| 1622 | AS7-4720    | Brian Should this be removed from AS 7.1.3 (on the 7.1 branch) as well?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-4720">https://issues.jboss.org/browse/AS7-4720</a> |
| 1623 | AS7-4713    | Randall, Are you able to test against the changes in https://github.com/scottmarlow/jboss-as/tree/AS7-4713_movehibernatecommonjar? Scott                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-4713">https://issues.jboss.org/browse/AS7-4713</a> |
| 1624 | AS7-4687    | Why don't we flip the default ThreadLocal used to be non inheritable? Rather than relying on a system property being set - at the moment I have not seen a valid reason for using an InheritedThreadLocal and this is not the first time it has caused us problems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-4687">https://issues.jboss.org/browse/AS7-4687</a> |
| 1625 | AS7-4646    | Why exactly is DIGEST non compliant?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-4646">https://issues.jboss.org/browse/AS7-4646</a> |
| 1626 | AS7-4646    | At what point do your requirements regarding storage actually apply? Is it that it needs to be irreversible or just a level of encryption that is applied? As I said above we do have an option to use the vault to store the passwords to work with Digest authentication.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-4646">https://issues.jboss.org/browse/AS7-4646</a> |
| 1627 | AS7-4580    | Your configuration looks correct. The root exception is: Cannot assign requested address. Could you check that your 225.3.2.3 is correctly configured for UDP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-4580">https://issues.jboss.org/browse/AS7-4580</a> |

| 1629 | AS7-4580    | I don't think setting the netty port is related, Netty is not used at all for UDP communication. Could you try to run HornetQ with -Djava.net.preferIPv4Stack=true and then a 2nd time with -Djava.net.preferIPv6Addresses=true to see if it makes any difference?<br><a href="http://docs.oracle.com/javase/6/docs/technotes/guides/net/properties.html">http://docs.oracle.com/javase/6/docs/technotes/guides/net/properties.html</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-4580">https://issues.jboss.org/browse/AS7-4580</a> |
| 1630 | AS7-4567    | * Where can I find the spec? * What's the correct location to put jars which are shared across the whole AS7 server (accessible for all deployed artifacts)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-4567">https://issues.jboss.org/browse/AS7-4567</a> |
| 1631 | AS7-4567    | Gernot, Do you have a sample of your war to attach? Just to try to reproduce the problem, I'm not saying that it will be implemented since there is no plans to this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-4567">https://issues.jboss.org/browse/AS7-4567</a> |
| 1632 | AS7-4567    | I am testing this with EAP 6.1 Alpha and apparently it works only partially. The beans packaged in a module can be injected, but it looks like the annotations in those beans are not processed. I have a bean that looks like this inside a module: {code:java} @ApplicationScoped public class MyBean { @PostConstruct public void init() { System.out.println("init"); } } {code} I added this to the ({jboss-deployment-structure.xml}) file of a ({.ear}) where I have EJB that need this bean injected: {code:xml} <dependencies> <module name="org.mymodule" export="true" meta-inf="import"/> </dependencies> {code} Then I have something like this in the EJB: {code:java} @Singleton public class MyEjb ... { @Inject private MyBean myBean; } {code} What happens then is that the injection works, but a new instance of MyBean is created for each call to the EJB. In addition the method marked with ({@PostConstruct}) is never executed. Is this the expected behavior?                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-4567">https://issues.jboss.org/browse/AS7-4567</a> |
| 1633 | AS7-4566    | Remy, would you please provide the name of the system property? I was unable to find it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-4566">https://issues.jboss.org/browse/AS7-4566</a> |
| 1634 | AS7-4547    | Could the performance loss actually be due to JVM CodeCache exhaustion? Default Java CodeCache size is quite low (48M/96M) and the JIT compiler switches off *permanently* once usage nears the ceiling. We have a large system & needed to up our CodeCache to 256m minimum (now running with 400m as our default recommendation). Our symptoms were subtle & initially misattributed, this is a tricky issue. -XX:ReservedCodeCacheSize=400m Tiered compilation should not cause performance loss, but can contribute to the above exhaustion & subsequent performance loss. See a few references: - <a href="http://blogs.atlassian.com/2012/05/codecache-is-full-compiler-has-been-disabled/">http://blogs.atlassian.com/2012/05/codecache-is-full-compiler-has-been-disabled/</a> -- (don't follow their tip to turn on CodeCache Flushing, there are actually major bugs there that can, on their own, cause severe degraded JVM performance.) - <a href="https://blog.codecentric.de/en/2012/07/useful-jvm-flags-part-4-heap-tuning/">https://blog.codecentric.de/en/2012/07/useful-jvm-flags-part-4-heap-tuning/</a> - <a href="https://www-304.ibm.com/connections/blogs/wcs/entry/performance_roadblock_full_jit_cache?lang=en_us">https://www-304.ibm.com/connections/blogs/wcs/entry/performance_roadblock_full_jit_cache?lang=en_us</a> Hope this helps.     | <a href="https://issues.jboss.org/browse/AS7-4547">https://issues.jboss.org/browse/AS7-4547</a> |
| 1635 | AS7-4508    | Yeah, I noticed that part while looking at the code although I didn't mention that as a workaround to the user since it really looked like something that happens to work but probably wasn't intended that way (should we be ignoring duplicate URLs in that comma separated list?). The other thing that I'm working as part of this change is to cleanup HaRemotingNamingStore a bit to make sure that it uses the NamingStoreCache so that appropriate cleanup of channel and connection takes place whenever necessary.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-4508">https://issues.jboss.org/browse/AS7-4508</a> |

| 1637 | AS7-4407    | Should this issue be marked out of date? It looks like it was resolved a while ago                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-4407">https://issues.jboss.org/browse/AS7-4407</a> |
| 1638 | AS7-4390    | stan, can you take a look at this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-4390">https://issues.jboss.org/browse/AS7-4390</a> |
| 1639 | AS7-4342    | Same applies to maven, if you dont set, you get "build.sh: Could not locate Maven; check \$MVN or \$MAVEN_HOME." Wasnt this solved back in AS5 days?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-4342">https://issues.jboss.org/browse/AS7-4342</a> |
| 1640 | AS7-4342    | Are you sure? I don't have \$MVN or \$MAVEN_HOME set and build.sh works fine for me.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-4342">https://issues.jboss.org/browse/AS7-4342</a> |
| 1641 | AS7-4324    | Still an issue, if I deploy a bunch of bundles where one dependency is missing, of course the bundles fail to deploy. But when I deploy that one missing dependency the container should detect that the missing dependency is now present and refresh the other bundles which should start as a result? Can we have a feature to turn back on, or make configurable, automatic refresh of bundles as it was in JBoss 7.1?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-4324">https://issues.jboss.org/browse/AS7-4324</a> |
| 1642 | AS7-4324    | Could you please point me in the direction of the part of the OSGi specification that says bundles must be installed, resolved and started as a set and that automatic refreshing is not allowed when a new bundle is hot deployed? I took a look at v5 and was unable to find anything like that.. although I could have easily missed it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-4324">https://issues.jboss.org/browse/AS7-4324</a> |
| 1643 | AS7-4296    | This is a particularly important issue for me in relation to my cloud related projects. We need total automation over the configuration of target containers across development, test, and UAT environments and we also need automation of the overriding of application servers within deployed clusters. Can anyone provide advice on the process to get this issue assigned to a target release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-4296">https://issues.jboss.org/browse/AS7-4296</a> |
| 1644 | AS7-4287    | Its network latency, it can not be significantly lower over Europe->USA because electric field travels in wire slightly lower then 300k km/sec and every router on way is adding few milliseconds delay. Look at other web applications. Do they needs minutes to load? Using <a href="https://developers.google.com/web-toolkit/doc/latest/DevGuideClientBundle">https://developers.google.com/web-toolkit/doc/latest/DevGuideClientBundle</a> helps                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-4287">https://issues.jboss.org/browse/AS7-4287</a> |
| 1645 | AS7-4279    | Closing, as it contains no useful information. Please ask these sorts of questions on the forums, and actually provide some information that will allow people to answer your questions. We are not familiar with your application and your setup, and we are not mind readers. e.g: Is your server running out of memory? Is your server leaking file handles? Are there any errors in the logs? etc                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-4279">https://issues.jboss.org/browse/AS7-4279</a> |

| 1646 | AS7-4268    | Should this really be its own subsystem? Wouldn't it make more sense to add it to the messaging subsystem, but have it configured outside the <hornetq-server> element?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-4268">https://issues.jboss.org/browse/AS7-4268</a> |
| 1647 | AS7-4268    | Jeff, just noticed that you began work on AS7-4268. When you complete this, is it something we could just pull the latest and get your update?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-4268">https://issues.jboss.org/browse/AS7-4268</a> |
| 1648 | AS7-4268    | Is this done since the 2 pull requests have been merged?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-4268">https://issues.jboss.org/browse/AS7-4268</a> |
| 1649 | AS7-4268    | Hi, I was trying to configure the JMSBridge based on the doc of AS72, but couldn't figure out where would I download the dependency jars from (acmemem-1.2.3.jar and mylogapi-0.0.1.jar) ? A google search didnt help actually. Could anyone help on this ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-4268">https://issues.jboss.org/browse/AS7-4268</a> |
| 1650 | AS7-4268    | I understand the documentation refers to non-existent JARs. Can you give a specific example for connecting to prior versions of JBoss, for example, if HornetQ is running in JBoss AS 7.x, how to bridge a topic from a JBoss 4.2 / JBossMQ environment? Which JBossMQ JARs have to be copied, where to put them, etc?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-4268">https://issues.jboss.org/browse/AS7-4268</a> |
| 1651 | AS7-4265    | Do we have provision to edit an existing module ? For example let's say if i already have a module in place and if i want to add one module dependency to it, can i do so ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-4265">https://issues.jboss.org/browse/AS7-4265</a> |
| 1652 | AS7-4265    | This works well for me, however, there's one thing which I had to manually change before it would work: I have a properties file which needs to be outside the WAR file, but yet accessible by the WAR file. I read the instructions on how to do this using the "modules" approach (https://developer.jboss.org/wiki/HowToPutAnExternalFileInTheClasspath), and so using the CLI module "add" command would be perfect. This is what I did: module add --name=com.mycompany.myproject.configuration --resources=myproperties.properties (where the myproperties.properties file is in the same folder where I issue this command) Everything worked well, except that the module.xml file created looked like this: <?xml version="1.0" ?> <module xmlns="urn:jboss:module:1.1" name="com.mycompany.myproject.configuration"> <resources> <resource-root path="myproperties.properties"/> <!-- THIS IS THE LINE WHICH I NEED CHANGED. --> </resources> </module> But what I need is: <?xml version="1.0" ?> <module xmlns="urn:jboss:module:1.1" name="com.mycompany.myproject.configuration"> <resources> <resource-root path="."/> <!-- THIS IS WHAT I NEED. --> </resources> </module> Otherwise the WAR file can't find the properties file. How do I do this? Thanks, | <a href="https://issues.jboss.org/browse/AS7-4265">https://issues.jboss.org/browse/AS7-4265</a> |
| 1653 | AS7-4194    | Do you know if this be pulled in for 7.1.2.Final-redhat1?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-4194">https://issues.jboss.org/browse/AS7-4194</a> |
| 1654 | AS7-4179    | How does one go around to adding one category to get only logs from that one category? If you add it as <logger> with a lower level than threshold the logs are ditched, if you lower the threshold you get unwanted logs as well.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-4179">https://issues.jboss.org/browse/AS7-4179</a> |
| 1655 | AS7-4151    | I would like to see this feature add too, is it on the roadmap?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-4151">https://issues.jboss.org/browse/AS7-4151</a> |
| 1656 | AS7-4140    | I have confirmed with Andy Taylor that for the standalone-full-ha.xml messaging configuration, the broadcast-group and the discovery-group: - should be using the same multicast channel (i.e. same address and port) - work correctly when using the same multicast channel At present, standalone-full-ha.xml is not used for testing in the AS71 test suite, as far as I can tell. However, in case it is used in future, we should update the config generation so that it is properly processed. Therefore, we need to add the messaging configuration to the list of XSL transformations in changeIPAddresses.xsl so that the multicast addresses are replaced by -Dmcast, whether -Dipv6 is true or not. Because the ports used are not used by any other multicast channels, this should work for testing. Ondra, can you set this up? Once this is set up and tested, we can close this issue, I believe.                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-4140">https://issues.jboss.org/browse/AS7-4140</a> |
| 1657 | AS7-4140    | I'll get to this at the end of this week, is that ok? I'll include it in a bunch of other updates.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-4140">https://issues.jboss.org/browse/AS7-4140</a> |
| 1658 | AS7-4140    | Ondra, did you forget about this? I still see hardcoded addresses in standalone-ha-full.xml.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-4140">https://issues.jboss.org/browse/AS7-4140</a> |
| 1659 | AS7-4140    | Ondro Can you resubmit and link the PR now? Or is there some outstanding issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-4140">https://issues.jboss.org/browse/AS7-4140</a> |
| 1660 | AS7-4088    | Do you mean add expression support to the various attributes in ModeClusterConfigResourceDefinition? If so this is done and this can be resolved against 7.1.2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-4088">https://issues.jboss.org/browse/AS7-4088</a> |
| 1661 | AS7-4084    | Implemented the code that Tristan provided into the Infinispan subsystem recently refactored into resources. Encountered the following problem: <quote> Infinispan and JGroups gather statistics in certain associated services (e.g. TransactionManager, RpcManager,...). These services are installed at boot time, but not started until someone deploys a clustering application which uses them. So, if I try to read one of their read-only attributes before a deployment has occurred, I throw an OperationFailedException with a message saying that the required service has not been started. This works fine and seems to be the right way to proceed. On the other hand, there is a smoke test case BasicOperationsUnitTestCase.testRecursiveReadIncludingRuntime() which seems to assume that all reads of runtime-only resources will succeed. </quote> Is it really the case that every read of a read-only attribute should always succeed? If so, what is the best way to work around this? Can I somehow return an informational message instead of throwing an exception? Checking these issues with Emanuel M.                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-4084">https://issues.jboss.org/browse/AS7-4084</a> |
| 1662 | AS7-4084    | In that case, you seem to be activating whole child resources by conditionally returning resources in response to getChild() calls. In what we had set up so far, we need to turn on a subset of attributes for a specific resource; e.g. /subsystem=infinispan/cache-container=X // always available attributes A B C // attributes available when a particular MSC service is running D E Can the method used in the Messaging case also be used to cater to the above? In other words, what mechanism can be used to "turn-on" and "turn-off" the visibility of the attributes, as opposed to children?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-4084">https://issues.jboss.org/browse/AS7-4084</a> |
| 1663 | AS7-4075    | Are you certain other components depend on this? I'm not seeing it. In the poms I see some exclusions. But maven dependencies are complex beasts. Luckily, however, we have a modular classloading setup where dependencies have to be explicitly declared. And a "git grep commons.pool" shows me that the only spots in modules where that appears are: build/src/main/resources/modules/org/apache/commons/pool/main/module.xml:<module xmlns="urn:jboss:module:1.1" name="org.apache.commons.pool"> build/src/main/resources/modules/org/infinispan/cache-store/jdbc/main/module.xml: <module name="org.apache.commons.pool"/> build/src/main/resources/modules/org/infinispan/client/hotrod/main/module.xml: <module name="org.apache.commons.pool"/>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-4075">https://issues.jboss.org/browse/AS7-4075</a> |
| 1664 | AS7-4075    | Right, my bad, I was just only looking at maven – but looking at JBoss modules is very exact. We should definitely upgrade then. Then, I also think we should upgrade 7.1 branch – do you agree?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-4075">https://issues.jboss.org/browse/AS7-4075</a> |
| 1665 | AS7-4057    | Is this worked on? Can we commit for EAP 6.1?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-4057">https://issues.jboss.org/browse/AS7-4057</a> |

| 1679 | AS7-3950    | Can you please clarify what you mean by 'it fails'? I am not sure silent by default would be a good change, if a user has not requested it to be silent they should see the relevant output messages indicating the success.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AS7-3950">https://issues.iboss.org/browse/AS7-3950</a> |
| 1680 | AS7-3950    | I'm working on master : {code} ./add-user.sh ggrosssetie abcd Exception in thread "main" java.lang.IllegalStateException: JBAS015232: Aucune java.io.Console disponible pour interagir avec l'utilisateur. {code} When the user provide two or three args the console is null and the code check : {code:java} if ((theConsole == null) && (stateValues.isSilent() == false)) { throw new Messages.noConsoleAvailable(); } {code} The --silent option seems to be ignored : {code} ./add-user.sh ggrosssetie abcd --silent Exception in thread "main" java.lang.IllegalStateException: JBAS015232: Aucune java.io.Console disponible pour interagir avec l'utilisateur. {code} {code} I am not sure silent by default would be a good change {quote} Me neither but can we instanciate a JavaConsole ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AS7-3950">https://issues.iboss.org/browse/AS7-3950</a> |

| 1682 | AS7-3891    | John is on leave for a couple of weeks, who else can take this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AS7-3891">https://issues.iboss.org/browse/AS7-3891</a> |
| 1683 | AS7-3874    | Jaikiran, How much is left on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AS7-3874">https://issues.iboss.org/browse/AS7-3874</a> |
| 1684 | AS7-3850    | This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AS7-3850">https://issues.iboss.org/browse/AS7-3850</a> |
| 1685 | AS7-3848    | Could you please let us know how did you verify with some sample program..thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AS7-3848">https://issues.iboss.org/browse/AS7-3848</a> |
| 1686 | AS7-3848    | {quote} Could you please let us know how did you verify with some sample program..thanks {quote} You don't have to do anything. Just deploy the @Clustered beans on the server side and invoke them from a client. Here's one example of the client invoking on remote beans <a href="https://docs.jboss.org/author/display/AS71/EJB+invocations+from+a+remote+client+using+JNDI">https://docs.jboss.org/author/display/AS71/EJB+invocations+from+a+remote+client+using+JNDI</a> . That example isn't specific to @Clustered beans though.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AS7-3848">https://issues.iboss.org/browse/AS7-3848</a> |
| 1687 | AS7-3842    | It doesn't look like this project has been progressing recently. Is there any chance of an official version?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AS7-3842">https://issues.iboss.org/browse/AS7-3842</a> |
| 1688 | AS7-3842    | I agree this would be nice to have, but does this issue belong in the AS7 project JIRA? Seems like this is an external effort.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/AS7-3842">https://issues.iboss.org/browse/AS7-3842</a> |
| 1689 | AS7-3816    | Expansion of variables in web.xml and jboss-web.xml do not appear to be supported in JBoss 7.1 either (and were in JBoss 5.x). Will expansion of variables in web.xml and jboss-web.xml be supported too in 7.1.2? For details please see: <a href="http://stackoverflow.com/questions/10032095/references-to-systemproperties-in-web-xml-and-jboss-web-xml-works-in-jboss5-but">http://stackoverflow.com/questions/10032095/references-to-systemproperties-in-web-xml-and-jboss-web-xml-works-in-jboss5-but</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/AS7-3816">https://issues.iboss.org/browse/AS7-3816</a> |
| 1690 | AS7-3816    | Expansion wasn't working for jboss-service.xml for a SAR deployment (JBoss AS 7.1.1). Would this be supported with this fix?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AS7-3816">https://issues.iboss.org/browse/AS7-3816</a> |
| 1691 | AS7-3809    | Hi, can someone explain why was this commit reverted?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AS7-3809">https://issues.iboss.org/browse/AS7-3809</a> |
| 1692 | AS7-3807    | Can this be resolved? The dependent issue is fixed and the fixed JBoss TS is incorporated in AS 7 master.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AS7-3807">https://issues.iboss.org/browse/AS7-3807</a> |
| 1693 | AS7-3793    | What is the use case for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/AS7-3793">https://issues.iboss.org/browse/AS7-3793</a> |
| 1694 | AS7-3793    | <stuartdouglas> opalka: That is not a real world requirement <stuartdouglas> appclient is not supposed to act as a server <opalka> stuartdouglas, of course it isn't. It's just for our testing purposes. <stuartdouglas> opalka: can you redesign the test so it actually runs inside the appclient JVM? <opalka> stuartdouglas, I think yes. But this is exactly I wanna avoid (it's about 200+ tests) <stuartdouglas> If you really want to use the appclient as a server can you just use a custom appclient.xml in your tests? <opalka> stuartdouglas, yes, this is workable for us too <stuartdouglas> opalka: does having the remoting subsystem in appclient actually allow remote naming to work? <opalka> stuartdouglas, yes, it works for me <opalka> stuartdouglas, I verified the proof of concept last week <opalka> stuartdouglas, if you will say no remoting protocol in appclient I'm fine with it. In that case I'll provide either custom appclient.xml for our tests or XSLT <opalka> stuartdouglas, I just wanna know the decision :) <opalka> stuartdouglas, to open or not to open remoting protocol on appclient, that's the question :) <stuartdouglas> opalka: I'm not going to add remoting to appclient just for your test suite <opalka> stuartdouglas, ok, NP. The decision have been taken. I'm fine with it. <stuartdouglas> as it is something that most real world users would then want to remove <opalka> stuartdouglas, +1 <opalka> stuartdouglas, I'm going to remove it from my pull request <stuartdouglas> ok <opalka> stuartdouglas, removed - <a href="https://github.com/jbossas/jboss-as/pull/1548">https://github.com/jbossas/jboss-as/pull/1548</a> | <a href="https://issues.iboss.org/browse/AS7-3793">https://issues.iboss.org/browse/AS7-3793</a> |
| 1695 | AS7-3789    | Hi Jeff, Could you review this HQ patch?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AS7-3789">https://issues.iboss.org/browse/AS7-3789</a> |
| 1696 | AS7-3789    | tomaz, did you attach a patch? I can only see your compiled hornetq-core.jar in the attachments...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AS7-3789">https://issues.iboss.org/browse/AS7-3789</a> |
| 1697 | AS7-3789    | Are we waiting for a new HornetQ release with a fix?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AS7-3789">https://issues.iboss.org/browse/AS7-3789</a> |
| 1698 | AS7-3789    | How is the testing going Tomaz?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AS7-3789">https://issues.iboss.org/browse/AS7-3789</a> |
| 1699 | AS7-3789    | Thanks Tomaz. BTW, is this fixed now? I don't see the delay in booting standalone-full.xml anymore?! (win7/32b)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AS7-3789">https://issues.iboss.org/browse/AS7-3789</a> |
| 1700 | AS7-3789    | dimitris, yes the fix has been merged into HornetQ 2.2.15.Final. That's why you don't see the delay anymore. There is still room for performance improvements (do not use reflection, etc.) but the main bottleneck has been fixed. Does the current boot time is fast enough to downgrade the priority of this issue (or close it)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AS7-3789">https://issues.iboss.org/browse/AS7-3789</a> |
| 1701 | AS7-3789    | Just tried standalone-full.xml at 2855ms, so that looks pretty competitive to me. Maybe leave some optimizations for later releases? :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AS7-3789">https://issues.iboss.org/browse/AS7-3789</a> |
| 1702 | AS7-3770    | In order to cherry-pick this in the EAP ER2 build, we would need a resolution by Feb/27th. Is this doable?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AS7-3770">https://issues.iboss.org/browse/AS7-3770</a> |
| 1703 | AS7-3739    | Do we want to preload the cache on server startup? Since file store is not the fastest persistence mechanism in the world, IMO it will be sufficient to load the sessions when they are requested.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/AS7-3739">https://issues.iboss.org/browse/AS7-3739</a> |
| 1704 | AS7-3715    | Actually, it is indeed byte array that I used internally. Could this even be represented in a different way? If no then just reject.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AS7-3715">https://issues.iboss.org/browse/AS7-3715</a> |
| 1705 | AS7-3696    | Can this JIRA be resolved with today's testsuite commit?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AS7-3696">https://issues.iboss.org/browse/AS7-3696</a> |
| 1706 | AS7-3692    | This could be made better, perhaps, but IMHO it's not a critical issue. Better == optional params to the top-level resource :add operation that provide the info needed to build the child resources. Reduces things to one op. In this specific case though that would be fairly useless, since a human would never type such a command in the interactive CLI -- just too much data is needed. They would end up using a script. In which case, why not use the batch commands?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/AS7-3692">https://issues.iboss.org/browse/AS7-3692</a> |
| 1707 | AS7-3659    | Will this only be in EAP, as a manual test?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AS7-3659">https://issues.iboss.org/browse/AS7-3659</a> |

| 1711 | AS7-3607    | Can someone from the JBoss Web team take look please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-3607">https://issues.jboss.org/browse/AS7-3607</a> |
| 1712 | AS7-3607    | This handles the opposite case - if I prefer an IPv6 stack and i'm given an IPv4 address, convert it to an IPv6 mapped address. But even with this fix, if I do prefer an IPv6 stack and I do pass in an IPv4 address, it still comes out as an IPv4 socket. The problem is further down. I tried locating the code for AprEndpoint to insert some debugging statements to confirm my suspicions. J-F, where is it located (i.e. which source repo and which jar?) I see JBoss Web 7.0.10.Final included in the pom; when I go to JBoss Web page, no hint of any version called 7.0.10.Final, as far as I could tell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-3607">https://issues.jboss.org/browse/AS7-3607</a> |
| 1713 | AS7-3561    | Hello, This change broke IDEA support of JBoss 7 ( <a href="http://youtrack.jetbrains.com/issue/IDEA-81489">http://youtrack.jetbrains.com/issue/IDEA-81489</a> ) In IDEA, we have used 'validate-address' operation in 2 cases: 1) check whether server is ready for remote administration - call to 'validate-address' without address 2) check whether deployment is registered on the server - call to 'validate-address' with 'deployment=<artifact name>' as the address As I can see from the AS7-3561 and from the actual CLI of the JBoss 7.1.0 final, now, validate-address: - could be executed without address only (execution with 'deployment=<artifact name>' fails with JBAS014739: No handler for validate-address at address [{"deployment" => "<artifact name>"}]) - requires the 'value' attribute But, 'value' attribute seems not to expect address or just broken itself, since every value I've passed as the 'value' fails with JBAS014749: Operation handler failed: null (I've tried empty string, "/", "/deployment=<deployed artifact name>"/...) Could you please describe what is expected as 'value' or confirm 'validate-address' is broken now? Regards, Michael                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-3561">https://issues.jboss.org/browse/AS7-3561</a> |
| 1714 | AS7-3556    | Thomas, could you please list the test classes involved so I can be sure we're talking about the same thing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-3556">https://issues.jboss.org/browse/AS7-3556</a> |
| 1715 | AS7-3556    | These unit tests are actually quite valuable. They test the inner workings of these classes and therefore mock out their environment. However I do see value in providing additional system tests for the OSGi subsystem management. Shall we rename this bug to 'Add system tests for OSGi subsystem model'?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-3556">https://issues.jboss.org/browse/AS7-3556</a> |
| 1716 | AS7-3510    | Have you tried any 7.1.0 release candidate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-3510">https://issues.jboss.org/browse/AS7-3510</a> |
| 1717 | AS7-3489    | I don't think we have the best coverage of the HTTP interface at the moment - doesn't this set of ignores completely remove all testing of the HTTP interface?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-3489">https://issues.jboss.org/browse/AS7-3489</a> |
| 1718 | AS7-3488    | That doesn't make sense to me. At this point "wilma" is not a valid cache name. Why is that better than leaving default-cache undefined?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-3488">https://issues.jboss.org/browse/AS7-3488</a> |
| 1719 | AS7-3488    | Also, relying on batch mode is awkward from a usability standpoint. Can't we solve the chicken and egg problem? What if you add a required "default-cache-type" parameter to the add operation? Then the add operation would just create a cache for the default-cache. The user would probably need to go back and configure the new cache. But at least you would always maintain a valid configuration. So this would execute successfully: {noformat}/subsystem=infinispan/cache-container=fred:add(default-cache=wilma,default-cache-type=LOCAL){noformat} And read-resource would immediately look like this: {noformat}/subsystem=infinispan/cache-container=fred:/read-resource(recursive=true,proxies=false,include-runtime=false,include-defaults=true) { "outcome" => "success", "result" => { "aliases" => undefined, "default-cache" => "wilma", "distributed-cache" => undefined, "eviction-executor" => undefined, "invalidation-cache" => undefined, "jndi-name" => undefined, "listener-executor" => undefined, "replicated-cache" => undefined, "replication-queue-executor" => undefined, "start" => undefined, "transport" => undefined, "local-cache" => {"wilma" => { "batching" => false, "cache-mode" => "LOCAL", "eviction" => undefined, "expiration" => undefined, "file-store" => undefined, "jdbc-store" => undefined, "locking" => undefined, "name" => "wilma", "remote-store" => undefined, "store" => undefined, "transaction" => undefined } } }, "response-headers" => {"process-state" => "reload-required"} } {noformat} | <a href="https://issues.jboss.org/browse/AS7-3488">https://issues.jboss.org/browse/AS7-3488</a> |
| 1720 | AS7-3488    | It's impossible for the cache to be present. You can't create the cache until you create the cache container. Is my proposed solution workable?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-3488">https://issues.jboss.org/browse/AS7-3488</a> |
| 1721 | AS7-3488    | Was this completed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-3488">https://issues.jboss.org/browse/AS7-3488</a> |
| 1722 | AS7-3419    | Tomaz, could you look at this? Basically this means providing proper expression support for this attribute. This subsystem isn't using AttributeDefinition. For 7.1.0 I absolutely don't want to try and change it to that (too late). If changing this one element to use AttributeDefinition is the efficient way to fix this, it's ok by me. It will look a bit odd having just one AttributeDefinition, but c'est la vie. AttributeDefinition isn't required for proper expression support though; it just has most of the code already there.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-3419">https://issues.jboss.org/browse/AS7-3419</a> |
| 1723 | AS7-3419    | What does not work? I have tested it and it work properly... i have tested with this configuration and all expressions resolved properly: {code:xml} <connector name="https" protocol="HTTP/1.1" scheme="https" socket-binding="https" secure="true"> <ssl name="ssl.name" key-alias="alias" password="{\${ssl.keystore.password:defaultPassword}}" certificate-key-file="{\${jboss.server.config.dir}/keystore.p12}" verify-client="true" ca-certificate-file="{\${jboss.server.config.dir}/megapos.jks}" ca-certificate-password="{\${my.custom.sysprop:password}}" keystore-type="PKCS12" truststore-type="JKS"/> </connector> {code} I didn't test with vault expression but other then that all expressions resolved properly                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-3419">https://issues.jboss.org/browse/AS7-3419</a> |
| 1724 | AS7-3371    | What exactly is that stress test, testing? I haven't taken a look. But without that detail, I don't think this will be assigned to the right person.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-3371">https://issues.jboss.org/browse/AS7-3371</a> |
| 1725 | AS7-3371    | Tomas, Can you try setting native="false" in the web config?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-3371">https://issues.jboss.org/browse/AS7-3371</a> |
| 1726 | AS7-3371    | I don't know much about thread pool size settings. I tried to follow <a href="http://www.mastertheboss.com/jboss-application-server/341-jboss-as-7-performance-tuning.html?start=3">http://www.mastertheboss.com/jboss-application-server/341-jboss-as-7-performance-tuning.html?start=3</a> , but I am not really sure about that numbers. I tried to double values for core-threads and max-threads, but didn't see any change. Can somebody tell me more or point me to some doc?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-3371">https://issues.jboss.org/browse/AS7-3371</a> |
| 1727 | AS7-3363    | Jan, what are allowed socket bindings? Is this a fix set of values or do they change in runtime?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-3363">https://issues.jboss.org/browse/AS7-3363</a> |
| 1728 | AS7-3359    | Mirek, can you create a pull request for this? You might have to wait until a ha profile is available upstream (JBCTS-1230)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-3359">https://issues.jboss.org/browse/AS7-3359</a> |
| 1729 | AS7-3357    | Is this planned to be exposed in metadata?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-3357">https://issues.jboss.org/browse/AS7-3357</a> |
| 1730 | AS7-3347    | So was the driver list command added?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-3347">https://issues.jboss.org/browse/AS7-3347</a> |

| 1731 | AS7-3322    | Darran: I was going to explain some details for Tomaz, but now I'm confused. The schema for the <management-interfaces><http-management-interface> type is: <xs:complexType name="http-management-socket-binding-refType"> <xs:annotation> <xs:documentation> Reference to the configurations of the sockets to be used by a standalone server's exposed HTTP and HTTPS management interface. </xs:documentation> </xs:annotation> <xs:attribute name="http" type="xs:string" use="optional"> <xs:annotation> <xs:documentation> Name of a socket-binding configuration declared in the server's socket-binding-group to use for a HTTP socket. </xs:documentation> </xs:annotation> </xs:attribute> <xs:attribute name="https" type="xs:string" use="optional"> <xs:annotation> <xs:documentation> Name of a socket-binding configuration declared in the server's socket-binding-group to use for a HTTPS socket. </xs:documentation> </xs:annotation> </xs:attribute> </xs:complexType> There are 2 attributes, one for HTTP one for HTTPS. What's missing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-3322">https://issues.jboss.org/browse/AS7-3322</a> |
| 1732 | AS7-3322    | I really don't think this is still the issues. as configuration that I use for quite a while looks like this: {code:xml}<connector name="https" protocol="HTTP/1.1" scheme="https" socket-binding="https" secure="true">{code} and under socket-binding I have: {code:xml}<socket-binding name="https" port="443"/>{code} Am I missing something?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-3322">https://issues.jboss.org/browse/AS7-3322</a> |
| 1733 | AS7-3309    | This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-3309">https://issues.jboss.org/browse/AS7-3309</a> |
| 1734 | AS7-3290    | <smarlow> galderz: which code module contains the code for constructing the global component registry (that gets Infinispan core to load the Hibernate Infinispan service entries)? <ttarrant> smarlow, the module that constructs that is org.jboss.as.clustering.infinispan <ttarrant> smarlow, the gcr is constructed with that module's classloader <ttarrant> smarlow, you probably need to add hibernate-infinispan to that module <ttarrant> with services exported <ttarrant> smarlow, can you try ? <smarlow> ttarrant, galderz: org.jboss.as.clustering.infinispan doesn't really know about the Hibernate Infinispan module, but even if org.jboss.as.clustering.infinispan had a dependency on Hibernate Infinispan, I'm not sure what that would do but I can try it as a hacj <ttarrant> smarlow, you are consuming caches created by the infinispan clustering subsystem are you not ? <smarlow> ttarrant: yes <smarlow> I believe that is the case <ttarrant> smarlow, the infinispan GlobalConfigurationRegistry is initialized by that subsystem with its module's classloader <ttarrant> smarlow, therefore the ServiceLoader will find only the services "exported" at that level <ttarrant> and visible to that classloader * smarlow is adding <module name="org.hibernate.infinispan" services="export"/> to org.jboss.as.clustering.infinispan <smarlow> ttarrant, galderz: ^ worked! :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-3290">https://issues.jboss.org/browse/AS7-3290</a> |

| 1736 | AS7-3251    | Even though ConfigAdmin is now an OSGi-independent subsystem, will we keep the console GUI part under OSGi? Or should we introduce an independent ConfigAdmin subsystem in the Console too?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-3251">https://issues.jboss.org/browse/AS7-3251</a> |
| 1737 | AS7-3251    | The latter. The reasoning is that the OSGi subsystem may get removed completely, which should then also happen (by itself) in the console. Could you please check that the console can react adequately to subsystem availability?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-3251">https://issues.jboss.org/browse/AS7-3251</a> |
| 1738 | AS7-3241    | Hi Kurt, Do you plan to do this before Feb 7? (My guess is no)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-3241">https://issues.jboss.org/browse/AS7-3241</a> |
| 1739 | AS7-3229    | Scott, are you still getting this error? SFSB serialization has changed a bit since this jira was opened - and I wonder if this is jira isn't obsolete.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-3229">https://issues.jboss.org/browse/AS7-3229</a> |

| 1741 | AS7-3203    | Hi Stuart, I can't find anywhere in the class loading guide ( <a href="https://docs.jboss.org/author/display/AS71/Class+Loading+in+AS7">https://docs.jboss.org/author/display/AS71/Class+Loading+in+AS7</a> ) that mentions the <module .. export="true" />. Can you quote in detail where I can find it? Thanks. John Wu                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-3203">https://issues.jboss.org/browse/AS7-3203</a> |
| 1742 | AS7-3195    | Is this fix expected to ship with 7.1.2, or is there more work required?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-3195">https://issues.jboss.org/browse/AS7-3195</a> |
| 1743 | AS7-3195    | My app was defining properties in an external .properties file, then loading them into system properties for later use. They seemed to be available in time for expansion into persistence.xml with 7.0.2, but that behavior seems to be different for 7.1.1. Defining the property directly in standalone.xml seems to work, and make the values available for substitution during deployment. Properties were externalized so that deployables could ship with their config files in a 'hot' directory, and deployed to different as7 servers as needed. This let us define one hot directory in standalone.xml, and drop deployable .properties files there, instead of having to mangle standalone.xml for each deployable. For properties that need to be available when a deployable is being deployed, is standalone.xml the right place to put those? Is there an approved way to externalize those? The admin guide ( <a href="https://docs.jboss.org/author/display/AS7/General+configuration+concepts">https://docs.jboss.org/author/display/AS7/General+configuration+concepts</a> ) doesn't mention any alternatives. Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-3195">https://issues.jboss.org/browse/AS7-3195</a> |
| 1744 | AS7-3195    | This bug is now present in EAP 6.1 on OpenShift. Is it slated for fix there?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-3195">https://issues.jboss.org/browse/AS7-3195</a> |
| 1745 | AS7-3174    | Would it make sense to make this even more generic? AFAICT only top-level stuff can be excluded.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-3174">https://issues.jboss.org/browse/AS7-3174</a> |
| 1746 | AS7-3166    | Rado, Is this reproducible on master? This issue was opened when Infinispan was at 5.1.0.CR1 - Infinispan is now at 5.1.0.CR4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-3166">https://issues.jboss.org/browse/AS7-3166</a> |
| 1747 | AS7-3159    | Thanks Stuart, but what about Hibernate Search? does it have the same reason to reject?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-3159">https://issues.jboss.org/browse/AS7-3159</a> |
| 1748 | AS7-3148    | "If D has a dependency on B and they are deployed at the same time I'll get: " .... Do you mean, if they're *not* deployed at the same time? If the scanner picks up both in the same run you shouldn't be getting this error.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-3148">https://issues.jboss.org/browse/AS7-3148</a> |
| 1749 | AS7-3148    | At the time of writing I was receiving the error in the description when A and D were picked up in the same scan. I hadn't tried this in a while as my deployment script currently waits on the creation of E.ear.deployed. I just tried it again and now get a different error that looks more like a race condition. This might not be the right JIRA for it though if what I am requesting is already the expected behaviour. In my case B.jar that contains entities and my persistence unit which provides an EntityManagerFactory via JNDI. D.war contains various seam2 components and its ManagedPersistenceContext tries to look up the EMF when the seam application starts. If both A and D are deployed in the same run the EMF is not available when D is starting. Is this intended or a bug? I will attach a log showing a deployment run where both are picked up at the same time and fail and then when they are deployed sequentially and succeed. The error when they are deployed concurrently is below:<br>Caused by: java.lang.IllegalArgumentException: EntityManagerFactory not found in JNDI : java:/PlutoMainEntityManagerFactory at<br>com.britensw.pluto.web.seam.ManagedPersistenceContext.getEntityManagerFactoryFromJndiOrValueBinding(ManagedPersistenceContext.java:188) [classes:] at<br>com.britensw.pluto.web.seam.ManagedPersistenceContext.createContext(ManagedPersistenceContext.java:91) [classes:] at<br>com.britensw.pluto.web.seam.ManagedPersistenceContext.create(ManagedPersistenceContext.java:84) [classes:] at<br>sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) [:1.6.0_30] at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) [:1.6.0_30] at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) [:1.6.0_30] at<br>java.lang.reflect.Method.invoke(Method.java:597) [:1.6.0_30] at org.jboss.seam.util.Reflections.invoke(Reflections.java:22) [jboss-seam-2.2.2.Final.jar:2.2.2.Final] at<br>org.jboss.seam.util.Reflections.invokeAndWrap(Reflections.java:144) [jboss-seam-2.2.2.Final.jar:2.2.2.Final] at<br>org.jboss.seam.Component.callComponentMethod(Component.java:2283) [jboss-seam-2.2.2.Final.jar:2.2.2.Final] at<br>org.jboss.seam.Component.callCreateMethod(Component.java:2198) [jboss-seam-2.2.2.Final.jar:2.2.2.Final] at<br>org.jboss.seam.Component.newInstance(Component.java:2158) [jboss-seam-2.2.2.Final.jar:2.2.2.Final] ... 37 more Caused by: javax.naming.NameNotFoundException:<br>Error looking up PlutoMainEntityManagerFactory, service service jboss.naming.context.java.PlutoMainEntityManagerFactory is not started at<br>org.jboss.as.naming.ServiceBasedNamingStore.lookup(ServiceBasedNamingStore.java:126) at<br>org.jboss.as.naming.ServiceBasedNamingStore.lookup(ServiceBasedNamingStore.java:74) at org.jboss.as.naming.NamingContext.lookup(NamingContext.java:177) at<br>org.jboss.as.naming.InitialContext.lookup(InitialContext.java:113) at org.jboss.as.naming.NamingContext.lookup(NamingContext.java:213) at<br>javax.naming.InitialContext.lookup(InitialContext.java:392) [:1.6.0_30] at<br>com.britensw.pluto.web.seam.ManagedPersistenceContext.getEntityManagerFactoryFromJndiOrValueBinding(ManagedPersistenceContext.java:186) [classes:] ... 48 more | <a href="https://issues.jboss.org/browse/AS7-3148">https://issues.jboss.org/browse/AS7-3148</a> |
| 1750 | AS7-3147    | This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-3147">https://issues.jboss.org/browse/AS7-3147</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | URL                                                                                             |

| 1752 | AS7-3116    | Can you open a new JIRA for this as it is a different issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-3116">https://issues.jboss.org/browse/AS7-3116</a> |
| 1753 | AS7-3114    | Another factor in the equation is that whether or not to have the console needs to be a configurable attribute, probably on the http management interface element. It's quite reasonable that people using AS 7 / EAP will want to use the HTTP management connector but not run a console. So you have a matrix: One access: Is the console available? (yes/no) Other access: Does user want console? (yes/no/didn't say)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-3114">https://issues.jboss.org/browse/AS7-3114</a> |
| 1754 | AS7-3114    | Tomaz, can you look into this one? There are two aspects: 1) Add a non-required boolean config attribute the the <management-interfaces><http-interface> element to allow users to disable the console. Default is true. 2) Detect the absence of the module that provides the console, and deal with that absence appropriately. How to deal with the absence of the console is an open question. One thought I had was to throw an exception if the config attribute was actually set to "true". If the config attribute is undefined or false then deal with it using ConsoleMode.NO_CONSOLE.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-3114">https://issues.jboss.org/browse/AS7-3114</a> |
| 1755 | AS7-3036    | Thanks for reply! But, where can I find the bundle files? Can I get from the original project repos and then deploy into AS7?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-3036">https://issues.jboss.org/browse/AS7-3036</a> |
| 1756 | AS7-3030    | I see the jacob build (2.3.1.jboss-1) in the JBoss repository: <a href="https://repository.jboss.org/nexus/content/repositories/thirdparty-releases/org/jacorb/jacorb/">https://repository.jboss.org/nexus/content/repositories/thirdparty-releases/org/jacorb/jacorb/</a> Should there also be a matching version of jacob-idl-compiler?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-3030">https://issues.jboss.org/browse/AS7-3030</a> |
| 1757 | AS7-2999    | Hi, what is the current status of this bug? I was told that it should be ready in the beginning of this week ... and that my pull request will be hold off until then. Thanks for the info.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-2999">https://issues.jboss.org/browse/AS7-2999</a> |
| 1758 | AS7-2999    | If I remove @Ignore(AS7-2999) for example in InjectionAnnFSBtoSFSBTestCase, I get an exception like this: javax.ejb.NoSuchEJBException: Could not find SFSB InjectionSFSBtoSFSB with {[-32, 80, 121, 29, -10, 122, 68, 78, -87, 114, -8, 77, -101, -123, -17, -11]} at org.jboss.as.ejb3.component.stateful.StatefulComponentInstanceInterceptor.processInvocation(StatefulComponentInstanceInterceptor.java:62) at org.jboss.invocation.InterceptorContext.proceed(InterceptorContext.java:288) at org.jboss.as.ejb3.tx.CMTTxInterceptor.invokeInOurTx(CMTTxInterceptor.java:228) at org.jboss.as.ejb3.tx.CMTTxInterceptor.required(CMTTxInterceptor.java:304)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-2999">https://issues.jboss.org/browse/AS7-2999</a> |
| 1759 | AS7-2991    | Is there any documentation explaining how to enable gzip compression in jboss as 7.1.1 (or maybe before the official release?)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-2991">https://issues.jboss.org/browse/AS7-2991</a> |
| 1760 | AS7-2991    | Any chance this regression is related to your change? AS7-4124 Which repo is the change you made at?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-2991">https://issues.jboss.org/browse/AS7-2991</a> |
| 1761 | AS7-2991    | So is this actually resolved? I added -Dorg.apache.coyote.http11.Http11Protocol.COMPRESSION=true to the vm properties but my pages are not being compressed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-2991">https://issues.jboss.org/browse/AS7-2991</a> |
| 1762 | AS7-2991    | How to enable this ? I'm using JBoss AS 7.1.1 and compression is not enabled by default.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-2991">https://issues.jboss.org/browse/AS7-2991</a> |
| 1763 | AS7-2991    | Can GZIP compression be enable on the HTTP connector in standalone.xml?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-2991">https://issues.jboss.org/browse/AS7-2991</a> |
| 1764 | AS7-2991    | It seems that JBoss AS 7.1.1 HTTP compression only compress the document itself and not static files (e.g., *.js, *.css, ...). Is there a way to define which the compressible MimeTypes are?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-2991">https://issues.jboss.org/browse/AS7-2991</a> |
| 1765 | AS7-2984    | JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 765759] <a href="https://bugzilla.redhat.com/show_bug.cgi?id=765759">https://bugzilla.redhat.com/show_bug.cgi?id=765759</a> Prabhat Jha <prabhat.jha@jboss.com> made a comment on jira ISPN-1799 Can this be fixed so that it gets fixed in next ER build for JDG?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-2984">https://issues.jboss.org/browse/AS7-2984</a> |

| 1768 | AS7-2984    | JBoss JIRA Server <jira-update@redhat.com> made a comment on [bug 765759] <a href="https://bugzilla.redhat.com/show_bug.cgi?id=765759">https://bugzilla.redhat.com/show_bug.cgi?id=765759</a> dex chen <dex80526@yahoo.com> made a comment on jira ISPN-1799 we saw this error in our 3 node cluster in which the network connectivity to one of nodes is not reliable and has high latency. Does this exception have anything to do with the network connectivity and high latency?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-2984">https://issues.jboss.org/browse/AS7-2984</a> |
| 1769 | AS7-2958    | Misty Stanley-Jones <misty@redhat.com> made a comment on [bug 831442] <a href="https://bugzilla.redhat.com/show_bug.cgi?id=831442">https://bugzilla.redhat.com/show_bug.cgi?id=831442</a> Sande, I think you might be a good fit for this topic. Maybe something like the following: About HA Singleton Differences from the EAP 5 Implementation Configure the HA Singleton Dummy Interface Use HA Singleton Can you give the above links a quick read through within the next week or so, and give Rich an estimate of how long it will take to write these topics? You can work with Tom to get an asynchronous addition to the Development Guide. In fact this might be a good candidate for a rough draft in Confluence for the developers and community to help with.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-2958">https://issues.jboss.org/browse/AS7-2958</a> |

| 1770 | AS7-2954    | Is there a reason why this is a bad idea? I mean all assert does is throw an exception? Are you trying to limit the usage of junit to allow usage of testng?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/AS7-2954">https://issues.iboss.org/browse/AS7-2954</a> |
| 1771 | AS7-2954    | What is the reasoning behind this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AS7-2954">https://issues.iboss.org/browse/AS7-2954</a> |
| 1772 | AS7-2954    | That was my question as well :) Ondrej, could you explain this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/AS7-2954">https://issues.iboss.org/browse/AS7-2954</a> |
| 1773 | AS7-2891    | I don't know where it was configured in AS 6, also. Was it using a realm element in server.xml (or context.xml) ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/AS7-2891">https://issues.iboss.org/browse/AS7-2891</a> |
| 1774 | AS7-2881    | Shouldn't this JIRA be assigned to yourself Max?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/AS7-2881">https://issues.iboss.org/browse/AS7-2881</a> |
| 1775 | AS7-2881    | Thanks Max (y) When you say codefreeze next week you mean of 7.1.0.final? Should we expect to have the release that was planned to Tuesday, Feb7th, to be next week?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AS7-2881">https://issues.iboss.org/browse/AS7-2881</a> |
| 1776 | AS7-2871    | Won't Fix {code} (07:42:38 PM) tdiesler: Nihility, I guess this attribute is special in the sense that no other subsystem is activated lazily. The attr pertains to subsystem startup and is not a configuration of the subsystem itself. WDT? (07:45:01 PM) Nihility: tdiesler: yeah i think you have a good point that this could be a generic notion, i really need bstansberry's thoughts on this though (07:45:21 PM) Nihility: bstansberry: hey what do you think about ^ (07:46:00 PM) ***bstansberry looks (07:49:08 PM) bstansberry: Nihility: I don't particularly object to attributes on the subsystem element (07:49:19 PM) bstansberry: and I now see 5 open JIRAs to fix them (07:49:59 PM) Nihility: bstansberry: yeah i was never really against them. I know David had some reasons, but I dont remeber what they were or if I ever agreed completely :) (07:50:00 PM) bstansberry: I don't really believe those are going to be fixed (07:50:23 PM) bstansberry: Nihility: the basic reason is readability (07:50:32 PM) bstansberry: AIUI (07:51:06 PM) bstansberry: tdiesler: I'm fine with leaving that attribute (07:51:14 PM) Nihility: yeah i guess in some cases we had some bad attributes on the subsytem level, activation does seem to belong there though, i mean i buy tdiesler's argument on this one {code}                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/AS7-2871">https://issues.iboss.org/browse/AS7-2871</a> |
| 1777 | AS7-2848    | Tomaz, can you take a look at this? I think this should be a matter of registering ReloadRequiredWriteAttributeHandler for all the attributes. This subsystem has 1 resource with a big long list of attributes. Potentially some attributes could be immediately changed in the runtime service (I have no idea which, and quite possibly none could be) but looking into that is a post-7.1.0.Final task If possible it would be nice to convert this subsystem to use ResourceDefinition, but that's better done after 7.1.0.Final since we have much more critical things to do.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/AS7-2848">https://issues.iboss.org/browse/AS7-2848</a> |
| 1778 | AS7-2792    | Rosta This question is best placed for Brian, but I'll present my understanding of it as it applies to the JGroups subsystem. If I understand correctly, this issue is not particular to socket-binding definitions, but to any model attribute whose value is an expression. When an attribute whose value is an expression is viewed from the management interface, the unresolved expression is displayed, not the resolved value, as it reflects the value of the attribute in the persistent model, and the persistent model needs to be server-instance neutral. Such expressions are resolved when services are started in a particular server context, but those resolved values are generally not available for viewing. The option include-runtime does not cause the resolved value of the attribute to be displayed, but rather displays attributes which are defined as runtime attributes (i.e. are not part of the persistent configuration, which is server instance neutral) - not the same thing. It would be possible to define a runtime attribute which read and made observable the resolved multicast address, but that would be one particular solution to a more general problem. I expect that you would like to have an option where you may connect to a server and see the model with all expressions resolved in the context of that server's environment; like: {noformat} :read-resource(resolve-expressions=true) {noformat} so that the resolved model can be viewed. Is that correct? | <a href="https://issues.iboss.org/browse/AS7-2792">https://issues.iboss.org/browse/AS7-2792</a> |
| 1779 | AS7-2787    | What would you prefer the flow to be? I can add support for 'y' or do you think I should just keep repeating "Is this correct yes/no?" until they say "no"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AS7-2787">https://issues.iboss.org/browse/AS7-2787</a> |
| 1780 | AS7-2770    | In the past there were the same issue with GWT opened check here: <a href="http://code.google.com/p/google-web-toolkit/issues/detail?id=1898">http://code.google.com/p/google-web-toolkit/issues/detail?id=1898</a> and since GWT 1.5 there has been added a method ensureDebugId()for UIObject We need to change current implementation somewhat in following way...<br>1. Create new button<br><pre> ToolButton button = new ToolButton("Remove", new ClickHandler() {     @Override public void onClick(ClickEvent event) { Feedback.confirm("Remove Module", "Really remove module?", new Feedback.ConfirmationHandler() {     @Override public void onConfirmation(boolean isConfirmed) { if(isConfirmed) { Module module = ((SingleSelectionModel&lt;Module&gt;) modules.getSelectionModel()).getSelectedObject(); presenter.onRemoveModule(form.getEditedEntity(), module); } }); } }); 2.Set Debug Id button.ensureDebugId("RemoveButtonEEView"); 3. Add to Panel moduleTools.addToolButtonRight(button); </pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/AS7-2770">https://issues.iboss.org/browse/AS7-2770</a> |
| 1781 | AS7-2763    | can anybody please have an update on this ? Since Hibernate Multi-tenant is not fully supportive due to the conflict with second level caching we can't think about Hibernate Multi-tenant. So the only way in front of us is to use one SessionFactory per tenant by registering SessionFactory using "hibernate.session_factory_name" configuration property. Since JBoss AS 7 is not supporting JNDI binding, we are really in trouble.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AS7-2763">https://issues.iboss.org/browse/AS7-2763</a> |
| 1782 | AS7-2763    | Hi Stuart, Can you please tell the implementation details ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/AS7-2763">https://issues.iboss.org/browse/AS7-2763</a> |
| 1783 | AS7-2756    | Is the same strength check applied to management user? I would assume management user passwords have more stringent requirement, at least should be the same as app user. But I can create a management user using password that consists of all letters (more than 8 letters). Can we validate the password immediately after the password is entered, before asking the user to enter a potentially useless password a second time, and before asking the user to assign a role. Currently the validation kicks in after adding role: Realm (ApplicationRealm) : Username : user1 Password : Re-enter Password : What roles do you want this user to belong to? (Please enter a comma separated list, or leave blank for none) [ ] : * Error * JBAS015266: Password must not have atleast one digit. The above error message is confusing, and that issue is tracked in AS7-5631                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/AS7-2756">https://issues.iboss.org/browse/AS7-2756</a> |
| 1784 | AS7-2751    | we do basically need all of it? but why is your resource description different from mine? are you using the latest AS7 master?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/AS7-2751">https://issues.iboss.org/browse/AS7-2751</a> |
| 1785 | AS7-2751    | I used [domain@localhost:9999 /] /profile=full-ha/subsystem=modcluster:read-resource-description(recursive=true) vs. [domain@localhost:9999 /] /profile=full-ha/subsystem=modcluster:read-resource(recursive=true) The read-resource operation gives me the same list as you posted but read-resource-description operation gives a bit more attributes, which looks strange. Shouldn't it be only detailed description of the same sets of attributes? Not sure if we need all of them, it depends what we want to manage through UI config IMO. Yes I do use the latest master jboss-as SNAPSHOT, have updated yesterday                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/AS7-2751">https://issues.iboss.org/browse/AS7-2751</a> |
| 1786 | AS7-2746    | yes, the "wrong credentials" approach is what I had in mind. do you think that's feasible? does it works across browsers?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/AS7-2746">https://issues.iboss.org/browse/AS7-2746</a> |

| 1789 | AS7-2703    | Whether we create new interceptors or reassemble them, we need to replicate enough information for that to happen. For example, the SFSBDestroyInterceptor constructor is passed the SFSBXPMap to be used. Currently, I'm serializing the applicationDeploymentBagKeyName so that the (per deployment) SFSBXPMap can be looked up ( <a href="https://github.com/scottmarlow/jboss-as/commit/bce74f9775efe37977e1ad2be8aac0ff3530cfccl2R93">https://github.com/scottmarlow/jboss-as/commit/bce74f9775efe37977e1ad2be8aac0ff3530cfccl2R93</a> ). Which class would we recreate the interceptors from? This also needs to work for passivation/activation as well. Do we have a passivation/activation test case already? I just pushed an update to <a href="https://github.com/scottmarlow/jboss-as/tree/cluster7">https://github.com/scottmarlow/jboss-as/tree/cluster7</a> that includes a basic cluster failover test change to include an extended persistence context. Its not really ready to be shared yet though as I'm using a Hibernate 4.0.1 snapshot build.                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-2703">https://issues.jboss.org/browse/AS7-2703</a> |
| 1790 | AS7-2695    | where does the lib/name1-name2/libxxx.so, name1? name2? module which module? Did you look to <a href="http://downloads.jboss.org/jbossnative/7.2.0.10.GA/jbossweb-native-2.0.10.jar">http://downloads.jboss.org/jbossnative/7.2.0.10.GA/jbossweb-native-2.0.10.jar</a> at least the jbossweb code could load libraries from those location.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |

How? and there is where?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |
| 1792 | AS7-2695    | {quote} "System.loadLibrary() will automatically look there first." What? How? and there is where? {quote} System.loadLibrary() always uses the caller's class loader first to locate native libs. "There" is the "lib" directory in the module which executes that method. {quote} There are few technical reasons why having product/lib/\$[platform]-\$[arch]/native.so would create some issues. {quote} For #1, correct, you should either link statically or rely upon the operating system to provide dependencies. For #2, you have it backwards - by having arch-specific directories we allow a single distribution which works on any operating system. For #3, I don't see this as any different than an OS distributing Java JARs. We don't use the OS for this case, so we shouldn't use the OS for the JNI case either, especially given that a JNI library is so tightly bound to its JAR counterpart. If you want to do it this way then you certainly can, but we don't normally support the distribution of some components separately from the AS because it's a bit of a pain from the user's perspective. If we can find a way to get around that then fine.                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |
| 1793 | AS7-2695    | What does \${os}-\${arch} expand into?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |
| 1794 | AS7-2695    | I put the latest jboss-native into the jboss web module, using the naming convention outline here, but I don't see anything in the log telling its using the native connector? Is there anything that is supposed to spit out?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |
| 1795 | AS7-2695    | What if you have multiple modules using the same native component? Since the .os/.dll can be loaded only once per VM instance second invocation will always fail because JNI methods have already been bound to a different class loader. Next what if multiple native components have the same dependency. Static linkage of dependencies means that dependency fix would cause fixing all components using it. Anyhow, setting LD_LIBRARY_PATH to a whatever location you have installed jboss-native/native before starting AS works equally well, so I see no reason why would this be something mandatory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |
| 1796 | AS7-2695    | Jean-Frederic - you said you tested this successfully on linux. I get the following after putting the native libraries in: <jboss-as>/modules/org/jboss/as/web/main/lib/\${os}-\${arch} 07:24:39,236 INFO [org.apache.catalina.core.AprLifecycleListener] (MSC service thread 1-3) The Apache Tomcat Native library which allows optimal performance in production environments was not found on the java.library.path: /usr/lib/jvm/java-1.6.0-openjdk-1.6.0.0.x86_64/jre/lib/amd64/server:/usr/lib/jvm/java-1.6.0-openjdk-1.6.0.0.x86_64/jre/lib/amd64:/usr/lib/jvm/java-1.6.0-openjdk-1.6.0.0.x86_64/jre/.lib/amd64:/usr/java/packages/lib/amd64:/usr/lib64:/lib64:/lib:/usr/lib I also noticed in my boot.log that os was Linux, and arch was amd64, so I tried linux-x86_64, linux-amd64, and linux-amd64, but none of them worked for me. I did notice that linux-x86_64 is working for HornetQ though, but so far no luck in this getting picked up. I also looked at the schema for jboss web, and native=true is the default for the configuration, so I shouldn't need to do anything in the configuration xml. What was your setup that worked?                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |
| 1797 | AS7-2695    | {quote} What if you have multiple modules using the same native component? Since the .os/.dll can be loaded only once per VM instance second invocation will always fail because JNI methods have already been bound to a different class loader. Next what if multiple native components have the same dependency. Static linkage of dependencies means that dependency fix would cause fixing all components using it. Anyhow, setting LD_LIBRARY_PATH to a whatever location you have installed jboss-native/native before starting AS works equally well, so I see no reason why would this be something mandatory. Well, since everybody seems to be 'module' oriented why not creating a separate module for all native components a. Native component can be loaded only once per VM b. In that case they could be shared among different modules c. It would solve module redeployment cause they would be loaded by parent class loader. d. User could safely deploy his native component into that module and be sure it'll be loaded by a correct classloader {quote} What are you talking about? Modules can't be redeployed. Modules are loaded once per VM, that's it. Anyway, there are no parent class loaders in AS 7. None of this makes any sense... I think you must have some wrong assumption. | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |
| 1798 | AS7-2695    | {quote} What are you talking about? Modules can't be redeployed. Modules are loaded once per VM, that's it. Anyway, there are no parent class loaders in AS 7. None of this makes any sense... I think you must have some wrong assumption. {quote} OK, my bad, wrong assumption. So if they are fixed why is so important to have them inside module/lib directory? This is not technical reason, its just convention you are imposing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |
| 1799 | AS7-2695    | What do you mean by: "Either the library is there and it's loaded, or it's not and it's skipped" Loaded by whom and when? I still do not understand what are you talking about. AS works out of box on my Fedora using tomcat-native rpm without any setup. Are you saying we should refuse to load anything outside module/lib?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |
| 1800 | AS7-2695    | Heretics should be burnt at the stake, don't you know that ? :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |
| 1801 | AS7-2695    | Mladen, Why should we have inconsistent mechanisms for jni library loading?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |
| 1802 | AS7-2695    | David, Where is the code that intercepts System.loadLibrary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |
| 1803 | AS7-2695    | Jean-Frederic forwarded me your explanation for findLibrary Thanks. Now, how can we make that not hard coded? It would be nice to have some configuration file which would be used to construct different layouts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-2695">https://issues.jboss.org/browse/AS7-2695</a> |

| 1804 | AS7-2676    | Hello. Looks like it is not working as expected. Example: script.properties: test=aaa my-script.cli: /subsystem=security/security-domain=SomeDomain:add()<br>/subsystem=security/security-domain=SomeDomain/authentication=classic:add(login-modules=[{"code"=>"org.picketbox.datasource.security.SecureIdentityLoginModule", "flag"=>"required", "module-options"=>[{"username"=>"someUsername"}, {"password"=>"\${test}"}]})] And the result is: <security-domain name="SomeDomain"> <authentication> <login-module code="org.picketbox.datasource.security.SecureIdentityLoginModule" flag="required"> <module-option name="username" value="someUsername"/> <module-option name="password" value="\${test}"/> </login-module> </authentication> </security-domain> Example 2: my-script.cli: /subsystem=security/security-domain=\${test}:add() Result is: <security-domain name="aaa"/> What am I missing here? It is working only when I change <resolve-parameter-values> to true in jboss-cli.xml.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-2676">https://issues.jboss.org/browse/AS7-2676</a> |
| 1805 | AS7-2676    | You are commenting on a resolved issue, I would suggest first a forum post, your question is "What am I missing here?" so haven't quite reached the point to confirm as a bug. If there is a bug here it will need raising under the WFCORE project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-2676">https://issues.jboss.org/browse/AS7-2676</a> |
| 1806 | AS7-2667    | Scott, what's the type of the context on which you're invoking getChildTarget() ? Could you please post a larger code snippet ? Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-2667">https://issues.jboss.org/browse/AS7-2667</a> |
| 1807 | AS7-2667    | I would like to bind my remote object from external JVM to Jboss AS 7 and use its JNDI as central Naming Directory. How is that possible to create/get org.jboss.msc.service.StartContext from a standalone application?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-2667">https://issues.jboss.org/browse/AS7-2667</a> |
| 1808 | AS7-2664    | I need more convincing arguments here. '=' are appended after request parameters and node types. Is it missing somewhere else? ':' is a separator between the node path (address part) and the operation name. How would the CLI know when you finished the node path and want to start an operation? I mean all these are valid 'read-resource', '/subsystem=datasources:read-resource', '/subsystem=datasources/data-source=mysds:read-resource'. '!' is a start of the parameter list. It's not required if the operation doesn't have parameters or does have but can be executed w/o them. So, it's questionable. Adding it automatically could be annoying.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-2664">https://issues.jboss.org/browse/AS7-2664</a> |
| 1809 | AS7-2664    | There would be a difficulty here in using the Tab completion to open the optional arguments, such as adding a "(" character. For many of the existing operations, the operation name can be filled with Tab completion, but another operation contains the same string of words. For example: bq. [standalone@localhost:9999 subsystem=datasources]:read-resource If you then hit Tab, you get the following: bq. read-resource read-resource-description The read-resource operation, however, also has some optional arguments. If you open the "(" bracket: bq. [standalone@localhost:9999 subsystem=datasources]:read-resource( And then hit Tab to show the options: bq. include-runtime= proxies= recursive= This would make it difficult to differentiate between the user's intention to fill the name of the operation, or add arguments. Jim, what would you think about having a {{-help}} wrapper, as raised in [AS-1758] <a href="https://issues.jboss.org/browse/AS7-1758">https://issues.jboss.org/browse/AS7-1758</a> ? This would allow the user to use the existing tab completion to fill out the operation name, and then use the {{operation-name --help}} option to effectively shortcut to running the {{read-operation-description(name=NameOfOperation)}}. The advantage I see here is a nice compromise between the existing Tab completion, and being able to query the use of optional arguments without interrupting the workflow of the existing operation (in other words, not having to undo the Tab completion of the operation name, and retype the read-operation-description, read it, and then type out the original operation again). Thoughts? | <a href="https://issues.jboss.org/browse/AS7-2664">https://issues.jboss.org/browse/AS7-2664</a> |
| 1810 | AS7-2663    | Can you update this ticket with the duplicate issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-2663">https://issues.jboss.org/browse/AS7-2663</a> |
| 1811 | AS7-2653    | Emanuel, there's still an @Ignore("AS7-4653") test in this class. Was that an oversight?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-2653">https://issues.jboss.org/browse/AS7-2653</a> |
| 1812 | AS7-2649    | I'm reluctant to require the client of this API to add a jboss-modules dependency in the manifest. It would be equally wrong to generate a hard dependency on apache scout in a DUP. A possible solution would be to generate a dependency on an intermediary module (i.e. org.jboss.jaxr.provider) which reexports the impl and such provides a configurable indirection layer. Another option would be to add the value of the generated dependency as a config option to the jaxr subsystem.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-2649">https://issues.jboss.org/browse/AS7-2649</a> |
| 1813 | AS7-2640    | What if I make a typo can I up arrow and make a fix and "replay" the command like I can in a Linux/Dos Shell? Are these '\ ' added automatically on long lines? Did you look at the MySQL client which I think has behavior that is close to this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-2640">https://issues.jboss.org/browse/AS7-2640</a> |
| 1814 | AS7-2624    | Is "bin/standalone.sh -v" sufficient for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-2624">https://issues.jboss.org/browse/AS7-2624</a> |
| 1815 | AS7-2536    | Another vote. Saving to alternative locations and changing the length of history were two in my topic spec for CLI docs. If you have a separate config file for CLI, what else might it cover?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-2536">https://issues.jboss.org/browse/AS7-2536</a> |
| 1816 | AS7-2531    | Rado, can you suggest a better wording for this error message?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-2531">https://issues.jboss.org/browse/AS7-2531</a> |
| 1817 | AS7-2530    | When this test case is launched, has the AS instance already been started with Byteman? <a href="http://community.jboss.org/wiki/ABYtemanTutorial">http://community.jboss.org/wiki/ABYtemanTutorial</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-2530">https://issues.jboss.org/browse/AS7-2530</a> |
| 1818 | AS7-2480    | brian, you commented the @Ignore some times ago ( <a href="https://github.com/jbossas/jboss-as/commit/53c5582650180fa1c0d167c3b07afc0ba9a90118">https://github.com/jbossas/jboss-as/commit/53c5582650180fa1c0d167c3b07afc0ba9a90118</a> ). Have you seen these failures again?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-2480">https://issues.jboss.org/browse/AS7-2480</a> |
| 1819 | AS7-2469    | Hi all, does this change mean the end for sub-profiling idea. What a pity! A profile extending by means of sub-profiles would be a very useful approach. Imagine hundred applications running in the same domain, which would be using the same default profile. But each application would like to have e.g. different logging configuration: levels, appenders etc. Without sub-profiling we need to create a separate profile for all applications requiring even small differences to the default profile and these profile will have up to 99% the same content as default. Assume we did so. On a profile update we have to change all hundreds profiles. That's why we are unhappy to resign sub-profiling idea. Regards                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-2469">https://issues.jboss.org/browse/AS7-2469</a> |
| 1820 | AS7-2437    | I want to lock down requirements for this. Can we confirm that a maven command that removes the code is ok? You would call it like: {code}mvn clean -Pblank{code} and we could offer this as an option when generating: {code}mvn archetype:generate \ -DarchetypeArtifactId=jboss-javaee6-webapp \ -DarchetypeGroupId=org.jboss.spec.archetypes \ -DarchetypeVersion=7.0.2.Final -Dblank=true {code} (see the last line). Burr, please approve this, and I will add it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-2437">https://issues.jboss.org/browse/AS7-2437</a> |
| 1821 | AS7-2419    | can you add the sample deployment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-2419">https://issues.jboss.org/browse/AS7-2419</a> |
| 1822 | AS7-2415    | Jakiran any thoughts on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-2415">https://issues.jboss.org/browse/AS7-2415</a> |

| 1823 | AS7-2392    | What happens is that the JSR88 layer generates a tmp file and passes the URL to which to the AS7 management API. During the building of the ADD step an InputStream for that URL is opened and stored as content to the ADD step. When deployment is done, the JSR88 layer attempts to delete the tmp file, which fails on w2k8 presumably because the associated input stream is not closed. See the client [test log file]https://hudson.qa.jboss.com/hudson/view/JBossOSGi/job/jboss-as7-as2392/ws/testsuite/integration/smoke/target/workdir/target/test.log] and search for deployment-app.ear. {code} 03:19:18,396 INFO [org.jboss.as.ee.deployment.spi] (Thread-179) JBAS016101: End deploy: [target=http://org.jboss.as.ee.deployment/jsr88?targetType=as7,parent=null,type=ear,id=file:/C:/DOCUME~1/hudson/LOCALS~1/Temp/deployment-app.ear] 03:19:18,397 WARN [org.jboss.as.ee.deployment.spi] (Thread-179) JBAS016103: Cannot delete deployment file C:\DOCUME~1\hudson\LOCALS~1\Temp\deployment-app.ear, will be deleted on exit {code} This particular test fails because it tries to deploy the same EAR twice, but cannot use the same tmp file name. In branch [as2392]https://github.com/tdiesler/jboss-as/tree/as2392] I implemented a workaround that assigns a different tmp file name when the tmp file already exists and cannot be deleted. The underlying issue IMHO is however in the AS7 deployment layer and its handling of input streams associated with user provided URLs. This should be a general issue for all management clients running on w2k8 | <a href="https://issues.jboss.org/browse/AS7-2392">https://issues.jboss.org/browse/AS7-2392</a> |
| 1824 | AS7-2380    | How do we distribute jars that are not intended to be used by the server? Should they still go into the modules hierarchy?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-2380">https://issues.jboss.org/browse/AS7-2380</a> |
| 1825 | AS7-2361    | Also, how do you do external JNDI lookups? Or what is the recommended way?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-2361">https://issues.jboss.org/browse/AS7-2361</a> |
| 1826 | AS7-2360    | Shouldn't this happen by default?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-2360">https://issues.jboss.org/browse/AS7-2360</a> |
| 1827 | AS7-2360    | "The command line switches do not appear to be going into the server or boot logs at all. It does scroll by at startup, but is not durably stored for support to have a chance to trouble shoot." Isn't this clear....if not.. Then currently in EAP 5/AS 5 the command line switches are written to the log, this seems like a regression and hurts supports ability to quickly ascertain what is going on in an environment. Do you not agree this is a regression?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-2360">https://issues.jboss.org/browse/AS7-2360</a> |
| 1828 | AS7-2360    | I am not even sure what you are asking..by default out of the box..java_opts should to into the boot server log....is that clear enough?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-2360">https://issues.jboss.org/browse/AS7-2360</a> |
| 1829 | AS7-2360    | "By default out of the box" really needs to be defined. The option is already there as a TRACE level message. We can add the JAVA_OPTS to print, as David suggests, as a DEBUG message like the system properties do. We would likely not want it at any lower level than that. Is that what you are looking for?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-2360">https://issues.jboss.org/browse/AS7-2360</a> |
| 1830 | AS7-2353    | Is this available in the console? I did not see anything that mentioned https in the drop downs around connectors....so I am confused...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-2353">https://issues.jboss.org/browse/AS7-2353</a> |
| 1831 | AS7-2350    | But shouldn't there be ways to edit view the settings in it, or are the "hidden" in some of the other metaphors that are in the current console? I would think the values of the host.xml need to be exposed somehow, or am I just missing something. Please help me understand why host settings should not be exposed in the console... For example the hosts, IP address, management port, creating serves, ie related to the cloning comment earlier....I do not think we can discount host file "editing" in spirit, but I of course do agree we should be editing XML in the console, but values need to be exposed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-2350">https://issues.jboss.org/browse/AS7-2350</a> |
| 1832 | AS7-2345    | Do you mean they should be within the table?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-2345">https://issues.jboss.org/browse/AS7-2345</a> |
| 1833 | AS7-2344    | What is the branch/tag for this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-2344">https://issues.jboss.org/browse/AS7-2344</a> |
| 1834 | AS7-2339    | Do you mean two instances of the same server configuration? or simply duplicating a given server configuration under a different name?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-2339">https://issues.jboss.org/browse/AS7-2339</a> |
| 1835 | AS7-2336    | I personally like that we have these services marked as lazy. After all why enable those services if nothing uses it? What's the advantage of making these eager?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-2336">https://issues.jboss.org/browse/AS7-2336</a> |
| 1836 | AS7-2336    | I am a server admin, I do not have a war file, how do I test out...see a cluster....in the past I just did about 10 mins of stuff and then I had a cluster. With AS 7.X I would have to find some docs, find a setting that is not documented, is not in the console, and then I am kinda lost. From a end user perspective out of the box, changing behavior that is several years old is challenge for people being great quickly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-2336">https://issues.jboss.org/browse/AS7-2336</a> |
| 1837 | AS7-2334    | What does this relate to? Can you elaborate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-2334">https://issues.jboss.org/browse/AS7-2334</a> |
| 1838 | AS7-2327    | This really should be a separate config though. The HTTP API != management console. It should be possible to have the former without the latter. For example if you want to ensure that your admins use JON.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-2327">https://issues.jboss.org/browse/AS7-2327</a> |
| 1839 | AS7-2324    | Can you provide a list of contents that should into the report?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-2324">https://issues.jboss.org/browse/AS7-2324</a> |
| 1840 | AS7-2320    | What do you mean interim values?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-2320">https://issues.jboss.org/browse/AS7-2320</a> |
| 1841 | AS7-2318    | That sounds good to me. Does that would mean "Log Level" combo box would have an empty or none entry?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-2318">https://issues.jboss.org/browse/AS7-2318</a> |
| 1842 | AS7-2318    | {quote} Does that would mean "Log Level" combo box would have an empty or none entry? {quote} Doug, I haven't checked how the admin console displays that information. But it would be the same as what it would display for any other handler, when the threshold (which is an optional field) is not set.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-2318">https://issues.jboss.org/browse/AS7-2318</a> |
| 1843 | AS7-2317    | Curent problem or challenge is the embedded logger editor only allows for the creation/managing of one logging results file. How do I create multiple log files that are specific to needs. One request from the field is how do I log security related events in one specific file. This is a big deal for security conscious use cases ie like in government agencies. Hope that makes more sense.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-2317">https://issues.jboss.org/browse/AS7-2317</a> |
| 1844 | AS7-2280    | Is this still relevant? Cache configuration can be modified by the management API, is there anything else that is required to resolve this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-2280">https://issues.jboss.org/browse/AS7-2280</a> |
| 1845 | AS7-2272    | Isn't this better explained in a README? Where do you draw the line? Should we have 100 XML files that existed in AS6 with a message that says "use this standalone.xml instead"? Should we have twiddle.sh launch jboss-admin.sh? So this will either be inconsistent, or we will have a ridiculous amount of clutter                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-2272">https://issues.jboss.org/browse/AS7-2272</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | URL                                                                                             |

| 1846 | AS7-2272    | What came out of a quick but pretty thorough discussion of this at the usability workshop is: I'm an AS7 newbie, perhaps a JBoss AS newbie, but not at all a "try out new stuff" newbie. I download, unzip and do one of two things: 1) Read README.txt in the root 2) or, since it's a server I downloaded, it should start and do something. It's a web server so it probably has an http accessible welcome page with helpful information on it. So I look in bin and try to run the start script. A start script usually has a name that indicates it starts or runs something, so that's what I look for. The goal is to immediately get such people on the right path, without forcing them to right off the bat go download docs to figure out what to do. (IMO any output from the script should reference the README.txt, not "See the documentation...") The README.txt should include a brief explanation of running a standalone server versus running a managed domain. Any run.sh/bat should not actually attempt to launch a server, because the configuration and behavior of the server will be different from previous AS releases. | <a href="https://issues.jboss.org/browse/AS7-2272">https://issues.jboss.org/browse/AS7-2272</a> |
| 1847 | AS7-2239    | {noformat} java.lang.IllegalArgumentException: Can not set java.net.URL field com.sun.ts.tests.ejb30.bb.session.stateless.annotation.resource.ResourceFieldBean.url to java.lang.String {noformat}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-2239">https://issues.jboss.org/browse/AS7-2239</a> |
| 1848 | AS7-2239    | Will this be fixed today? If not, please push to CR1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-2239">https://issues.jboss.org/browse/AS7-2239</a> |
| 1849 | AS7-2222    | What is this actually used for? The issue is, we don't have References for these objects. We may need to create references for this, but I am curious how the reference is used by the Referencable objects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-2222">https://issues.jboss.org/browse/AS7-2222</a> |
| 1850 | AS7-2179    | Maybe hide inherited operations by default? Actually I find it counter-intuitive that I have to specify operations=true to find out about the local operations. Maybe read-resource-description should include local operations by default and then you also have :read-resource-description(inherited-operations=true) or something like that...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-2179">https://issues.jboss.org/browse/AS7-2179</a> |
| 1851 | AS7-2172    | Heiko, can this be scheduled for 7.1.1? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-2172">https://issues.jboss.org/browse/AS7-2172</a> |
| 1852 | AS7-2169    | {quote} 1. Call System.getenv("X") and if it exists, use it as expression value 2. else, call System.getProperty("env.X") and if it exists, use it as expression value {quote} Isn't it usually the other way around? Developers usually use the system properties to override the environment entries (for example by passing -Denv.X). Would it be more consistent if we did: 1. Call System.getProperty("env.X") and if it exists, use it as expression value 2. else, call System.getenv("X") and if it exists, use it as expression value                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-2169">https://issues.jboss.org/browse/AS7-2169</a> |
| 1853 | AS7-2164    | Stuart, I'm creating CdiAnnotationProcessor, CdiAnnotations and CdiDeploymentMarker classes that will act as Jaxrs equivalent classes: JaxrsAnnotationProcessor, JaxrsAnnotations and JaxrsDeploymentMarker respectively. The difference will be of course in the CdiAnnotations that will contain the CDI annotations of JSR 299. Is that right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-2164">https://issues.jboss.org/browse/AS7-2164</a> |
| 1854 | AS7-2127    | RESTEasy 2.2.3.GA is now released. Does stuart want to bump the version?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-2127">https://issues.jboss.org/browse/AS7-2127</a> |
| 1855 | AS7-2115    | This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-2115">https://issues.jboss.org/browse/AS7-2115</a> |

| 1857 | AS7-2101    | Can this be resolved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-2101">https://issues.jboss.org/browse/AS7-2101</a> |
| 1858 | AS7-2096    | I have a hard time getting explanations and details ... So it was the opposite setting then ;) I am not sure about the usefulness about 100 as the default. It has been used because it is the httpd default, but I don't really see how it could help prevent bad things from happening. I'll review that, because I find it odd. On the other hand, the default is relatively big, which implies a low impact. Generally, if this is about adding a setting which would only be useful for configs which are bad in production, then why should it be put in ? You have a means to configure it as is.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-2096">https://issues.jboss.org/browse/AS7-2096</a> |

| 1859 | AS7-2074    | <p>[--controller=host:port] [--connect] [--file=file_path] [--commands=command_or_operation1,command_or_operation2...]</p> <p>[--command=command_or_operation] [--user=username --password=password] --help (-h) - prints (this) basic description of the command line utility. --version - prints the version info of the JBoss AS release, JVM and system environment. --controller - the default controller host and port to connect to when --connect option. (described below) is specified or when the connect command is issued w/o the arguments. The default controller host is localhost and the port is 9999. --connect (-c) - instructs the CLI to connect to the controller on start-up (to avoid issuing a separate connect command later). --file - specifies a path to a file which contains commands and operations (one per line) that should be executed (in a non-interactive mode). The CLI will terminate the session immediately after the last command has been executed or if some command or operation failed. --command - specifies a single command or an operation that should be executed in the CLI session. The CLI will terminate the session immediately after the command or the operation has been executed. Note: --command argument is optional in a sense that any word (or phrase without whitespaces in it) will be assumed to be a command (or an operation). --commands - specifies a comma-separated list (the list must not contain whitespaces) of commands and operations that should be executed in the CLI session. The CLI session will be automatically terminated as soon as the last command or operation has been executed or after the first error. Note: --commands argument is optional in a sense that any comma-separated list at the end of the argument list will be assumed to be the list of commands and operations. --user - if the controller requires user authentication, this argument can be used to specify the user name as a command line argument. If the argument isn't specified and the authentication is required the user will be prompted to enter the user name when the connect command is issued. --password - specifies the password for authentication while connecting to the controller as a command line argument. If the argument isn't specified and the authentication is required the user will be prompted to enter the password when the connect command is issued. During the command line session for a list of commands available in the current context execute help --commands The resulting listing may depend on the current context. E.g. some of the commands require an established connection to the controller (standalone or domain). These commands won't appear in the listing unless the connection has been established. Other commands may depend on the availability of specific subsystems. E.g. if the messaging subsystem is not available, messaging-related commands will not be listed. Here are some of the most basic supported commands: cd (or cd) - change the current node path to the argument; connect - connect to the specified host and port; deploy - deploy an application; help (or h) - print this message; history - print or disable/enable/clear the history expansion. ls - list the contents of the node path; pwn (or pwd) - prints the current working node; quit (or q) - quit the command line interface; undeploy - undeploy an application; version - prints the version and environment information. For a more detailed description of a specific command, execute the command with '--help' as the argument. Tab-completion is supported for the commands, just press the tab key to start. Operation requests start with '/' or '/' and follow the format: [node-type=node-name [, node-type=node-name]*] : operation-name ['(name=value [, name=value]*)'] e.g. /subsystem=web/connector=http:read-attribute(name=protocol) If the operation request doesn't require a node path then the request can start with ':' followed by an operation name and the property list if</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-2074">https://issues.jboss.org/browse/AS7-2074</a> |
| 1860 | AS7-2053    | Could we at least update to 1.7.3? Version which we distribute is not compatible with the one Hibernate Search 4 uses, leading to problems with applications wishing to use JAX-RS and HSEARCH together.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-2053">https://issues.jboss.org/browse/AS7-2053</a> |
| 1861 | AS7-2052    | What do you think about this John?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-2052">https://issues.jboss.org/browse/AS7-2052</a> |
| 1862 | AS7-1994    | <p>discussion, and our needs. I'm sending this email mainly as reminder for me to discuss these points with Brian after his and mine vacations regard S. * pferraro_ ("pferraro@adsl-99-97-30-7.dsl.wlfrct.sbcglobal.net) has joined #jboss-as7 &lt;emuckenhuber_&gt; maeste: pong * emuckenhuber_ is now known as emuckenhuber &lt;maeste&gt; emuckenhuber_: Hi, I'm trying to implement our metrics. Just to recall we need this issue Brian has resolved to implement them: AS7-772 &lt;jbossbot&gt; jira [AS7-772] Allow operation handlers to register child ModelNodeRegistrations [Resolved (Done) Feature Request, Critical, Brian Stansberry] <a href="https://issues.jboss.org/browse/AS7-772">https://issues.jboss.org/browse/AS7-772</a> &lt;maeste&gt; emuckenhuber: what I'm trying to do is: * bbrowning (~bbrowning@redhat/jboss/bbrowning) has joined #jboss-as7 * ChanServ gives voice to bbrowning &lt;maeste&gt; emuckenhuber: <a href="https://github.com/maeste/jboss-as/commit/d08f758b39d6a83257745cf86fe9f7ced481c4cb#L1R78">https://github.com/maeste/jboss-as/commit/d08f758b39d6a83257745cf86fe9f7ced481c4cb#L1R78</a> &lt;jbossbot&gt; git [jboss-as] d08f758. Stefano Maestri stats prototype &lt;maeste&gt; emuckenhuber: but I'm getting this exception &lt;maeste&gt; emuckenhuber: <a href="https://gist.github.com/1111413">https://gist.github.com/1111413</a> &lt;maeste&gt; emuckenhuber: have you an idea what I'm doing wrong? &lt;emuckenhuber&gt; maeste: yes &lt;maeste&gt; emuckenhuber: sorry to ask you for a Brian's issue, but AFAIK Brian is away until 11 August &lt;maeste&gt; emuckenhuber: cool &lt;emuckenhuber&gt; maeste: basically you would need to register the handlers inside that operation &lt;maeste&gt; emuckenhuber: yup, moreover after a service activated by this operation has been started &lt;maeste&gt; emuckenhuber: it's the reason because I've added a listener &lt;maeste&gt; emuckenhuber: line 91 &lt;emuckenhuber&gt; maeste: no, I'm saying operations have to be registered as part of operation handler itself &lt;emuckenhuber&gt; which is basically the exception &lt;maeste&gt; emuckenhuber: you have lost me &lt;emuckenhuber&gt; actually all operation handlers should be registered as part of the Extension &lt;maeste&gt; emuckenhuber: oki, but it's what AS7-772 try to solve &lt;jbossbot&gt; jira [AS7-772] Allow operation handlers to register child ModelNodeRegistrations [Resolved (Done) Feature Request, Critical, Brian Stansberry] <a href="https://issues.jboss.org/browse/AS7-772">https://issues.jboss.org/browse/AS7-772</a> &lt;maeste&gt; emuckenhuber: at least AFAI understood &lt;maeste&gt; emuckenhuber: this is our original problem &lt;emuckenhuber&gt; hmm, imho that does not make any sense &lt;maeste&gt; emuckenhuber: we have to register operation (metics in this case) after a datasource have been created &lt;emuckenhuber&gt; well perhaps a bit &lt;emuckenhuber&gt; anyway - you would have to register that as part of populateModel() * asoldano is now known as asoldano_lunch &lt;maeste&gt; emuckenhuber: because metrics are dynamic for us and need a concrete instance of ResourceAdapter/DS &lt;emuckenhuber&gt; yeah, but it basically does not really comply with how the management model works &lt;maeste&gt; emuckenhuber: there was a discussion on ML in May about that, and then Brian created 772 &lt;emuckenhuber&gt; you remember the subject? &lt;maeste&gt; emuckenhuber: discussion subject was "access to the ModelNodeRegistration during handling of an operation and during deployment" * kevinpollet (~kevinpoll@217.112.54.72) has joined #jboss-as7 * abstractj (~abstractj@186.202.49.66) has joined #jboss-as7 * hbraun (~hbraun@ppp-93-104-112-69.dynamic.mnet-online.de) has joined #jboss-as7 * hbraun has quit (Client Quit) * miclorb_ has quit (Remote host closed the connection) &lt;emuckenhuber&gt; maeste: hmm, ok that's an issue then &lt;maeste&gt; emuckenhuber: so, basically you are saying it's not implemented &lt;maeste&gt; emuckenhuber: oki, I'll put down in my todo list &lt;maeste&gt; emuckenhuber: better to wait for Brian, since I've discussed about that a lot with him &lt;emuckenhuber&gt; maeste: well i would not say 'not implemented' - we actually have a check to prevent exactly this &lt;maeste&gt; emuckenhuber: oki much stronger &lt;maeste&gt; emuckenhuber: &lt;emuckenhuber&gt; maeste: well perhaps you want to do a single operation handler which gives you all the metrics for now? &lt;emuckenhuber&gt; not sure how critical that is for the console work &lt;maeste&gt; emuckenhuber: not possible, it was already done, but it doesn't work &lt;emuckenhuber&gt; why? &lt;maeste&gt; emuckenhuber: or better it works, but not as expected &lt;maeste&gt; emuckenhuber: because sometimes some metrics are not available &lt;maeste&gt; emuckenhuber: to be more precise... &lt;maeste&gt; emuckenhuber: it's</p> | <a href="https://issues.jboss.org/browse/AS7-1994">https://issues.jboss.org/browse/AS7-1994</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | URL                                                                                             |

| 1863 | AS7-1994    | For the Datasource case, does StatisticsPlugin have a field that forms a natural key? Looking at <a href="https://github.com/maeste/jboss-as/commit/d08f758b39d6a83257745cf86fe9f7ced481c4cb#L1R78">https://github.com/maeste/jboss-as/commit/d08f758b39d6a83257745cf86fe9f7ced481c4cb#L1R78</a> , the concern I have is it appears you are modifying a generic resource registration by adding instance-specific metrics. So, the management interface for /subsystem=datasources/datasource=* has one set of attributes and ops, /subsystem=datasources/datasource=myDS has another set (a superset if we could make that work) and /subsystem=datasources/datasource=anotherDS has a 3rd set. It's almost like an abstract superclass and concrete subclasses. That might be possible, but I don't much like the idea that a resource's definition changes. Something like /subsystem=datasources/datasource=myDS/statistics-provider=oracle and /subsystem=datasources/datasource=myDS/statistics-provider=postgres sounds nicer. The statistics-provider level works like "subsystem" works.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-1994">https://issues.jboss.org/browse/AS7-1994</a> |
| 1864 | AS7-1963    | Can anyone comment on how jboss (or the webapp in question) knows to use the valve defined in jboss-web.xml? how does it know it is any different from any non-security related valve?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-1963">https://issues.jboss.org/browse/AS7-1963</a> |
| 1865 | AS7-1932    | IST Jaikiran: ? (09:47:50 IST) jbossbot: jira [AS7-1934] EJB client context configuration and management ops [Open (Unresolved) Sub-task, Blocker, jaikiran pai] <a href="https://issues.jboss.org/browse/AS7-1934">https://issues.jboss.org/browse/AS7-1934</a> (09:48:32 IST) kpiwko_afk is now known as kpiwko (09:49:13 IST) dmlloyd: sure (09:49:47 IST) Jaikiran: a part of it ties into AS7-1932 (09:49:49 IST) jbossbot: jira [AS7-1932] Remoting outbound connection service [Open (Unresolved) Sub-task, Blocker, Unassigned] <a href="https://issues.jboss.org/browse/AS7-1932">https://issues.jboss.org/browse/AS7-1932</a> (09:50:03 IST) dmlloyd: yeah there's two pieces (09:50:19 IST) dmlloyd: basically we first need a way to configure outbound connections in the remoting subsystem configuration (09:50:53 IST) dmlloyd: they need to be named, and have some base set of configuration parameters to facilitate authentication (think data sources) as well as configuring the socket itself (09:51:14 IST) dmlloyd: the connections would be established in the context of a source endpoint so they would reside within the endpoint configuration (09:51:41 IST) dmlloyd: then our EJB client configuration in the EJB subsystem would declare client contexts and have a listing of connections to associate with them (09:52:36 IST) dmlloyd: an important note though - the connection service lifecycle cannot be tied to the connection lifecycle (09:52:38 IST) Jaikiran: so ultimately the deployment descriptor would just be a named ref to that connections (09:52:45 IST) dmlloyd: right (09:53:02 IST) Jaikiran: isn't it the other way round? (09:53:16 IST) dmlloyd: it's both ways around (09:53:23 IST) Jaikiran: i mean the connection is destroyed on service destroy? (09:53:25 IST) dmlloyd: a service lifecycle cannot be controlled by external factors (09:53:41 IST) dmlloyd: so it can't wait for the connection to be up before starting for example (09:53:47 IST) dmlloyd: and killing the connection cannot bring down the service (09:54:07 IST) Jaikiran: oh ok i see what you mean (09:54:25 IST) Jaikiran: so typically, the named ref dependency doesn't guarantee a connection that is UP (09:54:39 IST) dmlloyd: right (09:54:55 IST) dmlloyd: we need a way to get a connection from the ref if it's up - probably best to return an <code>ioFuture&lt;Connection&gt;</code> always (09:55:05 IST) dmlloyd: the connection is either up or in the process of being created/restored (09:55:21 IST) dmlloyd: and anything which uses it has to be able to go back for a new connection in the event of a failure (09:55:38 IST) dmlloyd: this will take some thinking when it comes to EJBReceiver since we don't want the EJBReceiver disappearing (09:55:47 IST) dmlloyd: also, we should have a way to designate a client context as the "default" which is applied to deployments if none is specified for that deployment (09:55:55 IST) dmlloyd: (once we're at that part) (09:56:08 IST) Ifryc ["Ifryc@cst-prg-121-2.cust.vodafone.cz] entered the room. (09:56:35 IST) Jaikiran: although we don't "configure" the default context we do have the necessary setup ready to allow that default to be made available to the deployments currently (09:56:47 IST) stliu left the room (quit: Quit: Leaving). (09:57:11 IST) Jaikiran: btw, i was looking at the remoting subsystem xsd and it appears that the source endpoint is just 1? (09:57:24 IST) Jaikiran: i mean all connections would thus be in the scope of the endpoint? (09:58:00 IST) dmlloyd: yeah I'm not sure how it's set up, but one endpoint per VM is a reasonable policy (09:58:23 IST) Jaikiran: ok (09:58:41 IST) Jaikiran: in terms of specifying the destination for those connections (09:58:56 IST) Jaikiran: i believe we can rely on the outbound-socket-binding support that we added recently (09:59:04 IST) Jaikiran: which allows for specifying a host and a port (09:59:16 IST) Jaikiran: is there more that needs to be considered? (09:59:17 IST) dmlloyd: yes and no - remoting accepts a URI for the destination (09:59:34 IST) dmlloyd: which includes protocol as well, and basically supports anything a URI supports (09:59:57 IST) dmlloyd: for example, "local:" is a valid destination (10:00:05 IST) Jaikiran: so the outbound-client-socket would just be one type of the destination then (10:00:12 IST) dmlloyd: at some point "http:" may be as well (10:00:46 IST) dmlloyd: yeah we'd need some way of referencing it (10:01:25 IST) dmlloyd: e.g. "theproto://#{host}:#{port}/blah?foo" (10:01:31 IST) dmlloyd: which is really ugly :) (10:01:36 IST) dmlloyd: but I can't think of anything better (10:01:43 IST) dmlloyd: | <a href="https://issues.jboss.org/browse/AS7-1932">https://issues.jboss.org/browse/AS7-1932</a> |
| 1866 | AS7-1928    | Hi David, I think you might misunderstand my intention. What I'm trying to do is to *access the resources in META-INF/ in a JAR (defined as a module) from a class in that same JAR*. I tried tweaking the module.xml and jboss-deployment-structure.xml in various ways but no luck. Did I miss anything?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-1928">https://issues.jboss.org/browse/AS7-1928</a> |
| 1867 | AS7-1928    | Are you using the current classes class loader to try and access META-INF or are you trying to use the TCCL?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-1928">https://issues.jboss.org/browse/AS7-1928</a> |
| 1868 | AS7-1920    | So how did this end up working ? I would expect myfile.xml myfile.xml.dodeploy to work or how ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-1920">https://issues.jboss.org/browse/AS7-1920</a> |
| 1869 | AS7-1920    | okey - is there a jira for Part 2 ? btw. does this mean .xml is special and .dodeploy will just be ignored ? i.e. we currently apply this to all files we deploy (.jar, .war, .ear, .xml etc.) and just wondering if that will be hurtful for this kind of deploys ? (I assumed these would be symmetric, but sounds like they aren't)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-1920">https://issues.jboss.org/browse/AS7-1920</a> |
| 1870 | AS7-1917    | Wouldn't it be much better solution to make it possible to set URIEncoding and useBodyEncodingForURI on the connector element instead of using system properties? Connector element: <Connector name="http" ... URIEncoding="UTF-8" useBodyEncodingForURI="true"/> Like it's done for JBossWeb 3.0.x <a href="http://docs.jboss.org/jbossweb/3.0.x/config/http.html">http://docs.jboss.org/jbossweb/3.0.x/config/http.html</a> <a href="http://docs.jboss.org/jbossweb/7.0.x/config/http.html">http://docs.jboss.org/jbossweb/7.0.x/config/http.html</a> System properties: org.apache.catalina.connector.URI_ENCODING org.apache.catalina.connector.USE_BODY_ENCODING_FOR_QUERY_STRING                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-1917">https://issues.jboss.org/browse/AS7-1917</a> |
| 1871 | AS7-1917    | Okay. So is it official to use these properties I've found in the code? Are they documented anywhere?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-1917">https://issues.jboss.org/browse/AS7-1917</a> |
| 1872 | AS7-1908    | Planning to make a management function available: {noformat} /subsystem=jgroups/stack=udp:export-native-configuration {noformat} which returns a String containing the XML JGroups configuration. Would that satisfy this request?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-1908">https://issues.jboss.org/browse/AS7-1908</a> |
| 1873 | AS7-1893    | This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-1893">https://issues.jboss.org/browse/AS7-1893</a> |
| 1874 | AS7-1893    | Richard, there are integration clustering tests which use jdbc cache store and their config ( <a href="https://github.com/jbossas/jboss-as/blob/master/testsuite/integration/clust/src/test/config/ispn/cache-container-with-jdbc-store.xml">https://github.com/jbossas/jboss-as/blob/master/testsuite/integration/clust/src/test/config/ispn/cache-container-with-jdbc-store.xml</a> ) is currently out of date. Can you please fix this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-1893">https://issues.jboss.org/browse/AS7-1893</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | URL                                                                                             |

| 1875 | AS7-1893    | One more thing.. I'm looking at <a href="https://github.com/rachmatowicz/jboss-as/commit/9fed5aad5faacde351966d15f117b04ebf16b896#L0R589">https://github.com/rachmatowicz/jboss-as/commit/9fed5aad5faacde351966d15f117b04ebf16b896#L0R589</a> and <a href="https://github.com/rachmatowicz/jboss-as/commit/9fed5aad5faacde351966d15f117b04ebf16b896#L1R539">https://github.com/rachmatowicz/jboss-as/commit/9fed5aad5faacde351966d15f117b04ebf16b896#L1R539</a> and I see a problem. When we have XSD types for all three jdbc cache stores (string-keyed-jdbc-store, binary-keyed-jdbc-store and mixed-keyed-jdbc-store), I would suppose that when I use mixed-keyed-jdbc-store, I can really only create mixed jdbc cache store from it. However, from the code logic it seems that when a user specifies mixed-keyed-jdbc-store and inside that only binary-keyed-table, they will actually get binary jdbc cache store (the same for string-based one when they specify only string-keyed-table). I would suppose here that the XSD will say that binary-keyed-table has minOccurs=1 and maxOccurs=1 as well as string-keyed-table (they have "0" now): <a href="https://github.com/rachmatowicz/jboss-as/blob/9fed5aad5faacde351966d15f117b04ebf16b896/build/src/main/resources/docs/schema/jboss-as-infinispan_1_2.xsd#L589">https://github.com/rachmatowicz/jboss-as/blob/9fed5aad5faacde351966d15f117b04ebf16b896/build/src/main/resources/docs/schema/jboss-as-infinispan_1_2.xsd#L589</a> WDYT? | <a href="https://issues.jboss.org/browse/AS7-1893">https://issues.jboss.org/browse/AS7-1893</a> |
| 1876 | AS7-1833    | Hi All Does this bug really fix in EAP 6.1?I also had the bug on JBoss EAP6.1 final version. My environment is :Linux 5.3 + JBoss EAP 6.1.0 + JDK 1.6.0_26 Here are the log : [standalone@localhost:9999 /] :reload Communication error: java.util.concurrent.ExecutionException: Operation failed: Operation failed: Channel closed [disconnected /] Please correct me if I have any misunderstanding. Regards Xin                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-1833">https://issues.jboss.org/browse/AS7-1833</a> |
| 1877 | AS7-1830    | Emanuel, this ties in with the "flattening" thread we had with Heiko Rupp. Where do things stand with that? Basically a VALUE_TYPE for an interface criteria attribute is impossible if we allow arbitrary nesting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-1830">https://issues.jboss.org/browse/AS7-1830</a> |
| 1878 | AS7-1809    | Just curious - Can't this library jar (of any version of your choice) be just packaged within the application and start using it? Or is JBoss AS adding this as an implicit dependency to your deployments (which would require some additional jboss-deployment-structure.xml configurations, to use a different version of that module)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-1809">https://issues.jboss.org/browse/AS7-1809</a> |
| 1879 | AS7-1807    | The parts that we customized for EAP 6 so far include: (1) The log messages (JBPAPP-6831) (2) The welcome pages (JBPAPP-6838) (3) The admin console - logos, colors, etc (JBPAPP-7111, JBPAPP-7031) (4) The config profiles (JBPAPP-7032) A single jar containing this content/configuration sounds like a good idea. Could this be configured by changing standalone.conf and domain.conf?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-1807">https://issues.jboss.org/browse/AS7-1807</a> |
| 1880 | AS7-1807    | David - does your suggestion avoid the .bat/.sh scripts being the place this is defined ? See above why we should not make .bat/.sh's the place to control product disto settings. basically any settings controlled by .bat/.sh is ignored by any launches done via IDE's, arquillian and other "jboss launchers" because of the non-portability of control over processes started via .bat/.sh.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-1807">https://issues.jboss.org/browse/AS7-1807</a> |
| 1881 | AS7-1796    | Is this happening by Final? If not please punt to 7.1.1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-1796">https://issues.jboss.org/browse/AS7-1796</a> |
| 1882 | AS7-1786    | Hi Kabir, What is the current status of this on master? Thanks, David                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-1786">https://issues.jboss.org/browse/AS7-1786</a> |
| 1883 | AS7-1784    | Any update? Should this be reassigned?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-1784">https://issues.jboss.org/browse/AS7-1784</a> |

See AS7-923, and let me know what other informations you need                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-1782">https://issues.jboss.org/browse/AS7-1782</a> |
| 1885 | AS7-1781    | Marcus, can you provide the relevant information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-1781">https://issues.jboss.org/browse/AS7-1781</a> |
| 1886 | AS7-1781    | Thanks Marcus, that's already a good starting point. Can you provide some examples for " /subsystem=security/security-domain=other:add() "?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-1781">https://issues.jboss.org/browse/AS7-1781</a> |
| 1887 | AS7-1781    | Can someone update the resource description? it's still empty and practically not usable for us to move forward. although some examples for the child resources would be good.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-1781">https://issues.jboss.org/browse/AS7-1781</a> |
| 1888 | AS7-1780    | Hi Paul, What is the status on this one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-1780">https://issues.jboss.org/browse/AS7-1780</a> |
| 1889 | AS7-1780    | Richard, will there be a possibility to change the infinispn subsystem for the whole domain or server group so that all servers in the domain/server group are affected? I'm just trying to find out what we'll be able to test around EDG running in the domain mode. Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-1780">https://issues.jboss.org/browse/AS7-1780</a> |
| 1890 | AS7-1776    | I think this is already done for the English language - the only thing that needs to be done is the German translation (the message bundle contains 'TRANSLATE ME' messages). Or did I miss anything?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-1776">https://issues.jboss.org/browse/AS7-1776</a> |
| 1891 | AS7-1772    | Where does this stand? Perhaps it's done? Andy did some commits a week or so back that may have wrapped it up. Either way, please let QE (Rajesh) know where it stands, if you haven't already.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-1772">https://issues.jboss.org/browse/AS7-1772</a> |
| 1892 | AS7-1772    | Is the configuration that is needed for this in the XML schema? I opened another JIRA against the XML schema because I couldn't find it there? Isn't that missing too, which would be critical, since they wouldn't be able to configure it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-1772">https://issues.jboss.org/browse/AS7-1772</a> |
| 1893 | AS7-1772    | Hi Andy, seems like this functionality is done and AS7 is able to handle HQ in collocated topology. Is it truth? Thank you, Mirek                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-1772">https://issues.jboss.org/browse/AS7-1772</a> |
| 1894 | AS7-1772    | Hi, I've managed to start AS7/HQ in collocated topology. Great work. :-) There is only question whether jms client is able to failover to backup when remote jndi is not ready yet. Do we have any update? Thank you, Mirek                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-1772">https://issues.jboss.org/browse/AS7-1772</a> |
| 1895 | AS7-1772    | Hi Andy, I've noticed that '<ha>true</ha>' cannot be parsed in configuration. Could you add it please? Thank you, Mirek                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-1772">https://issues.jboss.org/browse/AS7-1772</a> |
| 1896 | AS7-1772    | Can this be closed? I believe the HA issue is fixed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-1772">https://issues.jboss.org/browse/AS7-1772</a> |
| 1897 | AS7-1752    | The second issue... (quote) 2) The launch script directly references the standalone/configuration/logging.properties and standalone/log/boot.log files. So, if those files aren't present the server doesn't boot properly, and both, e.g. serverA and serverB will use the standalone/log/boot.log as their boot log file (where logging goes until the boot process starts the logging subsystem.) (quote) ...is still present in 7.1.2.Final when using Mac OS X. Should i create a new Jira Issue on this or can someone reopen this one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-1752">https://issues.jboss.org/browse/AS7-1752</a> |
| 1898 | AS7-1751    | The idea would be the following to have the standalone.xml having \${VAR} for every variable that makes sense to be defined at run-time. standalone.conf - is the configuration file not only for standalone.sh BUT can also for the standalone.xml via environment variables. Then one would have to take care to configure one place and it get's pushed to the xml file. AS7 already overwrites the standalone.xml file every time it starts at min. It also provides a history. So it can be a 'nice' fit - in my opinion. Think a bash shell managing an xml file .....                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-1751">https://issues.jboss.org/browse/AS7-1751</a> |
| 1899 | AS7-1735    | I tried to set the cause of the StartException but it is not taken into account anyway in its toString() method. I checked the code and if I understand it correctly, it is up to the messaging system to provide a description with the error inside the StartException. Wouldn't it be simpler to let StartException print out the inner cause !l0ned message (if there is one) rather than do this many times in the messaging subsystem (and likely other systems)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-1735">https://issues.jboss.org/browse/AS7-1735</a> |
| 1900 | AS7-1730    | Pavel, can you check AS7-2616 and see if it satisfies your requirements?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-1730">https://issues.jboss.org/browse/AS7-1730</a> |
| 1901 | AS7-1730    | I'm closing it, it is verified and resolved. Currently available impl. satisfies my requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-1730">https://issues.jboss.org/browse/AS7-1730</a> |
| 1902 | AS7-1724    | Is this a good candidate for "Assign to Community?"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-1724">https://issues.jboss.org/browse/AS7-1724</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | URL                                                                                             |

| 1903 | AS7-1709    | Does this issue include remote JNDI look up for JMS objects (queues, factories ...)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-1709">https://issues.jboss.org/browse/AS7-1709</a> |
| 1904 | AS7-1701    | I don't understand the description. What would you like to see as the result of jboss-admin.sh --help? Would what is printed as the result of "jboss-admin.sh help" do?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-1701">https://issues.jboss.org/browse/AS7-1701</a> |
| 1905 | AS7-1674    | According to the JAX-RS spec there are three ways to activate a restful endpoint. These three methods are specified in the JAX-RS 1.1 specification in section 2.3.2. 1) Not including an application class and using web.xml as described above 2) subclassing javax.ws.rs.core.Application and using web.xml 3) subclassing javax.ws.rs.core.Application and using the ApplicationPath annotation. See <a href="https://docs.jboss.org/author/display/AS7/JAX-RS+Reference+Guide">https://docs.jboss.org/author/display/AS7/JAX-RS+Reference+Guide</a> . The idea that resteasy should be activated if there happens to be a JAX-RS annotation in the deployment does not really work. For one thing, where would you map it to? For another, this means that if a 3rd party app library includes a class with a JAX-RS annotation then resteasy would be activated whether you wanted it or not.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-1674">https://issues.jboss.org/browse/AS7-1674</a> |
| 1906 | AS7-1666    | What are you interested in seeing? That was a feature request to list it like that. BTW, before opening new issue, consider discussing them first.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-1666">https://issues.jboss.org/browse/AS7-1666</a> |
| 1907 | AS7-1652    | Brian, can you comment on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-1652">https://issues.jboss.org/browse/AS7-1652</a> |

Let me know if it's blocking you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-1652">https://issues.jboss.org/browse/AS7-1652</a> |
| 1909 | AS7-1640    | Clebert can you comment on this one? Brian spent a lot of effort on getting everything mapped, so most of the work is done, but we still need a hornetq expert to scan for major problems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-1640">https://issues.jboss.org/browse/AS7-1640</a> |
| 1910 | AS7-1633    | Was this already completed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-1633">https://issues.jboss.org/browse/AS7-1633</a> |
| 1911 | AS7-1614    | I believe with the commits that we made as part of AS7-2134 this issue should now be covered. Brian, do we want to keep this JIRA open to track the system property substitution (if at all we plan to do it)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-1614">https://issues.jboss.org/browse/AS7-1614</a> |
| 1912 | AS7-1590    | Needs work on "What are RESTful Web Services"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-1590">https://issues.jboss.org/browse/AS7-1590</a> |
| 1913 | AS7-1554    | You can check the jiras documented here <a href="https://github.com/tdiesler/org.apache.felix.webconsole/commits/3.1.6.SP1/">https://github.com/tdiesler/org.apache.felix.webconsole/commits/3.1.6.SP1/</a> Why is this still relevant? I thought we were removing that console.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-1554">https://issues.jboss.org/browse/AS7-1554</a> |
| 1914 | AS7-1545    | Does this issue still occur? I tried ".\build.sh -X clean install" and "mvn -X clean install" from the root directory, and both completed without error.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-1545">https://issues.jboss.org/browse/AS7-1545</a> |
| 1915 | AS7-1531    | Hi Anil, What's left to do on this (if anything at all)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-1531">https://issues.jboss.org/browse/AS7-1531</a> |
| 1916 | AS7-1500    | Hey all, There are several other paths that's needed for my application. <path name="sun/security"/> <path name="sun/security/krb5"/> <path name="com/sun/jndi/url"/> <path name="com/sun/jndi/url/dns"/> Can these be added as well? Thank you, Oved                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-1500">https://issues.jboss.org/browse/AS7-1500</a> |
| 1917 | AS7-1489    | Why is this needed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-1489">https://issues.jboss.org/browse/AS7-1489</a> |
| 1918 | AS7-1484    | not working in 7.1.0.Beta1 anymore :( Can you reopen this issue ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-1484">https://issues.jboss.org/browse/AS7-1484</a> |
| 1919 | AS7-1459    | The changes to standalone.sh is not working for me. + (-d --debug) ... + (-) ... + (*) What's this opening bracket in lines 13, 20 and 23? Never saw this syntax in shell-scripts. Bourne- and Korn-shell on Solaris do not like them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-1459">https://issues.jboss.org/browse/AS7-1459</a> |
| 1920 | AS7-1459    | Hi Frank, Is it working without the opening brackets? Guillaume.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-1459">https://issues.jboss.org/browse/AS7-1459</a> |
| 1921 | AS7-1426    | What do I need to do to get {code} @Stateless @LocalBean public class SimpleStatelessSessionBean implements Echo { @Resource private BundleContext context; {code} to work (i.e. lookup by type).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-1426">https://issues.jboss.org/browse/AS7-1426</a> |
| 1922 | AS7-1411    | Could you give a little more information than this? What are the errors? Do you have a branch I can look at?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-1411">https://issues.jboss.org/browse/AS7-1411</a> |
| 1923 | AS7-1407    | There's another issue with our Naming store :( I have the following piece of code in our web.xml DD: --- <env-entry> <env-entry-name>jaxws/entry1</env-entry-name> <env-entry-type>java.lang.String</env-entry-type> <env-entry-value>web</env-entry-value> <injection-target> <injection-target-class>org.jboss.test.ws.jaxws.enventry.EnvEntryBeanJSE</injection-target-class> <injection-target-name>strValue</injection-target-name> </injection-target> </env-entry> <env-entry> <env-entry-name>jaxws/entry2</env-entry-name> <env-entry-type>java.lang.Integer</env-entry-type> <env-entry-value>8</env-entry-value> </env-entry> --- This results in the following output in the CLI: --- ... "jaxws-enventry-jse.war" => { "modules" => [{"jaxws-enventry-jse" => {"java.module" => { ... "env" => { "class-name" => "javax.naming.Context", "children" => { "entry1" => { "class-name" => "org.jboss.as.naming.context.ModularReference", "value" => "web" }, "entry2" => { "class-name" => "org.jboss.as.naming.context.ModularReference", "value" => "8" } } } } } } } ... --- Note the missing 'jaxws' prefix? And at the end when I was debugging our JNDI naming store, I noticed that missing 'jaxws' context is present in the debugger. It's just not displayed. Another thing that I noticed is when I'm doing the following lookup: --- new InitialContext().lookup("java:comp/env/"); --- then for above web.xml DD configuration "env/jaxws" is returned instead of expected "env/" context :( | <a href="https://issues.jboss.org/browse/AS7-1407">https://issues.jboss.org/browse/AS7-1407</a> |
| 1924 | AS7-1393    | Can you be more specific as to what problem this is causing? Currently, if the user sets property "hibernate.cache.infinispan.cachemanager", we add a dependency on the specified value (in which case the cache manager will be started). If an application isn't using a 2lc, they wouldn't set this property (which means the cache isn't started). I don't think that we want the Infinispan cache to be started by default.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-1393">https://issues.jboss.org/browse/AS7-1393</a> |
| 1925 | AS7-1381    | For the records: "what about resource-adaptor/connection-definition/config-property or resource-adaptor/admin-object/config-property?" How can these be made accessible?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-1381">https://issues.jboss.org/browse/AS7-1381</a> |
| 1926 | AS7-1379    | What "attributes"? If you mean the resource adaptor config-property's, then they are only writeable if the resource adaptor is version 1.6, and supports dynamic updates. That should already be supported.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-1379">https://issues.jboss.org/browse/AS7-1379</a> |
| 1927 | AS7-1379    | Hi Jesper, Currently transaction-support is readonly. [standalone@localhost:9999 resource-adaptor=xmpp-ra.rar]:write-attribute(name=transaction-support,value=Nottransaction) { "outcome" => "failed", "failure-description" => "Attribute transaction-support is not writeable", "rolled-back" => true } This should be modifiable from cli or console? So far, we have some RWHandler to support read-write properties about pool. Should we make every properties modifiable?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-1379">https://issues.jboss.org/browse/AS7-1379</a> |
| 1928 | AS7-1365    | If this one is rejected, what still needs to happen for mod_proxy and mod_jk support?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-1365">https://issues.jboss.org/browse/AS7-1365</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | URL                                                                                             |

| 1929 | AS7-1365    | Remy, Are you talking about the automagic logic in the mod_cluster subsystem? There are a couple issues with this: * The autogenerated jvm-routes are UUIDs. While the generated values are indeed consistent (i.e. not random), they aren't really known until the server starts. Since mod_jk/mod_proxy needs to define these explicitly (e.g. in workers.properties), this becomes a little awkward to setup. * mod_jk/mod_proxy users may not realize that they need the mod_cluster subsystem for jvm-route autogeneration (it's not obvious). This is more of a documentation issue, really.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-1365">https://issues.jboss.org/browse/AS7-1365</a> |
| 1930 | AS7-1365    | Is there an expectation that the jvmRoute won't be configurable at all in the future? If so, I understand not adding a config option for it to our management API. If not, IMHO forcing people to use a system property to make a common configuration change is poor. However it gets sets, we should definitely at least expose a read-only attribute for it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-1365">https://issues.jboss.org/browse/AS7-1365</a> |
| 1931 | AS7-1365    | Wouldn't the mod_cluster service in AS 7 display that actual jvmroute ? I don't quite know.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-1365">https://issues.jboss.org/browse/AS7-1365</a> |
| 1932 | AS7-1365    | A user asked about this on the AS7 forum <a href="http://community.jboss.org/message/632900#632900">http://community.jboss.org/message/632900#632900</a> . I see that this issue is marked as resolved. Just to be sure, the system property is currently available and the open item is to find a suitable name for this? Should this JIRA be marked as re-opened to reflect this pending task?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-1365">https://issues.jboss.org/browse/AS7-1365</a> |
| 1933 | AS7-1358    | Chaps, this change doesn't appear to have made it into jboss-as master yet, as of now. <code>{[git blame transactions/src/main/java/org/jboss/as/txn/TransactionSubsystemAdd.java]}</code> reveals Chris's commit, but the line to add the alias "java:/jboss/UserTransaction" is missing (despite showing up when you check <code>{[git show 919c16e2]}</code> ). Is this by design? If not, can we get it in?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-1358">https://issues.jboss.org/browse/AS7-1358</a> |
| 1934 | AS7-1358    | I checked the jboss admin console. The value of jndi java:/jboss/UserTransaction is listed as unknown. Maybe this is the problem? I read Seam transaction 3.1.0's code, it does look up this jndi. What's the value for that jndi in your jboss admin console?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-1358">https://issues.jboss.org/browse/AS7-1358</a> |
| 1935 | AS7-1356    | Isn't this done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-1356">https://issues.jboss.org/browse/AS7-1356</a> |
| 1936 | AS7-1338    | How come this issue got rejected? Can't find another issue regarding accessing the JNDI from a client (or other server) - or am I missing something?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-1338">https://issues.jboss.org/browse/AS7-1338</a> |
| 1937 | AS7-1338    | Thanks, that's what I'm looking for. Guess you can't say when in time the preview build will contain it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-1338">https://issues.jboss.org/browse/AS7-1338</a> |
| 1938 | AS7-1338    | Was previously rejected: <code>&lt;opalka&gt; wolfc, dmlloyd I'm not able to connect to JNDI on AS7. in the AS7 config I see it should be running on 1099, but I'm getting http://fpaste.org/wgy8/ :( &lt;opalka&gt; wolfc, dmlloyd in the config I see the following ports defined &lt;opalka&gt; --- &lt;opalka&gt; &lt;socket-binding name="jndi" port="1099"/&gt; &lt;opalka&gt; &lt;socket-binding name="jmx-connector-registry" port="1090"/&gt; &lt;opalka&gt; &lt;socket-binding name="jmx-connector-server" port="1091"/&gt; &lt;opalka&gt; --- &lt;dmlloyd&gt; we don't do JNDI over RMI anymore &lt;dmlloyd&gt; that listing is an error &lt;opalka&gt; dmlloyd, So we're not able to do JNDI lookups to AS7 anymore and don't plan to? &lt;opalka&gt; dmlloyd, or we'll be doing JNDI over different binary protocol? &lt;dmlloyd&gt; no, we will be able to, it'll just work somewhat differently &lt;opalka&gt; dmlloyd, ok, I'm excluding the tests then ... &lt;opalka&gt; dmlloyd, Is there a JIRA covering this issue so I can use it in my excludes comment? &lt;dmlloyd&gt; not that I'm aware of, it's just an outstanding task &lt;dmlloyd&gt; remote invocation is not planned to be covered in next months' beta release &lt;opalka&gt; dmlloyd, ok, thx for info ;) But now it's back :)</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-1338">https://issues.jboss.org/browse/AS7-1338</a> |
| 1939 | AS7-1338    | Hi all, I'm just adding some brief info from John about newly implemented remote jndi support and how to use it. As I understood everything what should be reachable in jndi from outside the server must be registered under "java:jboss/exported/" context. As an example I used it in standalone jms client to get connection factory and queue from jndi: <code>{code} // jms client code // initialize context final Properties env = new Properties(); env.put(Context.INITIAL_CONTEXT_FACTORY, "org.jboss.naming.remote.client.InitialContextFactory"); env.put(Context.PROVIDER_URL, "remote://localhost:4447"); Context context = new InitialContext(env); // do lookups ConnectionFactory cf = (ConnectionFactory) context.lookup("jms/RemoteConnectionFactory"); Queue queue = (Queue) context.lookup("jms/queue/test"); // do whatever you want {code}</code> How are jms objects registered to jndi in messaging subsystem in standalone-ha.xml: <code>{code} &lt;jms-connection-factories&gt; ... &lt;!-- configuration for connection factory --&gt; &lt;connection-factory name="RemoteConnectionFactory"&gt; &lt;connectors&gt; &lt;connector-ref connector-name="netty"/&gt; &lt;/connectors&gt; &lt;entries&gt; &lt;entry name="java:jboss/exported/jms/RemoteConnectionFactory"/&gt; &lt;!-- this is the important part --&gt; &lt;/entries&gt; &lt;/connection-factory&gt; ... &lt;/jms-connection-factories&gt; &lt;jms-destinations&gt; ... &lt;jms-queue name="testQueue"&gt; &lt;entry name="java:jboss/exported/jms/queue/test"/&gt; &lt;!-- this is the important part --&gt; &lt;/jms-queue&gt; ... &lt;/jms-destinations&gt; {code}</code> Used libraries (in my simple client): <code>hornetq-core-2.2.11.Final.jar hornetq-jms-2.2.11.Final.jar jboss-as-naming-7.1.0.Final-SNAPSHOT.jar jboss-jms-api_1.1_spec-1.0.0.Final.jar jboss-logging-3.1.0.GA.jar jboss-marshalling-1.3.6.GA.jar jboss-marshalling-river-1.3.6.GA.jar jboss-modules.jar jboss-msc-1.0.2.GA.jar jboss-remote-naming-1.0.0.Beta4.jar jboss-remoting-3.2.0.CR9.jar jboss-sasl-1.0.0.Beta9.jar netty-3.2.6.Final.jar xnio-api-3.0.0.GA.jar xnio-nio-3.0.0.GA.jar</code> Note: I had to add static block to my class so I could connect to server through remoting: <code>{code} static { Security.addProvider(new JBSSaslProvider()); } {code}</code> Hopefully I didn't forget anything and this info will help. Thanks for this cool feature, Mirek | <a href="https://issues.jboss.org/browse/AS7-1338">https://issues.jboss.org/browse/AS7-1338</a> |
| 1940 | AS7-1338    | I have followed these instructions and have successfully sent a remote message. However, after each message, I see the following logs on the server. Is there something else I need to do? <code>ERROR [org.jboss.remoting.remote] JBREM000200: Remote connection failed: java.io.IOException: An existing connection was forcibly closed by the remote host INFO [org.jboss.as.naming] JBAS011806: Channel end notification received, closing channel Channel ID 58ff39c8 (inbound) of Remoting connection 01889fce to null</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-1338">https://issues.jboss.org/browse/AS7-1338</a> |
| 1941 | AS7-1338    | Ed what does your code look like? And when you say after each "message" what kind of message do you mean? Also is this an Windows OS? And do those log messages affect any functionality? Just trying to understand what the problem might be.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-1338">https://issues.jboss.org/browse/AS7-1338</a> |
| 1942 | AS7-1338    | @Ed when you say "after each message". Is this a java test class, which you are running each time, so creating a new process/VM for each message? We see this on VM shutdown, but not per request.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-1338">https://issues.jboss.org/browse/AS7-1338</a> |
| 1943 | AS7-1338    | @Jason, you had posted some example code on this thread, to illustrate how to connect to a remote queue. Where did that code go? I am having problems with this after downloading 7.1.0.Final, and I just want to make sure I am following the steps correctly. Can you please point me to a link where those directions are?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-1338">https://issues.jboss.org/browse/AS7-1338</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | URL                                                                                             |

| 1944 | AS7-1338    | Hello. I have the experience of 11 years with JBOSS. Recently we wanna to migrate from JBOSS 6 to JBOSS 7.1.0 final Here is a part of my code final Hashtable<br>jndiProperties = new Hashtable(); jndiProperties.put(Context.PROVIDER_URL, "remote://localhost:4447"); jndiProperties.put(Context.INITIAL_CONTEXT_FACTORY, "org.jboss.naming.remote.client.InitialContextFactory"); jndiProperties.put("remote.connection.default.username", "usera");<br>jndiProperties.put("remote.connection.default.password", "passa"); Context context; try { context = new InitialContext(jndiProperties); I may put username and password, I may not put it - all the time I got ERROR: JBREM000200: Remote connection failed: javax.security.sasl.SaslException: Authentication failed: all available authentication mechanisms failed javax.naming.NamingException: Failed to create remoting connection [Root exception is java.lang.RuntimeException: javax.security.sasl.SaslException: Authentication failed: all available authentication mechanisms failed] at<br>org.jboss.naming.remote.client.ClientUtil.namingException(ClientUtil.java:36) at<br>org.jboss.naming.remote.client.InitialContextFactory.getInitialContext(InitialContextFactory.java:117) at<br>javax.naming.spi.NamingManager.getInitialContext(NamingManager.java:684) at javax.naming.InitialContext.getDefaultInitCtx(InitialContext.java:307) at<br>javax.naming.InitialContext.init(InitialContext.java:242) at javax.naming.InitialContext.<init>(InitialContext.java:216) JBoss is of course running and the user added to application users. Any help? Is JBoss 7.1.0 robust enough to port the system from Jboss 6 to it? | <a href="https://issues.jboss.org/browse/AS7-1338">https://issues.jboss.org/browse/AS7-1338</a> |
| 1945 | AS7-1338    | Hi, Can someone please summarize what is the final resolution for this bug? As I understand from the bug, "JBAS011806: Channel end notification received, closing channel Channel ID 72d0f3d7 (inbound) of Remoting connection 67ffa9c7 to null" - this message in logs is fine and will come on Windows and currently no way to suppress it for this OS. We are testing with JBoss 7.1.1.Final and see this message at INFO level in JBoss console. Also it seems that this statement is logged via System.err.println also from code. We just need to know what is the final stance on this one. Thanks, Himanshu                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-1338">https://issues.jboss.org/browse/AS7-1338</a> |
| 1946 | AS7-1301    | How is the client supposed to calculate the system loader paths? Internally I see JDKPaths being used. public static DependencySpec<br>createSystemDependencySpec(final PathFilter importFilter, final PathFilter exportFilter, final Set<String> loaderPaths)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-1301">https://issues.jboss.org/browse/AS7-1301</a> |
| 1947 | AS7-1301    | The client won't normally want to do this as it incurs an expensive computation at boot. What is the use case here? Normally in AS you'd simply add a dependency on<br>javax.api, and maybe sun.jdk and org.jboss.modules.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-1301">https://issues.jboss.org/browse/AS7-1301</a> |
| 1948 | AS7-1301    | Thinking about it ... I always have an explicit import filter, so the set of paths does not need to be greater than what the filter accepts. So I could derive the paths from the<br>filter. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-1301">https://issues.jboss.org/browse/AS7-1301</a> |
| 1949 | AS7-1293    | Is there anyway to get documentation on how to use this? Specifically on what NameSpace these entries are bound into? I am trying to use this, but can't as I can't get a<br>read on how to reference them from my code and/or jboss-web.xml for resource references.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-1293">https://issues.jboss.org/browse/AS7-1293</a> |
| 1950 | AS7-1236    | What about the marking of the jar files as *.failed? Is that correct behavior?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-1236">https://issues.jboss.org/browse/AS7-1236</a> |
| 1951 | AS7-1236    | Okay I guess on the .failed markers, but I have to ask a question, so if we are deploying just things likes .war, .ear, .sar, and a host of other well known extensions, why<br>would this even happen. In the past I thought there was a "deployable" list of extensions JBoss AS/EAP would look at what changed requirement/need wise, or was this<br>just some oversight? Also curious does stuff like this end up in unit tests? How would I look at those if they exist?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-1236">https://issues.jboss.org/browse/AS7-1236</a> |
| 1952 | AS7-1236    | Yeah I get that a jar file is a standard deployment, but it is usually in the context of a war/ear/etc....just found it odd that something in a directory that did not end in the<br>well known types (war, ear, sar, etc) would be scanned, and then that it would be crawled it, and .failed file would be created in the exploded directory..just odd to me.<br>Are there cases where other "things" could be done to an exploded directory?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-1236">https://issues.jboss.org/browse/AS7-1236</a> |
| 1953 | AS7-1190    | Hi Jim, What kind of class loader isolation are you looking for? Typically, in AS7 users can package the libraries of their choice within their application and have it picked<br>up by the server. Some documentation is here <a href="https://docs.jboss.org/author/display/AS7/Class+Loading+in+AS7">https://docs.jboss.org/author/display/AS7/Class+Loading+in+AS7</a> and also in this forum thread<br><a href="http://community.jboss.org/message/608887#608887">http://community.jboss.org/message/608887#608887</a> . Is that what you are looking for?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-1190">https://issues.jboss.org/browse/AS7-1190</a> |
| 1954 | AS7-1177    | Should a new subsystem be created ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-1177">https://issues.jboss.org/browse/AS7-1177</a> |
| 1955 | AS7-1177    | Hi, i am already working on mail subsystem <a href="https://github.com/ctomic/jboss-as/tree/mail">https://github.com/ctomic/jboss-as/tree/mail</a> but I am not done yet... As for your configuration goes, what would be the<br>purpose of multiple mail-sessions? my idea for config was something similar to what was in as4/5/6 like this: {code:xml} <subsystem<br>xmlns="urn:jboss:domain:mail:1.0"> <jndi-name>java:/Mail</jndi-name> <properties> <property name="mail.store.protocol" value="pop3"/> </property<br>name="mail.transport.protocol" value="smtp"/> </properties> </subsystem> {code} wdyt?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-1177">https://issues.jboss.org/browse/AS7-1177</a> |
| 1956 | AS7-1177    | Tomaz, I would like to help you on implementing this. Is that possible ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-1177">https://issues.jboss.org/browse/AS7-1177</a> |
| 1957 | AS7-1177    | See my comments on AS7-1375 - once you have this solved then why don't you go ahead with a pull request and we'll start the first round of code review. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-1177">https://issues.jboss.org/browse/AS7-1177</a> |
| 1958 | AS7-1163    | This top-level license.txt file is showing LGPL v3. Is that deliberate or should it be v2.1?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-1163">https://issues.jboss.org/browse/AS7-1163</a> |
| 1959 | AS7-1136    | Last time I booted up AS it seemed to pick up the host name and node name properly. Can I close this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-1136">https://issues.jboss.org/browse/AS7-1136</a> |
| 1960 | AS7-1095    | Does this JIRA cover restart of the host controller without having to restart the servers? This is an important use case when we want a host controller to take over the<br>responsibilities of a failed domain controller from another host (same domain).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-1095">https://issues.jboss.org/browse/AS7-1095</a> |
| 1961 | AS7-984     | Is this issue going to be assigned to an AS7 version and component?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-984">https://issues.jboss.org/browse/AS7-984</a>   |
| 1962 | AS7-967     | From email discussion and AS7-1465, it sounds like we need to add joda time module and have HV 4.2 depend on it. See email discussion on<br><a href="http://lists.jboss.org/pipermail/hibernate-dev/2011-August/006863.html">http://lists.jboss.org/pipermail/hibernate-dev/2011-August/006863.html</a> Also, should this jira be closed, since we upgraded to HV 4.2 already?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-967">https://issues.jboss.org/browse/AS7-967</a>   |
| 1963 | AS7-936     | <bstansberry> darranl: when you do, can you do a general cleanup on the interface configs? get down to 2 interface definitions, management and ???public??? and no<br>example configs etc, just boilerplate                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-936">https://issues.jboss.org/browse/AS7-936</a>   |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | URL                                                                                           |

| 1964 | AS7-931     | Could you please add some coverage to the wiki on the set of supported operations/attributes that manage the osgi subsystem? There is an important distinction between the OSGi subsystem already being activated or not. Some of the configuration affect boot time only (i.e. activation, modules). How do changes of these properties affect the subsystem? Generally, should boot time config even be writeable? How is adding/removing a module that effects system classpath packages supposed to work? I believe that framework properties are read-only by spec. Is this reflected in the management operations? I realize and assume that much of the existing code is part of a learning exercise. Following this I suggest to go back to the drawing board and define a concise set of mgmnt operations that make sense for the OSGi subsystem. A discussion on the ml (referenced from here) would also be cool.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-931">https://issues.jboss.org/browse/AS7-931</a> |
| 1965 | AS7-928     | {quote} and model the new module after one of the current modules listed there (perhaps org.javassist). org.javassist is in as7/build/src/main/resources/modules/org/javassist/main). {quote} i don't get this.... {quote} 5. Next, add the "org.hibernate.envers" dependency to the "org.hibernate" module (in as7/build/src/main/resources/modules/org/hibernate/main.xml) {quote} iirc, "org.hibernate" should be a dependency of "org.hibernate.envers" and, envers also has a hibernate-tools dependency, should it be a module too?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-928">https://issues.jboss.org/browse/AS7-928</a> |
| 1966 | AS7-925     | This issue is being relocated to 7.1.2 so that 7.1.1 only contains criticals, blockers, and EAP LA issues (which are probably not yet at the right status, or need an extra triage pass). If these issues are completed in a 7.1.1 timeframe please change the fix version. Although if you forget I will bulk correct.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-925">https://issues.jboss.org/browse/AS7-925</a> |
| 1967 | AS7-911     | Is there any more work that needs to be done on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-911">https://issues.jboss.org/browse/AS7-911</a> |
| 1968 | AS7-909     | Hi Clebert, I see there is a 2.2.3-SNAPSHOT at the repo site <a href="https://repository.jboss.org/nexus/content/groups/public/org/hornetq/hornetq-core/">https://repository.jboss.org/nexus/content/groups/public/org/hornetq/hornetq-core/</a> There is no 2.2.3-Final. Should the snapshot be used? Howard                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-909">https://issues.jboss.org/browse/AS7-909</a> |
| 1969 | AS7-909     | Can we validate this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-909">https://issues.jboss.org/browse/AS7-909</a> |
| 1970 | AS7-887     | We are using Jboss EAP6.0.1 and used foo-commonj workmanager.sar that implemented on ServiceMBean and ServiceMBeanSupport. It received same exception as reported here and included previous version supported jars. Can I use your fix that is 6.1.0 jars to resolve this issue. Please help me in this. -Rajesh                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-887">https://issues.jboss.org/browse/AS7-887</a> |
| 1971 | AS7-887     | Pl kindly tell me which corrected jars i can use for Jboss EAP 6.0.1. Can you pl send any nightly build link if you have. Thanks Rajesh                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-887">https://issues.jboss.org/browse/AS7-887</a> |
| 1972 | AS7-887     | >> Sorry I am bothering you as I dont have support and I have to stick to EAP 6.0.1. EAP 6.0.1 binary is a paid product and you are entitled to support. Where did you get it from? You might want to check with your team to see who has access to the customer service portal. >> We are migrating app from Websphere to Jboss 6.0.1 EAP. We have websphere's workmanager feature which needs to be migrate using commonj. I tried to foo-commonj.sar to make use of workmanager features from ejb in Jboss 6.0.1 EAP. I used previous versions support jars to register commonj jndi in Jboss 6.0.1 EAP. You already created 2 other JIRAs to ask that question. Please do use the JIRAs for such questions. The user forums are the place where this should be discussed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-887">https://issues.jboss.org/browse/AS7-887</a> |
| 1973 | AS7-838     | I'm trying to stand up a SecurityDomainService with a custom LoginModule during app deployment on AS7. Have a look at the code excerpt here: <a href="https://gist.github.com/991956">https://gist.github.com/991956</a> I've pored over it a few times and it looks like it should do what I want, but when I try to authenticate against it, I get errors about no users.properties files as though it doesn't load my custom login module and instead defaults to UsersRolesLoginModule. 17:05 lanceball: asaldhan: hey anil - I have a question about standing up a SecurityDomainService with a custom LoginModule during app deployment on AS7 17:05 lanceball: if you have a sec, can you take a look at this gist? <a href="https://gist.github.com/991956">https://gist.github.com/991956</a> 17:06 lanceball: I've pored over it a few times and it looks like it should do what I want, but when I try to authenticate against it, I get errors about no users.properties files 17:06 lanceball: as though it doesn't load my custom login module and instead defaults to UsersRolesLoginModule 17:07 asaldhan: lanceball: not sure we have actually figured it out on AS7 17:07 asaldhan: lanceball: is this as7 or as6 17:07 lanceball: as7 17:08 lanceball: asaldhan: I've tried to walk the jaas code but had a hard time figuring out where you load up login modules 17:09 asaldhan: lanceball: doubt it works yet. We still figuring out stuff. <a href="https://issues.jboss.org/browse/AS7-838">https://issues.jboss.org/browse/AS7-838</a> 17:09 jbossbot: j Jira [ ^3AS7-838] Allow individual security domains to be deployed [ ^10Open (Unresolved) Feature Request ^7 Major ^6 Marcus Moyses] <a href="https://issues.jboss.org/browse/AS7-838">https://issues.jboss.org/browse/AS7-838</a> 17:09 asaldhan: lanceball: marcus and I were just broaching this topic. Plan is to work on it either tomorrow (Marcus) or Monday(I) depending on who finishes the current item 17:09 lanceball: asaldhan: thanks - I'll add my gist and comments to the Jira! 17:10 asaldhan: lanceball: there is a method to create security domains tho 17:10 asaldhan: lanceball: let me get it for u 17:10 lanceball: asaldhan: I'm successfully creating security domains on the fly with existing jboss LoginModules 17:11 lanceball: it's just a problem when I want to use a custom login module 17:11 asaldhan: lanceball: not sure if we have tested against custom LM yet. I will defer it to Marcus tomorrow morn. I will ask him once he is online | <a href="https://issues.jboss.org/browse/AS7-838">https://issues.jboss.org/browse/AS7-838</a> |
| 1974 | AS7-838     | We do have a unit test for custom login modules (CustomLoginModuleTestCase currently in teststuite2/internals) that was created for this purpose. It tests for the most basic scenario which is including the custom login module in a web app and trying to use it. Where is this TorqueBoxLoginModule class included?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-838">https://issues.jboss.org/browse/AS7-838</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | URL                                                                                           |

| 1975 | AS7-834     | <p>we should introduce something like Phase.java for configurations, so we have one place that we set the Configurator order [09:56:06] &lt;Jaikiran&gt; it would help with readability but other than that probably won't make much of a difference [09:56:07] &lt;Jaikiran&gt; would it/ [09:56:08] &lt;Jaikiran&gt; ? [09:56:12] &lt;stuartdouglas&gt; because I think as we start adding more interceptors etc figuring out the order is just going to turn into a mess [09:56:26] &lt;Jaikiran&gt; yeah, I agree with that [09:59:09] &lt;stuartdouglas&gt; how hard is it to add the transaction interceptor back in? because I think that would fix all the EPCPropagationTestCase failures [09:59:10] *** jamezp_afk has quit IRC [10:00:06] &lt;Jaikiran&gt; the tx interceptors are already in [10:00:12] &lt;stuartdouglas&gt; and other than that there is only really the weld failures I mentioned before, and the multiple bindings failures, which I think dmilloyd is working on [10:00:24] &lt;Jaikiran&gt; the EPCPropagation tests are failing due to this EJBContext issue that i'm fixing [10:00:43] &lt;Jaikiran&gt; yeah, the multiple bindings thing is affect the persistencecontext/unit test [10:00:58] &lt;stuartdouglas&gt; I see those tests failing with javax.persistence.TransactionRequiredException [10:01:09] &lt;stuartdouglas&gt; I don't think the transaction interceptor is actually enabled [10:01:10] * Jaikiran looks again [10:01:38] &lt;stuartdouglas&gt; that is after my changes, so your problem is probably hiding the transaction one [10:02:23] &lt;Jaikiran&gt; oh might be [10:02:27] &lt;Jaikiran&gt; because mine is failing with http://pastebin.com/k4BDxyhY [10:02:39] &lt;Jaikiran&gt; i'll take a look at those tests while i work on this fix [10:02:42] *** rmaucher has joined #jboss-as7 [10:02:51] &lt;Jaikiran&gt; can you pastebin your log [10:03:03] &lt;Jaikiran&gt; just to see what i might have missed with tx interceptors [10:04:18] *** rawbdor has quit IRC [10:04:21] &lt;stuartdouglas&gt; http://pastebin.com/jqp9cMXA [10:05:23] &lt;stuartdouglas&gt; actually it could be something else [10:05:28] * stuartdouglas looks at test again [10:06:18] *** AndyTaylor has joined #jboss-as7 [10:06:18] *** ChanServ sets mode: +v AndyTaylor [10:09:09] &lt;stuartdouglas&gt; I'm not really sure what is going on, I will try and debug it [10:09:54] *** wolfc has joined #jboss-as7 [10:09:54] *** ChanServ sets mode: +v wolfc [10:10:14] *** davidbos has joined #jboss-as7 [10:11:09] &lt;Jaikiran&gt; brb after lunch [10:11:13] *** Jaikiran is now known as Jaikiran Lunch [10:23:42] *** alesj has joined #jboss-as7 [10:26:06] &lt;stuartdouglas&gt; Jaikiran Lunch: It seems to be an ordering issue the transaction interceptor and the SessionInvocationContextInterceptor appear after the ComponentDispatcherInterceptor, and so never get invoked [10:26:51] *** aslak has quit IRC [10:27:22] *** aslak has joined #jboss-as7 [10:27:22] *** ChanServ sets mode: +v aslak [10:27:40] *** aslak has quit IRC [10:28:02] *** stalep has joined #jboss-as7 [10:31:30] *** hardy has joined #jboss-as7 [10:31:46] *** Nihility has quit IRC [10:41:04] *** galderz has joined #jboss-as7 [10:41:04] *** ChanServ sets mode: +v galderz [10:41:45] *** zroubali has joined #jboss-as7 [10:41:45] *** ChanServ sets mode: +v zroubali [10:54:47] *** kkhan has joined #jboss-as7 [10:54:47] *** ChanServ sets mode: +v kkhan [11:01:45] *** davidbos1 has joined #jboss-as7 [11:02:24] *** galderz has quit IRC [11:02:35] *** davidbos has quit IRC [11:05:20] &lt;stuartdouglas&gt; Jaikiran Lunch: You there? | 1978 | AS7-826     | Reopen. Why does this needs to be ignored?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-826">https://issues.jboss.org/browse/AS7-826</a> |
| 1979 | AS7-783     | I'd just make this "Open to Community" but my inclination would be to reject such a change anyway, so I don't want to mislead people. If deployments are not done in a batch, and 2.jar depends on 1.jar, 2.jar will fail if the scanner deploys it first. And the user will have no way out, unless we start adding in all that terrible pluggable deployment sorting logic we had in AS < 7.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-783">https://issues.jboss.org/browse/AS7-783</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | URL                                                                                           |

| 1980 | AS7-772     | task needs to be opened. Stefano Maestri also posted about the missing aspects on the dev list in July. Here's an IRC snippet with Scott Marlow that illustrates the issue: [1:08pm] smarlow: if the /deployment=foo.ear/subsystem-jpa/... structure is going to change, as I evolve the support, that would probably break the cli users, I would think [1:08pm] bstansberry: correct; the structure should be nailed down [1:09pm] smarlow: so, might need to build more long term support now but I'm conflicting with doing more than is needed [1:09pm] smarlow: okay, good to know [1:09pm] bstansberry: but I don't think you can really do that across JPA providers [1:09pm] bstansberry: there's no contract of what people are supposed to expose [1:10pm] bstansberry: I could see /deployment=foo.ear/subsystem-jpa/provider=hibernate/session-factory=xxx [1:10pm] smarlow: I was thinking that it would be nice to allow people to do hibernate 4 stuff, eventually, someone will want to see hibernate 3 stuff possibly also. And OGM [1:11pm] bstansberry: so /deployment=foo.ear/subsystem-jpa/provider=hibernate -- anything under that should be stable [1:12pm] bstansberry: but /deployment=foo.ear/subsystem-jpa/provider=ogm -- whatever under that is provided by the ogm guys [1:12pm] bstansberry: and whether /deployment=foo.ear/subsystem-jpa/provider=hibernate exists or not depends on whether hibernate is the provider [1:12pm] bstansberry: which is fine [1:13pm] smarlow: If I start out with only support for /deployment=foo.ear/subsystem-jpa/provider=hibernate and later have other things, I think that is locked down enough [1:13pm] bstansberry: BTW, see org.jboss.as.webservices.dmr.WSEExtension for how they register their stuff under /deployment=foo.ear/subsystem=webservices [1:13pm] bstansberry: right [1:15pm] bstansberry: https://github.com/jbossas/jboss-as/blob/master/webservices/server-integration/src/main/java/org/jboss/as/webservices/dmr/WSEExtension.java#L72 [1:17pm] smarlow: hmm [1:17pm] smarlow: final ManagementResourceRegistration deployments = subsystem.registerDeploymentModel(new DescriptionProvider() { [1:18pm] smarlow: this is subsystem start time code? [1:18pm] smarlow: or app deployment time? [1:18pm] smarlow: I guess the method name tells registerDeploymentModel [1:19pm] bstansberry: this is Extension initialization code; so normally boot time [1:19pm] bstansberry: it's the same as your JPAExtension [1:20pm] bstansberry: but instead of just registering resources for the /subsystem=webservices part of the tree, the subsystem.registerDeploymentModel will make them available for use use /deployment=*/subsystem=webservices/ [1:21pm] bstansberry: the tricky part for you is you don't know what providers to register [1:22pm] bstansberry: how are providers integrated? [1:23pm] smarlow: sound like I need to register this management code statically for all known providers that I want to manage [1:23pm] bstansberry: you could do a ServiceLoader thing [1:24pm] bstansberry: if the modules for the providers are going to be visible to the JPA extension module when JPAExtension is called [1:24pm] smarlow: currently, the provider can be packaged with the app (picked up via ServiceLoader thing) or can be an AS7 module (org.hibernate:3 or org.hibernate:main currently) [1:24pm] bstansberry: ah, ok [1:24pm] smarlow: or org.hibernate:ogm [1:25pm] smarlow: there could be a eclipsment provider someday [1:25pm] smarlow: there could be a EclipseLink provider someday [1:25pm] • bstansberry looks at modules.xml for org.jboss.as.jpa [1:25pm] smarlow: but I'm not worried about that this year [1:26pm] bstansberry: ok, org.jboss.as.jpa has no dependency on org.jboss.as.jpa.hibernate.3 or hibernate.4 [1:27pm] bstansberry: so you couldn't use a ServiceLoader to pull in an SPI impl those modules would provide [1:27pm] smarlow: right, its all dynamically done at deployment time now [1:29pm] smarlow: we could include it in the org.jboss.as.jpa.hibernate:3 or org.jboss.as.jpa.hibernate:4 integration classes [1:29pm] smarlow: that is where the integration spi implementation classes are [1:29pm] bstansberry: https://issues.jboss.org/browse/AS7-772 [1:29pm] bstansberry: which only partly solves the problem [1:30pm] bstansberry: https://github.com/jbossas/jboss- | <a href="https://issues.jboss.org/browse/AS7-772">https://issues.jboss.org/browse/AS7-772</a> |
| 1981 | AS7-771     | My question about going back and forth between ASYNC and SYNC logging. This is really a number of steps. If there is no ASYNC logger defined, we would need to add one and attach all the handlers to it and update the root logger to use the ASYNC. Should this really be a single op, or should we just make sure we have all the supporting ops available to perform the task?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-771">https://issues.jboss.org/browse/AS7-771</a> |
| 1982 | AS7-753     | Jaikiran, yes correct. Is that functionality available through the detyped API?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-753">https://issues.jboss.org/browse/AS7-753</a> |
| 1983 | AS7-738     | Is this just a console issue now? I doubt anything more will be done on this for AS 7.1 on the server side, other than fixing any bugs that come up.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-738">https://issues.jboss.org/browse/AS7-738</a> |
| 1984 | AS7-737     | /subsystem=datasources/data-source="java:H2DS" test-connection-in-pool { "outcome" => "success", "result" => [true], "compensating-operation" => undefined } means that we have successfully opened a connection with H2DS. Isn't it enough? This operation is already there.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-737">https://issues.jboss.org/browse/AS7-737</a> |
| 1985 | AS7-712     | Should we raise a helpdesk ticket for this one, so that Mark Newton and his team and take a look at this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-712">https://issues.jboss.org/browse/AS7-712</a> |
| 1986 | AS7-705     | Can we use i18n resource bundles to customise the look and feel of gwt consoles for the platforms? The projects could then provide a default bundle and the platforms could replace it with another.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-705">https://issues.jboss.org/browse/AS7-705</a> |
| 1987 | AS7-705     | Can you elaborate on that? The look and feel consists of - css files - images resources I don't really see how this relates to i18n bundles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-705">https://issues.jboss.org/browse/AS7-705</a> |
| 1988 | AS7-680     | How come this is not targeted for Beta 4? Waiting until the CR seems like a big risk for such a highly used feature as this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-680">https://issues.jboss.org/browse/AS7-680</a> |
| 1989 | AS7-672     | What is the action item for this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/AS7-672">https://issues.jboss.org/browse/AS7-672</a> |
| 1990 | AS7-659     | Just got hit by the same issue while testing changes on JSPs. As I can understand you don't want to enable dev mode by default, how about triggering that dev mode by an environment variable on startup? We could then adjust the default environment settings directly in JBoss Tools' runtime launch configuration. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-659">https://issues.jboss.org/browse/AS7-659</a> |
| 1991 | AS7-650     | Does straight dependency mean a jar which users can add to their classpath (even where maven isn't involved)? That would be pretty useful, like the 4.x versions of jbossall-client.jar (ofcourse a better assembled version of it).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-650">https://issues.jboss.org/browse/AS7-650</a> |
| 1992 | AS7-650     | Where should hybrid (testing spec features mixed with public API) tests go? org.jboss.as.testsuite.integration.jpa.hibernate.SessionFactoryTestCase is a hybrid test that consists of "spec" API use and non-spec API use also. SessionFactoryTestCase checks that legacy applications can still inject a PersistenceContext into a Hibernate session and a PersistenceUnit into a Hibernate session factory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-650">https://issues.jboss.org/browse/AS7-650</a> |
| 1993 | AS7-643     | So is this done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-643">https://issues.jboss.org/browse/AS7-643</a> |
| 1994 | AS7-642     | Due to feedback from the community, I have split the AS7 and AS6 projects and reopened all unscheduled AS6 issues that are a year or less old. This will make it easier community members to find and work on them. Future releases beyond 6.1 can be done provided a community member steps up to coordinate them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-642">https://issues.jboss.org/browse/AS7-642</a> |
| 1995 | AS7-623     | This is not an issue with respect to CDI 1.0: in that version of the specification, extensions are per-container and not per-BeanManager (cf. 11.5 of the spec). Leaving this open in case a later version of a CDI spec will provide a more granular extension model.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-623">https://issues.jboss.org/browse/AS7-623</a> |
| 1996 | AS7-623     | Mark, are you saying my initial assumption is correct? Should it be detected and scoped to the webapp inside the EAR?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-623">https://issues.jboss.org/browse/AS7-623</a> |
| 1997 | AS7-623     | See here for people with related issues all over Weld / Seam 3: SEAMFACES-76 SEAMFACES-114 WELD-888 WELD-889 This is a pretty serious issue. It affects more or less each non-trivial EAR-deployment, and certainly almost everyone using Seam 3 (e.g. how should one use Seam Solder / I18N / Config ... in WAR_and_EJB-Modules?). In my opinion it's not an option to wait for JBoss 7.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-623">https://issues.jboss.org/browse/AS7-623</a> |
| 1998 | AS7-623     | Marius, please take care of this issue. It's really a blocker. Do you see a realistic chance to get a 6.1 release containing this bug fix in the near future?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-623">https://issues.jboss.org/browse/AS7-623</a> |

| 2001 | AS7-608     | That'll do. But why the discrepancy? How come the QueuelessThreadPoolService and UnboundedThreadPoolService both provide an ExecutorService while the BoundedQueueThreadPoolService only provides an Executor?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-608">https://issues.jboss.org/browse/AS7-608</a> |
| 2002 | AS7-582     | Done. <a href="https://github.com/jbossas/jboss-as/pull/1985">https://github.com/jbossas/jboss-as/pull/1985</a> I'm not sure about the list of artifacts: 1) Does the module name always match the groupid? I counted on that. If not, we need some additional effort. 2) The list I got is simply a list of modules which do not contain 'jboss.api value="private"'. Is that enough?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-582">https://issues.jboss.org/browse/AS7-582</a> |
| 2003 | AS7-582     | <pre>artifact="jbossxts"/&gt; &lt;maven-resource group="org.jboss.jbossts" artifact="jbossxts-api"/&gt; &lt;maven-resource group="org.jboss.jbossts" artifact="jbossxtsbridge"/&gt; &lt;/module-def&gt; {code} ##### With exported dependencies, converted from module names to groupIDs: echo "&gt; packages.tmp.txt for i in `find build/src/main/resources/modules/ -name module.xml` ; do FILE=`grep 'value="private"' --files-without-match \$i` ; if [ "\$FILE" == "" ] ; then continue; fi; echo " Public module: \$i" ## Extract module name. PKG=`grep '&lt;module.* name=' "\$FILE"   head -1   sed 's#&lt;module.* name="([^\"]*)".*#\1#   sed 's#/\&gt;?&gt;##'; echo " == \$PKG" echo \$PKG &gt;&gt; packages.tmp.txt ## Exported dependencies. #grep '&lt;module name=' "\$FILE"   grep 'export="true"'   sed 's#&lt;module name="([^\"]*)".*#\1#   sed 's#/\&gt;?&gt;##'   sed 's#\s*(.*)\s*#\1#   sed 's#.*# Exported dep: \0#' #grep '&lt;module name=' "\$FILE"   grep 'export="true"'   sed 's#&lt;module name="([^\"]*)".*#\1#   sed 's#/\&gt;?&gt;##'   sed 's#\s*(.*)\s*#\1# &gt;&gt; packages.tmp.txt grep '&lt;module name=' "\$FILE"   grep 'export="true"'   sed 's#&lt;module name="([^\"]*)".*#\1#   sed 's#/\&gt;?&gt;##'   sed 's#\s*(.*)\s*#\1#   tee -a append packages.tmp.txt   sed 's#.*# Exported dep: \0#' done sort packages.tmp.txt   uniq &gt; modules.tmp2.txt #cat packages.tmp2.txt   sed 's#.*#&lt;include&gt;\0.*&lt;/include&gt;#' ##### Now we have a list of public API modules, e.g. javax.management.j2ee.api ### Let's convert it into a list of groupIDs. echo &gt; groupIDs.tmp.txt while read -r MODULE ; do echo "Artefacts for module: \$MODULE" GROUP_ID=`xsltproc --stringparam moduleName "\$MODULE" convertModuleNameToGroupID.xsl build/build.xml` echo " GroupID: \$GROUP_ID" echo \$GROUP_ID &gt;&gt; groupIDs.tmp.txt done &lt; modules.tmp2.txt cat groupIDs.tmp.txt   sort   uniq &gt; groupIDs.tmp.sorted.txt ### Wrap it as includes for pom.xml. cat groupIDs.tmp.sorted.txt   sed 's#.*#&lt;include&gt;\0&lt;/include&gt;#' {code} And the complete output is: {code} com.h2database:h2 commons-configuration:commons-configuration dom4j:dom4j javax.activation:activation javax.enterprise.cdi-api javax.faces.jsf-api javax.inject:javax.inject javax.jws.jsr181-api javax.mail:mail javax.validation:validation-api joda-time:joda-time org.apache.juddi:juddi-client org.apache.juddi.scout:scout org.apache.juddi:uddi-ws org.hibernate.common:hibernate-commons-annotations org.hibernate:hibernate-core org.hibernate:hibernate-entitymanager org.hibernate:hibernate-envers org.hibernate:hibernate-infinispan org.hibernate:hibernate-validator org.hibernate:javax.persistence:hibernate-jpa-2.0-api org.hornetq:hornetq-core org.hornetq:hornetq-jms org.infinispan:infinispan-core org.jboss.as:jboss-as-controller-client org.jboss.com.sun.httpserver:httpserver org.jboss.invocation:jboss-invocation org.jboss.jboss-dmr org.jboss.jboss-ejb-client org.jboss.jboss-remote-naming org.jboss.jbossts:jbossxtsbridge org.jboss.jbossts:jbossxts org.jboss.jbossts:jbossxts-api org.jboss.jboss-vfs org.jboss.logging:jboss-logging org.jboss.logging:jul-to-slf4j-stub org.jboss.logmanager:jboss-logmanager org.jboss.marshalling:jboss-marshalling org.jboss.msc:jboss-msc org.jboss.remoting:jmx:remoting-jmx org.jboss.remoting3:jboss-remoting org.jboss.sasl:jboss-sasl org.jboss.spec.java.annotation:jboss-annotations-api_1.1_spec org.jboss.spec.java.ejb:jboss-ejb-api_3.1_spec org.jboss.spec.java.el:jboss-el-api_2.2_spec org.jboss.spec.java.enterprise.deploy:jboss-jad-api_1.2_spec org.jboss.spec.java.faces:jboss-jsf-api_2.1_spec org.jboss.spec.java.interceptor:jboss-interceptors-api_1.1_spec org.jboss.spec.java.jms:jboss-jms-api_1.1_spec org.jboss.spec.java.management.j2ee:jboss-j2eemgmt-api_1.1_spec org.jboss.spec.java.resource:jboss-connector-api_1.6_spec org.jboss.spec.java.rmi:jboss-rmi-api_1.0_spec org.jboss.spec.java.security.auth.message:jboss-jaspi-api_1.0_spec org.jboss.spec.java.security.jacc:jboss-jacc-api_1.4_spec org.jboss.spec.java.servlet:jboss-servlet-api_3.0_spec org.jboss.spec.java.servlet.jsp:jboss-jsp-api_2.2_spec org.jboss.spec.java.servlet.jstl:jboss-jstl-api_1.2_spec org.jboss.spec.java.transaction:jboss-transaction-api_1.1_spec org.jboss.spec.java.ws.rs:jboss-jaxrs-api_1.1_spec</pre> | <a href="https://issues.jboss.org/browse/AS7-582">https://issues.jboss.org/browse/AS7-582</a> |
| 2004 | AS7-582     | Happy to help :) Perhaps we could add some CSS. Do we have some for Javadoc? I've also asked James Cobb.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-582">https://issues.jboss.org/browse/AS7-582</a> |
| 2005 | AS7-580     | is there a reason we can't house those javadoc resources inside the AS javadoc aggregate project, rather than attempting to deal with file collisions during dependency-source aggregation? At least then we could be more explicit WRT which resources are used, and which are not. I would think file collisions would be common in this case.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-580">https://issues.jboss.org/browse/AS7-580</a> |
| 2006 | AS7-580     | How close does this get you: <a href="http://maven.apache.org/plugins/maven-javadoc-plugin/examples/aggregate-dependency-sources.html">http://maven.apache.org/plugins/maven-javadoc-plugin/examples/aggregate-dependency-sources.html</a> Pay special attention to the bottom example, which is focused on making javadoc resources available from dependency projects for use in the aggregation step...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-580">https://issues.jboss.org/browse/AS7-580</a> |
| 2007 | AS7-560     | Did some of the prep work (isolated Hibernate specific details into org.jboss.as.jpa.hibernate package.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-560">https://issues.jboss.org/browse/AS7-560</a> |
| 2008 | AS7-548     | @javax.ejb.Remote annotation scanning support is available since Beta2 <a href="http://community.jboss.org/wiki/EJB3supportinJBossAS700Beta2">http://community.jboss.org/wiki/EJB3supportinJBossAS700Beta2</a> : {quote} @Remote view: Currently, the @Remote annotation is processed and a view is created out of it. However, remote view semantics don't apply and it works the same as a @Local. {quote} Is this JIRA still valid?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-548">https://issues.jboss.org/browse/AS7-548</a> |
| 2009 | AS7-524     | What's left on this task is to: 1) Add in handling of any schema elements that are omitted in what I've done. 2) Get proper testing. 3) Update the ServerMaker class as mentioned in previous comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-524">https://issues.jboss.org/browse/AS7-524</a> |

It says "Pull Request Sent" but there's no link.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-514">https://issues.jboss.org/browse/AS7-514</a> |
| 2011 | AS7-514     | Is there any docs for this? I can't find any in confluence: <a href="https://docs.jboss.org/author/display/AS71/Logging+Configuration">https://docs.jboss.org/author/display/AS71/Logging+Configuration</a> Here are few bits I have extracted from few discussions - no guarantees: Configured in your app in WEB-INF/classes/logging.properties or log4j.properties or log4j.xml You can turn it off with sysprop {{org.jboss.as.logging.per-deployment = false}} - see <a href="http://middlewaremagic.com/jboss/?p=1458">http://middlewaremagic.com/jboss/?p=1458</a> See the commit diff, <a href="https://209.132.182.49/message/749989">https://209.132.182.49/message/749989</a> and <a href="http://jboss-as7-development.1055759.n5.nabble.com/logger-config-per-deployment-app-t5709805.html">http://jboss-as7-development.1055759.n5.nabble.com/logger-config-per-deployment-app-t5709805.html</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-514">https://issues.jboss.org/browse/AS7-514</a> |
| 2012 | AS7-514     | I created a logging.properties and put it in META-INF folder for the .jar file and deployed, the specific log file is being created ,but app is not logging anything into it..can you point out what am i missing please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/AS7-514">https://issues.jboss.org/browse/AS7-514</a> |

| 2013 | AS7-504     | Can we get a yes/no on this issue? If it's a "no" at this point, let's just close it out.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/AS7-504">https://issues.jboss.org/browse/AS7-504</a> |
| 2014 | AS7-501     | <p>time. Following is the discussion we had where we discussed an approach, and outlined its benefits. Perhaps could be useful if someday we decided to pursue this:</p> <p>&lt;maeste2&gt; bstansberry: I wonder if these undocumented generic properties (that JBossTS map to system propeerties) have to be specified in tx subsystem or if we can make anew subsystem for generic properties (not only for tx) &lt;maeste2&gt; bstansberry: in second case we have 2 plus IMHO &lt;maeste2&gt; bstansberry: an xsd documenting the xml sturcture and a subsystem to manage via console &lt;maeste2&gt; bstansberry: #2 the ability to add here some special properties also during EAP phase &lt;maeste2&gt; bstansberry: since we are going to use a generic API for this properties/values &lt;maeste2&gt; bstansberry: JBossTS (or other services needing special props) can just depends on this subsystem's service &lt;maeste2&gt; bstansberry: opinion? * bstansberry is pondering this a bit &lt;bstansberry&gt; maeste2: the entire use case goes beyond subsystems though, so this would almost be a core item &lt;bstansberry&gt; maeste2: so to register a handler, that would really be another high-level part of what an Extension does &lt;bstansberry&gt; maeste2: so we'd add something in SubsystemRegistration? &lt;bstansberry&gt; maeste2: I'd been thinking to just use system properties, but your ideas have gotten me intrigued &lt;bstansberry&gt; maeste: looking at &lt;property-group subsystem="blah"&gt;&lt;property name="blah"&gt;value&lt;/property&gt;&lt;property-group&gt; ... &lt;bstansberry&gt; I see two theoretically benefits over simple system properties &lt;bstansberry&gt; one is if "value" had some more structure, wasn't just a string &lt;bstansberry&gt; but TBH I doubt that's practical, since this needs to be generic &lt;maeste&gt; bstansberry: yup &lt;bstansberry&gt; the other is the subsystem="blah" bit &lt;bstansberry&gt; which is an example of providing some scope to the property &lt;maeste&gt; bstansberry: even if we can use an attribute called type and we can validate against it &lt;maeste&gt; bstansberry: it's not more structure, but it still a plus against system property &lt;maeste&gt; bstansberry: another benefit is that they are manageable (at least theoretically) &lt;bstansberry&gt; maeste: well, system properties are manageable too &lt;maeste&gt; bstansberry: but they haven't custom handlers &lt;bstansberry&gt; maeste: right &lt;bstansberry&gt; that was the intriguing part &lt;maeste&gt; bstansberry: theoretically they could be runtime manageable &lt;maeste&gt; bstansberry: why can't be an OperationStepHandler? &lt;bstansberry&gt; maeste: I guess it can be &lt;bstansberry&gt; maeste: there's an ordering issue &lt;bstansberry&gt; any OSH will only be registered after the relevant extension is added &lt;bstansberry&gt; but all the extension properties have to be evaluated before any subsystem is added &lt;bstansberry&gt; otherwise the subsystem can start without knowing the value &lt;maeste&gt; sure &lt;bstansberry&gt; maeste: so that just means 1) this would have to be a core thing, not a subsystem and 2) in the boot handling its operations have to come before the subsystem ones &lt;bstansberry&gt; maeste: so that's solvable &lt;bstansberry&gt; maeste: we'd also need to add that outside subsystems &lt;maeste&gt; it's a different approach in model, but we are still saying that there are properties scoped at subsystem level &lt;bstansberry&gt; e.g. for core stuff &lt;bstansberry&gt; TBH I really dislike adding that to every subsystem though &lt;maeste&gt; oki &lt;bstansberry&gt; I've had way too much experience with what it takes to add some new capability to every subsystem &lt;maeste&gt; returning to ordering issue &lt;bstansberry&gt; that's solvable pretty easily &lt;maeste&gt; oki &lt;bstansberry&gt; just put this new element in the xsd after extension and before subsystem &lt;bstansberry&gt; before profile &lt;maeste&gt; gotcha &lt;bstansberry&gt; maeste: it just took me a bit to realize that &lt;maeste&gt; a bit more for me &lt;bstansberry&gt; maeste: so the advantages of this are 1) runtime handling and 2) scoping &lt;bstansberry&gt; i.e. a finer scope than the entire server &lt;bstansberry&gt; which is the scope of a system property &lt;bstansberry&gt; how about &lt;property-group scope="subsystem=datasource/datasource=blah"&gt;&lt;property name="blah"&gt;value&lt;/property&gt;&lt;property-group&gt; ? &lt;bstansberry&gt; scope or "address" or something &lt;maeste&gt; bstansberry: cool &lt;bstansberry&gt; maeste: that starts to make scoping a real benefit &lt;maeste&gt; bstansberry: where type reflect DMR ones and make possible to add a validator on the property? &lt;bstansberry&gt; maeste: so it could be &lt;property name="blah"</p> | <a href="https://issues.jboss.org/browse/AS7-501">https://issues.jboss.org/browse/AS7-501</a> |
| 2015 | AS7-500     | What's the status on this one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/AS7-500">https://issues.jboss.org/browse/AS7-500</a> |
| 2016 | AS7-494     | Hi Brian, Is there anything wrong with HARMIClient and HARMIServer, other than the fact that they depend on RMI? -Ron                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-494">https://issues.jboss.org/browse/AS7-494</a> |
| 2017 | AS7-493     | Carlo, is this an issue in the HornetQ integration or the Jacamar integration or elsewhere?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-493">https://issues.jboss.org/browse/AS7-493</a> |
| 2018 | AS7-492     | Is this done? We have a contract; seems any remaining task would just be to review it and check if it's complete and well polished.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-492">https://issues.jboss.org/browse/AS7-492</a> |
| 2019 | AS7-485     | Is this still valid? I don't see where any integration tests are using JSFUnit right now. As far as I know JSFUnit is only in the smoke tests and that uses a WAR.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-485">https://issues.jboss.org/browse/AS7-485</a> |
| 2020 | AS7-476     | Thomas, this issue does not have seem to have a specific corresponding deliverable. If you do have a specific deliverable, can you note it and assign this issue to a release? Otherwise it should be closed or moved to another project. Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-476">https://issues.jboss.org/browse/AS7-476</a> |
| 2021 | AS7-474     | Stuart, can you tell be the current state of affairs? Especially wrt to your last comment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-474">https://issues.jboss.org/browse/AS7-474</a> |
| 2022 | AS7-470     | Brian, can you assign this as you see fit, or simply close it out? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-470">https://issues.jboss.org/browse/AS7-470</a> |

| 2027 | AS7-426     | <p>Saw this when using interactive demo with both a master and slave DC. Had deployed a war to all servers in all groups, undeployed from main-server-group, then did "undeploy and remove" from other-server-group. This was reported on the master: [Host Controller] 10:59:39,615 ERROR [org.jboss.as.protocol.connection] (pool-1-thread-13) Failed to read a message: java.io.IOException: Failed to handle management operation [Host Controller] at org.jboss.as.protocol.mgmt.AbstractMessageHandler.handleMessage(AbstractMessageHandler.java:63) [Host Controller] at org.jboss.as.protocol.ConnectionImpl.safeHandleMessage(ConnectionImpl.java:254) [Host Controller] at org.jboss.as.protocol.ConnectionImpl\$1.run(ConnectionImpl.java:213) [Host Controller] at java.util.concurrent.Executors\$RunnableAdapter.call(Executors.java:441) [1.6.0_24] [Host Controller] at java.util.concurrent.FutureTask\$Sync.innerRun(FutureTask.java:303) [1.6.0_24] [Host Controller] at java.util.concurrent.FutureTask.run(FutureTask.java:138) [1.6.0_24] [Host Controller] at java.util.concurrent.ScheduledThreadPoolExecutor\$ScheduledFutureTask.access\$301(ScheduledThreadPoolExecutor.java:98) [1.6.0_24] [Host Controller] at java.util.concurrent.ScheduledThreadPoolExecutor\$ScheduledFutureTask.run(ScheduledThreadPoolExecutor.java:206) [1.6.0_24] [Host Controller] at java.util.concurrent.ThreadPoolExecutor\$Worker.runTask(ThreadPoolExecutor.java:886) [1.6.0_24] [Host Controller] at java.util.concurrent.ThreadPoolExecutor\$Worker.run(ThreadPoolExecutor.java:908) [1.6.0_24] [Host Controller] at java.lang.Thread.run(Thread.java:680) [1.6.0_24] [Host Controller] at org.jboss.threads.JBossThread.run(JBossThread.java:122) [Host Controller] Caused by: java.lang.IllegalArgumentException [Host Controller] at org.jboss.dmr.ModelValue.asPropertyList(ModelValue.java:100) [Host Controller] at org.jboss.dmr.ModelNode.asPropertyList(ModelNode.java:251) [Host Controller] at org.jboss.as.domain.controller.DomainControllerImpl.getOpsByGroup(DomainControllerImpl.java:627) [Host Controller] at org.jboss.as.domain.controller.DomainControllerImpl.execute(DomainControllerImpl.java:322) [Host Controller] at org.jboss.as.domain.controller.DomainControllerImpl.execute(DomainControllerImpl.java:110) [Host Controller] at org.jboss.as.controller.AbstractModelController.execute(AbstractModelController.java:46) [Host Controller] at org.jboss.as.controller.remote.ModelControllerOperationHandlerImpl\$ExecuteAsynchronousOperation.sendResponse(ModelControllerOperationHandlerImpl.java:209) [Host Controller] at org.jboss.as.protocol.mgmt.ManagementResponse\$2.handle(ManagementResponse.java:119) [Host Controller] at org.jboss.as.protocol.mgmt.AbstractMessageHandler.handleMessage(AbstractMessageHandler.java:59) [Host Controller] ... 11 more</p> | <a href="https://issues.jboss.org/browse/AS7-426">https://issues.jboss.org/browse/AS7-426</a> |
| 2028 | AS7-424     | Hi, Can you please provide example of using EJB3 with IIOP. How to access the EJB3 with IIOP/Corba.? Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/AS7-424">https://issues.jboss.org/browse/AS7-424</a> |
| 2029 | AS7-423     | Hi Do you work also on HAJNDI lookup ? see last post in: <a href="http://community.jboss.org/message/622860#622860">http://community.jboss.org/message/622860#622860</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-423">https://issues.jboss.org/browse/AS7-423</a> |
| 2030 | AS7-421     | For Hibernate, as a "pesky legacy subsystems" that uses a standard Java-defined API {{Context#bind}} to attempt to make users lives easier, what do you suggest we do?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-421">https://issues.jboss.org/browse/AS7-421</a> |
| 2031 | AS7-403     | Will you upgrade Mojarra to 2.0.6? <a href="http://download.java.net/maven/2/com/sun/faces/jsf-api/2.0.6/">http://download.java.net/maven/2/com/sun/faces/jsf-api/2.0.6/</a> <a href="http://download.java.net/maven/2/com/sun/faces/jsf-impl/2.0.6/">http://download.java.net/maven/2/com/sun/faces/jsf-impl/2.0.6/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/AS7-403">https://issues.jboss.org/browse/AS7-403</a> |
| 2032 | AS7-403     | I don't think it would be wise to upgrade to 2.0.6 with CR and final just a few days away. Is there something critical for you in that release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-403">https://issues.jboss.org/browse/AS7-403</a> |
| 2033 | AS7-402     | <p>Brian, is this Jira still relevant? If yes, can you update the description please? I tried to shutdown and restart domain controller, the remote host controller reconnected correctly: {code} [Host Controller] 14:19:51,773 WARN [org.jboss.as.domain.controller] (Thread-20) Could not connect to remote domain controller 127.0.0.1:9999 [Host Controller] 14:19:59,776 WARN [org.jboss.as.domain.controller] (Thread-20) Could not connect to remote domain controller 127.0.0.1:9999 [Host Controller] 14:20:03,466 INFO [org.jboss.as.domain.controller] (Thread-20) Reconnected to master {code}</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-402">https://issues.jboss.org/browse/AS7-402</a> |
| 2034 | AS7-395     | Alexey, can you drive this issue to completion?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-395">https://issues.jboss.org/browse/AS7-395</a> |
| 2035 | AS7-393     | Darran, can you drive this to completion or assign it to someone who can?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-393">https://issues.jboss.org/browse/AS7-393</a> |

| 2038 | AS7-389     | Is this complete John?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/AS7-389">https://issues.jboss.org/browse/AS7-389</a> |
| 2039 | AS7-388     | Any update, or can we drive this to conclusion?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-388">https://issues.jboss.org/browse/AS7-388</a> |
| 2040 | AS7-385     | Scott, Brian indicated that you were looking into this. Can you give an update?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/AS7-385">https://issues.jboss.org/browse/AS7-385</a> |
| 2041 | AS7-383     | Is this something you want to do? Assign back if not. Should be a very minor change.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-383">https://issues.jboss.org/browse/AS7-383</a> |
| 2042 | AS7-367     | From tooling I'm more interested to knowing *actual* status of deployments such as: Is it running ? Did it deploy - any warnings? any errors ? stacktraces ? Inner/nested details that arquillian is asking for is nice but i'm much more interested in getting status for deployment overall first with access to error info.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-367">https://issues.jboss.org/browse/AS7-367</a> |
| 2043 | AS7-364     | Brian, did you have a specific approach in mind for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/AS7-364">https://issues.jboss.org/browse/AS7-364</a> |
| 2044 | AS7-364     | Brian, is the EAP distinction done by appending -redhat? Or could the information that shows up in boot log at 22:13:52,235 INFO [org.jboss.as] JBoss EAP 6.0.0.Alpha2 (AS 7.1.0.Beta1-redhat-1) starting be the version string returned -- meaning "EAP 6... (....)" ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/AS7-364">https://issues.jboss.org/browse/AS7-364</a> |
| 2045 | AS7-354     | What does this mean?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-354">https://issues.jboss.org/browse/AS7-354</a> |
| 2046 | AS7-328     | has this been merged?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/AS7-328">https://issues.jboss.org/browse/AS7-328</a> |
| 2047 | AS7-318     | Aren't we done here? I'd like to close all of these generic holder tasks. If there is any commands we need for usability reasons we should just have a specific issues for them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/AS7-318">https://issues.jboss.org/browse/AS7-318</a> |
| 2048 | AS7-311     | Emanuel, could you have a look and see if this is still valid?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/AS7-311">https://issues.jboss.org/browse/AS7-311</a> |

| 2049 | AS7-308     | Hi, I tried to use this fix to solve issue JBAS-7882 on Jboss AS 7.1.0 Final. But it does not seem to work. I put all my security jars in ear/lib and mentioned in ear/META-INF/jboss-deployment-structure.xml like below:         <jboss-deployment-structure xmlns="urn:jboss:deployment-structure:1.1">           <ear-subdeployments-isolated=true/>           <ear-subdeployments-isolated>             <deployment>               <resources>                 <resource-root path="entbase.jar" use-physical-code-source="true"/>               </resources>             </deployment>             ...           </ear-subdeployments-isolated>         </jboss-deployment-structure>         But still i am getting Self-Integrity Check FAILED:         java.lang.SecurityException: java.security.PrivilegedActionException: java.util.zip.ZipException: zip file is empty: java.lang.SecurityException: Self-Integrity Check FAILED:         java.lang.SecurityException: java.security.PrivilegedActionException: java.util.zip.ZipException: zip file is empty         at         com.entrust.toolkit.security.provider.JCEVerifierImpl.checkIntegrity(Unknown Source) [entbase.jar:7.1.0 build 941 "Jul 25 2005" "03:44:15"]         at         com.entrust.toolkit.security.provider.Entrust.<init>(Unknown Source) [entbase.jar:7.1.0 build 941 "Jul 25 2005" "03:44:15"]         Am i missing something? Please guide.         Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/AS7-308">https://issues.jboss.org/browse/AS7-308</a>   |
| 2050 | AS7-308     | I confirm that use-physical-code-source is working with a recent version (7.2) I added it in the jboss-deployment-structure.xml of a war to solve the zip file is empty error about a bouncycastle jar It's working if I deploy the war directly in the application server deployments directory but sadly it doesn't work if I put it in an EAR. I tried to define it as subdeployment of the ear but it didn't help. Do you think that it is normal or I should report a new issue ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/AS7-308">https://issues.jboss.org/browse/AS7-308</a>   |
| 2051 | AS7-306     | IRC discussion for reference:         {quote} (06:56:39 IST) dmlloyd: EE.8.3.2 (06:57:00 IST) dmlloyd: portable applications must not depend on having or not having access to these classes or resources: The content of any EJB jar files included in the same ear file. dmison_a' dmlloyd (06:58:09 IST) Jaikiran: dmlloyd: indeed! (06:58:16 IST) Jaikiran: i wasn't aware that wasn't portable (06:58:24 IST) Jaikiran: but would be really useful to enable that in AS& (06:58:26 IST) Jaikiran: AS7 (06:58:33 IST) Jaikiran: assuming there's no technical issue (06:58:34 IST) dmlloyd: well if you weren't aware I imagine most of our users aren't either (06:58:41 IST) dmlloyd: so perhaps it should be a configurable default (06:59:23 IST) Jaikiran: from what i have seen, users (and even maven?) just creates the top level ejb jar and expects the classes in ejb deployment to be visible in web (06:59:29 IST) fbricon: last time I checked, my sample project ran on glassfish 3.x (06:59:50 IST) hardy [*hardy@81-235-238-123-no92.tbcn.telia.com] entered the room. (07:00:02 IST) dmlloyd: Jaikiran: you mean, in an EAR right? dmison_a' dmlloyd (07:00:07 IST) Jaikiran: dmlloyd: yes (07:00:18 IST) Jaikiran: both war in EJB jar in the .ear (07:00:46 IST) fbricon: dmlloyd: Jaikiran: *that's my setup (07:00:58 IST) dmlloyd: sounds like a config param for the EE subsystem: <isolate-ear-contents value="true"/> (07:01:12 IST) Jaikiran: that "sounds" different (07:01:18 IST) dmlloyd: can one of you guys open a JIRA for that? assign it to CR1 or something? (07:01:27 IST) Jaikiran: given our usage of ear isolation in previous AS version (07:01:39 IST) dmlloyd: I think the more strict behavior should be the default though. That will encourage people to move towards better spec compliance in their deployments (07:01:50 IST) fbricon: dmlloyd: ok I can create the issue and attach my sample project (07:01:53 IST) Jaikiran: basically, isolate-ear in previous releases meant that each ear would have a separate cl and wouldn't see each other (07:02:03 IST) Jaikiran: so it might be better to use a different term for this attribute (07:02:06 IST) dmlloyd: true, we may want to choose better wording (07:02:09 IST) Jaikiran: yeah (07:02:14 IST) Jaikiran: but yes, a JIRA would be a starting point (07:02:30 IST) Jaikiran: fbricon: yes, please do attach a app for easy testing {quote}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/AS7-306">https://issues.jboss.org/browse/AS7-306</a>   |

| 2053 | ARQ-2121    | [*chco] Hi Christian, thanks for opening this issue! Do you think you could create a pull request on GitHub for this at https://github.com/arquillian/arquillian-container-was/ ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-2121">https://issues.jboss.org/browse/ARQ-2121</a> |

| 2054 | ARQ-2082    | Could you share reproducer on GitHub? That would tremendously help us analyzing the problem.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-2082">https://issues.jboss.org/browse/ARQ-2082</a> |
| 2055 | ARQ-2051    | How are you downloading the liberty instance from Maven? If you're using the liberty:create-server goal it already provides an option for a configFile like we packaged it in our wlp-managed-85 test. Why is this more useful than that? I would think that if we start adding this, we will need further changes to support other features as well and at that point it just might be easier to include the server.xml as part of the test in the first place anyway; What do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ARQ-2051">https://issues.jboss.org/browse/ARQ-2051</a> |
| 2056 | ARQ-2051    | I've now created a new docker container that works with the current wercker environment and I also moved to the 1.2 version of the liberty-maven-plugin. The bad news is that at least for me the ApplicationMBean is never shown over the localConnector with the versions I tested with from the public maven repositories. I see a few other WebSphere.* MBeans, but not the ApplicationMBean. [~atijms] are you seeing this MBean? Can you tell me which exact JDK and liberty version you're using? tnx!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQ-2051">https://issues.jboss.org/browse/ARQ-2051</a> |
| 2057 | ARQ-2047    | [~ctorburn8], I have tried to reproduce this issue as per steps mentioned by you. But I couldn't reproduce your mentioned behavior for lambda expression. You can look for my test project [here]https://github.com/dipak-pawar/ARQ-2047-test Can you please share your project where this issue is reproducing? Maybe something is missing in my project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ARQ-2047">https://issues.jboss.org/browse/ARQ-2047</a> |
| 2058 | ARQ-2040    | [~stefanutti] Hi Antonin, if you really mean JTA then this has been already fixed in https://github.com/arquillian/arquillian-container-weld/issues/25 [~mjobanek] [~bmajsak] I can't assign issue to myself. Can you please update my permissions?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ARQ-2040">https://issues.jboss.org/browse/ARQ-2040</a> |
| 2059 | ARQ-2032    | [~thomas.diesler], I do not understand how is this issue connected with Wildfly... I just wanted to track issue somewhere. Shall I rather use github issues?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-2032">https://issues.jboss.org/browse/ARQ-2032</a> |
| 2060 | ARQ-2017    | [~thomas.diesler] : I notice that the "org.jboss.arquillian.osgi" package is listed both under <Private-Package> and also under <_exportcontents>. I assume that you would prefer one or the other. Let me know which one is appropriate and I will remove the duplicate from the other element. I am also curious why you have declined to inline the embedded dependencies, but to embed them as jars instead. There may be classloader improvements, among other things, if they are inlined instead. Are there licensing issues that require you to embed the jars? Otherwise, I would like to try inlining them instead. Please let me know. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-2017">https://issues.jboss.org/browse/ARQ-2017</a> |
| 2061 | ARQ-2016    | I don't see the "Assign to me" option in your JIRA. Is there a way that I can assign this story, and sub-tasks that I create, to myself?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQ-2016">https://issues.jboss.org/browse/ARQ-2016</a> |
| 2062 | ARQ-2016    | I'm asking specifically about the AuxiliaryArchiveAppender. When the auxiliary archive is created, what's the process by which it is deployed? And is it a bundle or is it only intended as a library to go into a web archive? I'm using a jar archive for my test, so I'm trying to understand the best way to make Spock available within the container.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/ARQ-2016">https://issues.jboss.org/browse/ARQ-2016</a> |
| 2063 | ARQ-2016    | Hello!, We have adapt the Arquillian OSGi Extension so it can use custom extensions, now we are using it successfully in the Arquillian Liferay Extension. The idea that we have implemented is: 1. The Arquillian OSGi Bundle is automatically generated (with all the extensions that are declared in the classpath). (This is done only once) 2. For every test: 2.1. The Arquillian OSGi Bundle is installed. 2.2. The test deployment is installed without any enhancement. 2.3. A fragment for the Arquillian OSGi Bundle that contains only the test class is generated and installed. 2.4 The tests are executed 2.5 All the previously installed bundle are uninstalled. We have created a pull (https://github.com/arquillian/arquillian-container-osgi/pull/51) were you can check the changes. We think that this maybe can be usefull for someone. Maybe it would be interesting try to merge it with the current Arquillian OSGi Container. What do you think? If you need more information, please, let us know. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/ARQ-2016">https://issues.jboss.org/browse/ARQ-2016</a> |

| 2066 | ARQ-2008    | What happens when you run "mvn clean install" from command line?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ARQ-2008">https://issues.jboss.org/browse/ARQ-2008</a> |
| 2067 | ARQ-1975    | Hi, is this the same feature as this one? <a href="https://developer.jboss.org/message/935605">https://developer.jboss.org/message/935605</a> If so, there is already a jira for that: ARQ-540                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-1975">https://issues.jboss.org/browse/ARQ-1975</a> |
| 2068 | ARQ-1968    | So I don't quite understand. Are you saying that Arquillian already works for Fuse and it's just a matter of RH saying it's a tested framework like Arquillian on EAP ( <a href="https://access.redhat.com/solutions/275433">https://access.redhat.com/solutions/275433</a> )?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-1968">https://issues.jboss.org/browse/ARQ-1968</a> |
| 2069 | ARQ-1954    | How can this be used? I'm running Arquillian Tests inside a remote WildFly instance and I cannot get it to work. :(                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/ARQ-1954">https://issues.jboss.org/browse/ARQ-1954</a> |
| 2070 | ARQ-1921    | [~aslak] you mean like you get it in lookup method in "Annotation... qualifiers" parameter? How these annotations would be called? I can look at it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQ-1921">https://issues.jboss.org/browse/ARQ-1921</a> |
| 2071 | ARQ-1902    | I assume you would want to skip the whole Before Test After phase? Not just Test? Do you want it 'marked' as Skipped in report?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ARQ-1902">https://issues.jboss.org/browse/ARQ-1902</a> |
| 2072 | ARQ-1887    | I have run into another issue that is related to how the scripts are split before execution. This time I'm trying to insert a simple JavaScript script into my table and all script's content between curly braces is cut out, which causes the test failure, since the script cannot be parsed by the Nashorn engine - example below.<br>{code:title=script.sql borderStyle=solid} INSERT INTO SCRIPT(ENGINE, BODY) VALUES('JavaScript', 'function execute(context) {var Result = Java.type("xx.xxxxxx.xxxx.xxxx.Result"); var result = new Result(); if (context.service === undefined) {result.code = 100;} else { result.code = 0;} return result;}); {code} Result: {code:title=output.log borderStyle=solid} INSERT INTO SCRIPT(ENGINE, BODY) VALUES('JavaScript', 'function execute(context) else return result;}); {code} The question is: shall I make a separate issue for this or maybe this comment will be enough? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/ARQ-1887">https://issues.jboss.org/browse/ARQ-1887</a> |
| 2073 | ARQ-1887    | Please go ahead with dedicated issue. Would you be interested in contributing the fix for this issue or the other one? It's rather straightforward and you can count on my full support :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQ-1887">https://issues.jboss.org/browse/ARQ-1887</a> |
| 2074 | ARQ-1883    | tests/src/test/java/org/jboss/arquillian/integration/persistence/cucumber/SeedingStrategyTest.java)) but its failing (i think its a detail) because persistence unit is not found. I've changed the deployment from *jar* to *war* cause i think cukespace doesn't work in jar project (in fact i didnt tried to flat the jar so changed to war) but the [PersistenceContext inside test ( <a href="https://github.com/rmpestano/arquillian-extension-persistence/blob/master/int-tests/src/test/java/org/jboss/arquillian/integration/persistence/cucumber/SeedingStrategyTest.java#L52">https://github.com/rmpestano/arquillian-extension-persistence/blob/master/int-tests/src/test/java/org/jboss/arquillian/integration/persistence/cucumber/SeedingStrategyTest.java#L52</a> ) isn't working, here is test output: {noformat}<br>org.jboss.arquillian.container.spi.client.container.DeploymentException: Cannot deploy: test.war at<br>org.jboss.as.arquillian.container.ArchiveDeployer.deployInternal(ArchiveDeployer.java:83) at<br>org.jboss.as.arquillian.container.ArchiveDeployer.deployInternal(ArchiveDeployer.java:64) at<br>org.jboss.as.arquillian.container.ArchiveDeployer.deploy(ArchiveDeployer.java:46) at<br>org.jboss.as.arquillian.container.CommonDeployableContainer.deploy(CommonDeployableContainer.java:146) at<br>org.jboss.arquillian.container.impl.client.container.ContainerDeployController\$3.call(ContainerDeployController.java:161) at<br>org.jboss.arquillian.container.impl.client.container.ContainerDeployController\$3.call(ContainerDeployController.java:128) at<br>org.jboss.arquillian.container.impl.client.container.ContainerDeployController.executeOperation(ContainerDeployController.java:271) at<br>org.jboss.arquillian.container.impl.client.container.ContainerDeployController.deploy(ContainerDeployController.java:127) at<br>sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at<br>sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:94)<br>at org.jboss.arquillian.core.impl.EventContextImpl.invokeObservers(EventContextImpl.java:99) at<br>org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:81) at<br>org.jboss.arquillian.container.impl.client.container.DeploymentExceptionHandler.verifyExpectedExceptionDuringDeploy(DeploymentExceptionHandler.java:50) at<br>sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at<br>sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:94)<br>at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:88) at<br>org.jboss.arquillian.container.impl.client.ContainerDeploymentContextHandler.createDeploymentContext(ContainerDeploymentContextHandler.java:78) at<br>sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at<br>sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at org.jboss.arquillian.core.impl.ObserverImpl.invoke(ObserverImpl.java:94)<br>at org.jboss.arquillian.core.impl.EventContextImpl.proceed(EventContextImpl.java:88) at<br>org.jboss.arquillian.container.impl.client.ContainerDeploymentContextHandler.createContainerContext(ContainerDeploymentContextHandler.java:57) at<br>sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at | <a href="https://issues.jboss.org/browse/ARQ-1883">https://issues.jboss.org/browse/ARQ-1883</a> |
| 2075 | ARQ-1852    | CommandService is part of Core already. Every Protocol has it's own implementation of it to allow InContainer to communicate with Client side:<br><a href="https://github.com/arquillian/arquillian-core/blob/master/container/test-spi/src/main/java/org/jboss/arquillian/container/test-spi/command/CommandService.java">https://github.com/arquillian/arquillian-core/blob/master/container/test-spi/src/main/java/org/jboss/arquillian/container/test-spi/command/CommandService.java</a><br>E.g. the ServletCommandService from the Servlet Protocol: <a href="https://github.com/arquillian/arquillian-core/blob/master/protocols/servlet/src/main/java/org/jboss/arquillian/protocol/servlet/runner/ServletCommandService.java">https://github.com/arquillian/arquillian-core/blob/master/protocols/servlet/src/main/java/org/jboss/arquillian/protocol/servlet/runner/ServletCommandService.java</a> After re-reading, you want the opposite direction? Client to send commands to Container at any point?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-1852">https://issues.jboss.org/browse/ARQ-1852</a> |
| 2076 | ARQ-1852    | At which points do the Client know? The normal execution flow in Arquillian is to for each @Test on client side execute the full In Container cycle(BeforeSuite/BeforeClass/Before/Test...), then take the result from container and move on. This is per say single threaded, so the Client can't really send anything at 'random' points to the container. It only sends one 'command'; run the complete test. It's from within the container side you can send fine grained commands back to the client within any of the events(BeforeSuite, BeforeClass...).. If you can explain in more detail what you're trying to do.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-1852">https://issues.jboss.org/browse/ARQ-1852</a> |
| 2077 | ARQ-1842    | I think this is related to <a href="https://issues.jboss.org/browse/ARQ-1807">https://issues.jboss.org/browse/ARQ-1807</a> Could you verify with arquillian-core upstream master branch?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-1842">https://issues.jboss.org/browse/ARQ-1842</a> |
| 2078 | ARQ-1842    | @Aslak Knutsen: Could you please where can we find the last 2.0.0.CR1 version? Is there any maven repository to download it from?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQ-1842">https://issues.jboss.org/browse/ARQ-1842</a> |
| 2079 | ARQ-1842    | Please, is there any estimate on when it is going to be available on maven repos? I would like to use this extension on my project but I keep getting this error. Btw: I am using 1.1.10.Final                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-1842">https://issues.jboss.org/browse/ARQ-1842</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | URL                                                                                             |

| 2080 | ARQ-1842    | Partial fix based on [~dashorst] work has been already rolled out with version 1.0.2.Final. Is that the one you are using? There is one additional improvement awaiting with this [pull request https://github.com/arquillian/arquillian-extension-transaction/pull/12]. I will wrap it up this week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-1842">https://issues.jboss.org/browse/ARQ-1842</a> |
| 2081 | ARQ-1842    | [~bmajszak] Sorry to ask: is there anywhere I can check if this was released? Is there anything I can do to help this matter?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQ-1842">https://issues.jboss.org/browse/ARQ-1842</a> |
| 2082 | ARQ-1809    | I cannot reproduce this behaviour, but I have improved sorted and filtered sets so that they have now proper metadata. As for the suggested fix : both YAML and JSON implementation are based on FlatXML data sets, where datatype is also set to unknown. If I understand DBUnit right, the real types are then extracted from underlying db and conversion is applied. But this might be wrong reasoning :) I will take a closer look. In the meantime, could you try to run your test against [latest master https://github.com/arquillian/arquillian-extension-persistence] and let me know? Does this error occurs each and every time you run the test?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQ-1809">https://issues.jboss.org/browse/ARQ-1809</a> |
| 2083 | ARQ-1800    | Thanks for the feature request. Of course this will be handy feature. Shall we consider UTF-8 as a default? Moreover would you be interested in contributing this improvement? That would be simply awesome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQ-1800">https://issues.jboss.org/browse/ARQ-1800</a> |
| 2084 | ARQ-1797    | What kind of strategy do you want to use here when you put @Screenshot annotation on a method? That screenshot annotation has to have some default values. It is clear that specified parameter to that annotation overrides settings in arquillian.xml. In case that property is not specified there, what setting should "win"? Annotation one which is not specified explicitly or property in arq.xml ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-1797">https://issues.jboss.org/browse/ARQ-1797</a> |
| 2085 | ARQ-1789    | Have you tried running the Managed/Remote 7 against a 8 Container?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ARQ-1789">https://issues.jboss.org/browse/ARQ-1789</a> |
| 2086 | ARQ-1756    | Thanks for opening this feature request! What would this feature do exactly? Do other arquillian adapters provide this function already? Please also look at the section at <a href="http://arquillian.org/guides/getting_started/#test_across_containers">http://arquillian.org/guides/getting_started/#test_across_containers</a> and see how this is documented to work for jboss-as artifacts. I think this should also work with Liberty. What do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-1756">https://issues.jboss.org/browse/ARQ-1756</a> |
| 2087 | ARQ-1751    | This is a _almost_ working prototype from DevNation hackfest; <a href="https://github.com/aslakknutsen/arquillian-recorder/tree/ARQ-1751">https://github.com/aslakknutsen/arquillian-recorder/tree/ARQ-1751</a> The missing parts; * probably integrate bowler with Maven to build the UI JS parts automatically * some mismatch in URL used by the UI and backend atm * possible some misstach in the format used General improvements require some more changes in recorder core. e.g.; * Should the same JAX-B model be used on Client and Container side? * JAX-B in general generates XML, XML is hell'ish in a JS client ** Currently worked around by XML from Test client to Server, and Gson converted jax-b model from Server to JS client * The full report is pushed to server for each @Test * Missing image upload.                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-1751">https://issues.jboss.org/browse/ARQ-1751</a> |
| 2088 | ARQ-1750    | I would've assumed that we use the configuration mechanisms used by liberty itself such as the ones documented in <a href="http://pic.dhe.ibm.com/infocenter/wasinfo/v8r5/index.jsp?topic=%2Fcom.ibm.websphere.wlp.nd.doc%2Fae%2Ftwlp_tun.html">http://pic.dhe.ibm.com/infocenter/wasinfo/v8r5/index.jsp?topic=%2Fcom.ibm.websphere.wlp.nd.doc%2Fae%2Ftwlp_tun.html</a> to set mx and debug parameters; what is the added value of having this as part of the arquillian.xml configuration? Do other container implementations already support this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQ-1750">https://issues.jboss.org/browse/ARQ-1750</a> |
| 2089 | ARQ-1744    | [~kpiwko] [~tkriz] Is it possible to have this in 2.0.0.Alpha1? Having this particular JIRA done, it would simplify Droidium code tremendously and I would move with other things as well for which this one being resolved is very needed prerequisite. Waiting for Alpha2 is just time blocker for me.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-1744">https://issues.jboss.org/browse/ARQ-1744</a> |
| 2090 | ARQ-1741    | Are you trying to handle a TypeNotPresentException?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ARQ-1741">https://issues.jboss.org/browse/ARQ-1741</a> |
| 2091 | ARQ-1716    | Would it be possible to just bind to Arquillian Events? This is a long term maintenance nightmare - JUnit, TestNG, Cukespace, Spock, etc...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-1716">https://issues.jboss.org/browse/ARQ-1716</a> |
| 2092 | ARQ-1572    | This will work nicely for JARs and WARs, but not for EARs, as there is no 'global classloader' for the ear package as far as I can say. I will keep it as jar in the lib/ folder with the fixed name, eg. 'arquillian-persistence-datasets.jar'. Would it work for you?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQ-1572">https://issues.jboss.org/browse/ARQ-1572</a> |
| 2093 | ARQ-1572    | So the conclusion will be: * JAR and WAR will have it flattened (included in the test archive), so that JRebel works out of the box * For EAR we have {{arquillian-persistence-datasets.jar}} as regular (not exploded) archive in the {{lib/}} folder in the root of the archive. Does it sound good enough?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQ-1572">https://issues.jboss.org/browse/ARQ-1572</a> |
| 2094 | ARQ-1567    | [~smikloso], would it be possible to check system property java.home as well? While this might point to JRE in some cases, it might make setup easier.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/ARQ-1567">https://issues.jboss.org/browse/ARQ-1567</a> |
| 2095 | ARQ-1555    | Actually, think I found a way to leverage @ArquillianResource. Since it uses a class, the class provided could be the @ApplicationPath annotated class. If you did @ArquillianResource(JaxRSActivator.class) MyInterface restClient; REST extension could look for that application path (as found on that class) and leverage that as the base URI. If your JAXRSActivator was annotated @ApplicationPath("/") it would use rest. Otherwise it should default to /, since this is the default behavior of JAX-RS. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-1555">https://issues.jboss.org/browse/ARQ-1555</a> |
| 2096 | ARQ-1555    | Are we still thinking this is not easily fixable to use ArquillianResource? Seems like it shouldn't be that difficult. What am I missing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ARQ-1555">https://issues.jboss.org/browse/ARQ-1555</a> |
| 2097 | ARQ-1461    | How does this effect arquillian-extension-ios?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQ-1461">https://issues.jboss.org/browse/ARQ-1461</a> |
| 2098 | ARQ-1453    | Could you define 'Drone-like'?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQ-1453">https://issues.jboss.org/browse/ARQ-1453</a> |
| 2099 | ARQ-1444    | I have created a pull request for this issue [1]. Can anyone review it? Thanks in advance. [1] <a href="https://github.com/arquillian/arquillian-extension-persistence/pull/38">https://github.com/arquillian/arquillian-extension-persistence/pull/38</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/ARQ-1444">https://issues.jboss.org/browse/ARQ-1444</a> |
| 2100 | ARQ-1444    | Hi guys, is this issue really resolved? im trying to clean a oracle db using @CleanupUsingScript or @ApplyScriptAfter/Before and still having ORA-00911: invalid character in Alpha. My scripts are simple DELETE from TABLE; my arquillian.xml is as follows: <extension qualifier="persistence-dbunit"> <property name="schema">TR_DETRAN_RED_AD</property> <!-- <property name="datatypeFactory">org.dbunit.ext.oracle.Oracle10DataTypesFactory</property>--> <property name="filterTables">true</property> <!-- <property name="filterForeignKeysEnabled">false</property>--> <!-- <property name="customTableFilter">org.jboss.arquillian.persistence.dbunit.filter.OracleDatabaseSequenceFilterProvider</property>--> </extension> <extension qualifier="persistence"> <property name="defaultDataSource">java:jboss/datasources/RedTestDS</property> <!-- <property name="defaultDataSeedStrategy">CLEAN_INSERT</property> --> <!-- <property name="defaultCleanupPhase">NONE</property> --> <property name="dumpData">false</property> </extension> <!-- <extension qualifier="persistence-script"> <property name="sqlStatementDelimiter">;</property> </extension> --> thanks in advance. | <a href="https://issues.jboss.org/browse/ARQ-1444">https://issues.jboss.org/browse/ARQ-1444</a> |
| 2101 | ARQ-1419    | Yes, it's HTTP only. With regard to the descriptor deployment - the only relevant documentation I found is this: <a href="https://docs.jboss.org/author/display/ARQ/Descriptor+deployment">https://docs.jboss.org/author/display/ARQ/Descriptor+deployment</a> . However I checked the AS7/WildFly container adapter and it seems it does not support this either. So I think we can live without this feature for now and add the support later. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQ-1419">https://issues.jboss.org/browse/ARQ-1419</a> |

What version we should use for that?</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/ARQ-1387">https://issues.iboss.org/browse/ARQ-1387</a> |
| 2104 | ARQ-1387    | We actually exclude the asm in the pom. Should we include our own?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/ARQ-1387">https://issues.iboss.org/browse/ARQ-1387</a> |
| 2105 | ARQ-1385    | Is this a default behavior you need? Or you want to have some value being the default and configurate via webdriver extension?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/ARQ-1385">https://issues.iboss.org/browse/ARQ-1385</a> |
| 2106 | ARQ-1385    | [~!fryc] What's the proper SPI lifecycle event in your opinion?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/ARQ-1385">https://issues.iboss.org/browse/ARQ-1385</a> |
| 2107 | ARQ-1384    | Thank you very much for your effort Tamás. Would you be so kind and create pull request out of it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/ARQ-1384">https://issues.iboss.org/browse/ARQ-1384</a> |
| 2108 | ARQ-1370    | Sure, you're welcome. Regarding your proposed solution (referenced in the description): without admittedly knowing Warp's internals, this looks more like a workaround than a solution. The root cause of this problem seems to be that {{Alpha3}} requires a dedicated custom SSL context (or TrustManager, respectively) while {{Alpha2}} was able to make use of the container's existing SSL context as described in ARQ-1365 and the forum thread (referenced above). The question is: why is that and would it be possible to let {{CommandService}} reuse the existing SSL context as well? Just ignore my comment if I'm totally mistaken :-)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/ARQ-1370">https://issues.iboss.org/browse/ARQ-1370</a> |
| 2109 | ARQ-1370    | Great, thanks for the doc pointers! The Arquillian GitHub wiki at [2] would have been the last place for me to look for such Warp details :-). {quote} I actually think that any SSL communication wouldn't work in Warp in Alpha2, because Warp is a Man in the Middle from the SSL handshake perspective {quote} Well, as described earlier, it does - at least for client-side tests in a test class annotated with {{@WarpTest}}. That's why this issue seemed like a Alpha2->Alpha3 regression from a user's (my) perspective: for some reason Warp-enriched_client-side_tests do fail with Alpha3 while they work with Alpha2 (via SSL). You know better than me whether that kind of client-side tests is also affected by the new {{CommandService}} infrastructure/workflow. I guess the major difference compared to Alpha2 is the _additional_ request in Alpha3 you describe: while Alpha2 (enriched) client-side tests, issuing requests via Drone/WebDriver, simply run in JBoss's configured SSL context, Alpha3 (enriched) client-side tests involve {{CommandService}} creating a new request _itself_, somehow outside the container's SSL context...? If my assessment is correct the question should be, can you tap into the container's SSL context or adopt it somehow? If not, you most likely need to establish your own, as suggested by your proposed workaround, if Warp's architecture itself can't be changed/improved in that regard. IMHO, such a workaround would be less optimal, however, because a functional JSF test naturally involves the web app's container, including potential security measures in place (like SSL or authentication). Thus it would be nice to run such tests in their actual environment, without the need for a parallel security setup that (potentially) needs to be kept in sync with the container's setup in order to produce meaningful test results (without superfluous artefacts). After all, this is what makes Arquillian such a great tool, right? What do you reckon? Seems like an interesting problem :-)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/ARQ-1370">https://issues.iboss.org/browse/ARQ-1370</a> |
| 2110 | ARQ-1370    | Hey Oliver, I agree that Warp should be able to work with SSL. {quote} Well, as described earlier, it does - at least for client-side tests in a test class annotated with {{@WarpTest}}. That's why this issue seemed like a Alpha2->Alpha3 regression from a user's (my) perspective: for some reason Warp-enriched client-side tests do fail with Alpha3 while they work with Alpha2 (via SSL). {quote} The thing is that Warp needs to be able to intercept the request flowing through proxy from client to server - it basically needs to know request/response headers (in order to be able select particular request which should be intercepted). I'm not sure whether LittleProxy current supports SSL handshake - it seems so, however as I said, we are not interested just in transportation level (HTTP-over-SSL), but rather in presentation layer (details of HTTP request). It seems that LittleProxy team recently added support for SSL interception (Man in the Middle - MITM) [1] to 0.6.0-SNAPSHOT (Warp currently uses 0.5.3). {quote} I guess the major difference compared to Alpha2 is the additional request in Alpha3 you describe: while Alpha2 (enriched) client-side tests, issuing requests via Drone/WebDriver, simply run in JBoss's configured SSL context, Alpha3 (enriched) client-side tests involve CommandService creating a new request itself, somehow outside the container's SSL context...? If my assessment is correct the question should be, can you tap into the container's SSL context or adopt it somehow? If not, you most likely need to establish your own, as suggested by your proposed workaround, if Warp's architecture itself can't be changed/improved in that regard. {quote} That's interesting, what have happened in Alpha2: {code} client --HTTPS--> proxy --HTTPS with payload--> server {code} * on the proxy, we had to have access to HTTP headers * in order to add additional request header (which contains payload) How it works in Alpha3: {code} client --HTTPS--> proxy --HTTPS with flag--> server proxy -- CommandService--> server {code} * we still need to have access to request headers (adding a flag (serialId of the message)) * but proxy needs to be able to connect independently to server You are talking about SSL contexts, but I think it actually stands for SSL certificates setup for {{client}} (browser?) and {{proxy}} (test JVM) and in Alpha3, the {{test}} itself (CommandService, test JVM). Any chance you could look at this issue more closely? I can provide you with guidance. | 2111 | ARQ-1370    | Hi Lukáš, Thanks for getting back to this! How do you want me to help? Would it be sufficient to somehow replace the current version of LittleProxy with 0.6.0-SNAPSHOT and see if it works. I hope I can find some time over the weekend but it's somewhat hard to come by right now.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/ARQ-1370">https://issues.iboss.org/browse/ARQ-1370</a> |
| 2112 | ARQ-1364    | Karel, could you please review this pull request?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/ARQ-1364">https://issues.iboss.org/browse/ARQ-1364</a> |
| 2113 | ARQ-1363    | Karel, could you please review this pull request?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/ARQ-1363">https://issues.iboss.org/browse/ARQ-1363</a> |

| 2115 | ARQ-1341    | As Aslak [pointed out   <a href="https://community.jboss.org/message/809204#809204">https://community.jboss.org/message/809204#809204</a> ], the REST extension would be better fit for separate module: {quote} We could put this in the arquillian-extension-rest. What's there now is just an early prototype with very little movement. We could 'move' the master branch to a branch, replace master with warp-rest, then retro fit the old master branch if needed. {quote} What do you think, [~jmnarloch]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-1341">https://issues.jboss.org/browse/ARQ-1341</a> |
| 2116 | ARQ-1341    | Ok, thanks. Quick question since we are moving the extension to repository *arquillian-extension-rest* how do you want me to name the packages? At the moment I had used *arquillian-warp-jaxrs* prefix.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/ARQ-1341">https://issues.jboss.org/browse/ARQ-1341</a> |
| 2117 | ARQ-1341    | org.jboss.arquillian.extension.rest.warp ? org.jboss.arquillian.extension.rest.warp.jaxrs ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ARQ-1341">https://issues.jboss.org/browse/ARQ-1341</a> |
| 2118 | ARQ-1330    | I'll admit that there might be a few edge cases where it makes sense to use a behavior-driven, mock-style approach. But I still hesitate to add a mock framework to JSFUnit. This is partially because I don't often see those theoretical edge cases. But mostly it's because a mock approach is a completely different style of testing. I'm not saying it's invalid, but it causes you to think about your tests in a completely different way. The classic paper on this is by Martin Fowler. If you haven't read it, I'd highly recommend it. It looks like he updated it since I last studied it so maybe I need to re-read it as well: <a href="http://martinfowler.com/articles/mocksArentStubs.html">http://martinfowler.com/articles/mocksArentStubs.html</a> To address the use cases the two of you have presented thus far: * For the one about analyzing generated html, I think this is solved with the speed and ease of Arquillian. If I understand your requirements correctly, I'd argue that it's easier to set up a JSFUnit test for this than to set up a mock environment. * For testing if an attribute is set only once per phase, I'm not sure I understand why you need that. What is the actual use case? Can you use a java assert statement to achieve the same thing? * For testing exceptions, that's pretty straightforward. You just create the conditions that throw the exception and see what happens. If that can't be done with a live application then you need to question your design because perhaps you are testing something that can't happen in the real world. Some of the above use cases might stem from the fact that JSFUnit tests aren't fine-grained enough. You are required to wait until the lifecycle completes and there is no opportunity to peek at the live object until rendering is done. To make fine-grained tests easier, I've thought of implementing JSFUNIT-59. This feature would call back into your tests before and after each phase. Then you could examine the live object at different points during the JSF lifecycle. You could even call its methods from your test, but I'd discourage that most of the time. The only tricky part to implementing JSFUNIT-59 would be to figure out how to register the callback with a PhaseListener. But it's quite doable. It would be great if one of you wants to take that on. I think it would make some of the above use cases even easier. | <a href="https://issues.jboss.org/browse/ARQ-1330">https://issues.jboss.org/browse/ARQ-1330</a> |
| 2119 | ARQ-1319    | Hey Aris, great job with investigations! The initial intention was to verify that Warp-based tests coverage is reported correctly. Configuring Warp's code coverage is actually nice consequence and I will merge it once it will work correctly. The problem here is that even in the ant-generated reporting, I can't see coverage of e.g. TestingServlet {{{fTest}}} project, {{org.jboss.arquillian.warp.ftest}}} package), which should be actually hit several times - this is what fundamentally Warp users wants. I guess there is some problem with reporting from Warp-based tests, e.g. does the command service does not work correctly? Does it provide correct data?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-1319">https://issues.jboss.org/browse/ARQ-1319</a> |
| 2120 | ARQ-1319    | It is possible to decouple response's writing and closing from {{WarpFilter}} {{doFilterWarp}} method, but this means that I should have to do the following changes: * Make {{RequestContextHandler}} observe {{BeforeSuite}} & {{AfterSuite}} instead of {{BeforeRequest}} & {{AfterRequest}} events. This way requestContext will be active throughout Arquillian's event lifecycle. * Add two observer methods on {{HttpRequestProcessor}}. The first one will observe {{BeforeSuite}} event (with precedence 100) and replace {{HttpServletResponse}} with a {{NonWritingResponse}}. The second one will observe {{AfterSuite}} event (with precedence -100) and will write and close the {{ServletOutputStream}}. Do you think that this is a good approach?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-1319">https://issues.jboss.org/browse/ARQ-1319</a> |
| 2121 | ARQ-1319    | Interesting approach. Do you plan on starting the implementation soon, or would you like me to give it a try? I believe it might take me some time, since I cannot commit to it full-time. ARQ-934 seems like a good starting point                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-1319">https://issues.jboss.org/browse/ARQ-1319</a> |
| 2122 | ARQ-1315    | Fabian, do you have a proposal how it should look like in the configuration file?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-1315">https://issues.jboss.org/browse/ARQ-1315</a> |
| 2123 | ARQ-1313    | [~lfryc] [~jpapouse] isn't this done via <a href="http://search.maven.org/#artifactdetails%7Corg.jboss.arquillian.extension%7Carquillian-phantom-driver%7C1.1.0.Beta1%7Cjar">http://search.maven.org/#artifactdetails%7Corg.jboss.arquillian.extension%7Carquillian-phantom-driver%7C1.1.0.Beta1%7Cjar</a> ? And who actually manages arquillian-phantom-driver now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ARQ-1313">https://issues.jboss.org/browse/ARQ-1313</a> |
| 2124 | ARQ-1307    | Okay, I will release them. [~jpapouse], what do you think about moving those projects to <a href="https://github.com/qa/">https://github.com/qa/</a> repo?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-1307">https://issues.jboss.org/browse/ARQ-1307</a> |
| 2125 | ARQ-1307    | Jan, I find the configuration quite cumbersome for end-user (all the profiles which need to setup). ---- I did a proof of concept that we could resolve the artifact with ShrinkWrap Resolver for Maven: {code:java}@Test public void test() { Maven.resolver().resolve("org.jboss.arquillian.phantomjs:phantomjs-binary:jar:unix_amd64:1.8.1").withoutTransitivity().as(JavaArchive.class); } {code} With {{org.jboss.shrinkwrap.resolver:shrinkwrap-resolver-depchain:2.0.0-beta-2}} I was able to get local resolution in ~0.5sec. I consider it quite fast, but we should still leverage local binary cache as you did already. ---- Could you re-implement it using the technique mentioned above?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-1307">https://issues.jboss.org/browse/ARQ-1307</a> |
| 2126 | ARQ-1303    | Ok, But in such case, how can I use that in my test? I would have to 'lookup' the bean that is being test each time from the application context. You won't be able to inject you configured beans into the tests directly. I was thinking about different approach. How about resigning from class level annotations in favor of 'factory method'. Something like: {code} public class TestCase { @SpringApplicationContext public static ApplicationContext createApplicationContext() { return ... // the application context could be created fully programtically } public void test() { } {code} In such way we could just @Autowire the beans in to the test class afterwards. Also we would have access to the ApplicationContext by simply adding @Autowired ApplicationContex field. It would work out of the box (likely this feature has been added somewhere in Spring 2.5.x version). The other thing I was thinking was using the same convention as in Spring Test 3.1. You are able to define static inner class annotated with @Configuration and define your beans there. Something like: {code} @SpringAnnotationConfiguration public class TestCase { @Configuration static class ContextConfiguration { @Bean public SomeBean create() { } } public void test() { } {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQ-1303">https://issues.jboss.org/browse/ARQ-1303</a> |
| 2127 | ARQ-1303    | Does this make sense?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ARQ-1303">https://issues.jboss.org/browse/ARQ-1303</a> |

| 2128 | ARQ-1303    | You don't need to lookup the bean, we can provide a feature to autowire beans in a test class by using reflection. please take a look at AbstractSpringInjectionEnricher.java registerBean method. in my point of view, it might be better to keep away the developer from complexity of creating spring context and let Arquillian take care of it so having a prepared context and controlling it by annotation is more convenient than creating it. second approach sounds cool but you only will be able to use it in Spring 3.x and it does not work with static application context. another problem that thanks to Arquillian it is solved now is to use your test context in server. it is really cumbersome specially if you are using Grizzly (jersey) but it is not our concern in this case. WDYT ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/ARQ-1303">https://issues.jboss.org/browse/ARQ-1303</a> |
| 2129 | ARQ-1292    | Hi Aslak and Andrew This looks very interesting. Shall I do some investigations?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQ-1292">https://issues.jboss.org/browse/ARQ-1292</a> |
| 2130 | ARQ-1269    | Hey, can I take this over? I have a pull request ready to go.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQ-1269">https://issues.jboss.org/browse/ARQ-1269</a> |
| 2131 | ARQ-1262    | Hey Pavol, could you please setup browser-compatibility tests for Warp? They could use CloudBees/OpenShift and SauceLabs (I can provide all required accounts). This issue does not have high priority for Beta1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-1262">https://issues.jboss.org/browse/ARQ-1262</a> |
| 2132 | ARQ-1261    | Hey Pavol, could you please setup container-compatibility tests for Warp? They could use CloudBees and mock-browser (htmlUnit now, phantomjs if available). This issue has high priority for Beta1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/ARQ-1261">https://issues.jboss.org/browse/ARQ-1261</a> |
| 2133 | ARQ-1260    | [~Ifryc] how you want to figure out what is the last deployment? Should you mark it somehow on the filesystem?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-1260">https://issues.jboss.org/browse/ARQ-1260</a> |
| 2134 | ARQ-1247    | Hey John, could you please update to latest master and try full build? Tests seem to work fine on continuous integration: <a href="https://buildhive.cloudbees.com/view/My%20Repositories/job/arquillian/job/arquillian-extension-warp/">https://buildhive.cloudbees.com/view/My%20Repositories/job/arquillian/job/arquillian-extension-warp/</a> The latest Warp builds were published to Maven repo today.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ARQ-1247">https://issues.jboss.org/browse/ARQ-1247</a> |
| 2135 | ARQ-1237    | Hey Bartosz, do you have difficulties with implementing it? Any insight you would like to share?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQ-1237">https://issues.jboss.org/browse/ARQ-1237</a> |
| 2136 | ARQ-1216    | Most important - you should avoid breaking what currently works on developers/testers. This will ease migration to the new way. Everything old can be marked as deprecated, and only drive new features in to the new setup. *Do not break the old setup.* The first issue that needs to be addressed is why you can only have one container on the classpath at a time. I'm assuming there is some marker interface that Arquillian uses to determine this is a container (probably the local implementation of LoadableExtension that's in every container). Once that's done, couldn't you start by adding some new tags to arquillian.xml, allowing the selection of which container to run and set each of these with an ID? Then setup some kind of JVM argument or something indicating which arquillian test set to run based on these IDs? Then make sure it allows you to run multiple (either serial or parallel). Maybe.. mvn test -DarquillianContainer=weld_ee -DarquillianContainer=jbossas_managed_7 I would almost argue that these need to be two different issues, one covering containers and the other covering extensions (though they are essentially both extensions...)                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQ-1216">https://issues.jboss.org/browse/ARQ-1216</a> |
| 2137 | ARQ-1213    | Do we still consider this issue relevant?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-1213">https://issues.jboss.org/browse/ARQ-1213</a> |
| 2138 | ARQ-1212    | Is this issue still relevant?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQ-1212">https://issues.jboss.org/browse/ARQ-1212</a> |
| 2139 | ARQ-1176    | Karel, would you prefer to have this implemented in Arquillian Drone?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQ-1176">https://issues.jboss.org/browse/ARQ-1176</a> |

| 2142 | ARQ-1169    | Seems related. But Lincoln's POC there handles simply the embedded case. Sounds like 483 would really be incorporated by this, which would aim to provide a target runtime. And could have a remote, managed, and embedded container to accompany it. What do you say we link this as "incorporates" 483?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-1169">https://issues.jboss.org/browse/ARQ-1169</a> |
| 2143 | ARQ-1166    | [10:53] <aslak> <a href="http://pastebin.com/bQP8rJiS">http://pastebin.com/bQP8rJiS</a> line:50 [10:53] <aslak> the original file name is linked in. the Asset might have a different name in the Archive then on the Filesystem [10:54] <aslak> in this case we're setting up rebel.xml to monitor test-web.xml, but does rebel know that that is our web.xml ? [10:55] == jharting [jharting@redhat/jboss/jharting] has joined #jbossstesting [10:56] <aslak> most of those shouldn't be linked under "web". [10:57] <blabno> aslak, sorry, but i don't understand [10:57] == kpiwko [kpiwko@redhat/jboss/kpiwko] has joined #jbossstesting [10:57] <blabno> i think jrebel will not know that test-web.xml is web.xml in archive [10:58] <aslak> but it should ? [10:58] <blabno> well, would be nice for use [10:58] <blabno> for us, but I don't think they have foreseen this [10:58] <blabno> and I would not expect them to support this [10:59] <aslak> blabno, mm, I can't seem to find any 'rename/redirect' type element [11:00] <aslak> we basically want to say: as / in web, link from src/test/resources/ file test-web.xml as web.xml [11:00] <blabno> i think that we will need to copy all resources that have different name in archive then in filesystem to jrebel temp [11:01] <aslak> mm yea, rebel should still be able to detect the changes when you run so. the user shouldn't notice [11:02] <aslak> i'll add it to my 'jrebel-feature-request' list [11:02] <blabno> :) yes and let's gather bunch of people to vote for it :D | <a href="https://issues.jboss.org/browse/ARQ-1166">https://issues.jboss.org/browse/ARQ-1166</a> |
| 2144 | ARQ-1143    | Hi Bartosz, I tried to update the runner to use Groovy 2.1 and Spock 0.7, but for some reason I haven't figured out yet AuxiliaryArchiveAppender is not picking groovy classes into arquillian-spock.jar even if groovy-all is on the classpath no matter of the scope. One of the workarounds I came with was to include groovy-all and 0.7-spock- <code>\$(groovy-version)</code> fetched by ShrinkWrapMavenResolver based on what groovy/spock version user specifier/transitivity depends on in his pom.xml. How does it sound to you?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-1143">https://issues.jboss.org/browse/ARQ-1143</a> |
| 2145 | ARQ-1096    | Do you suggest supporting both these variants or full migration to <default-container>foo</default-container>?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-1096">https://issues.jboss.org/browse/ARQ-1096</a> |
| 2146 | ARQ-1096    | Using default=true + arquillian.launch with Maven Resource Filtering works. Does not seem nice but still works with current infrastructure. Do we want to change the behavior somehow in future?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQ-1096">https://issues.jboss.org/browse/ARQ-1096</a> |
| 2147 | ARQ-1089    | I don't think this is actually critical and I would leave the fix for future. I can assess it again if you will provide more info about use case? Is that integration issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ARQ-1089">https://issues.jboss.org/browse/ARQ-1089</a> |
| 2148 | ARQ-1082    | This is awesome! Does that mean that we could use persistence on the client side?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-1082">https://issues.jboss.org/browse/ARQ-1082</a> |
| 2149 | ARQ-1077    | Guys, I think this issue can be fixed if: * Drone extension could be enabled in IN_CONTAINER mode or * Persistence extension could be enabled in AS_CLIENT mode or * Test run in IN_CONTAINER mode, however Drone tests are forced to run AS_CLIENT So, I think following scenario should work without any code modifications required: <code>@RunWith(Arquillian.class) @DataSource("java:jboss/datasources/ExampleDS") @UsingDataSet("OneUserAccount-Admin.yml") public void CombinedTest { // notice testable=true, hence run in container by default @Deployment(testable=true) public static Archive&lt;?&gt; deployment() { // return full archive for Drone here } @Test @RunAsClient public void droneTest(@Drone WebDriver driver) { driver.XYZ(); } }</code> Bryan, can you try this approach and let us know?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-1077">https://issues.jboss.org/browse/ARQ-1077</a> |

| 2150 | ARQ-1077    | Bryan, At least in my case I'm getting failures due to graphene not being in the archive. Did you have to add anything to your WAR file for that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQ-1077">https://issues.jboss.org/browse/ARQ-1077</a> |
| 2151 | ARQ-985     | Now correct me if I'm wrong, but will this have any chance to work with embedded container? Assuming that the XmlClientApplicationContextProducer will create the instance of TestScopeApplicationContext and then the XmlRemoteApplicationContextProducer will be run and create in CDI context new TestScopeApplicationContext, will that completely override the previous one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQ-985">https://issues.jboss.org/browse/ARQ-985</a>   |
| 2152 | ARQ-985     | Could I try to define different CDI scopes for the created TestScopeApplicationContext to make that working with the embedded containers?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQ-985">https://issues.jboss.org/browse/ARQ-985</a>   |
| 2153 | ARQ-970     | Where can these tests be found?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/ARQ-970">https://issues.jboss.org/browse/ARQ-970</a>   |
| 2154 | ARQ-967     | images, scripts, css, etc. <lfryc> that's the time when we expect AJAX request, but request for those evil resources come :-> <lfryc> so it's time to define smart filters which decides what request to enrich <aslak> client multi threads the resource request ? <lfryc> but it can't be written generally enough, since you can't simply map request URL to content-type or so <lfryc> yeah, browsers usually loads up to 5 resources at time <lfryc> it is not issue with htmlunit (that's why unit tests pass just fine) <lfryc> but real browsers have cause issues <aslak> lfryc, you can't look at the accept header ? <lfryc> aslak: it's not silver-bullet <lfryc> browser may not need to send that header <aslak> true <lfryc> I think we have two options: <lfryc> 1) smart heuristics <lfryc> 2) framework-dependent filters <aslak> you have control over the proxy, so you should be able to sync up at that level how ever you want it <lfryc> you mean I can force client to send accept-header? :-> <aslak> lfryc, hehe no, as in race conditions i mean <lfryc> race condition - I mean, request fighting in what will be enriched :-> <aslak> lfryc, you could in theory throttle the request <aslak> aa ok <aslak> there should be multiple types of filters. accept headers, url pattern etc <lfryc> hmm but browsers usually sends correct accept-headers for images/icons/etc. <lfryc> for resource types they know what to expect <aslak> depending on the use case, not all will work. if browsers don't sent accept headers, that filter might be more useful in a REST request <lfryc> yes, we could provide multiple types of filters <lfryc> thinkinga bout framework-specific and smart ones <lfryc> user may decide which to use for given use case <aslak> yea <lfryc> use the most appropriate one for the use case <lfryc> and choose/configure default one in arquillian.xml <aslak> i think you can provide in warp core http based filters * jharting has quit (Quit: Leaving.) <aslak> i guess that would be, request content, url and headers * alesj has quit (Quit: Leaving.) <lfryc> that's going to be huge :-> <lfryc> and then framework specific filters, which can be easier to use <aslak> where does arq.xml come in? * rmannibucan has quit (Remote host closed the connection) * geOffrey has quit (Ping timeout: 240 seconds) <lfryc> configure defaults <lfryc> like, I want to use JSF filter with FacesServlet mapping on /xyz <aslak> default what? filter ? <lfryc> yep <lfryc> when no filter specified, default can be used <aslak> arn't filters on a .execute() level ? <lfryc> yep, they are <lfryc> oh, no, they are on the proxy level * DavideD has quit (Ping timeout: 245 seconds) <aslak> ok, so basically via arq.xml you can say that only ever enrich jsf requests in this suite, what ever i might be calling <lfryc> which is on client-side <lfryc> but evaluated after client action <aslak> lfryc, sure, but i mean you don't need global filters. the individual .execute methods would define them <aslak> (not saying you can't have global) <lfryc> yes, but main use case for Warp is verifying request pages <aslak> eh, to rephrase.. a Filter is active from .execute start til end <lfryc> not resources <lfryc> so global might be handy <lfryc> but still you can define per Warp execution * #jboss-testing :End of Channel Ban List <aslak> and it work now based on just selecting the first request within the execute block <lfryc> yep <lfryc> first come, first served <aslak> so unless you wanted to enrich resources, you could really just split up the requests in two executes <lfryc> yep * qmx is now known as qmx away <aslak> HTTP filters should work with Resources and Ajax request, by either headers or url <aslak> a JSF filter would basically be a URL filter no? <lfryc> yes, it will be URL pattern filter <aslak> yea <aslak> what was the issue ? <aslak> :-> <aslak> known how to filter? <aslak> or the browser doing multi threaded requests that potentially create multiple enriched requests ? <lfryc> know what request to filter :-> <lfryc> know what to filter because browser may request pages/resources in parallel <aslak> does the parallel matter ? <lfryc> it matters, because without filtering, you can't choose what request to enrich/verify <lfryc> so you can either enrich first or enrich all * geOffrey (~geOffrey@174.195-241-81.adsl-dyn.isp.belgacom.be) has joined #jboss-testing * geOffrey has quit (Changing host) * geOffrey (~geOffrey@redhat/jboss/geOffrey) has joined #jboss-testing * balunasj is now known as balunasj lunch <lfryc> when enriching all requests, you can always wait for | <a href="https://issues.jboss.org/browse/ARQ-967">https://issues.jboss.org/browse/ARQ-967</a>   |
| 2155 | ARQ-967     | What's missing: * user-centric API * relation between filters and requests * integrity checks ** a filter is used ** how many requests user expects (at overall / per each filter) * standard set of common filters (TBD) * framework-specific filters * default filters configuration / SPI * groups of filters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-967">https://issues.jboss.org/browse/ARQ-967</a>   |
| 2156 | ARQ-957     | Guys, could you please review and comment what needs to be improved to stay aligned with other demos?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-957">https://issues.jboss.org/browse/ARQ-957</a>   |
| 2157 | ARQ-932     | We could solve the issue by forcing client to use only APIs of client tools (like selenium-api) and package them to the WAR. Is it possible to make anonymous classes static? -> No <a href="http://stackoverflow.com/questions/758570/is-it-possible-to-make-anonymous-inner-classes-in-java-static">http://stackoverflow.com/questions/758570/is-it-possible-to-make-anonymous-inner-classes-in-java-static</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQ-932">https://issues.jboss.org/browse/ARQ-932</a>   |
| 2158 | ARQ-932     | Would it be possible to rewrite the Anonymous Inner Class to a Static class on 'deploy', assuming of course the Inner class doesn't reference any object instances from the parent. Using e.g. javasist or similar ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-932">https://issues.jboss.org/browse/ARQ-932</a>   |
| 2159 | ARQ-928     | What's this all about? :-)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-928">https://issues.jboss.org/browse/ARQ-928</a>   |
| 2160 | ARQ-924     | What did you have in mind? I'm thinking of something similar, allowing you to build tests that run against servicemix/jboss fuse using the OSGi runtime of karaf.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQ-924">https://issues.jboss.org/browse/ARQ-924</a>   |
| 2161 | ARQ-924     | I'm curious how this works, or maybe we just need to wait for some docs to come out. Can I point to KARAF_HOME to run tests, and the container will start up for me?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-924">https://issues.jboss.org/browse/ARQ-924</a>   |
| 2162 | ARQ-918     | The following suggestions indicate to me I need to clarify what behavior we're attempting to control. * testMode = TestMode.CLIENT etc... * runMode = ArquillianRunMode.IN_CONTAINER CLIENT CLIENT_ENRICHED * Do the 'supports' and 'testing' bookends reinforce the meaning of 'inContainer' that much? A deployment is "in container" by definition. We aren't trying to control whether or not it's deployed to the container. Otherwise, we wouldn't be defining a deployment in the first place. What we are trying to control is whether Arquillian adds its own infrastructure to the deployment (effectively repackaging it). That infrastructure adds extra services to the deployment that become available once the deployment is deployed. Those services are (as of now): * a service to run tests in-container * a service to monitor, analyze or execute callbacks on the server-side code We are not trying to control how the tests are run. That behavior is controlled on the test class or test method using the @RunAsClient annotation. When absent, the default is to run the test "in-container" if the deployment supports in-container testing or "as client" if the deployment does not. (If there are multiple deployments, @OperateOnDeployment tells Arquillian which deployment to use for that test). I'll summarize the three ways a deployment is packaged and the behavior it provides: * Add the test infrastructure to the deployment - capable of running tests in-container (white box testing) * Add instrumentation to the deployment - supports client testing w/ knowledge of internal state (gray box testing) * Use the deployment exactly as it's defined - supports purely client testing (black box testing) With that in mind, I have another proposal for how to control the packaging of these services: {code} @Deployment(testingServices = ALL   INSTRUMENTATION_ONLY   NONE) {code} or as a separate annotation {code} @Deployment @TestingServices(NONE) {code} ALL could be IN_CONTAINER instead.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-918">https://issues.jboss.org/browse/ARQ-918</a>   |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | URL                                                                                           |

| 2163 | ARQ-918     | Do we want to continue supporting "mixed-mode"? Currently, this is possible doing something like this: <code>{code} @RunWith(Arquillian.class) public class ExampleIT { @Deployment public static WebArchive createDeployment() { // ... } @Test public void inContainerTest() { // ... } @Test @RunAsClient public void clientTest(@ArquillianResource URL baseUrl) { // ... } } {code}</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-918">https://issues.jboss.org/browse/ARQ-918</a> |
| 2164 | ARQ-917     | In what container have you tested this? It being a field, won't it be initialized when accessing/loading the class and fail to execute shrinkwrap in a managed/remote container?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ARQ-917">https://issues.jboss.org/browse/ARQ-917</a> |

| 2166 | ARQ-898     | Aha, now I see where the disconnect in my logic is. I suspected that the name attribute on the @Deployment annotation determined the middle segment (the deployment name), but I didn't realize that the first segment came from the @TargetsContainer annotation (the target name). I had thought that the target name came from the qualifier in arquillian.xml. If there is no @TargetsContainer annotation, is it possible to use the qualifier of the active configuration, if any? Or are these orthogonal things?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-898">https://issues.jboss.org/browse/ARQ-898</a> |
| 2167 | ARQ-892     | Aslak, last time we've talked about this you mentioned that jrebel doesn't pick up some resources. Could you give me more detailed description? I've retested the pull request and everything seems to work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-892">https://issues.jboss.org/browse/ARQ-892</a> |
| 2168 | ARQ-846     | Hi, The status is resolved in 1.1.0.Beta1, where can I find this version please? Regards                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-846">https://issues.jboss.org/browse/ARQ-846</a> |
| 2169 | ARQ-835     | reset history and push with force ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQ-835">https://issues.jboss.org/browse/ARQ-835</a> |
| 2170 | ARQ-809     | Which source are you using? arquillian-testenricher-cdi should depend on Weld Core 1.1.5 which is in central                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-809">https://issues.jboss.org/browse/ARQ-809</a> |
| 2171 | ARQ-798     | Lol, duplicating my own. How come goggle didn't find it for 'Arquillian "+httpd"' ? :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-798">https://issues.jboss.org/browse/ARQ-798</a> |
| 2172 | ARQ-796     | Deleted the {{GlassFishRestDeploymentAppender}}. Aslak, I've not deleted the older SPI file referenced in the comment - the {{glassfish-embedded-3}} artifact is no longer built, since it is not registered as a Maven module in the project. Would it be wise to delete the {{glassfish-embedded-3}} and {{glassfish-remote-3}} directories, seeing that they're not built anymore ? I think we should test the current adapter against GF 3.0 (we test against 3.1 currently) and then proceed to delete the older unused ones. NB - The modules built in CI currently are {{glassfish-managed-3.1}}, {{glassfish-remote-3.1}}, {{glassfish-embedded-3.1}} and {{glassfish-common}}.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-796">https://issues.jboss.org/browse/ARQ-796</a> |
| 2173 | ARQ-782     | Is this supported? I'm looking to use this feature and it doesn't look like my profile properties are being picked up, instead it reads \${var} as a string literal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQ-782">https://issues.jboss.org/browse/ARQ-782</a> |
| 2174 | ARQ-733     | Does it currently not do that? Or.. if so that's a bug                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-733">https://issues.jboss.org/browse/ARQ-733</a> |
| 2175 | ARQ-710     | Aslak: {quote} Not sure how to attack this.. in theory the stream that is wrapped in the managed container should be able to tell you which server it's from, so hench could be redirected somewhere, but not sure how to get 'client'. In AS4-6 CONSOLE was just another logger, I'm sure AS7 is similar. Wouldn't setting server1, server2 to log to specific file get you what you want? If no server logs to CONSOLE, then the assumption is the rest is 'client' ? {quote} I thought about that, but that would only separate by server. I believe it would be very convenient if separated by server_ and _test.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-710">https://issues.jboss.org/browse/ARQ-710</a> |
| 2176 | ARQ-710     | David Lloyd about implementing Appender-like logging: {quote} (17:16:59) OndrejZizka: Hi David, where can I find some Appender class in JBoss logging? (17:17:09) OndrejZizka: in sources (17:19:27) dmlloyd: JBoss Logging has no appenders, it's just a log frontend (17:19:39) dmlloyd: unless you're talking about the older stuff from AS 5 (17:22:24) OndrejZizka: No, AS 7 (17:22:37) OndrejZizka: So, if I want some rolling appender used in AS 7, (17:22:51) OndrejZizka: how would I do it - like in log4j.properties? (17:24:43) OndrejZizka: logging.properties goes directly to the underlying framework or is somehow processed by jboss logging? (17:29:35) dmlloyd: the logging backend in AS7 is jboss-logmanager (17:29:44) dmlloyd: it's a java.util.logging.LogManager implementation (17:29:54) dmlloyd: but it also has extensive compatibility APIs (17:30:13) dmlloyd: jboss-logmanager is what processes logging.properties (17:43:30) OndrejZizka: I haven't worked with JUL much; if I wanted to implement an appender, and set it to be used in AS7, where would I start? (17:45:30) dmlloyd: if it's specifically for AS7, the best thing to do is implement org.jboss.logmanager.ExtHandler or one of its subclasses (17:48:19) OndrejZizka: Yes, it's for AS 7 + arquillian - to separate log lines per test case. {quote} | <a href="https://issues.jboss.org/browse/ARQ-710">https://issues.jboss.org/browse/ARQ-710</a> |
| 2177 | ARQ-690     | What's left to do: Add {{-Djava.security.debug}} See <a href="http://docs.oracle.com/javase/1.5.0/docs/guide/plugin/developer_guide/debugger.html">http://docs.oracle.com/javase/1.5.0/docs/guide/plugin/developer_guide/debugger.html</a> {code} -Djava.security.manager -Djava.security.policy=xxx.policy -Djava.security.debug=access,failure {code} To ignore the JDK's default policy which merges with the specified as default behavior, the policy path is prepended with '-'. {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/ARQ-690">https://issues.jboss.org/browse/ARQ-690</a> |
| 2178 | ARQ-666     | Implementation note: No warning are issue. Configuration is hidden from tests, so user will see no warnings based on implementationClass value. This leads to following situation: {code} @Drone HtmlUnitDriver driver; {code} {code:xml} <property name="implementationClass">...FirefoxDriver</property> {code} This will use HtmlUnitDriverFactory to get instance of FirefoxDriver. This is incorrect and will fail (because HtmlUnitDriverFactory has specific instantiation). Following must be specified in order to pass, however than implementation specific details are no triggered, e.g. no ChromeSwitches will be executed. {code} @Drone WebDriver driver; {code} Is that generic approach enough?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/ARQ-666">https://issues.jboss.org/browse/ARQ-666</a> |
| 2179 | ARQ-653     | Hey Aslak, would it be possible for you to review this pull request? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-653">https://issues.jboss.org/browse/ARQ-653</a> |
| 2180 | ARQ-639     | Which information are you looking for specifically ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQ-639">https://issues.jboss.org/browse/ARQ-639</a> |
| 2181 | ARQ-638     | I see there are some bits in WildFly about this functionality, but mainly around embedded container. Shall we keep the issue open? /cc [~aslak]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-638">https://issues.jboss.org/browse/ARQ-638</a> |
| 2182 | ARQ-633     | The problem is, which module should it be in? This started as a archive.toURL extension that I wanted in ShrinkWrap, but it was refused at the time. We should probably revisit what it does and move it to ShrinkWrap.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-633">https://issues.jboss.org/browse/ARQ-633</a> |
| 2183 | ARQ-600     | {code:java}org.jboss.arquillian.container.tomcat.managed_6.TomcatManagedConfiguration{code} contains a serverName attribute that does not appear in the other container configurations. Should I remove this or propagate it to the other managed container configurations?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQ-600">https://issues.jboss.org/browse/ARQ-600</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | URL                                                                                           |

| 2184 | ARQ-600     | I've just had a go at adding tomcat-managed-8 to this source base. And now I can see that the remaining code in tomcat-managed-5.5 and tomcat-managed-6 is effectively identical - they both use "Servlet 2.5" protocol. tomcat-managed-7 and tomcat-managed-8 both use "Servlet 3.0" protocol and use the same (overridden) deploy/undeploy/list commands. ie. There's only two different flavours of tomcat-managed-N arquillian container integrations: * 5.5 and 6 * 7 and 8 I'm thinking of moving all the java code into tomcat-managed-common and just leaving the unit tests in the tomcat-managed-N modules and building tomcat-managed-N jars that just contain the appropriate org.jboss.arquillian.core.spi.LoadableExtension file. What do you think?                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/ARQ-600">https://issues.jboss.org/browse/ARQ-600</a> |
| 2185 | ARQ-597     | Is this container still needed? I'm hoping to drop support for it going forward per ARQ-1853. If there are any objections please comment on that issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-597">https://issues.jboss.org/browse/ARQ-597</a> |
| 2186 | ARQ-567     | Hello Bernard, thank you for pinpointing the suite extension and your and aslaks work on that. I've tested extension and the suite alone is working properly, but we are using persistence extension (1.0.0.Alpha5) and then following exception occurs: java.lang.RuntimeException: Could not create new instance of class org.jboss.arquillian.test.impl.EventTestRunnerAdaptor at org.jboss.arquillian.persistence.core.deployment.PersistenceExtensionArchiveAppender.requiredLibraries(PersistenceExtensionArchiveAppender.java:81) Unfortunately the real exception is eaten and I can't debug within persistence extension. Thanks, Peter                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-567">https://issues.jboss.org/browse/ARQ-567</a> |
| 2187 | ARQ-567     | Hi, Is there any news on this issue? I find it pretty interesting as we have more than 60 test cases per app and a part from build time we need big infrastructure to handle them. How do you do that in other projects? Thanks in advance. Regards. Esteve                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ARQ-567">https://issues.jboss.org/browse/ARQ-567</a> |
| 2188 | ARQ-567     | Hi, Is there a way to run multiple tests with a single Deployment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/ARQ-567">https://issues.jboss.org/browse/ARQ-567</a> |
| 2189 | ARQ-561     | Aslak, this workaround is useful only in a limited set of use cases. Here are the problems I've encountered: 1/ @Rule enricher is triggered before the Arquillian one...I was not able for example to do the following: {code} @Inject HelloService service1; @Inject HelloService service2; HelloService ruleService; @Rule public MethodRule dataProvider = new ParameterRule("ruleService", service1, service2); {code} It is clear the only way how to change that is to have a @Rule annotated method, which is not possible in JUnit currently 2/ Test method is reported as a single execution although it actually contains multiple tests 3/ MethodRule is deprecated Open question: Why do the sample implementation skip parameter enrichment while not running in container?                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-561">https://issues.jboss.org/browse/ARQ-561</a> |
| 2190 | ARQ-561     | > Open question: Why do the sample implementation skip parameter enrichment while not running in container? It would be executed both incontainer and on the client side if not one of them were skipped. We could have enhanced that with support for e.g. @RunAsClient. If we had executed the Client side multiple times for a Remote call, the Remote side would be invoked multiple times as well                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQ-561">https://issues.jboss.org/browse/ARQ-561</a> |
| 2191 | ARQ-556     | Hi guys. Is there any update to this feature request?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQ-556">https://issues.jboss.org/browse/ARQ-556</a> |
| 2192 | ARQ-521     | Karel, could you use the right URL if it's available (configured or obtained from Container based events) and if not, use the default?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQ-521">https://issues.jboss.org/browse/ARQ-521</a> |
| 2193 | ARQ-517     | [~aslubinger] [~aslak] Shall we pay this technical debt? Or is it already sorted out? :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-517">https://issues.jboss.org/browse/ARQ-517</a> |
| 2194 | ARQ-474     | I was thinking more in the line of @DependsOn("otherMethodName"). What do you mean by does not mean anything? Are you talking the annotation name "InOrder"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQ-474">https://issues.jboss.org/browse/ARQ-474</a> |
| 2195 | ARQ-474     | How about providing an annotation, lets say, @Ordered with which a whole test class could be annotated and then the test methods would be ordered according to the order in which they are written in the test class (from top->down). Do you think it would be possible?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-474">https://issues.jboss.org/browse/ARQ-474</a> |
| 2196 | ARQ-474     | What about the non ordered ones? executed before or after? Default order is 0, then you can order as you like + or - ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQ-474">https://issues.jboss.org/browse/ARQ-474</a> |
| 2197 | ARQ-467     | Got any details here? pom, stack trace etc..                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQ-467">https://issues.jboss.org/browse/ARQ-467</a> |
| 2198 | ARQ-448     | I've made the changes locally to implement ARQ-448. I'm not so familiar with git. Can you please advise me on what I need to do to submit them? Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQ-448">https://issues.jboss.org/browse/ARQ-448</a> |
| 2199 | ARQ-437     | Lukas, If was thinking about this: You can't configure this via an annotation as during the BeforeSuite event you have no idea what files are in the suite and thus you can't go through source code creating appropriate browser instances. It is difficult to get this added to Arquillian runners, as JUnit has no {After,Before}Suite events. So only thing actually available in BeforeSuite event is configuration from arquillian.xml. So I can create a Drone Extension, which if activated, creates all instance in BeforeSuite and TestEnricher will later inject all field instances from SuiteScope context. If no browser instance is found, it will safely fail. This means that you will have possibility to use either BEFORE_SUITE + BEFORE_METHOD or BEFORE_CLASS + BEFORE_METHOD browsers, latter being the default. Do you find this usable? Proposed extension: {code:xml} <extension qualifier="drone-lifecycle"> <property name="browser-lifecycle">suite class</property> </extension> {code} WDYT? | <a href="https://issues.jboss.org/browse/ARQ-437">https://issues.jboss.org/browse/ARQ-437</a> |
| 2200 | ARQ-437     | One more important note: With SuiteScoped browsers you become dependent on class ordering. You can add a TestClass, thus changing order leading to unexpected failures. I'm not sure if class ordering is preserved on different platforms, afaii Surefire uses filesystem ordering as default. Are the advantages of this future bigger than drawbacks?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-437">https://issues.jboss.org/browse/ARQ-437</a> |
| 2201 | ARQ-436     | Seems to me that new Arquillian Core is logging testng to console. Lukas, can you check Ajocado ftest example, which uses TestNG module if there is enough logging?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-436">https://issues.jboss.org/browse/ARQ-436</a> |
| 2202 | ARQ-435     | Did I got right that idea of this is to make a screenshot and log actual state of the application (e.g. generated HTML) if test fails? Can you please elaborate on how this should be used? Do you want something like following? {code} @FailureLogging @RunWith(Arquillian.class) public class Test { ... } {code} and {code} @RunWith(Arquillian.class) public class Test { @Test @FailureLogging public void test(){ ... } } {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-435">https://issues.jboss.org/browse/ARQ-435</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | URL                                                                                           |

| 2203 | ARQ-433     | <p>The tests pass from the old <a href="https://github.com/arquillian/arquillian.git">https://github.com/arquillian/arquillian.git</a> repo. A notable difference is in the old repo the Servlet 2.5 protocol is being used, whereas in the new repo it's the Local protocol. The <code>{org.jboss.arquillian.protocol.servlet.v_2_5.ServletProtocolDeploymentPackager}</code> adds auxiliary archives such as <code>{arquillian-tomcat-testenrichers.jar}</code> [to the web application archive] <a href="http://community.jboss.org/message/551100">http://community.jboss.org/message/551100</a>: <code>{noformat} . /META-INF /META-INF/context.xml /WEB-INF /WEB-INF/beans.xml /WEB-INF/classes /WEB-INF/classes/org /WEB-INF/classes/org/jboss /WEB-INF/classes/org/jboss/arquillian /WEB-INF/classes/org/jboss/arquillian/container /WEB-INF/classes/org/jboss/arquillian/container/tomcat /WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6 /WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6/TestServlet.class /WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6/TomcatEmbeddedInContainerTestCase.class /WEB-INF/classes/org/jboss/arquillian/protocol /WEB-INF/classes/org/jboss/arquillian/protocol/servlet /WEB-INF/classes/org/jboss/arquillian/protocol/servlet/runner /WEB-INF/classes/org/jboss/arquillian/protocol/servlet/runner/SecurityActions\$1.class /WEB-INF/classes/org/jboss/arquillian/protocol/servlet/runner/SecurityActions\$GetTcdAction.class /WEB-INF/classes/org/jboss/arquillian/protocol/servlet/runner/SecurityActions.class /WEB-INF/classes/org/jboss/arquillian/protocol/servlet/runner/ServletTestRunner.class /WEB-INF/lib /WEB-INF/lib/arquillian-core.jar /WEB-INF/lib/arquillian-junit.jar /WEB-INF/lib/arquillian-tomcat-testenrichers.jar /WEB-INF/lib/weld-servlet-1.0.1-Final.jar /WEB-INF/web.xml {noformat} The <code>{org.jboss.arquillian.container.test.impl.client.protocol.local.LocalDeploymentPackager}</code> does not: <code>{noformat} /META-INF /META-INF/context.xml /WEB-INF /WEB-INF/beans.xml /WEB-INF/classes /WEB-INF/classes/org /WEB-INF/classes/org/jboss /WEB-INF/classes/org/jboss/arquillian /WEB-INF/classes/org/jboss/arquillian/container /WEB-INF/classes/org/jboss/arquillian/container/tomcat /WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6 /WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6/TestBean.class /WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6/TestServlet.class /WEB-INF/classes/org/jboss/arquillian/container/tomcat/embedded_6/TomcatEmbeddedInContainerTestCase.class /WEB-INF/lib /WEB-INF/lib/weld-servlet-1.0.1-Final.jar /WEB-INF/web.xml {noformat}</code> Was the change to the Local protocol intentional, and if so any tips on how test enrichment should work with it? Also are there any immediate plans to switch Hudson to the new repo?</code></p> | <a href="https://issues.jboss.org/browse/ARQ-433">https://issues.jboss.org/browse/ARQ-433</a> |
| 2204 | ARQ-433     | Can we make this for 1.0.0.Final? this/next week? :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQ-433">https://issues.jboss.org/browse/ARQ-433</a> |
| 2205 | ARQ-417     | Are we still interested in this feature?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-417">https://issues.jboss.org/browse/ARQ-417</a> |
| 2206 | ARQ-414     | Thanks for your input guys! Shall we move issues to GitHub so that they are closer to the code and use this one as an umbrella?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQ-414">https://issues.jboss.org/browse/ARQ-414</a> |
| 2207 | ARQ-397     | <p>I was interested in testing it so I checked out your branch and tried to install it locally. First I had the following error : <code>{quote}{color:red}'dependencies.dependency.version' for org.jboss.shrinkwrap.shrinkwrap-extension-glassfish:jar is missing. @ line 43, column 19{color}{quote}</code> I just added the version to pom.xml (1.0.0-alpha-12) and now I cannot install because the "IntegrationWarTestCase" fails on : <code>{quote}</code> Failed tests: <code>shouldBeAbleToInjectEJBsInstanceVariable(org.jboss.arquillian.container.glassfish.embedded_3_1.app.IntegrationWarTestCase)</code> <code>{quote}</code> It seems that the test case in error was not able to inject the referenced EJB : <code>{code:java} @EJB private NoInterfaceEJB bean; @Test public void shouldBeAbleToInjectEJBsInstanceVariable() throws Exception { Assert.assertNotNull( "Verify that the Bean has been injected", bean); Assert.assertEquals("Arquillian", bean.getName()); } {code}</code> Having no clue why this could happen, I just installed it skipping the tests, and tried the installed snapshot on my project. The sun-resources.xml is deployed correctly : <code>{quote}</code> INFO: command add-resources result: PlainTextActionReporterSUCCESSDescription: add-resources AdminCommandnull JDBC connection pool jdbc/wakwi-pool created successfully. JDBC resource jdbc/wakwi-ds created successfully. <code>{quote}</code> However ... I have the problem that the ejb is not injected in my test. My test code : <code>{code:java} @RunWith(Arquillian.class) public class TestFileManagementServiceTest { @Deployment public static WebArchive createDeployment() { return ShrinkWrap.create(WebArchive.class, "testFileManagementService.war").addClasses( FileManagementService.class, File.class, Category.class, FileStore.class, CurrentFileStore.class, DefaultFileStore.class). addAsResource("test-persistence.xml", ArchivePaths.create("META-INF/persistence.xml")); addAsResource(EmptyAsset.INSTANCE, "WEB-INF/beans.xml"); } @EJB private FileManagementService service; @Test public void testSaveFile() { assertNotNull("Service should have been injected.", service); } } {code}</code> Do you have the same problem injecting an EJB using the branch ARQ-397 ? Is it related ?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-397">https://issues.jboss.org/browse/ARQ-397</a> |
| 2208 | ARQ-395     | I got this message. What does this mean? How to resolve it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ARQ-395">https://issues.jboss.org/browse/ARQ-395</a> |
| 2209 | ARQ-395     | Hi, I also get this error-msg: "DeploymentScenario contains targets not matching any defined Container in the registry". @Aslak --- re. "no container integration module on classpath"... I have this in my pom-file: <code>&lt;dependency&gt; &lt;groupId&gt;org.jboss.arquillian.container&lt;/groupId&gt; &lt;artifactId&gt;arquillian-jbossas-embedded-6&lt;/artifactId&gt; &lt;version&gt;1.0.0.Alpha5&lt;/version&gt; &lt;scope&gt;test&lt;/scope&gt; &lt;/dependency&gt; &lt;dependency&gt; &lt;groupId&gt;org.jboss.jbossas&lt;/groupId&gt; &lt;artifactId&gt;jboss-as-depchain&lt;/artifactId&gt; &lt;version&gt;6.0.0.Final&lt;/version&gt; &lt;type&gt;pom&lt;/type&gt; &lt;/dependency&gt;</code> Isn't that enough? Anything else I need to do to launch JBoss from Arquillian? (I do not have any @TargetsContainer annotation in my code)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-395">https://issues.jboss.org/browse/ARQ-395</a> |
| 2210 | ARQ-395     | The dependencies looks right, it's basically the arquillian-jbossas-embedded-6 dep it's complaining missing. Do you have it setup in a Maven Profile? And if so, are you sure it's activated?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-395">https://issues.jboss.org/browse/ARQ-395</a> |
| 2211 | ARQ-359     | "envy" is the server hostname? Can the server resolve "envy" to itself ? What is your configuration ? this sounds similar to the localhost ubuntu resolve issue..                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ARQ-359">https://issues.jboss.org/browse/ARQ-359</a> |
| 2212 | ARQ-358     | Is it still something we would like to implement [~:aslak]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ARQ-358">https://issues.jboss.org/browse/ARQ-358</a> |
| 2213 | ARQ-351     | How is this related to ARQ-456? Does it mean that @Before annotated method can be used if whole test is marked as @RunAsClient?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQ-351">https://issues.jboss.org/browse/ARQ-351</a> |

| 2214 | ARQ-351     | This issue just bit me now when trying to restructure part of WFLY testsuite. Aslak, where is this on the roadmap? How hard would it be for a contributor to fix this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ARQ-351">https://issues.jboss.org/browse/ARQ-351</a> |
| 2215 | ARQ-348     | Hi Aslak, is it possible to get byteman support to Arquillian for AS7. I was just informed in AS7-2530 that current implementation is in experimental phase. This thing seems to be needed for us. Thank you, Mirek                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-348">https://issues.jboss.org/browse/ARQ-348</a> |
| 2216 | ARQ-347     | Is this issue "dead"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-347">https://issues.jboss.org/browse/ARQ-347</a> |
| 2217 | ARQ-337     | <p>&lt;aslak&gt; pbakker, we will create a common arq 'ContextController' you can inject, since all of this is non standard between cdi impls and containers.. with a common api exposed by Arq your tests can be portable between impls pbakker, if you want to help prototype that your more then welcome.. :) &lt;pbakker&gt; what else should the contextcontroller be able to do? because request and session are part of the test already &lt;aslak&gt; pbakker, session/req shouldn't be auto in the test case(maybe with some annotations but..). it just works by chance currently by chance between embedded vs remote container that is &lt;pbakker&gt; hehe ok i wasn't aware of that &lt;aslak&gt; it works basically because the remote test execution currently use HTTP to execute, so when in cdi, you will have req and session there.. but when you move to e.g. ejb protocol for execution then you only have request the scopes should be controlled by the test, not 'randoms' in the environment.. :) &lt;pbakker&gt; ok than a ContextController makes a lot of sense so i guess step one would be to get it working consistently over types of containers step 2 to look at other cdi impl &lt;aslak&gt; pbakker, yea, start with weld-ee weld-se and jboss remote probably the easies let CDI manage the ContextController as a bean, and only use CDI to inject it as well &lt;pbakker&gt; i agree &lt;aslak&gt; possible we could do something like @Scopes(Request, Session) @Test as a 'around invoke style, but that is a abstraction over the ContextController that would be step 3/4 or so &lt;pbakker&gt; yeah that would be good i guess we just have to write different implementations for each container because different way of executing the tests if there is a real http request you probably want to run the test in that same request, not in a simulated one &lt;aslak&gt; i think one for weld based containers should be ok, since weld works the same in all, but need different impl between openweb beans / reinis etc resin &lt;pbakker&gt; but in a remote test it now uses a http request to execute the test right, and not in an embedded container (lots of assumptions here, haven't really looked at the code yet...) &lt;aslak&gt; hmm.. not quite sure. you might be able to reuse the one there, depends a bit on how strict the container is.. weld allow you to stop and start new requests within a reques etc.. as pete commented, don't do that if you want it to work.. hehe pbakker, correct &lt;pbakker&gt; lol, that sounds extremely hacky, but it might be a way around it and work glassfish-remote and jboss-remote in a similar way? &lt;aslak&gt; yes</p> | <a href="https://issues.jboss.org/browse/ARQ-337">https://issues.jboss.org/browse/ARQ-337</a> |
| 2218 | ARQ-336     | how to hard kill a embedded server ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-336">https://issues.jboss.org/browse/ARQ-336</a> |
| 2219 | ARQ-336     | <p>All the functionality is implemented already but not yet pushed. A user will be able to inject a ContainerController: {code:java} @ArquillianResource ContainerController controller; {code} and start/stop/kill server instances like this: {code:java} @Test public void killTest() throws Exception { //CONTAINER2 variable corresponds to container's name specified via qualifier arquillian.xml // ... &lt;container qualifier="container2" managed="false"&gt; controller.start(CONTAINER2); //do some test controller.stop(CONTAINER2); //do some test controller.start(CONTAINER2); //do some test controller.kill(CONTAINER2); //do some test } {code} The kill method has a default implementation called DefaultServerKillProcessor (implements org.jboss.arquillian.container.spi.ServerKillProcessor) which is used if no other impls are available. These can be shipped with DeployableContainer implementations or directly within a test. The default implementation does the same as stop() so when there is a need to hard kill a server instance, the concrete implementation for the target container has to be supplied. There are certain limitations, though. When running in a Client mode (@RunAsClient), all servers can be started/stopped/killed. To run in InContainer mode only containers other than the one running the test can be stopped/killed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-336">https://issues.jboss.org/browse/ARQ-336</a> |
| 2220 | ARQ-336     | This is starting to tie into this issue a bit: ARQ-236 Maybe we simple should call it "mode"/"controlmode". Where possible values are: suite class manual                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-336">https://issues.jboss.org/browse/ARQ-336</a> |
| 2221 | ARQ-336     | We already had a two state logic in Arquillian - RunAs(CLIENT, INCONTAINER) and it was replaced in Alpha5. Couldn't we move this to the class directly? Something like: {code} @ContainerSuiteLifecycle class FooTest { ... } {code} or {code} @ContainerManualLifecycle("jboss1") @ContainerClassLifecycle("jboss2", "jboss3") class Foo2Test { @Deployment @TargetsContainer("jboss1") ... } {code} In XML/XSD, this mapping would correspond rather to an element than attribute, so user can easily provide his own implementation and not depend on suite/class/manual possibilities, similar to protocols.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQ-336">https://issues.jboss.org/browse/ARQ-336</a> |
| 2222 | ARQ-336     | What happens when: @ContainerSuiteLifecycle public class Foo1Test { and @ContainerClassLifecycle public class Foo2Test { exist in the same Suite ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQ-336">https://issues.jboss.org/browse/ARQ-336</a> |
| 2223 | ARQ-336     | Could this be pushed to Arquillian and then to AS7 soon? We (QE) really need such functionality for our test development. Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQ-336">https://issues.jboss.org/browse/ARQ-336</a> |
| 2224 | ARQ-336     | Yep, Martin what's the status of this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ARQ-336">https://issues.jboss.org/browse/ARQ-336</a> |
| 2225 | ARQ-336     | <p>This feature looks like exactly what we need to test crash recovery in XTS. However, I have one question... We need to be very precise about when the server crashes. To achieve this we use Byteman to inject some crash code into the server at an exact time and place. Will this feature work when the server has killed itself? This is roughly what our usage would look like: {code} @ArquillianResource ContainerController controller; @Test public void killTest() throws Exception { controller.start(CONTAINER1); //start a test scenario //Wait for byteman to kill the server controller.start(CONTAINER1); //Wait for recovery to complete //Verify correct recovery outcome } {code}</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQ-336">https://issues.jboss.org/browse/ARQ-336</a> |
| 2226 | ARQ-336     | <p>This won't work because the "start" method will start the container only if it's not started yet. When you don't call stop() or kill(), the container will be still marked as "started": <a href="https://github.com/mgencur/arquillian-core/blob/12d710e821e51e9231114cdb3417858fd0f8dbf/container/impl-base/src/main/java/org/jboss/arquillian/container/impl/client/container/ContainerLifecycleController.java">https://github.com/mgencur/arquillian-core/blob/12d710e821e51e9231114cdb3417858fd0f8dbf/container/impl-base/src/main/java/org/jboss/arquillian/container/impl/client/container/ContainerLifecycleController.java</a> . We would need to reconsider the approach again. However, you can provide your own implementation of a <a href="https://github.com/mgencur/arquillian-core/blob/12d710e821e51e9231114cdb3417858fd0f8dbf/container/spi/src/main/java/org/jboss/arquillian/container/spi/ServerKillProcessor.java">https://github.com/mgencur/arquillian-core/blob/12d710e821e51e9231114cdb3417858fd0f8dbf/container/spi/src/main/java/org/jboss/arquillian/container/spi/ServerKillProcessor.java</a> and do the waiting for byteman to kill the server in its kill() method (an example can be found here: <a href="https://github.com/mgencur/edg-tests/blob/master/failover/src/main/java/org/arquillian/edg/failover/extension/JBossAS7ServerKillProcessor.java">https://github.com/mgencur/edg-tests/blob/master/failover/src/main/java/org/arquillian/edg/failover/extension/JBossAS7ServerKillProcessor.java</a>). Then you would normally call controller.kill(CONTAINER1). Is that clear?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQ-336">https://issues.jboss.org/browse/ARQ-336</a> |

| 2227 | ARQ-336     | Martin, Thanks for the info. Looks like writing our own impl of ServerKillProcessor shouldn't be too difficult. We should be able to use the example in edg-tests to figure out how to specify our own impl of ServerKillProcessor. Does this make sense?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/ARQ-336">https://issues.iboss.org/browse/ARQ-336</a> |
| 2228 | ARQ-332     | i do see your point. At least in my mind, Arquillian should be able to provide the Switzerland of configuration injection though, at least from my perspective. how would the testing stuff work with @Deployment in an Arquillian test? i never got in to testing, so i'm not sure at what point the config parameters are available; but they look like they're available in the equivalent of @Before.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/ARQ-332">https://issues.iboss.org/browse/ARQ-332</a> |

| 2230 | ARQ-322     | In follow-up to your other commands: ---- *deploying glassfish-resources.xml* I agree that ideally we should wait on the fix in GlassFish. If that stalls, I think we could probably hit most of the use cases by parsing the XML file ourselves and issuing the individual delete-* commands in reverse. Let's open a separate tracking issue for that.<br>*setting the debug port* I also agree that the start-domain command should accept a debug port. I did, however, look into what it would take to change the port in the container adapter. In a nutshell, you can only change the debug port when the DAS is running (or you have to edit the domain.xml file manually). Here's the command:<br>{code} asadmin set server.java-config.debug-options=-Xdebug -Xrunjdpw:transport=dt_socket,server=y,suspend=y,address=9009 {code} There is another issue at hand here. In order for the developer to make use of debugging w/ the managed container, it must be possible to set the suspend flag on the jdpw option. So --debug alone isn't sufficient (again, probably something start-domain should support). Here's the code that would be required to do this today: {code:title=GlassFishServerControl#start()}<br>if (config.isDebugEnabled()) { result = executeAdminCommand("Setting debug options", "set", Arrays.asList(config.getTarget() + ".java-config.debug-options=" + "-Xdebug -Xrunjdpw:transport=dt_socket,server=y,suspend=y,address=" + config.getDebugSocketPort())); if (result > 0) {<br>executeAdminDomainCommand("Stopping container", "stop-domain", new ArrayList<String>()); throw new LifecycleException("Could not set debug options"); }<br>// NOTE we can't use restart-domain with suspend=y because connecting the debugger // does not resume startup result =<br>executeAdminDomainCommand("Stopping container", "stop-domain", new ArrayList<String>()); if (result > 0) { throw new LifecycleException("Could not stop<br>container to restart in debug mode"); } result = executeAdminDomainCommand("Starting container in debug mode", "start-domain", Arrays.asList("--debug"));<br>if (result > 0) { throw new LifecycleException("Could not restart container in debug mode"); } } {code} {code:title=GlassFishServerControl#stop()} if<br>(config.isDebugEnabled()) { result = executeAdminCommand("Restoring debug options", "set", Arrays.asList(config.getTarget() + ".java-config.debug-options=" + "-Xdebug -Xrunjdpw:transport=dt_socket,server=y,suspend=n,address=" + config.getDebugSocketPort())); if (result > 0) { logger.warning("Could not reset<br>debug options, you may need to change them manually"); } } {code} and of course the configuration property:<br>{code:title=GlassFishManagedContainerConfiguration} /** * Socket port to use for debugging */ private int debugSocketPort = 9009; public int getDebugSocketPort()<br>{ return debugSocketPort; } public void setDebugSocketPort(int debugSocketPort) { this.debugSocketPort = debugSocketPort; } {code} *add support for JVM<br>flags* If setting the debug port wasn't complex enough, the JVM arguments are just crazy. Again, JVM options can be set with the DAS is running. However, it only<br>supports deleting or appending, not replacing. To do this reliably, you have to read in the JVM options, figure out if the ones you want to add overlap, etc, etc. Here's the<br>asadmin command set to set an option: {code} asadmin --echo create-jvm-options -Xmx512m {code} This is really where I think manually editing the domain.xml<br>would make sense, because working with the available commands is like having your hands tied. ---- There is one other option to all of this. We could support creating a<br>domain configuration to set custom properties such as the debug port and jvm options, then restart into that configuration. The configuration is created using the copy-<br>config command [1]. The benefit to this approach is that it would also side step the issue of having to revert any changes we make for the test run (such as the debug<br>port). |------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|
| 2231 | ARQ-322     | Aha!!! The REST API no longer allows you to request XML as a response type. If you change the "accepts" from MediaType.APPLICATION_XML to MediaType.APPLICATION_JSON, you'll see that it's trying to return this string: <code>{'message':"", 'command': 'server', 'exit_code': 'SUCCESS', 'extraProperties': {'commands': [], 'methods': {'name': 'GET'}, 'childResources': {'server': 'http://localhost:4848/management/domain/servers/server/server'}}}</code> Can you gut out the XML parsing and replace with JSON parsing? Then we'll be in good shape. Btw, I'm pretty sure the admin REST API has always support JSON responses. For some reason, Jason picked XML when we wrote the first prototype.                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-322">https://issues.jboss.org/browse/ARQ-322</a> |
| 2232 | ARQ-322     | Ah, right, I should have guessed there was another issue based on the fact that we've discussed it in the past. Thanks for the pointer. As for XML vs JSON, I wonder which would be faster. I would imagine that the developer would prefer speed over one less dependency, since parse speed affects every test execution. I could see the extra dep as a problem if it had to be packaged, but in this case it's purely for client-side usage. Should we at least do an analysis of the speed? If so, I can open a separate issue.                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-322">https://issues.jboss.org/browse/ARQ-322</a> |
| 2233 | ARQ-315     | Is there a way to do this with JBoss 4.2?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQ-315">https://issues.jboss.org/browse/ARQ-315</a> |
| 2234 | ARQ-315     | Hi Dan, any updates on this? Will this be working for all JBoss AS containers?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ARQ-315">https://issues.jboss.org/browse/ARQ-315</a> |
| 2235 | ARQ-311     | where is this commit?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ARQ-311">https://issues.jboss.org/browse/ARQ-311</a> |
| 2236 | ARQ-297     | What Thomas did could be replaced with: <code>mvn clean install -pl container/osgi-embedded/containers/osgi-remote -am</code> The same goes for the ppl that are interested in only one container: <code>mvn clean install -pl containers/jbossas-remote-6,junit -am</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-297">https://issues.jboss.org/browse/ARQ-297</a> |
| 2237 | ARQ-297     | I've updated the build page accordingly: <a href="https://www.jboss.org/arquillian/build.html">https://www.jboss.org/arquillian/build.html</a> We may need a docs update too (I can't remember if we have build instructions there). Should we still move forward with creating some basic profiles? Do we want to get rid of the OSGi profile?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ARQ-297">https://issues.jboss.org/browse/ARQ-297</a> |
| 2238 | ARQ-286     | Hi, I would like to take a look at this issue. In the end the behavior for the @Rule annotation should be the same as for @Before/@After (execute the rule only on the container if we are in Client mode). Is that correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-286">https://issues.jboss.org/browse/ARQ-286</a> |
| 2239 | ARQ-286     | It seems to me that it is still failing in RunAsClient scenario. Consider this: <code>{code} @RunWith(Arquillian.class) @RunAsClient public class TestCase { @Rule public ExpectedException e = ExpectedException.none(); @Test public void test() { e.expect(RuntimeException.class) throw new RuntimeException(); } }</code> Observing <code>org.jboss.arquillian.test.spi.event.suite.After</code> and <code>org.jboss.arquillian.test.spi.TestResult</code> still tells me that <code>result.getStatus() == Status.FAILED</code> is true. I am using <code>{code} &lt;dependency&gt; &lt;groupId&gt;org.jboss.arquillian.junit&lt;/groupId&gt; &lt;artifactId&gt;arquillian-junit-container&lt;/artifactId&gt; &lt;scope&gt;test&lt;/scope&gt; &lt;/dependency&gt; {code}</code> in the test project. Should I file related jira or client mode was not treated yet? Thanks | <a href="https://issues.jboss.org/browse/ARQ-286">https://issues.jboss.org/browse/ARQ-286</a> |
| 2240 | ARQ-286     | I'm triing arquillian 1.1.7 with the same code in mode 'in container' so: <code>{code:java} @RunWith(Arquillian.class) public class TestCase { @Rule public ExpectedException e = ExpectedException.none(); @Test public void test() { e.expect(RuntimeException.class) throw new RuntimeException(); } }</code> I see that the rule is executed anyhow in the client side. Should it run in the container side?                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQ-286">https://issues.jboss.org/browse/ARQ-286</a> |
| 2241 | ARQ-286     | Do you have the code/pom example somewhere?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-286">https://issues.jboss.org/browse/ARQ-286</a> |
| 2242 | ARQ-286     | Ok I reproduced the problem I met. In the RuleTest there is a runtime exception that is thrown if the test is not in the server side, so the rules.Container class starts only once and my test fail. Only a question. Can I choose if run the test only in a mode instead of both leaving the exception inside the instantiation of the rule? I updated the git project with the issue                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-286">https://issues.jboss.org/browse/ARQ-286</a> |
| 2243 | ARQ-271     | Hi Thomas, are you still working on this? What is the current status? Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-271">https://issues.jboss.org/browse/ARQ-271</a> |
| 2244 | ARQ-271     | Any update on this? It looks like it didn't make it into 1.0.0-Final. Is there a work around? Can I force the enricher to execute manually from within my test's @BeforeClass method?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ARQ-271">https://issues.jboss.org/browse/ARQ-271</a> |
| 2245 | ARQ-269     | Do we know 100% that this will always be the case? GlassFish has a notion of DomainAdminServer, which is responsible for Deploying to the Nodes. Will the Deployer IP and the 'Testing' Node IP always be the same ? ARQ-153 will move the removeServerAddress out of the GlassFish container configuration as a Protocol Configuration as well..                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-269">https://issues.jboss.org/browse/ARQ-269</a> |
| 2246 | ARQ-261     | (01:08:32) ozizka-here: jweiss: So, did you work with CLI? (01:08:43) jweiss: ozizka-here: a tiny bit (01:08:51) jweiss: cswiii is more experienced with it (01:09:27) ozizka-here: FWIK, it's for a client side, (01:09:27) ozizka-here: so my idea is to get agent to think it's registered, so it doesn't hang on start, (01:09:42) ozizka-here: and then connect through CLI and just operate the objects available (01:10:03) jweiss: that may work, like i said i was guessing                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-261">https://issues.jboss.org/browse/ARQ-261</a> |
| 2247 | ARQ-248     | Are there API changes that need to be covered by the upgrade? or is this just a examples/docs/default compile v update?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-248">https://issues.jboss.org/browse/ARQ-248</a> |
| 2248 | ARQ-244     | Spring cleaning - how relevant is this issue after 6y? Can we close it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-244">https://issues.jboss.org/browse/ARQ-244</a> |
| 2249 | ARQ-238     | do you have a jndi.properties file on your classpath? alla: <a href="http://github.com/aslakknutsen/arquillian/blob/ARQ-238/containers/jbossas-remote-4.2/src/test/resources/jndi.properties">http://github.com/aslakknutsen/arquillian/blob/ARQ-238/containers/jbossas-remote-4.2/src/test/resources/jndi.properties</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQ-238">https://issues.jboss.org/browse/ARQ-238</a> |
| 2250 | ARQ-238     | I cloned the branch but it seems that now there are some compilation errors because of recente changes on upstream. Are you planning to work on this one any time soon? I think I can help on this since it's needed for the project I'm working right now. Thanks for the great work, Davide                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/ARQ-238">https://issues.jboss.org/browse/ARQ-238</a> |
| 2251 | ARQ-238     | Brilliant! Here's my prototype: <a href="https://github.com/DavideD/arquillian/commits/ARQ-238">https://github.com/DavideD/arquillian/commits/ARQ-238</a> I've created the managed and the remote container following the wiki about JSR88 at <a href="http://community.jboss.org/wiki/JSR88Client">http://community.jboss.org/wiki/JSR88Client</a> I saw that you were using a different approach...is there any particular reason? I have to clean it but it seems to work. Cheers                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-238">https://issues.jboss.org/browse/ARQ-238</a> |
| 2252 | ARQ-197     | Hi, Is there a way to run multiple tests with a single Deployment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/ARQ-197">https://issues.jboss.org/browse/ARQ-197</a> |
| 2253 | ARQ-197     | Hi [~huangdihu], Thank you so much for taking your time to reply to my questions patiently. I currently have a project that has a deployment class Deployments with the extension @ArquillianSuiteDeployment added and two test classes Greeter and Greeter2 both JUnit Tests Running the Tests gives an exception and tests fail. Could you let me know what I am missing in the Test Classes? Or is it possible to provide ur mail ID so that I could send a snippet of my classes?                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ARQ-197">https://issues.jboss.org/browse/ARQ-197</a> |
| 2254 | ARQ-197     | Hi [~huangdihu] That was really helpful. Thank you for the link. Is it possible to use ArquillianSuiteExtension in Arquillian with JUnit tests running in Apache Tomcat Container?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/ARQ-197">https://issues.jboss.org/browse/ARQ-197</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | URL                                                                                           |

| 2255 | ARQ-197     | Hi [~aslak] I've been following this for well over half a year now. I was also trying out the [arquillian-suite-extension] [https://www.google.ch/url?sa=t&rct=j&q=&esrc=s&source=web&cd=1&cad=rja&uact=8&ved=0ahUKewjv1oS21NTJAhXlmw4KHcfvBxgQFggdMAA&url=https%3A%2F%2Fgithub.com%2Farquillian-suite-extension&usg=AFQjCNFGF2kTBJM9wZt16f2NuDZHCT15zQ] from ingwarsw, but it wouldn't fit my needs. Any update on this? Read something on Twitter that it might be ready in January? Thanks Martin                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-197">https://issues.jboss.org/browse/ARQ-197</a> |
| 2256 | ARQ-197     | A very quick update on this would be really appreciated. Is there hope that this will be released or should we assume it has been dropped? After all, this is the second most voted for issue in this JIRA... (!)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQ-197">https://issues.jboss.org/browse/ARQ-197</a> |
| 2257 | ARQ-197     | Hi and thank's to all who are working on Arquillian and especially on this issue. I really appreciate this great work. Is there a planned release date for Version 1.2.0?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-197">https://issues.jboss.org/browse/ARQ-197</a> |
| 2258 | ARQ-194     | where is the code for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ARQ-194">https://issues.jboss.org/browse/ARQ-194</a> |
| 2259 | ARQ-187     | To be 'true' to what we show, we need to be able to put Arquillian into a dry-run mode, a Profile where the defined container is overridden with a ExportContainer that can export this format on deploy. We should reuse as much of the same Arq core / setup as possible but without touching a live container. We of course also need to exclude the @Test from execution. (note to self, if we use the DeployableContainer SPI for exporting, how do we deal with Manual deployment which are only happening under @test)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQ-187">https://issues.jboss.org/browse/ARQ-187</a> |
| 2260 | ARQ-166     | Two open questions remain: 1. Should XML be all uppercase in the configuration properties domainXml and resourcesXml? 2. Should we provide the configuration defaultDataSourceName that sets up an org.apache.derby.jdbc.EmbeddedDataSource? The reason for #2 is that the default data source in GlassFish (named jdbc/___default) connects to a remote Derby instance, which will not likely be available to an embedded GlassFish instance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-166">https://issues.jboss.org/browse/ARQ-166</a> |
| 2261 | ARQ-155     | On the other hand, isn't it more intuitive to bring up GF on the standard port, which the user would be expecting? Seems this is more common than the need to avoid conflicts with a running instance, which of course a user shouldn't do anyway. Think of it like this: if they were bringing up two instances on their own, they'd have to configure the 2nd to avoid a port conflict, not expect that as a default.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQ-155">https://issues.jboss.org/browse/ARQ-155</a> |
| 2262 | ARQ-148     | If done on a container level, groups, protocols and extensions won't profit of this, is that a correct assumption?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ARQ-148">https://issues.jboss.org/browse/ARQ-148</a> |
| 2263 | ARQ-148     | Where can I find this change? I'm pulling in Arquillian 1.0.0.Final-SNAPSHOT and the change is not getting picked up: > mvn dependency:tree [INFO] org.jboss.as.test.clustering:my-arquillian-testsuite:jar:1.0.0-SNAPSHOT [INFO] +- org.jboss.spec.java:javax.servlet:jboss-servlet-api_3.0_spec:jar:1.0.0.Final:provided [INFO] +- org.jboss.arquillian.junit:arquillian-junit-container:jar:1.0.0.Final-SNAPSHOT:compile [INFO]   +- org.jboss.arquillian.junit:arquillian-junit-core:jar:1.0.0.Final-SNAPSHOT:compile [INFO]   +- org.jboss.arquillian.test:arquillian-test-api:jar:1.0.0.Final-SNAPSHOT:compile [INFO]   +- org.jboss.arquillian.test:arquillian-test-spi:jar:1.0.0.Final-SNAPSHOT:compile [INFO]     +- org.jboss.arquillian.core:arquillian-core-spi:jar:1.0.0.Final-SNAPSHOT:compile [INFO]     \- org.jboss.shrinkwrap:shrinkwrap-api:jar:1.0.0-beta-5:compile ... <container qualifier="jboss" default="false"> <configuration> <property name="jbossHome">target/clustering-udp-0</property> <property name="javaVmArguments">\${ip.server.stack}</property> <property name="bindAddress">192.168.0.103</property> <property name="serverConfig">standalone.xml</property> <property name="startupTimeoutInSeconds">30</property> <property name="outputToConsole">true</properties> </configuration> </container> and i'm passing in <systemPropertyVariables><ip.server.stack>-Djava.net.prefer.IPv4Stack=true</ip.server.stack></systemPropertyVariables> Running TestSuite Sep 12, 2011 10:33:07 AM org.jboss.as.arquillian.container.managed.ManagedDeployableContainer startInternal INFO: Starting container with: [java, \${ip.server.stack}], -Djboss.home.dir=target/clustering-udp-1, -Dorg.jboss.boot.log.file=target/clustering-udp-1/standalone/log/boot.log, -Dlogging.configuration=file:target/clustering-udp-1/standalone/configuration/logging.properties, -Djboss.modules.dir=target/clustering-udp-1/modules, -jar, /home/nrla/maven/my-arquillian-testsuite/target/clustering-udp-1/jboss-modules.jar, -mp, target/clustering-udp-1/modules, -logmodule, org.jboss.logmanager, -jaxpmodule, javax.xml.jaxp-provider, org.jboss.as.standalone, -server-config, standalone.xml] Sep 12, 2011 10:33:07 AM org.jboss.remoting3.EndpointImpl <clinit> INFO: JBoss Remoting version 3.2.0.Beta2 Exception in thread "main" java.lang.NoClassDefFoundError: \${ip.server.stack} Caused by: java.lang.ClassNotFoundException: \${ip.server.stack} at java.net.URLClassLoader\$1.run(URLClassLoader.java:202) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:190) at java.lang.ClassLoader.loadClass(ClassLoader.java:306) at sun.misc.Launcher\$AppClassLoader.loadClass(Launcher.java:301) at java.lang.ClassLoader.loadClass(ClassLoader.java:247) Could not find the main class: \${ip.server.stack}. | 2264 | ARQ-141     | Is this documented anywhere? I don't see it here: https://docs.jboss.org/author/display/ARQ/Reference+Guide especially here where I'd expect to: https://docs.jboss.org/author/display/ARQ/Servlet+3.0. A Google search for "deploymentExportPath site:docs.jboss.org/author/display/ARQ/" doesn't find it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ARQ-141">https://issues.jboss.org/browse/ARQ-141</a> |
| 2265 | ARQ-141     | When tested with Arquillian 1.0.0.Final as per: https://github.com/arquillian/arquillian-examples/blob/master/jpa2/src/test/resources/arquillian.xml and: https://community.jboss.org/thread/155043 no deployment archive appears to be produced anywhere within the target/ tree. Is this still supported? Has usage changed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/ARQ-141">https://issues.jboss.org/browse/ARQ-141</a> |
| 2266 | ARQ-141     | Does it find your arquillian.xml at all? It's normally located in src/test/resources, but anywhere on the classpath should do. Depends on your IDE I guess if non .java files are actually moved to classpath from src/test/java                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQ-141">https://issues.jboss.org/browse/ARQ-141</a> |
| 2267 | ARQ-138     | This looks alpha/beta/release quality now. Submitting the pull request to make an initial release. Tests have been written for * EAR and WAR deployments, * Injection of dependencies into tests using @Resource, @Ejb and @Inject annotations, What might need review - * The project POMs. Since this is a Java EE 5 container, the artifacts from the JBoss repo have been used. * Use of the WebLogic JMX classloader within the project. What is not yet supported (or might not work yet): * Deployment and execution of tests against WLS clusters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-138">https://issues.jboss.org/browse/ARQ-138</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | URL                                                                                           |

| 2268 | ARQ-136     | <p>PM) ALR@Freenode: It cannot get this transitively through the jbossas-embedded-60 container (02:25:11 PM) ALR@Freenode: As import is not transitive. (02:25:16 PM) aslak: aa.. right (02:25:23 PM) ALR@Freenode: But the more overarching problem: (02:25:34 PM) ALR@Freenode: Is that we shouldn't be leaking out everything in compile scope. (02:25:37 PM) ALR@Freenode: Because we did. (02:25:56 PM) aslak: is test transitive ? (02:25:57 PM) ALR@Freenode: And since import scope wasn't transitive, we missed out on the exclusions defined by dephchain. (02:26:01 PM) ALR@Freenode: aslak: No. (02:26:10 PM) ALR@Freenode: aslak: It's not our job to define transitive deps. (02:26:13 PM) aslak: that means we have to push it to the user (02:26:21 PM) ALR@Freenode: Once APIs are locked, everything should play nice. (02:26:23 PM) ALR@Freenode: ie: (02:26:39 PM) ALR@Freenode: Using a specific version of Arquillian should not dictate a specific version of a target container. (02:26:52 PM) ALR@Freenode: If that's the case, we're not helping users. (02:26:59 PM) ALR@Freenode: We're actually limiting their ability to choose. (02:27:06 PM) aslak: no, but a specific v. of a DeployableContainer will (02:27:08 PM) ALR@Freenode: And leaking stuff onto their classpath in the process (02:27:14 PM) ALR@Freenode: aslak: Nope. (02:27:21 PM) ALR@Freenode: aslak: We can't do that either. (02:27:29 PM) jharting [~jharting@r11de73.net.upc.cz] entered the room. (02:27:35 PM) jharting left the room (quit: Client Quit). (02:27:45 PM) ALR@Freenode: aslak: The client must make the dependencies upon their container. (02:27:48 PM) aslak: i mean v. as in DeployableContainer impl (02:27:56 PM) ALR@Freenode: aslak: I know. We can't do that. (02:28:50 PM) ALR@Freenode: The user must declare the dep on their target container. (02:29:00 PM) aslak: ok..... maybe i'm not following but.. how do you propose you run a DeployableContainer that is build for Jboss 4 on a jboss 6 ? (02:29:18 PM) ALR@Freenode: 4 and 6 are different APIs, so we should have different impls sure. (02:29:34 PM) ALR@Freenode: Let's take AS 6.0.0.M2 vs. M3. (02:29:39 PM) ALR@Freenode: They have similar APIs (02:29:47 PM) ALR@Freenode: But very different runtime components. (02:29:57 PM) ALR@Freenode: Or a better example is GFv3 vs. 3.0.1 (02:29:59 PM) ALR@Freenode: Same API. (02:30:13 PM) aslak: that's what i'm saying, a deployable is limited to a specific v. of a target container. whether you want to make that implicit or not is different (02:30:30 PM) ALR@Freenode: aslak: No, it's can't be limited. (02:30:41 PM) ALR@Freenode: We abide by a container's deployment API. (02:30:47 PM) aslak: yea, jboss m2 and m3 are different enough to need impl changes.. same with 5.0 to 5.1 (02:31:24 PM) ALR@Freenode: If the deployment API of the backing container changes, yes, we need to change too. (02:31:26 PM) ALR@Freenode: BUT (02:31:39 PM) ALR@Freenode: M2 and M3 aren't locked APIs. (02:31:43 PM) ALR@Freenode: They're milestone releases. (02:31:51 PM) ALR@Freenode: GFv3 vs. 3.0.1 (02:32:00 PM) ALR@Freenode: Should be the same Arquillian DeployableContainer impl (02:32:09 PM) aslak: your not limiting the user by implicit defining the v. your saying, this is tested and build against this v. if you want to try it with a newer v. you may do so, but keep in mind that it might not work. use exclude and include your own (02:32:33 PM) ALR@Freenode: aslak: I know you're trying to help the user. (02:32:44 PM) ALR@Freenode: But you're stepping into their responsibility/ (02:32:53 PM) ALR@Freenode: They must define their runtime CP. (02:32:54 PM) ALR@Freenode: Not us. (02:33:09 PM) ALR@Freenode: This is a symptom of Maven compile scope by default. (02:33:30 PM) ALR@Freenode: They don't need the backing container for compilation, therefore we should not be exporting compile scope. (02:33:38 PM) ALR@Freenode: If we do, then we leak out that version. (02:33:39 PM) aslak: what's the point of a build system if you have to define all your dependencies ? :) (02:33:49 PM) ALR@Freenode: aslak: To build. (02:34:01 PM) ALR@Freenode: aslak: Don't mistake convenience for doing too much. (02:34:08 PM) ALR@Freenode: Try to follow me here. (02:34:18 PM) ALR@Freenode: It took me a long time to come around to understand this. (02:34:31 PM) ALR@Freenode: We export GFv3. (02:34:38 PM) ALR@Freenode: Say the user wants 3.0.1 (02:34:44 PM)</p> | <a href="https://issues.jboss.org/browse/ARQ-136">https://issues.jboss.org/browse/ARQ-136</a> |
| 2269 | ARQ-127     | <p>Hi, can you provide some update on this? It would be a big good-to-have for my usage of arquillian-testng-standalone + graphene2. Right now I'm getting this error: {noformat} java.lang.IllegalStateException: No TestRunnerAdaptor found, @BeforeSuite has not been called at org.jboss.arquillian.testng.Arquillian.verifyTestRunnerAdaptorHasBeenSet(Arquillian.java:246) at org.jboss.arquillian.testng.Arquillian.arquillianBeforeClass(Arquillian.java:101) at sun.reflect.NativeMethodAccessorImpl.invoke(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:57) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:601) at org.testng.internal.MethodInvocationHelper.invokeMethod(MethodInvocationHelper.java:84) at org.testng.internal.Invoker.invokeConfigurationMethod(Invoker.java:564) at org.testng.internal.Invoker.invokeConfigurations(Invoker.java:213) at org.testng.internal.Invoker.invokeConfigurations(Invoker.java:138) at org.testng.internal.TestMethodWorker.invokeBeforeClassMethods(TestMethodWorker.java:175) at org.testng.internal.TestMethodWorker.run(TestMethodWorker.java:107) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1145) at java.util.concurrent.ThreadPoolExecutor\$Worker.run(ThreadPoolExecutor.java:615) at java.lang.Thread.run(Thread.java:722) ... {noformat}</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQ-127">https://issues.jboss.org/browse/ARQ-127</a> |
| 2270 | ARQ-127     | Do you have a test project to point to?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQ-127">https://issues.jboss.org/browse/ARQ-127</a> |
| 2271 | ARQ-127     | <p>Hi Aslak (and others), today I came back to this issue after some time as it's still seems to be a critical thing which we would appreciate with arquillian-testng-standalone library. I still used the same example just with updated dependencies. I tried some hacking at Arquillian.class and it seems like the usage of ThreadLocal is breaking this TestNG parallelism feature... {noformat} ... Running TestSuite BEFORE SUITE, runner:null Going to set test runner:org.jboss.arquillian.test.impl.EventTestRunnerAdaptor@266c6ce1, threadLocal:java.lang.ThreadLocal@18603b7c BEFORE CLASS, runner:null BEFORE CLASS, runner:null AFTER TEST, runner:null AFTER TEST, runner:null AFTER TEST, runner:null AFTER TEST, runner:null AFTER TEST, runner:null AFTER TEST, runner:null AFTER TEST, runner:null AFTER CLASS, runner:null AFTER CLASS, runner:null AFTER SUITE, runner:org.jboss.arquillian.test.impl.EventTestRunnerAdaptor@266c6ce1 {noformat} It's initialized once at the suite level, but none of the class/test methods are able to access it and it ends up with same message: {noformat} java.lang.IllegalStateException: No TestRunnerAdaptor found, @BeforeSuite has not been called at org.jboss.arquillian.testng.Arquillian.verifyTestRunnerAdaptorHasBeenSet(Arquillian.java:252) at org.jboss.arquillian.testng.Arquillian.arquillianBeforeClass(Arquillian.java:104) {noformat} [~aslak] - can you please confirm that there is any chance that Arquillian will be sometime able to handle this kind of parallelism (at least on class level)? Or maybe there is some quick hint you can provide... or should I just forget this requirement or workaround it at "ugly way"? Thanks a lot for your help! And I also thanks [~lfryc] for his help and support :)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQ-127">https://issues.jboss.org/browse/ARQ-127</a> |
| 2272 | ARQ-127     | [~tremes] adding arquillian to the test groups is required, but does NOT resolve the TestRunner & Nullpointer exceptions. link to my post [https://developer.jboss.org/thread/266910]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQ-127">https://issues.jboss.org/browse/ARQ-127</a> |
| 2273 | ARQ-123     | Don't we have one, or at least the info is there in the docs. Do we still need this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-123">https://issues.jboss.org/browse/ARQ-123</a> |
| 2274 | ARQ-103     | Should we name this something more then just reloaded ? - jbossas-reloaded - mc-reloaded ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQ-103">https://issues.jboss.org/browse/ARQ-103</a> |

| 2276 | ARQ-25      | via DeployableAppender SPI any module can provide a Archive<?> at runtime, but we're missing a 'smart' way to merge/decide what archive type to deploy.. hardcoded as EnterpriseArchive atm.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/ARQ-25">https://issues.iboss.org/browse/ARQ-25</a>         |
| 2277 | ARQ-13      | Isn't this done already? Or we have it in the docs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/ARQ-13">https://issues.iboss.org/browse/ARQ-13</a>         |
| 2278 | ARQGRA-500  | Why won't I go via normal means like a user would, arrive to this parameterized page through other pages? Sometimes this path is too complex, the pages involved are too heavy - they have their own tests, other teams support those pages. Sometimes there may not be such a path at all, because some pages are linked directly with parameters by 3rd party applications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/ARQGRA-500">https://issues.iboss.org/browse/ARQGRA-500</a> |
| 2279 | ARQGRA-500  | Then again, some parameter provider class wouldn't know the context to decide on parameters. Only the test does. Some location decider probably can get the current test instance and call some callback on it. The test just needs to implement the interface ParameterProvider - this would be the trigger. No need to alter the \@Location annotation. Upd: it's probably not possible to "get the current test instance" without hardcoding some specific test framework like JUnit. Upd2: it should be possible! Otherwise how would Graphene's annotations work. They know the test object, see org.iboss.arquillian.test.spi.TestEnricher.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/ARQGRA-500">https://issues.iboss.org/browse/ARQGRA-500</a> |
| 2280 | ARQGRA-500  | Dumping some additional concerns that bother me. -- Generalize to dynamic path manipulation (DPM)? "Parameters" only make sense for the HTTP scheme currently. The linked SO's OP also wanted more than that. But generalize too much and it looks like another LocationDecider. Might as well check if the test object implements the LocationDecider interface. No, I think the generalized DPM should be an implementation helper for Deciders. E.g. the HTTP decider would use it to implement the parameter provider functionality and path substitution functionality ("http://static/{dynamic}") - 2 different interfaces. But how to expose this functionality in Graphene.goTo? Either be content with some generic DPM interface argument, or refactor goTo to return a specific builder somehow. Make goTo return a builder? Nasty breaking change - goTo now doesn't trigger navigation. Some new method (arguments like goTo) returns a builder, and an argumentless goTo triggers navigation? This could work. -- Need to discriminate the pages. Problem: LocationDecider only knows a String location. Needs to know pageClass too. --- Annotated parameters could accept it as {@@LocationParameters(for = MyPage.class)}. | <a href="https://issues.iboss.org/browse/ARQGRA-500">https://issues.iboss.org/browse/ARQGRA-500</a> |
| 2281 | ARQGRA-485  | Interesting reading [~asotobu]. Do you have some API in mind? It would be worth to start a discussion with API snippets on <a href="http://discuss.arquillian.org/">http://discuss.arquillian.org/</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/ARQGRA-485">https://issues.iboss.org/browse/ARQGRA-485</a> |
| 2282 | ARQGRA-446  | Hey Chris, nice catch. Any suggestion how to avoid this issue? Is that just metaclass property that needs to be avoided in Groovy ecosystem or are we facing bigger issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/ARQGRA-446">https://issues.iboss.org/browse/ARQGRA-446</a> |
| 2283 | ARQGRA-440  | We can upgrade to Core 1.1.4 in 2.0 branch, but imho Drone 2.x upgrade should happen in 2.1 branch.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/ARQGRA-440">https://issues.iboss.org/browse/ARQGRA-440</a> |
| 2284 | ARQGRA-440  | [~jhaska] does it make sense to upgrade to Drone 2.0 from RichFaces tests perspective? We should really help Drone test the compatibility. At least we could enable a profile that would help test Drone 2.0 compatibility.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/ARQGRA-440">https://issues.iboss.org/browse/ARQGRA-440</a> |
| 2285 | ARQGRA-439  | What do you think about prototyping this in 2.1 branch and if the complexity of the fix will be low, we can include it in 2.0 as well?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/ARQGRA-439">https://issues.iboss.org/browse/ARQGRA-439</a> |
| 2286 | ARQGRA-431  | +1 adding .equalsIgnoreCase(String).matches(regex) Karel, could you look into adding this capabilities?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/ARQGRA-431">https://issues.iboss.org/browse/ARQGRA-431</a> |
| 2287 | ARQGRA-425  | [~lfryc] Please, what do you think about this addition ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/ARQGRA-425">https://issues.iboss.org/browse/ARQGRA-425</a> |
| 2288 | ARQGRA-420  | Does it makes sense to place it into {@impl} under {@org.iboss.arquillian.graphene.integration} package? It would need to make sure that extension won't try to register itself unless appropriate API artifacts are on classpath.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/ARQGRA-420">https://issues.iboss.org/browse/ARQGRA-420</a> |
| 2289 | ARQGRA-411  | Email, afaik GrapheneElement should wait for an element to be present, could you please provide more details, i.e. stacktrace?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/ARQGRA-411">https://issues.iboss.org/browse/ARQGRA-411</a> |
| 2290 | ARQGRA-409  | +1 we can do that for both of frameworks, I just don't know Ember.js internals. Angular wraps all XHR objects and timeouts in order to be able run its model/view synchronization process. Ember doesn't have to allow similar mechanism at all. So let's go ahead and research whether there is a way. :-) ---- On side note, for AngularJS, it is very handy to have special selectors based on ng- attributes such as ng-click, ng-model, etc, such as: {code} @FindByNg(model = "username") WebElement usernameInput; @FindByNg(action = "search()") WebElement searchButton; {code} Is there anything similar for Ember? ---- I would love to have extensions for Graphene and certain frameworks in place. so you could just add artifact on classpath and you will be all setup: {code} graphene-ember graphene-angular {code}                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/ARQGRA-409">https://issues.iboss.org/browse/ARQGRA-409</a> |
| 2291 | ARQGRA-409  | [~smiklos] [~kpiwko] I believe this extension is not requires at this point? Can I resolve this and see whether there will be a need for that in the future?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/ARQGRA-409">https://issues.iboss.org/browse/ARQGRA-409</a> |
| 2292 | ARQGRA-408  | [~jhaska] [~lfryc] Do you have any particular requirements how this should be done? I would go for similar style as implemented in that smart url mini extension (1) which was heavily inspired from (2). Talking concretely, it could be like {code} @Location(scheme = Scheme.HTTP // http:// @Location(scheme = Scheme.HTTPS // https:// @Location(scheme = Scheme.FILE // file:// @Location(scheme = Scheme.RESOURCE // resource:// @Location(scheme = Scheme.DROIDIUM // and-activity://{code} where HTTP would be default. (1) <a href="https://github.com/smiklosovic/arquillian-smart-url">https://github.com/smiklosovic/arquillian-smart-url</a> (2) <a href="https://issues.iboss.org/browse/ARQ-1321">https://issues.iboss.org/browse/ARQ-1321</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/ARQGRA-408">https://issues.iboss.org/browse/ARQGRA-408</a> |
| 2293 | ARQGRA-408  | Sounds good. 1) Wouldn't Droidium users appreciate that they won't need to configure scheme on each location? I.e. they should be able to configure scheme globally: {code} <extension name="graphene"> <!-- use HTTPS everywhere --> <property name="scheme">org.iboss.arquillian.graphene.location.Scheme.HTTPS</property> </extension> {code} 2) Shouldn't we make Scheme an extensible concept? As you said, having extensible set of schemes {HTTP,HTTPS,FILE,RESOURCE} that could e.g. Droidium extend with Scheme.DROIDIUM. There should be SPI for registration new schemes. Wdyt?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/ARQGRA-408">https://issues.iboss.org/browse/ARQGRA-408</a> |
| 2294 | ARQGRA-406  | Hey Juraj, could you please take care of this update?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/ARQGRA-406">https://issues.iboss.org/browse/ARQGRA-406</a> |
| 2295 | ARQGRA-392  | Linking a pull request where I have submitted the changes. Ready for review.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/ARQGRA-392">https://issues.iboss.org/browse/ARQGRA-392</a> |
| 2296 | ARQGRA-382  | Yes, it was intentional. I just forget to remove {@Field} literal from annotation declaration. But now I am thinking of following enhancement: One test class is often used for testing one page, or often we need to load the same page in each test, and then redirect to another. What if it would be possible to have {@@InitialPage} over field, which would result in automatic loading of the page URL before each test execution? Usage of {@@InitialPage} in test parameter would override this global setting. Can I change this to Enhancement ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/ARQGRA-382">https://issues.iboss.org/browse/ARQGRA-382</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | URL                                                                                                 |

| 2297 | ARQGRA-382  | Given that *initial ~ existing or occurring at the beginning*, this can be both understood as BeforeClass (my understanding) and Before (your understanding). However, all other fields in tests preserve the state among tests, so Before would be an exception. That said, I would either prefer to remove the possibility of annotating a field or making a parameter to @InitialPage, which would additionally alter it's behavior - e.g. where do you want URL to be fired, which some reasonable default identified by broader audience. Nice Enhancement for post 2.0.0.GA release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQGRA-382">https://issues.jboss.org/browse/ARQGRA-382</a> |
| 2298 | ARQGRA-382  | Agree, let's make this issue opened for post-2.0 development and make the annotation work only for --fields-- method parameters. Juraj, could you please take this over?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQGRA-382">https://issues.jboss.org/browse/ARQGRA-382</a> |
| 2299 | ARQGRA-381  | Juraj, could you please explain what's your use case of browser detection? This issue might be relevant to ARQGRA-135.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ARQGRA-381">https://issues.jboss.org/browse/ARQGRA-381</a> |
| 2300 | ARQGRA-380  | [~jhaska], could you please provide a stack trace so it will be evident where is the issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQGRA-380">https://issues.jboss.org/browse/ARQGRA-380</a> |
| 2301 | ARQGRA-377  | <p>Few points: 1. for determining whether an element is enabled, you should use the simplest API possible: <code>{code} WebElement#isEnabled()</code> <code>{code}</code> <a href="http://selenium.googlecode.com/git/docs/api/java/org/openqa/selenium/WebElement.html#isEnabled()">http://selenium.googlecode.com/git/docs/api/java/org/openqa/selenium/WebElement.html#isEnabled()</a> 2. (y) +1 for being able to build assertions and waiting conditions in unified manner (if statements doesn't apply afaik) ---- 3. we could leverage interceptors to wrap instances and wait on conditions specified in closing word (method), e.g.: <code>{code} element.isEnabled(); waitGui().until().element(element).isEnabled(); assertThat(element, isEnabled());</code> <code>{code}</code> the problem is that <code>{{WebElement#isEnabled}}</code> returns false, but it should return <code>{{FluentBase&lt;?&gt;}}</code> otherwise. One of the solutions comes from extending capabilities of <code>{{WebElement}}</code> interface and transform it to fluent API, consumed later by e.g. <code>{{GrapheneElement}}</code>. Say we have interface: <code>{code} public interface ElementOperation&lt;B, T&gt; { B isEnabled(); T getText(); ... }</code> <code>{code}</code> then we can: <code>{code} public class GrapheneElement implements WebElement, ElementOperation&lt;Boolean, String&gt; { Boolean isEnabled(); String getText(); ... }</code> <code>{code}</code> Based on a returned type, you could leverage that same API in assertions/waiting conditions: <code>{code} public class FluentElement implements ElementOperation&lt;FluentBoolean, FluentString&gt; { FluentBoolean isEnabled(); FluentString getText(); }</code> <code>{code}</code> ---- Do you have another ideas? I think re-implementation is not possible at this stage, as we are approaching 2.0 Final release. I would rather take it as suggestions for improvement in 3.0 or alternative API in 2.Future.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQGRA-377">https://issues.jboss.org/browse/ARQGRA-377</a> |

| 2303 | ARQGRA-329  | Hey Oliver, that's interesting idea. How would you imagine a usage? Could you share a snippet of the test code which shows how validation should be used?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQGRA-329">https://issues.jboss.org/browse/ARQGRA-329</a> |
| 2304 | ARQGRA-329  | Oliver, could you prototype this feature on an own branch first?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ARQGRA-329">https://issues.jboss.org/browse/ARQGRA-329</a> |
| 2305 | ARQGRA-326  | Hey Juraj, do you have any requirements for fix deadline?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQGRA-326">https://issues.jboss.org/browse/ARQGRA-326</a> |
| 2306 | ARQGRA-325  | What kind of settings you would like to set?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQGRA-325">https://issues.jboss.org/browse/ARQGRA-325</a> |
| 2307 | ARQGRA-325  | We could use Drone's configuration service which loads configuration from arquillian.xml into custom class representing configuration. This service does automatic type conversion. I think this would be simpler to implement than page-fragment specific configuration. wdyt?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ARQGRA-325">https://issues.jboss.org/browse/ARQGRA-325</a> |

| 2309 | ARQGRA-299  | <p>There was a problem with parallel browsers. When I fixed it, the number of failed/error tests reduced to 6: {code} Results : Failed tests:</p> <p>testWithTimeout(org.jboss.arquillian.graphene.ftest.wait.WebDriverWaitTest): The waiting time shouldn't be much bigger than 500 MILLISECONDS, but was 1050 ms.</p> <p>Tests in error: testDronelnPageFragments(org.jboss.arquillian.graphene.ftest.parallel.TestPageFragments): unexpected invocation exception during invocation of org.openqa.selenium.remote.RemoteWebDriver#getCurrentUrl(), on target 'org.openqa.selenium.htmlunit.HtmlUnitDriver@3943f337': object is not an instance of declaring class testJavaScriptExecutorlnPageFragments(org.jboss.arquillian.graphene.ftest.parallel.TestPageFragments): unexpected invocation exception during invocation of org.openqa.selenium.remote.RemoteWebDriver#executeScript(), on target 'org.openqa.selenium.htmlunit.HtmlUnitDriver@3943f337': java.lang.ClassCastException@47c87a55 testDronelnPageObjects(org.jboss.arquillian.graphene.ftest.parallel.TestPageObjects): unexpected invocation exception during invocation of org.openqa.selenium.remote.RemoteWebDriver#getCurrentUrl(), on target 'org.openqa.selenium.htmlunit.HtmlUnitDriver@117a5f43': object is not an instance of declaring class testJavaScriptExecutorlnPageObjects(org.jboss.arquillian.graphene.ftest.parallel.TestPageObjects): unexpected invocation exception during invocation of org.openqa.selenium.remote.RemoteWebDriver#executeScript(), on target 'org.openqa.selenium.htmlunit.HtmlUnitDriver@117a5f43': java.lang.ClassCastException@5cd974e0 test(org.jboss.arquillian.graphene.ftest.javascript.TestCustomJSInterface): Can't invoke the javascript org.jboss.arquillian.graphene.ftest.javascript.TestCustomJSInterface\$Document#getElementsByTagName() Tests run: 245, Failures: 1, Errors: 5, Skipped: 0 {code}</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/ARQGRA-299">https://issues.iboss.org/browse/ARQGRA-299</a> |
| 2310 | ARQGRA-296  | Jan, what does this issue mean /wrt implementation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/ARQGRA-296">https://issues.iboss.org/browse/ARQGRA-296</a> |
| 2311 | ARQGRA-294  | Is there any reason why Selenium WebElement can't be injected by web element wrappers?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/ARQGRA-294">https://issues.iboss.org/browse/ARQGRA-294</a> |
| 2312 | ARQGRA-294  | Couldn't we rather get those changes upstream?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/ARQGRA-294">https://issues.iboss.org/browse/ARQGRA-294</a> |
| 2313 | ARQGRA-294  | [^]huska], could you please open a new issue addressing the mentioned requirements ^?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/ARQGRA-294">https://issues.iboss.org/browse/ARQGRA-294</a> |
| 2314 | ARQGRA-293  | Jan, could you please list some cases where it is necessary to fire a DOM event manually instead of using WebDriver?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/ARQGRA-293">https://issues.iboss.org/browse/ARQGRA-293</a> |
| 2315 | ARQGRA-283  | Could you start with an outline which we can brain-storm about?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/ARQGRA-283">https://issues.iboss.org/browse/ARQGRA-283</a> |
| 2316 | ARQGRA-283  | <p>First proposal: # Introduction ## Testing difficulties in general: _unreliable waits_ , ## _testing of ajax behavior_ , ## _coupling of HTML and test code_ , # Introducing Graphene ## Coolest features: _request guards_ , ## _Page Objects_ - support for {{@Page}}, nested pages, {{@FindBy}}, _jQuery_ locators, locators from field names, enriching of other injection points like {{@Drone}}, {{@Location}} mechanism ## _Page Fragments_ - rooting mechanism, reference to RichFaces page fragments, dynamically creatable ## _fluent API_ for waits - example ## _JS interfaces_ - example ## _Interceptors_ - example for resolving {{Stale..}} exceptions ## highly extendable and usable with {{Arquillian}} life cycle # Wrap-up ## nice table which summarizes all the features in comparison to {{WebDriver}} General notes: * Where it is possible I will reference to {{WebDriver}} to showcase the difference. So for example when I will be speaking about waits I will also show how it is done in {{WebDriver}}. What do you think Lukas ?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/ARQGRA-283">https://issues.iboss.org/browse/ARQGRA-283</a> |
| 2317 | ARQGRA-283  | Could you please update a proposal with the current thoughts on the subject? On a sprint planning meeting you have mentioned some FAQs: * Page Abstractions initialization * Select injection                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/ARQGRA-283">https://issues.iboss.org/browse/ARQGRA-283</a> |
| 2318 | ARQGRA-282  | Could you start with an outline so we could discuss publicly what should be included?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/ARQGRA-282">https://issues.iboss.org/browse/ARQGRA-282</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | URL                                                                                                 |

| 2319 | ARQGRA-282  | IMHO it can be done in this way: * change the feature reference _Drive the Browser_ from [here http://arquillian.org/features/], to contain _Graphene_ reference. It would be nice to have there also Graphene logo (ARQGRA-69)(together with Drone logo) * reuse and alter the already existing [functional testing using drone http://arquillian.org/guides/functional_testing_using_drone/], because IMHO there are valuable parts, which are needed (_Assumptions_, _Introducing Client Mode_, _Enabling Client Mode_, _Drone Overview_). So dropping the whole guide is not a good option for me. * it can be done in a similar way as the [guide for JPA testing http://arquillian.org/guides/testing_java_persistence/] is done. So _Introducing the application we are going to write tests for_, _Preparation for testing with Graphene_, _Developing tests_, _Running the tests_ * basically I have not recognized other candidates from Lukas's ones, I just ordered them in the outline. The guide outline itself can look like: # Assumptions # Introducing Client Mode # Enabling Client Mode # Drone Overview ## There are mentioned all the browsers drivers Drone currently has support for, we can emphasize _Graphene_ here and say that we are going to setup a test suite project with use of it from now on. # Introducing the application we are going to write tests for ## We can show how to develop a simple _HTML 5_ page, which will use _AJAX_ calls to retrieve backend data from _JAX-RS_ endpoints. ## *Or* we can reuse again the _JSF_ sample which is already there, logging fragment, and to add some parts to easily showcase _Graphene_ features on it. My concern here is the _JSF_. I would like to showcase that _Graphene_ can be used with all front end frameworks and most importantly with now most coolest POHS applications. By this IMHO we can get much bigger audience. ## It does not have to be all in this guideline. There can be just snippets from whole Graphene showcase, which will be developed as well. (ARQGRA-174) # _Graphene_ scaffolding # Senium server setup, remote reusable, chrome browser -> fast development turnaround # Developing tests ## Showcasing some of the _Graphene_ features: _request guards_, _fluent waitings_, _Page Objects_, _Page Fragments_ ## This should be probably the biggest part of the guideline. My concern here is that it will be too big. On the other side I do not have a major problem with it. IMHO the navigation which is used in arquillian.org is quite clear and that the platform is suitable for long posts as well. # Running and debugging the test in IDE # Best practices from developing and running tests What do you think guys ? | <a href="https://issues.jboss.org/browse/ARQGRA-282">https://issues.jboss.org/browse/ARQGRA-282</a> |
| 2320 | ARQGRA-282  | +(really big number). Existing guide should be rewritten to show Graphene2 primarily. Other Drone supported Selenium/WebDriver could be handled by infobox saying something like: _Not starting a new test suite from scratch? Do you already have Selenium 1 and WebDriver (and Graphene1 :-P) tests? See Drone reference documentation how to run those instead of Graphene 2_. No reason why to keep existing content.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARQGRA-282">https://issues.jboss.org/browse/ARQGRA-282</a> |
| 2321 | ARQGRA-282  | Jura, can you please sent this as PR against arquillian.org repository? Much easier to comment that way.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/ARQGRA-282">https://issues.jboss.org/browse/ARQGRA-282</a> |
| 2322 | ARQGRA-282  | Hey Juraj, could you please review the guide from the grammar perspective?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQGRA-282">https://issues.jboss.org/browse/ARQGRA-282</a> |
| 2323 | ARQGRA-282  | [~bleathem], could you please check a grammar of the guide?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQGRA-282">https://issues.jboss.org/browse/ARQGRA-282</a> |
| 2324 | ARQGRA-280  | How would you solve a problem of cache invalidation in case of stale reference?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQGRA-280">https://issues.jboss.org/browse/ARQGRA-280</a> |
| 2325 | ARQGRA-279  | I don't get why we have this {{element(By)}} version. Couldn't you use {code} WebElement el = driver.findElement(By) Graphene.waitAjax().until().element(el).present(); {code} [~japapouse], doesn't the Alpha4 feature ensure that the element does not have to be present during invocation of {{#findElement}}?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQGRA-279">https://issues.jboss.org/browse/ARQGRA-279</a> |
| 2326 | ARQGRA-267  | Jan, do we still need to upgrade HtmlUnit manually? It's version is specified by version of Selenium.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/ARQGRA-267">https://issues.jboss.org/browse/ARQGRA-267</a> |
| 2327 | ARQGRA-265  | I don't like to introduce own solution - could we discuss if it is really necessary? <a href="https://issues.jboss.org/browse/ARQGRA-258?focusedCommentId=12753402&amp;page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12753402">https://issues.jboss.org/browse/ARQGRA-258?focusedCommentId=12753402&amp;page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12753402</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARQGRA-265">https://issues.jboss.org/browse/ARQGRA-265</a> |
| 2328 | ARQGRA-264  | I looked through the pull request and I have 2 questions: * Is it possible to switch to default frame? It seems that either {{index}} or {{nameOrId}} should be specified. Is it needed at all, or elements without {{@InFrame}} are always looked up in default frame? * What about adding possibility to specify {{@InFrame}} on class for the whole fragments which live in a frame?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQGRA-264">https://issues.jboss.org/browse/ARQGRA-264</a> |
| 2329 | ARQGRA-264  | You are right Aliaksei, it would not work for all cases. It is not supporting nested structure of iframes, only one level of iframes. The nested functionality if needed can be IMHO implemented as I described [here https://github.com/arquillian/arquillian-graphene/pull/81#discussion_r4743171]. Is there a real life scenario where this multiple iframe levels are needed ? Otherwise, well documented feature would be sufficient IMHO. The {{@InFrame}} annotation can not be used to switch to the default iframe. IMHO the legacy tests should be rewritten to use this annotation. Another option is to implement such {{@InFrame}} which would be capable doing so. What do you think Lukas ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQGRA-264">https://issues.jboss.org/browse/ARQGRA-264</a> |
| 2330 | ARQGRA-261  | Hey Jan, I believe this is already possible, have you tried that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/ARQGRA-261">https://issues.jboss.org/browse/ARQGRA-261</a> |
| 2331 | ARQGRA-258  | Hey Jan, would it be possible to inject a proxy of WebElement, which will be initialized later?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQGRA-258">https://issues.jboss.org/browse/ARQGRA-258</a> |

Should we resolve it with other Resolution?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ARQGRA-258">https://issues.jboss.org/browse/ARQGRA-258</a> |
| 2333 | ARQGRA-258  | We doesn't have to inject *a proxy for the Select*, we can rather inject *the Select with a proxy to the WebElement.* Could we?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQGRA-258">https://issues.jboss.org/browse/ARQGRA-258</a> |
| 2334 | ARQGRA-255  | Hey Jura, could you please drive an incorporation and improvements of documentation for new features in these releases?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/ARQGRA-255">https://issues.jboss.org/browse/ARQGRA-255</a> |
| 2335 | ARQGRA-230  | Hey Jan, if we don't have time to improve it in scope of Alpha3, could you please create request for improvement and resolve this? Note that Alpha3 code-freeze is Fri Jan 4th.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/ARQGRA-230">https://issues.jboss.org/browse/ARQGRA-230</a> |
| 2336 | ARQGRA-228  | Hey Jan, could you please comment what do you think about my proposal?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/ARQGRA-228">https://issues.jboss.org/browse/ARQGRA-228</a> |
| 2337 | ARQGRA-219  | Hey Lukas, we scheduled first meeting for this on Monday (October 29, 2012). Should we reschedule it so you can be there Lukas ? Or it is enough to send pull request and you can review it there ? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQGRA-219">https://issues.jboss.org/browse/ARQGRA-219</a> |
| 2338 | ARQGRA-200  | Jiri, could you please clarify where guards aren't enough in your use case?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQGRA-200">https://issues.jboss.org/browse/ARQGRA-200</a> |
| 2339 | ARQGRA-200  | Thanks for the informations. So, should I (always) use some explicit waiting after guarded request? What are the use-cases of the guards now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/ARQGRA-200">https://issues.jboss.org/browse/ARQGRA-200</a> |
| 2340 | ARQGRA-199  | Hey Juraj, could you please provide more details? I consider this report quite incomplete.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/ARQGRA-199">https://issues.jboss.org/browse/ARQGRA-199</a> |
| 2341 | ARQGRA-195  | Juraj, could you please propagate exception and add information about field which is being enriched?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/ARQGRA-195">https://issues.jboss.org/browse/ARQGRA-195</a> |
| 2342 | ARQGRA-193  | Karel, what is preferred way to configure via system properties then?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/ARQGRA-193">https://issues.jboss.org/browse/ARQGRA-193</a> |

| 2344 | ARQGRA-191  | Jan, could you please file an issue for Drone that it could be initialized without having {{@Drone}} directly in test case?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARQGRA-191">https://issues.jboss.org/browse/ARQGRA-191</a> |
| 2345 | ARQGRA-190  | Hey Juraj, we would like to support inner classes with Page Abstractions. Could you please look at it and tell us if it's feasible?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARQGRA-190">https://issues.jboss.org/browse/ARQGRA-190</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | URL                                                                                                 |

| 2346 | ARQGRA-186  | Hey Juraj, I think this was rather misunderstanding. I don't think it's necessary to rename those interfaces to *PageFragment. I would leave them as *Component or remove the suffix completely. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/ARQGRA-186">https://issues.iboss.org/browse/ARQGRA-186</a> |
| 2347 | ARQGRA-186  | Removing the suffix completely can lead to some conflicts with class names, e.g. {{Calendar}} vs. {{java.util.Calendar}}. Suffix also sounds good for me because it tells me what that classes really are, and what they are good for. Page Fragment is little bit long but personally I do not mind. Do you find this justifying reasonable? Let me know if I should let it with Component suffix. Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/ARQGRA-186">https://issues.iboss.org/browse/ARQGRA-186</a> |
| 2348 | ARQGRA-170  | Hey Jan, could we use following entry points? * {{GrapheneContext.getDriverProxy();}} * {{GrapheneContext.getDriverProxyWithInterfaces(Class<?>[] interfaces);}} * {{GrapheneContext.getDriverProxyByImplementation(Class<? extends WebDriver> implClass);}} * {{GrapheneContext.getConfigurations();}} * {{GrapheneContext.getProviders();}} ** returns {{ProviderHolder}}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/ARQGRA-170">https://issues.iboss.org/browse/ARQGRA-170</a> |
| 2349 | ARQGRA-160  | Great idea, could you please elaborate which configuration options we should start with? For now, I can think just about wait timeouts, right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/ARQGRA-160">https://issues.iboss.org/browse/ARQGRA-160</a> |
| 2350 | ARQGRA-156  | Hi Jan, could you please look at this issue? It should be simple one.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/ARQGRA-156">https://issues.iboss.org/browse/ARQGRA-156</a> |
| 2351 | ARQGRA-155  | [~okiss], could you please share the code what you have so we can take a look? Let's open a branch on your fork of Graphene, please.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/ARQGRA-155">https://issues.iboss.org/browse/ARQGRA-155</a> |
| 2352 | ARQGRA-152  | Karel, how critical is this issue? Does it mean instantiation of browser makes serious delays in tests, so thus it is blocking the machine where the test runs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/ARQGRA-152">https://issues.iboss.org/browse/ARQGRA-152</a> |
| 2353 | ARQGRA-132  | Karel, could you please clarify what is the reference usage of BOM? Since {{arquillian-graphene}} depchain brings you all the dependencies, there is no need for BOM, or is it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/ARQGRA-132">https://issues.iboss.org/browse/ARQGRA-132</a> |
| 2354 | ARQGRA-131  | If I read this correctly, Arquillian Drone can handle configuration, creation and destruction of multiple AjaxSelenium instances. However, it would be up to user to switch to correct context manually by his own. Suppose following: <code>{code:java} @Drone AjaxSelenium b1; @Test public void test(@Drone AjaxSelenium b2) { // we can't switch to b2, as the first method might be b1.click(...); // no way how to check method body } {code}</code> The only other idea I got so far is that AjaxSelenium will set correct context in each call, e.g. <code>{code:java} public class AjaxSelenium { public void click(...) { AjaxSeleniumContext.setContext(this); // do the click() } } {code}</code> Lukas, what do you think?                                                                                                                                  | <a href="https://issues.iboss.org/browse/ARQGRA-131">https://issues.iboss.org/browse/ARQGRA-131</a> |
| 2355 | ARQGRA-114  | Should we create a sub space on Arquillian community site? or just reuse the Arquillian one? I guess we can reuse for now, non of them is flooded with blogs so..)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/ARQGRA-114">https://issues.iboss.org/browse/ARQGRA-114</a> |
| 2356 | ARQGRA-84   | Hi Juraj, could you please look at it once Page Extensions will be implemented (ARQGRA-71)? We can discuss the implementation if that would not be familiar - e.g. JavaScript part.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/ARQGRA-84">https://issues.iboss.org/browse/ARQGRA-84</a>   |
| 2357 | ARQGRA-84   | The pull request is not ready for merging, since tests does not pass on buildhive. Juraj, could you please take a look into failing tests?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/ARQGRA-84">https://issues.iboss.org/browse/ARQGRA-84</a>   |
| 2358 | ARQGRA-76   | I have moved configuration of plugins needed for Jenkins profile into parent pom.xml. However, there is need for support for two different paths, from where the arquillian.xml is copied. One for parent pom: <code>{{basedir}}/../qa/richfaces-arquillian-xml-property-resolver/target/conf/arquillian.xml</code> and second for all child poms: <code>{{basedir}}/../qa/richfaces-arquillian-xml-property-resolver/target/conf/arquillian.xml</code> I have solve this with defining property in parent pom, with the value of path which satisfy parent pom, and also overwritten this property with value which satisfy child poms. Can this be right solution? Another solution which works is to define only path which satisfy child poms and to disable enforcer plugin, which just not copy arquillian.xml for parent. Which one will be more suitable please? | <a href="https://issues.iboss.org/browse/ARQGRA-76">https://issues.iboss.org/browse/ARQGRA-76</a>   |
| 2359 | ARQGRA-76   | Karel, isn't there any way to point to the top-level pom such as use parent.relativePath? Jura, you can simulate this for you and add property topLevelProject.relativePath to each module and use it after basedir path: <code>{{basedir}}/{{topLevelProject.relativePath}}/qa/richfaces-arquillian-xml-property-resolver/target/conf/arquillian.xml</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/ARQGRA-76">https://issues.iboss.org/browse/ARQGRA-76</a>   |
| 2360 | ARQGRA-76   | Great, Karel, thanks for your insight. Jura, could you please adapt this property for your needs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/ARQGRA-76">https://issues.iboss.org/browse/ARQGRA-76</a>   |
| 2361 | ARQGRA-76   | Pavol, could you look at this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/ARQGRA-76">https://issues.iboss.org/browse/ARQGRA-76</a>   |
| 2362 | ARQGRA-74   | Perfect, could you create some functional tests for {{element(...)}} and {{attribute(...)}}? I assume methods {{initElement/s}} should be aligned with Juraj's Component Objects ARQGRA-40.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/ARQGRA-74">https://issues.iboss.org/browse/ARQGRA-74</a>   |
| 2363 | ARQGRA-67   | (1) As commented on pull request - could you change that to {{window.Graphene}}? (2) could we just extend DefaultExecutionResolver instead of replacing? (3) why it should be exposed publicly? I don't have strong objections, just GrapheneProxy was intended to be used by internal implementation. How does interception matches with ARQGRA-79?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/ARQGRA-67">https://issues.iboss.org/browse/ARQGRA-67</a>   |
| 2364 | ARQGRA-45   | Karel, I suppose there is no need for object encapsulation of request headers? Do you want to contribute some code around authorization to Ajocado utilities? I can imagine to have encodeCredentials there.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/ARQGRA-45">https://issues.iboss.org/browse/ARQGRA-45</a>   |
| 2365 | ARQGRA-45   | Can you please elaborate and API you have suggested? You propose to use following to add authorization? <code>{code:Java} String credentials = URLEncoder.encode(Base64Credentials(username, password)); Header authorizationHeader = new Header("Authorization", "Basic " + credentials); selenium.addCustomRequestHeader(authorizationHeader); {code}</code> I propose to introduce utility class for manipulation with common request like: <code>{code:Java} Header authorizationHeader = HeaderUtils.createBasicAuthorization(username, password); {code}</code>                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/ARQGRA-45">https://issues.iboss.org/browse/ARQGRA-45</a>   |
| 2366 | ARQGRA-40   | Juraj, could we work on incorporating the Components Objects into Graphene?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/ARQGRA-40">https://issues.iboss.org/browse/ARQGRA-40</a>   |
| 2367 | ARQGRA-37   | Jura, could you please create separated JIRAs for issues you have mentioned? Add them to doc component.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/ARQGRA-37">https://issues.iboss.org/browse/ARQGRA-37</a>   |
| 2368 | ARQGRA-33   | Juraj, it's good point, could you please provide pull request for this feature?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/ARQGRA-33">https://issues.iboss.org/browse/ARQGRA-33</a>   |
| 2369 | ARQGRA-28   | Karel, could you please elaborate more on this issue - it is affecting compatibility between Se1 and Se2?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/ARQGRA-28">https://issues.iboss.org/browse/ARQGRA-28</a>   |
| 2370 | ARQRUSH-38  | Could you move those checkboxes to main panel of ProjectManager? So it will be immediately clear what filters are applied? Additionally, could you add Show Differs quick filter similar to Show All?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/ARQRUSH-38">https://issues.iboss.org/browse/ARQRUSH-38</a> |
| 2371 | ARQRUSH-28  | Hey Jan, could you please send pull request for those changes? Right now, we are basing development on Jakub's repository: <a href="https://github.com/cube88/arquillian-rushey">https://github.com/cube88/arquillian-rushey</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/ARQRUSH-28">https://issues.iboss.org/browse/ARQRUSH-28</a> |
| 2372 | ARTIF-748   | [~eric.wittmann], thanks again for the help. Am I missing anything here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/ARTIF-748">https://issues.iboss.org/browse/ARTIF-748</a>   |

| 2373 | ARTIF-748   | Thanks [~eric.wittmann]. [~csa], any thoughts on that? See my comment on KEYCLOAK-1539. Essentially, a call to JSON REST using Errai's Caller may be unauthorized. But instead of returning a 401 (or anything helpful), KeyCloak returns a login page's HTML. GWT's JSONmarshallers, of course, fall over themselves. However, I was a little surprised that the error didn't hit the Caller's ErrorHandler "at all". Should it? I'll need to play with it again to come up with a stacktrace. But regardless, if a GWT marshaller throws an exception on a REST call, could that bubble up to the ErrorHandler somehow? Or, is there a way to deal with this with some sort of Interceptor, like Eric suggested?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/ARTIF-748">https://issues.jboss.org/browse/ARTIF-748</a> |
| 2374 | ARTIF-748   | [~brmeyer], I agree with your summary. Since the response code is 200 OK, Errai will try to demarshall the response which it expects to be JSON-based, as specified in @Consumes and @Produces. So, the server is really returning an invalid response and you will see an unhandled exception. Interceptors are probably not an ideal solution here as you don't know which REST call will fail after the token expired, so you'd have to intercept them all. I could easily add error handling for this case to Errai 3.2, if needed. BTW, did you already upgrade to 3.2 and GWT 2.7?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/ARTIF-748">https://issues.jboss.org/browse/ARTIF-748</a> |
| 2375 | ARTIF-730   | Completed in https://github.com/brmeyer/s-ramp/tree/wildfly9. But, for now, holding. The server overlay from ARTIF-739's Keycloak upgrade no longer supports WF 8, so we'd have to follow suit and drop it. Also, WF 9 upgraded to Hibernate Search 5.2, which is really different than the 4.x in EAP 6 and WF 8. Supporting both with the distro *might* be possible, but it'll be horrifically complex to do so in the actual repo module (some packages are different, etc.). So, this might imply dropping EAP 6.4 as well. Not sure if 1.1.0.Final is the place to do all that -- how soon is too soon?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/ARTIF-730">https://issues.jboss.org/browse/ARTIF-730</a> |
| 2376 | ARTIF-674   | Can't the extension support be added without breaking compliance?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/ARTIF-674">https://issues.jboss.org/browse/ARTIF-674</a> |
| 2377 | ARTIF-659   | On hold. At least guava-gwt, and therefore Errai 2, require Java 6-7 and fail with Java 8.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/ARTIF-659">https://issues.jboss.org/browse/ARTIF-659</a> |
