AGPUSH-211  | AFAIK, for broadcast we don't use already a "message" object. So that is really specific for "selected" messages, right ? <a href="https://github.com/aerogear/aerogear-unified-push-java-client/blob/master/src/main/java/org/iboss/aerogear/unifiedpush/SenderClient.java#L89">https://github.com/aerogear/aerogear-unified-push-java-client/blob/master/src/main/java/org/iboss/aerogear/unifiedpush/SenderClient.java#L89</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGPUSH-211">https://issues.iboss.org/browse/AGPUSH-211</a> |
| 562 | AGPUSH-211  | [~kborchers] [~mwessendorff] I'm not against that (from the java sender perspective) but that means adding more logic on the Sender impl. And what if we send a "selected" message for both a simplepush network and a "native" network ? We should only choose one of the option, or keep "message" or get rid of it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGPUSH-211">https://issues.iboss.org/browse/AGPUSH-211</a> |
| 563 | AGPUSH-195  | Do you know the git repo will be 'moved' into this git folder: <a href="https://github.com/openshift/origin-server/tree/master/cartridges">https://github.com/openshift/origin-server/tree/master/cartridges</a> Or is a different one being used ? Regarding enabling this DB in your MASTER, should we keep this open, or should we close that out ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGPUSH-195">https://issues.iboss.org/browse/AGPUSH-195</a> |
| 564 | AGPUSH-162  | [~abstract] "For example here we should add @param annotation of Javadocs doesn't make too much sense:" What do you mean ? We should add the @param ? Or or not (because of the "doesn't make too much sense")                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-162">https://issues.iboss.org/browse/AGPUSH-162</a> |
| 565 | AGPUSH-150  | I started on this. Just to be clear : we do only paging on the UI side for now ? Nothing to be done the UPS side ? I'm following this approach <a href="http://stackoverflow.com/a/13033425">http://stackoverflow.com/a/13033425</a> and looks good so far. I'm using a mixin to avoid too much duplication. How many items do we want per page ? 10 ? [~hbons] Any advice about the layout for the pagination ("next", "previous" and page numbers links) ? I will start with a classic / lean design                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AGPUSH-150">https://issues.iboss.org/browse/AGPUSH-150</a> |
| 566 | AGPUSH-150  | [~hbons] Could you elaborate a bit on patternfly ? Is it a concrete CSS lib or just guidelines ? Samples seems to be based on bootstrap.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AGPUSH-150">https://issues.iboss.org/browse/AGPUSH-150</a> |
| 567 | AGPUSH-116  | I'm not sure that plan for this feature, but as we've been building our mobile just a few thoughts on what types of metrics/analytics that could potentially be gathered:<br>Users Date New Returning Total Sessions Date New Returning Total Location Country ex. US, Canada, Germany, etc... City ex. Raleigh, Toronto, Munich, etc... Devices OS ex. Android, iOS, etc... OS Details (Major Version & Minor Version) ex. iOS 7.0.2, iOS 7.1, Android 4.4, etc... Device Maker/Brand ex. iPhone 5 (Global), iPhone 5S (GSM), iPod Touch 5G, SAMSUNG-SGH-I727, HTC One, Full MIPS Android on Emulator, Simulator, etc... Resolution/Width & Height ex. 800x480, 1920x1080, etc... App Version ex. 1.0, 3.1, 2.1.223, etc... Carrier ex. AT&T, T-Mobile, Verizon, etc... Custom Events (Can be used to track a wide variety of custom events that could be used by a funnel, or could be used to drill down into data. Its just a simple server based counter.) ex. Newsletter Signups, Subscriptions, Bought, Video Plays, Articles Read, Button Clicks, Demographics, Behavior flow/how users user the app, etc... Error/Bug Reporting Automatically sends crash report (no sensitive or user data) back to AG Gives user option to give additional error information and perhaps a screenshot Potentially useful links/examples <a href="https://github.com/Countly/county-server">https://github.com/Countly/county-server</a> <a href="http://docs.phonegap.com/en/3.3.0/cordova_device_device.md.html#Device">http://docs.phonegap.com/en/3.3.0/cordova_device_device.md.html#Device</a> <a href="https://github.com/AppBlade/AppBladeSDK/wiki/Feature-Implementation-Guide#iOS-crash-reporting">https://github.com/AppBlade/AppBladeSDK/wiki/Feature-Implementation-Guide#iOS-crash-reporting</a> <a href="http://devcenter.kinvey.com/phonegap/guides/troubleshooting">http://devcenter.kinvey.com/phonegap/guides/troubleshooting</a> <a href="http://try.crashlytics.com/reports/">http://try.crashlytics.com/reports/</a> <a href="https://www.google.com/analytics/mobile/">https://www.google.com/analytics/mobile/</a> <a href="http://piwik.org/blog/2012/04/how-to-use-piwik-to-track-mobile-apps-activity-clicks-phones-errors-etc/">http://piwik.org/blog/2012/04/how-to-use-piwik-to-track-mobile-apps-activity-clicks-phones-errors-etc/</a> | <a href="https://issues.iboss.org/browse/AGPUSH-116">https://issues.iboss.org/browse/AGPUSH-116</a> |
| 568 | AGPUSH-110  | currently SimplePush has _NO_ support for this; but could be good enough for the native plaforms that have support for it                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AGPUSH-110">https://issues.iboss.org/browse/AGPUSH-110</a> |
| 569 | AGPUSH-92   | I agree this should be configurable, but I'm not sure yet if it should be in present in the UI. OpenShift should change the default path without bothering the user with it. \$HOME should normally be writable. If it's not for whatever reason we can ask to change it and show a field in the UI or point to a configuration file. What are potential use cases for changing the default path?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGPUSH-92">https://issues.iboss.org/browse/AGPUSH-92</a>   |
| 570 | AGPUSH-38   | How about we show the CURL command for sending, on the Admin UI ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGPUSH-38">https://issues.iboss.org/browse/AGPUSH-38</a>   |

| 572 | AGPUSH-20   | It looks like there is no way to "GET" a list/one instance other than getting a particular variant and then looking at the instance array. was thinking this could/should go in the corresponding VariantEndpoint.java file ex: /application/{pushAppld}/{variantType}/{variantId}/instance(s) and /application/{pushAppld}/{variantType}/{variantId}/instance/{instanceId} should we reopen?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AGPUSH-20">https://issues.iboss.org/browse/AGPUSH-20</a> |
| 573 | AGPUSH-11   | those look pretty good. do we need a Push Cordova plugin thing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AGPUSH-11">https://issues.iboss.org/browse/AGPUSH-11</a> |
| 574 | AGPUSH-11   | I've been thinking about this for a while now and I'm honestly not sure. The question is, does Cordova, or one of its plugins bridge JS to the notifications? On the one hand, since it's a native app, it could be covered by the iOS or Android clients but the user would have to know how to incorporate their own or build that bridge. Since it's also using JS, it could just be handled by the JS SimplePush client but then you're only getting in app notifications while it's open. I say we at least create a Cordova component and we'll investigate this more later.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AGPUSH-11">https://issues.iboss.org/browse/AGPUSH-11</a> |
| 575 | AGPUSH-11   | Do we need need to duplicate "Unified Push Server" and "SimplePush" so many times? I would recommend # Unified Push # SimplePush # Security # APNs # Server # Client # Admin # UI etc.... Then mix and match as needed - such as "SimplePush, Server, Security". Otherwise you'll end up with tag spaghetti imo.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AGPUSH-11">https://issues.iboss.org/browse/AGPUSH-11</a> |

| 588 | AGSYNC-9    | [~beve] [~mwessendorf] I wonder, have we discussed which of the two mentioned formats we will use for the Alpha1 impl? While *JSON Patch* is similar to what we have now: {code} [ { "op": "test", "path": "/a/b/c", "value": "foo" }, { "op": "remove", "path": "/a/b/c" }, { "op": "add", "path": "/a/b/c", "value": { "foo", "bar" } }, { "op": "replace", "path": "/a/b/c", "value": 42 }, { "op": "move", "from": "/a/b/c", "path": "/a/b/d" }, { "op": "copy", "from": "/a/b/d", "path": "/a/b/e" } ] {code} *JSON Merge Patch* may be actually simpler to adopt and it is IMO also more straightforward to read: {code} { "title": "Hello!", "author": { "givenName": "John" }, "tags": [ "example" ], "content": "This will be unchanged", "phoneNumber": "+01-123-456-7890", "this_will_be_removed": null } {code} The *JSON Patch* is obviously more powerful with its "test", "copy" and "move" operations (the latter two we could potentially use), still they are not necessary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AGSYNC-9">https://issues.jboss.org/browse/AGSYNC-9</a> |
| 589 | AGSYNC-9    | Neither? Is binding our internal representation of the sync data to JSON what we want to do? Also neither of these proposals address the case of small changes to large text values (the diff and merge of the diff sync algorithm). Double also neither of these protocols make any claims for the order of the json fields/values which could also be quite problematic when it comes time to implement shadows and diffing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AGSYNC-9">https://issues.jboss.org/browse/AGSYNC-9</a> |
| 590 | AGSYNC-9    | Sorry, I was incorrect regarding my comment about JSON Merge Patch. It is only the patches that are being sent. My view on this that we could provide different algorithms/storage options for different use cases. The first version, though inefficient, could be used to handle the small changed to large text values like Summers brought up. And a different implementation could use JSON Patch or JSON Merge Patch and store JSON Objects which it then performs the operations on. We could use a content-type property (header depending of transport protocol) to know what type is being targeted. The initial goal of the sync engine was to make this easy to implement, basically you should only have to provide a [ServerSynchronizer https://github.com/aerogear/aerogear-sync-server/blob/master/api/src/main/java/org/jboss/aerogear/sync/server/ServerSynchronizer.java], and a [ServerDataStore https://github.com/aerogear/aerogear-sync-server/blob/master/api/src/main/java/org/jboss/aerogear/sync/server/ServerDataStore.java] and you'd be good to go. But it has become painfully obvious that this is not enough since what is called a Diff in the current implementation can vary with the implementation. For example, it might be operations for the current DiffMatchPatch implementation, but for JSON Patch just a patch. I'm currently looking into this refactoring and trying to fix this. @supittma When you say neither. What would you suggest we have here instead or in addition to this? | <a href="https://issues.jboss.org/browse/AGSYNC-9">https://issues.jboss.org/browse/AGSYNC-9</a> |
| 591 | AGSYNC-8    | This is about a Java client ? or generally an overall ticket for all different client engines ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AGSYNC-8">https://issues.jboss.org/browse/AGSYNC-8</a> |
| 592 | AESH-433    | is this fixed now with your latest changes [~jdenise]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AESH-433">https://issues.jboss.org/browse/AESH-433</a> |
| 593 | AESH-399    | I think that the appropriate behavior is that if you have something like: "Is "<tab> it should default to call the argument value completor if the command accept arguments, if not it should list options. However if you have something like: "Is -"<tab> or "Is --<tab> it should list option names and not call the argument value completor. Is this acceptable?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AESH-399">https://issues.jboss.org/browse/AESH-399</a> |
| 594 | AESH-399    | If there is a completor on the Argument and the completor has something to show, this could be a valid behavior. But when the completor is not present or there is nothing to show, the user has no clue about what is going on. The argument could be required or not (this is something that should be added, I logged an RFE some time ago). If the argument is not required, do we default to the argument? When a choice is possible between showing argument values or options, something like the following could help: Is <TAB> Command Options: --verbose,-l Command Argument: /subsystem= /core-services= ...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AESH-399">https://issues.jboss.org/browse/AESH-399</a> |
| 595 | AESH-397    | the parser currently supports the use of ',' and double quotes '"', using these you can have space in values. is the usage of {,} a standard? if so we could probably extend the parser to support that as well.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AESH-397">https://issues.jboss.org/browse/AESH-397</a> |
| 596 | AESH-393    | Just immediately I'm thinking that this kind of syntax is very "non-standard". Could we change it to something like:\$ Is -l   echo-drm ? If we really have to support this, I think you second suggestion looks like the best. I also would prefer to hide as much as possible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AESH-393">https://issues.jboss.org/browse/AESH-393</a> |
| 597 | AESH-358    | In which context is this needed in the public api?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AESH-358">https://issues.jboss.org/browse/AESH-358</a> |
| 598 | AESH-354    | The commits concerning this issue are not merged into the master branch. Is that on purpose?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AESH-354">https://issues.jboss.org/browse/AESH-354</a> |
| 599 | AESH-354    | what is the commit not present in master? It seems that it is present but a mismatch in merge message. Stale used "Fix for AESH-354" for something else (interactive mode). In master: https://github.com/aeshell/aesh/commit/cd15eb9780a8d8c356fe5b9d85b710bede9d6c7f In 0.66.+: https://github.com/aeshell/aesh/commit/b1868f4a65c12adde452065f071a1fc50c7cf650 [~stalep] could you confirm?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AESH-354">https://issues.jboss.org/browse/AESH-354</a> |
| 600 | AESH-354    | Ok, we'll switch from master to 0.66.+ branch. Although we haven't had any problems using the master branch for our dev in the last 9 month. Thanks for this great project!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AESH-354">https://issues.jboss.org/browse/AESH-354</a> |
| 601 | AESH-352    | [~stalep] (CC: [~jdenise]): Any update here? Do you have fixed this issue in Aesh-readline?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AESH-352">https://issues.jboss.org/browse/AESH-352</a> |
| 602 | AESH-352    | hi, i have not added functionality to do this yet. I'll try to do it tomorrow, it should not be very difficult. we need aesh to run that command and parse the output. its important that we get the correct width and height. i wonder how infocmp works on hp-ux, do you know [~mkopecky]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AESH-352">https://issues.jboss.org/browse/AESH-352</a> |
| 603 | AESH-348    | I added some unit tests to my maven project to show how to reproduce. There is still an issue with 0.66.7-SNAPSHOT. The "hasOption" is not working. See my README for the full replication steps - just build with the latest snapshot and you'll see the one unit test fails. \$ git clone git@github.com:jmazzitelli/aesh-348.git && cd aesh-348 \$ mvn clean install -Daesh.version=0.66.7-SNAPSHOT Tests run: 5, Failures: 1, Errors: 0, Skipped: 0, Time elapsed: 0.124 sec <<< FAILURE! testMyOptionAtEndWithoutValue(MainTest) Time elapsed: 0.012 sec <<< FAILURE! java.lang.AssertionError: Should have myoption at MainTest.testMyOptionAtEndWithoutValue(MainTest.java:41) This happens when the option is specified last, with no value, such as: mycmd --abc 123 --myoption                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AESH-348">https://issues.jboss.org/browse/AESH-348</a> |
| 604 | AESH-348    | What is the probability of getting this bug fixed? There is still a problem in the latest 0.66.7.SNAPSHOT release - see my last comment - including the automated test that can be used to demonstrate the problem.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AESH-348">https://issues.jboss.org/browse/AESH-348</a> |
| 605 | AESH-321    | with the current impl thats in master child commands of a groupcommans will be autocompleted if the the groupcommand do not contain any options/arguments. atm this also happens when autocompleting on an empty input line: {quote} [aesh@rules]\$ alias export group child1 ls prompt test exit foo group child2 man run unalias [aesh@rules]\$ {quote} compared to 0.60 behaviour: {quote} [aesh@rules]\$ alias exit export foo group ls man prompt run test unalias [aesh@rules]\$ {quote} is that ok [~brmeyer]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AESH-321">https://issues.jboss.org/browse/AESH-321</a> |

| 606 | AESH-306    | hi, its been a while since i looked at the code for the groupcommand parser, but i think one of the reasons it only add a space when pressing space for 1. is that the group "main" command also can contain options. the parser could be smarter though and check if there are no options it could instead list all the child commands. does this sound like a ok solution? i dont think i can get this in 0.61 though. im planning to release 0.61 tomorrow or monday and im leaving on vacation after next week. regarding 2. i think that could be done as well. we could add a "separator" char for the group command or something. i need to look into it, but i think its doable. in any case i think it deserves a separate jira :) 3. we have the possibility to specify the color/font/etc for options, but not commands atm. one idea might be to add a feature for commands to have a specified renderer similar to options (OptionRenderer). - as with 2. i also think it deserves a separate jira.                                                                                                       | <a href="https://issues.iboss.org/browse/AESH-306">https://issues.iboss.org/browse/AESH-306</a> |
| 607 | AESH-306    | {quote} the group "main" command also can contain options. the parser could be smarter though and check if there are no options it could instead list all the child commands. does this sound like a ok solution? {quote} +1 Re: #3, it could be something even simpler. Append ":" to the end of them, assuming you use that as the separator?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AESH-306">https://issues.iboss.org/browse/AESH-306</a> |
| 608 | AESH-300    | Im probably a bit slow but i dont see the practical usecase for this, could you give an example?:) - i dont oppose it, i just would like to understand why.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AESH-300">https://issues.iboss.org/browse/AESH-300</a> |
| 609 | AESH-289    | hi, sorry for the late reply. do you know which version of æsh you are using? the latest version should work with those keys you describe. if you are using æsh 0.5* then it would be helpful if you tried to run: java -cp aesh-version.jar AeshExample that example should create a aesh.log file in your tmp folder (/tmp on posix) for each keypress there will be a line starting with "GOT" if you could comment here what you see when you press the home/end keys that would be great. æsh have hardcoded some values that might change, but it is also using infocmp on posix systems to try to find the correct key (which works in most cases).                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AESH-289">https://issues.iboss.org/browse/AESH-289</a> |
| 610 | AESH-289    | I am using whatever is in Forge 2.10.0. I think it's 0.56.1. Could you please give a link to aesh-version.jar? Since we use it as a lib, I only have aesh.jar and aesh-extensions.jar.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AESH-289">https://issues.iboss.org/browse/AESH-289</a> |
| 611 | AESH-281    | hi, i did some initial work on this, but didnt get it to work as wanted. could you look at this when you have time [~danielcunha]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AESH-281">https://issues.iboss.org/browse/AESH-281</a> |
| 612 | AESH-259    | Can we close it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AESH-259">https://issues.iboss.org/browse/AESH-259</a> |
| 613 | AESH-251    | What do you prefer? Close the issue or return "" case the method called with parameter without \$? (I have PR in gun! Hehehe!)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AESH-251">https://issues.iboss.org/browse/AESH-251</a> |
| 614 | AESH-249    | yup, that should work. another thing is in æsh we're using a lot System.getProperty("file.separator") can we still assume that we can use this or do we have to get that from this new api? we also need a method ala: List<AeshResource> listRoots();                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AESH-249">https://issues.iboss.org/browse/AESH-249</a> |
| 615 | AESH-223    | so, thinking about this a bit further. do you think it would make sense to have an annotation type for pipe/redirection handling? atm the pipe "result" is caught by æsh and stored in a buffer, then the "receiving" command needs to check that buffer to see if there is any input. would it be easier to use the api you suggested and have æsh "automatically" populate the field with data if it receives data through pipe (i guess identical to what you said if im not misunderstanding you but with a specific annotation name) ? ala: {code:java} @Retention(RUNTIME) @Target(FIELD) public @interface PipedList { } public class GrepCommand { @PipedList private List<Object> pipelInput; @Option private String arguments; Result<Set<Object>>, Formatter<Set<Object>>> execute(CommandInvocation) { .. grep based on el expression passed in by arguments on each Object in pipelInput and return Set<Object> } } {code}                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AESH-223">https://issues.iboss.org/browse/AESH-223</a> |
| 616 | AESH-223    | ive started implementing it in the result_and_format branch, but im a bit uncertain regarding the Format interface. what is the reason for it, eg what is it meant to do? another thing, lets say we have; command1   command2 command returns some text that is picked up by æsh and is then injected into the pipelist (or whatever its called) field of command2. the value from command1 is always as text so the question is if we need a "converter" from text to whatever object type is used for the field that is tagged with pipelist?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AESH-223">https://issues.iboss.org/browse/AESH-223</a> |
| 617 | AESH-223    | after thinking a bit more about this (and implementing a bit), im not sure if this will be very intuitive since it will require a two-step execution of commands. but i would still like to try to get it implemented somehow. what if we do something like: {code:java} public interface Command<T> { List<T> process(CommandInvocation2 ci); CommandResult execute(CommandInvocation ci, List<T> data); } {code} process will not push anything to the shell, just return some data that will be sent as a value to the execute method. CommandInvocation2 (in lack of a better name in this example) is identical to CommandInvocation, but do not have a reference to Shell.out() (not sure if this is required, but it would prohibit commands to push anything to the terminal at this stage). in a pipeline scenario we could either have the values thats passed from the previous command included in the CommandInvocation object or a command might also have a field annotated with {code}@Pipeline{code} where æsh could inject the values. what do you think? [~lincolnthree] and [~gastaldi] any input? | <a href="https://issues.iboss.org/browse/AESH-223">https://issues.iboss.org/browse/AESH-223</a> |
| 618 | AESH-209    | AESH-210 should have resolved these afaiK. could you please check?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AESH-209">https://issues.iboss.org/browse/AESH-209</a> |
| 619 | AESH-150    | I think that a better way to do this would be to implement a ManProvider, which accepts a class, or a command, an returns the URL to a MAN page. Thus, Forge could provide our own ManProvider extension, and do our own resolution. Do you still support AsciiDoc?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AESH-150">https://issues.iboss.org/browse/AESH-150</a> |
| 620 | AESH-108    | Or probably we could have a single Completion implementation in Forge 2 and then it could iterate through the available commands. What do you think that would be the best strategy ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AESH-108">https://issues.iboss.org/browse/AESH-108</a> |
| 621 | AESH-23     | yes i agree the way its works now is not good enough. so, do if we change it to: --name "joe bloggs", will set the option name value to "joe bloggs" (without "). it should also accept ' AND change escaped spaces to "normal" spaces does that sound ok?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AESH-23">https://issues.iboss.org/browse/AESH-23</a>   |
| 622 | AGOVA-83    | Seems resolved. Socializer shows a failure, but it is related to a missing repository. Should that persist I guess I'll create another issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGOVA-83">https://issues.iboss.org/browse/AGOVA-83</a> |
| 623 | AGOVA-6     | Can this be moved to a 0.5.1 target, because existing project that depends on Seam would not benefit from having the DS dependency until DS is "Seam/Solder"-grade?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AGOVA-6">https://issues.iboss.org/browse/AGOVA-6</a>   |
| 624 | AGOVA-6     | That's great Ove ! We keep Solder because of Generic Bean mechanism : DS team is not convince to adopt it and I didn't have time to convince them. Do you think we could swith to your ptoject for Generics ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AGOVA-6">https://issues.iboss.org/browse/AGOVA-6</a>   |
| 625 | AGOVA-3     | The obvious way would be to support client side information storage in a cookie, but in some use case we me need to have user information on server side (asynchronous or long batch like crawling user network graph). should we support both scenario or try to have a unique smart one ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AGOVA-3">https://issues.iboss.org/browse/AGOVA-3</a>   |
| 626 | AJSF-80     | Is this going to be fixed with 3.1? Without this fix I will not be able to use RichFaces in my application                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AJSF-80">https://issues.iboss.org/browse/AJSF-80</a>   |

| 628 | AJSF-33     | Can anyone tell us how to do it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AJSF-33">https://issues.iboss.org/browse/AJSF-33</a>         |
| 629 | AJSF-7      | a4j-trinidad is not yet published to maven repository and not build by default. However, it is possible to build and deploy the package manually. Is there any special reason is package is released to public? Are there any outstanding issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AJSF-7">https://issues.iboss.org/browse/AJSF-7</a>           |
| 630 | ENTMQCL-251 | Unclear on scope - wouldn't this require the python-qpid client be ported to python 3.x?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/ENTMQCL-251">https://issues.iboss.org/browse/ENTMQCL-251</a> |
| 631 | ENTMQCL-164 | [*justi9] What is expected to be tested here? I believe that connection failover was supported in python amqp client prior to 1.1.0-alpha. Have there been any changes to this functionality?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/ENTMQCL-164">https://issues.iboss.org/browse/ENTMQCL-164</a> |
| 632 | ANDIAMO-30  | I think the answer here might be to tell Windows users to use Wordpad instead of Notepad. Wordpad, apparently, can handle either LF or CR+LF, just like VIM can on Linux. Any fairly recent Windows version has Wordpad along with Notepad (at least from XP on, which should be more sufficient). Jim, can you test out Wordpad on a file that doesn't work with Notepad. We could possible put a note on this in the knowledge base in the customer portal, and include it the right documentation as a side note.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/ANDIAMO-30">https://issues.iboss.org/browse/ANDIAMO-30</a>   |
| 633 | ANDIAMO-24  | I guess the comment was for EPP, Jim, why didn't you report in EPP instead ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/ANDIAMO-24">https://issues.iboss.org/browse/ANDIAMO-24</a>   |
| 634 | ANDIAMO-20  | Jim, can you elaborate on why this is a major problem? I want to understand the priority. Also, if notepad on Windows doesn't respect the carriage return line feeds, what's going to make it easy to edit something in notepad?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/ANDIAMO-20">https://issues.iboss.org/browse/ANDIAMO-20</a>   |
| 635 | ANDIAMO-20  | I don't have a Windows box around, but I do have Wine installed, and it has the notepad application. When I open the configuration files in EAP 5.0.1, they all look fine. What's the trick here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/ANDIAMO-20">https://issues.iboss.org/browse/ANDIAMO-20</a>   |
| 636 | ANDIAMO-20  | Jim, Could you also attach the files directly. I want to do a hex diff of the file on your system, and the file on mine.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/ANDIAMO-20">https://issues.iboss.org/browse/ANDIAMO-20</a>   |
| 637 | ANDIAMO-20  | Windows XP: Steps: Downloaded EAP 5.0.1 zip file Run from the cmd.exe jar -xf \$(name of file) Browse attached file/s via Notepad Just reconfirmed all of the above Not sure how you can not reconfirm? Very interesting. What is your environment? If you are still running Wine, I would guess that the libs are converting these characters correctly for you when you open the file. jar -xf changing the contents of the file on the way out, that sounds pretty crazy to me. Although that is why I call it Computer Art sometimes and not Computer Science or Computer Engineering                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/ANDIAMO-20">https://issues.iboss.org/browse/ANDIAMO-20</a>   |
| 638 | ANDIAMO-20  | I did attach the two files..below..what files are you seeking..I attached jboss-service.xml and jmx-console-users.properties???? at Aug 16th at 11:18 and 11:17 AM????                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/ANDIAMO-20">https://issues.iboss.org/browse/ANDIAMO-20</a>   |
| 639 | ANDIAMO-20  | Is a process in place to test this for all products/projects etc so this is never an issue again?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/ANDIAMO-20">https://issues.iboss.org/browse/ANDIAMO-20</a>   |
| 640 | ANDIAMO-7   | Does this apply to the AS7 subsystem codebase only or is it relevant to jboss projects that are pulled in as binary dependencies too?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/ANDIAMO-7">https://issues.iboss.org/browse/ANDIAMO-7</a>     |
| 641 | ANDIAMO-2   | Discussions on Andiamo mailing list. General consensus seems almost complete at least in terms of the format for messages. No discussion yet on common API though. Outstanding issue around exceptions though: how are they formatted? Jason will complete the format thread and then move to the implementation/API discussion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/ANDIAMO-2">https://issues.iboss.org/browse/ANDIAMO-2</a>     |
| 642 | APIMAN-1236 | Do you want metrics to be disabled entirely or stored in some other system? To disable completely, set and/orchange these properties in apiman.properties: {code} apiman-gateway.metrics=io.apiman.gateway.engine.impl.InMemoryMetrics apiman-manager-ui.metrics.enable=false {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/APIMAN-1236">https://issues.iboss.org/browse/APIMAN-1236</a> |
| 643 | APIMAN-1234 | Thank you Eric. I need to increase buffer size for request as well as response payload. I hope change in these 3 files will increase buffer for both request and response. Will there be any consequences if I make it to 32K ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/APIMAN-1234">https://issues.iboss.org/browse/APIMAN-1234</a> |

| 645 | APIMAN-1212 | You're trying to install npm on an AWS server? What is the goal you are trying to accomplish? Typically gulp would be used on a local developer machine for the purpose of doing iterative development work on the core apiman UI.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/APIMAN-1212">https://issues.iboss.org/browse/APIMAN-1212</a> |
| 646 | APIMAN-1157 | Can you describe what you would expect to see for the configuration of such a policy?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/APIMAN-1157">https://issues.iboss.org/browse/APIMAN-1157</a> |

| 651 | APIMAN-1129 | <p>Ok I tested My plugin on the new version, it by pass the last error but now I het an error in class Policy where I have the Authorization {code:java} if (result.getResult()) { String forwardIdentityHttpHeader = config.getForwardIdentityHttpHeader(); if (forwardIdentityHttpHeader != null &amp;&amp; !forwardIdentityHttpHeader.trim().isEmpty()) { request.getHeaders().put(forwardIdentityHttpHeader, forwardedUsername); } RequestMetric metric = context.getAttribute(PolicyContextKeys.REQUEST_METRIC, (RequestMetric) null); if (metric != null) { metric.setUser(forwardedUsername); } // Remove the authorization header so that it doesn't get passed through to the backend API // TODO: make this optional - perhaps they *want* the auth header passed through? request.getHeaders().remove("Authorization"); //\$NON-NLS-1\$ chain.doApply(request); } else { sendAuthFailure(context, chain, config, PolicyFailureCodes.BASIC_AUTH_FAILED); } {code} In this part I don't get why? finally I have a 404 not found error trace : {code:java} 14:31:18,857 ERROR [stderr] (default task-43) java.nio.channels.ClosedChannelException 14:31:18,866 ERROR [stderr] (default task-43) at io.undertow.channels.DetachableStreamSinkChannel.write(DetachableStreamSinkChannel.java:238) 14:31:18,879 ERROR [stderr] (default task-43) at io.undertow.server.HttpServerExchange\$WriteDispatchChannel.write(HttpServerExchange.java:2000) 14:31:18,885 ERROR [stderr] (default task-43) at io.undertow.servlet.spec.ServletOutputStreamImpl.writeBufferBlocking(ServletOutputStreamImpl.java:567) 14:31:18,892 ERROR [stderr] (default task-43) at io.undertow.servlet.spec.ServletOutputStreamImpl.flushInternal(ServletOutputStreamImpl.java:482) 14:31:18,898 ERROR [stderr] (default task-43) at io.undertow.servlet.spec.ServletOutputStreamImpl.flush(ServletOutputStreamImpl.java:469) 14:31:18,907 ERROR [stderr] (default task-43) at io.apiman.gateway.platforms.servlet.GatewayServlet\$3.write(GatewayServlet.java:310) 14:31:18,933 ERROR [stderr] (default task-43) at io.apiman.gateway.platforms.servlet.GatewayServlet\$3.write(GatewayServlet.java:298) 14:31:18,942 ERROR [stderr] (default task-43) at io.apiman.gateway.engine.impl.DefaultPolicyFailureWriter.write(DefaultPolicyFailureWriter.java:98) 14:31:18,948 ERROR [stderr] (default task-43) at io.apiman.gateway.platforms.servlet.GatewayServlet.writeFailure(GatewayServlet.java:295) 14:31:18,978 ERROR [stderr] (default task-43) at io.apiman.gateway.platforms.servlet.GatewayServlet\$1.handle(GatewayServlet.java:152) 14:31:18,990 ERROR [stderr] (default task-43) at io.apiman.gateway.platforms.servlet.GatewayServlet\$1.handle(GatewayServlet.java:103) 14:31:18,995 ERROR [stderr] (default task-43) at io.apiman.gateway.engine.impl.ApiRequestExecutorImpl.lambda\$wrapResultHandler\$0(ApiRequestExecutorImpl.java:159) 14:31:19,013 ERROR [stderr] (default task-43) at io.apiman.gateway.engine.impl.ApiRequestExecutorImpl.lambda\$createPolicyFailureHandler\$16(ApiRequestExecutorImpl.java:609) 14:31:19,020 ERROR [stderr] (default task-43) at io.apiman.gateway.engine.policy.Chain.doFailure(Chain.java:230) {code}</p> | <a href="https://issues.iboss.org/browse/APIMAN-1129">https://issues.iboss.org/browse/APIMAN-1129</a> |
| 652 | APIMAN-1122 | <p>Sorry but I didn't know about the mailing List or the IRC (which I can't install), anyway do you have an idea how can I get the pluginClassLoader in my plugin? I'm trying this code but it does not work :/ {code:java} PluginClassLoader cl = (PluginClassLoader) Thread.currentThread().getContextClassLoader(); try{ URL toto = cl.getResource("mongoDB.properties"); System.out.println(toto.toURI().getPath()); System.out.println(toto.toString()); } catch (Exception e){ System.out.println("-----"); System.out.println("-----"); System.out.println(e.getMessage()); System.out.println("-----"); System.out.println("-----"); } {code} Knowing that actually there is a class in my JAR that load mongoDB.properties and this file exists in the Jar. I copy it but I have to call the class in the JAR to do the processing. Thank you for your help</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/APIMAN-1122">https://issues.iboss.org/browse/APIMAN-1122</a> |
| 653 | APIMAN-1122 | So I have no control on my service loader, but I didn't get your last solution about changing the current thread's context classloader prior to calling whatever library. Can you give me a simple example please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/APIMAN-1122">https://issues.iboss.org/browse/APIMAN-1122</a> |
| 654 | APIMAN-1122 | Ok, I will test it once you release it in the website and give you a feedback. When can we have the possibility to extend the policies in APIMAN like BASIC AUTHENTICATION with our needs? It is something necessary I guess. Like in my case I just needed it to use a new identity source but I had to rewrite the doApply function because it called a private function which is validateCredentials who only let you use the 3 identity source defined by you. I guess it will be interesting to let this function public so I can override it or expand it. What do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/APIMAN-1122">https://issues.iboss.org/browse/APIMAN-1122</a> |
| 655 | APIMAN-1122 | Can you open up a separate JIRA issue to make the basic auth policy more extensible? :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/APIMAN-1122">https://issues.iboss.org/browse/APIMAN-1122</a> |
| 656 | APIMAN-1122 | Would you be able to share your code or create a stripped-down version that reproduces the problem? I'd be happy to give it a try and figure out what's going wrong!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/APIMAN-1122">https://issues.iboss.org/browse/APIMAN-1122</a> |
| 657 | APIMAN-1119 | Do you want this INI file to be packaged inside the plugin? You should be able to access such a resource by loading it through the plugin's classloader. Something like this: {code} URL configURL = getClass().getResource("/config/my-properties.ini"); {code} Assuming you put the file into "src/main/resources/config/my-properties.ini". Note: I can never remember if the leading slash in the string is required. Try both. :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/APIMAN-1119">https://issues.iboss.org/browse/APIMAN-1119</a> |
| 658 | APIMAN-1119 | Do you have a full stack trace you can include? I will try to reproduce this locally.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/APIMAN-1119">https://issues.iboss.org/browse/APIMAN-1119</a> |
| 659 | APIMAN-1119 | Yes I really like too. Especially the Pom.xml!! Where did you put the shiro.ini? In the resources folder?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/APIMAN-1119">https://issues.iboss.org/browse/APIMAN-1119</a> |
| 660 | APIMAN-1119 | <p>Thank you I have already solved the problem. It was in the pom.xml apiman-plugins parent where the ressource are ignored. I have a question about this part of code: {code:xml} &lt;plugin&gt; &lt;groupId&gt;org.apache.maven.plugins&lt;/groupId&gt; &lt;artifactId&gt;maven-enforcer-plugin&lt;/artifactId&gt; &lt;version&gt;\${version.enforcer.plugin}&lt;/version&gt; &lt;dependencies&gt; &lt;dependency&gt; &lt;groupId&gt;de.is24.maven.enforcer.rules&lt;/groupId&gt; &lt;artifactId&gt;illegal-transitive-dependency-check&lt;/artifactId&gt; &lt;version&gt;1.7.4&lt;/version&gt; &lt;/dependency&gt; &lt;/dependencies&gt; &lt;executions&gt; &lt;execution&gt; &lt;id&gt;enforcer-transitives-check&lt;/id&gt; &lt;goals&gt; &lt;goal&gt;enforce&lt;/goal&gt; &lt;/goals&gt; &lt;phase&gt;process-classes&lt;/phase&gt; &lt;configuration&gt; &lt;fail&gt;true&lt;/fail&gt; &lt;rules&gt; &lt;illegalTransitiveDependencyCheck implementation="de.is24.maven.enforcer.rules.IllegalTransitiveDependencyCheck"&gt; &lt;reportOnly&gt;false&lt;/reportOnly&gt; &lt;regexIgnoredClasses&gt; &lt;regexIgnoredClass&gt;javax.*&lt;/regexIgnoredClass&gt; &lt;regexIgnoredClass&gt;org.w3c.dom.*&lt;/regexIgnoredClass&gt; &lt;/regexIgnoredClasses&gt; &lt;useClassesFromLastBuild&gt;true&lt;/useClassesFromLastBuild&gt; &lt;/illegalTransitiveDependencyCheck&gt; &lt;/rules&gt; &lt;/configuration&gt; &lt;/execution&gt; &lt;/executions&gt; &lt;/plugin&gt; {code} For what reason do you use this plugin like this? Can you explain please?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/APIMAN-1119">https://issues.iboss.org/browse/APIMAN-1119</a> |

| 661 | APIMAN-1093 | How to use this new feature? It's easy, just get the current *RequestMetric* object from the policy context and add your own custom attributes to it! {code} RequestMetric metric = context.getAttribute(PolicyContextKeys.REQUEST_METRIC, (RequestMetric) null); metric.getAttributes().put("my-property-1", "value-1"); metric.getAttributes().put("my-property-2", "value-2"); {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/APIMAN-1093">https://issues.iboss.org/browse/APIMAN-1093</a> |
| 662 | APIMAN-1045 | When you say backend services are clustered, wouldn't you be having a cluster IP or basically a load balancer ip such as F5 (Hardware based) or Apache web server (software based) IP? On the APIMAN you could just configure the backend services load balancer IP which in the event of outage for one of the servers could re-direct the traffic to the one that is alive.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/APIMAN-1045">https://issues.iboss.org/browse/APIMAN-1045</a> |
| 663 | APIMAN-1027 | If [~opontes] and [~eric.wittmann] could comment... > 1) section 4.4.3 is suggesting that redirect URLs should be modified for apimanui only. Other clients (apiman, apiman-getaway) should be mentioned as well Do we need redirect URLs for apiman and apiman-gateway? The user shouldn't be logging directly into either of those endpoints using a browser, AFAIK. Does it not work unless you change it? > 3) The guide seems to lack any information that client configuration in KC needs to be reflected in related section of standalone.xml as well. Additionally the realm file linked in the docs [2] is configured as confidential while default values in standalone.xml are configured for public clients (at least apimanui is). Yes, this is an annoying aberration. For demo and other reasons (it was tricky to get the secrets to work properly when using cURL, it might be fixed now) we turned it off in the example config. We should harmonise it (e.g. provide a separate one with secrets enabled for this guide).                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/APIMAN-1027">https://issues.iboss.org/browse/APIMAN-1027</a> |
| 664 | APIMAN-1018 | How do we envisage this working? It's simple to do given the groundwork already done, but I want some clarification. * What are the preconditions for allowing a plan to be deleted? That it's unused by any ClientApp/Contract? Or we just delete any contracts that use the plan * Are we anticipating that we'd want to do batch deletes of plans in isolation? (seems functionality with low usefulness IMO given delete API, ClientApp & Org)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/APIMAN-1018">https://issues.iboss.org/browse/APIMAN-1018</a> |
| 665 | APIMAN-1012 | [~eric.wittmann], [~msavy] I've created an initial implementation of this policy here: <a href="https://github.com/outofcoffee/apiman-plugins/tree/feature/url-whitelist-plugin">https://github.com/outofcoffee/apiman-plugins/tree/feature/url-whitelist-plugin</a> The policy normalises the incoming URL, then applies the configured rules, based on URL and HTTP method to determine if the request is permitted to be passed-on to the back-end API. Please see the {{url-whitelist-policy}} directory for implementation and tests. Would you be interested in including this in the main {{apiman-plugins}} repo, or would you prefer I keep it as a separate project?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/APIMAN-1012">https://issues.iboss.org/browse/APIMAN-1012</a> |
| 666 | APIMAN-982  | Can we rephrase this to read "uninstalling" plugins? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/APIMAN-982">https://issues.iboss.org/browse/APIMAN-982</a>   |
| 667 | APIMAN-973  | We don't use a KC json config. When running in EAP/WF the adapters are configured in the standalone.xml file. Is there a way to configure the tomcat KC adapters in some sort of equivalent tomcat config file? If we can avoid requiring users to fiddle with the WAR that would be ideal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/APIMAN-973">https://issues.iboss.org/browse/APIMAN-973</a>   |
| 668 | APIMAN-961  | Wouldn't it make more sense to move as much of apiman into WF module as possible? This would enable us to leverage WF's patching mechanism in the future if we need it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/APIMAN-961">https://issues.iboss.org/browse/APIMAN-961</a>   |
| 669 | APIMAN-942  | Great! Would it be possible for you to create a pull request in github? <a href="https://help.github.com/articles/using-pull-requests/">https://help.github.com/articles/using-pull-requests/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/APIMAN-942">https://issues.iboss.org/browse/APIMAN-942</a>   |
| 670 | APIMAN-931  | Could you clarify how this works. My understanding is that we just need to compare the SOAPAction value to the allowed value(s) and see whether it matches one of those patterns, then go/no-go? One complication is that the SOAP spec seems to indicate the use of multiple headers with identical keys: <a href="https://www.w3.org/TR/2000/NOTE-SOAP-20000508/#_Toc478383528">https://www.w3.org/TR/2000/NOTE-SOAP-20000508/#_Toc478383528</a> - presumably it's possible to do multiple actions with one message? I'm hesitant to do loads of Map<String, List<String>> due to the overheads, but I guess we should profile that before worrying (allocation is cheap, after all). I can think of a few workarounds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/APIMAN-931">https://issues.iboss.org/browse/APIMAN-931</a>   |
| 671 | APIMAN-906  | I'm a big +1 to creating new pages with explanations of what certain things mean. For example, creating a page to explain Centralized Security...and another page to explain rate limiting, etc. I've actually been meaning to create a better "How does apiman work?" page or series of pages. Basically something that will explain what the concepts are: API, Client App, Plan. I'm also good with adding a Resources page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/APIMAN-906">https://issues.iboss.org/browse/APIMAN-906</a>   |
| 672 | APIMAN-906  | [~eric.wittmann] - Thanks for the quick response. What about breaking up the guides into multiple pages? Are those automatically generated? Can they be broken up? I'm referring to the Installation, User, Developer, and Production guides. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/APIMAN-906">https://issues.iboss.org/browse/APIMAN-906</a>   |
| 673 | APIMAN-892  | Is it something difficult to achieve? We need apiman to work with a recent version of ES and are considering doing it ourself.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/APIMAN-892">https://issues.iboss.org/browse/APIMAN-892</a>   |
| 674 | APIMAN-876  | I spent a while on this, and can't reproduce it on 1.2.x at all. I just realised after re-analysing it that this is probably a UI bug, and I think we've since fixed it. I can't find any data flows whereby the apiman-manager-api returns the user's credentials. I think this is the UI's AJAX request breaking somehow, and then displaying it in the error box in a manner that misleads us into thinking it's the backend! Investigating 1.1.9.Final to see if I can reproduce the bug, but seemingly not.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/APIMAN-876">https://issues.iboss.org/browse/APIMAN-876</a>   |

| 676 | APIMAN-876  | I've had an idea: How's about we add a filter to the remote call that regexes the returned JSON and replaces anything that looks vaguely like "Password: 1234" with Password: <REMOVED>". If that is too broad (there may be some cases where we actually want to display passwords in the UI that we've downloaded?), we can add an option to turn the filtering off. The main thrust of my point is that it seems sensible _default_ behaviour, as it will avoid future accidental displays of user credentials. It should only be turned off in cases where we are fully aware of the caveats, and hence have _explicitly_ disabled the obfuscation. Seem a reasonable option?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/APIMAN-876">https://issues.iboss.org/browse/APIMAN-876</a>   |

| 677 | APIMAN-847  | Yeah - I already added initial support for this in the community version. What form would you want the icon to take for f8 services? The community edition supports fa-* (font awesome) icons ATM, but I could support image URLs too I suppose. I'd need to be careful to scale a URL based icon appropriately, of course.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/APIMAN-847">https://issues.iboss.org/browse/APIMAN-847</a> |
| 678 | APIMAN-828  | This is something that we have discussed internally and I think is a very good feature to have. Thanks for the feature request. The hardest thing about this feature, of course, is making sure we don't allow the same base URL for multiple APIs. :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/APIMAN-828">https://issues.iboss.org/browse/APIMAN-828</a> |
| 679 | APIMAN-822  | Where can we find this documentation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/APIMAN-822">https://issues.iboss.org/browse/APIMAN-822</a> |
| 680 | APIMAN-795  | [~eric.wittmann]- Do you mean the disabled endpoint field on the Service Implementation tab? Because for the Endpoint tab it looks like that field already has a copy-to-clipboard feature on it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/APIMAN-795">https://issues.iboss.org/browse/APIMAN-795</a> |
| 681 | APIMAN-795  | You get there by "searching for a service to consume" from the Application UI. Or by Find/Consume a service from the Home page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/APIMAN-795">https://issues.iboss.org/browse/APIMAN-795</a> |
| 682 | APIMAN-790  | [~ryordan] - can you add basic validation of the Service Endpoint in the UI? Just start out with ensuring that it starts with "http://" or "https://" . :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/APIMAN-790">https://issues.iboss.org/browse/APIMAN-790</a> |
| 683 | APIMAN-772  | Eric, why are you no longer showing if the serviceType, and the link to the Definition Document?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/APIMAN-772">https://issues.iboss.org/browse/APIMAN-772</a> |
| 684 | APIMAN-750  | Can you try something where there is an arrow pointing @ the disabled Publish button with a link/button labeled something like "Why can't I publish?" That link/button could then open a dialog (or something else) with a comprehensive checklist of items required for publishing. That allows us to defer asking the server for the checklist data until the user actually wants to see the checklist. So we won't need to load that data for every tab, instead we do it on demand (on click of the "Why can't I publish?" button). I also like that because advanced users can just easily ignore it. Thoughts?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/APIMAN-750">https://issues.iboss.org/browse/APIMAN-750</a> |
| 685 | APIMAN-722  | [~eric.wittmann] What do you think of this idea? Seems a reasonably simple solution, I think.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/APIMAN-722">https://issues.iboss.org/browse/APIMAN-722</a> |
| 686 | APIMAN-688  | We can use different plans for different consumers. Eg. A Plan for us consumers and another plan for Japan consumers                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/APIMAN-688">https://issues.iboss.org/browse/APIMAN-688</a> |
| 687 | APIMAN-683  | What about create a tree with the versions and the correspondent status?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/APIMAN-683">https://issues.iboss.org/browse/APIMAN-683</a> |
| 688 | APIMAN-664  | To be clear, the REST api for installing plugins has not changed - you can still use the REST API to install a plugin, but you need the plugin's maven GAV information to do this. The addition of plugin registry support is simply a *list* of possible plugins. You can still install a plugin that is not on the list. You can *retrieve* the list of available plugins via REST: {code} /apiman/plugins/availablePlugins {code} This simply returns a list of all plugins listed by all configured plugin registries. A consumer would need to invoke the above endpoint, then iterate through the results in some way. Once the desired plugin is found in the list, the GAV information for that plugin will be available. What additional registry REST API functionality would be useful?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/APIMAN-664">https://issues.iboss.org/browse/APIMAN-664</a> |
| 689 | APIMAN-652  | The "next page" button *should* be adding activity items to the bottom of the list. So if you want to see previous entries you should be able to just scroll back up in your browser. Does that work?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/APIMAN-652">https://issues.iboss.org/browse/APIMAN-652</a> |
| 690 | APIMAN-652  | [~ldimaggio], can you check the previous comment? Wondering if it works for you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/APIMAN-652">https://issues.iboss.org/browse/APIMAN-652</a> |
| 691 | APIMAN-649  | What would the level of detail mean? You mean whether to show the details or not?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/APIMAN-649">https://issues.iboss.org/browse/APIMAN-649</a> |
| 692 | APIMAN-647  | You're supposed to see a "Load More" button at the end of the activity list if there are more items to see. Is that not working?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/APIMAN-647">https://issues.iboss.org/browse/APIMAN-647</a> |
| 693 | APIMAN-640  | I am interested in Russian localization of APIMAN. I have discovered where are few i18n files in project. I have found html-files with "apiman-i18n-key" properties and TemplateScanner.java which generates messages.properties from html. I can't understand how messages.properties backward affect to html. Yes, I have registered at zanata.org. I have entered apiman in search field but found nothing. Is the project registered where. By the way. I'm ready to localize the project for Russian language. How can I start?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/APIMAN-640">https://issues.iboss.org/browse/APIMAN-640</a> |
| 694 | APIMAN-588  | Is usage by contract different from usage by application? I suppose an application could have multiple contracts. FWIW, the data to do this query is easily available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/APIMAN-588">https://issues.iboss.org/browse/APIMAN-588</a> |
| 695 | APIMAN-582  | [~eric.wittmann]: Hey! For the multiple versions do you mean adding an extra column for the version, and an extra row for each unique version? So, something like this: <a href="https://drive.google.com/open?id=0B54p6affHym-VUcxaU0tcDILOXc">https://drive.google.com/open?id=0B54p6affHym-VUcxaU0tcDILOXc</a> Please excuse the hideous mockup, I don't have any design tools installed on this laptop. :D As for the multiple services an organization has, don't we already have a page/view for that with the path /api-manager/orgs/<org>/services?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/APIMAN-582">https://issues.iboss.org/browse/APIMAN-582</a> |

| 697 | APIMAN-544  | [~msavy] - is this regressed? If so please open it again, assign to [~ryordan] and set to Blocker.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/APIMAN-544">https://issues.iboss.org/browse/APIMAN-544</a> |
| 698 | APIMAN-540  | That's a really great start! The back-end bits should be easy enough to implement - you are well on your way. Have you thought about how best to display the data in the UI? What kind of chart(s) would you want to see? If you want to take a stab at implementing the UI as well, of course that would be most welcome. If that's not your cup of tea then I'm happy to finish that part off.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/APIMAN-540">https://issues.iboss.org/browse/APIMAN-540</a> |

| 699 | APIMAN-540  | It's basically just a vertical bar chart, one resource per bar. I realized just recently that simply aggregating over resource doesn't really cut it because resource is stored with parameters, so if you have 1000000 users searched on a /users endpoint, this means 1000000 entries in the chart. I think there are two things an API owner might want to know: 1. Which parameters are hit the most on a certain endpoint (which users in /users ?) 2. Which endpoints are hit the most? The problem is actually filtering out the endpoint or the set of endpoints (which you get from swagger), especially with endpoints with path parameters. For example: /organizations/:organizationId/applications/:applicationId /organizations/organizationId/plans You'd have to filter by two substring tokens to recognise these two endpoints and aggregate over them. I'm pretty sure ES was never meant for this kind of queries. So at this point I am thinking that you'd need some kind of endpoint identifier field added to the database for easier filtering. This means you'd need to actually recognise the endpoint when it is accessed which further complicates the problem. As far as I know, Apiman uses swagger upload just for the reference and does not actually use that information for anything important.                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/APIMAN-540">https://issues.iboss.org/browse/APIMAN-540</a> |
| 700 | APIMAN-538  | Out of curiosity question. I vaguely remember [~ibek] telling me about discussion he had with you about the use of JRAPIDoc [1]. Was this idea dismissed or do I remember incorrectly? [1] <a href="https://github.com/projectodd/jrapidoc">https://github.com/projectodd/jrapidoc</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/APIMAN-538">https://issues.iboss.org/browse/APIMAN-538</a> |
| 701 | APIMAN-516  | I'm using AngularJS and calling the application with the simple call : \$http.get(\$scope.service,{headers: { 'Authorization': getBearerKey() }}); Is there something else i should send ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/APIMAN-516">https://issues.iboss.org/browse/APIMAN-516</a> |
| 702 | APIMAN-516  | You may need to add a CORS policy if you're doing a CORS request. Or do you want the service itself to service the CORS? I suggest you add and configure the CORS plugin policy for best functionality. It should be very easy. There may be an argument for passing CORS requests through to the back end but I'm not convinced that's a good idea.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/APIMAN-516">https://issues.iboss.org/browse/APIMAN-516</a> |
| 703 | APIMAN-516  | Do you think this is why the calls not working for me ? I'll try to add that . Are you able to test your fix on <a href="http://fadiabdeen.github.io/keycloak-oauth/public_html/">http://fadiabdeen.github.io/keycloak-oauth/public_html/</a> ? This should be pretty easy , just type in the information on the keycloak.json file and and put the same url as your redirect url. you should be able to get a code and then a token , then test your service. When you click "TEST" , it will attach a header and send it , and this is where it sends only the preflight and doesn't finish .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/APIMAN-516">https://issues.iboss.org/browse/APIMAN-516</a> |
| 704 | APIMAN-516  | I know i'm a pain :( ... I think we are very close. I did not know there was a CORS policy ,, so for the first time i'm using it now. I added the CORS policy on both the 1.1.3 and your version 1.1.7-SNAPSHOT and gave it a shot . i only tried the older version because you said its your fix might be releated , but it didnt work. Your version 1.1.7-SNAPSHOT (before tiring down and rebuilding) gave me problems. XMLHttpRequest cannot load <a href="http://localhost:8080/apiman-gateway/express/test/4.0">http://localhost:8080/apiman-gateway/express/test/4.0</a> . No 'Access-Control-Allow-Origin' header is present on the requested resource. Origin 'http://fadiabdeen.github.io' is therefore not allowed access. The response had HTTP status code 403. even when i remove the Auth policy completely. Then i decided to change the "Terminate on CORS error" to false . and what i got is : XMLHttpRequest cannot load <a href="http://localhost:8080/apiman-gateway/express/test/5.0">http://localhost:8080/apiman-gateway/express/test/5.0</a> . Request header field Authorization is not allowed by Access-Control-Allow-Headers. I have the CORS policy setup same as your screen shot but it seems not to be reading the values : Access-Control-Allow-Origin : <a href="http://fadiabdeen.github.io">http://fadiabdeen.github.io</a> , * Access-Control-Allow-Headers : Authorization The Access-Control-Allow-Credentials are false , i'm not passing username/password and i turned off the terminate on cors error That was my cors-fix branch setup from yesterday. should it not work ? When you said update from the latest and rebuild , you mean from master ? | <a href="https://issues.iboss.org/browse/APIMAN-516">https://issues.iboss.org/browse/APIMAN-516</a> |
| 705 | APIMAN-516  | It seems this issue still occurs in APIMan 1.2.3. Does anyone has the same issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/APIMAN-516">https://issues.iboss.org/browse/APIMAN-516</a> |
| 706 | APIMAN-516  | It is the only policy you have in the whole chain? i.e. client + plan + api? In general you'd probably want CORS on the client (or API if you're using a public API). If it's still not working then you may have your CORS policy setup slightly wrong. Could you share it, please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/APIMAN-516">https://issues.iboss.org/browse/APIMAN-516</a> |
| 707 | APIMAN-516  | Can you paste the precise error you're seeing if that doesn't resolve your situation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/APIMAN-516">https://issues.iboss.org/browse/APIMAN-516</a> |
| 708 | APIMAN-516  | Maybe this sounds like a silly question, but should I have build a new war file and deploy it on my Wildfly? I'm using the standalone version of APIMan. Could I just remove my old version (1.2.3) and then deploy the new one? I'm using the standalone-apiman.xml config. So I'd like to know if when I deploy the new version this going to continue running fine, or should I need to change something?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/APIMAN-516">https://issues.iboss.org/browse/APIMAN-516</a> |
| 709 | APIMAN-503  | Are you using Joda time? I've heard that helps. Also must be careful in date ranges as you mention above to be inclusive of all time within a day - a typical daily date range would be something like: 01-01-2015-00-00-00 to 01-01-2015-11-59-59....                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/APIMAN-503">https://issues.iboss.org/browse/APIMAN-503</a> |
| 710 | APIMAN-470  | Can you explain #1 - I don't understand what that means.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/APIMAN-470">https://issues.iboss.org/browse/APIMAN-470</a> |
| 711 | APIMAN-458  | Not sure this is an intended use-case, but here's what I did: 1) Create new Apiman/WildFly 8.2 instance 2) Login as admin/admin123! 3) Create organization -> fails, no auto-roles defined 4) Edit Roles/Permissions 5) Create new role called "admin" with some description 6) Select "Auto-Grant Role" 7) Select all available permissions 8) Click "Create Role" Upon doing so, the default admin user has been updated and now has membership association with the admin role to include all admin role permissions. Is this intended? Or is the default "admin" user intended to be like a "super admin" with the expectation that end users of Apiman would be creating new "admin" users for administering organizations? With all that said, I'm trying to put into context the feature description above. Do you mean when creating new users and assigning them the admin role, by default those users should inherit "Publish" and "Register" in addition to "Edit"? It seems as if database pre-population scripts are missing that create default system roles and assign default permissions to those roles, or something along those lines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/APIMAN-458">https://issues.iboss.org/browse/APIMAN-458</a> |
| 712 | APIMAN-445  | Thanks for the pointers! Next question is which version you'd like to use. We strive to be very conservative with APIs, however Lucene doesn't always do the same, so the Hibernate Search version in WildFly 8 turns out to be slightly different than the one in WildFly 10. You can of course ignore the version from WildFly and include any other version.. that's particularly good in case we need to develop a new feature (unlikely but it's good to have the options). Personally I would expect you to move to WildFly 10 since it's stable now, so we could use the version provided by it which is nicely up to date (and will get long term product support), while also avoiding to bloat the download size of ApiMan with new dependencies. So that would be my preference, but I don't know if you can have "master" drop support for WildFly 8 now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/APIMAN-445">https://issues.iboss.org/browse/APIMAN-445</a> |
| 713 | APIMAN-430  | Wow it looks like I never released them! Sorry about that. I'll make sure that when we release 1.1.3.Final (soon) I won't forget the plugins. I am filled with self loathing now.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/APIMAN-430">https://issues.iboss.org/browse/APIMAN-430</a> |

| 714 | APIMAN-426  | Hi [~eric.wittmann] [~msavy], I've been working on a CLI for apiman, so you can do things like this: Create a new service: {noformat} \$ ./apiman service create \ --server http://localhost:8080/apiman \ --name example \ --endpoint http://example.com \ --initialVersion 1.0 \ --publicService \ -- orgName test {noformat} Add a gateway: {noformat} \$ ./apiman gateway create \ --server http://localhost:8080/apiman \ --name test-gw \ endpoint http://localhost:1234 \ --username apimanuser \ --password "apiman123!" \ --type REST {noformat} You can find the project at https://github.com/outofcoffee/apiman-cli It uses the management API documented at http://www.apiman.io/latest/api-manager-restdocs.html to perform common operations such as: Manage Gateways: {noformat} apiman gateway test [args...] apiman gateway show [args...] apiman gateway create [args...] apiman gateway list [args...] {noformat} Manage Plugins: {noformat} apiman plugin show [args...] apiman plugin create [args...] apiman plugin list [args...] {noformat} Manage Organisations: {noformat} apiman org show [args...] apiman org create [args...] {noformat} Manage Services: {noformat} apiman service create [args...] apiman service policy [add remove] [args...] apiman service publish [args...] {noformat} Would you be interested in adopting this as part of the main project at some point? | <a href="https://issues.iboss.org/browse/APIMAN-426">https://issues.iboss.org/browse/APIMAN-426</a> |
| 715 | APIMAN-426  | Thanks [~stalep] - æsh looks interesting as a front-end to the CLI, as it provides completion, which is something that we don't get from Args4j. It also looks like æsh's annotation-based commands are similar to what we do at the moment, so hopefully it wouldn't be too much rework. Do you have an idea about how we can create hierarchical command trees using æsh, like we have right now? For example: {noformat} apiman api list [args] apiman api policy add [args] {noformat} Each subcommand makes things more specific. It looks like {@GroupCommandDefinition}} might do this - does it work for >1 level deep?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/APIMAN-426">https://issues.iboss.org/browse/APIMAN-426</a> |
| 716 | APIMAN-426  | so the gist i created show how to create a groupcommand as you saw. its not possible to go more than one level deep unfortunately, but i would assume that it wont be needed to use the "apiman" name if you start a apiman-cli? im thinking: \$ ./apiman-cli.sh (some welcome text here if needed) [apiman] > *user press tab* service gateway org api .... [apiman] > ... not sure if i mange to show my point, but the idea is that we dont need the apiman anymore since we're running in an interactive cli. does that make sense? if so, it should be sufficient to have one level deep group commands as æsh supports i think.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/APIMAN-426">https://issues.iboss.org/browse/APIMAN-426</a> |
| 717 | APIMAN-421  | Additional elements - the time period - if "day" can use an ID, why can't they all use id's? Thx! | 718 | APIMAN-408  | Eric, I've been trying to find a way to convert the data in chunks, therefore avoiding the storage of the whole data in memory. Unfortunately I haven't found a way to do it. Do you have any suggestions?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/APIMAN-408">https://issues.iboss.org/browse/APIMAN-408</a> |
| 719 | APIMAN-408  | In the policy's getResponseDataHandler method, I have the following line of code: final IBufferFactoryComponent bufferFactory = context.getComponent(IBufferFactoryComponent.class); When I run the test, I get the following error: {code} io.apiman.gateway.engine.beans.exceptions.ComponentNotFoundException: Component not found: io.apiman.gateway.engine.components.IBufferFactoryComponent at io.apiman.gateway.engine.impl.DefaultComponentRegistry.getComponent(DefaultComponentRegistry.java:87) at io.apiman.gateway.engine.policy.PolicyContextImpl.getComponent(PolicyContextImpl.java:81) at io.apiman.plugins.transformation_policy.TransformationPolicy.getResponseDataHandler(TransformationPolicy.java:95) {code} How do I register the component in my test set up?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/APIMAN-408">https://issues.iboss.org/browse/APIMAN-408</a> |
| 720 | APIMAN-368  | Erm, so :-)... What are we thinking on this issue, Jakub?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/APIMAN-368">https://issues.iboss.org/browse/APIMAN-368</a> |
| 721 | APIMAN-353  | The client will send a request with a query string parameter specifying the name of the callback function, e.g., "http://host/service/resource?callback=myCallbackFunctionName". Should the parameter name be parameterized? jQuery provides that flexibility (http://api.jquery.com/jQuery.ajax/ - jsonp). In case jQuery users don't specify a parameter name, it uses 'callback' by default. Should the callback function name parameter be sent to the endpoint? It will be of no use in the endpoint. We could remove it of just leave it there. I'm not sure it could cause issues.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/APIMAN-353">https://issues.iboss.org/browse/APIMAN-353</a> |
| 722 | APIMAN-347  | is there any workaround right now ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/APIMAN-347">https://issues.iboss.org/browse/APIMAN-347</a> |
| 723 | APIMAN-336  | I don't see where the CORS policy uses the shared state component... Isn't the IPolicyContext sufficient for this? Specifically getAttribute() and setAttribute() are conversation-scoped (in-memory). The ISharedStateComponent is what should be used if the state needs to be shared across requests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/APIMAN-336">https://issues.iboss.org/browse/APIMAN-336</a> |
| 724 | APIMAN-173  | [~jorgemoralespou_2] - did you offer to take this on?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/APIMAN-173">https://issues.iboss.org/browse/APIMAN-173</a> |
| 725 | APIMAN-173  | Great, thanks [~jorgemoralespou_2]. Does Keycloak support some sort of command line for creating users? I honestly think it doesn't. Not sure how to implement that last bullet point above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/APIMAN-173">https://issues.iboss.org/browse/APIMAN-173</a> |
| 726 | APIVIZ-8    | Does this _only_ exclude it from the overview summary? Does this also apply to subpackages?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/APIVIZ-8">https://issues.iboss.org/browse/APIVIZ-8</a>     |
| 727 | APIVIZ-7    | This can probably be solved in Edge.java via spec.replaceAll("\\\\s*\\\\n\\\\s+", "") Although this still is a bit of a hack.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/APIVIZ-7">https://issues.iboss.org/browse/APIVIZ-7</a>     |
| 728 | AF-564      | Hi Matt, As we talk before, here are my thought on the subject: 1) Teams are a bad name, I rather prefer to use Organizations. Organizations are how name, it sets basically a namespace. Another thing that contribute to me don't like the Team terminology is that this will limit us in the future to create team in the scope of the Organization. 2) Embrace Organizations are fundamental for multi tenancy (cloud first) 3) Now the technical 'implications': 3.1) If users can create a project without a 'Organization' setup first, where should we store the project? If projects aren't bound to thier organizations, we'll limit ourselves to have one single project name in the whole installation (we'll end up with: hello-world1, hello-world11, hello-world2, hello-world133, hello-world13422, my-hello-world-12,...) 3.2) What exactly projects we'll list under the Teams? 3.3) What about pagination? We'll need paginate everything for sure (multi tenancy in mind)                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AF-564">https://issues.iboss.org/browse/AF-564</a>         |
| 729 | AF-561      | [~mstevens1] Yes I really like option2. If that becomes too big, I would recommend to move some behind a more... link (or something similar) that would then open the wizard with all options listed there. But imho it significantly improves the experience for the most common asset types.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AF-561">https://issues.iboss.org/browse/AF-561</a>         |

| 730 | AF-546      | Hello [~mbarkley], did you do some benchmarking before/after these changes? I'd like to have an idea about how fast it was/is now for some example app. Also can we expect some kind of speedup for kie-wb? If so at what point (e.g. the initial loading of the app after we login etc.).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AF-546">https://issues.jboss.org/browse/AF-546</a>       |
| 731 | AF-411      | Hi [~ederign] we chatted about two things. 1) the ability to expand multiple categories via API. This is now implemented by the addExpandedCategory( String... categoriesToExpand ) method. and 2) the ability to have an event in order to be aware of the categories expand/collapse. Did you add this event too?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AF-411">https://issues.jboss.org/browse/AF-411</a>       |
| 732 | AF-338      | Hello [~paulovmr], do I understand it right that this wysiwyg editor is some third party library that is just being integrated at some places in our product? In such case QE would only have to create basic selenium integration test(s) - e.g. set some HTML using editor's source view and verify it's rendered correctly in the places where the edited HTML is used. Or is this editor more like part of the product, with some heavy customizations from our side? In such case we would also need to create some tests like checking that the editor's buttons for inserting images or tables in the visywyg mode are working correctly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AF-338">https://issues.jboss.org/browse/AF-338</a>       |
| 733 | AF-288      | [~porcelli] Thanks. I made a new commit on the PR that uses more adequate images to illustrate the example on uberfire-wires: <a href="https://github.com/paulovmr/uberfire-extensions/blob/UF-288-master/uberfire-wires/uberfire-wires-webapp/src/main/resources/org/uberfire/ext/wires/client/resources/images/optaPlannerIconBlue.png">https://github.com/paulovmr/uberfire-extensions/blob/UF-288-master/uberfire-wires/uberfire-wires-webapp/src/main/resources/org/uberfire/ext/wires/client/resources/images/optaPlannerIconBlue.png</a> <a href="https://github.com/paulovmr/uberfire-extensions/blob/UF-288-master/uberfire-wires/uberfire-wires-webapp/src/main/resources/org/uberfire/ext/wires/client/resources/images/optaPlannerIconWhite.png">https://github.com/paulovmr/uberfire-extensions/blob/UF-288-master/uberfire-wires/uberfire-wires-webapp/src/main/resources/org/uberfire/ext/wires/client/resources/images/optaPlannerIconWhite.png</a> Do you think we could do anything else to try to prevent that to happen? In our case, I think the PR review should catch this kind of thing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AF-288">https://issues.jboss.org/browse/AF-288</a>       |
| 734 | AF-110      | Ok this makes sense. I would anticipate that I will go with PicketLink and a derivative of the Errai's FormAuthenticationScheme. As for tracking this, should I open a ticket in Errai or Picketlink? Also, whats the thought on a release date for UberFire 0.5.0.Final?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AF-110">https://issues.jboss.org/browse/AF-110</a>       |

What tools will you use to automate this effort? 2) Documents results of internal audit, 508 non-compliance log bugs 3) Fix 508 non-compliance bugs                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AF-49">https://issues.jboss.org/browse/AF-49</a>         |
| 736 | JBAS-9571   | Tomaz and Bilge, Should this move to the EAP 7 jira instead or should it also be opened in BZ? I know EAP 6 is basically done, so maybe this belongs somewhere else, where is that somewhere else? Jim Tyrrell Principal JBoss Solutions Architect Public Sector Middleware Advocate 720-839-2251 mobile                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBAS-9571">https://issues.jboss.org/browse/JBAS-9571</a> |
| 737 | JBAS-9571   | Good point on Undertow, do we need to have a test case validating this behavior doesn't occur in Wildly, how do we figure that out? Jim Tyrrell Principal JBoss Solutions Architect Public Sector Middleware Advocate 720-839-2251 mobile                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBAS-9571">https://issues.jboss.org/browse/JBAS-9571</a> |
| 738 | JBAS-9526   | I have very similar issue. +JBoss 5.1.0.+ During the load test with >200 users per instance each instance run into high CPU load >99%. The thread dump analysis and statistics for CPU usage per Application Threads revealed that most of CPU (>75%) is taken by org.apache.tomcat.util.net.JIoEndpoint\$Worker threads. During the load test multiple new +JIoEndpoint\$Worker threads+ were created, and +each took from 1 to 9% of CPU+. Surprisingly, most of JIoEndpoint\$Worker threads which were on high CPU usage were in Waiting state, which doesn't makes much sense to me. To collect CPU per Application thread statistics I used the following linux command: {code:java} ps -mo pid,lwp,stime,time,%cpu,%mem -C java >>shared/threads_per_cpu.\$(date +"%F_%H-%M-%S") {code} Why JIoEndpoint\$Worker Threads took so much of CPU? (Especially the Threads which were in Waiting state) Is there any way to workaround this? (e.g. configuration change or Hotfix) Dump example for the heavy CPU threads: {code:java} "http-0.0.0.0-8280-25" daemon prio=10 tid=0x00002b4f7d5ee800 nid=0x6c05 in Object.wait() [0x00002b4f9d64b000] java.lang.Thread.State: WAITING (on object monitor) at java.lang.Object.wait(Native Method) - waiting on <0x0000000078f5c3298> (a org.apache.tomcat.util.net.JIoEndpoint\$Worker) at java.lang.Object.wait(Object.java:485) at org.apache.tomcat.util.net.JIoEndpoint\$Worker.await(JIoEndpoint.java:420) - locked <0x0000000078f5c3298> (a org.apache.tomcat.util.net.JIoEndpoint\$Worker) at org.apache.tomcat.util.net.JIoEndpoint\$Worker.run(JIoEndpoint.java:446) at java.lang.Thread.run(Thread.java:662) {code} | <a href="https://issues.jboss.org/browse/JBAS-9526">https://issues.jboss.org/browse/JBAS-9526</a> |
| 739 | JBAS-9472   | I'm sorry for very slow reaction. We can understand your stance for this issue. But, you revised the implementation of Parameters class for JBoss AS 7.1.1 in AS7-3989. Could you tell us if you have a plan for back-porting it to JBoss AS 5.1.0.GA? Regards,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBAS-9472">https://issues.jboss.org/browse/JBAS-9472</a> |
| 740 | JBAS-9472   | Hello, We have the same problem in production. Can you gives as a version of jboss modified with a patch ? Thx.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBAS-9472">https://issues.jboss.org/browse/JBAS-9472</a> |

| 743 | JBAS-9425   | where did you get the download file for hibernate 3.6.6-final. Please comment Thanks Chris                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBAS-9425">https://issues.jboss.org/browse/JBAS-9425</a> |
| 744 | JBAS-9164   | Jozef, what version are you referring to? 2.1.0.GA is the only GA version I see released which is currently in AS 6. Can you be more specific what version you are requesting?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBAS-9164">https://issues.jboss.org/browse/JBAS-9164</a> |
| 745 | JBAS-8948   | Thanks for the quick reply! Yep, that workaround works for us. The only problem with this was that it requires us to modify all our deployments which would also be required if we went with the jboss-scanning.xml solution. But this is doable. Do you think adding a configuration property is a valid enhancement that you might consider adding to a future version? Thanks, /Daniel                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBAS-8948">https://issues.jboss.org/browse/JBAS-8948</a> |
| 746 | JBAS-8948   | {quote} Do you think adding a configuration property is a valid enhancement that you might consider adding to a future version? {quote} Yeah, that looks reasonable. I'll see what needs to be done to add that support for 6.1.0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBAS-8948">https://issues.jboss.org/browse/JBAS-8948</a> |
| 747 | JBAS-8948   | Daniel, I've committed a fix for JBAS-8318. Can you try this application against the latest snapshot containing this fix and see if it helps?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBAS-8948">https://issues.jboss.org/browse/JBAS-8948</a> |
| 748 | JBAS-8939   | Marius, one obvious thing that comes to mind about this solution is that it will mean that anything that relies on this new feature will not be able to run on earlier versions of AS6, right? In the case of SwitchYard, that's probably going to be an issue (need to check that). I might have a look at the current Weld war deployer + JndiBinder class and see can we replicate that for SwitchYard. If it works, can we make sure that the resolution of this issue checks that the BeanManger is not already bound in.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBAS-8939">https://issues.jboss.org/browse/JBAS-8939</a> |

| 750 | JBAS-8613   | The following tests run in Hudson environment were failing when because the lookup was resolving to localhost:1099 instead of honoring the -Dnode0 IP address passed in to the tests. Specifically, org.jboss.test.cluster.defaultcfg.web.test.PersistentManagerFormAuthTestCase<br>org.jboss.test.cluster.ejb3.clusteredsession.ejbthree1136.unit.ClusteredCacheCleanStartUnitTestCase These tests extend JBossTest* instead of JBossTestCluster* which results in: Stacktrace javax.naming.CommunicationException: Could not obtain connection to any of these urls: localhost:1099 and discovery failed with error: javax.naming.CommunicationException: Receive timed out [Root exception is java.net.SocketTimeoutException: Receive timed out] at<br>org.jnp.interfaces.NamingContext.discoverServer(NamingContext.java:1690) at org.jnp.interfaces.NamingContext.checkRef(NamingContext.java:1761) at<br>org.jnp.interfaces.NamingContext.lookup(NamingContext.java:695) at org.jnp.interfaces.NamingContext.lookup(NamingContext.java:688) at<br>javax.naming.InitialContext.lookup(InitialContext.java:392) at org.jboss.test.JBossTestServices.getServer(JBossTestServices.java:154) at<br>org.jboss.test.JBossTestServices.invoke(JBossTestServices.java:228) at org.jboss.test.JBossTestCase.invoke(JBossTestCase.java:240) at<br>org.jboss.test.cluster.ejb3.clusteredsession.ejbthree1136.unit.ClusteredCacheCleanStartUnitTestCase.getExtraneousData(ClusteredCacheCleanStartUnitTes return<br>server; }                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBAS-8613">https://issues.jboss.org/browse/JBAS-8613</a> |
| 751 | JBAS-8610   | Due to feedback from the community, I have split the AS7 and AS6 projects and reopened all unscheduled AS6 issues that are a year or less old. This will make it easier community members to find and work on them. Future releases beyond 6.1 can be done provided a community member steps up to coordinate them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBAS-8610">https://issues.jboss.org/browse/JBAS-8610</a> |
| 752 | JBAS-8559   | Adding the details on what exactly is required out of this task. The JavaEE 6 spec (section EE.5.17) states that: <quote> A DataSource resource may be defined in a web module, EJB module, application client module, or application deployment descriptor using the datasource element. For example: <data-source><br><description>Sample DataSource definition</description> <name>java:app/MyDataSource</name> <class-name>com.foobar.MyDataSource</class-name><br><server-name>myserver.com</server-name> <port-number>6689</port-number> <database-name>myDatabase</database-name> <user>lance</user><br><password>secret</password> <property> <name>Property1</name> <value>10</value> </property> <property><br><name>Property2</name> <value>20</value> </property> <login-timeout>0</login-timeout> <transactional>>false</transactional> <isolation-<br>level>TRANSACTION_READ_COMMITTED</isolation-level> <initial-pool-size>0</initial-pool-size> <max-pool-size>30</max-pool-size> <min-pool-<br>size>20</min-pool-size> <max-idle-time>0</max-idle-time> <max-statements>50</max-statements> </data-source> A DataSource resource may<br>also be defined using the DataSourceDefinition annotation on a container-managed class, such as a servlet or enterprise bean class. For example:<br>@DataSourceDefinition(name="java:app/MyDataSource", className="com.foobar.MyDataSource", portNumber=6689,<br>serverName="myserver.com", user="lance", password="secret") (Of course, we do not recommend including passwords to production systems in the<br>code, but it's often useful while testing. Passwords, or other parts of the DataSource definition, can be overridden by a deployment descriptor when the application is<br>deployed.) </quote> So all that needs to be done is to process this Java EE spec defined datasource deployment descriptor element and the corresponding annotation<br>and create a JBoss specific datasource and bind it to JNDI. That's it. | <a href="https://issues.jboss.org/browse/JBAS-8559">https://issues.jboss.org/browse/JBAS-8559</a> |
| 753 | JBAS-8481   | Due to feedback from the community, I have split the AS7 and AS6 projects and reopened all unscheduled AS6 issues that are a year or less old. This will make it easier community members to find and work on them. Future releases beyond 6.1 can be done provided a community member steps up to coordinate them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBAS-8481">https://issues.jboss.org/browse/JBAS-8481</a> |
| 754 | JBAS-8468   | Richard, this should be Resolved with this commit: <a href="http://fisheye.jboss.com/changelog/JBossAS/?cs=108309">http://fisheye.jboss.com/changelog/JBossAS/?cs=108309</a> Can you confirm?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBAS-8468">https://issues.jboss.org/browse/JBAS-8468</a> |
| 755 | JBAS-8438   | There is still more work to do. Can this issue be moved to the next release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBAS-8438">https://issues.jboss.org/browse/JBAS-8438</a> |
| 756 | JBAS-8409   | We dropped support of AS6 in jbosgi. Our current implementation targets AS7 M1 and is based on MSC. IMHO, it'd be sufficient to remove the osgi profile and delete the test. Is that acceptable?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBAS-8409">https://issues.jboss.org/browse/JBAS-8409</a> |
| 757 | JBAS-8400   | There is a separate plugin for jbcache, jopr-jboss-cache-v3-plugin-3.0.0.B06.jar. So it may be that we'd just need to add an Infinispan plugin. Is there one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBAS-8400">https://issues.jboss.org/browse/JBAS-8400</a> |
| 758 | JBAS-8399   | This is probably not the best solution to deal with instantiation. The original idea was to have a BeanInstantiator registered per-component (i.e. EJB) in order for the insantiator to know what EJB is instantiated (and retrieve the appropriate AnnotatedType in Weld). But WAR deployments containing EJBs share the same java:comp context (and with java:module) so two EJBs will share the same BeanInstantiator.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBAS-8399">https://issues.jboss.org/browse/JBAS-8399</a> |
| 759 | JBAS-8371   | Done in weld-snapshot branch, Marius, can you merge to trunk?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBAS-8371">https://issues.jboss.org/browse/JBAS-8371</a> |
| 760 | JBAS-8350   | Daniel, questions like these are more appropriate in the user forums <a href="http://community.jboss.org/">http://community.jboss.org/</a> . For this specific question, the JCA user forum is appropriate <a href="http://community.jboss.org/en/jbossas/jca?view=discussions">http://community.jboss.org/en/jbossas/jca?view=discussions</a> . Could you please create a topic there?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBAS-8350">https://issues.jboss.org/browse/JBAS-8350</a> |
| 761 | JBAS-8315   | Stan, what is the deadline for this? Dan, any updates?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBAS-8315">https://issues.jboss.org/browse/JBAS-8315</a> |
| 762 | JBAS-8268   | I think, this made to 6.0.0.Final, didn't it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBAS-8268">https://issues.jboss.org/browse/JBAS-8268</a> |

| #   | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | URL                                                                                               |

| 765 | JBAS-8244   | Alessio, can you comment on this failure?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBAS-8244">https://issues.jboss.org/browse/JBAS-8244</a> |
| 766 | JBAS-8230   | Marius, could you try the upgrade that Nik requests in AS? We will update Weld for 1.1, but perhaps we can get the update into AS sooner.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBAS-8230">https://issues.jboss.org/browse/JBAS-8230</a> |

| 767 | JBAS-8169   | <p>If we want to make a service accessible through CORBA 1) We create a standard EJB service using a standard invoker (not IOP, no IOR Security config). 2) We create the public interfaces accessible through CORBA in an independent IDL file 3) We create the necessary java objects using IDL plug-in. 4) We implement the servant by extending the POA object generated by IDL (This servant object will then make (relay) a CORBA IOP call to a standard EJB) 5) We add a listener to our EJB application that will register this CORBA object at deployment using the following schema. // initialisation InitialContext ctx = new InitialContext(); NamingContextExt rootNC = (NamingContextExt)ctx.lookup("java:BossCorbaNaming"); POA poa = (POA) ctx.lookup("java:BossCorbaPOA"); ORB orb = (ORB)ctx.lookup("java:BossCorbaORB"); // using reflexion, we create a IorSecurityConfigMetaData with our custom realm IorSecurityConfigMetaData data = new IorSecurityConfigMetaData(); Class asConfigClass = data.getAsContext().getClass(); Class sasConfigClass = data.getSasContext().getClass(); Field realm = asConfigClass.getDeclaredField("realm"); realm.setAccessible(true); realm.set(data.getAsContext(), "weblogicDEFAULT"); Field propagation = sasConfigClass.getDeclaredField("callerPropagation"); propagation.setAccessible(true); propagation.set(data.getSasContext(), "SUPPORTED"); Any secPolicy = orb.create_any(); secPolicy.insert_Value(data); Policy csiv2Policy = orb.create_policy(CSiv2Policy.TYPE, secPolicy); Policy[] policies = new Policy[]{csiv2Policy}; poa.the_POAManager().activate(); // Create a secure child POA POA childPOA = null; try{ childPOA = poa.find_POA("csiv2POA", true); }catch(org.omg.PortableServer.POAPackage.AdapterNonExistent e){ logger.info("csiv2POA do not exist =&gt; Beeing created"); childPOA = poa.create_POA("csiv2POA", poa.the_POAManager(), policies); } // register the servant in the secure POA and activate it childPOA.activate_object(servant); childPOA.the_POAManager().activate(); // add the service in the naming directory org.omg.CORBA.Object o = childPOA.servant_to_reference(servant); createContext(nsPath, rootNC); rootNC.rebind(rootNC.to_name(nsPath), o); As you can see, the way we register CORBA objects do not allow us to use the IOR configuration available in the deployment descriptor. The code presented before allows us to register CORBA services with our custom realm and to change the callerPropagation setting. Nevertheless, we would like to avoid reflexion. We propose you to either give the possibility to set these values through a configuration XML file or by making the constructor of IorSecurityConfigMetaData to public. Furthermore, we remarked that the CSIV2 security settings are not propagated to the EJB in this configuration although the CSIV2 security context is correctly intercepted by org.jboss.iop.csiv2.SASTargetInterceptor. Why don't you populate the SecurityAssociation variable with these intercepted values? If this is a desired feature, how can we access to the CSIV2 security context in our CORBA servant in order to forward them to the EJB. It is really important for us to be able to use this architecture to register CORBA services and that the security context is correctly propagated.</p> | <a href="https://issues.jboss.org/browse/JBAS-8169">https://issues.jboss.org/browse/JBAS-8169</a> |
| 768 | JBAS-8166   | <p>The Hudson run JBoss-AS-6.0.x-testSuite-sun16 (Build #801 (Jul 15, 2010 2:26:27 AM) ran with Remoting 2.5.3. There are three failures that didn't occur in the previous run that went to completion: * org.jboss.test.cluster.defaultcfg.simpleweb.test.SessionCountUnitTestCase(Default-udp).testMarshallRedeployWarAndCache * org.jboss.test.profileservice.test.Ejb3MetricsUnitTestCase(profileservice).testSlsbLocal * org.jboss.test.xml.DDValidatorUnitTestCase.testJBossXml They don't appear to have any relationship to Remoting, so I'm closing the case.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBAS-8166">https://issues.jboss.org/browse/JBAS-8166</a> |
| 769 | JBAS-8159   | <p>Thanks for the 5.x patch, that will be useful to others also using 5.x. The JSR-160 connector can be secured already in 6.x (see umbrella jira JBAS-7818), but if you have improvements (for AS 6) to what we did, that is always welcome. What do think?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBAS-8159">https://issues.jboss.org/browse/JBAS-8159</a> |
| 770 | JBAS-8159   | <p>Question: How complete is the patch for securing the JSR-160 (example) code in AS 5? I am wondering if its complete or known to need further work (as a solution to patch the current JSR-160 example code in AS 5). In addition to looking at any new proposals for securing JSR-160 support, we should look at merging any parts of this contribution to AS-7 release (that make sense). Marking as fix for AS 7 to support that separate effort.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBAS-8159">https://issues.jboss.org/browse/JBAS-8159</a> |
| 771 | JBAS-8148   | <p>Just a reminder - M4 is planned to be tagged on the coming Wednesday (July 21). Looking at the AS trunk, these files seem to come from HornetQ distribution (although I don't know why, since these configs should perhaps be in AS). So that means, this will require a HornetQ release before 21st. I believe this is a good improvement to have in terms of boot time, so IMO should make it to M4.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBAS-8148">https://issues.jboss.org/browse/JBAS-8148</a> |
| 772 | JBAS-8143   | <p>Why there is a JCA task separated from the server? All the security events are done at the Server's Session. (I.e. I'm not sure there's any need for a JCA specific part).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBAS-8143">https://issues.jboss.org/browse/JBAS-8143</a> |
| 773 | JBAS-8105   | <p>What happened to conf/jbossts-properties.xml in trunk, can't find it?!</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBAS-8105">https://issues.jboss.org/browse/JBAS-8105</a> |
| 774 | JBAS-8105   | <p>Clebert, could you comment on Robert's entry whether that would be the proper way to configure it manually? Thanks in advance - Rico.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBAS-8105">https://issues.jboss.org/browse/JBAS-8105</a> |
| 775 | JBAS-8105   | <p>Well, for JBoss 6.0.0 this is definitely not the case. So you would say that here, Robert's configuration is correct? Also for 6.1.0 or even 7.x I cannot see that this configuration has made it into the general distribution - can you point me to it in case you found it? At least I think HornetQ's documentation should reflect the necessary configuration for JBoss 6 and later, instead of only for JBoss5 at atm.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBAS-8105">https://issues.jboss.org/browse/JBAS-8105</a> |
| 776 | JBAS-8099   | <p>This probably won't happen until AS7, but I don't have a target release version yet. Very minor task.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBAS-8099">https://issues.jboss.org/browse/JBAS-8099</a> |
| 777 | JBAS-8093   | <p>INFO in that case You might want to have web applications that aren't CDI enabled (and therefore you left out beans.xml). But isn't this a chicken-egg syndrome since if you left out beans.xml, Weld isn't booting (not going the weld-deployers route) and who does the warning in that case?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBAS-8093">https://issues.jboss.org/browse/JBAS-8093</a> |
| 778 | JBAS-8093   | <p>Underlying issue is that if CDI annotations are present but beans.xml isn't then the AS should complain. However I don't think the AS can do this right now? Maybe in AS7? Jason, could you let me know what the best course of action is.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBAS-8093">https://issues.jboss.org/browse/JBAS-8093</a> |
| 779 | JBAS-8078   | <p>Tim Fox wrote: The first time you boot HQ it will take longer, since it has to create the journal files. On subsequent boots it will be faster since it just has to open them. I didn't measure first run (heat phase). Tim Fox wrote: You can reduce the number of initial files in the config (see user manual) if you want to speed this up. Why isn't it default in AS?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBAS-8078">https://issues.jboss.org/browse/JBAS-8078</a> |
| 780 | JBAS-8061   | <p>I'm not sure this is working in M4 -- I'm still getting: 15:11:21,069 SEVERE [javax.enterprise.resource.webcontainer.jsf.application] JSF1005: Cannot instantiate validator of type IntegerValidator When this class is on the classpath, and I try to reference it in a Facetel via the &lt;f:validator validatorId="IntegerValidator" /&gt; tag: ----- package com.ocpsocialpm.validator; import javax.faces.application.FacesMessage; import javax.faces.component.UIComponent; import javax.faces.context.FacesContext; import javax.faces.validator.FacesValidator; import javax.faces.validator.Validator; import javax.faces.validator.ValidatorException; @FacesValidator("IntegerValidator") public class IntegerValidator implements Validator { @Override public void validate(final FacesContext context, final UIComponent component, final Object value) throws ValidatorException { //... } }</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBAS-8061">https://issues.jboss.org/browse/JBAS-8061</a> |
| 781 | JBAS-8061   | <p>How are you deploying your validator? Is it in a jar or in WEB-INF/classes? If it's a jar, please attach.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBAS-8061">https://issues.jboss.org/browse/JBAS-8061</a> |

| 782 | JBAS-8061   | Some annotations are found but others are not. Need to investigate why.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBAS-8061">https://issues.jboss.org/browse/JBAS-8061</a> |
| 783 | JBAS-8055   | Does this happen on AS startup? Or during an actual AS unit test? Which test?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBAS-8055">https://issues.jboss.org/browse/JBAS-8055</a> |
| 784 | JBAS-8026   | All the nodes that are part of a cluster are supposed to use the same ports. How the service binding manager would help here? Also, I have a question about this phrase: "Currently the discovery group and the broadcast group in hornetq-configuration.xml in AS are used for configuring the group-address and the port: " What you meant by this statement? Are you affirming we are clashing with another port, or that was just informing what the port was for?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBAS-8026">https://issues.jboss.org/browse/JBAS-8026</a> |
| 785 | JBAS-8026   | >> All the nodes that are part of a cluster are supposed to use the same ports. How the service binding manager would help here? The ServiceBindingManager (SBM) is the central place where all ports and group addresses are centrally configured. Each such address and/or port is part of a group known as ServiceBindingSet. The advantage of this approach is that end user/admins can just use a single resource (the SBM) to manage their ports. If they want to switch their ports, then that just switch the ServiceBindingSet group by passing a JVM system param (like in the example in the wiki). >> Also, I have a question about this phrase: >>"Currently the discovery group and the broadcast group in hornetq-configuration.xml in AS are used for configuring the group-address and the port: " >> What you meant by this statement? Are you affirming we are clashing with another port, or that was just informing what the port was for? Just informing what those ports are for.                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBAS-8026">https://issues.jboss.org/browse/JBAS-8026</a> |
| 786 | JBAS-8026   | on that case.. even with you inform -Dports=, those groups should still be the same... unless they form another group. I'm not sure how the ServiceBinding would help here                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBAS-8026">https://issues.jboss.org/browse/JBAS-8026</a> |
| 787 | JBAS-8026   | "SBM internally adds +100 (just an example) to the default port." This is exactly my point.... if you add another server on the same box... everything should be added +100 except those groups ports. Unless the user wants to make them part of a different cluster. In other words.. most of the same the user will want the same port for those two groups. Notice that the connectors and acceptors are using the binding manager                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBAS-8026">https://issues.jboss.org/browse/JBAS-8026</a> |
| 788 | JBAS-8020   | Dan, can you take care of this please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBAS-8020">https://issues.jboss.org/browse/JBAS-8020</a> |
| 789 | JBAS-8016   | Ron, can you work on the remoting docs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBAS-8016">https://issues.jboss.org/browse/JBAS-8016</a> |
| 790 | JBAS-8015   | Clebert, can you or someone from hornetQ work on the docs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBAS-8015">https://issues.jboss.org/browse/JBAS-8015</a> |
| 791 | JBAS-8015   | Can we have some context about what the purpose of this task is, what's expected of us etc? So far I was under the impression that AS docs would simply reference our existing HornetQ docs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBAS-8015">https://issues.jboss.org/browse/JBAS-8015</a> |
| 792 | JBAS-8012   | Anil, can you work on the AS6 docs for security?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBAS-8012">https://issues.jboss.org/browse/JBAS-8012</a> |
| 793 | JBAS-8008   | Jason, can you take this task or re-assign?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBAS-8008">https://issues.jboss.org/browse/JBAS-8008</a> |
| 794 | JBAS-8008   | I think that the twiddle JIRA (JBAS-8013) could probably be closed as duplicated by JBAS-8008. If no one disagrees, I'll merge my current twiddle changes in to the admin doc. Thinking more about it, we probably need several subtasks for JBAS-8008 (to allow multiple people to work on JBAS-8008). Does Jira allow subtasks for subtasks? We could then have a twiddle subtask.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBAS-8008">https://issues.jboss.org/browse/JBAS-8008</a> |
| 795 | JBAS-7988   | Can you please check Paul if there is a flag to disable this update check?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBAS-7988">https://issues.jboss.org/browse/JBAS-7988</a> |
| 796 | JBAS-7970   | Ales, is there a plan that backport this fix into EAP 5.1?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBAS-7970">https://issues.jboss.org/browse/JBAS-7970</a> |
| 797 | JBAS-7955   | No idea, and as you can see, this was a while ago. I would have to look again. btw: this our jsr77 impl doesn't do much, mostly basic deployment structure. What exactly is the issue or you're trying to do?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBAS-7955">https://issues.jboss.org/browse/JBAS-7955</a> |
| 798 | JBAS-7889   | updated existing wiki pages: Remote bean access <a href="http://community.jboss.org/wiki/HowDoIGetRemoteAccessToMyMBean">http://community.jboss.org/wiki/HowDoIGetRemoteAccessToMyMBean</a> Which interface should I use for remote bean access <a href="http://community.jboss.org/wiki/WhichRemoteInterfaceShouldIUseForTheMBeanServer">http://community.jboss.org/wiki/WhichRemoteInterfaceShouldIUseForTheMBeanServer</a> There is some jsr160 support in remoting (see <a href="http://community.jboss.org/wiki/Remoting">jmx-remoting.sar</a> in <a href="http://community.jboss.org/wiki/Remoting">http://community.jboss.org/wiki/Remoting</a> ) twiddle page <a href="http://community.jboss.org/wiki/Twiddle">http://community.jboss.org/wiki/Twiddle</a> shutdown page <a href="http://community.jboss.org/wiki/StartStopJBoss">http://community.jboss.org/wiki/StartStopJBoss</a> <a href="https://community.jboss.org/wiki/SecureTheJmxConsole">https://community.jboss.org/wiki/SecureTheJmxConsole</a> jconsole page <a href="http://community.jboss.org/wiki/UseJDK5JConsole">http://community.jboss.org/wiki/UseJDK5JConsole</a> | <a href="https://issues.jboss.org/browse/JBAS-7889">https://issues.jboss.org/browse/JBAS-7889</a> |
| 799 | JBAS-7857   | Sorry for not getting back earlier on this. Does this upgrade still need to happen for AS6? I see both apache-xalan:xalan and xalan:xalan included in the AS6 dep tree, so probably the "apache-xalan" deps should be excluded. And the new patched version should be uploaded to the thirdparty-releases community repo.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBAS-7857">https://issues.jboss.org/browse/JBAS-7857</a> |
| 800 | JBAS-7830   | Is there anything in <a href="#">jmx-invoker-service.xml</a> that we should keep? :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBAS-7830">https://issues.jboss.org/browse/JBAS-7830</a> |
| 801 | JBAS-7828   | Should we do this still? What is the major advantage over <a href="#">jmx-jboss-beans.xml</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBAS-7828">https://issues.jboss.org/browse/JBAS-7828</a> |
| 802 | JBAS-7828   | I see various examples of other services doing this, such as <a href="#">jboss-threads</a> Should I create a separate subversion project, as you did for <a href="#">jboss-threads</a> ? Or should this live in an existing project?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBAS-7828">https://issues.jboss.org/browse/JBAS-7828</a> |
| 803 | JBAS-7818   | Is this going to be scheduled on the remoting roadmap?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBAS-7818">https://issues.jboss.org/browse/JBAS-7818</a> |
| 804 | JBAS-7818   | The OSGi remote testsuite relies on the RMIAdaptor. Recent changes made <code>&lt;groupId&gt;org.jboss.jbossas&lt;/groupId&gt; &lt;artifactId&gt;jboss-as-client&lt;/artifactId&gt;&lt;version&gt;6.0.0.20100216-M2&lt;/version&gt;</code> unusable with <code>jbossas/trunk</code> . Could you please provide documentation on the intended migration path? * How should clients remotely connect to JMX in the future? * When is the existing access method intended to go out of service? I assume that access to the RMIAdaptor using the <code>6.0.0.20100216-M2</code> client libraries should continue to work for a while and that I am seeing a bug introduced by recent changes.                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBAS-7818">https://issues.jboss.org/browse/JBAS-7818</a> |

| #   | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | URL                                                                                               |

| 805 | JBAS-7818   | Scott, It appears that with the recent changes around this, the following lookup: MBeanServerConnection adaptor = (MBeanServerConnection) ctx.lookup("jmx/rmi/RMIAdaptor"); runs into issues (in EJB3 testsuite). This throws a: javax.naming.Reference cannot be cast to javax.management.MBeanServerConnection java.lang.ClassCastException: javax.naming.Reference cannot be cast to javax.management.MBeanServerConnection at org.jboss.test.JBossTestServices.getServer(JBossTestServices.java:154) at org.jboss.test.JBossTestServices.invoke(JBossTestServices.java:228) at org.jboss.test.JBossTestServices.undeploy(JBossTestServices.java:364) at org.jboss.test.JBossTestSetup.undeploy(JBossTestSetup.java:197) at org.jboss.test.JBossTestCase\$1.tearDown(JBossTestCase.java:333) at junit.extensions.TestSetup\$1.protect(TestSetup.java:24) at junit.extensions.TestSetup.run(TestSetup.java:27) The root cause appears to be the class org.jboss.system.server.jmx.JMXAdapter (present in JBOSS_HOME/lib/jboss-system.jar) missing from the client classpath (which uses the jars in JBOSS_HOME/client folder, especially jbossall-client.jar). Looking at the name of that class, i don't think it would be appropriate to include that in the client jar files.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBAS-7818">https://issues.jboss.org/browse/JBAS-7818</a> |
| 806 | JBAS-7818   | Scott, is this work completed for AS 6.0.0? There is a problem starting AS 6 with IPv6; specifically, the error shown below. This prevents additional testing with IPv6 to proceed. Can you comment on this failure? 4:15:34,374 INFO [JMXConnector] starting JMXConnector on host 3ffe:ffff:100:f101::1:1090 14:15:34,393 ERROR [JMXConnector] Could not start JMXConnector: java.net.MalformedURLException: Bad port number: "". java.lang.NumberFormatException: For input string: "" at javax.management.remote.JMXServiceURL.<init>(JMXServiceURL.java:193) [:1.6.0_13] at org.jboss.system.server.jmx.JMXConnector.start(JMXConnector.java:143) [:6.0.0.20100721-M4 (Build SVNTag:JBoss_6.0.0.20100721-M4 date: 20100723)]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBAS-7818">https://issues.jboss.org/browse/JBAS-7818</a> |
| 807 | JBAS-7739   | Stan, can you check the versions for jsf.deployer and jsf-impl in jbossas/trunk/component-matrix/pom.xml. There seems to be some discrepancy in the pom. From the JIRA, your comment is to upgrade the jsf.deployer to 1.0.3, but trunk contains 1.0.2: <version.jboss.jsf-deployer>1.0.2</version.jboss.jsf-deployer> http://fisheye.jboss.com/changelog/JBossAS/?cs=108115 There is also a dependency for jsf-impl; <dependency> <groupId>javax.faces</groupId> <artifactId>jsf-impl</artifactId> <version>\${version.javafx.faces}</version> </dependency> where version.javafx.faces is: <version.javafx.faces>2.0.2-FCS</version.javafx.faces> The 1.0.0.Beta6 of org.jboss.javaee.specs.bom also defines the JSF API version as: <version.jsf.api>2.0.2-FCS</version.jsf.api>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBAS-7739">https://issues.jboss.org/browse/JBAS-7739</a> |
| 808 | JBAS-7735   | As per http://community.jboss.org/wiki/JBossProjectVersioning 6.0.0.20100215-M2 is the official and correct name of the release. Any formal declaration of the version should use the full and correct name; IMO the logging above is a formal declaration of the version. The one semi-exception to this is the decision not to include the timestamp in the name of the zip files for the dist, as discussed at http://post-office.corp.redhat.com/archives/jboss-tag-public/2010-February/msg00032.html . I say semi-exception, because a name of a zip file isn't really a formal declaration of the version. Changing the directory name seems harmless enough, but doing it means hacking the build scripts to essentially manually set it. Is that worth doing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBAS-7735">https://issues.jboss.org/browse/JBAS-7735</a> |
| 809 | JBAS-7735   | Are you thinking more like (build: SVNTag=JBoss_6_0_0_20100215-M2 revision=r100927) ? I'll ping Paul Gier to see what's involved.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBAS-7735">https://issues.jboss.org/browse/JBAS-7735</a> |
| 810 | JBAS-7735   | What happened to the old codenames (Trinity, Morpheus, Neo). Why they disappeared?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBAS-7735">https://issues.jboss.org/browse/JBAS-7735</a> |
| 811 | JBAS-7715   | Dimitris - is this planned for 6.0.0.CR1? If javax.script is part of JDK 6 now, what is needed to be done in AS (remove the 2.4.0 dep?)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBAS-7715">https://issues.jboss.org/browse/JBAS-7715</a> |
| 812 | JBAS-7706   | On a remote client I get: Failed to initialise session factory javax.jms.JMSEException: Failed to initialise session factory at org.hornetq.core.client.impl.ClientSessionFactoryImpl.createSessionInternal(ClientSessionFactoryImpl.java:1043) at org.hornetq.core.client.impl.ClientSessionFactoryImpl.createSession(ClientSessionFactoryImpl.java:790) at org.hornetq.jms.client.HornetQConnection.authorize(HornetQConnection.java:572) at org.hornetq.jms.client.HornetQConnectionFactory.createConnectionInternal(HornetQConnectionFactory.java:602) at org.hornetq.jms.client.HornetQConnectionFactory.createQueueConnection(HornetQConnectionFactory.java:128) at org.hornetq.jms.client.HornetQConnectionFactory.createQueueConnection(HornetQConnectionFactory.java:123) at org.jboss.ejb3.test.dd.mdb.unit.MDBUnitTestCase.getQueueSession(MDBUnitTestCase.java:129) at org.jboss.ejb3.test.dd.mdb.unit.MDBUnitTestCase.testQueue(MDBUnitTestCase.java:155) at org.jboss.ejb3.test.dd.mdb.unit.MDBUnitTestCase.testQueue(MDBUnitTestCase.java:270) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:24) at junit.extensions.TestSetup\$1.protect(TestSetup.java:23) at junit.extensions.TestSetup.run(TestSetup.java:27) at junit.extensions.TestDecorator.basicRun(TestDecorator.java:24) at junit.extensions.TestSetup\$1.protect(TestSetup.java:23) at junit.extensions.TestSetup.run(TestSetup.java:27) Caused by: HornetQException[errorCode=0 message=Failed to initialise session factory] Caused by: java.lang.IllegalArgumentException: Error instantiating connector factory "org.hornetq.integration.transports.netty.NettyConnectorFactory" at org.hornetq.core.client.impl.FailoverManagerImpl.instantiateConnectorFactory(FailoverManagerImpl.java:1016) at org.hornetq.core.client.impl.FailoverManagerImpl.<init>(FailoverManagerImpl.java:228) at org.hornetq.core.client.impl.ClientSessionFactoryImpl.initialise(ClientSessionFactoryImpl.java:237) at org.hornetq.core.client.impl.ClientSessionFactoryImpl.createSessionInternal(ClientSessionFactoryImpl.java:1039) Caused by: java.lang.ClassNotFoundException: org.hornetq.integration.transports.netty.NettyConnectorFactory at java.net.URLClassLoader\$1.run(URLClassLoader.java:200) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:188) at java.lang.ClassLoader.loadClass(ClassLoader.java:307) at sun.misc.Launcher\$AppClassLoader.loadClass(Launcher.java:301) at java.lang.ClassLoader.loadClass(ClassLoader.java:252) at org.hornetq.core.client.impl.FailoverManagerImpl.instantiateConnectorFactory(FailoverManagerImpl.java:1011) | <a href="https://issues.jboss.org/browse/JBAS-7706">https://issues.jboss.org/browse/JBAS-7706</a> |
| 813 | JBAS-7703   | Carlo, can you or one of your guys have a look at this? One thing I notice is ContainerDependencyMetaData has an unused jndiPolicy field, which if used would seem to be a hook for making a more sophisticated determination of the jndi name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBAS-7703">https://issues.jboss.org/browse/JBAS-7703</a> |
| 814 | JBAS-7703   | Do you have some time to make a servlet that does the same thing as simple.jsp, throw it in the war and invoke on that? If that fails, it's a more significant issue since as you say resource injection in JSP pages is not supported.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBAS-7703">https://issues.jboss.org/browse/JBAS-7703</a> |

| 815 | JBAS-7690   | The produced Maven artifacts will just use whatever version is in the POM. The same goes for the base directory in the zip. According to the guidelines linked in the summary, the community release should be 6.0.0.Final. Dimitris, is there anything remaining to do on this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBAS-7690">https://issues.jboss.org/browse/JBAS-7690</a> |
| 816 | JBAS-7689   | Do we want all build artifacts to use that version string? I'm not sure if there is anything to change in the build for this. As long as the version is changed in the pom it will affect all the artifacts and the distribution zip.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBAS-7689">https://issues.jboss.org/browse/JBAS-7689</a> |
| 817 | JBAS-7661   | Per discussion on jboss-dev, can we move this to a special osgi profile for now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBAS-7661">https://issues.jboss.org/browse/JBAS-7661</a> |
| 818 | JBAS-7661   | FYI, here a transcript of the chat that I had with Dimitris Friday 09 April 2010 ... [12:38:37] Thomas Diesler: The discussion is however relevant for the upcoming M3 release. :-) [12:45:25] Thomas Diesler: the beauty about smoke-tests is that folks actually run them often [12:45:45] Dimitris Andreadis: I know, but your test target will also show up in hudson runs [12:45:45] Thomas Diesler: thats why I wanted osgi coverage in there out of the box ... [12:46:28] Thomas Diesler: again, whats your concern against osgi being part of 'all'? is it just boot time? [12:46:42] Dimitris Andreadis: yea, boot time ... [12:51:20] Dimitris Andreadis: I think the 'osgi' config is a good first step to show that "we do OSGi", too. And we can take it from there depending on user interest. [12:53:59] Thomas Diesler: my main concern with that approach is that other services i.e. ejb3, web, hornetq, etc. would not work as expected when a user installs jbosgi using the installer. Because there is no test coverage that tests these services with osgi in place. [12:54:07] Thomas Diesler: Here is a prime example http://community.jboss.org/thread/150453?tstart=0 [12:54:54] Thomas Diesler: Simple EJB3 SLSB breaks when osgi is installed [12:55:13] Thomas Diesler: Issues like this I'd like to see in the AS hudson run [12:55:37] Thomas Diesler: which I would not if its (only) in a separate profile [12:55:53] Dimitris Andreadis: but we could test for that with your custom osgi-test config, no? [12:57:01] Thomas Diesler: only if we run all-tests against an 'all+osgi' configuration [12:57:18] Thomas Diesler: I claim taht it would be better to make osgi part of all [12:57:35] Thomas Diesler: so that all test coverage must work with osgi in place [12:58:01] Dimitris Andreadis: i see your point [13:04:34] Thomas Diesler: Here is another example: https://jira.jboss.org/jira/browse/JBAS-7909 [13:04:51] Thomas Diesler: the 'default' profile would not even boot with osgi in place [13:05:17] Thomas Diesler: because the AOP subsystems makes certain assumptions that osgi bundle deployments do not satisfy [13:05:59] Thomas Diesler: stuff like this I'd like to catch early before I want to ship osgi as part of AS [13:06:07] Dimitris Andreadis: in that case the only way to satisfy everybody is to copy over osgi for all tests and remove it afterwards. [13:06:20] Dimitris Andreadis: i.e. make all-test a custom config [13:06:38] Thomas Diesler: that would work ... [13:07:47] Dimitris Andreadis: maybe you can throw the idea/reasoning on the dev-list thread [13:08:26] Thomas Diesler: sure, let me add the boot time delta [13:08:38] Dimitris Andreadis: yes, thats imporant [13:19:17] Thomas Diesler: on my machine I get 'all' config boot times of osgi excluded: ~ 1:17min osgi included: ~ 1:37min This is an increase of ca. 29% [13:19:50] Dimitris Andreadis: 1:17 is a lot already ... [13:28:05] Dimitris Andreadis: all+osgi: 1:02 [13:29:52] Dimitris Andreadis: all-osgi: 49 [13:30:33] Dimitris Andreadis: +26.5% [13:31:26] Thomas Diesler: same result [13:31:31] Thomas Diesler: so what do you say? [13:33:13] Dimitris Andreadis: do the isolated testing anyway (custom config with smoke tests + osgi tests anyway) and discuss if we should alter the all testing [13:33:36] Thomas Diesler: ok | <a href="https://issues.jboss.org/browse/JBAS-7661">https://issues.jboss.org/browse/JBAS-7661</a> |
| 819 | JBAS-7651   | Stan, do you still consider this a BLOCKER for 6.0.0.Final?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBAS-7651">https://issues.jboss.org/browse/JBAS-7651</a> |
| 820 | JBAS-7612   | I see this largely as a usage issue. The work unit stuff should be adapted to the new thread pool code since the old thread pool code predates JDK5 and Executors. Can you describe the requirements (preferably in a forum thread linked into this issue)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBAS-7612">https://issues.jboss.org/browse/JBAS-7612</a> |
| 821 | JBAS-7588   | >> The issue here is that org.jboss.system.RMIClassLoader is no longer getting used. >> It was previously configured in conf/jboss-service.xml before any subsystem (e.g. naming) used RMI. If you don't do it that way it won't work. Thanks a lot Adrian, for that help. Without it, this surely would have taken me a lot longer to even get a complete grasp of what's going on :) Just as a quick check, i booted the server with -Djava.rmi.server.RMIClassLoaderSpi=org.jboss.system.JBossRMIClassLoader in the JAVA_OPTS of the run script. The tests started passing consistently. I'll do the necessary changes (which you already explained).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBAS-7588">https://issues.jboss.org/browse/JBAS-7588</a> |
| 822 | JBAS-7583   | Some time back there was a suggestion to move the SBM configuration to a central location instead of per server config/profile http://community.jboss.org/message/434149. Is that something that could be done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBAS-7583">https://issues.jboss.org/browse/JBAS-7583</a> |
| 823 | JBAS-7563   | Do we need to remove JRMPInvokerProxyHA JRMPInvokerProxy? I assume yes but wanted to see if others agree. Class JRMPInvoker has the following method which tells me that we do want to remove the proxies for JRMPInvoker: protected Invoker createDelegateInvoker() { return new JRMPInvokerProxy(this); }                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBAS-7563">https://issues.jboss.org/browse/JBAS-7563</a> |
| 824 | JBAS-7563   | From IRC re: WrapperDataSourceService: <bstansberry> smarlow: is that tied to JRMP? or just to Invoker? <bstansberry> smarlow: i.e. i suspect UnifiedInvoker is fine <bstansberry> yeah, it takes a property named "JMIXInvokerName" where "JMIXInvoker" means a legacy detached invoker that calls through the JMX bus <bstansberry> UnifiedInvoker meets the requirements <smarlow> well, it uses the Invoker interface but the comment mentions creating a JRMPInvokerProxy <bstansberry> where? <smarlow> around line 273 <smarlow> bstansberry: line 273 of WrapperDataSourceService.java <bstansberry> smarlow: ok, but it actually calls into GenericProxyFactory, which can create a proxy that can deal with any legacy detached invoker <bstansberry> a lot of code comments are from the early days when JRMP was the only detached invoker <smarlow> bstansberry: okay, so we should be good just updating the comment <bstansberry> yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBAS-7563">https://issues.jboss.org/browse/JBAS-7563</a> |
| 825 | JBAS-7542   | Shouldn't the solution be to update to use the correct library (or wait for that), rather than reverting to reflection?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBAS-7542">https://issues.jboss.org/browse/JBAS-7542</a> |
| 826 | JBAS-7539   | Emanuel, if the profileservice-secured.jar is no longer needed, can I also remove ejb-jar.xml, profileservice-users.properties, and profileservice-roles.properties?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBAS-7539">https://issues.jboss.org/browse/JBAS-7539</a> |
| 827 | JBAS-7533   | Can we make this an alpha3 with JBASM-33 fixed? That will stabilize the testsuite run by preventing the JBM clustering tests screwing it up. I volunteer to do JBASM-33 right away if not throwing the ISE is the right thing to do.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBAS-7533">https://issues.jboss.org/browse/JBAS-7533</a> |
| 828 | JBAS-7509   | Is the console code going to be removed for M2? If not, please open a separate JIRA for cleaning out the code. The AS dist no longer includes the web-console, so this JIRA should be closed before M2 so that fact is reflected in the release notes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBAS-7509">https://issues.jboss.org/browse/JBAS-7509</a> |
| 829 | JBAS-7509   | I might have a go with it. What's the cutoff, Thursday 11th?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBAS-7509">https://issues.jboss.org/browse/JBAS-7509</a> |
| 830 | JBAS-7503   | Howard, A couple questions: 1) When will the HornetQ upgrade happen? 2) How much effort is it to move trunk to 1.4.3.GA? Is it more than changing component-matrix/pom.xml and running the testsuite? I ask because 6.0.0.M1 includes 1.4.3.GA, and the development branch for the next milestone release does not. That's a regression, plus it makes other efforts to ensure things are working correctly in trunk more suspect. It's not good to leave the AS in a regressed state for a long time, even if we know that in the end JBM is going to be replaced.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBAS-7503">https://issues.jboss.org/browse/JBAS-7503</a> |

| #   | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | URL                                                                                               |

| 834 | JBAS-7434   | Open question for anyone following/working this issue. Is there a way to make the com.arjuna.ArjunaOTS.ManagedSynchronizationPOA._invoke run in the user/application thread that committed the transaction. This would be an optimization for the case where the invocation came from a local thread. Assumingly, the user/application thread must be blocked on the completion of the com.arjuna.ArjunaOTS.ManagedSynchronizationPOA._invoke and we probably have a way to make this "local" optimization.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBAS-7434">https://issues.jboss.org/browse/JBAS-7434</a> |

| 839 | JBAS-7384   | What does beanvalidation deployer do to make this fail?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBAS-7384">https://issues.jboss.org/browse/JBAS-7384</a> |
| 840 | JBAS-7376   | Can you change the name of the package to org.jboss.test.ejb3.jbas7376.unit (instead of ejbthree7376)? Helps in finding the JIRA :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBAS-7376">https://issues.jboss.org/browse/JBAS-7376</a> |
| 841 | JBAS-7370   | So can JBAS-7361 be closed then?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBAS-7370">https://issues.jboss.org/browse/JBAS-7370</a> |
| 842 | JBAS-7326   | Added code to JaccContextValve that sets the response in the ActiveRequestResponseCache, just as it does with the request object. Test now pass: [sguilhen@BLACKBIRD<br>testsuite]\$ ant one-test -Dtest=org.jboss.test.web.test.WebProgrammaticLoginTestCase Buildfile: build.xml one-test: [delete] Deleting: /opt/workspace-jboss/jbossas-<br>b5x/testsuite/output/log/test.log [junit] WARNING: multiple versions of ant detected in path for junit [junit] jar:file:/opt/development-tools/apache-ant-<br>1.7.1/lib/ant.jar!/org/apache/tools/ant/Project.class [junit] and jar:file:/opt/workspace-jboss/jbossas-b5x/tools/lib/ant.jar!/org/apache/tools/ant/Project.class<br>[junit] Running org.jboss.test.web.test.WebProgrammaticLoginTestCase [junit] Tests run: 2, Failures: 0, Errors: 0, Time elapsed: 5.006 sec BUILD SUCCESSFUL Total time:<br>9 seconds                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBAS-7326">https://issues.jboss.org/browse/JBAS-7326</a> |
| 843 | JBAS-7277   | Would this include all projects pulled into the AS? Or just the modules of AS itself? For a combined AS module javadoc, I opened JBBUILD-526 a while ago, but haven't<br>worked on it yet. Also would this need to be packaged up into the distribution, or deployed to the web somewhere?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBAS-7277">https://issues.jboss.org/browse/JBAS-7277</a> |
| 844 | JBAS-7273   | Andrew, if these are tests of a non-existing feature, should they be disabled until the feature is there?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBAS-7273">https://issues.jboss.org/browse/JBAS-7273</a> |
| 845 | JBAS-7273   | Investigate dependency mismatch in AS?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBAS-7273">https://issues.jboss.org/browse/JBAS-7273</a> |
| 846 | JBAS-7257   | Stan, can you comment on this remaining SEAM test failure?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBAS-7257">https://issues.jboss.org/browse/JBAS-7257</a> |
| 847 | JBAS-7257   | Is this application using the old version of Facelets? And by old, I mean the non-JSF2 version that you need to bundle with your WAR. I assume that is the case and you<br>just need to put the Facelets jar in the WEB-INF/lib directory. Otherwise, please post web.xml and faces-config.xml.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBAS-7257">https://issues.jboss.org/browse/JBAS-7257</a> |
| 848 | JBAS-7249   | Ron, where is 2.5.2. Is it in the maven repository?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBAS-7249">https://issues.jboss.org/browse/JBAS-7249</a> |
| 849 | JBAS-7244   | Is the update-to version now called 'weld'?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBAS-7244">https://issues.jboss.org/browse/JBAS-7244</a> |
| 850 | JBAS-7241   | Isn't this update critical for this release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBAS-7241">https://issues.jboss.org/browse/JBAS-7241</a> |

| 853 | JBAS-7223   | Juergen, could you provide this as a test case. Either VFS, Deployers or JBossAS test. If you need any help, we can continue the discussion on MC or JBossAS dev forums.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBAS-7223">https://issues.jboss.org/browse/JBAS-7223</a> |
| 854 | JBAS-7222   | I've added hibernate-commons-annotations.jar & hibernate-validator.jar Regarding hibernate-client.jar, I see it produced by the ejb3 module in Branch_4_2: <!-- build hibernate-client.jar --> <!-- <unjar src="\$\${hibernate.hibernate.lib}/hibernate3.jar" dest="\$\${build.classes}" /> --> <jar jarfile="\$\${build.lib}/hibernate-client.jar"> <zipfileset src="\$\${hibernate.hibernate.lib}/hibernate3.jar"> <include name="org/hibernate/AssertionFailure.class"/> <include name="org/hibernate/**/*Exception.class"/> <include name="org/hibernate/collection/**"/> <include name="org/hibernate/exception/Nestable*.class"/> <include name="org/hibernate/exception/ExceptionUtils.class"/> <include name="org/hibernate/engine/SessionImplementor.class"/> <include name="org/hibernate/loader/CollectionAliases.class"/> <include name="org/hibernate/persister/collection/**"/> <include name="org/hibernate/pretty/MessageHelper.class"/> <include name="org/hibernate/type/Type.class"/> <include name="org/hibernate/EntityMode.class"/> <include name="org/hibernate/util/**"/> <include name="org/hibernate/proxy/**"/> </zipfileset> </jar> Do we want to do the same, or just copy the whole hibernate3.jar?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBAS-7222">https://issues.jboss.org/browse/JBAS-7222</a> |
| 855 | JBAS-7179   | Should be resolved due to sub-task JBAS-7311 Both the upcoming JBAS 5.2 as well as in AS6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBAS-7179">https://issues.jboss.org/browse/JBAS-7179</a> |
| 856 | JBAS-7179   | The attached file may fix the issue in JBAS 5.1 but no guarantees.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBAS-7179">https://issues.jboss.org/browse/JBAS-7179</a> |
| 857 | JBAS-7179   | Can we expect a fix for jboss-4.2.3.GA as well? It's the same behaviour, ExtendedFormAuthenticator.forwardToLoginPage will not invoke SecurityAssociationValve, so calls to WebAutentication will result in java.lang.IllegalStateException: request is null                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBAS-7179">https://issues.jboss.org/browse/JBAS-7179</a> |
| 858 | JBAS-7085   | Can you summarize what the JNDI binding names are for: 1) the remote AOP proxy(s) 2) the local java:* unsecured proxy Also, can you confirm that authentication is enabled by default for the AOP proxy and also describe the configuration steps for turning authentication on and off for it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBAS-7085">https://issues.jboss.org/browse/JBAS-7085</a> |
| 859 | JBAS-7085   | > the local unsecured ProfileService is only available via injection from the "ProfileService" MC bean Can you describe how to do this? I'll need to do it from within the jbas5 Jopr plugin, which will need to run both within the AS process (i.e. for the admin console) and external to it (in the JON Agent).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBAS-7085">https://issues.jboss.org/browse/JBAS-7085</a> |
| 860 | JBAS-7081   | (11:38:59 AM) ccrouch: were you seeing this repeatedly? (11:38:59 AM) ccrouch: JBAS-7081 ConcurrentModificationException when invoking 'stop' managed operation on Queue managed component (11:42:21 AM) ips: no, i only saw that in a multi-threaded PS client i wrote that was sending concurrent requests (11:42:35 AM) ips: never saw it in admin console or JON regular use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBAS-7081">https://issues.jboss.org/browse/JBAS-7081</a> |
| 861 | JBAS-7078   | Shouldn't this new work be a separate issue? The initial work is already in a released version and included in its release notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBAS-7078">https://issues.jboss.org/browse/JBAS-7078</a> |
