| 9353 | JBEAP-10527 | Has the server knowledge of the AuthenticationContext defined by the client or is this object only stored on the client? On the server-side any authentication and authorization for JMS is performed by <a href="https://github.com/wildfly/wildfly/blob/master/messaging-activemq/src/main/java/org/wildfly/extension/messaging/activemq/ElytronSecurityManager.java">https://github.com/wildfly/wildfly/blob/master/messaging-activemq/src/main/java/org/wildfly/extension/messaging/activemq/ElytronSecurityManager.java</a> using the ServerAuthenticationContext.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-10527">https://issues.jboss.org/browse/JBEAP-10527</a> |
| 9354 | JBEAP-10527 | Is it really blocker? I would think it is not: we were not offering that feature with PicketBox and it was my understanding that providing the same feature set with Elytron in the messaging subsystem was sufficient? From a technical perspective, if we can get the client's AuthenticationContext info on the server-side using ServerAuthenticationContext, that *new feature* can be done for EAP 7.1. Otherwise, it would require changes to Artemis to integrate it with SASL and I don't think it is reasonable to expect it for EAP 7.1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-10527">https://issues.jboss.org/browse/JBEAP-10527</a> |
| 9355 | JBEAP-10261 | how are you testing this? executing this scripts from cmd or from powershell? powershell "fixes" the path and is correctly set. .bat scripts needs to be executed in cmd.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-10261">https://issues.jboss.org/browse/JBEAP-10261</a> |
| 9356 | JBEAP-10061 | I updated the community ( <a href="https://docs.jboss.org/author/display/WFLY/JPA+Reference+Guide">https://docs.jboss.org/author/display/WFLY/JPA+Reference+Guide</a> ) to refer to "Migrating from" the non-Hibernate persistence providers. Is that clear enough to also change in the EAP 7.1 documentation? I also updated the *jboss.as.jpa.classtransformer* description to: {quote} set to false to disable class transformers for the persistence unit. Set to true, to allow entity class enhancing/rewriting. {quote} For the EAP 7.1 description of *jboss.as.jpa.classtransformer*, we can change to: {quote} jboss.as.jpa.classtransformer  Set to 'false' to disable entity class transformers for the persistence unit. Set to 'true' to enable entity class tranforming, or set one of { hibernate.enhancer.enableDirtyTracking, hibernate.enhancer.enableLazyInitialization, hibernate.enhancer.enableAssociationManagement, hibernate.ejb.use_class_enhancer} properties to 'true'. {quote}                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-10061">https://issues.jboss.org/browse/JBEAP-10061</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | URL                                                                                                   |

| 9357 | JBEAP-10052 | [~istraka] Could you please review the topics added here: <a href="https://gitlab.cee.redhat.com/nchaudha/eap-documentation/commit/8181db6c4d9f2d467daeb3bca41b7c20ab529940">https://gitlab.cee.redhat.com/nchaudha/eap-documentation/commit/8181db6c4d9f2d467daeb3bca41b7c20ab529940</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-10052">https://issues.jboss.org/browse/JBEAP-10052</a> |
| 9358 | JBEAP-9901  | Hi [~ochaloup], I'm almost ready to start writing the transaction manager content for the Performance Tuning Guide (to be tracked in this sub-task JIRA). [You mentioned in the parent JIRA  <a href="https://issues.jboss.org/browse/JBEAP-7233?focusedCommentId=13345191&amp;page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13345191">https://issues.jboss.org/browse/JBEAP-7233?focusedCommentId=13345191&amp;page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13345191</a> ] that for XA transactions, using a journal store for logging would be better for performance. Is all that is required to enable the {{(use-journal-store)}} setting, or is any other configuration necessary? {code} /subsystem=transactions:write-attribute(name=use-journal-store,value=true) {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBEAP-9901">https://issues.jboss.org/browse/JBEAP-9901</a>   |
| 9359 | JBEAP-9746  | Does this mean it should a configuration attribute on the logging subsystem? If so that will not work. It has to be done via a system property because loggers are generally static in WildFly/EAP and they will be created before the attribute can be parsed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-9746">https://issues.jboss.org/browse/JBEAP-9746</a>   |

| 9361 | JBEAP-9746  | [~Takis] You mentioned "And it is a feature that comes with the next component upgrade to 3.3.1." Will this component upgrade make 7.1.0 GA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-9746">https://issues.jboss.org/browse/JBEAP-9746</a>   |
| 9362 | JBEAP-9716  | [~trepel]: It seems like someone may have already fixed this as I am not able to reproduce this issue now. Can you give it a shot with the latest source? If it is fixed, I will remove those warnings from the README file.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-9716">https://issues.jboss.org/browse/JBEAP-9716</a>   |
| 9363 | JBEAP-9716  | [~jeffmaury] I can see the warnings even if using <a href="https://github.com/jbossas/eap-quickstarts/blob/7.x/kitchensink-jsp/pom.xml#L60">https://github.com/jbossas/eap-quickstarts/blob/7.x/kitchensink-jsp/pom.xml#L60</a> As you can see it uses taglibs-standard-impl and the scope is compile (default scope if nothing specified). I tried adding jsp-api to the pom.xml as you suggested but only one of the two warnings disappeared. I wonder [~sgilda], could you please try it as well, it's really weird. There are other quickstarts that use jsp (e.g. spring-greeter). It seems that warnings are not shown for these quickstarts because of {noformat} <dependency> <groupid>org.jboss.spec.java:javax.servlet.jsp</groupid> <artifactId>jboss-jsp-api_2.3_spec</artifactId> </dependency> {noformat} in their pom.xml However when I tried adding this in kitchensink-jsp quickstart, again only one of the two warnings disappeared.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-9716">https://issues.jboss.org/browse/JBEAP-9716</a>   |
| 9364 | JBEAP-9716  | [~ctomc]: This issue is beyond me. I've tried the suggestions, but they don't really work. Is there someone else who could take a look at this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-9716">https://issues.jboss.org/browse/JBEAP-9716</a>   |
| 9365 | JBEAP-9712  | @[~rjanik], do you have any suggestions for this chapter? [~johara] suggested mentioning simple caches for local caches that don't need transactions or persistence, but it seems the EAP implementation already enables that option automatically (according to JBEAP-1905 and <a href="https://github.com/jbossas/jboss-eap7/pull/26/">https://github.com/jbossas/jboss-eap7/pull/26/</a> ). Is my understanding correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-9712">https://issues.jboss.org/browse/JBEAP-9712</a>   |
| 9366 | JBEAP-9603  | What is the setup you are using to test websockets where you see this behavior?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-9603">https://issues.jboss.org/browse/JBEAP-9603</a>   |
| 9367 | JBEAP-9590  | [~dlofthouse], [~jkalina] can you please switch linked JBEAP jiras to proper state before I ack this? Some of them are still in NEW state, should be in PR sent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-9590">https://issues.jboss.org/browse/JBEAP-9590</a>   |
| 9368 | JBEAP-9324  | [~emmartins]: Are you asking [~smarlow]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-9324">https://issues.jboss.org/browse/JBEAP-9324</a>   |
| 9369 | JBEAP-9243  | Changing the icon just requires swapping the JFramelcon found in izpack. I was thinking of just using shadowman, or should it be more wildfly specific?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-9243">https://issues.jboss.org/browse/JBEAP-9243</a>   |

| 9371 | JBEAP-8950  | [~dmichael], could you please include the link of the JIRA that was included in the RN?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-8950">https://issues.jboss.org/browse/JBEAP-8950</a>   |
| 9372 | JBEAP-8944  | This issue is fixed, can it be moved to fixed issues?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-8944">https://issues.jboss.org/browse/JBEAP-8944</a>   |
| 9373 | JBEAP-8941  | 1. Should the EAP 7.1 release notes refer to [ <a href="https://docs.jboss.org/author/display/WFLY/WildFly+Elytron+Security#WildFlyElytronSecurity-GetStartedusingtheElytronSubsystem">https://docs.jboss.org/author/display/WFLY/WildFly+Elytron+Security#WildFlyElytronSecurity-GetStartedusingtheElytronSubsystem</a> ], which contents may change to reflect future WildFly versions? Same question for [ <a href="https://docs.jboss.org/author/display/WFLY/Using+the+Elytron+Subsystem">https://docs.jboss.org/author/display/WFLY/Using+the+Elytron+Subsystem</a> ] + [ <a href="https://docs.jboss.org/author/display/WFLY/WildFly+Elytron+Security">https://docs.jboss.org/author/display/WFLY/WildFly+Elytron+Security</a> ] + [ <a href="https://docs.jboss.org/author/display/WFLY/WildFly+Elytron+Security#WildFlyElytronSecurity-UsetheElytronandSecuritySubsystemsinParallel">https://docs.jboss.org/author/display/WFLY/WildFly+Elytron+Security#WildFlyElytronSecurity-UsetheElytronandSecuritySubsystemsinParallel</a> ]. 2. The link for "Migrate from Hibernate ORM 5.0 to Hibernate ORM 5.1", doesn't work for me, I get a http 404 error. [ <a href="https://access.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.1.alpha/html-single/migration_guide/#migrating_from_hibernate_5_0_to_5_1">https://access.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.1.alpha/html-single/migration_guide/#migrating_from_hibernate_5_0_to_5_1</a> ] | <a href="https://issues.jboss.org/browse/JBEAP-8941">https://issues.jboss.org/browse/JBEAP-8941</a>   |
| 9374 | JBEAP-8941  | Yes, the EAP 7.1 Alpha Release Notes intentionally links to upstream Elytron docs, because we had the Elytron writer help draft upstream Elytron content for Alpha use. For EAP 7.1 Beta & GA, the Elytron info in the Release Notes will be modified to link to relevant Elytron documentation in the official EAP product documentation and the Release Notes will no longer point to upstream WildFly docs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-8941">https://issues.jboss.org/browse/JBEAP-8941</a>   |
| 9375 | JBEAP-8853  | [~martyn-taylor] The Artemis upgrade incorporates [commit  <a href="https://github.com/rh-messaging/jboss-activemq-artemis/commit/3d765ae4cf1b122328ce7bfa8f8db671ad758b92">https://github.com/rh-messaging/jboss-activemq-artemis/commit/3d765ae4cf1b122328ce7bfa8f8db671ad758b92</a> ] which likely fixes JBEAP-7454 and JBEAP-8523. Is it true? If yes these JIRAs should be linked here and consequently marked as Resolved. [~kabirkhan] it also affects RFEs EAP7-591 and EAP7-660.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-8853">https://issues.jboss.org/browse/JBEAP-8853</a>   |
| 9376 | JBEAP-8853  | [~kabirkhan] There are some reopen issues related to this upgrade. Is there general policy for upgrade jiras which incorporates reopened issues? Should I reopen this jira as well or verify with comment that something is wrong with it? Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-8853">https://issues.jboss.org/browse/JBEAP-8853</a>   |

| 9378 | JBEAP-8665  | [~wolfc] [~kabirkhan] how can we push this issue forward for review/updates/action?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-8665">https://issues.jboss.org/browse/JBEAP-8665</a>   |
| 9379 | JBEAP-8659  | Martin Svehla asked: {quote} Hey Kabir, Seems that JIRAs that have labels eap7.1.0-defer or eap7.1.0-to-prd, while having dev ack-, cause issues in some of our filters. Can you please make a mass update and set dev ack to '+' or '?' on all JIRAs with that label? {quote} Since this issue is one of these, these labels implicitly mean it is a valid issue, so setting devel-ack to +                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-8659">https://issues.jboss.org/browse/JBEAP-8659</a>   |
| 9380 | JBEAP-8599  | Hi, can you please include JDG-708? It's critical for us. It was fixed in 3.0.20.Final in upstream: <a href="https://issues.jboss.org/browse/RESTEASY-1205">https://issues.jboss.org/browse/RESTEASY-1205</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-8599">https://issues.jboss.org/browse/JBEAP-8599</a>   |
| 9381 | JBEAP-8599  | [~asoldano] hi, i've created and linked the issue. We need the fix for 7.0.5.GA actually, because of JDG release schedule, 7.0.6.GA would be too late. Is it possible to release SP2 in 7.0.5.GA (CR2)? I'll talk to my PM and escalate this if needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-8599">https://issues.jboss.org/browse/JBEAP-8599</a>   |
| 9382 | JBEAP-8593  | [~pjelinek], is this a big concern given that the passwords are shown plainly in CLI? Changing it in the given form is trivial but the passwords would still show up in the Management Model browser (as do other passwords).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-8593">https://issues.jboss.org/browse/JBEAP-8593</a>   |
| 9383 | JBEAP-8532  | This requires some changes that I don't want to make this late in the 7.1 cycle - can we move this to 7.2 and I'll take another look then?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-8532">https://issues.jboss.org/browse/JBEAP-8532</a>   |

| 9384 | JBEAP-8489  | [~asoldano]: Can you please set dev_nack and close this jira?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-8489">https://issues.jboss.org/browse/JBEAP-8489</a> |
| 9385 | JBEAP-8437  | So basically only "name" attribute is checked during XML validation and others are skipped and checked by model? Is there a plan to extend it the validation as information which attribute is required is in xsd?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-8437">https://issues.jboss.org/browse/JBEAP-8437</a> |
| 9386 | JBEAP-8437  | Is there an accepted requirement anywhere that all configuration mistakes are caught via xml parsers? I don't recall agreeing to one, although it's been a lot of years now. :) BTW, my comments are not meant as a rejection of this issue. I just want behavior improvements separately categorized.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-8437">https://issues.jboss.org/browse/JBEAP-8437</a> |
| 9387 | JBEAP-8434  | Hi [~jpallach]! What do you think about this issue becoming a RFE?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-8434">https://issues.jboss.org/browse/JBEAP-8434</a> |
| 9388 | JBEAP-8434  | Hi [~bilge]! What do you think about this issue becoming a RFE?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-8434">https://issues.jboss.org/browse/JBEAP-8434</a> |
| 9389 | JBEAP-8371  | [~jamezp]: Thank you for explanation. I see two choices: * add description of this use case to documentation and all similar use cases too. or * logging load all properties at first. Writer will be opened correctly after all properties are loaded. Anything else would be done after all properties are loaded. This is probably not a bug, it is enhancement. Component is also "User experience", because this could be really annoying for users although users could set logging correctly ... WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-8371">https://issues.jboss.org/browse/JBEAP-8371</a> |
| 9390 | JBEAP-8308  | [~kabirkhan] [~ataylor] [~clebert] I'm not happy with the "wildfly" in the suffix. Can we please use SP instead of wildfly?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-8308">https://issues.jboss.org/browse/JBEAP-8308</a> |
| 9391 | JBEAP-8287  | Hello [~jamezp] I would like to ask you about supported languages. According to EAP7-30 we support zh_CN. On the other hand, 3.2.3. Change the Language of the Management Console [here https://doc-stage.usersys.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.1.alpha/html-single/configuration_guide/#management_console_overview] is said, that we support zh_Hans in management console. Is EAP7-30 valid?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-8287">https://issues.jboss.org/browse/JBEAP-8287</a> |
| 9392 | JBEAP-8287  | One more question. These files can be found in eap sources: {code} ./appliance/src/main/resources/org/jboss/as/appliance/logging/AppClientLogger.i18n_fr.properties<br>./appliance/src/main/resources/org/jboss/as/appliance/logging/AppClientLogger.i18n_zh_Hans.properties<br>./appliance/src/main/resources/org/jboss/as/appliance/logging/AppClientLogger.i18n_pt_BR.properties<br>./appliance/src/main/resources/org/jboss/as/appliance/logging/AppClientLogger.i18n_de.properties<br>./appliance/src/main/resources/org/jboss/as/appliance/logging/AppClientLogger.i18n_es.properties<br>./appliance/src/main/resources/org/jboss/as/appliance/logging/AppClientLogger.i18n_CN.properties<br>./appliance/src/main/resources/org/jboss/as/appliance/logging/AppClientLogger.i18n_ja.properties {code} zh_Hans can not be set as language to be used (starting eap with java opts -Duser.language=zh -Duser.country=Hans - nothing is translated). Is there any reason why AppClientLogger.i18n_zh_Hans.properties is there? Note that this is only example. There are many zh_Hans property files.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBEAP-8287">https://issues.jboss.org/browse/JBEAP-8287</a> |
| 9393 | JBEAP-8280  | bq. The instance pool max-pool-size value is the maximum number of EJB instances that can exist in the pool. The default max-pool-size value is 20, which means that for a particular EJB there can only be 20 instances of that EJB at one time. Actually the default is that the pool size is derived from the size of worker pools: {noformat}<br>{domain@localhost:9990 /} /subsystem=ejb3/strict-max-bean-instance-pool=slsb-strict-max-pool:read-resource { "outcome" => "success", "result" => { "derive-size" => "from-worker-pools", "max-pool-size" => 20, "timeout" => 5L, "timeout-unit" => "MINUTES" } } {noformat} If the {{derive-size}} attribute is defined, it overrides the value from {{max-pool-size}}. Please add some discussion about the {{derive-size}} attribute (and both of its possible values - {{from-worker-pools}} and {{from-cpu-count}}) and the possibility to undefine it (in which case the explicit {{max-pool-size}} is applied). This affects the {{5.1.1.1. Creating a Bean Instance Pool}} section where both possibilities should be described. bq. If more than the maximum number of threads try to use a particular EJB, the client will block and wait for an instance to become available. If a client does not get an instance within the time set in instance-acquisition-timeout, an exception is thrown. - I only see {{timeout}} and {{timeout-unit}} attributes, no {{instance-acquisition-timeout}}. Am I missing something? - Also the wording "more than the maximum number of threads" is a bit confusing, because obtaining an instance from the pool depends on whether the instance is free or not, it has nothing to do with number of threads (either someone is using it or not). bq. {{5.1.1.2. Specifying the Instance Pool a Bean Should Use}} - IMO it is worth mentioning that you can do this using the {{@org.jboss.ejb3.annotation.Pool}} annotation as well, not just using the deployment descriptor. - {{By default, EJBs use the default instance pool.}} - that sentence sounds a bit silly and tautological :) and it repeats what was already said at the beginning of {{5.1.1. Bean Instance Pools}} I think we could remove it. bq. Bean instance pools are used for Stateless Session Beans (SLSBs) and Message Driven Beans (MDBs). By default, beans use the default instance pool specified by default-slsb-instance-pool. The {{default-slsb-instance-pool}} is for SLSBs only, for MDBs, it is {{default-mdb-instance-pool}} bq. By default, a bean thread pool named default is used for remote EJB requests, asynchronous EJB calls, and EJB timers. This is no longer true for remote EJB requests, in EAP 7 these are by default handled in the worker defined in the IO subsystem. It is possible to use an EJB thread pool for remote requests, but you have to set the value of {{execute-in-worker}} of the {{/subsystem=ejb3/service=remote}} resource to {{false}} | <a href="https://issues.jboss.org/browse/JBEAP-8280">https://issues.jboss.org/browse/JBEAP-8280</a> |
| 9394 | JBEAP-8280  | Verified in revision 018262f. Looks good to me now, thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-8280">https://issues.jboss.org/browse/JBEAP-8280</a> |

| 9395 | JBEAP-8054  | Verification failed on Performance guide, revision 8288495. ---- {quote}CMS is the default garbage collector in Java 8{quote} Default garbage collector in Java 8 is "Parallel GC", you can check this by -XX:+PrintCommandLineFlags option: \[mkopecky@dhcp-10-40-5-170 bin\]\$ java -XX:+PrintCommandLineFlags -version -XX:InitialHeapSize=257824576 -XX:MaxHeapSize=4125193216 -XX:+PrintCommandLineFlags -XX:+UseCompressedClassPointers -XX:+UseCompressedOops -XX:+UseParallelGC ... \[mkopecky@dhcp-10-40-5-170 bin\]\$ ---- {quote} To explicitly enable large page ...: -XX:+UseLargePages To explicitly disable large page ...: -XX:-UseLargePages {quote} Large pages should be disabled by different attribute then is used for enabling of them, right? ---- Information about getting/setting large pages information from OS should be in documentation too. It could be enough to add link to [oracle documentation http://www.oracle.com/technetwork/java/javase/tech/largememory-jsp-137182.html] ---- {quote}These operating system options do the same thing as the large pages JVM option, but are instead applied system-wide. For more information, see the Memory chapter in the Red Hat Enterprise Linux Performance Tuning Guide. {quote} Memory chapter is quite huge. Can you be more specific and add link to some subchapter? ---- There could be mentioned some basic informations about ulimit tool. On the [article on Customer portal https://access.redhat.com/solutions/61334] is almost nothing about ulimit tool. There should be at least: * how to get soft limit values: ulimit -Sa * how to get hard limit values: ulimit -Ha * how to set some value: for example this: ulimit -Hn 4090 * difference between soft limit and hard limit | <a href="https://issues.jboss.org/browse/JBEAP-8054">https://issues.jboss.org/browse/JBEAP-8054</a> |
| 9396 | JBEAP-7969  | [~rhusar]: Should I assign this one to you?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-7969">https://issues.jboss.org/browse/JBEAP-7969</a> |
| 9397 | JBEAP-7877  | I can't reproduce this. How are you actually configuring the proxy?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-7877">https://issues.jboss.org/browse/JBEAP-7877</a> |
| 9398 | JBEAP-7875  | [~kabir Khan] [~jmesnil] All the linked jira are in state PR sent or resolved but this upgrade jira is ready for QA. Could you update the state of jiras, please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-7875">https://issues.jboss.org/browse/JBEAP-7875</a> |
| 9399 | JBEAP-7867  | I don't think this is a VDX concern. VDX has no knowledge of the namespaces for which parsers are registered. Not for 7.1; we're past the point where we can consider non-trivial enhancements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-7867">https://issues.jboss.org/browse/JBEAP-7867</a> |
| 9400 | JBEAP-7796  | Hi Gunnar, could you give a few more details about the changes included. You mentioned that this upgrade fixes a regression and two bugs. Are there any new features? Or just the regression fix + bug fixes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-7796">https://issues.jboss.org/browse/JBEAP-7796</a> |
| 9401 | JBEAP-7790  | [~rsvoboda] I presume we already test this using the property? Can we add it to the management model at this stage?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-7790">https://issues.jboss.org/browse/JBEAP-7790</a> |
| 9402 | JBEAP-7780  | [~rsvoboda] This one has been merged, can you ack it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-7780">https://issues.jboss.org/browse/JBEAP-7780</a> |
| 9403 | JBEAP-7762  | Martin, I can see this ticket is assigned to me. Please can you be more specific on how the localization team can help you here? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-7762">https://issues.jboss.org/browse/JBEAP-7762</a> |
| 9404 | JBEAP-7721  | [~mstyk] If I understand correctly, the guide should add the following line to the Core and Jms examples found at the end of the thread management chapter[1]: {{myFactory.allowCoreThreadTimeOut(true);}} Is there a CLI equivalent for allow-time-out (or whatever it may be called) like there is for use-global-pools? I'm unable to find the attribute if it exists. Reply when you can. Thank you! | 9405 | JBEAP-7720  | [~pjelinek] or [~mnovak]: Could you please take a look at this merge request and let me know if I am understanding this one correctly?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-7720">https://issues.jboss.org/browse/JBEAP-7720</a> |
| 9406 | JBEAP-7719  | [~jpallich]: I spoke with [~rhnsupport-pfestoso] and we both think this JIRA can be closed. Can you confirm?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-7719">https://issues.jboss.org/browse/JBEAP-7719</a> |
| 9407 | JBEAP-7719  | [~nziakova] or [~dudae]: Since this is now targeted for 7.2, should it still be a blocking issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-7719">https://issues.jboss.org/browse/JBEAP-7719</a> |
| 9408 | JBEAP-7705  | [~rsvoboda] since the general undertow+elytron use case is covered here: <a href="https://issues.jboss.org/browse/JBEAP-7728">https://issues.jboss.org/browse/JBEAP-7728</a> are there any other usecases/scenarios I'm missing? If not can we close this JIRA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-7705">https://issues.jboss.org/browse/JBEAP-7705</a> |
| 9409 | JBEAP-7698  | Verification failed in revision 864568d5. Chapter CHAPTER 2. HOW RED HAT JBOSS ENTERPRISE APPLICATION PLATFORM 7 HANDLES SECURITY OUT OF THE BOX looks good to me. There are only some 'major' issues - JBEAP-11399, JBEAP-11410, JBEAP-11411, JBEAP-11412. What needs to be improved is following - related Analysis document says: _From a documentation perspective we should add commands to show how to convert the default resources to use Elytron security, We should also show commands to remove the legacy security once it is no longer referenced._ There is JBEAP-8472 which will provide CLI script {{enable-elytron.cli}} in examples directory which will enable Elytron. By mention this script in documentation will be covered mentioned above requirement (otherwise there will be needed documentation for how to enable every particular resource which is integrated with Elytron). Please add information about this script once JBEAP-8472 will be resolved - there should be mentioned: * where this CLI script can be found * some basic information that it can be used as example for enabling Elytron in related subsystems and management interfaces                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBEAP-7698">https://issues.jboss.org/browse/JBEAP-7698</a> |
| 9410 | JBEAP-7694  | Failing verification. What is missing: * common place with set of included mechanisms ** Anonymous ** Digest ** Entity ** External ** Gs2 ** Gssapi ** LocalUser ** OAuth2 ** OTP ** Plain ** Scram * information how and when to use each of them * list of parameters which can be used for the mechanisms configuration and their description: ** wildfly.sasl.local-user.quiet-auth / jboss.sasl.local-user.quiet-auth ** wildfly.sasl.gssapi.client.delegate-credential ** wildfly.sasl.otp.alternate-dictionary ** ... * how to configure set of mechanisms on server side (filtering, ordering, parameters etc). * how to configure set of mechanisms on client side (filtering, ordering, parameters etc).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-7694">https://issues.jboss.org/browse/JBEAP-7694</a> |
| 9411 | JBEAP-7690  | [~ahoffer] It needs to be listed as a newly supported feature and I think it also needs some documentation on the configuration of distributed workmanager. That should go in chapter 16 (JCA) of Configuration Guide. In addition to the usual stuff (what is a distributed workmanager, what attributes does it take, etc.) there are some specifics that I think need to be documented, such as that the thread pool for a distributed workmanager needs to be of the same name as the workmanager. [~maeste] I see the Jirban Community Docs flag on EAP7-495 has been set to Done/Not Relevant, but couldn't find the documentation in the WildFly docs *. Could you point [~ahoffer] to the docs, or provide some, if there are none? Thanks. \* <a href="https://docs.jboss.org/author/display/WFLY10/Documentation">https://docs.jboss.org/author/display/WFLY10/Documentation</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-7690">https://issues.jboss.org/browse/JBEAP-7690</a> |
| 9412 | JBEAP-7689  | [~nziakova]: I am a little confused by two of your comments as they contradict each other: 1. In the first bullet, you say: "The artifacts are not downloaded from JBoss EAP Maven repository, but from Red Hat Maven repository..." 2. In the last bullet you say it "Should be the JBoss EAP Maven repository" Should it be the "Red Hat Maven repository" or the "JBoss EAP Maven repository"? We refer to it extensively throughout our documentation as the "JBoss EAP Maven repository". It only contains artifacts for JBoss EAP, so it might be better to keep referring to it that way. Also, the downloaded version of the repository is branded with the JBoss EAP name. Your thoughts?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-7689">https://issues.jboss.org/browse/JBEAP-7689</a> |

| 9416 | JBEAP-7670  | [~jpallich]: We do not document Arquillian. Is this JIRA to update the quickstarts that use Arquillian? If so, the component should be changed to "Quickstarts".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-7670">https://issues.jboss.org/browse/JBEAP-7670</a> |
| 9417 | JBEAP-7669  | [~jpallich]: Should this component be changed to "Quickstarts"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-7669">https://issues.jboss.org/browse/JBEAP-7669</a> |
| 9418 | JBEAP-7665  | - Please add a note about the {{org.wildfly.extension.batch.jberet.deployment.BatchPermission}} which is required to allow authenticated users deal with Batch jobs. The supported targets of this permissions are {{start}} for starting jobs, {{stop}} for stopping jobs, {{restart}} for restarting jobs, {{abandon}} for marking executions as ABANDONED, {{read}} for reading metadata about job executions using the JobOperator and management interfaces. bq. For example, a secured RESTful endpoint is created to initiate batch jobs and the batch-jberet subsystem. - This sentence is not very senseful, did you mean for example "using" instead of "and" the batch-jberet subsystem? bq. By default, the batch-jberet subsystem is configured to use the ApplicationDomain Elytron security domain. - I think that at least in 7.1.0.DR11 the security domain is undefined by default. [~jamezp] are we planning to keep it this way?                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-7665">https://issues.jboss.org/browse/JBEAP-7665</a> |
| 9419 | JBEAP-7615  | Can you confirm that this is not default in EAP7? Can you point me to what system property it is? If above is true, maybe it would make sense to extend that property or add a new one to incorporate removing the file content entirely? Current approach doesn't fit well in Docker images, these are tested afterwards and we release only working images, so no rollback would be required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-7615">https://issues.jboss.org/browse/JBEAP-7615</a> |
| 9420 | JBEAP-7615  | We are talking here about different things. We use the {{ageout-history}} command. It removes all the unnecessary, previous patches, which let us go down from 1.4 GB to around 280 MB. But there are *still left scrapped jar files* that were updated while patching under {{modules/system/layers/base}} directory. Example? {code} [root@d12b18135037 ~]# jar tf /opt/eap/modules/system/layers/base/org/jboss/log4j/logmanager/main/log4j-jboss-logmanager-1.1.1.Final-redhat-1.jar Picked up JAVA_TOOL_OPTIONS: -Duser.home=/home/jboss -Duser.name=jboss java.util.zip.ZipException: error in opening zip file at java.util.zip.ZipFile.open(Native Method) at java.util.zip.ZipFile.<init>(ZipFile.java:219) at java.util.zip.ZipFile.<init>(ZipFile.java:149) at java.util.zip.ZipFile.<init>(ZipFile.java:120) at sun.tools.jar.Main.list(Main.java:1115) at sun.tools.jar.Main.run(Main.java:293) at sun.tools.jar.Main.main(Main.java:1288) {code} When we remove these unusable jar files we save over 100 MB with 6.4.12.GA CP.                                             | <a href="https://issues.jboss.org/browse/JBEAP-7615">https://issues.jboss.org/browse/JBEAP-7615</a> |
| 9421 | JBEAP-7470  | This will be done in a later release, as it requires a non compatible Undertow API change that is not suitable for the 1.4.x branch.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-7470">https://issues.jboss.org/browse/JBEAP-7470</a> |
| 9422 | JBEAP-7469  | [~jdenise]: When do you expect to merge code for this jira? Before EAP 7.1.0.DR11?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-7469">https://issues.jboss.org/browse/JBEAP-7469</a> |
| 9423 | JBEAP-7469  | @Marek, although we seem to have a stable integration, I am wandering if we should really rush to integrate in in 7.1 We could wait and only push it upstream when we have identified a branch for 7.1 So should come in 7.2 with part of CLI.next.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-7469">https://issues.jboss.org/browse/JBEAP-7469</a> |
| 9424 | JBEAP-7469  | [~jdenise]: Well, I prefer to wait and push it to upstream (I mean wf-core, not wf-core-eap) when we have identified a branch for 7.1. Community can fix some potential initial issues ... When will you have Aesh-readline ready? DR10? Do you run WildFly TS with Aesh.readline? (I mean WF, not WF-core) So you plan to add CLI.next to EAP 7.2, right? Btw, I'm unable to build you branch locally: {noformat} [ERROR] Failed to execute goal org.apache.maven.plugins:maven-compiler-plugin:3.5.1:testCompile (default-testCompile) on project wildfly-core-testsuite-standalone: Compilation failure: Compilation failure: [ERROR] /home/mkopecy/git/jbossqe-eap-testsuite-eap7-core/testsuite/standalone/src/test/java/org/jboss/as/test/integration/management/cli/FileInputTestCase.java:[24,27] package com.sun.javafx.util does not exist [ERROR] /home/mkopecy/git/jbossqe-eap-testsuite-eap7-core/testsuite/standalone/src/test/java/org/jboss/as/test/integration/management/cli/FileInputTestCase.java:[61,82] cannot find symbol {noformat}                               | <a href="https://issues.jboss.org/browse/JBEAP-7469">https://issues.jboss.org/browse/JBEAP-7469</a> |
| 9425 | JBEAP-7469  | [~jdenise]: What do you plan with this jira? Can we change "Target Release" to 7.2.0.GA? I don't have permission to change it, but I can ask Jiri Pallich. Jiri has those permissions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-7469">https://issues.jboss.org/browse/JBEAP-7469</a> |

| 9429 | JBEAP-7362  | Thank you. I updated status of this jira. [~soul2zimate]: Can you please set dev_ack?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-7362">https://issues.jboss.org/browse/JBEAP-7362</a> |
| 9430 | JBEAP-7235  | The originating JIRA is closed and I believe this one, which also targets 7.0,is complete. [~jpallich]: Can we close this issue also?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-7235">https://issues.jboss.org/browse/JBEAP-7235</a> |
| 9431 | JBEAP-7233  | Thanks a lot for the suggestions, [~ochaloup] and [~mkopecy]! @ [~mkopecy]: I am writing the JVM chapter at the moment (tracked in sub-task jira JBEAP-8054), and I will be sure to mention ulimits as suggested. @ [~ochaloup]: I have made a note in the planning doc to cover the transaction subsystem log store. When I get up to writing that section, I will probably contact you for some more details.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-7233">https://issues.jboss.org/browse/JBEAP-7233</a> |
| 9432 | JBEAP-7228  | Hey [~rhn-support-pnag], I have added comments to the MR. When do you expect you will add documentation for the other areas of this RFE?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-7228">https://issues.jboss.org/browse/JBEAP-7228</a> |
| 9433 | JBEAP-7224  | [~jpallich]: This seems to be a duplicate of <a href="https://issues.jboss.org/browse/JBEAP-1493">https://issues.jboss.org/browse/JBEAP-1493</a> . Or am I missing something here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-7224">https://issues.jboss.org/browse/JBEAP-7224</a> |
| 9434 | JBEAP-7221  | Verification failed in revision n_2419454_how-to-configure-server-security_version_7.1.Alpha_edition_1.0_release_0-revision_8279980 (docs-bulk-12) The documentation for this RFE is insufficient. I'm missing a couple of important pieces of information: * How is it possible to create a custom manager * Where can be custom trust manager implementations referred from (e.g. server modules, in deployments, ...) * What must be changed in server's configuration in order to use a custom trust manager - including CLI commands with a brief reason and description * Explicitly say that usage of a custom trust manager will not be possible when running a JVM in FIPS mode (+ describe a way how to achieve similar behaviour as stated in analysis doc [1]) * An example of use case in which a custom manager could be used [1] <a href="https://docs.google.com/a/redhat.com/document/d/1oMPYgHgmYNG0psiQDx8p3D_A5hu5IZ_NCY3UMyR9cms/edit?usp=sharing">https://docs.google.com/a/redhat.com/document/d/1oMPYgHgmYNG0psiQDx8p3D_A5hu5IZ_NCY3UMyR9cms/edit?usp=sharing</a> | <a href="https://issues.jboss.org/browse/JBEAP-7221">https://issues.jboss.org/browse/JBEAP-7221</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | URL                                                                                                 |

| 9435 | JBEAP-7218  | > So for #3, is there any way that starting a job through the console would actually work? Yes, I use some batch examples from here <a href="https://github.com/javaee-samples/javaee7-samples/tree/master/batch">https://github.com/javaee-samples/javaee7-samples/tree/master/batch</a> Their job applications doesn't require parameters. > Or perhaps should there be a way to allow the user to provide the necessary parameters when starting the job instead of just failing every time? Yes, it is possible, it would require some changed in the UI to allow the user to specify the parameters, but I would like to defer this implementation to a later release as the time is tight for the EAP 7.1. > Could you also verify the wording in my merge request to make sure it is accurate for the console behavior? I think the text reflects the actual UI, nice job.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-7218">https://issues.jboss.org/browse/JBEAP-7218</a> |
| 9436 | JBEAP-7212  | This should probably be treated as a review of all pom.xml examples related to EJB clients and suggesting this particular strategy for handling dependencies - using the {{wildfly-ejb-client-bom}} for versions and then just adding the {{jboss-ejb-client}} library. {noformat} <dependencyManagement> <dependencies> <dependency> <groupId>org.jboss.eap</groupId> <artifactId>wildfly-ejb-client-bom</artifactId> <version>EJB_CLIENT_BOM_VERSION</version> <type>pom</type> <scope>import</scope> </dependency> </dependencies> </dependencyManagement> <dependencies> <dependency> <groupId>org.jboss</groupId> <artifactId>jboss-ejb-client</artifactId> </dependency> </dependencies> {noformat} We should also mention where to find the right EJB_CLIENT_BOM_VERSION - probably tell the users to take a look into the Maven repo, which version is present there? Any better idea?                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-7212">https://issues.jboss.org/browse/JBEAP-7212</a> |
| 9437 | JBEAP-7212  | I would say that the chapter {{Project Dependencies for Remote EJB Clients}} as a whole needs a bit of restructuring, it doesn't make much sense anymore. The pom.xml examples in the new chapter {{Single artifactID for jboss-ejb-client Dependencies}} basically just introduces a new way of achieving the same result as the two pom.xml snippets above (in {{Maven Dependencies for Remote EJB Clients}}) - the result is the same. But in the docs, these two sections are too separated and it looks like they are something different. Can we add an explanation that these are two different ways to achieve the same? Also, this list of added dependencies {quote} jboss-ejb-client xnio-nio jboss-marshalling-river jboss-sasl jboss-ejb-api_3.1_spec jboss-transaction-api_1.1_spec {quote} is not complete, and probably not necessary at all anyway. Do we really need to list all transitive dependencies? When the developer uses one of the two ways to declare an EJB client dependency, these transitive dependencies will be automatically added, it's not really necessary to list them in the documentation, IMO. Btw, please note that I also filed related JBEAP-11505 which is to remove a similar list of transitive dependencies from the beginning of the {{Maven Dependencies for Remote EJB Clients}} section - for the same reasoning. | <a href="https://issues.jboss.org/browse/JBEAP-7212">https://issues.jboss.org/browse/JBEAP-7212</a> |
| 9438 | JBEAP-7192  | Hi [~dmichael]! It currently looks like there will no documentation apart RN. Do you plan to add rest of it to relevant chapters in Configuration Guide?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-7192">https://issues.jboss.org/browse/JBEAP-7192</a> |
| 9439 | JBEAP-7178  | reopening in n_2419413_security-architecture_version_7.1.Alpha_edition_1.0_release_0-revision_8279994 with these objections: * "Elytron uses SASL to implement HTTP authentication" - This is new information for me. Could you double check it is true? Does this somehow impacts user? As I didn't realize that until now, I think this is internal implementation detail, isn't it? Is it worth mentioning then? * "...provides a complete set of HTTP authentication mechanisms including BASIC, FORM, DIGEST, and CLIENT-CERT." I am missing SPNEGO in the list * Document how to setup custom http authentication mechanism.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-7178">https://issues.jboss.org/browse/JBEAP-7178</a> |
| 9440 | JBEAP-7178  | [~zrhoads] [~rhnsupport-pnag], we have agreed with Zach configuring custom component will be tracked separately. Does this issue already exists? Could you link it? Or it should be created?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-7178">https://issues.jboss.org/browse/JBEAP-7178</a> |
| 9441 | JBEAP-7174  | @[~hsvabek], I think that details on how to create a custom implementation in the Development Guide is a different enough use case and should be tracked in a new JIRA. I don't think it should hold up verification of this one. What do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-7174">https://issues.jboss.org/browse/JBEAP-7174</a> |
| 9442 | JBEAP-7173  | Verification failed with How to configure server security revision 6bff93b8. *3.3. Credential Stores* * IMPORTANT paragraph There is change in behaviour if you fill both - credential-reference and password attribute. Here is jira issue <a href="https://issues.jboss.org/browse/JBEAP-8764">https://issues.jboss.org/browse/JBEAP-8764</a> According this jira issue please remove "IMPORTANT" paragraph. It is no longer necessary. *3.3.2. Supply a Master Password to a Credential Store* * Example Credential Store Created with a Password from Another Credential Store In example is "alias==master-pw" which contain double =, please remove one. *MISSING* * There is missing how to explicitly define type of Credential store Some explanation of /subsystem=elytron/credential-store=credStore:add(type= I can see a lot of texts in MR which is out of scope this jira issue. Can you give me a link to given issue?                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-7173">https://issues.jboss.org/browse/JBEAP-7173</a> |
| 9443 | JBEAP-7173  | Documentation should give answer for these questions: - What is "uri" attribute and what it is used for? -- what are possible parameters in uri? -- and give their description - what is happened if I replace storage file on filesystem when EAP server runs? - Credential store storage file can be removed after server starts up, passwords stay loaded in memory. -- what happens if you add/remove/update new alias in this credential store -- what happens if you lost permission to write folder - When is loaded credential store to memory from file? start, reload, restart, creation of new credential store, ... - What is relation between storage file and credential store loaded to memory? - How to define absolute path to credential store storage file? - Table A.27. credential-store Attributes - wrong URI example, there isn't "vault://" -- keep on mind that URI parameter can be different for default implementation and custom credential store implementation                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-7173">https://issues.jboss.org/browse/JBEAP-7173</a> |

| 9444 | JBEAP-7173  | <p>Hi [~hsvabek], I'll be taking over docs for this feature. I have a few questions: * I am trying to go through the process of creating and using a credential store, but the commands currently documented don't work. I assume the implementation of this feature has changed? For example: <code>{code} /subsystem=elytron/credential-store=exampleCS:add( \ &gt; uri="cr-store://exampleCS?create=true", \ &gt; credential-reference=(clear-text=cs-secret) \ &gt; )</code> 'uri' is not found among the supported properties: [credential-reference, relative-to, case-sensitive, create, implementation-properties, location, modifiable, other-providers, provider-name, providers, type] {code} In looking at the management model in the CLI, it looks like there is now {{location}}, {{relative-to}}, and {{create}} attributes for the adding a new store. It looks like something like the following works for creating a new store (and having it stored in the {{data}} directory of the server): <code>{code} /subsystem=elytron/credential-store=test_store01:add(location="cred_stores/test_store01.jcks", relative-to=jboss.server.data.dir, credential-reference=(clear-text=pass123),create=true) {code}</code> Can you confirm if this is correct? I assume the URI of {{cr-store://}} etc isn't required any more. * I think we should provide some advice on why a user would use a credential store vs using a password vault. Am I correct in assuming that we would recommend that users should prefer using a credential store because it is more easier to use and reference inside EAP (e.g. using the management CLI), rather than managing a vault externally using {{vault.sh}}? * For your suggestions in your previous comment re memory, permissions, etc: I'm not sure that we need to go in to that much detail on how the memory loading of the store file works. I think an admonition like the following would be sufficient? {quote}IMPORTANT: JBoss EAP reads the credential store file into memory and writes changes to it at varying times. You must ensure that the user running the JBoss EAP process has permissions to the store file, and that you do not externally modify or remove the store file while JBoss EAP is running.{quote}</p> | <a href="https://issues.jboss.org/browse/JBEAP-7173">https://issues.jboss.org/browse/JBEAP-7173</a> |
| 9445 | JBEAP-7173  | <p>After doing a bit of googling, I've found these great blog posts by [~pskopek]: <a href="http://undertheelytron.blogspot.com.au/2017/04/basics-credential-store-in-wildfly.html">http://undertheelytron.blogspot.com.au/2017/04/basics-credential-store-in-wildfly.html</a> <a href="http://undertheelytron.blogspot.com.au/2017/05/credential-references.html">http://undertheelytron.blogspot.com.au/2017/05/credential-references.html</a> I think his example of using a credential reference for a datasource is a much better practical example of using a credential from a credential store (rather than using one store to create another credential store). @[~pskopek]: Do you mind if I take some content from your blog posts and adapt it for the EAP docs?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-7173">https://issues.jboss.org/browse/JBEAP-7173</a> |
| 9446 | JBEAP-7173  | <p>Hi [~lcosti.redhat], You are right, 'uri' attribute was removed as this jira issue JBEAP-8450. Besides new attributes 'location', 'relative-to' and 'create', there are also 'modifiable' and case-sensitive attributes (maybe will be renamed, check JBEAP-8871 for details). And of course your example how to create credential store is correct. It would be nice go through whole documentation and update parts where is 'uri' attribute is used. Why prefer using credential store rather than vaults? One reason is easier usage, but it is not main reason for it. Main reason is better security how to get access to secure storage. Please [~pskopek] give here detailed answer, thanks. About loading storage to memory - there is reload() operation for credential store, to reload it from filesystem to memory. Now it doesn't work good JBEAP-10650. Your IMPORTANT paragraph looks good, please add there information about reload, keep on mind how reload works: *Scenario 1* # you replace storage file for credential store on filesystem # process reload() # you have in memory new content of storage file *Scenario 2* # you replace storage file for credential store on filesystem # through CLI you make remove/add operation for aliases -&gt; memory is persisted to filesystem and your replaced storage file from first step is replaced. # process reload() # you have in memory same content as before reload() You must be very careful with reload() operation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-7173">https://issues.jboss.org/browse/JBEAP-7173</a> |
| 9447 | JBEAP-7168  | <p>Hi [~hsvabek], like the other credential store docs issues, I'll be taking over this one too. :) [~hsvabek] [~pskopek]: I'm a bit confused on the use cases for this feature. I understand that it is for Elytron Client, but is it expected that credential stores will only be available to clients deployed on EAP, [as this existing doc implies <a href="https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.1.beta/html-single/how_to_configure_identity_management/#using_elytron_client_deployed">https://access.qa.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.1.beta/html-single/how_to_configure_identity_management/#using_elytron_client_deployed</a>] Or, are clients that are not deployed on EAP expected to be able to create and use credential stores? If this is the case, how is it supported for users to create a credential store? Would using the elytron tool be supported? I can't find many details on how to refer to created stores for Elytron Client. I've found the [test cases here <a href="https://github.com/wildfly-security/wildfly-elytron/blob/master/src/test/java/org/wildfly/security/auth/client/XmlConfigurationTest.java#L120">https://github.com/wildfly-security/wildfly-elytron/blob/master/src/test/java/org/wildfly/security/auth/client/XmlConfigurationTest.java#L120</a>], but while it looks like it uses custom-config.xml, I'm not sure about the EAP implementation of this. Those tests looks like it creates a credential store, but I can't see how it adds credentials to the store? Some assistance in helping me understand how this works would be very much appreciated. :)</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-7168">https://issues.jboss.org/browse/JBEAP-7168</a> |
| 9448 | JBEAP-7167  | [~zrhoads], could you provide correct link? Custom component -- OK, I will check {{custom-realm}} documentation when available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-7167">https://issues.jboss.org/browse/JBEAP-7167</a> |
| 9449 | JBEAP-7167  | <p>Hi [~okotek], I'll be taking over this docs issue. I'm not sure how to document this change. As I understand it (please correct me if I am wrong), if a user's roles is changed in LDAP (or other modifiable realm), that change will not be propagated automatically to a relevant Elytron caching-realm. What should we advise a customer to do? Should we advise them that on every LDAP update that affects users' roles, that they should be clearing affected Elytron caching-realms?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-7167">https://issues.jboss.org/browse/JBEAP-7167</a> |

| 9450 | JBEAP-7165  | <p>Verification failed in How to Configure Server Security in revision 6bff93b8. This documentation Jira should provide introduction to the new feature described in Analysis document in Jira description. Provided documentation misses some important information about configuration and understanding of this new feature. What is missing or incorrect: * Section 3.1.4. Mapping Identity for Authenticated Management Users includes sentence "Once you have added the identity resource, the identity of an authenticated user will appear when accessing the management interfaces.", but it is incorrect. In seems that in case when no access=identity is configured then identity from security domain used for authentication appears. * One of requirement for this RFE mentioned in Analysis documents says: "It will be possible to configure the SecurityDomain to be used by domain management to obtain the current SecurityIdentity which will be used for the invocation of the current management request." This requirement should be reflect in documentation. * Analysis document includes table which describes which identity is used in some cases (note, that scenarios 5 a 6 in table are out of the scope of that RFE and should not be documented). This table can be used for improving documentation of this RFE. * Documentation should provide answers for following questions: ** What is and how work inflow identity for Management security? (i.e. one security domain is used for authentication and results identity is inflowed into security domain used in access=identity) ** Provide some information about trusted-security-domains attribute from security domain - when and why it is needed. *** What happens if security domain from access=identity does not trust security domain from authentication. *** What happens if security domain from access=identity does not trust security domain from authentication, but both of them using the same security realm. *** There should be mentioned that trusted-security-domains is not transitive. ** How are mapped roles/groups to the final identity if access=identity is used (i.e. which domain maps it). In case when some information are needed for documenting mentioned above notes please ask developers. I also reported some issues related to this Jira - I linked them to this Jira.</p> | <a href="https://issues.jboss.org/browse/JBEAP-7165">https://issues.jboss.org/browse/JBEAP-7165</a> |
| 9451 | JBEAP-7153  | [~zrhoads]: Should this be moved to "Ready for QA"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-7153">https://issues.jboss.org/browse/JBEAP-7153</a> |
| 9452 | JBEAP-7152  | <p>[~ahoffer] Opps, sorry pasted the wrong link. Yeah, I meant the EAP7.0 release notes. I was talking about the community docs yeah for EAP 7.0, but I thought you had done some EAP docs for that at some point (I may not be remembering correctly.) WRT how we talk about it, the ignore-unused-configuration is generally used on the thing being managed, so in this case the slaves (The domain controller generally doesn't want to ignore anything, as it has to be able to distribute the entire domain model and deployments etc to a slave that is not ignoring or running --backup etc). FWIW, we mentioned this in the 7.1 alpha notes here: <a href="https://access.redhat.com/articles/2662761">https://access.redhat.com/articles/2662761</a> (see: Slave Host Controllers Ignore Irrelevant Parts of the Domain Configuration and Content Repository). I'll double check what was available and what the default was in 7.0 vs 7.1 and post an update here. I don't remember exactly when the change went in.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-7152">https://issues.jboss.org/browse/JBEAP-7152</a> |
| 9453 | JBEAP-7150  | Hi [~pjelinek], the doc work to use the new subsystem is tracked and already done in this JIRA <a href="https://issues.jboss.org/browse/JBEAP-10180">https://issues.jboss.org/browse/JBEAP-10180</a> . Could you move this JIRA back to verified? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-7150">https://issues.jboss.org/browse/JBEAP-7150</a> |
| 9454 | JBEAP-7149  | <p>Hi [~zrhoads], thank you for the notification. I've briefly read that section and here are my notes: # In the first paragraph of {{17.11. CONFIGURING HTTP/2}}: ** There is link to HTTP2 RFC draft. Although that link is automatically redirected to the final specification I believe we should provide direct link to final spec instead: {{(https://datatracker.ietf.org/doc/rfc7540/)}} ** Regarding to the link to the SPDY protocol in the very same paragraph, maybe we might prefer to actually provide link to IETF RFC draft {{(https://datatracker.ietf.org/doc/draft-mbelshe-httpbis-spdy/)}} instead of the current {{(www.chromium.org/spdy)}} link? # In the {{(WARNING)}} section, there is {quote} HTTP/2 requires a TLS stack that supports ALPN... {quote} I would emphasize that this is true only when using HTTP2 over a secured connection (TLS). When you use HTTP/2 in cleartext, the TLS is not utilized at all. Thus I propose something like: {quote} When using HTTP/2 over secured TLS connection the TLS stack that supports ALPN TLS protocol extension is required as it is not provided by the default installation of Java 8... {quote} Also I should note that using HTTP2 over secured connection is probably 99% of the time it will be actually used as all modern browsers don't support HTTP2 in cleartext. # Section {{(17.11.1. Configuring Undertow to use HTTP/2)}}: ** Well, I think that all necessary information is already included in the description but I feel uncomfortable with the structure a little bit. Basically all you need to do to enable HTTP2 is to set 'enable-http2' attribute on particular http(s)-listener. In case of https-listener the HTTPS setup must be prepared also. Maybe we can separate the steps for the http-listener (with some warning note that most modern browsers enforce HTTP/2 over secured TLS connection - 'h2' - and does not support HTTP/2 in clear text - 'h2c') and https-listener. # I think that we should also provide information how to setup and use OpenSSL libs downloaded from JBCS in EAP somewhere in the documentation. This configuration might slightly differ depending on whether EAP is installed from .zip archive vs RPM packages. Should you have any additional questions or something is not clear, just let me know.</p>                                                        | <a href="https://issues.jboss.org/browse/JBEAP-7149">https://issues.jboss.org/browse/JBEAP-7149</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | URL                                                                                                 |

| 9455 | JBEAP-7149  | Hi [~rhn-support-pnag], according to the latest discussion, we should also explicitly mention that there is actually also some ALPN implementation put into the EAP itself (although we still prefer our customers to use OpenSSL based ALPN implementation instead). Thus I propose following - in the Configuration guide, section {{17.11. CONFIGURING HTTP/2}}, there is a following paragraph in the warning column: {quote} When using HTTP/2 over a secured TLS connection, a TLS stack that supports ALPN TLS protocol extension is required as it is not provided by the default installation of Java 8. To get ALPN TLS protocol extension support, utilize the OpenSSL provider in JBoss EAP 7.1 with OpenSSL libraries that implement ALPN capability. The supported OpenSSL libraries are the ones from JBoss Core Services, installed and configured. {quote} Proposed updated paragraph text (feel free to alternate/modify): {quote} When using HTTP/2 over a secured TLS connection, a TLS stack that supports ALPN TLS protocol extension is required. As ALPN is not available in Java 8, there was introduced implementation of it right into the JBoss EAP 7.1, which depends on Java internals. As such it works only with Oracle and OpenJDK (and doesn't work with IBM Java) and there is a risk (even though it is rather low) that it can break with some Java update. Because of this risk it is strongly recommended to utilize ALPN TLS protocol extension support from the OpenSSL provider in JBoss EAP 7.1 with OpenSSL libraries that implement ALPN capability. The supported OpenSSL libraries are the ones from JBoss Core Services, installed and configured. {quote} Also I thought that maybe we should reorder some paragraphs in the warning column so they are more logically ordered: # The paragraph starting with sentence '{{JBoss EAP will automatically try to search for the OpenSSL libraries on the system and use them.}}' should be moved right after the example of how to configure {{openssl}} provider via legacy security-based configuration. # The paragraph '{{If OpenSSL is loaded properly, you will see a message in the server.log during JBoss EAP startup, similar to}}' including the log message example should be moved right after the previously mentioned one - that means after the '{{JBoss EAP will automatically try to search for the OpenSSL libraries on the system and use them.}}' I think that this change should make information more clear regarding to the order of the steps customer would probably do. What do you think? | <a href="https://issues.jboss.org/browse/JBEAP-7149">https://issues.jboss.org/browse/JBEAP-7149</a> |
| 9456 | JBEAP-7146  | * bq. If your application contains a persistence.xml file or the code uses the @PersistenceContext or @PersistenceUnit annotations, JBoss EAP 7 detects this during deployment and assumes the application uses JPA. It implicitly adds the Hibernate ORM 5 libraries plus a few other dependencies to your application class path and defaults to using these libraries. ** This has worked this way in EAP 6.x as well, I think. Is this really relevant for the migration guide then? * The {{Oracle Byte Array Mapping Changes}} speaks about the {{hibernate.dialect.oracle.prefer_longvarbinary}} property, but the property is correctly named {{hibernate.dialect.oracle.prefer_long_raw}} - yes, it's wrong in the official migration guide document, I'll report that. FYI this is where it is defined: <a href="https://github.com/hibernate/hibernate-orm/commit/177bbfe5e371796a5af523e0d1a70839ff0bdb71#diff-1e7261dc64d13954f60f7b0c87758dabR28">https://github.com/hibernate/hibernate-orm/commit/177bbfe5e371796a5af523e0d1a70839ff0bdb71#diff-1e7261dc64d13954f60f7b0c87758dabR28</a> * Also, are we planning to include information about new features in Hibernate 5.1.x in addition to just the migration related stuff? I mean, the stuff which is not covered by RFEs, that means without Envers-to-one associations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-7146">https://issues.jboss.org/browse/JBEAP-7146</a> |
| 9457 | JBEAP-7140  | Is this documentation for the Configuration Guide, the Migration Guide, or both? From what I can see, it seems like it might belong here: <a href="https://access.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.1.Beta/html-single/configuration_guide/#manage_a_transaction">https://access.redhat.com/documentation/en-us/red_hat_jboss_enterprise_application_platform/7.1.Beta/html-single/configuration_guide/#manage_a_transaction</a> If so, should the new operation be mentioned in the Migration Guide as well?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-7140">https://issues.jboss.org/browse/JBEAP-7140</a> |
| 9458 | JBEAP-7139  | What is the point of this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-7139">https://issues.jboss.org/browse/JBEAP-7139</a> |
| 9459 | JBEAP-7130  | Hi [~rhn-support-pfestoso]! Is this a duplicate of JBEAP-7718? If so, can you please close it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-7130">https://issues.jboss.org/browse/JBEAP-7130</a> |
| 9460 | JBEAP-7044  | [~brian.stansberry]: I agree with keeping type. But what about to rename "input-stream-index" to "input"? This would be still correct (for both "tooling" and "direct input by users"), but it would be also intuitive for customers. We can still keep "input-stream-index" (as something like alias) for backward compatibility and make it deprecated. And I really recommend to update description of this attribute.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-7044">https://issues.jboss.org/browse/JBEAP-7044</a> |
| 9461 | JBEAP-7044  | [~mjurc][~mkopecky] My apologies; in my comments above I think I didn't understand properly your perspective when you filed this. I forgot the CLI added a trick where it would check some metadata on the param and based on that let the user provide a file name as the attribute value. That's useful but it does have the impact of meaning the r-r-d output, which is a server management API description and is not directly meant as CLI help text, is made inconsistent with what the CLI user experiences. I'm not willing to change the server side management API description away from being a description of the server side management API and turn it into CLI help text. We need a proper server-side management API description. But still, we should try to improve. Some things to do: 1) Look into the param names and descriptions as you suggest here. That should be the focus of this particular JIRA. Text descriptions we of course have some flexibility, and param names we can tweak. (Note that in some cases the param is already in a .Final API and a change means a new param not a rename.) I personally prefer 'input-stream' to 'input' as it better hints at what is going on and is a better description of the server management API. But the '-index' part isn't really necessary. [~ehugonnet] can you have a look at this? Note that we should not change the type from INT, as that would be changing the description from a server API description to a CLI description. 2) [~jfdenise] Perhaps when the CLI feature you've worked on that generates CLI help text from r-r-d output comes along, it could factor this scenario into what is generated? Add some text or something to the CLI help output that explains what the CLI allows with the input? 3) CLI high level commands. One of the main points of CLI high level commands is to hide the less friendly aspects of the server side API from end users. So any place where we are using this CLI input trick is a candidate for a high level command. (We have high level commands around deployment and deployment overlays already.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-7044">https://issues.jboss.org/browse/JBEAP-7044</a> |
| 9462 | JBEAP-7007  | [~psakar][~kabirkhan] This upgrade happened in WildFly Core 3.0.0.Alpha13, so it should be linked to JBEAP-7028, not JBEAP-7572, and moved to On QA, Fix Version DR9. I'll make a bold decision and decide I'm right and do all that now. :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-7007">https://issues.jboss.org/browse/JBEAP-7007</a> |
| 9463 | JBEAP-7007  | [~jdenise]: Can you please close this as "Out of date"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-7007">https://issues.jboss.org/browse/JBEAP-7007</a> |
| 9464 | JBEAP-6868  | [~asoldano] I can take this over, unless you want to keep it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-6868">https://issues.jboss.org/browse/JBEAP-6868</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | URL                                                                                                 |

| 9465 | JBEAP-6868  | We've found it works most easily to do major API version bumps in upstream (which in this case would be ported back to 7.x). At some point the EAP code base and the upstream one will fork more than they are now, and doing major bumps in upstream ensures there is a minor stream available for future changes in EAP's branch of the fork. Right now the two branches are the same so you could use 2.1 and then bump upstream to 3.0 in the next upstream release where there is a change. But then we have to remember it's being done this way, and guard against the upstream change being to 2.2, which would be the intuitive thing for someone seeing 2.1 as the current version to do. But that would prevent the EAP branch from producing a 2.2 if it didn't want everything that was in the upstream 2.2. So, a 2.1 would be ok if you prefer but just to follow the KISS principle and stay consistent across subsystems we say always bump the upstream version by a major increment. | <a href="https://issues.jboss.org/browse/JBEAP-6868">https://issues.jboss.org/browse/JBEAP-6868</a> |
| 9466 | JBEAP-6858  | Do I understand it correctly? It is not possible to do it because of limitation of current implementation. I noticed you changed the type of Jira from Bug to Enhancement. Do you plan to address this issue in the future? If no we should close it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-6858">https://issues.jboss.org/browse/JBEAP-6858</a> |
| 9467 | JBEAP-6853  | [~tomekadamski]: This is a bad user experience. Is there any underlying technical reasoning for nacking this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-6853">https://issues.jboss.org/browse/JBEAP-6853</a> |
| 9468 | JBEAP-6842  | I added a blue focus box to the Jtree in treepackpanel. The focus box currently spans the height of the rows. Is this okay or should the focus box span the jtrees true size?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-6842">https://issues.jboss.org/browse/JBEAP-6842</a> |
| 9469 | JBEAP-6842  | What about input field focus proposal, would it be processed? !input_proposed_focus.png thumbnail!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-6842">https://issues.jboss.org/browse/JBEAP-6842</a> |
| 9470 | JBEAP-6842  | Hi Jan, I'm unsure if an input field focus indicator is required, since the cursor appears on the focused text field. Additionally, this is quite a pain to implement since it requires drawing an indicator beyond the components bounds and any solution would be quite hacky.. I can do it but I believe it will take much more than it is worth. What do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-6842">https://issues.jboss.org/browse/JBEAP-6842</a> |
| 9471 | JBEAP-6842  | Well, it was only a proposal. There are probably more important issues to work on. Still, can we avoid drawing focus indicator outside component by wrapping JTextField in JPanel and draw the border there so that it doesn't interfere with other components?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-6842">https://issues.jboss.org/browse/JBEAP-6842</a> |
| 9472 | JBEAP-6842  | Hi Daniel, I checked that and I am glad you make it possible, it looks good. However, the margins could be played with a little more to find the best visual effect. Currently the space around the field is not equal in every direction (bottom + right larger): !textfield-focus-current.png thumbnail! And I think there is no need to have more than 1px space between field and border. With these sizes for inset in JFocusPanel I get the desired effect: {code:java} gbc.insets = new Insets(1, 1, 0, 0); {code} !textfield-focus-altered-size.png thumbnail! I am not quite sure why I see equally distributed space with inset sizes not the same, I was just trying different values. This way also the "blank" space between different fields get a bit smaller, but still bigger than the original without field focus. Can these margins can be altered too to get as close as possible to the margins in DR11 installer?                                                                | <a href="https://issues.jboss.org/browse/JBEAP-6842">https://issues.jboss.org/browse/JBEAP-6842</a> |
| 9473 | JBEAP-6834  | The need to reload e.g. many servers in production domain just to enable transactional statistics is very user unfriendly behaviour. If this needs to add additional way how to inform Narayana about the variable value change this new way should be implemented. Do you need RFE for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-6834">https://issues.jboss.org/browse/JBEAP-6834</a> |
| 9474 | JBEAP-6834  | Hi [~tomjenkinson], I changed this ticket from bug to enhancement. Could you please take a look at the PR which is linked to the WFLY-7534. Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-6834">https://issues.jboss.org/browse/JBEAP-6834</a> |
| 9475 | JBEAP-6702  | Setting qa_ack. [~jmesnil] There is dependency for <module name="org.apache.activemq.artemis" /> in org.apache.activemq.artemis.journal module. I'm not sure if it's correct as everyone else should depend on "journal" module and "journal" module should not load "artemis" main module. wdyt?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-6702">https://issues.jboss.org/browse/JBEAP-6702</a> |
| 9476 | JBEAP-6702  | [~jmesnil] As JDBC store functionality was added to EAP 7.1.0.DR8, there is new jar {{artemis-jdbc-store-1.5.0.redhat-1.jar}} in artemis main module. Is it correct location. Shouldn't it be move to journal module as well?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-6702">https://issues.jboss.org/browse/JBEAP-6702</a> |
| 9477 | JBEAP-6702  | [~jmesnil] Looking at the code {{JDBCJournalImpl}} from artemis-jdbc-store.jar is implementing interface {{Journal}} from artemis-journal.jar which in "journal" module. It seems that artemis-jdbc-store.jar should be located in "journal" module as well. wdyt?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-6702">https://issues.jboss.org/browse/JBEAP-6702</a> |
| 9478 | JBEAP-6694  | Hey [~baranowb], what is the current state of this one? I see that all related Jiras are in "Pull Request Sent" for quite a long time. Just trying to clean things a little bit. Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-6694">https://issues.jboss.org/browse/JBEAP-6694</a> |
| 9479 | JBEAP-6591  | Below taken from email thread. Will update here with reply from Jimmy/Rich per below... Hi Bilge, what do you think? Can we remove the JBoss EAP 5 Legacy Clients section from the EAP 7 documentation? Erich ----- I am ok removing it from the documentation. I would like to get confirmation from Jimmy and Rich as well. (Now cc-ed)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBEAP-6591">https://issues.jboss.org/browse/JBEAP-6591</a> |
| 9480 | JBEAP-6556  | Component upgrade contains two re-opened issues: JBEAP-5965, JBEAP-6622. Re-opening.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-6556">https://issues.jboss.org/browse/JBEAP-6556</a> |
| 9481 | JBEAP-6484  | [~jmesnil] Hi Jeff, there is already jira for this - JBEAP-5830. Can this be closed as duplicate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-6484">https://issues.jboss.org/browse/JBEAP-6484</a> |
| 9482 | JBEAP-6355  | [~rhn-support-pnag]: Was this merged to stage? Should this be moved to 'Ready for QA'?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-6355">https://issues.jboss.org/browse/JBEAP-6355</a> |
| 9483 | JBEAP-6344  | [~sgilda]: I'd suggest to drop the "such a loser!" part of the message. It looks a bit unprofessional to me. What do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-6344">https://issues.jboss.org/browse/JBEAP-6344</a> |
| 9484 | JBEAP-6290  | Since there is proper fix now in jackson, what about to revert the https://github.com/wildfly/wildfly/pull/9173 in wildfly?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-6290">https://issues.jboss.org/browse/JBEAP-6290</a> |
| 9485 | JBEAP-6253  | [~rsvoboda] This is in, can you qa-ack?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-6253">https://issues.jboss.org/browse/JBEAP-6253</a> |
| 9486 | JBEAP-6244  | [~spyrkob]: When do you plan to fix this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-6244">https://issues.jboss.org/browse/JBEAP-6244</a> |
| 9487 | JBEAP-6019  | CXF 3.1.8 is out yet updated and I think it should be pulled in via jbossws-cxf update once CXF 3.1.8 is available and pass TCK ;).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-6019">https://issues.jboss.org/browse/JBEAP-6019</a> |
| 9488 | JBEAP-5919  | [~sguilhen] Thanks. Is there any progress with jiras for [2] and [3]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-5919">https://issues.jboss.org/browse/JBEAP-5919</a> |
| 9489 | JBEAP-5830  | This should be upgraded to tag created from maintenance branch: https://github.com/rh-messaging/jboss-activemq-artemis/tree/jboss-1.4.0-x [~ataylor] [~jmesnil] Any plans when tag could be created? It would be great to have it in EAP 7.1.0.DR7 (dead line is in ~ 1 week) [~kabirkhan] All jiras are in new state but most of them (maybe all) has already PR in jboss-1.4.0-x. Do you know who moves jiras to correct state?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-5830">https://issues.jboss.org/browse/JBEAP-5830</a> |
| 9490 | JBEAP-5830  | [~ataylor] [~jmesnil] Please see Miroslav's comments above. Andy, can you relink accordingly? For unlinked issues, please unresolve them and clear the fix version                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-5830">https://issues.jboss.org/browse/JBEAP-5830</a> |
| 9491 | JBEAP-5830  | [~jmesnil] [~ataylor] is there any update on this? Do we have Artemis upgrade jira for EAP 7.1.0.DR8?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-5830">https://issues.jboss.org/browse/JBEAP-5830</a> |
| 9492 | JBEAP-5784  | Hi Martin. I'm working on the solution to this, and I just wanted to clarify with you what you believe the ideal solution to be. I've opted for the option '2' of the ones you've suggested; however, I am not sure which screen to return to. Do you mean the advanced options screen? Or the JDBC vendor screen? I'm unable to exit cleanly from the vendor screen as well. Perhaps it's best to add the 'press 1 to continue ...' dialogue in between the JDBC vendor selection and the jar entry?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-5784">https://issues.jboss.org/browse/JBEAP-5784</a> |

| 9493 | JBEAP-5784  | Hi Thomas, I've tested your changes. I found missing text and one regression. I think the new functionality is otherwise good. *Missing text*: When there are no JARs, pressing 1 results in: {code:java} Driver JAR locations: /home/mschvarc/lib/postgresql.jar [ /home/mschvarc/lib/postgresql.jar ] Enter 1 to accept, 2 Add additional jar, 3 Remove jar, 4 Redisplay JDBC vendor 3 [ ] Enter 1 to accept, 2 Add additional jar, 3 Remove jar, 4 Redisplay JDBC vendor 1 dynamicComponents.jar.empty //missing resource press 1 to continue, 2 to quit, 3 to redisplay. {code} "dynamicComponents.jar.empty" is not found anywhere in the 3 git repositories. From the behavior, pressing 1 sends the user back to JDBC Driver Vendor selection. Pressing 3 also sends the user to the same screen. Either way the user can now *quit* the installation or re-display JDBC Driver Vendor selection, which is what this JIRA is about. *Bugs*: IBM DB2 Driver selected Input Postgres or any other JAR (has to be an actual jar file) Remove the JAR (press '3 to remove' repeatedly) {code:java} You cannot remove anymore elements. [ ] Enter 1 to accept, 2 Add additional jar, 3 Remove jar, 4 Redisplay JDBC vendor 1 dynamicComponents.jar.empty press 1 to continue, 2 to quit, 3 to redisplay. 1 None of the provided jars contained the chosen driver's Driver class: "com/ibm/db2/jcc/DB2Driver.class". Do you want to continue? (y/n) [n]: {code} I should not be able to proceed with *zero* JARs present (regression against DR4). | <a href="https://issues.jboss.org/browse/JBEAP-5784">https://issues.jboss.org/browse/JBEAP-5784</a> |
| 9494 | JBEAP-5784  | Hi Thomas, your above solution looks good. However, as of 7.1.0.DR5 and when building the installer manually from master, this is what I get: {code:nofmt} JDBC Driver Setup .... Driver vendor: 0 [x] IBM DB2 1 [ ] Microsoft SQL Server 2 [ ] MySQL .... Input Selection: 1 Driver JAR locations: /home/mschvarc/ [ /home/mschvarc/ ] [ Starting processing ] ... Starting process Advanced configuration - JDBC (5/25) Failed to copy jars. /home/mschvarc (Is a directory) Starting process Onfail Server Shutdown Job (6/25) 11:17:45,756 ERROR [org.jboss.as.protocol] (Thread-39) WFLYPRTO003: Failed to close resource org.jboss.as.cli.embedded.ThreadContextsModelControllerClient@474ab1e9: java.lang.IllegalStateException: WFLYEMB0023: The embedded server is stopping and invocations on the ModelControllerClient are not available {code} The installer selects the file without any validation and begins/advances the installation, resulting in crash if file is invalid or a directory. "Validation error:: At least one jar is required for the JDBC driver." Where does this warning take you afterwards?                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-5784">https://issues.jboss.org/browse/JBEAP-5784</a> |
| 9495 | JBEAP-5751  | [~mnovak] Thanks. I'm actually fixing this bug based on your comments in JBEAP-4363. (updated today with a question for you: please take a look when you can:) Close this one as dupe?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-5751">https://issues.jboss.org/browse/JBEAP-5751</a> |
| 9496 | JBEAP-5576  | AFAIK, JBoss is open source, even EAP. So the source code should be published. So where is the source code of wildfly-core 2.1.6-redhat-1 ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-5576">https://issues.jboss.org/browse/JBEAP-5576</a> |
| 9497 | JBEAP-5576  | That's fine. But why don't you want to put the source code in the RedHat GA repository (https://maven.repository.redhat.com/ga/), just like version 2.1.2.Final-redhat-1, or the other artefacts ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-5576">https://issues.jboss.org/browse/JBEAP-5576</a> |
| 9498 | JBEAP-5518  | Hi, It started logging in output system log. Can we make it customised to log into specific folder. under log dir. Thanks Jivendra                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-5518">https://issues.jboss.org/browse/JBEAP-5518</a> |
| 9499 | JBEAP-5480  | [~treblereel] [~fjuma] I am trying to clean up some states of issues, and it isn't clear to me if this one is in EAP 7.x or not. Can you please let me know so I can adjust accordingly?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-5480">https://issues.jboss.org/browse/JBEAP-5480</a> |
| 9500 | JBEAP-5480  | [~treblereel] Would you be able to submit PRs against wildfly and jboss-eap7 to get this upgrade in?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-5480">https://issues.jboss.org/browse/JBEAP-5480</a> |
| 9501 | JBEAP-5443  | [~wolfc], what's the reason for the subject change? This was a jira for moving from 3.0.18 to 3.0.19 in 7.0.x, similar to JBEAP-5438 which did the same on 7.1. I've also opened up a PR one month ago.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-5443">https://issues.jboss.org/browse/JBEAP-5443</a> |
| 9502 | JBEAP-5429  | [~msvehla] JBEAP-5112 follows up this one to get fixed, so would you please provide qa_ack? Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-5429">https://issues.jboss.org/browse/JBEAP-5429</a> |
| 9503 | JBEAP-5400  | Singleton MDBs (if that's what the 1st item in this issue is about?) are described at https://access.redhat.com/documentation/en/red-hat-jboss-enterprise-application-platform/version-7.0/developing-ejb-applications/#clustered_singleton_mdb. Singleton services are described at https://access.redhat.com/documentation/en/red-hat-jboss-enterprise-application-platform/version-7.0/development-guide/#clustered_ha_singleton_service (there's also a chapter in the EJB Dev Guide, but that's going away as a part of JBEAP-3816). Singleton deployments are described at https://access.redhat.com/documentation/en/red-hat-jboss-enterprise-application-platform/version-7.0/development-guide/#ha_singleton_deployments. So the docs already have it all. Is the issue about adding links into the Config Guide that would point to the Dev Guides?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-5400">https://issues.jboss.org/browse/JBEAP-5400</a> |

| 9505 | JBEAP-5331  | [~manaRH]: I updated the merge request as you suggested. Could you please review again? Thanks for the help!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-5331">https://issues.jboss.org/browse/JBEAP-5331</a> |
| 9506 | JBEAP-5331  | [~mnovotn], the last changes look good(*) to me. Do you want to have a look at them or can assume they are alright? (*) There's "Red Hat JBoss Web Framework" instead of "Red Hat JBoss Web Framework Kit". I don't know if we care about that. I've also gone through the previous changes and found that there's an almost identical duplicate paragraph in the beginning of chapter 7.2 and 7.3. I don't think these are big issues, but I'll reopen the Jira.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-5331">https://issues.jboss.org/browse/JBEAP-5331</a> |
| 9507 | JBEAP-5310  | How is this related to JBEAP-5253 ? Duplicate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-5310">https://issues.jboss.org/browse/JBEAP-5310</a> |
| 9508 | JBEAP-5275  | [~treblereel], [~brian.stansberry], JBEAP-5310 has been verified, but console logging in standalone-full-ha.xml is still enabled in DR4. When can we expect this fixed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-5275">https://issues.jboss.org/browse/JBEAP-5275</a> |
| 9509 | JBEAP-5256  | @Jeff what is the next planned version in 7.1.0?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-5256">https://issues.jboss.org/browse/JBEAP-5256</a> |
| 9510 | JBEAP-5243  | [~nziakova]: I just noticed the outdated year in the license headers today. Should I merge this update? Waiting for QE to acknowledge this is an issue before I merge the 1200+ file changes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-5243">https://issues.jboss.org/browse/JBEAP-5243</a> |
| 9511 | JBEAP-5126  | [~tomjenkinson] yep, ok, I do understand now. I haven't read the mailing list properly. With the new annotation it will be possible to forbid transaction propagation to happen. And what about JTS and IIOP? It behaves currently in the same fashion as ejb remotng. Is this by design behavior which will remain?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-5126">https://issues.jboss.org/browse/JBEAP-5126</a> |
| 9512 | JBEAP-5057  | [~lthor], [~sgilda] -- Does this JIRA need to be CLOSED manually? Looks like the work is completed. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-5057">https://issues.jboss.org/browse/JBEAP-5057</a> |
| 9513 | JBEAP-5041  | Hello [~mjurc], can you be more specific please ? Or can you provide an example ? Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-5041">https://issues.jboss.org/browse/JBEAP-5041</a> |
| 9514 | JBEAP-5041  | [~mstefank]: Would you kindly provide this JIRA with ack+ seeing this has already been merged in upstream?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-5041">https://issues.jboss.org/browse/JBEAP-5041</a> |
| 9515 | JBEAP-4980  | Isn't this an EAP change on how it implements JBossWS?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-4980">https://issues.jboss.org/browse/JBEAP-4980</a> |
| 9516 | JBEAP-4957  | Is this still an issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-4957">https://issues.jboss.org/browse/JBEAP-4957</a> |

| 9517 | JBEAP-4957  | Hello Romain, Could you check this PR?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-4957">https://issues.jboss.org/browse/JBEAP-4957</a> |
| 9518 | JBEAP-4943  | I just checked with aesh-0.66.11 on Mac OS, I can skip words using Alt +Arrow. And this is not that bad already. =,/( are delimiters. It seems that the issue is for Windows only. Would you confirm that this is Windows only? Thanks. JF.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-4943">https://issues.jboss.org/browse/JBEAP-4943</a> |
| 9519 | JBEAP-4930  | Each tree node displays the resource description retrieved from r-r-d, so the "Management Model" view is fairly descriptive, because it allows the user to navigate in the domain model and see all attributes, operations and its descriptions. It there should be an enhancement, can you elaborate on which description is necessary ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-4930">https://issues.jboss.org/browse/JBEAP-4930</a> |
| 9520 | JBEAP-4886  | [~mstyk] Hi Martin, Can you attach your configuration file and examples?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-4886">https://issues.jboss.org/browse/JBEAP-4886</a> |
| 9521 | JBEAP-4886  | [~mstyk] Hi Martin, I have made a modify according to your example, when I do the operation <code>??/subsystem=messaging-activemq/server=default:list-connection-ids??</code> , the connection is built on two servers. And when I change the "RandomConnectionLoadBalancingPolicy" into "FirstElementConnectionLoadBalancingPolicy", all of the connections are built on one server, this is right according to the documentation. So I think the policy is useful, what do you think about it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-4886">https://issues.jboss.org/browse/JBEAP-4886</a> |
| 9522 | JBEAP-4886  | How is the connection factory defined on the server? Is it the same on every server? I assume the connection factory is retrieved via JNDI. If so, how is the JNDI lookup defined? Is every client looking up the connection factory on the same server? In any event, no client-side solution is going to ultimately solve the problem you've outlined in your use-case as there's still a chance all the clients would end up connecting to the same server. The real solution would require a server-side feature that balanced connections smartly across the cluster.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-4886">https://issues.jboss.org/browse/JBEAP-4886</a> |
| 9523 | JBEAP-4886  | How are the clients doing their JNDI lookup? Is every client looking up the connection factory on the same server? If so, this behavior is not surprising. There are a few ways to address this with configuration: * Add connectors for the other (maybe even all) nodes in the cluster to "RemoteConnectionFactory." This, of course, is a bit tedious and prone to error, but it is nonetheless effective. * Remove the "connectors" attribute from the "RemoteConnectionFactory" and use "discovery-group" instead (referencing "dg-group1"). This is the recommended approach. * Ensure somehow that the clients' JNDI lookups are balanced among the cluster nodes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-4886">https://issues.jboss.org/browse/JBEAP-4886</a> |
| 9524 | JBEAP-4886  | How can you update the cluster topology on the client side before the first connection is created? Where would you get the cluster topology information from? As I see it, the client would need to connect to its target, download the cluster topology, and then potentially connect to a different node in the cluster. This turns 100 connection events into potentially 200 connection events and would significantly increase the time it took the client to connect to the cluster. I think this solution would also get a bit messy because the client would want to maintain its original connection to the cluster while it attempted to connect to a different node so in case the topology changed it could receive those updates. In the end you could still end up with many (or even all) clients connected to the same cluster node since there's nothing "smart" about this approach. As I mentioned before, the real solution to this problem would require a server-side feature that balanced connections smartly across the cluster. This has been on our radar for some time, but we haven't gotten to it yet. See <a href="https://issues.apache.org/jira/browse/ARTEMIS-23">https://issues.apache.org/jira/browse/ARTEMIS-23</a> . | <a href="https://issues.jboss.org/browse/JBEAP-4886">https://issues.jboss.org/browse/JBEAP-4886</a> |

| 9526 | JBEAP-4673  | Hi [~asoldano], do you mind if I take this one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-4673">https://issues.jboss.org/browse/JBEAP-4673</a> |
| 9527 | JBEAP-4673  | Thinking about this, I believe this can't work the way it's implemented. System properties in WildFly, IIRC, are only available at boot time. If we somehow tie this to a model change on WildFly, then I believe we can have this work on-the-fly. What do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-4673">https://issues.jboss.org/browse/JBEAP-4673</a> |
| 9528 | JBEAP-4673  | Any update on this ? how hard would it be to achieve it ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-4673">https://issues.jboss.org/browse/JBEAP-4673</a> |
| 9529 | JBEAP-4673  | Hi [~rsvoboda], the easiest and more manageable solution would be if the deployed web services already use logging interceptors. Then we would set a new property on WildFly that would trigger the on-the-fly logging functionality implemented in CXF. Would that be good enough?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-4673">https://issues.jboss.org/browse/JBEAP-4673</a> |
| 9530 | JBEAP-4609  | Why exactly is this an issue? This is really just about coding conventions. Either you use static imports, or you don't, or you mix it. Besides, even if we unified it now, we would have to introduce it as a new rule for developers to adhere to this convention. We would probably have to add it as a new checkstyle rule to enforce it. Just fixing it once and then leaving it would make absolutely no sense. Also I don't think that coding conventions fall under QA responsibility. Was this discussed with developers?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-4609">https://issues.jboss.org/browse/JBEAP-4609</a> |
| 9531 | JBEAP-4600  | [~thofman]: Has this JIRA correct description? There is mentioned "3.0.15.Final", but current version of RESTEasy in EAP is 3.0.16.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-4600">https://issues.jboss.org/browse/JBEAP-4600</a> |
| 9532 | JBEAP-4547  | [~jamezp]: That sounds like a good plan at this time. At some point in the future, we can revisit this. Since you created the JIRA, would you like to close it? Or should I close it was Won't Fix? :-)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-4547">https://issues.jboss.org/browse/JBEAP-4547</a> |
| 9533 | JBEAP-4485  | [~manaRH]: I believe I addressed all of the JIRAs in this merge request. Would you please review and let me know if it needs anything? Also make sure I didn't restate anything improperly :-).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-4485">https://issues.jboss.org/browse/JBEAP-4485</a> |
| 9534 | JBEAP-4485  | I got an info that EAP7 docs are now frozen, but we need this for Windup EAP6->7 rule migrations to point to new added parts of Migration guide which I requested. [~nziakova], could you do something to ack this changes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-4485">https://issues.jboss.org/browse/JBEAP-4485</a> |
| 9535 | JBEAP-4293  | [~jpallich] Just out of curiosity which Weld issue is a blocker for JDG 7? Is it WELD-2110?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-4293">https://issues.jboss.org/browse/JBEAP-4293</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | URL                                                                                                 |

| 9536 | JBEAP-4292  | <p>@MapKeyColumn refers to a column mapped in embeddable map value [HHH-8305] - Envers auditing OneToOne inserts null in Aud JoinTable in a not stablished relationship [HHH-8507] - SQLServer2005LimitHandler throws "string out of range -1" error [HHH-8999] - NullPointerException when updating or deleting multiple entities of same type with non-comparable IDs [HHH-9322] - Updating multiple entities with the same name in the same flush throws a ClassCastException when using a non-Comparable user type as the entity ID [HHH-9676] - TypeSafeActivator.applyDDL doesn't process composing constraints when @NotNull is present [HHH-10230] - Using boolean or null literals results in a parser error [HHH-10245] - SelfDirtinessTracker not found [HHH-10277] - AttributeConverter not applied to attributes of an embeddable used as collection element [HHH-10287] - Cache keys no longer include the entity type [HHH-10290] - org.hibernate.test.cfg.BatchVersionedDataConfigTest does not work properly when hibernate.jdbc.batch_versioned_data is set in environment [HHH-10299] - After adding "@Audited" to an entity field the warning "Use of DOM4J entity-mode is considered deprecated" appears [HHH-10334] - @formula annotation javadoc contains database dependent sample usage [HHH-10341] - Specification violation in Implementation of TupleElement [HHH-10352] - HBM2DDL does not use described name for foreign key in join inheritance [HHH-10360] - Natural ID columns are nullable by default (hbm mappings only) [HHH-10361] - Child module osgi does not exist in hibernate-tutorials [HHH-10373] - Sequence generator for idbag ignores generator parameters [HHH-10375] - adding an entity at index to list with @OrderColumn in detached Entity [HHH-10413] - byte[] as the version attribute broken [HHH-10427] - ServiceRegistry creates multiple service instances and returns uninitialized services [HHH-10476] - Getting an entity with composite ID containing a detached entity fails if PersistenceContext contains a managed copy [HHH-10511] - PluralAttribute.getPersistentAttributeType() wrong value with enhanced classes [HHH-10515] - Stored procedure execution fails to find column [HHH-10522] - Invalid reference to naming chapter in user guide [HHH-10524] - Invalid reference wrt composite identifiers [HHH-10525] - Invalid reference to bytecode enhancement in User Guide [HHH-10535] - Documentation: hibernate.order_updates configuration property [HHH-10540] - Incorrect bytecode instrumentation when there are multiple @Embedded attributes [HHH-10551] - NonIdentifierAttribute.isLazy() returns false when @Basic(fetch=FetchType.LAZY) [HHH-10562] - ManagedEntity linked list broken when mutable, non-associated enhanced entity is evicted [HHH-10583] - BytecodeEnhancement's AssociationManagement breaks with entity containing two ToOne relations with the same mappedBy value. [HHH-10587] - Test NationalizedIgnoreCaseTest.testIgnoreCaseCriteria fails on some databases that don't support nString type [HHH-10588] - ConnectionsReleaseTest should use H2Dialect [HHH-10596] - Some tests fail on oracle12c because of missing dialect-scope [HHH-10598] - Oracle JDBC driver can't handle entities with a one-character name in some cases [HHH-10608] - Avoid HibernateException with Hibernate.initialize and ENABLE_LAZY_LOAD_NO_TRANS [HHH-10614] - Auto evict collection cache throws exception with null values [HHH-10635] - EntityManager.isOpen() should respect status of Session [HHH-10640] - SchemaCreationTest fails on DB2 due to wrong expected statement [HHH-10641] - Some tests fail on Oracle due to ORA-00972: identifier is too long [HHH-10642] - BytecodeEnhancements PersistentAttributesEnhancer bytecode error INVOKESPECIAL [HHH-10644] - Enhancement cause Exception if property field not present [HHH-10646] - Lazy fetch not properly handled when annotation in @MappedSuperclass [HHH-10648] - No MultipleBagFetchException is thrown when fetching two bags eagerly [HHH-10678] - hibernate-mapping's schema is ignored [HHH-10679] - Subselect fetching is not used for collections if their entity owners are initialized in a batch [HHH-10708] - Accessing a lazy collection in an enhanced class deletes it afterwards [HHH-10712] -</p> | <a href="https://issues.jboss.org/browse/JBEAP-4292">https://issues.jboss.org/browse/JBEAP-4292</a> |
| 9537 | JBEAP-4281  | <p>[~ataylor] Hi ,Andy,about this issue, in order to disable slow client reconnecting with KILL slow client policy,i just want to add a new attribute in ServerConsumer named "isKill" to record the client whether or not was killed, when the slow client is killed,we can set the attribute is true,then when the slow client want to reconnect the server,we can judge according to the attribute ,if the attribute is true we will ignore the reconnect attempt.This is my resolution to fix this issue,what do you think about it ? expected your reply,thanks!</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-4281">https://issues.jboss.org/browse/JBEAP-4281</a> |
| 9538 | JBEAP-4281  | <p>[~jbertram] Hi,Justin,yeah I have done it,when detected the slow consumer with the policy KILL,I will send a packet to the client,but i think it is not necessary for the client to response it.Even though I have done only work for core client,I do not understand why this not work for any other kind of client,can you tell me that?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-4281">https://issues.jboss.org/browse/JBEAP-4281</a> |
| 9539 | JBEAP-4275  | <p>I would expect that if a server to which a connection in the pool is connected dies then that connection's ExceptionListener (i.e. {{org.apache.activemq.artemis.ra.ActiveMQRAManagedConnection#onException}}) would be invoked and the connection would then be removed from the pool (assuming reconnect-attempts isn't -1 and also assuming there is no backup configured). Then later if pool utilization was high enough to force the creation of a new connection to replace the one that was lost then a new connection would be added to the pool and would be created according to the connection load balancing policy configured on the pool and the updated cluster topology. That said, my hunch is that the main use-case in mind here is when a node is _added_ to the remote cluster. However, if a new node was added to remote cluster then a similar process could occur. If the pool's utilization was high enough so that a new connection was necessary (and there was room in the pool for another connection) then a new connection would be created according to the connection load balancing policy configured on the pool and the updated cluster topology. Therefore, connections could eventually go to the new node. Of course, this doesn't help in the situation where the pool is full. Also, I'm surprised that a complete server restart would be required to reset the pool. Isn't there a way to simply flush the connection pool so that the connections are destroyed and then recreated as they're needed? This was possible in previous versions of EAP. This may not be exposed on the pooled-connection-factory, but I'm fairly certain that the JCA subsystem supports ways to time-out idle connections which would be a way to get connections onto a new node. There are plans to implement server-side client connection re-balancing when cluster topology changes so I think development effort should probably go there rather than this particular feature since there ostensibly are ways to deal with this administratively in the mean-time. Lastly, was this based on a customer request? Typically EAP feature requests come from customers through GSS and product management for approval.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-4275">https://issues.jboss.org/browse/JBEAP-4275</a> |

| 9541 | JBEAP-4232  | <p>Here's what standalone.sh does: {code} if [ "x\$CLIENT_SET" = "x" -a "x\$SERVER_SET" = "x" ]; then # neither -client nor -server is specified if \$darwin &amp;&amp; [ "\$JVM_OPTVERSION" = "d32" ]; then # Prefer client for Macs, since they are primarily used for development PREPEND_JAVA_OPTS="\$PREPEND_JAVA_OPTS -client" else PREPEND_JAVA_OPTS="\$PREPEND_JAVA_OPTS -server" fi fi {code} So, for macs running 32 bit, we append "-client", else we append "-server", appending nothing of course if the user configured one or the other. So, is the proposal here to 1) ignore the mac stuff and just append "-server", or 2) not append anything at all? If the latter, that implies that you consider "-server" by itself to be meaningless, completely redundant to the default tiered compilation behavior, and that the only reason anyone would meaningfully use -server is in conjunction with turning off tiered compilation (-server -XX:-TieredCompilation). Re: the code cache size, it sounds like the 240MB is the default with -server, so the only people not already using that amount are OSX users running 32 bit. BTW, AFAICT the lines I pasted above plus one other line are all that would come out of standalone.sh because of this change. The rest of the nearby logic is also used for putting OSX users on a 32 bit VM. I'm not saying getting rid of just those lines isn't a valid thing to consider, just that doing this doesn't mean the large chunk of script surrounding them can all come out.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-4232">https://issues.jboss.org/browse/JBEAP-4232</a> |
| 9542 | JBEAP-4232  | [~brian.stansberry], can you check what it shows on Mac OS ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-4232">https://issues.jboss.org/browse/JBEAP-4232</a> |
| 9543 | JBEAP-4232  | Why haven't we resolved this issue already? Nothing needs to be changed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-4232">https://issues.jboss.org/browse/JBEAP-4232</a> |
| 9544 | JBEAP-4227  | Hi [~brian.stansberry], [~anrobert] - this JIRA is marked as Affecting the RN. Is there any additional information needed in order to have this RN'ed correctly?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-4227">https://issues.jboss.org/browse/JBEAP-4227</a> |
| 9545 | JBEAP-4133  | [~dlofthouse], will elytron have new Kerberos/SPNEGO implementation? Is it opportunity to address long-lived kerberos bugs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-4133">https://issues.jboss.org/browse/JBEAP-4133</a> |
| 9546 | JBEAP-4133  | Preliminary testing with elytron and eap 7.1 shows in this case "Continuation required" roundtrip doesn't occur. [~dlofthouse], could you elaborate more how is this achieved? Is important here the fact, that in {{kerberos-security-facotry}} only "Kerberos V5" and "SPNEGO" can be actually configured as {{mech-oids}}. When trying to configure "Kerberos V5 Legacy" I get {{java.security.PrivilegedActionException: GSSException: Unsupported mechanism requested: 1.2.840.48018.1.2.2}} [~paramjindal], could you link customer case, please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-4133">https://issues.jboss.org/browse/JBEAP-4133</a> |
| 9547 | JBEAP-4133  | [~darranl], is there any progress on this issue ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-4133">https://issues.jboss.org/browse/JBEAP-4133</a> |
| 9548 | JBEAP-4004  | Yes, you are right it uses a public API currently (updating description now) but the main reason here is to avoid doing an EE lookup from MSC service. So I think the strategy should be the following: # remove the QS as is in the existing (now closed) PR as this is not the recommended way to do similar thing # add a QS reaching the same goal, but the right way by using singleton deployments instead of EE lookup from MSC # add a QS showing singleton service, but doing something else than using EE lookup from MSC Does that sounds good now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-4004">https://issues.jboss.org/browse/JBEAP-4004</a> |

| 9549 | JBEAP-4004  | I still do not think we should remove the quickstart. I would prefer to get someone to fix the code you have issues with. These are my concerns about removing it, especially this late in the process: * This will break the documentation as we have references to it. * It may also break the.jboss.org developer site as they provide information and details for all the quickstarts. * Anyone that implemented code using this quickstart in the previous release will be looking for a way to migrate it to this release. As [~thton] mentioned in the other JIRA [1], the migration concerns are real. * The code is actually a valid example of a timer service. Can you point out which class and lines of code you are concerned about? I am not clear what you mean when you say it does an "EE lookup from MSC service". [~wdfink] is out on PTO for a while, so he won't be able to update the offending code, but maybe I can find someone else to do it. | 9550 | JBEAP-4004  | Ha, did I change the _Assignee_ to myself? I must have clicked somewhere... Definitely wasn't intentional, sorry about that!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-4004">https://issues.jboss.org/browse/JBEAP-4004</a> |
| 9551 | JBEAP-3984  | [~jpallich] I have released 7.0.0.CR1 in Jira. This issue is still open, but we went with Paul's suggestion: {code} [~/sourcecontrol/jboss-eap7/jboss-eap7] \$git grep jgroups --pom.xml pom.xml: <version.org.jgroups>3.6.8.Final-redhat-2</version.org.jgroups> {code} CR1 contains 3.6.8.Final-redhat-2 with the cherry-pick. What to do with this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-3984">https://issues.jboss.org/browse/JBEAP-3984</a> |
| 9552 | JBEAP-3967  | [~ataylor] this kind of improvement could be done at the Artemis level (when the broker is started) or at the WildFly level (when the configuration is read)? Do you have something similar in Artemis backlog?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-3967">https://issues.jboss.org/browse/JBEAP-3967</a> |
| 9553 | JBEAP-3907  | [~psakar] updated the groupId in the 7.0.x branch of the quickstarts. This JIRA is a reminder to update and synchronize the 7.0.x-development branch after GA. After GA, cherry-pick this commit back to 7.0.x-devel: <a href="https://github.com/jboss-developer/jboss-eap-quickstarts/commit/24df1d89c9a7d8a9b01dcf2f304e367425a637be">https://github.com/jboss-developer/jboss-eap-quickstarts/commit/24df1d89c9a7d8a9b01dcf2f304e367425a637be</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-3907">https://issues.jboss.org/browse/JBEAP-3907</a> |
| 9554 | JBEAP-3907  | artifacts in the public Maven repository use '7.0.0.GA'. [~pgier]: Do you know how I should proceed with this JIRA? {code} [INFO] Scanning for projects... | 9555 | JBEAP-3907  | Added the following comment here: <a href="https://issues.jboss.org/browse/JBEAP-2584?focusedCommentId=13251125&amp;page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13251125">https://issues.jboss.org/browse/JBEAP-2584?focusedCommentId=13251125&amp;page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13251125</a> This change [1] was applied to the product version of the quickstarts [2]. I originally thought the change had to be back-ported to the development branch of the quickstarts [3] after the 7.0.0.GA Maven repository was delivered, but I now question whether this is correct. When I cherry-pick the commit back to this branch, the quickstarts don't build because the BOMs in the development repository do not contain the correct version of the artifacts. [~pgier] and I discussed this and we both think that maybe this does not need to be ported back to the development quickstarts. Can someone please clarify whether the development quickstarts should be using the 'org.jboss.eap' group ID? | 9560 | JBEAP-3664  | [~rob.stryker] The product name was changed to follow official product naming guidelines. Please note that while EAP 7.0 product name was changed to JBoss EAP, EAP 6.4.x product name remains "EAP". Can we close the issue ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBEAP-3664">https://issues.jboss.org/browse/JBEAP-3664</a> |
| 9561 | JBEAP-3664  | The point of this issue is to alert you guys that changes such as this will break consuming tools, and you should telegraph your intentions to the teams who may depend on those flags BEFORE you make such a change. > Can we close this issue? I'm not sure. Have you updated your process documentation to ensure that 'alert the tools team' is now part of the process for any time you want to change the product name?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-3664">https://issues.jboss.org/browse/JBEAP-3664</a> |
| 9562 | JBEAP-3664  | Hey all: It's been over 6 months. When will these simple tests be added? Can we get it assigned to someone for the next sprint or whatever?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-3664">https://issues.jboss.org/browse/JBEAP-3664</a> |
| 9563 | JBEAP-3664  | Hi Brian: Any idea when this can get done? Do you guys need any more info from me?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-3664">https://issues.jboss.org/browse/JBEAP-3664</a> |
| 9564 | JBEAP-3664  | Hi Brian: Any idea when this can get done? Do you guys need any more info from me?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-3664">https://issues.jboss.org/browse/JBEAP-3664</a> |
| 9565 | JBEAP-3662  | [~valery_sorokin]: Please, can you fill "Affects Version" entry in this jira?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-3662">https://issues.jboss.org/browse/JBEAP-3662</a> |
| 9566 | JBEAP-3651  | I thought we talked about just setting an offset? Why does it need to be random?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-3651">https://issues.jboss.org/browse/JBEAP-3651</a> |
| 9567 | JBEAP-3632  | Understood, it is whatever the user sets. But if they use that upstream service script for something that sets and maybe expects WILDFLY_HOME. Wouldn't this risk causing some confusion? P.S.: Customers know EAP7 is based on Wildfly. GSS and PM have recently created some text to reply to the usual question "what is the Wildfly version that EAP 7 is based on?" So they will not be surprised to find env variables with a WILDFLY_ prefix.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-3632">https://issues.jboss.org/browse/JBEAP-3632</a> |
| 9568 | JBEAP-3593  | Is there an ETA for this version?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-3593">https://issues.jboss.org/browse/JBEAP-3593</a> |
| 9569 | JBEAP-3590  | [~dimitris] [~jason.green] - Do we need to include this to 7.0.0?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-3590">https://issues.jboss.org/browse/JBEAP-3590</a> |
| 9570 | JBEAP-3572  | [~sgilda] How would you like to do it if you would like to support multiple versions concurrently ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-3572">https://issues.jboss.org/browse/JBEAP-3572</a> |
| 9571 | JBEAP-3572  | Maybe the new QS can be added to WildFly Quickstarts, until it can be merged into product. What do you think, [~sgilda]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-3572">https://issues.jboss.org/browse/JBEAP-3572</a> |
| 9572 | JBEAP-3572  | [~nziakova]: I was thinking the same thing! [~ozizka]: Do you want to modify and submit your pull to the WildFly quickstart repository?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-3572">https://issues.jboss.org/browse/JBEAP-3572</a> |
| 9573 | JBEAP-3571  | The only linked issue is JBEAP-3364 which is *MINOR*. Update from JGroups-3.6.7.Final to JGroups-3.6.8.Final contains *38 commits*, 4 from them are "Merge pull request". So it is quite a lot of changes, for details see <a href="https://github.com/belaban/JGroups/compare/JGroups-3.6.7.Final...JGroups-3.6.8.Final">https://github.com/belaban/JGroups/compare/JGroups-3.6.7.Final...JGroups-3.6.8.Final</a> We are in *BLOCKERS* only phase*, PR <a href="https://github.com/jbossas/jboss-eap7/pull/369">https://github.com/jbossas/jboss-eap7/pull/369</a> is already merged. How did this happen ? [~n1hility] [~jpallich]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-3571">https://issues.jboss.org/browse/JBEAP-3571</a> |
| 9574 | JBEAP-3442  | Hi [~ahoffer], sorry for unclear description. There is a small difference between the current text and text which is asked to be added by this jira. The information which is currently in doc talks about commit phase of two phase commit. This should be clarified in some way like change {{The JDBC driver returns XAER_RMERR when a network failure occurs during the commit phase.}} to something like {{The JDBC driver returns XAER_RMERR when a network failure occurs on commit phase of 2PC.}} This jira asks to add one more information about limitation of JDBC drivers as mentioned in description. This limitation lays in returning wrong error code when one phase commit optimization of 2PC is used. The description of the limitation should be clarify. My idea would be {{When connection failure happens when one phase commit optimization is used JDBC driver should return XAException error code XAER_RMFAIL but the driver returns XAER_RMERR.}}. So basically it's about adding more limitation info under the section. Now concerning one phase commit optimization for various jdbc drivers. Is my intention understandable or should I add some more info? Thank you Ondra | <a href="https://issues.jboss.org/browse/JBEAP-3442">https://issues.jboss.org/browse/JBEAP-3442</a> |
| 9575 | JBEAP-3433  | [~lcosti.redhat]: The links for the JBCS docs are not available on the QA preview server yet, are they? I tried the following URL and didn't find anything: {code} :linkBCShttpdinstall:/documentation/en/red-hat-jboss-core-services/version-1/apache-http-server-installation-guide/ {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-3433">https://issues.jboss.org/browse/JBEAP-3433</a> |
| 9576 | JBEAP-3426  | Thanks for the review, [~jstefl]. Do you know what the download is going to be named on the Customer Portal? [~mbabacek], do you know where we can find this out?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-3426">https://issues.jboss.org/browse/JBEAP-3426</a> |
| 9577 | JBEAP-3389  | Hi [~hrowsepy]: Does this capture what you are trying to say? The Postgres Plus JDBC driver returns XIDs for all prepared transactions that exist in the Postgres Plus database, so there is no way to determine the database to which the XID belongs. This issue is limited to cases where you define more than one data source for the same database in JBoss EAP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-3389">https://issues.jboss.org/browse/JBEAP-3389</a> |
| 9578 | JBEAP-3389  | Hi [~sgilda], I will answer for Hayk as he moved to other department and I'm responsible for transaction component in EAP. [~dmichael] It's so. The problem, caused by the behavior, is visible for a user when there are more datasources configured under EAP pointing to the same database server. I would rephrase the sentence a bit, would that give you a sense? {code} The Postgres Plus JDBC driver returns XIDs for all prepared transactions that exist in the Postgres Plus Server, so there is no way to determine the database to which the XID belongs. This could cause a trouble during recovery in case that JBoss EAP configures more than one datasource pointing to the same Postgres Plus Server. As that in-doubt transaction recovery could be run under wrong account which causes fail of the recovery attempts. {code}                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-3389">https://issues.jboss.org/browse/JBEAP-3389</a> |
| 9579 | JBEAP-3389  | [~ochaloup]: Thanks for the explanation. I might rephrase it just a bit more. How is this: The Postgres Plus JDBC driver returns XIDs for all prepared transactions that exist in the Postgres Plus Server, so there is no way to determine the database to which the XID belongs. If you define more than one data source for the same database in JBoss EAP, an in-doubt transaction recovery attempt could be run under wrong account, which causes the recovery to fail.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-3389">https://issues.jboss.org/browse/JBEAP-3389</a> |
| 9580 | JBEAP-3374  | [~tremes]: Can you please review the content in my merge request and let me know if it looks okay? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-3374">https://issues.jboss.org/browse/JBEAP-3374</a> |
| 9581 | JBEAP-3357  | Hm ok....I overlooked this. Any suggestions how to rewrite this ? E.g "Weld should scan the archive to perform bean discovery" ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-3357">https://issues.jboss.org/browse/JBEAP-3357</a> |
| 9582 | JBEAP-3346  | When will 5.0.8 be released?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-3346">https://issues.jboss.org/browse/JBEAP-3346</a> |

| 9584 | JBEAP-3306  | [~ochaloup]: Where did you get the above code example? I am just curious if it has been tested. Some of the code seems incomplete. Here are a couple of examples. There is no definition for the `orb` variable referenced in this line: orb = com.arjuna.orbportability.ORB.getInstance("ClientSide"); This line does not assign the new object to a variable: new ContextPropagationManager();                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-3306">https://issues.jboss.org/browse/JBEAP-3306</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | URL                                                                                                 |
|------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| 9586 | JBEAP-3305  | [~rhn-support-pnag] and [~ochaloup]: I commented in the merge request but it has already been merged and I don't want to lose the comment. I think it's the wording that is bothering me. It's isn't really narrowing the home interface, is it? Isn't it narrowing the reference to the home interface? For example: . Use the context lookup to narrow the reference to the 'IIOpBeanHome' home interface. Or am I being too picky here? Also, if this change is made in another merge request, I would suggest changing the variable name for the Properties from "prope" to "props". That's the more common variable name used for properties. Thanks!                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-3305">https://issues.jboss.org/browse/JBEAP-3305</a> |
| 9587 | JBEAP-3305  | [~rhn-support-pnag]: Sorry I didn't mention the "prope" variable name before. I had meant to, but I was too bothered by the phrasing in the "narrow" statement. Based on the reply by [~ochaloup], would you mind submitting the fixes to the 'narrowing' phrase and 'prope' I suggested above in another merge request?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-3305">https://issues.jboss.org/browse/JBEAP-3305</a> |
| 9588 | JBEAP-3193  | [~anrobert]: Do you think we should clone this issue so it can be tracked more easily? [~jstefl]: Can you clarify the following statement: * Connectors (mod_cluster, mod_jk, isapi, nsapi): mod_cluster, mod_jk are part of Apache HTTP Server delivered in separate product JBoss Core Services, isapi and nsapi are delivered with JBoss Core Serices as well. Can I just combine them into one statement and say the following: * The mod_cluster, mod_jk, isapi, and nsapi connectors are delivered with the product in a separate "JBoss Core Services" download.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-3193">https://issues.jboss.org/browse/JBEAP-3193</a> |
| 9589 | JBEAP-3193  | [~jstefl]: I'm not sure I'm clear what you are saying, particularly the 3rd bullet. Is the following okay? {code} Package JBoss EAP 6 JBoss EAP 7 AIO Natives for Messaging Delivered with the product in a The new ActiveMQ Artemis separate "Native Utilities" subsystem is included in the download JBoss EAP download. Note: The libraries are located in the JBoss EAP 7 org.apache.activemq.artemis module. {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-3193">https://issues.jboss.org/browse/JBEAP-3193</a> |
| 9590 | JBEAP-3193  | [~jstefl]: 1. The only reference I could find for JBoss Core Services was the link you provided here: https://access.qa.redhat.com/documentation/en/red-hat-jboss-core-services/version-1/apache-http-server-installation-guide/#about_red_hat_jboss_core_services. I don't see an equivalent product category on https://access.redhat.com/documentation/en/red-hat-jboss-core-services/. Do you know of a published link? 2. I thought you wanted me to mention the module location. I will simplify it. 3. Done!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-3193">https://issues.jboss.org/browse/JBEAP-3193</a> |
| 9591 | JBEAP-3134  | Let me summarize current situation: 1. For starting EAP as service via JSVC on RHEL or Solaris the "commons-daemon.jar" (name is only illustational) has to be delivered. 2. All combination of JSVC was not delivered in jbcv DR2.1, see JCSP-19 3. There was problem with naming of delivered bits, see JCSP-16 4. I expect JSVC (jar) will be delivered as part of jbcv in zip and rpm distro because jsvc was delivered via zip (it was in native utils) and rpm in EAP 6 as well. [~mladen.turk]: Could you please help us with construction of commands starting EAP as service with JSVC in EAP/standalone and domain mode? Any product specific scripts should be delivered with specific product. For example see handling of tooling for handling [EAP as Windows service]https://issues.jboss.org/browse/JBEAP-2735?focusedCommentId=13152301&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13152301.                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-3134">https://issues.jboss.org/browse/JBEAP-3134</a> |
| 9592 | JBEAP-3134  | I am not sure the JBOS is the place to add this JAR, and we were actually told not to include it. Other consumers of JSVC (it is not only EAP) have their own version of commons-daemon.jar and if we ship our own it may cause class loader issues. Also, where would we instal it, as all consumers have different layouts (e.r. Wildfly and Tomcat)? AFAIK the Tomcats on JWS already have commons-daemon, so maybe EAP7 should ship as an optional RPM the commons-daemon to be used when JSVC is used. Not sure how to do that for the ZIP, maybe some optional ZIP as well. Or just include it on EAP from the starts. We need PMs input on this (JBOS, JWS, EAP).                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-3134">https://issues.jboss.org/browse/JBEAP-3134</a> |
| 9593 | JBEAP-3134  | We'll create a jbcv-httpd24-apache-commons-daemon for that then. EAP7 customers will need to get that from the JBOS channel if they are using RPMs. And stick the .jar with the executables for the ZIP. A JBOS JIRA will be created for that. I still wonder... EAP6 and EWS are not the only consumers of JBOS. What happens if the product already has a commons-daemons.jar in the classpath?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-3134">https://issues.jboss.org/browse/JBEAP-3134</a> |
| 9594 | JBEAP-3079  | "Component Upgrade"? What gets upgraded? :-)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-3079">https://issues.jboss.org/browse/JBEAP-3079</a> |
| 9595 | JBEAP-3079  | [~baranowb], [~pgier] can you please comment on the state of the JIRA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBEAP-3079">https://issues.jboss.org/browse/JBEAP-3079</a> |
| 9596 | JBEAP-3067  | [~pgier]: I was told this change made it into the ER4 release, so I updated the quickstart POM files to use the new GAV: <dependency> <groupId>org.jboss.eap</groupId> <artifactId>wildfly-ejb-client-bom</artifactId> <type>pom</type> <scope>provided</scope> </dependency> <dependency> <groupId>org.jboss.eap</groupId> <artifactId>wildfly-jms-client-bom</artifactId> <type>pom</type> </dependency> However, when I try to build the quickstarts, I get errors: 'dependencies.dependency.version' for org.jboss.eap:wildfly-ejb-client-bom:pom is missing. 'dependencies.dependency.version' for org.jboss.eap:wildfly-jms-client-bom:pom is missing. Have either the GA [1] or Staging [2] repository been updated with this change yet? [1] https://maven.repository.redhat.com/ga/ [2] http://jboss-developer.github.io/temp-maven-repo/                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-3067">https://issues.jboss.org/browse/JBEAP-3067</a> |
| 9597 | JBEAP-3067  | [~pgier]: I thought that was the purpose of the staging repository. We update that repository with changes needed for the public version of the quickstarts [1]. [~rafabene]: Is that your understanding of the purpose of that repository? I don't think I can make this change until that is done. And I usually cherry-pick the changes to the product version. Is there a reason we can't update the staging repository?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-3067">https://issues.jboss.org/browse/JBEAP-3067</a> |
| 9598 | JBEAP-3061  | I tried to set auto-create-jms-queues to true and auto-delete-jms-queues to false. When I try to send message to non-existent queue then queue is created and consumer is able to receive this message. Problem occurs after the consumer was closed. Queue was deleted despite the fact that auto-delete-jms-queues is set to false. I'm not sure if it's problem in Artemis or integration. Providing reproducer below. How to run the test locally: {code} git clone git://git.app.eng.bos.redhat.com/jbosseqe/eap-tests-hornetq.git cd eap-tests-hornetq/scripts/ git checkout refactoring_modules groovy -DEAP_VERSION=7.0.0.ER5 PrepareServers7.groovy export WORKSPACE=\$PWD export JBOSS_HOME_1=\$WORKSPACE/server1/jboss-eap export JBOSS_HOME_2=\$WORKSPACE/server2/jboss-eap export JBOSS_HOME_3=\$WORKSPACE/server3/jboss-eap export JBOSS_HOME_4=\$WORKSPACE/server4/jboss-eap cd ../jboss-hornetq-testsuite/ mvn clean test -Dtest=AutoCreateQueueTestCase#testAutoDeleteQueueDisabled -DfailIfNoTests=false -Deap=7x   tee log {code} | <a href="https://issues.jboss.org/browse/JBEAP-3061">https://issues.jboss.org/browse/JBEAP-3061</a> |
| 9599 | JBEAP-3061  | [~bertram]: Could you please have a look at this issue please? I quickly looked at https://github.com/rh-messaging/jboss-activemq-artemis/commit/e293d80f08de58e4ce2baf9d63c1a4185e079a9 and artemis code base and I see no use for AddressSettings#isAutoDeleteJmsQueues(). Is the deletion of auto-created jms queue implemented?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-3061">https://issues.jboss.org/browse/JBEAP-3061</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | URL                                                                                                 |

| 9600 | JBEAP-3050  | [~jstefl], I just wanted to make sure: I was previously told that Apache HTTP Server from JBoss Web Server 3 was also going to be supported for use with EAP 7. Is this still correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-3050">https://issues.jboss.org/browse/JBEAP-3050</a> |
| 9601 | JBEAP-3050  | [~dmichael]: I'm not clear which topic you mean. Are you referring to the topic shared between the Release Notes and the Migration Guide or a different topic? Either way, if you understand what needs to be done, please submit a merge request and I will be happy to review it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-3050">https://issues.jboss.org/browse/JBEAP-3050</a> |
| 9602 | JBEAP-3050  | Hi Jan, How does this sound: <code>* The Apache HTTP server from JBoss Core Services does not include support HP-UX. If you need to configure load balancing for JBoss EAP 7 instances running on HP-UX servers, you have two choices: 1. You can configure the JBoss EAP 7 instance as a load balancer on the HP-UX server. For details, see Configuring {ProductShortName} as a Front-end Load Balancer. 2. You can deploy Apache HTTP server on a machine that is supported and certified and then run the load balancer on that machine.</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-3050">https://issues.jboss.org/browse/JBEAP-3050</a> |
| 9603 | JBEAP-3028  | Does this tag make it to be in EAP 7.0.0.ER5?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-3028">https://issues.jboss.org/browse/JBEAP-3028</a> |
| 9604 | JBEAP-2998  | [~gaol] I don't get it :) The PR linked here only adjusts a testcase, but where's the code which added the <code>{--connection-properties}</code> parameter? Am I blind?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-2998">https://issues.jboss.org/browse/JBEAP-2998</a> |
| 9605 | JBEAP-2990  | [~clebert] I'm willing to take a look at that for you, but could you point me to the right direction? Maybe I am wrong, but given your description, it sounds like you have clear idea on where, in the code, the changes needs to be done, and how those unwanted calls could happen...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-2990">https://issues.jboss.org/browse/JBEAP-2990</a> |
| 9606 | JBEAP-2931  | Hi Mansi, can you please add one additional check? Installer should not allow user to add more modules in case that pool of Codes for given element is empty. Testing this on authentication element option, trying to add another module once the all code were selected by previous modules Installer simply skip to JSSE panel. <code>{noformat}</code> Operation <code>qwe=asd [ PermitAll, Required, asd=qwe ] [ DenyAll, Required, asd=xzc ] [ Delegating, Required, asd=qwe ] [ Web, Required, asd=qwe ] [ JACC, Required, qwe=asd ] [ XACML, Required, qwe=asd ]</code> Enter 1 to accept, 2 Add Module, 3 Remove Module 2 Code JSSE Configuration <code>{noformat}</code> Apart from this, all changes looks good to me. Thanks, Petr                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-2931">https://issues.jboss.org/browse/JBEAP-2931</a> |
| 9607 | JBEAP-2931  | Hi Petr, Is it alright if when all codes are selected, it simply prints an error if the user tries to add another module? Something like "You cannot add more modules." This is what it would look like <code>{noformat}</code> ... Enter 1 to accept, 2 Add Module, 3 Remove Module 2 You cannot add more modules. <code>[ DenyAll, Required, sdfsd=sdf ] [ PermitAll, Required, sdf=sdf ] [ Delegating, Required, sdf=sdf ] [ Web, Required, sdf=sdf ] [ JACC, Required, sdf=sdf ] [ XACML, Required, asd=asd ]</code> Enter 1 to accept, 2 Add Module, 3 Remove Module <code>{noformat}</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-2931">https://issues.jboss.org/browse/JBEAP-2931</a> |
| 9608 | JBEAP-2929  | [~kabirkhan] or [~ppenicka]: Can you correct the Target Release on this to 7.1.0? [~jpallich] has probably PTO ...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBEAP-2929">https://issues.jboss.org/browse/JBEAP-2929</a> |
| 9609 | JBEAP-2897  | [~johnathonlee] [~jolee] [~gaol] The PR is for 7.1.0. Should the target release of this Jira be changed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-2897">https://issues.jboss.org/browse/JBEAP-2897</a> |
| 9610 | JBEAP-2897  | [~rsvoboda] The PR is for 7.1.0. Should the target release of this Jira be changed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-2897">https://issues.jboss.org/browse/JBEAP-2897</a> |
| 9611 | JBEAP-2858  | [~lcosti.redhat], [~dmichael], Thank you for this JIRA. There are some other reported issues in Release Notes. I think we should track all of them here. What do you think? If you agree, I will link all open RN issues to this one.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-2858">https://issues.jboss.org/browse/JBEAP-2858</a> |
| 9612 | JBEAP-2789  | [~emmartins]: I created a topic for migration of the 'threads' subsystem, but can not find anything on the updates to Infinispan 4.0. Do you know who can help me with this one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-2789">https://issues.jboss.org/browse/JBEAP-2789</a> |
| 9613 | JBEAP-2789  | [~pferraro] or [~emmartins]: Is there any information available about the important changes to the Infinispan subsystem? I don't see anything in the community docs here: <a href="https://docs.jboss.org/author/display/WFLY10/Admin+Guide">https://docs.jboss.org/author/display/WFLY10/Admin+Guide</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-2789">https://issues.jboss.org/browse/JBEAP-2789</a> |
| 9614 | JBEAP-2786  | <code>{quote}</code> I believe this belongs in the Configuration Guide, not the Migration Guide. <code>{quote}</code> Yes, the correct place for that is Configuration Guide, but the stack is now configured on a <code>{channel}</code> element instead of <code>{subsystem}</code> . I see the commit contains a link to Configuration Guide, so that's fine by me. <code>{quote}</code> The Migration Guide contains a section on threads subsystem changes here: <code>{quote}</code> In that case, there's no change needed for JGroups topic. <code>{quote}</code> Where do you see that thread-factory is deprecated? <code>{quote}</code> It is in the output of the following CLI command when EAP is started with HA capabilities ( <code>{/standalone.sh -c standalone-ha.xml}</code> ): <code>{code}</code> <code>/subsystem=jgroups/stack=udp/transport=UDP:read-resource-description(recursive=true)</code> <code>{code}</code> The output contains the following: <code>{code}</code> <code>"thread-factory" =&gt; { "type" =&gt; STRING, "description" =&gt; "The thread factory to use for handling asynchronous transport-specific tasks.", "expressions-allowed" =&gt; false, "nillable" =&gt; true, "min-length" =&gt; 1L, "max-length" =&gt; 2147483647L, "deprecated" =&gt; { "since" =&gt; "3.0.0", "reason" =&gt; "Deprecated. Supports EAP 6.x slaves." }, "access-type" =&gt; "read-write", "storage" =&gt; "configuration", "restart-required" =&gt; "no-services" }, {code}</code> I think the project documentation hasn't been updated since this changed. I'll reopen the Jira due to this, but the commit looks good otherwise. | <a href="https://issues.jboss.org/browse/JBEAP-2786">https://issues.jboss.org/browse/JBEAP-2786</a> |
| 9615 | JBEAP-2766  | According to discussion in <a href="https://gitlab.cee.redhat.com/red-hat-jboss-enterprise-application-platform-documentation/eap-documentation/merge_requests/930">https://gitlab.cee.redhat.com/red-hat-jboss-enterprise-application-platform-documentation/eap-documentation/merge_requests/930</a> , section Unsupported and Deprecated functionality will be created. Currently, the note about unsupported org.jboss.genericjms module is placed under Pruning heading, but it would be much better to have it in section Unsupported and Deprecated functionality. Could you please move it there? Question about section <a href="https://access.qa.redhat.com/documentation/en/red-hat-jboss-enterprise-application-platform/version-7.0/configuration-guide/#configure-generic-jms-resource-adapter">https://access.qa.redhat.com/documentation/en/red-hat-jboss-enterprise-application-platform/version-7.0/configuration-guide/#configure-generic-jms-resource-adapter</a> is still open. Is it OK to keep section in and add note that it is unsupported?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-2766">https://issues.jboss.org/browse/JBEAP-2766</a> |
| 9616 | JBEAP-2758  | MR looks good, I only have one comment. Saying "Consider how to approach the migration of large managed domains that include hundreds of hosts" sounds weird for people that don't operate such domains. I'd reword like this: "If you operate a large managed domain (say 10s of hosts or more), consider how to approach gradual migration." We should have a dedicated chapter on this ourselves, but for now, a sentence like this will have to suffice :) Also, we should say something about migrating a cluster. As I commented above, there's a topic about this in the Patching Guide that we can reuse. Here's how I'd like to proceed: let's fix the few things I mentioned above and then consider this JIRA resolved. For additional topics that require more detail, I'll file other JIRAs. I already filed JBEAP-3715 for gradual migration of large domain. What other topics do you think we need to cover and need help from other parties (developers, consultants, ...)? The recommended practices?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-2758">https://issues.jboss.org/browse/JBEAP-2758</a> |
| 9617 | JBEAP-2758  | [~ltho]: We do not use parenthesis in running text in our documentation. That is why I modified your suggestions of "If you operate a large managed domain (say 10s of hosts or more), consider " to say "If you are currently running a large managed domain consisting of 10 or more hosts, consider..." They both state pretty much the same thing. If we don't want a hard limit, we should not include it in the text at all. I would suggest we just say: "If you are currently running a large managed domain, consider a gradual migration approach." Does that work for you?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-2758">https://issues.jboss.org/browse/JBEAP-2758</a> |

| 9618 | JBEAP-2584  | How many/which artifacts does this affect ? If this 'leak' into artifacts used in examples and quickstarts we are looking at a rather massive impact and a direct opposition for the assumption used for the rules/guidelines for Project Wolf/Enterprise Maven repo.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-2584">https://issues.jboss.org/browse/JBEAP-2584</a> |
| 9619 | JBEAP-2584  | Do you have a matching PR for all the quickstarts to illustrate the impact this will have for users, documentation, examples and tools ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-2584">https://issues.jboss.org/browse/JBEAP-2584</a> |
| 9620 | JBEAP-2584  | What are they being renamed from? I presume this breaks maven's conflict detection? If a wildfly and eap dependency that contain the same packages/classes are in the same dependency tree, then they end up both on the classpath (no conflict detection), so arbitrarily one will win. On BRMS/BPMS we make each war in a way that it deploys to both WildFly 10 and EAP 7 (or even EAP 6). Our current approach is very brittle. Is there a documented, recommended approach for that? If this issue means we need different dependency sets to support both WildFly 10 and EAP 7, especially different groupId/artifactId's of those dependencies (so this leaks beyond dependencyManagement), then this can make it very difficult for us to keep supporting both platforms - and therefore test against both platforms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-2584">https://issues.jboss.org/browse/JBEAP-2584</a> |
| 9621 | JBEAP-2584  | This change [1] was applied to the product version of the quickstarts [2]. I originally thought the change had to be back-ported to the development branch of the quickstarts [3] after the 7.0.0.GA Maven repository was delivered, but I now question whether this is correct. When I cherry-pick the commit back to this branch, the quickstarts don't build because the BOMs in the development repository do not contain the correct version of the artifacts. [~pgier] and I discussed this and we both think that maybe this does not need to be ported back to the development quickstarts. Can someone please clarify whether the development quickstarts should be using the 'org.jboss.eap' group ID? [1] <a href="https://github.com/jboss-developer/jboss-eap-quickstarts/commit/24df1d89c9a7d8a9b01dcf2f304e367425a637be">https://github.com/jboss-developer/jboss-eap-quickstarts/commit/24df1d89c9a7d8a9b01dcf2f304e367425a637be</a> [2] <a href="https://github.com/jboss-developer/jboss-eap-quickstarts/tree/7.0.x">https://github.com/jboss-developer/jboss-eap-quickstarts/tree/7.0.x</a> [3] <a href="https://github.com/jboss-developer/jboss-eap-quickstarts/tree/7.1.x-develop">https://github.com/jboss-developer/jboss-eap-quickstarts/tree/7.1.x-develop</a> cc @paul gier, [~rafabene], [~rsvoboda], [~nziakova] | <a href="https://issues.jboss.org/browse/JBEAP-2584">https://issues.jboss.org/browse/JBEAP-2584</a> |
| 9622 | JBEAP-2529  | I am not sure they should be stored in the history. Does any other shell add commands from executed scripts to the command history?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-2529">https://issues.jboss.org/browse/JBEAP-2529</a> |
| 9623 | JBEAP-2529  | [~jpallich] I would like to set QA_NACK to this jira, because this jira is "Feature Request". And feature requests shouldn't be filled in JPEAt jira project. But "CDW Engine" remove my QA_NACK. Do you know what I need to do for setting QA_NACK?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-2529">https://issues.jboss.org/browse/JBEAP-2529</a> |
| 9624 | JBEAP-2529  | [~baranowb]: Ok, can you please set "target release" and "Affects Version"? I recommend to move this jira to EAP7/PRODMGT project. AFAIK, JBEAP jira project shouldn't contain feature requests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-2529">https://issues.jboss.org/browse/JBEAP-2529</a> |
| 9625 | JBEAP-2516  | [~dmilloyd] the PR seems to have been merged without attention to your comment <a href="https://github.com/jbossas/jboss-eap7/pull/143/files#r48203353">https://github.com/jbossas/jboss-eap7/pull/143/files#r48203353</a> -- is it still a valid concern?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-2516">https://issues.jboss.org/browse/JBEAP-2516</a> |
| 9626 | JBEAP-2516  | Ok if you are saying that the line-swap is fine, I don't object. I just didn't want to close this until we resolve concerns about the correctness, but I don't understand that code enough to be able to determine it myself. Could someone please provide the devel_ack? Then we'll move it forward, it is already in ER4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-2516">https://issues.jboss.org/browse/JBEAP-2516</a> |
| 9627 | JBEAP-2463  | Since EAP 7.0.0.ER5 already contains Weld 2.3.2.Final (or rather 2.3.2.Final-redhat-1.jar), shouldn't this issue be resolved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-2463">https://issues.jboss.org/browse/JBEAP-2463</a> |
| 9628 | JBEAP-2456  | Is this still valid ? The text appear correctly for me (Chrome and Firefox), see runtime_tx.png attached. I would like to close as Will not fix.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-2456">https://issues.jboss.org/browse/JBEAP-2456</a> |
| 9629 | JBEAP-2443  | [~jmesnil] Hi, is fix version for this upgrade 7.0.0.ER4?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-2443">https://issues.jboss.org/browse/JBEAP-2443</a> |
| 9630 | JBEAP-2418  | Regression definition = the user configures semaphores to be unfair, but that doesn't take any effect and the semaphores stay fair, therefore the performance benefit will not occur. We need to be sure that this won't happen. Can performance team ensure this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-2418">https://issues.jboss.org/browse/JBEAP-2418</a> |
| 9631 | JBEAP-2351  | I assume that pressing the "OK" will continue the installation, correct? In that case how about we add something like "Do you wish to use the password anyway?" to the dialogue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-2351">https://issues.jboss.org/browse/JBEAP-2351</a> |
| 9632 | JBEAP-2283  | Have you tried the operation /subsystem=messaging-activemq/server=default:import-journal ? It should be able to take a xml dump from HornetQ (EAP6) and import it into Artemis (EAP7)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-2283">https://issues.jboss.org/browse/JBEAP-2283</a> |
| 9633 | JBEAP-2240  | When could we expect this upgrade please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-2240">https://issues.jboss.org/browse/JBEAP-2240</a> |
| 9634 | JBEAP-2224  | Thanks [~bilge] and [~jesper.pedersen] for the acks. Anyone any idea why the issue moved to New/Unresolved once all the acks were in? /cc [~jason.greene]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-2224">https://issues.jboss.org/browse/JBEAP-2224</a> |
| 9635 | JBEAP-2214  | [~okalman] Please note that the forward-when-no-consumers attribute is no longer used and is replaced by the message-load-balancing-type (see ARTEMIS-19). The current setup uses the default for message-load-balancing-type (ON_DEMAND) which is the same behaviour than forward-when-no-consumers=false I'm not sure if the configuration is correct. Why does the server #4 (which is the target of the bridges) define broadcast-group/discovery-group and a cluster-connection? From the test description, the cluster is formed of server #1 & #3 but not #4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-2214">https://issues.jboss.org/browse/JBEAP-2214</a> |
| 9636 | JBEAP-2158  | You need to explain a little how these numbers have been captured. What exact process has been monitored (i.e. selenium process or actual browser)? How did you record the heap useage (tools, etc)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-2158">https://issues.jboss.org/browse/JBEAP-2158</a> |
| 9637 | JBEAP-2158  | Did you compare it to other browsers in such an environment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-2158">https://issues.jboss.org/browse/JBEAP-2158</a> |
| 9638 | JBEAP-2064  | Why would you split them further? Note I've organized the current module structure essentially in two categories: # the ones the end user code needs directly (contains API) # the ones which shouldn't be used directly (for example the backwards compatibility codecs) but need to be picked up by lucene-core and Hibernate Search Please keep in mind this module structure is maintained for both Hibernate Search (upstream and EAP) and Infinispan (upstream and JDG product). If given suggestions I'm happy to make changes but would prefer to do them upstream first.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-2064">https://issues.jboss.org/browse/JBEAP-2064</a> |
| 9639 | JBEAP-2064  | Note that we are talking about the way it is delivered in .rpm files. (I've adjusted the Summary to reflect that now, sorry). "Why would you split them further?" Because QE doesn't like the unused JARs to be installed anywhere in the system when the Server does not use them. We can't avoid this completely, but when we split the JARs between separate .rpm files we can avoid shipping some of these. "BTW We removed dependencies to Solr a long time ago." That is another JAR we need to have in a separate sub package. The way it was done now was not to include it in the RPM which is a bad way as prevents another product to re-use the RPM if it needs lucene-solr.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-2064">https://issues.jboss.org/browse/JBEAP-2064</a> |
| 9640 | JBEAP-2020  | Hi, please, what is status of this jira? It seems that Narayana 5.2.8.Final is part of the EAP7 ER3 but the fix version here or status to 'Ready for QA' is not changed. Thanks Ondra                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-2020">https://issues.jboss.org/browse/JBEAP-2020</a> |

| 9641 | JBEAP-1916  | I checked Chapter 3. Configuring Destinations and I have few notes: * in section 3.3 there is no explanation for attributes queue-address, entries, durable, legacy-entries and selector. What are entries, why can we have more entries, what do entries mean for application developer, etc * which differences are between entries in the example (queue/myQueue jms/queue/myQueue java:jboss/exported/jms/queue/myQueue), why do we have various prefixes, especially java:jboss/exported                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-1916">https://issues.jboss.org/browse/JBEAP-1916</a> |
| 9642 | JBEAP-1915  | First, I don't get why the content about configuration options should be placed in development guide? Why would we want this duplicated in configuration and in development guide? I think that simply something similar to this will be enough for development guide: {code:java} There are several configuration options that can help setup your application or help in your development process (ie. logging). For configuration options of webservices subsystem please consult Configuration guide, chapter xxx. {code} Second, even if it is asked to be placed in Development guide for webservices, is should be distinguished JAX-WS related things from JAX-RS related things, ie. configuring webservices subsystem should be moved within JAX-WS related chapters, as mentioned in JBEAP-2723                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-1915">https://issues.jboss.org/browse/JBEAP-1915</a> |
| 9643 | JBEAP-1905  | [~rhusar], [~pferraro], how can this JIRA be resolved when it lacks the qa_ack+ ? The "workaround / hack" of closing and reopening the bug is meant for situation when you want to start to work on an issue before all the acks are provided. Resolved == MODIFIED in Bugzilla. It is not possible to move bugs to Resolved status without qa_ack. Reopening.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-1905">https://issues.jboss.org/browse/JBEAP-1905</a> |
| 9644 | JBEAP-1905  | This is already fixed and merged. The QA ack was automatic when moving from WFLY to JBEAP. What is your goal here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-1905">https://issues.jboss.org/browse/JBEAP-1905</a> |
| 9645 | JBEAP-1856  | [~wolfc] - is the fixVersion intentional? I think it needs a target release instead?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-1856">https://issues.jboss.org/browse/JBEAP-1856</a> |
| 9646 | JBEAP-1856  | [~jmesnil] This jira seems to be out-of-date. Can it be closed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-1856">https://issues.jboss.org/browse/JBEAP-1856</a> |
| 9647 | JBEAP-1829  | [~anrobert]: I'm not clear what content needs updating for the QA automated testing? [~nziakova]: Do you know what is needed here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-1829">https://issues.jboss.org/browse/JBEAP-1829</a> |
| 9648 | JBEAP-1758  | [~mnovak] what's the status of this issue? the underlying issue in Artemis has been fixed some times ago. Is it still an issue or did the resolution slips through the cracks?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-1758">https://issues.jboss.org/browse/JBEAP-1758</a> |
| 9649 | JBEAP-1667  | [~bmaxwell]: I've updated the implicit dependency list via [JBEAP-2361][https://issues.jboss.org/browse/JBEAP-2361] with details from the spreadsheet you'd shared: [EAP 6.4.x Implicit Dependencies][https://docs.google.com/spreadsheets/d/1qx_HM9JZDeratNdU7KmB8iZzc5N2lv0zwsaPiWC6cnc/edit#gid=0] Could you please confirm if CMP or any other module/subsystem in the spreadsheet is not included in EAP 7?<br>https://docs.google.com/spreadsheets/d/1qx_HM9JZDeratNdU7KmB8iZzc5N2lv0zwsaPiWC6cnc/edit#gid=0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-1667">https://issues.jboss.org/browse/JBEAP-1667</a> |
| 9650 | JBEAP-1667  | [~bmaxwell]: I've updated the 'Implicit Module Dependencies' table for EAP 7. Following are the changes made: * Removed the subsystems that are no longer there: CMP; JacORB; JAXR; Messaging; Threads; Web * Updated the subsystems that have been changed: Messaging to Messaging-ActiveMQ; Web to Undertow * Added newly added subsystems: Batch-JBeret; IIO-OpenJDK * Added dependencies for the newly added subsystems with inputs from the source. Could you please review the changes below and confirm? Thanks! https://gitlab.cee.redhat.com/nchaudha/eap-documentation/blob/9b50b46b8f71d563d30dd1a9e50bbeed12d36c0/docs/topics/4353.adoc                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-1667">https://issues.jboss.org/browse/JBEAP-1667</a> |
| 9651 | JBEAP-1667  | [~bmaxwell] Also, could you please confirm if the '{org.jboss.as.jacorb}' dependency under EJB3 subsystem needs to be updated/removed? I checked in the source and it's still listed there even though JacORB is no longer supported.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBEAP-1667">https://issues.jboss.org/browse/JBEAP-1667</a> |
| 9652 | JBEAP-1667  | [~bmaxwell]: Let me take a stab at it. {code} JSF (Java Server Faces) Subsystem org.jboss.as.jsf jsf-api jsf-impl The package dependencies listed above are added if the WAR 'web.xml' does not bundle JSF. The module slot added for the package dependencies listed below depends on the 'web.xml'. javax.faces.api com.sun.jsf-impl {code} Does that sound right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-1667">https://issues.jboss.org/browse/JBEAP-1667</a> |
| 9653 | JBEAP-1667  | [~nids1409]: Did you my comment in your merge request and [~bmaxwell]'s comments above? At the minimum, WAR and JSF need to be capitalized. This may also need some rewording. I will try to get to it today.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-1667">https://issues.jboss.org/browse/JBEAP-1667</a> |
| 9654 | JBEAP-1667  | [~nids1409] Looking at my notes now, it seems that I messed some dependencies in my previous comment. I'm sorry about that. in EE subsystem I forgot to mention that dependency {org.hibernate.validator} should be removed too. also I suggested to remove {org.jboss.resteasy.resteasy-atom-provider} from JAX-RS, but it is valid dependency, could you please re-add it? Again I'm sorry about these inaccuracies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-1667">https://issues.jboss.org/browse/JBEAP-1667</a> |
| 9655 | JBEAP-1604  | Sounds to me like your asking for certain HHH fixes to be included in EAP 7. I think that the individual (JBEAP-1596, JBEAP-1460, JBEAP-1595) jiras should be assigned to someone that is doing the back porting of fixes for EAP 7. [~gbadner] should this jira be assigned to you? Or directly to David Stahl?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-1604">https://issues.jboss.org/browse/JBEAP-1604</a> |
| 9656 | JBEAP-1604  | All of the "incorporates" links have already been fixed in Hibernate ORM 5.0.2, so there is nothing listed that needs to be backported; they will already be fixed when updated to Hibernate ORM 5.0.3.Final. Scott Marlow, I have not been involved in getting new versions incorporated. Should I be? Let's discuss offline                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBEAP-1604">https://issues.jboss.org/browse/JBEAP-1604</a> |
| 9657 | JBEAP-1360  | [~martyn-taylor] You're right. This was issue with the test. I've fixed it in the test suite. There is a question: I've tried to remove backup connector from configuration of core bridge so there was just connector to live server. If core bridge is configured with ha=true, should it receive live/backup pair topology and failover to backup without the need to have static connector to backup configured? Decreasing priority as reported issue is not valid.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBEAP-1360">https://issues.jboss.org/browse/JBEAP-1360</a> |
| 9658 | JBEAP-1360  | [~jmesnil] Jeff. When the connectors are set up, the ActiveMQServerService is doing an address resolution for loopback interfaces. This is causing problems when configuring static connectors. In order for Artemis to assume 2 TransportConfigurations are the same, the params must be equal. Since, WildFly is replacing the host="localhost.localdomain" when the server bind address is 127.0.0.1. Configuring a static connector with 127.0.0.1 means that the resulting TransportConfigurations are different. See above. This is causing failover to stop working on bridges with single static connector configured. Is there any reason for doing this? I am not sure if this is a bug in the WildFly code or if there is some policy to always use "localhost.localdomain"? {code:title=ActiveMQServerService.java borderStyle=solid} // resolve the host name of the address only if a loopback address has been set if (sa.getAddress().isLoopbackAddress()) { host = NetworkUtils.canonize(sa.getAddress().getHostName()); } else { host = NetworkUtils.canonize(sa.getAddress().getHostAddress()); } {code} There is an additional problem here, I think either through the management interface or the tests where an additional property is being set on the static connector "localAddress". | <a href="https://issues.jboss.org/browse/JBEAP-1360">https://issues.jboss.org/browse/JBEAP-1360</a> |

| 9659 | JBEAP-1360  | [~jmesnil][~martyn-taylor] Thanks for looking at this! I understand this way is correct. My concern is usability as it's not intuitive. I've never tried to even set {{local-destination-outbound-socket-binding}} with EAP 6/7 and did not know its existence. Is there a way to make it simple and use just socket-binding for remote-connector in live server?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBEAP-1360">https://issues.jboss.org/browse/JBEAP-1360</a> |
| 9660 | JBEAP-1360  | [~jmesnil] What do you think of the changes? It's usability problem.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBEAP-1360">https://issues.jboss.org/browse/JBEAP-1360</a> |
| 9661 | JBEAP-1360  | [~jmesnil] Hi Jeff, I can see that this was changed from bug to feature request. From usability point of view this seems to be bug. wdyt?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-1360">https://issues.jboss.org/browse/JBEAP-1360</a> |
| 9662 | JBEAP-1291  | The DR13 installer still contains checks for services running on conflicting ports, even though this enhancement obsoletes the checks. Possibly create a new JIRA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-1291">https://issues.jboss.org/browse/JBEAP-1291</a> |
| 9663 | JBEAP-1281  | Hi Petr, Which VM are you testing this on? I'm testing on W10 and in some cases, I do see the path reselection; however, complications with aesh make it difficult to test. I believe there are some conditions on windows in which we will see this issue reproduced, but not all. We need to narrow down the reproduction procedure. Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-1281">https://issues.jboss.org/browse/JBEAP-1281</a> |
| 9664 | JBEAP-1281  | Seems there is still something wrong, in some cases installer doesn't offer reselecting target and instead ends with {{XML not written successfully}} Checked inputs: PASS 1) Unwritable location provided: G:\auto.xml or /root/auto.xml PASS 2) Directory provided: C:\tmp or /home/jbliznak PASS 3) Relative location: auto.xml PASS 4a) Existing file on local filesystem: C:\test\existing.xml or /home/jbliznak/existing.xml FAIL 4b) Existing file (not writable) on local filesystem C:\test\existing-nowritable.xml or /home/jbliznak/existing-nowritable.xml 5) Writing to network drive (windows): FAIL 5a) new file H:\home\hudson\jbliznak\users-tmp\auto.xml PASS 5b) Existing file H:\home\hudson\jbliznak\users-tmp\existing.xml FAIL 5c) Existing file (not writable) H:\home\hudson\jbliznak\users-tmp\existing-nowritable.xml ad 4b) this issue is for both, Windows and Linux platforms. 5c) seems to be the same problem - missing check after user select to overwrite. {code:java} [jbliznak@erebos-rh installer]\$ sudo touch /home/jbliznak/existing-nowritable.xml [jbliznak@erebos-rh installer]\$ ll /home/jbliznak/existing-nowritable.xml -rw-r--r-- 1 root root 0 29. bře 15.55 /home/jbliznak/existing-nowritable.xml ..... Would you like to generate an automatic installation script and properties file? (y/n) [n]: y Select path for the automatic installation script: [/home/jbliznak/test/EAP-7.0.0/auto.xml] /home/jbliznak/existing-nowritable.xml File already exists, would you like to overwrite it? (y/n) [n]: y XML not written successfully. [ Console installation done ] [jbliznak@erebos-rh installer]\$ cat /home/jbliznak/existing-nowritable.xml [jbliznak@erebos-rh installer]\$ {code} {code:java} Would you like to generate an automatic installation script and properties file? (y/n) [n]: y Select path for the automatic installation script: [C:\Users\Administrator\Desktop\op\test-console\EAP-7.0.0\auto.xml] H:\home\hudson\users-tmp\jbliznak\existing-nowritable.xml File already exists, would you like to overwrite it? (y/n) [n]: y XML not written successfully. [ Console installation done ] {code} ad 5a) [~thausen] you wrote in JBEAP-3580, that you were unable to write the file even when checks say "OK to write", [~pkremens] on the other hand was able to write it. I am using the very same command he provided and I am also unable to write the file {code:java} Select path for the automatic installation script: [C:\Users\Administrator\Desktop\test-console\EAP-7.0.0\auto.xml] H:\home\hudson\users-tmp\jbliznak\auto.xml Cannot write to path, please choose another location. {code} This is something strange, I am able to create/edit files/dirs on that network drive, but installer says no in this case (although it is ok with 5b). In any case, would it be possible to extend the check and offer the reselection if the file was unable to write (although other checks claimed it should be writable)? | <a href="https://issues.jboss.org/browse/JBEAP-1281">https://issues.jboss.org/browse/JBEAP-1281</a> |
| 9665 | JBEAP-1093  | This functionality works correctly in standalone.sh and standalone.ps1. This functionality don't work on bat script. Is it correct behaviour? If yes, this should be mentioned in documentation (documentation jira should be created now).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-1093">https://issues.jboss.org/browse/JBEAP-1093</a> |
| 9666 | JBEAP-1093  | [~jpallich] or [~ppenicka]: Can you correct the Target Release on this to 7.1.0?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-1093">https://issues.jboss.org/browse/JBEAP-1093</a> |
| 9667 | JBEAP-1006  | Yes that's it. Thanks [~jmesnil]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-1006">https://issues.jboss.org/browse/JBEAP-1006</a> |
| 9668 | JBEAP-760   | Hi Pavel, I couldn't reproduce the problem, can you elaborate on how to reproduce it ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBEAP-760">https://issues.jboss.org/browse/JBEAP-760</a>   |

| 9670 | JBEAP-732   | Can you guys do some proper clean up? Which version it affects, which version it's fixed, etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-732">https://issues.jboss.org/browse/JBEAP-732</a>   |
| 9671 | JBEAP-523   | [~rafabene]: Is this an issue with the QS tools Maven plugin? I see that Daran replaced the private API with the public API in this quickstart on Mar 13, 2014 with this commit: <a href="https://github.com/jboss-developer/jboss-eap-quickstarts/commit/9be73458bfc1cd909a19f5f1c175fbd0fe5b8160">https://github.com/jboss-developer/jboss-eap-quickstarts/commit/9be73458bfc1cd909a19f5f1c175fbd0fe5b8160</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-523">https://issues.jboss.org/browse/JBEAP-523</a>   |
| 9672 | JBEAP-523   | [~diofthouse] or [~darran]: See Rafael's comment above. You fixed this quickstart over a year ago. Do you know why these classes are still marked as private?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBEAP-523">https://issues.jboss.org/browse/JBEAP-523</a>   |
| 9673 | JBEAP-523   | [~bdaw]: There is a long history related to the use of private APIs in this quickstart and I thought it was resolved for JBoss EAP 6.3.1. These were the issues for this quickstart and as you can see, they are marked resolved. * <a href="https://issues.jboss.org/browse/EAP6-69">https://issues.jboss.org/browse/EAP6-69</a> * <a href="https://issues.jboss.org/browse/EAP6-136">https://issues.jboss.org/browse/EAP6-136</a> See [~rafabene]'s comment above. Do you know why these classes are still marked private?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBEAP-523">https://issues.jboss.org/browse/JBEAP-523</a>   |
| 9674 | JBEAP-523   | I took a look and I saw that 'org.jboss.as.core.security' is private on the module 'org.jboss.as.core-security' but 'org.jboss.as.core.security.api' from 'org.jboss.as.core-security-api' module is marked as "deprecated". [~sgilda]. Does QSTools still complaining about those imports? From my perspective it looks like org.jboss.as.security.api.* is a valid import                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBEAP-523">https://issues.jboss.org/browse/JBEAP-523</a>   |
| 9675 | JBEAP-459   | Shouldn't those be returned by /subsystem=messaging-activemq/server=default:read-children-names(child-type=ha-policy) ? Which is what CLI tab-completion relies upon in this case.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-459">https://issues.jboss.org/browse/JBEAP-459</a>   |
| 9676 | JBEAP-385   | Petr, can you close this one as a duplicate? It's older than JBEAP-2529 but the other one has more data on it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-385">https://issues.jboss.org/browse/JBEAP-385</a>   |
| 9677 | JBEAP-235   | Hi [~swd847], I have successfully verified support for options C, L, N and S (their respective form in Undertow predicate language). Although I am in trouble to verify options E and NE. Regarding to E: I have tried to create rewrite rule where I first define some env variable and then use that variable to determine what kind of rewrite should be used. My particular expression in expression-filter looks like this: {code} set(attribute=%{r,myvar},value='myval'); equals('\${ENV:myvar}',myval)->rewrite(/jboss-helloworld/second.html) else rewrite(/jboss-helloworld/third.html) {code} Output of this should be rewrite to 'second.html' page but unfortunately it seems that 'myvar' is not set. I think I am missing something here - did I misunderstand how this should work? Regarding to NE: does that mean that user can specify whether not to use URI escaping rules only when using rewrite handler, not in expression in predicate logic? Could you please provide more info for me? Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-235">https://issues.jboss.org/browse/JBEAP-235</a>   |

| #    | Requirement  | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | URL                                                                                                     |

| 9678 | JBEAP-235    | Thank you [~swd847] for your answer. Regarding to E: unfortunately I am still not able to make it working. When I try with {code}\$ {r, myvar}{code} I get following error: {code} [standalone@localhost:9990 /] /subsystem=undertow/configuration=filter/expression-filter=envvar:write-attribute(name=expression,value="set(attribute=%{r, myvar}', value='myval'); equals('\$ {r, myvar}', 'myval')->rewrite('/jboss-helloworld/second.html') else rewrite('/jboss-helloworld/third.html')") { "outcome" => "failed", "failure-description" => "WFLYCTL0211: Cannot resolve expression 'set(attribute=%{r, myvar}', value='myval'); equals('\$ {r, myvar}', 'myval')->rewrite('/jboss-helloworld/second.html') else rewrite('/jboss-helloworld/third.html')'", "rolled-back" => true } {code} Well, when I use {{%}} instead of {{S}} then command succeed (although guess this is not correct input): {code} /subsystem=undertow/configuration=filter/expression-filter=envvar:write-attribute(name=expression,value="set(attribute=%{r, myvar}', value='myval'); equals('%{r, myvar}', 'myval')->rewrite('/jboss-helloworld/second.html') else rewrite('/jboss-helloworld/third.html')") {code} - after reload this still is not working -> still redirected to {{third.html}}. Could you please tell me what else am I doing wrong? Thanks. Regarding to NE: ok. I have checked that now URL encoding does not apply when using in rewrite predicate so user can do it manually.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-235">https://issues.jboss.org/browse/JBEAP-235</a>       |
| 9679 | JBEAP-235    | Hi [~swd847], I've just realized I have marked different Stuart Douglas in previous comment. Therefore now hopefully this will ping you - could you please look and see what am I doing wrong in previous comment regarding to setting own servlet request attribute? Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBEAP-235">https://issues.jboss.org/browse/JBEAP-235</a>       |
| 9680 | JBEAP-176    | [~jmesnil] After the long discussion in the cloned WFLY jira, I assume the only way to fix would be adding javax.jms.api to global modules. Is this correct, and is this a desired thing in Wildfly? Should this be discussed with someone else from Wildfly/EAP team before fixing or deciding to keep it in the backlog?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBEAP-176">https://issues.jboss.org/browse/JBEAP-176</a>       |

RPM?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-142">https://issues.jboss.org/browse/JBEAP-142</a>       |
| 9683 | JBEAP-117    | This is reading like a feature request so as Brian says this is the wrong place - can we get this one closed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBEAP-117">https://issues.jboss.org/browse/JBEAP-117</a>       |
| 9684 | JBEAP-62     | This was intended for JBoss EAP 6.1 as the comment above states. Can it be moved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-62">https://issues.jboss.org/browse/JBEAP-62</a>         |
| 9685 | JBEAP-52     | Is it any workaround for this issue? We are migrating to jboss 7.2 and we have a big number of unicast remote objects, so it's really critical for us.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBEAP-52">https://issues.jboss.org/browse/JBEAP-52</a>         |
| 9686 | JBEAP-31     | How is this class packaged in the project? Are you sure it is not packaged twice?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBEAP-31">https://issues.jboss.org/browse/JBEAP-31</a>         |
| 9687 | JBEAP-31     | Do you have a reproducer for this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBEAP-31">https://issues.jboss.org/browse/JBEAP-31</a>         |
| 9688 | JBPAPP-11240 | [~raggz] I can see that this is not built as roll-up patch as we usually do for HornetQ. Could you built it as roll-up patch as we did for JBPAPP-11226, please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-11240">https://issues.jboss.org/browse/JBPAPP-11240</a> |
| 9689 | JBPAPP-11214 | application. I tried running the reproducer against EAP 5.1.2 and it worked correctly there. I tried "patching" 5.0.1 by using jbossctx-client.jar and jboss-common-jdbc-wrapper.jar from a 5.1.2.GA distribution and it worked correctly too. I have a heavy suspicion that https://issues.jboss.org/browse/JBPAPP-3970 is the cause -- it needs to be backported to this patch too. The description of JBPAPP-3970/JBAS-7811 fits my testing logs very well: From the server log - two client threads get assigned connections with the same hashCode, so it is stored only once in the WrapperDataSourceService. {noformat} 10:01:51,723 DEBUG [WrapperDataSourceService] Created Connection proxy for invoker=jboss:service=invoker,type=jrmp, targetName=jboss:jca:service=DataSourceBinding,name=GlobalDS, cacheID=912805409 10:01:51,723 DEBUG [WrapperDataSourceService] Created Connection proxy for invoker=jboss:service=invoker,type=jrmp, targetName=jboss:jca:service=DataSourceBinding,name=GlobalDS, cacheID=912805409 {noformat} after that, one client uses the connection, then he closes it. The other client then tries to use it, but the connection with that ID is already closed. {noformat} Exception in thread "Thread-1" java.lang.RuntimeException: java.lang.reflect.UndeclaredThrowableException at AccessTest\$1.run(AccessTest.java:48) Caused by: java.lang.reflect.UndeclaredThrowableException at com.sun.proxy.\$Proxy1.close(Unknown Source) at AccessTest\$1.run(AccessTest.java:41) Caused by: java.lang.IllegalAccessException: Failed to find connection: 912805409 at org.jboss.resource.adapter.jdbc.remote.WrapperDataSourceService.invoke(WrapperDataSourceService.java:213) at sun.reflect.GeneratedMethodAccessor256.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at org.jboss.mx.interceptor.ReflectedDispatcher.invoke(ReflectedDispatcher.java:157) at org.jboss.mx.server.Invocation.dispatch(Invocation.java:96) at org.jboss.mx.server.Invocation.invoke(Invocation.java:88) at org.jboss.mx.server.AbstractMBeanInvoker.invoke(AbstractMBeanInvoker.java:264) at org.jboss.mx.server.MBeanServerImpl.invoke(MBeanServerImpl.java:668) at org.jboss.invocation.jrmp.server.JRMPInvoker\$MBeanServerAction.invoke(JRMPInvoker.java:855) at org.jboss.invocation.jrmp.server.JRMPInvoker.invoke(JRMPInvoker.java:422) at sun.reflect.GeneratedMethodAccessor255.invoke(Unknown Source) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at sun.rmi.server.UnicastServerRef.dispatch(UnicastServerRef.java:303) at sun.rmi.transport.Transport\$1.run(Transport.java:159) at java.security.AccessController.doPrivileged(Native Method) at sun.rmi.transport.Transport.serviceCall(Transport.java:155) at sun.rmi.transport.tcp.TCPTransport.handleMessages(TCPTransport.java:535) at sun.rmi.transport.tcp.TCPTransport\$ConnectionHandler.run0(TCPTransport.java:790) at sun.rmi.transport.tcp.TCPTransport\$ConnectionHandler.run(TCPTransport.java:649) at java.util.concurrent.ThreadPoolExecutor\$Worker.runTask(ThreadPoolExecutor.java:895) at java.util.concurrent.ThreadPoolExecutor\$Worker.run(ThreadPoolExecutor.java:918) at java.lang.Thread.run(Thread.java:662) at sun.rmi.transport.StreamRemoteCall.exceptionReceivedFromServer(StreamRemoteCall.java:255) at sun.rmi.transport.StreamRemoteCall.executeCall(StreamRemoteCall.java:233) at sun.rmi.server.UnicastRef.invoke(UnicastRef.java:142) at org.jboss.invocation.jrmp.server.JRMPInvoker\$Stub.invoke(Unknown Source) at | <a href="https://issues.jboss.org/browse/JBPAPP-11214">https://issues.jboss.org/browse/JBPAPP-11214</a> |
| 9690 | JBPAPP-11127 | What version of postgres plus are we talking about? Wasn't support for that first added in EAP 6?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-11127">https://issues.jboss.org/browse/JBPAPP-11127</a> |
| 9691 | JBPAPP-11127 | Guessing off your HHH-8349 link: If you're talking about pgplus 9.2, support for that wasn't added until ORM 4.2 and EAP 6 (HHH-8175). Can this be closed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBPAPP-11127">https://issues.jboss.org/browse/JBPAPP-11127</a> |
| 9692 | JBPAPP-11073 | I have deployed the tag HornetQ_2_2_28_Final I tried to upload it.. but for some reason the poms are not being accepted. This is an ancient project now... using ant... Would productization have better poms to this? or do I need to fix this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-11073">https://issues.jboss.org/browse/JBPAPP-11073</a> |
| 9693 | JBPAPP-11073 | Could you be more specific on the issue you're meeting ? What error message do you get ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-11073">https://issues.jboss.org/browse/JBPAPP-11073</a> |

| 9694 | JBPAPP-10981 | [~huwang] [~pferraro] I've tagged it. <a href="https://svn.jboss.org/repos/jboss/cache/core/tags/3.2.12.GA/">https://svn.jboss.org/repos/jboss/cache/core/tags/3.2.12.GA/</a> Do you guys require maven artifacts to be uploaded as well or you're building it yourself in brew? If later I'd rather not release it in maven as I don't want people to see any activity around it (it is not maintained anymore and users are encouraged to use Infinispan)                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-10981">https://issues.jboss.org/browse/JBPAPP-10981</a> |
| 9695 | JBPAPP-10959 | So far I built the following: jboss-seam2-2.2.7.EAP5-2.ep5.el6 jboss-seam2-2.2.7.EAP5-1.ep5.el6 rhel4 build is in WIP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBPAPP-10959">https://issues.jboss.org/browse/JBPAPP-10959</a> |
| 9696 | JBPAPP-10916 | Hi Marek, how about the 3.3.1.SP4 tag?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBPAPP-10916">https://issues.jboss.org/browse/JBPAPP-10916</a> |
| 9697 | JBPAPP-10916 | Hi Brian, thanks for the SP4 tag. But I found a problem, there is SP3 zip file in SP4 tag: <a href="http://anonsvn.jboss.org/repos/richfaces/tags/3.3.1.SP4/docs/">http://anonsvn.jboss.org/repos/richfaces/tags/3.3.1.SP4/docs/</a> which is same in the SP3 tag: <a href="http://anonsvn.jboss.org/repos/richfaces/tags/3.3.1.SP3/docs/">http://anonsvn.jboss.org/repos/richfaces/tags/3.3.1.SP3/docs/</a> Is that OK?                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-10916">https://issues.jboss.org/browse/JBPAPP-10916</a> |
| 9698 | JBPAPP-10911 | [~navssurtani] thanks for details, I see commits 18199 and 18187 linked with this JIRA. Will you provide documentation for customers how to enable this feature ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-10911">https://issues.jboss.org/browse/JBPAPP-10911</a> |
| 9699 | JBPAPP-10893 | So, based on the start script mentioned, the way to run EAP as a service on Solaris (without using the script itself) is something like: * Define JBOSS_HOME, SERVER_NAME, JBOSS_OPTIONS, JBOSS_USER, JBOSS_CONSOLE AND JAVA_HOME. * Ensure the user has write permission in these locations. * Stop any already running EAP processes * Start EAP with: <code>\${JBOSS_HOME}/bin/run.sh -c \${SERVER_NAME} \${JBOSS_OPTIONS}</code> Is there more to it than that?                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-10893">https://issues.jboss.org/browse/JBPAPP-10893</a> |
| 9700 | JBPAPP-10893 | Note to self: Topic 3758 has good instructions for doing this in EAP 6. Would they apply to 5?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBPAPP-10893">https://issues.jboss.org/browse/JBPAPP-10893</a> |
| 9701 | JBPAPP-10893 | Ivo; I have no such script in my EAP 5.2 zip installation (From CSP: JBEAP-5.2.0/jboss-eap-5.2.0.zip). Is it contained in one of the other distribution archives?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-10893">https://issues.jboss.org/browse/JBPAPP-10893</a> |
| 9702 | JBPAPP-10889 | Hi Bartosz, Could you elaborate? If you're talking about communicating between Remoting 2 on EAP 5 and Remoting 3 on EAP 6, then that's not likely ever to work. If you're talking about using RMI, then it's not a Remoting issue. Thanks, Ron                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-10889">https://issues.jboss.org/browse/JBPAPP-10889</a> |
| 9703 | JBPAPP-10847 | Dennis, is it possible to get some info on how this race issue was fixed for inclusion in the 5.3.0 Release Notes? Also, is the text I provided in the Release Notes Text field accurate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBPAPP-10847">https://issues.jboss.org/browse/JBPAPP-10847</a> |
| 9704 | JBPAPP-10839 | Hi Tom, there is missing link to git/svn from where one-off patch was built. I need it so I can run HornetQ test suite and check that all fixes are present. Based on the naming convention described in [1] could you remove attachment JBPAPP-10839-signed.zip, please? Return patch to me as soon as it's done. Thanks, Mirek [1] <a href="https://docspace.corp.redhat.com/docs/DOC-151974">https://docspace.corp.redhat.com/docs/DOC-151974</a>                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBPAPP-10839">https://issues.jboss.org/browse/JBPAPP-10839</a> |
| 9705 | JBPAPP-10816 | Can you provide the stacktrace and/or a sample app to reproduce the issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-10816">https://issues.jboss.org/browse/JBPAPP-10816</a> |
| 9706 | JBPAPP-10720 | How do you launch your build so this issue happens ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBPAPP-10720">https://issues.jboss.org/browse/JBPAPP-10720</a> |
| 9707 | JBPAPP-10710 | Will this be included in EAP 5.3 release? also, will a new SOA-P 5 version be release along with EAP 5.3?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBPAPP-10710">https://issues.jboss.org/browse/JBPAPP-10710</a> |
| 9708 | JBPAPP-10666 | Tom, it doesn't look like this issue is past EAP QE yet. Do we have more work to do on it? Thanks, Rick                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBPAPP-10666">https://issues.jboss.org/browse/JBPAPP-10666</a> |
| 9709 | JBPAPP-10666 | [~raggz]: This one has been sitting for a long time, and it only recently got turned over to QA. When I check the case, it's been closed with no apparent need for a patch. Can you confirm?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBPAPP-10666">https://issues.jboss.org/browse/JBPAPP-10666</a> |
| 9710 | JBPAPP-10645 | Would you create 2.2.3.GA tag to include the patch?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-10645">https://issues.jboss.org/browse/JBPAPP-10645</a> |
| 9711 | JBPAPP-10623 | I am returning this one-off because of following issues: 1. Incorrect names of jars - it should be just jboss-messaging.jar and jboss-messaging-client.jar. If you would like to highlight that these jars are signed, try zipping them both into JBPAPP-10623-signed.zip or so. 2. Incorrect MANUAL INSTALL INSTRUCTIONS - the path should be without 'server' part, just <code>\${JBOSS_HOME}/common/lib</code> and <code>\${JBOSS_HOME}/client</code> . Could you please fix these issues? Thank you, Nikoleta                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-10623">https://issues.jboss.org/browse/JBPAPP-10623</a> |
| 9712 | JBPAPP-10623 | It looks good now, thanks. Could you please hand over the jira back to QA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-10623">https://issues.jboss.org/browse/JBPAPP-10623</a> |
| 9713 | JBPAPP-10610 | can this be uploaded soon?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-10610">https://issues.jboss.org/browse/JBPAPP-10610</a> |
| 9714 | JBPAPP-10600 | Does anyone watching this issue have some raw documentation with which we (ECS) can make a start? Without a starting point, this simply can't be delivered.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-10600">https://issues.jboss.org/browse/JBPAPP-10600</a> |
| 9715 | JBPAPP-10596 | testStatefulBank21() is the only test failure on this TestCase. testRemoteBindingInterceptorStack() passes locally and has been passing on Boo as well. | 9716 | JBPAPP-10557 | Why do we have one-off patch for the same issue for both EAP 600 and EAP 601? I think we should push to use latest EAP and so only one one-off patch should be processed - the one for EAP 601.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-10557">https://issues.jboss.org/browse/JBPAPP-10557</a> |
| 9717 | JBPAPP-10494 | Could you please change MANUAL INSTALL INSTRUCTIONS: ? This step also remove hibernate-infinispan-4.1.3.Final-redhat-1.jar, but shouldn't: {noformat} Backup and remove the following files: <code>\${JBOSS_HOME}/modules/org/hibernate/main/hibernate*.jar</code> {noformat} Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBPAPP-10494">https://issues.jboss.org/browse/JBPAPP-10494</a> |
| 9718 | JBPAPP-10444 | There is another commit in Branch_2_0 of the microcontainer which relates to JBPAPP-6020 which is still open. Should this commit be included in 2.0.11 upgrade or not?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBPAPP-10444">https://issues.jboss.org/browse/JBPAPP-10444</a> |
| 9719 | JBPAPP-10444 | Hi Ivo, The new source tag depends on google-guice-1.0, but google-guice-2.0 has been included in our EAP 5.2.0 release and compare to 1.0, 2.0 has great change, I have tried to patch sources but failed. Is it possible for you to tag new source which depends on google-guice-2.0? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-10444">https://issues.jboss.org/browse/JBPAPP-10444</a> |
| 9720 | JBPAPP-10418 | Attention: Miroslav The installation of libaio is already documented in the EAP Installation Guide, as can be confirmed here at [1]. I'm open to suggestions as to how these instructions or the HornetQ User Guide might be improved with reference to libaio. On re-reading the Installation Guide it seems that there is no direct mention of the native libraries in the HornetQ installation section. Is this what you want clarified? | 9724 | JBPAPP-10221 | I just noticed that yesterday was the deadline for component upgrades. Can I get a new Remoting 2 in?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-10221">https://issues.jboss.org/browse/JBPAPP-10221</a> |
| 9725 | JBPAPP-10211 | 1. classpath has some ear ref - is this required, used in test? 2. classpath has refs to local copy of jboss, this should be changed to \$JBoss_HOME or something 3. class names are wrong binary (EJB3FailoverServices-1.0.0-SNAPSHOT.jar) bean refers to HelloServiceRemote, however there is no such class, there is HelloServiceRemote2 (EJB3FailoverPublic2-1.0.0-SNAPSHOT.jar) 4. instructions in Readme.txt state that EJB3FailoverPublic2-1.0.0-SNAPSHOT.jar should be deployed. Why interface is deployed, not bean?( or both :) ) 5. IPs in Unit test class are kind of wrong.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-10211">https://issues.jboss.org/browse/JBPAPP-10211</a> |
| 9726 | JBPAPP-10211 | What is more important - I wonder how other places which have the "call-by-value" flags handle this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-10211">https://issues.jboss.org/browse/JBPAPP-10211</a> |
| 9727 | JBPAPP-10211 | Noted. Initially CTR has been "reinitialized" after each lookup, but I wasnt sure if this is correct - hence the check for "success". WRT to issue, Im still unable to replicate locally failure which may be caused by this fix: {noformat}<br>org.jboss.test.cluster.defaultcfg.ejb3.ustxsticky.test.UserTransactionStickyUnitTestCase.testMoreBeansInTransaction (from<br>org.jboss.test.cluster.defaultcfg.ejb3.ustxsticky.test.UserTransactionStickyUnitTestCase(Default-udp)) Failing for the past 3 builds (Since #27 ) Took 28 ms. | 9730 | JBPAPP-10102 | Dominik Pospisil <dpospisi@redhat.com> made a comment on [bug 900989] <a href="https://bugzilla.redhat.com/show_bug.cgi?id=900989">https://bugzilla.redhat.com/show_bug.cgi?id=900989</a> That would work. But as I said this need to be copied before other tests are executed so I guess this needs to be hacked into testsuite POM file which is something I would not prefer to do. I guess you are much more familiar with the testsuite POMs. Can you do that Ondro?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBPAPP-10102">https://issues.jboss.org/browse/JBPAPP-10102</a> |
| 9731 | JBPAPP-10102 | Rostislav Svoboda <rsvoboda@redhat.com> made a comment on [bug 900989] <a href="https://bugzilla.redhat.com/show_bug.cgi?id=900989">https://bugzilla.redhat.com/show_bug.cgi?id=900989</a> Is the workaround sufficient ? If yes and you don't want changes in TS, please close this BZ. Btw, how many tests are affected by this BZ, I can't access <a href="https://jenkins-jbossqa.rhcloud.com">https://jenkins-jbossqa.rhcloud.com</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBPAPP-10102">https://issues.jboss.org/browse/JBPAPP-10102</a> |

| #    | Requirement  | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | URL                                                                                                     |

| 9732 | JBPAPP-10017 | <p>I've tried replicating this situation on my localhost, using the following steps: 1. checkout sources from SVN, using the checkout.log for guidance on revId, etc. 2. apply VMan patch from dist-git, using patches.log for guidance 3. created proxy to jb-eap-6-rhel-6-build MEAD Maven repository on my local repository manager, disabling local caching to make it a "pass-through" proxy 4. setup variant settings.xml to &lt;mirror/&gt; to the pass-through proxy, so all I can access are artifacts in the jb-eap-6-rhel-6-build MEAD repository 5. ran 'mvn -s ~/.m2/settings-jbeap6.xml dependency:resolve-plugins' which is the command that failed according to the root.log Nothing failed. So, I ran: 'mvn -s ~/.m2/settings-jbeap6.xml org.apache.maven.plugins:maven-help-plugin:effective-pom -Doutput=effective.pom.xml' which calculates what the POM looks like after processing inheritance, interpolation, BOM imports, etc. and looked for the version of the project-info-reports plugin in that effective POM. Here's what I found:</p> <pre> {noformat} [...] &lt;pluginManagement&gt; [...] &lt;plugin&gt; &lt;artifactId&gt;maven-project-info-reports-plugin&lt;/artifactId&gt; &lt;version&gt;2.2-redhat-1&lt;/version&gt; &lt;/plugin&gt; [...] &lt;/pluginManagement&gt; &lt;plugins&gt; [...] &lt;plugin&gt; &lt;artifactId&gt;maven-site-plugin&lt;/artifactId&gt; &lt;version&gt;3.0-beta-3-redhat-1&lt;/version&gt; &lt;executions&gt; &lt;execution&gt; &lt;id&gt;default-site&lt;/id&gt; &lt;phase&gt;site&lt;/phase&gt; &lt;goals&gt; &lt;goal&gt;site&lt;/goal&gt; &lt;/goals&gt; &lt;configuration&gt; &lt;outputDirectory&gt;/Users/jdcasey/workspace/redhat/temp/neethi-3.0.2/target/site&lt;/outputDirectory&gt; &lt;reportPlugins&gt; &lt;reportPlugin&gt; &lt;groupId&gt;org.apache.maven.plugins&lt;/groupId&gt; &lt;artifactId&gt;maven-project-info-reports-plugin&lt;/artifactId&gt; &lt;/reportPlugin&gt; &lt;/reportPlugins&gt; &lt;/configuration&gt; &lt;/execution&gt; &lt;execution&gt; &lt;id&gt;default-deploy&lt;/id&gt; &lt;phase&gt;site-deploy&lt;/phase&gt; &lt;goals&gt; &lt;goal&gt;deploy&lt;/goal&gt; &lt;/goals&gt; &lt;configuration&gt; &lt;outputDirectory&gt;/Users/jdcasey/workspace/redhat/temp/neethi-3.0.2/target/site&lt;/outputDirectory&gt; &lt;reportPlugins&gt; &lt;reportPlugin&gt; &lt;groupId&gt;org.apache.maven.plugins&lt;/groupId&gt; &lt;artifactId&gt;maven-project-info-reports-plugin&lt;/artifactId&gt; &lt;/reportPlugin&gt; &lt;/reportPlugins&gt; &lt;/configuration&gt; &lt;/execution&gt; &lt;/executions&gt; &lt;configuration&gt; &lt;outputDirectory&gt;/Users/jdcasey/workspace/redhat/temp/neethi-3.0.2/target/site&lt;/outputDirectory&gt; &lt;reportPlugins&gt; &lt;reportPlugin&gt; &lt;groupId&gt;org.apache.maven.plugins&lt;/groupId&gt; &lt;artifactId&gt;maven-project-info-reports-plugin&lt;/artifactId&gt; &lt;/reportPlugin&gt; &lt;/reportPlugins&gt; &lt;/configuration&gt; &lt;/plugin&gt; [...] &lt;/plugins&gt; {noformat} </pre> <p>In short, the only version for the project-info-reports plugin I could find was 2.2-redhat-1, and I've verified that this doesn't depend on joda-time. Nor does the plugin declaration mention any additional dependency on joda-time. I'm not sure how this project ever came to depend on a different version of the project-info-reports plugin...is it possible the jboss-parent was rebuilt and had this plugin added?</p>                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-10017">https://issues.jboss.org/browse/JBPAPP-10017</a> |

| 9736 | JBPAPP-9889  | Mirek, it was fixed already.. I just didn't resolve it.. sorry about that. <a href="https://github.com/hornetq/hornetq/commit/1641d180c9639d503cf889c6b02303584dd5c170">https://github.com/hornetq/hornetq/commit/1641d180c9639d503cf889c6b02303584dd5c170</a> still not resolved.. as I'm not sure what's the fix-version it should be in... can you resolve it for me at the proper fix please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-9889">https://issues.jboss.org/browse/JBPAPP-9889</a>   |
| 9737 | JBPAPP-9889  | Hi Jimmy, Tom, could you sign last jars from Clebert so I can start testing. Thanks, Mirek                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-9889">https://issues.jboss.org/browse/JBPAPP-9889</a>   |

They have been failing consistently for a while now.<br/>         org.jboss.test.cluster.multicfg.test.HAJndiAutoDiscoveryTestCase.testAutoDiscovery org.jboss.test.cluster.multicfg.test.HAJndiAutoDiscoveryTestCase.testAutoDiscovery</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-9712">https://issues.jboss.org/browse/JBPAPP-9712</a> |
| 9748 | JBPAPP-9616 | <p>Hi [~]bertram Would it be possible to get a bit more information about what was causing this exception and how it was fixed? Both this and the original HometQ JIRA are a little light on for explanatory details. Cheers.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-9616">https://issues.jboss.org/browse/JBPAPP-9616</a> |

| 9752 | JBPAPP-9502 | Unfortunately, I've got this again in EAP-5.2.0-ER2 build when I've tried to run RESTEasy module jboss-integration-testing against running EAP instance. How to reproduce: svn co <a href="https://retesteasy.svn.sourceforge.net/svnroot/retesteasy/tags/RESTEASY_JAXRS_1_2_1_GA_CP02">https://retesteasy.svn.sourceforge.net/svnroot/retesteasy/tags/RESTEASY_JAXRS_1_2_1_GA_CP02</a> retesteasy cd retesteasy/jboss-integration-testing<br><EAP_DIR>/bin/run.sh mvn2 install I've got: {code} [ERROR] BUILD ERROR [INFO] ----- [INFO] Mojo error occurred:<br>Server returned HTTP response code: 500 for URL: http://localhost:8080/jmx-console/HtmlAdaptor?action=invokeOpByName&name=jboss.system:service%3DMainDeployer&methodName=deploy&argType=java.net.URL&arg0=file:/home/pjanouse/devel/zdroje/RESTEasy-1.x/RESTEASY_JAXRS_1_2_1_GA_CP02/6/jboss-integration-testing/basic-integration-test/target/basic-integration-test.war {code} And on EAP part {code} 10:45:07,600 WARN [HtmlAdaptorServlet] Received request for invokeOpByName with invalid or missing CSRFToken token. This might indicate that someone is trying CSRF attack on your server. 10:45:07,601 ERROR [[HtmlAdaptor]] Servlet.service() for servlet HtmlAdaptor threw exception javax.servlet.ServletException: Operation invoke prohibited. at org.jboss.jmx.adaptor.html.HtmlAdaptorServlet.invokeOpByName(HtmlAdaptorServlet.java:319) . . {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBPAPP-9502">https://issues.jboss.org/browse/JBPAPP-9502</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | URL                                                                                                   |

| 9753 | JBPAPP-9497 | <p>Result of Petr's review: ----- * What sections we should remove, instead referring to the Migration Guide; Chapter 2, 3 and 4 - suitable candidates for move to the Migration Guide, if the Migration Guide is going to be published at all. If there will be no Migration Guide in the end, I'd suggest moving this to the end of this guide, so that New installation (currently chapter 5) is right after Introduction - better positioning of the information because a new installation is, imo, what users will most typically do when referring to this guide. -----</p> <p>- * How we might restructure the remaining content. 5.1.2. Configuring Your Java Environment - points to Appendix C, but Appendix D is also relevant (maybe merge the two appendices as suggested further below) 6.1. Web Services Stack, 6.2. PicketLink Federation - these two don't go together with 6.3 Installation Methods; I'd divide this chapter into two, resulting in 6.3 being in its own chapter, and maybe move 6.1 and 6.2 to a further location in the guide not to interrupt the flow of information Chapter 14 - divide into two sections based on the type of installation (graphical (uninstall script) vs. others (rm -r [EAP root])), and indicate the installation types in the section heading Appendix A - Disabling Authentication - is there a reason for having this in the Installation Guide? I'd suggest moving this to the Security Guide or/and the Administration and Configuration Guide instead Appendix C - Installing JDK on RHEL - I'd merge this with Appendix D - Installing Sun JDK on Windows - info about JDK installation on RHEL6 is completely missing - we need to add it ----- * other notes 1 - "Installing JBoss Enterprise Web Platform is simple and easy. You can have it installed and running in no time. This guide will teach you to install and uninstall JBoss." - referring to Enterprise Web Platform - should be Enterprise Application Platform - + a bit too marketing-ish, not suitable for technical docs - I'd suggest a re-write or even leaving this paragraph out 1.1 Other manuals: the link here is pointing to the global docs overview, shouldn't we rather be pointing to the EAP docs overview: <a href="http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/index.html">http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/index.html</a>? if not, I'd at least modify the text a bit to specify what products' docs (all products in this case) can be found at the link Chapter 9. Installation using the Graphical Installer - running the installer as root - causes problems on RHEL-6.3 (errors, unable to run, no shortcuts in apps menu), getting expected results when launching as a regular user - need to verify with SMEs about the need to run as root 12.4.2. Run the Enterprise Application Platform as a Service on Red Hat Enterprise Linux - I'd expect the same information here as in 12.4.1 - need to verify with an SME on how to start the service manually on linux, and if it is possible unless installed from an RPM - second note: missing end comma + I'd turn "Administration and Configuration Guide" into a link leading to the guide Appendix E - Installing Apache Ant Procedure E.2: "Do this on Red Hat Enterprise Linux by adding the following line" - this procedure is about installing "on Other Operating Systems", not on RHEL - shouldn't we change it to "on Unix/Linux systems"</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBPAPP-9497">https://issues.jboss.org/browse/JBPAPP-9497</a> |
| 9754 | JBPAPP-9497 | <p>Petr - My comments are prefixed \$\$\$ ----- What sections we should remove, instead referring to the Migration Guide; Chapter 2, 3 and 4 - suitable candidates for move to the Migration Guide, if the Migration Guide is going to be published at all. If there will be no Migration Guide in the end, I'd suggest moving this to the end of this guide, so that New installation (currently chapter 5) is right after Introduction - better positioning of the information because a new installation is, IMHO, what users will most typically do when referring to this guide. It seems we won't have the MG ready for 5.1.3 but I agree that the first chapter after the introduction should be Installation. ----- How we might restructure the remaining content. 5.1.2. Configuring Your Java Environment points to Appendix C, but Appendix D is also relevant (maybe merge the two appendices as suggested further below) \$\$\$ Agree - please merge these two appendices. 6.1. Web Services Stack, 6.2. PicketLink Federation - these two don't go together with 6.3 Installation Methods; I'd divide this chapter into two, resulting in 6.3 being in its own chapter, and maybe move 6.1 and 6.2 to a further location in the guide not to interrupt the flow of information \$\$\$ Agree - please divide into two and move 6.1 and 6.2. Chapter 14 - divide into two sections based on the type of installation (graphical (uninstall script) vs. others (rm -r [EAP root])), and indicate the installation types in the section heading \$\$\$ Agree. Appendix A - Disabling Authentication is there a reason for having this in the Installation Guide? I'd suggest moving this to the Security Guide or/and the Administration and Configuration Guide instead \$\$\$ Agree. Please move this to the A&amp;C Guide. IMHO the Security Guide should not give steps which actually reduce the platform's security. Appendix C - Installing JDK on RHEL I'd merge this with Appendix D - Installing Sun JDK on Windows info about JDK installation on RHEL6 is completely missing - we need to add it \$\$\$ Agree. ----- other notes 1 - "Installing JBoss Enterprise Web Platform is simple and easy. You can have it installed and running in no time. This guide will teach you to install and uninstall JBoss." referring to Enterprise Web Platform - should be Enterprise Application Platform \$\$\$ Wow - please fix the product name. + a bit too marketing-ish, not suitable for technical docs - I'd suggest a re-write or even leaving this paragraph out \$\$\$ Agree - please remove this paragraph. 1.1 Other manuals: the link here is pointing to the global docs overview, shouldn't we rather be pointing to the EAP docs overview: <a href="http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/index.html">http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/index.html</a>? if not, I'd at least modify the text a bit to specify what products' docs (all products in this case) can be found at the link \$\$\$ Agree - change so that it points to the EAP docs. Chapter 9. Installation using the Graphical Installer running the installer as root - causes problems on RHEL-6.3 (errors, unable to run, no shortcuts in apps menu), getting expected results when launching as a regular user - need to verify with SMEs about the need to run as root \$\$\$ Agree - I have seen a JIRA recently about the issue of running the installer as root. If I can find it I'll provide you the link. 12.4.2. Run the Enterprise Application Platform as a Service on Red Hat Enterprise Linux I'd expect the same information here as in 12.4.1 - need to verify with an SME on how to start the service manually on linux, and if it is possible unless installed from an RPM \$\$\$ Agree. second note: missing end comma + I'd turn "Administration and Configuration Guide" into a link leading to the guide \$\$\$ Please fix comma. The Red Hat style guide states that we DON'T link directly from one book to another. Appendix E - Installing Apache Ant Procedure E.2: "Do this on Red Hat Enterprise Linux by adding the following line" this procedure is about installing "on Other Operating Systems", not on RHEL - shouldn't we change it to "on Unix/Linux systems" \$\$\$ Agree - change to "on Unix/Linux..." I also noticed the word "Repository" and this should be deleted.</p> | <a href="https://issues.jboss.org/browse/JBPAPP-9497">https://issues.jboss.org/browse/JBPAPP-9497</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | URL                                                                                                   |

IMHO the Security Guide should not give steps which actually reduce the platform's security. €€€ Completely removed from the Installation Guide. Added to Administration and Configuration Guide. Appendix C - Installing JDK on RHEL I'd merge this with Appendix D - Installing Sun JDK on Windows info about JDK installation on RHEL6 is completely missing - we need to add it \$\$\$ Agree. €€€ Merged, currently Appendix B. ----- other notes 1 - "Installing JBoss Enterprise Web Platform is simple and easy. You can have it installed and running in no time. This guide will teach you to install and uninstall JBoss." referring to Enterprise Web Platform - should be Enterprise Application Platform \$\$\$ Wow - please fix the product name. €€€ Paragraph completely removed, see below. + a bit too marketing-ish, not suitable for technical docs - I'd suggest a re-write or even leaving this paragraph out \$\$\$ Agree - please remove this paragraph. €€€ Paragraph removed. 1.1 Other manuals: the link here is pointing to the global docs overview, shouldn't we rather be pointing to the EAP docs overview: <a href="http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/index.html">http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/index.html</a>? if not, I'd at least modify the text a bit to specify what products' docs (all products in this case) can be found at the link \$\$\$ Agree - change so that it points to the EAP docs. €€€ Changed, now it is pointing to EAP docs. Chapter 9. Installation using the Graphical Installer running the installer as root - causes problems on RHEL-6.3 (errors, unable to run, no shortcuts in apps menu), getting expected results when launching as a regular user - need to verify with SMEs about the need to run as root \$\$\$ Agree - I have seen a JIRA recently about the issue of running the installer as root. If I can find it I'll provide you the link. €€€ Verified, no need to run the installer as root, information removed. 12.4.2. Run the Enterprise Application Platform as a Service on Red Hat Enterprise Linux I'd expect the same information here as in 12.4.1 - need to verify with an SME on how to start the service manually on linux, and if it is possible unless installed from an RPM \$\$\$ Agree. €€€ Verified, only RPM installation causes EAP to run as a service. second note: missing end comma + I'd turn "Administration and Configuration Guide" into</p> | <a href="https://issues.jboss.org/browse/JPAPPP-9497">https://issues.jboss.org/browse/JPAPPP-9497</a> |
| 9756 | JBPAPP-9495 | Hui, I did the RHEL-6 bits for you. Can you please try replicating it for RHEL-4/5? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPAPPP-9495">https://issues.jboss.org/browse/JPAPPP-9495</a> |
| 9757 | JBPAPP-9493 | Hi ["lakagwu"] and ["jfclerc"]. I'm wondering if I can get some more information about exactly what was causing this issue and how it was resolved. Was a CPING/CPONG implemented in the end?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPAPPP-9493">https://issues.jboss.org/browse/JPAPPP-9493</a> |
| 9758 | JBPAPP-9493 | Thanks for the info ["jfclerc"]. Can you confirm that the draft Release Note above accurately describes the bug and its fix? If not, can you let me know where I misunderstood. Cheers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPAPPP-9493">https://issues.jboss.org/browse/JPAPPP-9493</a> |
| 9759 | JBPAPP-9493 | I am not sure about the status of the this JIRA. Is there a one-off patch ? If yes, do we have a link to share with customers ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPAPPP-9493">https://issues.jboss.org/browse/JPAPPP-9493</a> |
| 9760 | JBPAPP-9493 | A customer urgently needs a one-off patch. Do I created a another JIRA for this ? Environment: * EAP 5.1.1 * mod_cluster 1.0.10.GA_CP02 * mod_cluster Native-Libs + a patch mod_cluster-native-1.0.10-5.1.1.GA_CP02_patch02.ep5.el6.x86_64.rpm ( <a href="https://issues.jboss.org/browse/JPAPPP-8957">https://issues.jboss.org/browse/JPAPPP-8957</a> ) * Apache Webserver 2.2.15 * RHEL 6.2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPAPPP-9493">https://issues.jboss.org/browse/JPAPPP-9493</a> |
| 9761 | JBPAPP-9493 | Can we close this one as the fix will be in EAP 5.2.0 ER5 as indicated in JBPAPP-10409 and this one doesn't have the right workflow?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JPAPPP-9493">https://issues.jboss.org/browse/JPAPPP-9493</a> |

| 9763 | JBPAPP-9454 | ["smarlow"], should we reject this one? Since we had several issues with Javassist 3.17.1 in Hibernate 4 in general, as well as AS7, I'd be worried about attempting to backport it into EAP 5.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPAPPP-9454">https://issues.jboss.org/browse/JPAPPP-9454</a> |
| 9764 | JBPAPP-9454 | IMO, it would be good to defer JBPAPP-9454 until the known issues are resolved and we get more community testing of the Javassist 3.17.x.x changes. HHH-7884/JASSIST-189 is still open.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPAPPP-9454">https://issues.jboss.org/browse/JPAPPP-9454</a> |
| 9765 | JBPAPP-9454 | When the known issues are resolved and enough testing has occurred, I think the next question is can the fix be back ported. The Java 7 verify error fixes would not be included in the back port, which might make the change less risky. Lets discuss further when I'm back.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JPAPPP-9454">https://issues.jboss.org/browse/JPAPPP-9454</a> |
| 9766 | JBPAPP-9454 | We have all ack's for including in EAP 6.2.0 ( <a href="https://bugzilla.redhat.com/show_bug.cgi?id=900690">https://bugzilla.redhat.com/show_bug.cgi?id=900690</a> ). However, who should we ping about this in EAP 5? In my opinion, with the regressions we hit before, it's a bit of a risky move.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JPAPPP-9454">https://issues.jboss.org/browse/JPAPPP-9454</a> |
| 9767 | JBPAPP-9393 | Hi ["jbertram"] Could you please supply a bit more information about what was causing HornetQ to fail in this scenario and what was done to correct the problem? Both this and the original HQ JIRA seem to be light on details. I'll do up a draft release note as soon as I have a bit more to go on. Cheers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPAPPP-9393">https://issues.jboss.org/browse/JPAPPP-9393</a> |
| 9768 | JBPAPP-9348 | @Paul, can you create a tag so we can bring ha-server-api upgrade into EAP 5.1.3?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JPAPPP-9348">https://issues.jboss.org/browse/JPAPPP-9348</a> |
| 9769 | JBPAPP-9337 | claprun@redhat.com made a comment on [bug 831445] <a href="https://bugzilla.redhat.com/show_bug.cgi?id=831445">https://bugzilla.redhat.com/show_bug.cgi?id=831445</a> Kyle, Why is the standard XML XSD resolved from the wsdl director? Also, there's a jax-ws-catalog.xml file in \$JBOS_HOME/server/\$PROFILE/conf which contains mappings from Public/System Ids to local files, couldn't we piggy back on this file instead of adding a new file? I tried adding references to the WSRP files there but it didn't work so maybe this why EAP doesn't support catalog files properly? I would also argue that the directory that contains the WSRP-specific schemas should be named differently (probably wsrp). Finally, if the current solution is the only one that would work with minimal effort at this time (i.e. targeting EAP 5.1.2), could you also do the same changes so that the WSRP 2 schemas are also resolved locally, please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JPAPPP-9337">https://issues.jboss.org/browse/JPAPPP-9337</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | URL                                                                                                   |

| 9770 | JBPAPP-9337 | Kyle Lape <klape@redhat.com> made a comment on [bug 831445]https://bugzilla.redhat.com/show_bug.cgi?id=831445] > Why is the standard XML XSD resolved from the wsdl director? This can be changed easily. Changing the dir name to 'wsrp' should be fine. > What about conf/jax-ws-catalog.xml? I'm not sure why this file is there for you, but it's only used by CXF. JBossWS Native doesn't have any code to parse jax-ws-catalog.xml and add the information to the deployment metadata. Adding this code would be a major change to code, and this is why I am opting for the simpler (code-change-wise) solution. I see that file is in EPP 5.2.1, but I'm not sure why. JBossWS Native doesn't use it (confirmed by Jim Ma). > Can you add WSRP 2 schemas? Sure, I can do this. Would you mind to give me the information needed to add these and test them?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBPAPP-9337">https://issues.jboss.org/browse/JBPAPP-9337</a> |
| 9771 | JBPAPP-9337 | claprun@redhat.com made a comment on [bug 831445]https://bugzilla.redhat.com/show_bug.cgi?id=831445] Kyle, Did you get a chance to add the WSRP 2 files?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-9337">https://issues.jboss.org/browse/JBPAPP-9337</a> |
| 9772 | JBPAPP-9337 | Hi Kyle, I've added the ability to resolve the jbossws-entities.properties under WEB-INF/classes, and committed the fix to jbossws-native-3.1.2 branch. Can you please help try if that works in WSRP2 ? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-9337">https://issues.jboss.org/browse/JBPAPP-9337</a> |

| 9775 | JBPAPP-9316 | A draft Release Note text has been supplied above, however confirmation is requested from the assignee as to whether a Release Note is required for this issue. Does the issue and it's resolution have an end-user impact? Might they need to know this to use EAP 5.1.3?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBPAPP-9316">https://issues.jboss.org/browse/JBPAPP-9316</a> |
| 9776 | JBPAPP-9299 | According to JIRA the JBoss Web SME is Remy Maucherat - https://issues.jboss.org/secure/ViewProfile.jspa?name=rmaucher. How much work is likely to be involved in adding documentation of the Filter element? If it's more than a day or so I'd like to schedule it for a later date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-9299">https://issues.jboss.org/browse/JBPAPP-9299</a> |
| 9777 | JBPAPP-9295 | After performing some research, I found that a link to the supported configurations page for EAP (the same as in the KB article) is already included in: - EAP Release Notes (as of 5.1.0): http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Release_Notes_5.1.2/index.html#id2300403 - EAP Installation Guide: http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Installation_Guide/index.html#Getting_Started-Pre_Requisites - here it is mentioned as "Supported Operating Systems", I suggest to change it to "Supported Configurations" and modify the text accordingly From the other guides, only Administration and Configuration Guide seems as a potential candidate for inclusion of this info. I have, however, not been able to identify a suitable chapter to include it in. The guide also seems focused on EAP itself, not on the environment, so I'm really not sure about including it here. Russel: 1) Can I go ahead and modify the linked section of Installation Guide? 2) What is your opinion on inclusion in Administration and Configuration Guide? Do we want this type of information in it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-9295">https://issues.jboss.org/browse/JBPAPP-9295</a> |

| 9778 | JBPAPP-9294 | I found out that we only have the "2.1 Do You Need Help?" section in the Preface of each book. It directs users to the Red Hat Customer Portal, where they can open a support case. However, not a word about what information should be provided. If anywhere, I would expect the information from the KB article here. I have two ideas: 1) Extend the "2.1 Do You Need Help" section with the required information. This would, however, require changing it in the Publican brands used for JBoss docs, which I'm not sure we really want to do. What do you think Russel? 2) I guess it might be much more effective to have the information included directly on the page where support cases are submitted: <a href="https://access.redhat.com/support/cases/new">https://access.redhat.com/support/cases/new</a> I guess this is out of our scope, but I reckon this might really help.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPBAPP-9294">https://issues.jboss.org/browse/JPBAPP-9294</a> |
| 9779 | JBPAPP-9258 | This JIRA has been marked as affecting Release Notes however nothing in it contains any matter that would do so. The original ticket that was cloned from (HORNETQ-940) highlights an issue, however it contains no reference to how the problem was solved. More information is required before this issue can be included in the EAP 5.1.3 Release Notes: What was causing the issue? How was the issue resolved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPBAPP-9258">https://issues.jboss.org/browse/JPBAPP-9258</a> |
| 9780 | JBPAPP-9163 | I fixed JBPAPP-9507 + renamed oracle11RAC to oracle11gRAC to reflect product name and message about supported DBS which mentions Oracle 11gRAC. (Commit #113210) I'd like to bring up JDBC 3 and JDBC 4 topic. Currently this tool forces JDBC 4 drivers. Would you agree to change name.properties to be less specific and allow jdbc3 drivers?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPBAPP-9163">https://issues.jboss.org/browse/JPBAPP-9163</a> |
| 9781 | JBPAPP-9112 | Wouldn't an enforcer rule be more appropriate here? Or something similar to that? It should be obvious when a dependency or plugin diverges from the parent POM or BOM(s): it will have a version specified. Right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPBAPP-9112">https://issues.jboss.org/browse/JPBAPP-9112</a> |
| 9782 | JBPAPP-9002 | Marking this issue as "Needs more info" as, from a user perspective, does this change actually need a release note? Does the user need to know that these error messages will no longer be logged every five seconds?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPBAPP-9002">https://issues.jboss.org/browse/JPBAPP-9002</a> |
| 9783 | JBPAPP-8986 | <pre>Dmaven.test.failure.ignore=true {code} testMessagingClient(org.jboss.as.test.smoke.messaging.client.messaging.MessagingClientTestCase): Timed out waiting to receive cluster topology. Group:null testMessagingClient(org.jboss.as.test.smoke.messaging.client.jms.JmsClientTestCase): Failed to create session factory That's expected, JMS is not supported in EC2. Failed tests: testSendWithNoTx(org.jboss.as.test.smoke.stilts.SimpleStompletTestCase): Bundle started testPropertyBasedEnvEntry(org.jboss.as.test.smoke.property.EjbDDWithPropertyTestCase): expected:&lt;[foo/bar]&gt; but was:&lt;[{\$(from.jboss.props1)}\${file.separator}\$(from.jboss.props2)}&gt; testPropertyBasedEnvEntryWithOverride(org.jboss.as.test.smoke.property.EjbDDWithPropertyTestCase): expected:&lt;[foo- bar]&gt; but was:&lt;[{\$(from.jboss.props1)}\$(path.separator)\$(from.jboss.props2)}&gt; Props replacing issue, looking into it. testClientDeploymentAsArchive(org.jboss.as.test.smoke.osgi.SimpleRunAsClientTestCase): expected:&lt;[INSTALLED]&gt; but was:&lt;[ACTIVE]&gt; This seems like timing issue. testListAvailableModules(org.jboss.as.test.smoke.jsr88.JSR88DeploymentTestCase) testDeploymentStreamApi(org.jboss.as.test.smoke.mgmt.servermodule.ServerInModuleDeploymentTestCase) testDeploymentFileApi(org.jboss.as.test.smoke.mgmt.servermodule.ServerInModuleDeploymentTestCase): expected:&lt;1&gt; but was:&lt;0&gt; Tests in error: testSendWithTxCommit(org.jboss.as.test.smoke.stilts.SimpleStompletTestCase): Connection timed out. testFindPackageCapability(org.jboss.as.test.smoke.osgi.SimpleModuleRegistrationTestCase): org/osgi/resource/Requirement testResolveModule(org.jboss.as.test.smoke.osgi.SimpleModuleRegistrationTestCase): org/osgi/resource/Requirement testRepositoryService(org.jboss.as.test.smoke.osgi.SimpleRepositoryTestCase): Could not serialize object: TestResult[status=FAILED,time=95ms] Timing issue probably. testStandaloneXml(org.jboss.as.test.smoke.subsystem.parse.ParseAndMarshalModelsTestCase): org/jboss/as/controller/services/path/PathManagerService testStandaloneHAXml(org.jboss.as.test.smoke.subsystem.parse.ParseAndMarshalModelsTestCase): org/jboss/as/controller/services/path/PathManagerService testStandaloneFullXml(org.jboss.as.test.smoke.subsystem.parse.ParseAndMarshalModelsTestCase): org/jboss/as/controller/services/path/PathManagerService testStandaloneFullHAXml(org.jboss.as.test.smoke.subsystem.parse.ParseAndMarshalModelsTestCase): org/jboss/as/controller/services/path/PathManagerService testHostXml(org.jboss.as.test.smoke.subsystem.parse.ParseAndMarshalModelsTestCase): org/jboss/as/controller/services/path/PathManagerService testDomainXml(org.jboss.as.test.smoke.subsystem.parse.ParseAndMarshalModelsTestCase): org/jboss/as/controller/services/path/PathManagerService testRegistryConfiguration(org.jboss.as.test.smoke.deployment.rar.tests.inflow.InflowTestCase): org/jboss/as/connector/util/ConnectorServices testMetadataConfiguration(org.jboss.as.test.smoke.deployment.rar.tests.inflow.InflowTestCase): org/jboss/as/connector/util/ConnectorServices testRegistryConfiguration(org.jboss.as.test.smoke.deployment.rar.tests.pure.PureTestCase): org/jboss/as/connector/util/ConnectorServices testMetadataConfiguration(org.jboss.as.test.smoke.deployment.rar.tests.pure.PureTestCase): org/jboss/as/connector/util/ConnectorServices I think this is fixed in GA. Note: Tested with ER4 which is in AML.</pre> | <a href="https://issues.jboss.org/browse/JPBAPP-8986">https://issues.jboss.org/browse/JPBAPP-8986</a> |
| 9784 | JBPAPP-8986 | Dominik Pospisil <dpospisi@redhat.com> made a comment on [bug 900989] <a href="https://bugzilla.redhat.com/show_bug.cgi?id=900989">https://bugzilla.redhat.com/show_bug.cgi?id=900989</a> That would work. But as I said this need to be copied before other tests are executed so I guess this needs to be hacked into testsuite POM file which is something I would not prefer to do. I guess you are much more familiar with the testsuite POMs. Can you do that Ondro?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-8986">https://issues.jboss.org/browse/JPBAPP-8986</a> |
| 9785 | JBPAPP-8986 | Rostislav Svoboda <rsvoboda@redhat.com> made a comment on [bug 900989] <a href="https://bugzilla.redhat.com/show_bug.cgi?id=900989">https://bugzilla.redhat.com/show_bug.cgi?id=900989</a> Is the workaround sufficient ? If yes and you don't want changes in TS, please close this BZ. Btw, how many tests are affected by this BZ, I can't access <a href="https://jenkins.jbossqa.rhcloud.com">https://jenkins.jbossqa.rhcloud.com</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JPBAPP-8986">https://issues.jboss.org/browse/JPBAPP-8986</a> |
| 9786 | JBPAPP-8891 | Do we need to build with Java 7? The requirement, as I understood it, was to only run on Java 7.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPBAPP-8891">https://issues.jboss.org/browse/JPBAPP-8891</a> |

| 9788 | JBPAPP-8786 | Justin, is it possible to get more information about the fix that resolved this issue? Also, is that release notes draft text even approaching accurate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPBAPP-8786">https://issues.jboss.org/browse/JPBAPP-8786</a> |

| 9789 | JBPAPP-8731 | Justin, could you please confirm whether shutting down the main server or the backup server creates the problem? (refer to the <remark> tag in the Release Notes draft above for context) Also, did I identify the fix correctly from your and Clebert's comments on HORNETQ-911?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/JBPAPP-8731">https://issues.iboss.org/browse/JBPAPP-8731</a> |
| 9790 | JBPAPP-8683 | from the code, i can see the fix provided from HHH-5043 is already in the EAP 5.1.2 release, would you provide a test case?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/JBPAPP-8683">https://issues.iboss.org/browse/JBPAPP-8683</a> |
| 9791 | JBPAPP-8683 | Hello Liu, We used the same test case in the project JIRA. Do you really need another test case or the one attached in the other JIRA is enough?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/JBPAPP-8683">https://issues.iboss.org/browse/JBPAPP-8683</a> |
| 9792 | JBPAPP-8617 | Do you see these OOM errors in upstream Jenkins builds? For this job [1] we're building against as console master branch (with -Peap), I'm just wondering if you are seeing the same errors. [1] <a href="https://hudson.qa.jboss.com/hudson/job/JBoss-EAP-6.0.x-Community/">https://hudson.qa.jboss.com/hudson/job/JBoss-EAP-6.0.x-Community/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/JBPAPP-8617">https://issues.iboss.org/browse/JBPAPP-8617</a> |
| 9793 | JBPAPP-8617 | paul, did you figure it out?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/JBPAPP-8617">https://issues.iboss.org/browse/JBPAPP-8617</a> |
| 9794 | JBPAPP-8377 | Can someone please explain just what it is that has been resolved in this JIRA issue? I presume JBTM = JBoss Transaction Manager? It's not at all clear in this issue nor linked issues just what the Cause, Consequence, Fix and Result are.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JBPAPP-8377">https://issues.iboss.org/browse/JBPAPP-8377</a> |
| 9795 | JBPAPP-8363 | Dimitris, can you create a tag to include 2.2.20 upgrade in EAP 5.1.3? Is there someone else this should be assigned to?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/JBPAPP-8363">https://issues.iboss.org/browse/JBPAPP-8363</a> |
| 9796 | JBPAPP-8168 | Hi Justin, we're having difficulties to verify this jira. I can see that there were some changes to ClientCrashTest.java but it seems to be unstable: <a href="https://jenkins.mw.lab.eng.bos.redhat.com/hudson/view/EAP5/view/HornetQ/job/_hornetq-RHEL5-x86_64-SunJDK1.6-NIO/lastCompletedBuild/testReport/">https://jenkins.mw.lab.eng.bos.redhat.com/hudson/view/EAP5/view/HornetQ/job/_hornetq-RHEL5-x86_64-SunJDK1.6-NIO/lastCompletedBuild/testReport/</a> Could you help with reproducing this issue, please? Thank you, Mirek                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/JBPAPP-8168">https://issues.iboss.org/browse/JBPAPP-8168</a> |
| 9797 | JBPAPP-8125 | Is this still an issue? can we close it? [~bershath27?]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/JBPAPP-8125">https://issues.iboss.org/browse/JBPAPP-8125</a> |
| 9798 | JBPAPP-8119 | Hi Justin, it seems that work on this is done. Is it possible to commit it to upstream? Thanks, Mirek                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/JBPAPP-8119">https://issues.iboss.org/browse/JBPAPP-8119</a> |
| 9799 | JBPAPP-8073 | Since this issue is marked "Resolved", shouldn't the Fix Version/s field have been updated to "EAP 5.1.3"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/JBPAPP-8073">https://issues.iboss.org/browse/JBPAPP-8073</a> |
| 9800 | JBPAPP-8073 | Sorry, I didn't quite understand the initial request. That said, the part of the commit I backported should be fine as the synchronization will now log the stack trace. It looks to me like with both parts of the fix you would get the same stack trace twice? If you think it is safest, I can put the other part of the commit in if you want? I not too sure of the protocol in that case here, should I create a new tag and raise a Jira in JBPAPP to get the new version included?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/JBPAPP-8073">https://issues.iboss.org/browse/JBPAPP-8073</a> |
| 9801 | JBPAPP-8038 | Which JBoss version uses EAP 5.1.3? As it is not fixed AS 7.1.1, I'd like know which version this bug fix for.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/JBPAPP-8038">https://issues.iboss.org/browse/JBPAPP-8038</a> |
| 9802 | JBPAPP-7881 | Customer Answer: I think you don't understand my use case. We have a legacy app and JPA is a persistence option we are trying to bring (the app is using a proprietary ORM framework). We try to be as clean as possible (support the two through configuration with a clear migration path). Assume this app has 3 modules A, B and C. Each of them is using persistence (the proprietary one). B and C depends on A. I don't need to step back because we thought about that issue *a lot*. We're introducing module D which gives "RUNTIME" support for JPA through Hibernate. A, B and C can still perfectly work with the current system and support JPA if it's available. I don't want to bring hibernate as a dependency if we're not using it. Relying on JPA API and Hibernate annotations is fine though. In D, I am already registering the custom types we had to define to support custom data types. It's fine if D heavily relies on hibernate-core. Right now A still has hibernate core dependency because we have a @GenericGenerator on the base class and this refers to the generator class. Being able to register that through configuration in D is the feature I am looking for. Thanks for that. Regarding annotations split, it's the same. Why on earth would I have to bring the whole hibernate engine to configure a JPA entity with some advanced options? Again, an entity in B or C or A is using a custom type. I must use @Type. In order to do that, I have to bring the whole hibernate-core jar and its dependencies. Sorry, that does not make any sense to me.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/JBPAPP-7881">https://issues.iboss.org/browse/JBPAPP-7881</a> |
| 9803 | JBPAPP-7813 | be the inclusion of the facelets-1.1.15.B1.patch, which doesn't work with properly with the JBoss Embedded version present in the seam distribution in EAP5.0.0, which is used to run the integration tests. See also JBPAPP-5456, which discusses a previous attempt to include facelets-1.1.15.B1.patch on EAP5.1 and JBPAPP-7057 JBPAPP-7058 which fixes the inclusion of the facelets-1.1.15.B1.patch in EAP5.1.2 by updating jboss embedded. The question is whether it is really necessary to include that part of the patch (which introduces the VFSClasspath to tothe jsf-facelets.jar) {noformat} java.lang.AssertionError: java.lang.IllegalStateException: File cannot contain children: FileHandler@1496691980[path= context=file:/home/maschmid/testing/one-offs/JBPAPP-7813/jboss-eap-5.0/seam/examples/excel/test-build/META-INF/MANIFEST.MF real=file:/home/maschmid/testing/one-offs/JBPAPP-7813/jboss-eap-5.0/seam/examples/excel/test-build/META-INF/MANIFEST.MF] at org.jboss.seam.mock.AbstractSeamTest\$Request.onException(AbstractSeamTest.java:455) at org.jboss.seam.mock.AbstractSeamTest\$Request\$2.doFilter(AbstractSeamTest.java:504) at org.jboss.seam.servlet.SeamFilter\$FilterChainImpl.doFilter(SeamFilter.java:83) at org.jboss.seam.web.IdentityFilter.doFilter(IdentityFilter.java:40) at org.jboss.seam.servlet.SeamFilter\$FilterChainImpl.doFilter(SeamFilter.java:69) at org.jboss.seam.web.MultipartFilter.doFilter(MultipartFilter.java:90) at org.jboss.seam.servlet.SeamFilter\$FilterChainImpl.doFilter(SeamFilter.java:69) at org.jboss.seam.web.ExceptionFilter.doFilter(ExceptionFilter.java:64) at org.jboss.seam.servlet.SeamFilter\$FilterChainImpl.doFilter(SeamFilter.java:69) at org.jboss.seam.web.RedirectFilter.doFilter(RedirectFilter.java:45) at org.jboss.seam.servlet.SeamFilter\$FilterChainImpl.doFilter(SeamFilter.java:69) at org.ajax4jsf.webapp.BaseXMLFilter.doXmlFilter(BaseXMLFilter.java:178) at org.ajax4jsf.webapp.BaseFilter.handleRequest(BaseFilter.java:290) at org.ajax4jsf.webapp.BaseFilter.processUploadsAndHandleRequest(BaseFilter.java:368) at org.ajax4jsf.webapp.BaseFilter.doFilter(BaseFilter.java:495) at org.jboss.seam.web.Ajax4jsfFilter.doFilter(Ajax4jsfFilter.java:56) at org.jboss.seam.servlet.SeamFilter\$FilterChainImpl.doFilter(SeamFilter.java:69) at org.jboss.seam.web.LoggingFilter.doFilter(LoggingFilter.java:60) at org.jboss.seam.servlet.SeamFilter\$FilterChainImpl.doFilter(SeamFilter.java:69) at org.jboss.seam.web.HotDeployFilter.doFilter(HotDeployFilter.java:53) at org.jboss.seam.servlet.SeamFilter\$FilterChainImpl.doFilter(SeamFilter.java:69) at org.jboss.seam.servlet.SeamFilter.doFilter(SeamFilter.java:158) at org.jboss.seam.mock.AbstractSeamTest\$Request.run(AbstractSeamTest.java:491) at org.jboss.seam.mock.AbstractSeamTest\$FacesRequest.run(AbstractSeamTest.java:862) at org.jboss.seam.example.excel.test.RenderTest.testSimple(RenderTest.java:27) at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:39) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:25) at java.lang.reflect.Method.invoke(Method.java:597) at org.testng.internal.MethodHelper.invokeMethod(MethodHelper.java:580) at org.testng.internal.Invoker.invokeMethod(Invoker.java:478) at org.testng.internal.Invoker.invokeTestMethod(Invoker.java:617) at org.testng.internal.Invoker.invokeTestMethods(Invoker.java:885) at org.testng.internal.TestMethodWorker.invokeTestMethods(TestMethodWorker.java:126) at org.testng.internal.TestMethodWorker.run(TestMethodWorker.java:110) at org.testng.TestRunner.runWorkers(TestRunner.java:712) at org.testng.privateRun(privateRun(TestRunner.java:582) at | <a href="https://issues.iboss.org/browse/JBPAPP-7813">https://issues.iboss.org/browse/JBPAPP-7813</a> |

| 9804 | JBPAPP-7729 | [*stliu] Can you please complete the Release Notes text with the nominated information about this bug. Unfortunately I wasn't able to grok the nature of the problem from the comments on this ticket (or the linked HornetQ ticket). Cheers                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JPBAPP-7729">https://issues.iboss.org/browse/JPBAPP-7729</a> |
| 9805 | JBPAPP-7671 | 121) 17. Complete Working Example Proxy Server example has an opening < that probably shouldn't be there 122) Appendix: workers.properties Reference What exactly does a range of _ to / comprise? "The structure of a Worker Property is worker.worker_name.directive" <-- missing final full stop 123) Appendix: workers.properties Reference – workers.properties Connection Directives "For example, a correct directive flag set is worker.node1.ping_mode=CI" <-- missing full stop, and should probably describe what it is attempting to set for clarity's sake 124) Appendix: workers.properties Reference – workers.properties Load Balancing Directives "...three times the load than other workers..." <-- three times the load OF other workers >>> Fixed. 125) Appendix: Java Properties Reference – B.1. Proxy Configuration Itemizedlist is incorrectly punctuated Proxy Configuration Values <-- not values, parameters or attributes The default values are displayed next to the parameter name here, but nowhere else in the document. >>> Fixed. 126) Appendix: Java Properties Reference – B.1. Proxy Configuration "an usable worker" <-- a usable worker >>> Fixed. 127) Appendix: Java Properties Reference – B.1. Proxy Configuration cping and cpong or CPing and CPong? Consistency required. >>> Fixed.                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/JPBAPP-7671">https://issues.iboss.org/browse/JPBAPP-7671</a> |
| 9806 | JBPAPP-7671 | Jan, I have made the following edits as per your feedback. Revision 20 is the latest available edition of this book. I have rebuilt it and it should soon be available at [1]. 109) 15.2.1 Configuring HttpSession Passivation number of sessions managed by the the session manager <-- remove a the >>> "the" was not removed Checked and confirmed as removed. Note that this text is now contained in section 17.2.1 (previously 15.2.1). 117) 16.1 Configuration SSO's <-- NO. SSOs. Not fixed Checked and confirmed as corrected. Note that this text is now contained in section 17.1 (previously 16.1). 125) Appendix: Java Properties Reference – B.1. Proxy Configuration Proxy Configuration Values <-- not values, parameters or attributes >>> not fixed Can you please clarify exactly what's to be changed here? 127) Appendix: Java Properties Reference – B.1. Proxy Configuration cping and cpong or CPing and CPong? Consistency required. >>> not fixed >>> Could you please do fulltext search on entire document and make this consistent? Thanks. I have done a full text search on the book's content and changed all references to CPing and CPon, with the exception of references in log files. [1] <a href="http://documentation-devel.engineering.redhat.com/docs/en-US/IBoss_Enterprise_Application_Platform/5/html-single/HTTP_Connectors_Load_Balancing_Guide/index.html">http://documentation-devel.engineering.redhat.com/docs/en-US/IBoss_Enterprise_Application_Platform/5/html-single/HTTP_Connectors_Load_Balancing_Guide/index.html</a> | <a href="https://issues.iboss.org/browse/JPBAPP-7671">https://issues.iboss.org/browse/JPBAPP-7671</a> |
| 9807 | JBPAPP-7670 | 90) 13. What Is Netscape Server API Question mark? lower case "is" "to gain a basic understand about" --> "to gain a basic understanding of" web server or HTTP Server? pick a term >>> Fixed. Question mark added, "is" converted to lower case, "understand" changed to "understanding", HTTP changed to "web" 91) 13. What Is Netscape Server API Itemizedlist is not punctuated correctly – closing full stop with no commas or semi-colons >>> Fixed. Semi-colons added. 92) 14. Configuring the NSAPI Connector on Solaris worker node and master node use different cases here than in other places in the document >>> Invalid. I searched all the files which make up this book and the only instances I could find of capitalisation were correct - i.e. in titles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/JPBAPP-7670">https://issues.iboss.org/browse/JPBAPP-7670</a> |
| 9808 | JBPAPP-7670 | 93) Task: Configure Initial Clustering Behaviour What is non-initial clustering behaviour? >.> Also, Step 1 – perhaps say "disable the mappings ..... by commenting them out, as shown...". Basic, but helps clarify the task for the unfamiliar. >>> Fixed 94) Task: Configure a Basic Cluster with NSAPI "The procedure specifies [that] worker01..." >>> Fixed. Also removed the unnecessary text "Use the following procedure".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/JPBAPP-7670">https://issues.iboss.org/browse/JPBAPP-7670</a> |
| 9809 | JBPAPP-7669 | 63) 12.1 Prerequisites and Configuration Assumptions Why is this a massive section, but most prerequisites in the first half of the book are as tiny little formalparas? Consistency please. >>> Fixed. I changed the layout and text so that it was more consistent with the rest of the text. 64) 12.1 Prerequisites and Configuration Assumptions The IMPORTANT note should probably be integrated into the steps rather than at the beginning of the chapter. (Which I think ought to be Step 4 of 12.2.) >>> Fixed. 65) 12.2 Configure Server Instance as a Worker Node – Prerequisites Step 1 – specifies use of the default profile. Is this the only profile supported? If so, remove "you want to configure as a worker node". If it's not the only supported profile, then the directive to copy default profile specifically should be removed. You can use default as an example after the main directive. Same again for subsequent steps – I'd make a main directive that summarizes what they are doing and why, followed by a specific example. >>> Fixed. The default profile is used as it already contains the necessary components. 66) Task: Define ISAPI Filter Not immediately clear what the filter will do or why you are defining it. Screenshots would be nice, if anyone has licensed products around. >>> Fixed. I added a sentence which explains briefly why the filter is created. 67) Task: Define ISAPI Filter Master Server or Master server? Be consistent. >>> Fixed. Changed "Master Server" to "master server".                         | <a href="https://issues.iboss.org/browse/JPBAPP-7669">https://issues.iboss.org/browse/JPBAPP-7669</a> |
| 9810 | JBPAPP-7669 | 68) Task: Define ISAPI Filter – Step 5 Is the location of the executable always C:\connectors\iboss-ep-5.1\native\sbin\isapi_redirect.dll? >>> Fixed. I changed this so that it uses a path convention instead of an explicit path. 69) Task: Define ISAPI Virtual Directory Not immediately clear why this needs to be done. Perhaps a summary of the configuration required at the beginning of Ch. 12 would be useful to orient people. >>> Fixed. I added a brief description of what the filter will do. 70) Task: Define ISAPI Virtual Directory – Step 1 Missing closing full stop. >>> Fixed. 71) Task: Define ISAPI Virtual Directory – Step 2 Again, is this ALWAYS the path? >>> Fixed. I used a path convention here instead of the explicit path. 72) Task: Define ISAPI Virtual Directory – Step 4 Missing full-stop. >>> Fixed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/JPBAPP-7669">https://issues.iboss.org/browse/JPBAPP-7669</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | URL                                                                                                   |
|------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| 9811 | JBPAPP-7669 | <p>73) Task: Define ISAPI Web Service Extension Bleh @ difference in cases between a button and a window – I'm assuming this is present in the software, but still. &gt;&gt;&gt; I couldn't find where "window" and "button" are mentioned in this section so I've skipped this point. 74) Task: Define ISAPI Web Service Extension – Step 2 Missing "exactly as written" used in previous procedures. Also, is this always the path? &gt;&gt;&gt; Fixed. Added "exactly as written" and changed path. 75) 12.4 Microsoft IIS 7 Initial Clustering Configuration – Terms URL at the end of the definition is not a hyperlink. Also, why does only this chapter have a Terms section? &gt;&gt;&gt; Made text into a hyperlink. This chapter has only 1 entry in the Terms section and it's there instead of in an appendix because it's important the reader understands this term when reading the rest of the chapter. 76) Task: Define a JBoss Native ISAPI Restriction – Step 1 "Start -&gt; Run, then type inetmgr." &lt;- I think you also need to hit Enter or click Run afterward. &gt;&gt;&gt; Fixed. 77) IMPORTANT: Task: Define a JBoss Native ISAPI Restriction – Step 2 Ends abruptly. Opens in the what? &gt;&gt;&gt; Fixed. Deleted "in the what" 78) Task: Define a JBoss Native ISAPI Restriction – Step 5 Is this always the path? Also, the spacing around the "jboss" value is too wide (spaces inside and outside the tag?). &gt;&gt;&gt; Fixed. Changed path. The spacing is a result of the styling applied. 79) Task: Define an JBoss Native Virtual Directory s/an/a &gt;&gt;&gt; Fixed. 80) Task: Define an JBoss Native Virtual Directory – Step 2 Missing full stop after (exactly as written). Is this path always the same? &gt;&gt;&gt; Fixed. Added full stop. Changed path. 81) Task: Enable the ISAPI-dll Handler – Step 1 Ends abruptly. &gt;&gt;&gt; Fixed. 82) Task: Enable the ISAPI-dll Handler – Step 4 Missing full stop. &gt;&gt;&gt; Fixed.</p>                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBPAPP-7669">https://issues.jboss.org/browse/JBPAPP-7669</a> |
| 9812 | JBPAPP-7669 | <p>83) Task: Configure ISAPI to serve a Basic Cluster – Step 1 Double spacing around the directory. Append to, not append into. &gt;&gt;&gt; Fixed "append". Spacing is a matter of the JBoss styles and is not significant enough to change. 84) Task: Configure ISAPI to serve a Basic Cluster – Step 2 "... has an abstract directory name containing images" -&gt; "has an abstract directory name, and contains images" &gt;&gt;&gt; Fixed. 85) Task: Configure ISAPI to serve a Basic Cluster – Step 3 &amp; 4 Append to, not into. &gt;&gt;&gt; Fixed. 86) Task: Configure ISAPI to serve a Basic Cluster – Step 6 Is there a default location for the log_file property? We should tell people this. Also, tell them what exactly they are meant to be "verifying" about the logs. &gt;&gt;&gt; Fixed. The default location is specified in the example configuration file. Re: checking logs, readers are to check for events of Warning and/or Error. 87) Task: Configure ISAPI to serve a Load Balancing Cluster Load-Balancing &gt;&gt;&gt; Fixed. 88) Task: Configure ISAPI to serve a Load Balancing Cluster – Step 1 Directory has extra spaces around it &gt;&gt;&gt; Spacing is a matter of the JBoss styles and is not significant enough to change. 89) Task: Configure ISAPI to serve a Load Balancing Cluster – Step 3 &amp; 4 Append to, not into. &gt;&gt;&gt; Fixed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBPAPP-7669">https://issues.jboss.org/browse/JBPAPP-7669</a> |
| 9813 | JBPAPP-7668 | <p>29) 5.1.1. mod_manager.so "uses this location for generated keys" &lt;-- uses this location to store generated keys, perhaps, to avoid for-for confusion &gt;&gt;&gt; Fixed 30) 5.1.1. mod_manager.so Are there any limits on Maxcontext, Maxnode, Maxhost, Maxsessionid parameters? &gt;&gt;&gt; Don't know but I'll try to find out. A quick Internet search didn't reveal any limits. 31) 5.1.1. mod_manager.so images/mod_status.png &lt;-- could stand to go inside a &lt;figure&gt; tag with a title, since it is all white it just kinda makes the spacing in the document look weird. &gt;&gt;&gt; Fixed 32) 5.1.2. mod_proxy_cluster.so Again, keep an eye on case in your module names. "to change load balancing behaviour" -&gt; load-balancing &gt;&gt;&gt; Fixed 33) 5.1.3. mod_advertise.so case in module names "If port is not specified, the default port specified is 23364." -&gt; the default port used, not specified &gt;&gt;&gt; Fixed 34) 5.2 Install Proxy Server Components "on a JBoss Enterprise Web Server." &lt;-- on a server instance, or on JBoss etc. not on a JBoss etc. &gt;&gt;&gt; Fixed 35) 5.2 Install Proxy Server Components "The Native components are Operating System and processor architecture specific." -&gt; The native components are specific to particular operating systems and processor architectures. (Either that or you need to hyphenate in a complicated way.) Also, check caps on Native Components. &gt;&gt;&gt; Fixed 36) Task: Install Proxy Server Components "Edit the JBoss Enterprise Web Server Apache configuration file" -&gt; Edit the [Apache] configuration file in your JBEWS instance: JBOSS_EWS_DIST/httpd/conf/httpd.conf Instruction for commenting out the line could be clearer, too. (Question for the devs: is there anything the mod_proxy_balancer module is compatible with, and if not, why is it here?) &gt;&gt;&gt; Fixed 37) 6. Configure Basic Proxy Server "to configure a JBoss Enterprise Web Server" -&gt; again, a JBEWS instance, or just JBEWS. Also, "JBoss HTTP connector mod_cluster" is poorly marked up and capitalized in the opening here. &gt;&gt;&gt; Fixed</p>                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-7668">https://issues.jboss.org/browse/JBPAPP-7668</a> |
| 9814 | JBPAPP-7668 | <p>45) Task: Install and Configure a JBoss Enterprise Web Server Worker Node Appendix B, Java Properties Reference is only mentioned in the EWS worker note config section, but the opening of this Appendix suggests that it refers to JBEAP, not JBEWS. Which is it? And should this appear in the previous task's prerequisites as well? &gt;&gt;&gt; Fixed. Added to previous tasks's pre-reqs, also appendix opening changed so that EWS and EAP are mentioned. 46) 8. Further Server Configuration feels like a bit of a "misc" section. Can this content go elsewhere? &gt;&gt;&gt; Fixed. In fact this material was somehow duplicated so I have deleted what was chapter 8. 47) Task: Configure Application Platform Worker Node with Static Proxy List comma separated -&gt; comma-separated &gt;&gt;&gt; Fixed 48) 9.2 Clustered Node Operation "The JBoss HTTP Connector can operate in non-clustered or clustered mode." -&gt; in either clustered or non-clustered mode &gt;&gt;&gt; Fixed 49) IMPORTANT: 9.2 Clustered Node Operation Does not include details on configuring clustered/non-clustered operation. &gt;&gt;&gt; Still pending action. 50) 10. Load Balancing Demonstration jboss-eap-5.1/mod_cluster/demo directory. Only in 5.1? I imagine this will need to be edited in future; may as well make it multi-version compliant now. &gt;&gt;&gt; Fixed. 51) 10. Load Balancing Demonstration I think QE likes us to avoid letting applications possess things (load-demo.war's) &gt;&gt;&gt; Fixed. "load-demo.war's" change to "the application's" 52) 10. Load Balancing Demonstration "Load-demo app" &lt;-- decide how you will refer to the app and use it consistently; avoid swapping between this and load-demo.war Similarly, decide whether to refer to it as the Demonstration or the Demo &gt;&gt;&gt; Fixed. "Demo" changed to demonstration. 53) 10.1 Set up the Demonstration Step 2 Note – text and admonition weight (note vs important) should match the admonition in the previous section, if this note is here at all. &gt;&gt;&gt; Fixed. 54) 10.1 Set up the Demonstration Step 3 - just prefix the step name with "Tomcat 6 only" or something, remove the admonition &gt;&gt;&gt; Fixed. Admonition removed and prefix added instead.</p> | <a href="https://issues.jboss.org/browse/JBPAPP-7668">https://issues.jboss.org/browse/JBPAPP-7668</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | URL                                                                                                   |

| 9815 | JBPAPP-7668 | 55) 10.1 Set up the Demonstration Step 3 - "<web-app>element," <-- missing space, and element not marked up as I would expect Also, is it actually "appending" (that is, is </web-app> the last thing in the file before you add this)? >>> Yet to be addressed 56) Task: Configure Client Control Tab Fields "...to learn the values you must supply in the Client Control tab of the Load Balancing Demonstration." <-- 'complete this task to learn' is a vague task goal; what does the task actually accomplish? I would recommend making Step 2 "Supply values for <required fields> and, optionally, <optional fields>." Move your list of references outside the task - either beforehand with "the demo client requires a number of values, defined here" or after with "the fields in step two expect values as defined in the following list". >>> Fixed 57) Task: Interact with the Demonstration Task Prerequisites <-- differs from the straight "Prerequisites" in all other sections, and is misspelled >>> Fixed 58) Task: Interact with the Demonstration I'm not sure "experiment" should be a task/procedure. Additionally, screenshots couldn't go amiss. >>> Fixed. I have reworded the description to avoid "experiment". For the sake of the document's structure I have left this as a task. Regarding screenshots, I disagree and believe they are not necessary. The only steps which might benefit from screenshots are instructions to click on a tab in a GUI interface, a task so simple that I don't believe screenshots would help.                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-7668">https://issues.jboss.org/browse/JBPAPP-7668</a> |
| 9816 | JBPAPP-7668 | Request for help with item #49 was made via email to Samuel Mendenhall (at James Livingston's suggestion): "Samuel, James Livingston recommend I contact you for help regarding documentation of HTTP Connectors. I am working on a JIRA issue in which some identified that the HTTP Connectors Load Balancing Guide states (in section 8.2 - "The JBoss HTTP Connector can operate in either clustered or non-clustered mode." but that is all. There is no further explanation of whether or not any configuration is required to use the HTTP Connector in a clustered configuration. Can you please give me some hints?"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBPAPP-7668">https://issues.jboss.org/browse/JBPAPP-7668</a> |
| 9817 | JBPAPP-7667 | 7) 1. Overview "takes the load of the disabled node" <-- reads like a typo for 'takes the load off'; awkward >>> Reworded 8) 1. Overview "Two distinct functions must be performed" <-- by...? Try "This involves two distinct operations:" >>> Reworded 9) IMPORTANT: 1. Overview "Sessions state replication" -> "Session state replication" "is handled by JBoss at the application level" <-- if it's handled at the application level, it's not handled by JBoss. Perhaps this should say "on an application by application basis"? Or does JBoss delegate responsibility to the application? >>> Reworded 10) 1. Overview "A cost effective way of managing load-balancing is..." <-- hyphenation is wrong. cost-effective and load balancing, please >>> Fixed 11) 1. Overview "Apache httpd" <-- described previously as Apache httpd Server, pick one and stick with it >>> "Apache HTTP Server" chosen as this is how it's described on the project's home page. Fixed. 12) 2. Download and Install "Apache httpd is included..." <-- described previously as Apache httpd Server, pick one and stick with it >>> Fixed 13) 3. Configure load balancing using Apache and mod_jk "Apache" <-- described previously as both Apache httpd Server and Apache httpd, pick one and stick with it, or say "hereafter referred to as Apache" (Last time I will mention this unless it develops a new reference; it's running rife throughout the document.) >>> Fixed 14) STYLE: 3. Configure load balancing using Apache and mod_jk - Prerequisites The weighting of the Task header and the Prerequisites header is the same, which makes it look like the steps actually belong to the Prerequisites. >>> Fixed | <a href="https://issues.jboss.org/browse/JBPAPP-7667">https://issues.jboss.org/browse/JBPAPP-7667</a> |
| 9818 | JBPAPP-7666 | OK, my fault but I must reopen - none of mentioned points are on <a href="https://access.redhat.com/knowledge/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/HTTP_Connectors_Load_Balancing_Guide/index.html">https://access.redhat.com/knowledge/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/HTTP_Connectors_Load_Balancing_Guide/index.html</a> Am I missing something?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBPAPP-7666">https://issues.jboss.org/browse/JBPAPP-7666</a> |
| 9819 | JBPAPP-7658 | I have added the requested information to the EAP 5.1.2 Release Notes. The book has now being re-Brew-ed and the modified version is available on DocStage: <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Release_Notes_5.1.2/index.html#id3501816">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Release_Notes_5.1.2/index.html#id3501816</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBPAPP-7658">https://issues.jboss.org/browse/JBPAPP-7658</a> |
| 9820 | JBPAPP-7610 | Ales, this upgrade has been identified for the EAP 5.1.3 release. Is it possible to create a tag including the linked issue to be incorporated?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBPAPP-7610">https://issues.jboss.org/browse/JBPAPP-7610</a> |
| 9821 | JBPAPP-7610 | When do you need this? I can do it tomorrow. (hopefully it will work w/o problems, as it's been a while since I released JBCL :-))                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-7610">https://issues.jboss.org/browse/JBPAPP-7610</a> |
| 9822 | JBPAPP-7603 | Clebert, Is there any info about this available anywhere? Cheers                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-7603">https://issues.jboss.org/browse/JBPAPP-7603</a> |
| 9823 | JBPAPP-7603 | Thanks Justin The content from the upstream docs has been added to the enterprise Guide and is available for review at: <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/HornetQ_User_Guide/index.html#id4021952">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/HornetQ_User_Guide/index.html#id4021952</a> Could you please confirm that it is technically accurate and suitable for publication. Cheers                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBPAPP-7603">https://issues.jboss.org/browse/JBPAPP-7603</a> |
| 9824 | JBPAPP-7603 | Thanks for the feedback Justin. I had misunderstood your info, but have it straight now. Can you please confirm the changes to be sure they're clear and accurate. <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/HornetQ_User_Guide/ch29s07.html">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/HornetQ_User_Guide/ch29s07.html</a> Thanks again                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-7603">https://issues.jboss.org/browse/JBPAPP-7603</a> |
| 9825 | JBPAPP-7556 | Can I please double-check what's being requested? I have read the latest comments on JIRA JBPAPP-7521 and I believe the problem was that the redelivery-delay parameter was *NOT* supposed to have been changed from 6000 to 0 but instead this was a mistake. If I understand correctly, you're asking that (1) the Release Notes entry for this JIRA issue be deleted, and (2) the change to the HornetQ documentation be undone - i.e. the value "6000" be changed back to "0" in the appendix. I don't understand just why in JBPAPP 7521, Clebert and Rostislav seem to confirm that having "redelivery-delay" set to a value greater than 0 is a problem, yet a later comment from Miroslav states that if this parameter is not greater than 0 that failover doesn't work. Can someone please clarify the situation and what changes are required to documentation (including Release Notes)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-7556">https://issues.jboss.org/browse/JBPAPP-7556</a> |
| 9826 | JBPAPP-7556 | Can someone please confirm just what the status of this issue is? As far as I can tell the change was documented correctly but some comments indicate that the documentation changes need to be undone. If I haven't received a reply by 3 February 2012 I will resolve this JIRA issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBPAPP-7556">https://issues.jboss.org/browse/JBPAPP-7556</a> |
| 9827 | JBPAPP-7494 | Martha, this file is needed in the main zip, I've updated the JBPAPP_5_1 branch (Committed revision 113599.) with the fix, and local build now includes that file under docs/examples/jms/, can you please merge that into your 5.2.0 tag? Also, we should have this file in the rpm and zip now. Please update those as well if needed. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-7494">https://issues.jboss.org/browse/JBPAPP-7494</a> |
| 9828 | JBPAPP-7480 | Misty, Can you move JBPAPP-7480 to bz and then cross reference the bz number in this Jira and close this one? Thanks, Mike                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBPAPP-7480">https://issues.jboss.org/browse/JBPAPP-7480</a> |

| 9829 | JBPAPP-7455 | Hi Clebert, I am reopening this issue because I have not found any documentation updates related to this new feature. There is no description in new documentation for EAP 5.1.2 [1] and there is no description in project documentation [2]. I have tried to add min-large-message-size to connection factory and this works fine. Core-bridge takes this configuration value. But I want to verify new configuration properties (well same property but at different locations) according discussion at help desk ticket. Could you add documentation for this new feature, please? | 9830 | JBPAPP-7455 | Russe, Can you add something like the diff.patch attached here? I have committed this to the open source's doc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-7455">https://issues.jboss.org/browse/JBPAPP-7455</a> |
| 9831 | JBPAPP-7455 | Attention: Clebert I am happy to add to the documentation mention of the "min-large-message-size" configuration option but before I do I need to check I understand correctly. (1) When I wrote the Release Notes entry for this issue I thought the configuration option already existed but that it wasn't recognised. If in fact this is a *new* configuration option, I need to correct the Release Notes text; (2) The patch you attached to this issue also contains documentation of two other configuration options. Is the documentation of those options covered by separate JIRA issues? I'll wait on your feedback before making any changes. Regards, Russell                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBPAPP-7455">https://issues.jboss.org/browse/JBPAPP-7455</a> |
| 9832 | JBPAPP-7455 | Attention: Clebert Sorry, but I'm now even more confused. :) "Russel: there should be two parameters to be added on the cluster-connection: min-large-message-size and max-retries" I understand from what you've written that these parameters already existed but previously *only* existed on ClientSessionFactory, not the cluster connection. I understand that part. What I don't understand is the sudden mention of the "max-retries" parameter. It's not mentioned anywhere in this JIRA issue, nor in the patch you attached to this issue. The patch documents two parameters: min-large-message-size and reconnect-attempts. Can you please explain the difference between what you have said about the two parameters and the documentation patch? On an side note, I notice in the patch that you have a probably unwanted " character between the <literal> tags of the "reconnect-attempts" parameter. I'm sorry that we're having to play JIRA comment tag but I want to be sure I understand before I edit the documentation. Is there a better method by which we could communicate, perhaps IRC? I am rldickens and always in #docs, #brisanbe, #jboss-docs when I am at work. Regards, Russell                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBPAPP-7455">https://issues.jboss.org/browse/JBPAPP-7455</a> |
| 9833 | JBPAPP-7363 | These issues require SME input to allow development of this document to continue: * Is it possible to get an example of how the SAML11SPRedirectFormAuthenticator method could be implemented? Config files, usecase? * What does Artifact Resolution Protocol offer end users, in a practical sense? * What happens if GLO participant numbers are too high? * There's tables in the source content for SAML2IssuerTrustHandler and SAML2LogOutHandler.java configuration parameters that have nothing in them. Is there content available or should they be removed? * Are the authors' under BinaryTokenHandler (and the ensuing sections) the author of the code or the documentation about it? * How much of the content in the PicketLink STS Login Modules page is required in the enterprise docs? ( <a href="http://community.jboss.org/wiki/PicketLinkSTSLoginModules">http://community.jboss.org/wiki/PicketLinkSTSLoginModules</a> ). Part of ECS mandate is to avoid linking to community documents as much as possible. Is it important enough to port the entire page into the doc? * Is this an appropriate trace category for org.jboss.security? The documentation says to add one, but not what it should look like. <!-- <category name="org.jboss.security"> <priority value="TRACE"/> </category> --> These questions are also in the PLINK doc itself (highlighted in yellow) <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/PicketLink_Reference_Guide/index.html">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/PicketLink_Reference_Guide/index.html</a> | <a href="https://issues.jboss.org/browse/JBPAPP-7363">https://issues.jboss.org/browse/JBPAPP-7363</a> |
| 9834 | JBPAPP-7325 | Anil, can this change be added to the requested file without impacting the current customers?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-7325">https://issues.jboss.org/browse/JBPAPP-7325</a> |
| 9835 | JBPAPP-7325 | We can do this at the EAP level. Can we do this as part of the EAP build?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBPAPP-7325">https://issues.jboss.org/browse/JBPAPP-7325</a> |
| 9836 | JBPAPP-7275 | Attention: Permaine We are past the docs freeze date for EAP 5.1.2 but I am willing to make this correction to the documentation if it's minor. The description and your comments on this issue don't seem to match so I'm confused. In the Description you say "But there isn't such package jbossas-web-tp-licences..." yet in the comments "We now have jbossas-{web}tp-licences...". Even more confusing is your latest comment which states that this page should be removed from the yum command you quoted. If the package exists, why is it to be removed from the yum command? I look forward to your reply.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-7275">https://issues.jboss.org/browse/JBPAPP-7275</a> |
| 9837 | JBPAPP-7275 | Unfortunately, I haven't seen correction on Stage Docs server yet - licence package is still mentioned on every RHEL (EAP/EWP). Isn't the problem that IG for EWP will be not updated (PM decision)? Although I've seen this package also in EAP docs. Update: Note from Permaine is correct, licence package is deployed to system in the first phase automatically as dependency for jbossas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-7275">https://issues.jboss.org/browse/JBPAPP-7275</a> |
| 9838 | JBPAPP-7275 | Attention: Pavel (and Rajesh) (1) The latest change noted on 22 November 2011 was to the *EAP* Installation Guide, not the *EWP* Installation Guide as this issue requests, so I'll need to correct my error ASAP. I wonder, though, if this change is also relevant to EAP? In other words, if this change affects EAP *and* EWP, should I leave my changes as they are? (2) Pavel, you're quite correct that in a PM meeting some time ago it was decided that EWP documentation was no longer to be maintained. So my original changes to the EWP Installation Guide should not have been done. I'll leave them as they are, though, since it's not worth undoing them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBPAPP-7275">https://issues.jboss.org/browse/JBPAPP-7275</a> |
| 9839 | JBPAPP-7221 | I'm trying to resolve old open issues filed against the Installer component, and it would seem that the [EAP 6 Installation Guide] ( <a href="https://access.redhat.com/knowledge/docs/en-US/JBoss_Enterprise_Application_Platform/6/html/Installation_Guide/Install_JBoss_Enterprise_Application_Platform_6_Using_the_Installer_Method.html">https://access.redhat.com/knowledge/docs/en-US/JBoss_Enterprise_Application_Platform/6/html/Installation_Guide/Install_JBoss_Enterprise_Application_Platform_6_Using_the_Installer_Method.html</a> ) now contains documentation about this feature. Does this issue need to remain open?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBPAPP-7221">https://issues.jboss.org/browse/JBPAPP-7221</a> |
| 9840 | JBPAPP-7221 | I echo Alex' question from 2012; do we need this to remain open now that documentation exists?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-7221">https://issues.jboss.org/browse/JBPAPP-7221</a> |
| 9841 | JBPAPP-7203 | The customer has indicated that their production date is October 28, 2011. Can we make this date?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBPAPP-7203">https://issues.jboss.org/browse/JBPAPP-7203</a> |

| 9845 | JBPAPP-6996 | Attention: Derek Horton Can you please expand on the draft Release Notes entry? Standard release notes are based on four pieces of information: Cause, Consequence, Fix and Result. I have looked over the issue's description and commits etc but simply don't understand the issue well enough to complete the Release Notes field with confidence. Thankyou, Russell Dickenson Content Author                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPAPPP-6996">https://issues.jboss.org/browse/JPAPPP-6996</a> |
| 9846 | JBPAPP-6990 | The contents of the attached patch have been incorporated into setcion 15.2. Datasource Parameters of the Administration and Configuration Guide.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JPAPPP-6990">https://issues.jboss.org/browse/JPAPPP-6990</a> |
| 9847 | JBPAPP-6958 | Sent email to Clebert and Tomas (with Pavel in cc) Hi Clebert and Tomas Pavel raised https://issues.jboss.org/browse/JPAPPP-6958 to capture the need for GFS2/SAN Fencing information for HornetQ. Can you assist with the correct information so we can incorporate this info before docs freeze on September 18? I would need the basic procedure with configuration options. The end result of the procedure would be the customer correctly configuring Fencing on their system. Because customer server implementations vary, if we can give the customer configuration info for the most common, or top two most common scenarios (like we did for Colocated Symmetrical Clustering), that would be ideal. Jared Morgan                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPAPPP-6958">https://issues.jboss.org/browse/JPAPPP-6958</a> |
| 9848 | JBPAPP-6923 | This jira description is too brief for me to verify it. Please add some explanatory usecase or description so as we know what we should verify. Also, is there a relationship to JBAPP-6954? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPAPPP-6923">https://issues.jboss.org/browse/JPAPPP-6923</a> |
| 9849 | JBPAPP-6893 | Does this need to be mentioned in the Release Notes for EAP 5.1.2, considering it has a helpdesk ticket reference. The policy is that every GSS issue has CCFR provided in the Release Note Text field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPAPPP-6893">https://issues.jboss.org/browse/JPAPPP-6893</a> |
| 9850 | JBPAPP-6892 | We need the change in both the zip and rpm, is that correct? Just want to make sure before I make the changes. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JPAPPP-6892">https://issues.jboss.org/browse/JPAPPP-6892</a> |
| 9851 | JBPAPP-6846 | Hi [~rhatlapa] The instance of 'JBoss Server' in the Release Notes had already been corrected in the source code when I went to fix it. A new version will be staged today. Nice catch. Regarding the Security Guide; I'm having trouble finding the instance of 'JBoss Server' you're referring to. A search of a html-single build of the book returns only the reference in my own Revision History entry, which says that the term had been removed. It's possible the latest version of the doc had not propagated to the stage by the time you checked it (there can be some lengthy delays sometimes). If the instance is still present, could you grab a screenshot and attach it to this JIRA. If not, and you're satisfied that this fix is verified, please close this ticket. Thanks for your diligence on this issue.                                        | <a href="https://issues.jboss.org/browse/JPAPPP-6846">https://issues.jboss.org/browse/JPAPPP-6846</a> |
| 9852 | JBPAPP-6794 | I've spoke to colleagues about testing this. Without changing the actual code to put in a sleep to stop the synchronization and try and make it break it's not possible. The customer is happy to test the patch for us but neither the upstream or apache fix has a test case for this either. Can we just do some base testing. Any questions let me know please.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JPAPPP-6794">https://issues.jboss.org/browse/JPAPPP-6794</a> |
| 9853 | JBPAPP-6752 | jbossas-tp-licenses-5.1.2-1.ep5.el4.jbossas-tp-licenses-5.1.2-1.ep5.el5 jbossas-tp-licenses-5.1.2-1.ep5.el6 jbossas-web-tp-licenses-5.1.2-1.ep5.el4.jbossas-web-tp-licenses-5.1.2-1.ep5.el5.jbossas-web-tp-licenses-5.1.2-1.ep5.el6 Built in Brew. Martha, please let me know when you have a jbossas{-web} built, I can update the build to R: -tp-licenses and remove the packaing of the licenses file in the jbossas{-web} itself.                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JPAPPP-6752">https://issues.jboss.org/browse/JPAPPP-6752</a> |
| 9854 | JBPAPP-6743 | I can confirm the EAP 5 documentation is fixed, but EWS 2 doc still need this fix: http://documentation-devel.engineering.redhat.com/docs/en-US/JBoss_Enterprise_Web_Server/2/html-single/Hibernate_Entity_Manager/index.html#setup-configuration-bootstrapping Could you please fix it? Thank you                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPAPPP-6743">https://issues.jboss.org/browse/JPAPPP-6743</a> |
| 9855 | JBPAPP-6726 | Stefan, this is supposed to be fixed in the JBPAPP_5_1 branch since December but I could not find the SVN commit with that JIRA in the subject in the svn log. Can you confirm that is fixed and find the svn rev number for us please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPAPPP-6726">https://issues.jboss.org/browse/JPAPPP-6726</a> |
| 9856 | JBPAPP-6724 | To my mind, the problem only occurs when requireReauthentication is set to True (I checked it), because of this : After looking at the code of WebAuthentication, I saw that it sets AUTH_TYPE field with private static final java.lang.String AUTH_TYPE = "PROGRAMMATIC_WEB_LOGIN"; In org.apache.catalina.authenticator.SingleSignOnEntry.updateCredentials(Principal, String, String, String), the method checks if authtype is FORM or BASIC to sets the canReauthenticate boolean to true, this one will allow to reauthenticate later. So as far as I understand, org.jboss.web.tomcat.security.login.WebAuthentication.AUTH_TYPE is incompatible with org.apache.catalina.authenticator.SingleSignOn.requireReauthentication. What do you think ?                                                                                                                 | <a href="https://issues.jboss.org/browse/JPAPPP-6724">https://issues.jboss.org/browse/JPAPPP-6724</a> |
| 9857 | JBPAPP-6706 | Seems like something that a customer could do with knowing about. Flagged for release note at a minimum. Could there also be a docs impact with this fix?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JPAPPP-6706">https://issues.jboss.org/browse/JPAPPP-6706</a> |
| 9858 | JBPAPP-6680 | Hi, I'm not sure, how does a typical usecase looks like. Where is this resources.xml file located? Could you provide me with some example? Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JPAPPP-6680">https://issues.jboss.org/browse/JPAPPP-6680</a> |
| 9859 | JBPAPP-6680 | I'm sorry, I'm not familiar with LzPack and I'm apparently missing something. This splash screen should be displayed when the installer is run? And where in the installer jar directory structure is eap-config directory located? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPAPPP-6680">https://issues.jboss.org/browse/JPAPPP-6680</a> |
| 9860 | JBPAPP-6654 | Hi Howard, I've identified some tests which fails regularly due to too strict timeout. Could you please increase them 10x for receive(...) methods and 2x for thread sleep. Thank you, this will help me a lot with futher testing. Mirek org.jboss.test.messaging.jms.ConnectionFactoryTest(Remote-bisocket).testAdministrativelyConfiguredOrderingGroup - line 829 FailoverTest(Clustering).testSimpleFailoverWithRemotingListenerEnabled - line 1429 FailoverTest.simpleFailover(FailoverTest.java:2321) JMSEExpirationHeaderTest.testNoExpirationOnTimeoutReceive(JMSEExpirationHeaderTest.java:90) DistributedQueueTest.clustereedQueue(DistributedQueueTest.java:611) HATest.testFailoverWithUnackedMessagesClientAcknowledge(HATest.java:416) ChangeFailoverNodeTest.killAllToOneAndBackAgain - increase timeout in all Thread.sleep(8000) method to 20000 seconds | <a href="https://issues.jboss.org/browse/JPAPPP-6654">https://issues.jboss.org/browse/JPAPPP-6654</a> |
| 9861 | JBPAPP-6649 | do you have a test replicating this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPAPPP-6649">https://issues.jboss.org/browse/JPAPPP-6649</a> |

| 9862 | JBPAPP-6649 | <p>Hi, we have tried to re-test this issue with EAP 5.1.2 ER2 and we are able to reproduce this issue with this build. {code} java.lang.IndexOutOfBoundsException at org.jboss.netty.buffer.AbstractChannelBuffer.checkReadableBytes(AbstractChannelBuffer.java:657) at org.jboss.netty.buffer.AbstractChannelBuffer.readBytes(AbstractChannelBuffer.java:337) at org.jboss.netty.buffer.AbstractChannelBuffer.readBytes(AbstractChannelBuffer.java:343) at org.hornetq.core.buffer.impl.ChannelBufferWrapper.readSimpleStringInternal(ChannelBufferWrapper.java:84) at org.hornetq.core.buffer.impl.ChannelBufferWrapper.readNullableSimpleString(ChannelBufferWrapper.java:58) at org.hornetq.jms.client.HornetQTextMessage.doBeforeReceive(HornetQTextMessage.java:143) at org.hornetq.jms.client.HornetQMessageConsumer.getMessage(HornetQMessageConsumer.java:236) at org.hornetq.jms.client.HornetQMessageConsumer.receive(HornetQMessageConsumer.java:133) at org.jboss.qa.hornetq.TestConsumerSimple.main(TestConsumerSimple.java:54) {code} How to reproduce it? - setup EAP 5.1.2 ER2 with HornetQ, use PAGE address full policy and durable test queue - use standalone JMS client and push 1000 large text messages into queue. Every message include 1MB of real text - use standalone JMS client and try to receive all messages (no transaction, auto ack). Disconnect network when client consumes messages (just pull out network cable from client machine) and restore this connection. Do it several times during the test and do not put cable back after last disconnection. After some time you will see IndexOutOfBoundsException on the client side (you will have to wait several minutes). We have also noticed another interesting behavior. Client is configured to receive messages with 30s timeout but client will not end with null message. Try to pull out cable and wait more than 30s. You should see it. {code} while ((message = consumer.receive(30000)) != null) {code}</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBPAPP-6649">https://issues.jboss.org/browse/JBPAPP-6649</a> |
| 9863 | JBPAPP-6649 | Hi Clebert, I agree but is it possible to provide better exception here? IndexOutOfBoundsException does not look good. Could you add your comment about described issue with consumer.receive(30000)? It seems that client does not return null message in this case. Is it expected behavior? Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-6649">https://issues.jboss.org/browse/JBPAPP-6649</a> |
| 9864 | JBPAPP-6618 | This is due to the nature of AUTO_ACK mode. The user should be aware that using a small timeout this would happen. I think it is a normal behavior. Can we mark it as 'won't fix'? Howard                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-6618">https://issues.jboss.org/browse/JBPAPP-6618</a> |
| 9865 | JBPAPP-6618 | Hi Mirek, If a user doesn't want to loose a message, he should use a transactional ack to guarantee this. The behavior of AUTO_ACK conforms to JMS spec. Can we postpone this jira to later releases until we have a better idea? Howard                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-6618">https://issues.jboss.org/browse/JBPAPP-6618</a> |
| 9866 | JBPAPP-6589 | Hi Clebert, Roger, severity of log message was decreased to "debug" level. Is it ok? Jira says to decrease it to "either WARNING or INFO". If it's ok then jira can be closed. I'll wait for feedback. Thank you, Mirek                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-6589">https://issues.jboss.org/browse/JBPAPP-6589</a> |
| 9867 | JBPAPP-6577 | how does this relate to HHH-2389?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-6577">https://issues.jboss.org/browse/JBPAPP-6577</a> |
| 9868 | JBPAPP-6577 | <p>Strong Lui, Have you ever tried to use the private modifier for version/id setter? For sure not! If you have tried it, you would notice that, because the proxy extends the entity class, these setters need to be, at least, protected. About the use case not being a good practice. Why this is not a good practice? In 2006 (when this version of hibernate was released) we did not have conversation scope in JavaEE, remember? As far as I know, conversation scope was recently add to Java EE 6 (which was proposed by Seam Framework). Even though, conversation scope, in my opinion, is not a good option for all kinds of system. About the rejection. It is not a "Feature Request". It is a "BUG", for sure. Think about the below cases: 1) Entity is detached: hibernate receives the version and understand it. 2) Entity is attached: hibernate receives the version, DOES NOT understand it and simply SAY NOTHING to the programmer. So, it is a BUG because we have only two options: 1) hibernate implements the same semantics in both attached or detached (that is the better solution and used by other JPA frameworks, in my opinion) OR 2) hibernate throws an Exception when entity is attached saying it does not understand the new value. Ignoring a value just set is, for sure, A BUG. Of course, the second option can not be implemented at this point because it will break many systems around the world. So, if you do not want to fix this. Please, say that. But do not say it is not a bug because IT IS. I know a lot of people that have the same problem, even with newer versions of hibernate. If you don't want to fix this in this old version, please, fix this in the last version of hibernate. So we will not have the same issue forever.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-6577">https://issues.jboss.org/browse/JBPAPP-6577</a> |

If you don't want to fix this in this old version, please, fix this in the last version of hibernate. So we will not have the same issue forever. {quote} i'm saying it is not a bug because of we never said in our document hibernate supports that, and, take a look of JPA spec, "11.1.50 Version Annotation" -- "In general, fields or properties that are specified with the Version annotation should not be updated by the application.[112]"</p> | <a href="https://issues.jboss.org/browse/JBPAPP-6577">https://issues.jboss.org/browse/JBPAPP-6577</a> |

| 9870 | JBPAPP-6514 | Email sent to Thomas seeking further information: "Thomas, I need your help with this JIRA issue as I need to write an appropriate Release Notes entry but don't have enough information. Since this is a few feature, we'll need to provide instructions to customers as to how it's to be used - both in creating the installation template file and using it to complete an automated installation. Does this documentation already exist and if so, where? If not, when might it be created? Of course all I need is a rough draft, from which I can write more complete instructions and add these to the installation guide. Since we're writing draft Release Notes now, please ACK this message by Monday, 5 September 2011 and provide a response by Wednesday, 7 September 2011. <a href="https://issues.jboss.org/browse/JPAP-6514">https://issues.jboss.org/browse/JPAP-6514</a> Thanks, -- Russell Dickenson Engineering Content Services Red Hat, Brisbane Australia"                                                                                      | <a href="https://issues.jboss.org/browse/JPAP-6514">https://issues.jboss.org/browse/JPAP-6514</a> |
| 9871 | JBPAPP-6497 | Tyronne, Are these requests still valid? To my knowledge, no changes have been made to the docs as a result of this JIRA. 1: What is the JCA adapter renaming you referred to? 3: There's many references to 'transactions' in the HornetQ Guide, which section (number and title) did you wish to see separated into a new chapter?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPAP-6497">https://issues.jboss.org/browse/JPAP-6497</a> |
| 9872 | JBPAPP-6497 | Hi, >>1: What is the JCA adapter renaming you referred to? This has already been changed and looks fine. >>3: There's many references to 'transactions' in the HornetQ Guide, which section (number and title) did you wish to see separated into a new chapter? I doubt it's necessary at this stage. With the latest changes in JMS RAR, you don't truly need to perform any manual configurations on the JBossTS to enlist HQ resources for recover. This has been automated since JBoss-EAP-5.1.2 This Jira can now be closed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JPAP-6497">https://issues.jboss.org/browse/JPAP-6497</a> |
| 9873 | JBPAPP-6483 | Hi Jared, item: 7.4 Standalone HornetQ JNDI configuration needed to be removed Invalid configuration and comment is still here: "In the default configuration,...." + including Note. Could you check it, please? <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/HornetQ_User_Guide/index.html#id3379235">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/HornetQ_User_Guide/index.html#id3379235</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPAP-6483">https://issues.jboss.org/browse/JPAP-6483</a> |
| 9874 | JBPAPP-6462 | Jimmy, Can you please provide Cause, Consequence, Fix, Result information for this issue? I have looked over the patch attached above and the linked JIRA issues but still don't understand what the issue was and how it was resolved. I need this information for EAP 5.1.2's release notes so I'd appreciate an ACK by Thursday, 25 August 2011 and a response by Monday, 29 August 2011.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPAP-6462">https://issues.jboss.org/browse/JPAP-6462</a> |
| 9875 | JBPAPP-6462 | Jimmy, Do you know if I will have confirmation on this issue's draft Release Notes field by the end of this week? If not I'll need to exclude it from the Release Notes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JPAP-6462">https://issues.jboss.org/browse/JPAP-6462</a> |
| 9876 | JBPAPP-6462 | Attention: Jimmy Sorry for marking this "Not Required" but I was pressed for time to get Release Notes finalised. Other JIRA issues are have put me back a little and since you've corrected the text I thought it was best to include it. I have added a little information to the Release Notes about what was done to fix the issue. I read the SVN commit diff but am not sure if I have described the fix accurately. Could you please look over it and tell me if the description is wrong? Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JPAP-6462">https://issues.jboss.org/browse/JPAP-6462</a> |
| 9877 | JBPAPP-6444 | Hi Rajesh, I believe that certification for Oracle 11gR2 11.2.0.2 [1] is done. We could close this jira. What do you think? Thank you, Mirek [1] <a href="https://docspace.corp.redhat.com/docs/DOC-30279#Oracle_112020_mm184">https://docspace.corp.redhat.com/docs/DOC-30279#Oracle_112020_mm184</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPAP-6444">https://issues.jboss.org/browse/JPAP-6444</a> |
| 9878 | JBPAPP-6418 | I mean.. if we don't at least log an error, the user will never fix his application.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPAP-6418">https://issues.jboss.org/browse/JPAP-6418</a> |
| 9879 | JBPAPP-6418 | Another reason for not to do it: Say, you mistyped an expression. Say: vendorID=id, when you had a vendorID property on your messages. If I don't throw an exception, you will never know you didn't have an exception. If you want an improvement here.. the maximum we could do is log a warn with PROPERTY=<property> non existent. But that would be major change, with low priority to be developed since I don't see much gain compared to other issues we have to invest our time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JPAP-6418">https://issues.jboss.org/browse/JPAP-6418</a> |
| 9880 | JBPAPP-6368 | Will the .bat appear eventually, or should we close?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPAP-6368">https://issues.jboss.org/browse/JPAP-6368</a> |
| 9881 | JBPAPP-6368 | Hi Clebert, I've attached switch.bat file. I'm not sure how to get it to EAP distribution. Could you do it please? Thank you, Mirek                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPAP-6368">https://issues.jboss.org/browse/JPAP-6368</a> |
| 9882 | JBPAPP-6368 | Is there any other mechanism (like ant) to install HQ on the EAP distribution to replace JBM? If no this is a blocker.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPAP-6368">https://issues.jboss.org/browse/JPAP-6368</a> |
| 9883 | JBPAPP-6333 | Rajesh, could you reassign this issue to some EAP QE? Or, just close it as won't fix if you don't mind EAP 5 logging this annoying INFO.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JPAP-6333">https://issues.jboss.org/browse/JPAP-6333</a> |
| 9884 | JBPAPP-6303 | I am reopening this JIRA because there is a new configuration parameter for ra (see committed changes). This parameter is not documented in project documentation and it is not documented in EAP documentation. Could you update project and EAP documentation, please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JPAP-6303">https://issues.jboss.org/browse/JPAP-6303</a> |
| 9885 | JBPAPP-6302 | Builds updated to use hornetq-eap-exmples, retestasy-examples, jboss-messaging-examples and a svn export of the ws examples: rh-ewp-docs-5.1.1-3.ep5.el4 rh-ewp-docs-5.1.1-3.ep5.el5 rh-ewp-docs-5.1.1-3.ep5.el6 retestasy and ws examples updated in : rh-eap-docs-5.1.1-3.ep5.el4 rh-eap-docs-5.1.1-3.ep5.el5 rh-eap-docs-5.1.1-3.ep5.el6 Marking this as resolved, will be in ER2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JPAP-6302">https://issues.jboss.org/browse/JPAP-6302</a> |
| 9886 | JBPAPP-6260 | Larry O'Leary <loleary@redhat.com> made a comment on [bug 710230] <a href="https://bugzilla.redhat.com/show_bug.cgi?id=710230">https://bugzilla.redhat.com/show_bug.cgi?id=710230</a> (In reply to comment #3) > Fixed in master - commit 5f9ddb7. I do not see 5f9ddb7, did you mean e431028f? Also, please note that this doesn't truly resolve this BZ. It resolves the example use-case provided but the BZ is more general then that. It seems that this confusion can exist with any operation that would have a boolean result. Instead of using the "Success" status on the operation status, maybe we should be looking at: In Progress -> [Failed   Complete] Or even going as far as displaying the operations result as the state. If a boolean, "True False", if a simple object "<object>.toString()", if a complex object, "Object Name" or "See Result" link. The idea is that we want to convey to the user, via the UI, that what they are looking at is not the result of the operation but a link that will take you to the result of the operation. | <a href="https://issues.jboss.org/browse/JPAP-6260">https://issues.jboss.org/browse/JPAP-6260</a> |
| 9887 | JBPAPP-6174 | Fernando, could we get this component upgrade to the ER2?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JPAP-6174">https://issues.jboss.org/browse/JPAP-6174</a> |
| 9888 | JBPAPP-6166 | Prabhat, can you assign this patch to somebody on Richfaces QE for testing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPAP-6166">https://issues.jboss.org/browse/JPAP-6166</a> |
| 9889 | JBPAPP-6157 | Martha, we need to bump the release, to at least 7, of the RHEL 6 build to be newer than the base one, antlr-2.7.7-6.5.el6. Do you mind rebuilding it? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JPAP-6157">https://issues.jboss.org/browse/JPAP-6157</a> |
| 9890 | JBPAPP-6156 | Martha, we need to bump the release of the RHEL 6 build, to at least 9, to be newer than the base one, hsqldb-1.8.0.10-8.el6. Do you mind rebuilding it? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JPAP-6156">https://issues.jboss.org/browse/JPAP-6156</a> |
| 9891 | JBPAPP-6145 | Is this JIRA about a documentation section describing how nad why S3_PING (and possibly the JBM id script) use Amazon S3 to enable clustering?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JPAP-6145">https://issues.jboss.org/browse/JPAP-6145</a> |
| 9892 | JBPAPP-6145 | Is this information really relevant? We ship our cluster-ec2 and mod_cluster-ec2 profiles pre-configured to use S3_PING and tcp (although UDP unicast might still work we have tcp in config). I guess we need to document how S3_PING works and what configuration user needs to apply in the amazon AWS console but I don't see why should we document advanced jgroups configuration details.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JPAP-6145">https://issues.jboss.org/browse/JPAP-6145</a> |

| 9893 | JBPAPP-6138 | Hi Jared, could you add a note to documentation about this issue. Thank you, Mirek                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/JPBAPP-6138">https://issues.iboss.org/browse/JPBAPP-6138</a> |
| 9894 | JBPAPP-6138 | Attention: Jared Are you happy to run with this one? I thought about re-assigning it to myself but I don't think it's worth it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/JPBAPP-6138">https://issues.iboss.org/browse/JPBAPP-6138</a> |
| 9895 | JBPAPP-6138 | Hi Jared, problem is little bit different. I think that documentation update is not correct here. Problem: You can use HA activation property on your MDB. Problem is that MDB with this activation property cannot be used in default EAP configuration profile because this configuration profile does not have cluster=true in HornetQ configuration. Documentation should contain information that this activation property cannot be used with HornetQ without cluster enabled. If you use this MDB with the HornetQ without cluster=true, you will get the following exception: {code} 09:51:07,042 WARN [HornetQActivation] Failure in HornetQ activation org.hornetq.ra.inflow.HornetQActivationSpec(ra=org.hornetq.ra.HornetQResourceAdapter@f1abb1c destination=/queue/DLQ destinationType=javax.jms.Queue ack=Auto-acknowledge durable=false clientID=null user=null maxSession=15) HornetQException[errorCode=3 message=Timed out waiting to receive cluster topology] at org.hornetq.core.client.impl.ServerLocatorImpl.createSessionFactory(ServerLocatorImpl.java:723) at org.hornetq.ra.inflow.HornetQActivation.setupSession(HornetQActivation.java:352) at org.hornetq.ra.inflow.HornetQActivation.setup(HornetQActivation.java:290) at org.hornetq.ra.inflow.HornetQActivation\$SetupActivation.run(HornetQActivation.java:587) at org.jboss.resource.work.WorkWrapper.execute(WorkWrapper.java:205) at org.jboss.util.threadpool.BasicTaskWrapper.run(BasicTaskWrapper.java:260) at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1110) at java.util.concurrent.ThreadPoolExecutor\$Worker.run(ThreadPoolExecutor.java:603) at java.lang.Thread.run(Thread.java:679) {code} Could you contact Clebert for more detailed information, please? Thank you. | <a href="https://issues.iboss.org/browse/JPBAPP-6138">https://issues.iboss.org/browse/JPBAPP-6138</a> |
| 9896 | JBPAPP-6138 | Hi Clebert Can you provide more information regarding Pavel's comment? Cheers Jared                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/JPBAPP-6138">https://issues.iboss.org/browse/JPBAPP-6138</a> |
| 9897 | JBPAPP-6107 | Is this upgrade being done for EAP 5.1.1 or 5.1.2? I would prefer this be updated in EAP 5.1.1 as we want to target JDK 1.6 U24 certification with EAP 5.1.1. We already have all our lab systems updated to this version.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/JPBAPP-6107">https://issues.iboss.org/browse/JPBAPP-6107</a> |
| 9898 | JBPAPP-6098 | Mike, let's leave this around for the next release. However, Would it be ok to not update this JIRA until after EAP 5.1.1 and EWS 1.0.2 releases as it's causing some confusion. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/JPBAPP-6098">https://issues.iboss.org/browse/JPBAPP-6098</a> |
| 9899 | JBPAPP-6098 | Do we need the 1.0.10? Its just EC2 stuff - is it supported in EWS anyway? If yes could we make it to CR2?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/JPBAPP-6098">https://issues.iboss.org/browse/JPBAPP-6098</a> |
| 9900 | JBPAPP-6098 | iboss-eap5-native built with this version of mod_cluster. Mladen, can you please update the EAP 5.1.2 natives to include this version of mod_cluster? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/JPBAPP-6098">https://issues.iboss.org/browse/JPBAPP-6098</a> |
| 9901 | JBPAPP-6098 | Updated. Do we need a -patch packages and what name that would be?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/JPBAPP-6098">https://issues.iboss.org/browse/JPBAPP-6098</a> |
| 9902 | JBPAPP-6098 | Mladen, we don't need a -patch package, this is for EAP 5.1.2, can you please update the name of the zips to reflect it is for 5.1.2? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/JPBAPP-6098">https://issues.iboss.org/browse/JPBAPP-6098</a> |
| 9903 | JBPAPP-6098 | Can somebody please fill in Affects and Fix versions? Now I don't know which release this is for.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/JPBAPP-6098">https://issues.iboss.org/browse/JPBAPP-6098</a> |
| 9904 | JBPAPP-5989 | Juca, can this task be resolved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/JPBAPP-5989">https://issues.iboss.org/browse/JPBAPP-5989</a> |
| 9905 | JBPAPP-5924 | Hi Martha, can you build the patch-02 when Stefan sends us the new properties file please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/JPBAPP-5924">https://issues.iboss.org/browse/JPBAPP-5924</a> |
| 9906 | JBPAPP-5893 | Would it make sense to set the value inside the comment to {{jboss.messaging.ServerPeerID}} by default? i.e. instead of {code} <!-- property name="com.arjuna.ats.jta.xaRecoveryNode" value="CHANGE_ME" --> {code} put {code}<!-- property name="com.arjuna.ats.jta.xaRecoveryNode" value="{{jboss.messaging.ServerPeerID}}" --> {code} If the server is being used in a clustered environment, users would have to set {{jboss.messaging.ServerPeerID}} anyway.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/JPBAPP-5893">https://issues.iboss.org/browse/JPBAPP-5893</a> |
| 9907 | JBPAPP-5889 | Hui, can you try and do this on Monday? The new tag is <a href="http://anonsvn.jboss.org/repos/jbossws/thirdparty/cxf/tags/cxf-2.2.12-patch-01/">http://anonsvn.jboss.org/repos/jbossws/thirdparty/cxf/tags/cxf-2.2.12-patch-01/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/JPBAPP-5889">https://issues.iboss.org/browse/JPBAPP-5889</a> |
| 9908 | JBPAPP-5876 | Hi Ivo I need more information before I can resolve this issue: For A. I will need a reference point with descriptions of these elements so I can add them to the table. For B. There is no mention of connection-factory-ha, connection-factory-ha, or any other permutation. Can you link to where you saw this element mentioned in the Enterprise HornetQ User Guide. Cheers Jared                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/JPBAPP-5876">https://issues.iboss.org/browse/JPBAPP-5876</a> |
| 9909 | JBPAPP-5876 | Hi Andy Can you help with the element descriptions? All I need is a link to a wiki or txt file with adequate info and I can take it from there. I've had no luck with my google searches for the missing element definitions. Cheers J                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/JPBAPP-5876">https://issues.iboss.org/browse/JPBAPP-5876</a> |
| 9910 | JBPAPP-5875 | Hi Ivo I've added descriptions for each of the elements for B. to the HQ User guide. I trawled the HQ user guide for the descriptions, and put them in with links to the most relevant section of the user guide. More info required to resolve this issue completely however: 1. For A, does the .xsd have descriptions in the form of comments for the missing configuration elements/parameters. I can list the elements as specified, but they will be meaningless without explanatory text. 2. Currently, the table seems to be largely unsorted, and quite chaotic. Can you see a reason why we might have the elements in the order they are? My only thought would be that it follows the nesting in each config file, but that seems a bit daft. I would propose a reorder (which would be after the Putnam release due to time to do this).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JPBAPP-5875">https://issues.iboss.org/browse/JPBAPP-5875</a> |

| 9912 | JBPAPP-5875 | The following information has been provided by Clebert Suconic (many thanks). Some of these parameters need further context before Clebert can confirm their purpose etc. "I have embedded my answer, as well as adding some questions as I'm missing some context here: - initial-wait-timeout? In what context is that? cluster-connection there's a initial lookup for the cluster that has a separate timeout. log-delegate-factory-class-name... it's only for standalone usage. it should never be touched on the EAP context live-connector-ref.. I'm not sure about it.... where is that definition? hornetq-configuration / root? log-journal-write-rate, perf-blast-pages, run-sync-speed-test is left undocumented on purpose. we can eventually enable to run some performance tests on the server and verify what's the write rate the system is capable off. I've been thinking of removing it anyway. connector-services? I'm not sure what's that? I'm missing a context here as well bridges.ha.. if it's using ha to connect to a server through the bridge. it should be under the birdge, right? bridge.user/password/static-connectors... that's used to define the connectivity on the birdge cluster-connection.static-connectors.. that's used to define static clusters message-counter-history-day-limit.. that's to define a limit on the MessageCounters.. which you can have a history on it. there's a chapter about it somewhere else."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JPBAPP-5875">https://issues.jboss.org/browse/JPBAPP-5875</a> |
| 9913 | JBPAPP-5844 | Dennis, can you please try and verify this fix? This pull the plug test requires a Windows host and on the very old XP host I have, it takes 23 minutes to start JBoss. The XP host executes so slowly that timeouts are causing members to be suspected, triggering merges and other problems which complicate verification. If you can't verify it, i'm going to have to pass it back to Rajesh so he can find someone with at least one moderately fast Windows platform from which a plug can be pulled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPBAPP-5844">https://issues.jboss.org/browse/JPBAPP-5844</a> |
| 9914 | JBPAPP-5844 | Good thinking, Ondrej. How about trying this out with the ER2 release? You'll need to start up two instances of EAP on two separate interfaces, let them cluster together, and then shut down / restart one of the interfaces as above. You could try to reproduce the error first using an older version of EAP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPBAPP-5844">https://issues.jboss.org/browse/JPBAPP-5844</a> |
| 9915 | JBPAPP-5813 | So should I take out the workaround then? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPBAPP-5813">https://issues.jboss.org/browse/JPBAPP-5813</a> |

| 9918 | JBPAPP-5775 | Resolved with the fix for JBTM-821 in 4.6.1 CP09 via JBPAPP-5186.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPBAPP-5775">https://issues.jboss.org/browse/JPBAPP-5775</a> |
| 9919 | JBPAPP-5775 | Jonathan, take a look at the Release Notes Text please. I think there should be TransactionManager or JBossTS instead of Hibernate. Could you help Misty with proper release notes wording, pls?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPBAPP-5775">https://issues.jboss.org/browse/JPBAPP-5775</a> |
| 9920 | JBPAPP-5757 | Verified code in jboss-jpa-deployers.jar packed in EAP-5.1.2.ER1 distribution. MANIFEST.MF shows version 1.0.0 and PersistenceUnitInfoImpl still contains public ClassLoader getNewTempClassLoader() { return null; } Was the component upgraded in 5.1.2 as commented earlier?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JPBAPP-5757">https://issues.jboss.org/browse/JPBAPP-5757</a> |
| 9921 | JBPAPP-5711 | Anne-Louise, should we change the name of the ZIPs from what was shipped in EAP 5.1.0.GA or should we try and keep them consistent?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-5711">https://issues.jboss.org/browse/JPBAPP-5711</a> |
| 9922 | JBPAPP-5702 | We should probably move listConsumersAsJSON to JMS. Can you open a feature request on that case? (low priority) We would deprecate the method and create a new one for compatibility purposes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPBAPP-5702">https://issues.jboss.org/browse/JPBAPP-5702</a> |

| 9928 | JBPAPP-5593 | This should be fixed already. Can you check it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JPBAPP-5593">https://issues.jboss.org/browse/JPBAPP-5593</a> |
| 9929 | JBPAPP-5593 | Hi Clebert, examples included in official distribution do not work. I have created new JIRA for it, see JBPAPP-6659. Could you check if examples were prepared correctly for distribution by productization, please? E.g. file readme [1] in root folder of examples should not be included in distribution. [1] <a href="http://source.jboss.org/browse/HornetQ/branches/Branch_2_2_EAP/examples-eap/readme?r=10177&amp;r=10177&amp;r=10177">http://source.jboss.org/browse/HornetQ/branches/Branch_2_2_EAP/examples-eap/readme?r=10177&amp;r=10177&amp;r=10177</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPBAPP-5593">https://issues.jboss.org/browse/JPBAPP-5593</a> |
| 9930 | JBPAPP-5591 | Here's the thread I started when I noticed it went missing... Jimmy ----- Original Message ----- Subject: IPv6 in JBoss Documentation Date: Mon, 11 Oct 2010 16:32:12 -0500 From: Jimmy Wilson <jawilson@redhat.com> To: Laura Bailey <lbailey@redhat.com> I have a customer asking about how to configure JBoss for use with IPv6. I have the information contained in the release notes [1], but I happen to know that bin/run.sh needs to be modified as well. This was previously documented in the Installation Guide. I know this because if I search for "ipv6 jboss" using the documentation search [2] it returns this: "7.3. IPv6 Configuration ... JBoss Enterprise Application Platform starts with an IPv4 stack by default. To use IPv6 instead, you will need to make some changes to the run scripts. ... www.redhat.com/.../4.3.0.cp08/html/Installation_Guide/IPv6.html - Cached" Clicking either the "www.redhat.com..." or "Cached" links doesn't work due to the docs changes, and looking at 4.3 CP08's Installation Guide, section 7.3 isn't about IPv6 anymore. Can you help me find the referenced page from the search? I've web searched the full text of *every* piece of 4.3 documentation that I thought relevant, and I've found nothing. I know what the documentation was about, so that's not the problem, but I'd like to reference it to the customer if it still exists. Should I open a JIRA to re-add it? [1] <a href="http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/4.3/html-single/Release_Notes_CP08/index.html#id2834368">http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/4.3/html-single/Release_Notes_CP08/index.html#id2834368</a> | <a href="https://issues.jboss.org/browse/JPBAPP-5591">https://issues.jboss.org/browse/JPBAPP-5591</a> |
| 9931 | JBPAPP-5591 | ""Networking JBPAPP-5591 IPv6 is not supported in version 5 of the Enterprise Platform. "" Shouldn't this be "Enterprise Application Platform"? Or does it refer generally to E*P? Reopening.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPBAPP-5591">https://issues.jboss.org/browse/JPBAPP-5591</a> |
| 9932 | JBPAPP-5571 | Removed Resolution text from release notes text field. Anil, would the new attribute need to be documented for all customers in the Sec Guide. Would customers other than Mastercard require this attribute to use it for other applications?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPBAPP-5571">https://issues.jboss.org/browse/JPBAPP-5571</a> |

| 9935 | JBPAPP-5536 | Hi David I can't access the Issue Tracker issue that relates to this problem. I tried to search for the included number, but I can't find any trace of it. Is the Description the same as the issue tracker description. I will assign this to Anne-Louise Tangring so she can forward to the correct area for developmental action. Anne-Louise, JBPAPP-3798 is also currently unassigned, so should we put that in someone's queue as well. Cheers Jared                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JPBAPP-5536">https://issues.jboss.org/browse/JPBAPP-5536</a> |

| 9938 | JBPAPP-5516 | Jonathan, can you comment on the behaviour of Arjuna as noticed by Carlo?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPBAPP-5516">https://issues.jboss.org/browse/JPBAPP-5516</a> |
| 9939 | JBPAPP-5496 | Hi Marek In order to proceed with release notes, can I please have more information about how this affected the customer? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JPBAPP-5496">https://issues.jboss.org/browse/JPBAPP-5496</a> |
| 9940 | JBPAPP-5463 | There are still two dependencies containing -brew in their versions in root.pom.xml. Is this allowable? <dependency> <groupid>quartz</groupid> <artifactId>quartz</artifactId> <version>1.5.2-brew</version> </dependency> <dependency> <groupid>dom4j</groupid> <artifactId>dom4j</artifactId> <version>1.6.1-brew</version> <exclusions> <exclusion> <groupid>xml-apis</groupid> <artifactId>xml-apis</artifactId> </exclusion> </exclusions> </dependency>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPBAPP-5463">https://issues.jboss.org/browse/JPBAPP-5463</a> |
| 9941 | JBPAPP-5461 | Tyronne, Could you please advise as to where information on the missing configuration options you mentioned when you reopened this JIRA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JPBAPP-5461">https://issues.jboss.org/browse/JPBAPP-5461</a> |
| 9942 | JBPAPP-5456 | Should this be an "Upgrade JSF to 1.1.15.B1-patch01" JIRA following the upgrade rules (docspace, parent JIRA)? For me it sounds like it should. Thanks for the patch BTW                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JPBAPP-5456">https://issues.jboss.org/browse/JPBAPP-5456</a> |
| 9943 | JBPAPP-5456 | Why was the license on Classpath.java changed from CDDL to ASL 2.0? Was this intentional (since the newer jsf2 code made a switch to ASL 2.0)? There is also an ASL 2.0 license on the new file VFSClasspath.java, and I assume that is a compatible license, although it does not share the same license as the rest of the files. I noticed that our RPM said 'license: ASL 2.0', but this doesn't seem to be the case. All of the code appears to be under the CDDL License. According to < <a href="https://fedoraproject.org/wiki/Packaging/LicensingGuidelines">https://fedoraproject.org/wiki/Packaging/LicensingGuidelines</a> >, the package must list both licenses, plus include a comment with the license breakdown, e.g.: # The entire source code is CDDL except Classpath.java and VFSClasspath.java which are ASL 2.0 License: CDDL and ASL 2.0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-5456">https://issues.jboss.org/browse/JPBAPP-5456</a> |

| 9945 | JBPAPP-5456 | How exactly does the full url look like? For some reason the right protocol Handler didn't kick in. e.g. I suspect there is a "jar" prefix present                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-5456">https://issues.jboss.org/browse/JBPAPP-5456</a> |
| 9946 | JBPAPP-5456 | Hi guys, Thanks for all of your hard work. The customer is requesting an update on this patch. Do we have any?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-5456">https://issues.jboss.org/browse/JBPAPP-5456</a> |
| 9947 | JBPAPP-5456 | How exactly does the url look like? Its protocol is "jar", but then it's missing "!/", as per the spec.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-5456">https://issues.jboss.org/browse/JBPAPP-5456</a> |
| 9948 | JBPAPP-5456 | >> I don't have a way how to go into VFS sources to inspect what JAR URL could fail in it Debugging? Trace logging? >> there is bundled jboss-vfs 2.0.0.Beta6 in it. Is there a way to replace this ancient version?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBPAPP-5456">https://issues.jboss.org/browse/JBPAPP-5456</a> |
| 9949 | JBPAPP-5456 | Ales, trace logging is already attached in test-log.zip, see my previous comment. JBoss Embedded dependencies can't be easily changed. I can only add newer version to classpath, what version of jboss-vfs works with your jsf-facelets fix?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBPAPP-5456">https://issues.jboss.org/browse/JBPAPP-5456</a> |
| 9950 | JBPAPP-5456 | >> Ales, trace logging is already attached in test-log.zip, see my previous comment. And it has no info about which URL is failing? If not, what about remote debugging? >> what version of jboss-vfs works with your jsf-facelets fix? Take the latest 2.2.x. There are some API changes in between, specially with some util classes, so I hope it should work, otherwise drop to 2.1.x or even 2.0.0.GA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBPAPP-5456">https://issues.jboss.org/browse/JBPAPP-5456</a> |
| 9951 | JBPAPP-5456 | Do we have an update on this? The customer is still waiting for the patch. thanks. Gary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-5456">https://issues.jboss.org/browse/JBPAPP-5456</a> |

| 9956 | JBPAPP-5334 | Carlo, apparently there is also an upgrade needed for jboss-ejb3-proxy-impl Is this intentional or a mistake in the 1.0.2 bom? If it is intentional, what is the tag for it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBPAPP-5334">https://issues.jboss.org/browse/JBPAPP-5334</a> |
| 9957 | JBPAPP-5330 | Kabir, can you create the 2.1.6 CP02 tag?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-5330">https://issues.jboss.org/browse/JBPAPP-5330</a> |
| 9958 | JBPAPP-5293 | The issue here is that the listener is being added after the notification thread has started running. Thus, the map of listeners is modified while the notification thread is iterating over it. SSLocketImpl does not protect the map from concurrent access and so we hit this exception. Can the listener not be added before the thread is started?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-5293">https://issues.jboss.org/browse/JBPAPP-5293</a> |
| 9959 | JBPAPP-5293 | I have verified this, doesn't happen in EAP 5.1.1. Is the documentation work done? If it is, please confirm that and/or close.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-5293">https://issues.jboss.org/browse/JBPAPP-5293</a> |
| 9960 | JBPAPP-5293 | I am experiencing this exception in jboss 6.1.0-FINAL. In the documentation ( <a href="http://docs.jboss.org/jbossweb/2.1.x/printer/changelog.html">http://docs.jboss.org/jbossweb/2.1.x/printer/changelog.html</a> ) I see that bug JBPAPP-5293 was fixed in Jboss Web 2.1.11.GA, but I can't find this version anywhere. On <a href="http://www.jboss.org/jbossweb/downloads/jboss-web">http://www.jboss.org/jbossweb/downloads/jboss-web</a> the latest available is 2.1.9. Where can I download jbossweb 2.1.11 or higher?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-5293">https://issues.jboss.org/browse/JBPAPP-5293</a> |
| 9961 | JBPAPP-5259 | Hi Weinan, can you take care of this one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-5259">https://issues.jboss.org/browse/JBPAPP-5259</a> |
| 9962 | JBPAPP-5228 | Justin I'm looking at \$JBOSS_DIST/docs/examples/binding-manager/sample-bindings.xml, which is the only file called sample-bindings.xml in the distributuon. What do you mean by a missing tag? The file sizes for sample-bindings.xml in CP08 and CP09 are the same.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBPAPP-5228">https://issues.jboss.org/browse/JBPAPP-5228</a> |
| 9963 | JBPAPP-5227 | Hi Mike Just doing the triage on this for 5.1.1. Do you remember what guide you saw this in? I found "apr-utils" in the Installation Guide for EAP 5 so I will assume this bug relates to this. <a href="http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Web_Platform/5/html/Installation_Guide/Install_Native_Components.html">http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Web_Platform/5/html/Installation_Guide/Install_Native_Components.html</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-5227">https://issues.jboss.org/browse/JBPAPP-5227</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | URL                                                                                                   |

| 9964 | JBPAPP-5214 | David, how is this now? How did we set it up for MEAD loading?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPBAPP-5214">https://issues.jboss.org/browse/JPBAPP-5214</a> |
| 9965 | JBPAPP-5193 | Isn't this fix to be included in the next EAP 5 release? I don't see any JIRA linked to this one nor any "Upgrade JBss TS to <new version>" filed. Without that this customer may experience a regression when upgrading.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JPBAPP-5193">https://issues.jboss.org/browse/JPBAPP-5193</a> |
| 9966 | JBPAPP-5161 | Can you check if this has been resolved for EAP 4.3.CP09? The linked issues is marked resolved with a fix version of 4.3.CP09. If that's the case we can resolve this JIRA too.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JPBAPP-5161">https://issues.jboss.org/browse/JPBAPP-5161</a> |

| 9968 | JBPAPP-5150 | Im still struggling with functional tests for this. I don't know how to correctly reproduce the scenario that throws in unpatched and doesn't throw in patched version i'm attaching sample project where i'm testing this contains two methods: store and store2, both can be called via their respective urls <a href="http://localhost:8080/hibernate-sample-war/eventmanager/store">http://localhost:8080/hibernate-sample-war/eventmanager/store</a> <a href="http://localhost:8080/hibernate-sample-war/eventmanager/store2">http://localhost:8080/hibernate-sample-war/eventmanager/store2</a> store calls session.close() in transaction which means before autoclose store2 calls session.close() out of transaction, after autoclose in scenario with autoclose=false it shouldnt throw "Session was already closed" when I'm using JTA the autoclose is true regardless of the HibernateMBean setting. It's because of org.hibernate.context.JTASessionContext.buildOrObtainSession() that disregards this setting. do you have any code that I can use to functionally test this ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPBAPP-5150">https://issues.jboss.org/browse/JPBAPP-5150</a> |
| 9969 | JBPAPP-5150 | yeah, that was what I forgot to mention. When I deploy to the unpatched appserver, I comment out the AutoCloseSessionEnabled attribute in the jboss-service.xml. but I have still a problem when I do it as you propose (no AutoCloseSessionEnabled attribute) unpatched: 1. start an unpatched EAP 4.3.0.GA_CP08 2. deploy hibernate-sample.ear 3. visit <a href="http://localhost:8080/hibernate-sample-war/eventmanager/store2">http://localhost:8080/hibernate-sample-war/eventmanager/store2</a> 4. I get "Session was already closed" exception patched: 1. start an patched EAP 4.3.0.GA_CP08 2. deploy hibernate-sample.ear 3. visit <a href="http://localhost:8080/hibernate-sample-war/eventmanager/store2">http://localhost:8080/hibernate-sample-war/eventmanager/store2</a> 4. I also get "Session was already closed" exception with <a href="http://localhost:8080/hibernate-sample-war/eventmanager/store">http://localhost:8080/hibernate-sample-war/eventmanager/store</a> there's no problem in either patched and unpatched, which is expected because of the logic of the store() method - it closes the session within the transaction and then when after the transaction when the framework tries to autoclose it doesn't complain because it closes only when not already closed. EAP 4.3.0.GA_CP08 seems to be packaged with Hibernate 3.2.4.sp1.cp10 ( <a href="http://anonsvn.jboss.org/repos/hibernate/core/tags/JPBAPP_4_3_0_GA_CP08/build/build-thirdparty.xml">http://anonsvn.jboss.org/repos/hibernate/core/tags/JPBAPP_4_3_0_GA_CP08/build/build-thirdparty.xml</a> ) I can see that by removing the line settings.setProperty(Environment.AUTO_CLOSE_SESSION, "true"); in org.jboss.hibernate.jmx.Hibernate (line 483): the patch effectively changes the default value to false because in org.hibernate.cfg.SettingsFactory (line 146) boolean autoCloseSession = PropertiesHelper.getBoolean(Environment.AUTO_CLOSE_SESSION, properties); the getBoolean method returns false if the property isn't set. but as I mentioned org.hibernate.context.JTASessionContext.buildOrObtainSession() successfully ignores this see lines 117 and 128 which happens also in this example project and that's why I get "Session was already closed" also in patched version. or does it behave differently in your environment ? | <a href="https://issues.jboss.org/browse/JPBAPP-5150">https://issues.jboss.org/browse/JPBAPP-5150</a> |
| 9970 | JBPAPP-5148 | Well, the fix is supposedly in common-core 2.2.17.GA which is what the EAP 5.1.1 has been updated to. This is from the MEAD build information: Parameters SCM URL: svn+ <a href="http://anonsvn.jboss.org/repos/common/common-core/tags?2.2.17.GA#3877">http://anonsvn.jboss.org/repos/common/common-core/tags?2.2.17.GA#3877</a> So you guys are saying that the 2.2.17.GA version of commons-core did not solve the problem? That was the only reason to switch to that version. The branch has been upgraded to it and the JAR has been available from the repo from quite some time (Feb 11), didn't anybody try it before now? Or maybe the problem requires further investigation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-5148">https://issues.jboss.org/browse/JPBAPP-5148</a> |
| 9971 | JBPAPP-5148 | Hi Jean-Frederic, would the upgrade of commons-core to 2.1.17 alone fix this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPBAPP-5148">https://issues.jboss.org/browse/JPBAPP-5148</a> |
| 9972 | JBPAPP-5148 | Per my last comment, can you make sure the build references the correct commons tag so this is in the EAP 5.1.2 release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-5148">https://issues.jboss.org/browse/JPBAPP-5148</a> |
| 9973 | JBPAPP-5143 | Hi Ivo, can you give us a patch or a new tag? We are in a hurry to rebuild for ER2. It is not a blocker, so if you cannot do this now it is OK, but if it is a quick thing we will rebuild the plugin with the changes. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JPBAPP-5143">https://issues.jboss.org/browse/JPBAPP-5143</a> |
| 9974 | JBPAPP-5139 | What should be there, this is not clear for me, if there are still symlink to real location? "But all of these %_{javadir}/sun-jaxws links should point to the real external locations."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-5139">https://issues.jboss.org/browse/JPBAPP-5139</a> |
| 9975 | JBPAPP-5139 | Marek, is this fixed? Did you find the right packages?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPBAPP-5139">https://issues.jboss.org/browse/JPBAPP-5139</a> |
| 9976 | JBPAPP-5139 | David didn't respond to my question. What are correct packages to use. jboss-seam2 packages uses glassfish-jaxws for jsr173-api.jar, jsr181-api.jar and jboss-ejb-api for jsr250-api.jar. So again my question, Are they correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPBAPP-5139">https://issues.jboss.org/browse/JPBAPP-5139</a> |
| 9977 | JBPAPP-5139 | I think it is resolved, because tatletale report was reviewed and nobody filed the jira against differences between these 3 jars in JBoss AS and Seam distribution. Do you agree?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPBAPP-5139">https://issues.jboss.org/browse/JPBAPP-5139</a> |
| 9978 | JBPAPP-5094 | Hi Elspeth Could you please make the changes specified in this ticket this morning. The task estimation is 1hr, so because you've never done it before I'll expect the task to be finished in two. Cheers J                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JPBAPP-5094">https://issues.jboss.org/browse/JPBAPP-5094</a> |
| 9979 | JBPAPP-5094 | Hey Elspeth, is this issue resolved now? From a quick glance it looks like you've done all the base roll-ins. If so, just Resolve the issue and assign it to Rajesh R.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPBAPP-5094">https://issues.jboss.org/browse/JPBAPP-5094</a> |
| 9980 | JBPAPP-5094 | Hi Elspeth Can I roll in the other changes you've still got outstanding while you're doing the diff task? Or will that clash with the rebase you're currently working on?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JPBAPP-5094">https://issues.jboss.org/browse/JPBAPP-5094</a> |
| 9981 | JBPAPP-5092 | >Section 38.5.2 >in the Note change "HornetQ 2.0.0" to "HornetQ 2.1.x" Changed to HornetQ 2.2 <-- is this correct, or does the issue only relate to HQ 2.1.x                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPBAPP-5092">https://issues.jboss.org/browse/JPBAPP-5092</a> |

| #    | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | URL                                                                                                 |

| 9982 | JBPAPP-5092 | Hi Jared, I have found new issues. I am reopening this JIRA. Thank you. Section 3.1 Starting The Server This section should be changed. We have automated installer which replaces JBoss Messaging with HornetQ. User do not have to create profiles. And "default-with-hornetq" is not correct profile. Section 5. Core Architecture "This allows HornetQ to be instantiated in any dependency injection framework such as JBoss Microcontainer, or Spring." We do not support standalone HornetQ and we should remove such as sentences. Section 6. Using the Server "For the remainder of this chapter ..." We do not support standalone server, remove this sentence it (e.g. JNDI service is provided by EAP)? Section 6.1 Configuration files "... in the HornetQ directory structure ..." HornetQ is installed into EAP dir. structure, this sentence is valid only for standalone server. 7.4 JNDI Configuration We should remove text between "In the default ..." to the end of the section. JNDI is provided by EAP. Section 10.1 and 10.2 We should remove sentence "If the client runs inside a Java 5 virtual machine, use instead hornetq-core-client-java5.jar." We do not ship special jar for JDK5. Chapter 32. Application Server Integration and Java EE This chapter uses hornetq-ra.rar on several spots. HornetQ is installed as full replacement of JBoss Messaging and it uses jms-ra.rar. But explicit declaration of @ResourceAdapter("jms-ra.rar") is not required. Section 32.5.1 "can be found inside the hornetq-ra.rar archive" EAP 5 does not include this archive file. Section 32.5.2 Configuring JBoss 5 MDB should be renamed, this name does not seem correct to me.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPAPP-5092">https://issues.jboss.org/browse/JPAPP-5092</a> |
| 9983 | JBPAPP-5092 | {quote}Hi Jared, I have found new issues. I am reopening this JIRA. Thank you.{quote} Thanks for these observations. Comments inline: {quote}Section 3.1 Starting The Server This section should be changed. We have automated installer which replaces JBoss Messaging with HornetQ. User do not have to create profiles. And "default-with-hornetq" is not correct profile.{quote} This section was removed completely based on feedback in the Bugzilla issues. {quote}Section 5. Core Architecture "This allows HornetQ to be instantiated in any dependency injection framework such as JBoss Microcontainer, or Spring." We do not support standalone HornetQ and we should remove such as sentences.{quote} Thanks for this pick-up. It seems that as soon as Tyronne and I think we have removed all info about "standalone" another one sticks it's head up to bite us. {quote}Section 6. Using the Server "For the remainder of this chapter ..." We do not support standalone server, remove this sentence it (e.g. JNDI service is provided by EAP)?{quote} And another one... Removed. {quote}Section 6.1 Configuration files "... in the HornetQ directory structure ..." HornetQ is installed into EAP dir. structure, this sentence is valid only for standalone server.{quote} I have changed "in the hornetq directory structure" to "in the JBoss Enterprise Application Platform directory structure". {quote}7.4 JNDI Configuration We should remove text between "In the default ..." to the end of the section. JNDI is provided by EAP.{quote} Yep, the same observation was made by Tyronne and Andrew Ross in the Bugzilla HQ issues. It was removed as part of that feedback. {quote}Section 10.1 and 10.2 We should remove sentence "If the client runs inside a Java 5 virtual machine, use instead hornetq-core-client-java5.jar." We do not ship special jar for JDK5.{quote} This section was removed as part of BZ feedback. {quote}Chapter 32. Application Server Integration and Java EE This chapter uses hornetq-ra.rar on several spots. HornetQ is installed as full replacement of JBoss Messaging and it uses jms-ra.rar. But explicit declaration of @ResourceAdapter("jms-ra.rar") is not required.{quote} I think the same observation was made in a number of BZ issues. All the references I can see in this chapter now refer to the jms rar {quote}Section 32.5.1 "can be found inside the hornetq-ra.rar archive" EAP 5 does not include this archive file.{quote} I can't locate this section in the new guide. Since this JIRA was created, I have removed some sections completely based on Bugzilla feedback. I suspect this happened in this case. {quote}Section 32.5.2 Configuring JBoss 5 MDB should be renamed, this name does not seem correct to me.{quote} This name has either been changed or the section is no longer present in the document. | <a href="https://issues.jboss.org/browse/JPAPP-5092">https://issues.jboss.org/browse/JPAPP-5092</a> |
| 9984 | JBPAPP-5092 | Hi Jared, some of these issues are still not fixed so I am reopening this JIRA. Could you look at it please? Thank you, Nikoleta<br>===== Section 2.5 Migrating JMS-administered Objects and Bridges correct Table 2.5 - "text overflow"<br>===== Section 32.1.1 the paragraph: " The TransactionManagement annotation tells the container to manage the transaction. The TransactionAttribute annotation tells the container that a JTA transaction is required for this MDB. Note that the only other valid value for this is TransactionAttributeType.NOT_SUPPORTED which tells the container that this MDB does not support JTA transactions and one should not be created. " – it seems that it has a bad aligning but now it is Section 30.1.1. ===== Section 32.4.2 "</connection-definition>" in the configuration example is a bad aligning - move to right now Section 30.4.2. ===== Section 33.3 "Different implementations can be provided with the org.hornetq.jms.bridge.DestinationFactory interface. " - seems to have a bad aligning now Section 31.3.<br>===== Section 39.1.1.1.1 in the both configuration examples is a bad aligning "</factory-class>" now in sections 5.3 and 43.1.5 =====                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPAPP-5092">https://issues.jboss.org/browse/JPAPP-5092</a> |
| 9985 | JBPAPP-5090 | Peter, the content I have in there already is about Remote Method Invocation of EJB3s - is this information for something different? It talks about configuring servlets. How does this relate to the existing content, about configuring the server for EJB3 RMI over SSL?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JPAPP-5090">https://issues.jboss.org/browse/JPAPP-5090</a> |
| 9986 | JBPAPP-5090 | For the webconnector there is no keypair value specified. What happens when you use a keystore that has more than one key pair in it? Can we use keyAlias on the connector like this: <a href="https://jira.jboss.org/browse/JPAPP-538">https://jira.jboss.org/browse/JPAPP-538</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPAPP-5090">https://issues.jboss.org/browse/JPAPP-5090</a> |
| 9987 | JBPAPP-5089 | Peter, this section has moved to here: <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Security_Guide/index.html#id3130166">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Security_Guide/index.html#id3130166</a> The book name has been changed to "Security Guide", and the chapter has moved to chapter 19. To this specific JIRA issue: What about if we change it from "java -cp" to "java -jar " - does that remove the need to specify the classpath? I'd like to keep the example as simple as possible.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JPAPP-5089">https://issues.jboss.org/browse/JPAPP-5089</a> |
| 9988 | JBPAPP-5088 | Wow, that's important - thanks for catching that! On my running EAP 5.1 instance production profile <a href="https://server_name:8443/invoker/JNDIFactory">https://server_name:8443/invoker/JNDIFactory</a> and <a href="http://server_name:8443/invoker/JNDIFactory">http://server_name:8443/invoker/JNDIFactory</a> both do not connect to a running service. Are you saying that the CN of the certificate has to be the same as the SERVER_NAME that a client uses to connect with the server? If so, where is this configured on the client?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPAPP-5088">https://issues.jboss.org/browse/JPAPP-5088</a> |
| 9989 | JBPAPP-5086 | Marek, On this issue there seems to be some confusion as to which JARs have definitely been removed and which have not. Can you please confirm this? I am currently writing and compiling Release Notes for EAP 5.1.2 and I need this information to be able to provide the customer with accurate information. Please ACK this message by Thursday, 1 September 2011 and provide a response by Monday, 5 September 2011. Thankyou, Russell Dickenson (Content Author)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JPAPP-5086">https://issues.jboss.org/browse/JPAPP-5086</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | URL                                                                                                 |

| 9990  | JBPAPP-5061 | Email sent to Marcus Moyses asking for help: "Marcus, I need help to make progress on a JIRA issue and hope that you might be able to guide me. The specific issue is <a href="https://issues.jboss.org/browse/JPAPP-5061">https://issues.jboss.org/browse/JPAPP-5061</a> . I have looked at the commit diffs of the changes made in linked JIRA issues (3583 for example) but still don't understand what needs to be done with respect to documentation. In the EAP Security Guide ( <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Security_Guide/index.html#sect-JaasSecurityDomain_MBean">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Security_Guide/index.html#sect-JaasSecurityDomain_MBean</a> ) is mention of KeyStorePass and TrustStoreType but I'm not sure if something needs to be added to their description. Are you able to help? If not, can you suggest someone else I might contact? -- Russell Dickenson Engineering Content Services Red Hat Brisbane, Australia"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JPAPP-5061">https://issues.jboss.org/browse/JPAPP-5061</a> |
| 9991  | JBPAPP-5061 | Reply from Marcus: "Hi Russel, I think I added some descriptions of those options in <a href="http://community.jboss.org/wiki/JaasSecurityDomain">http://community.jboss.org/wiki/JaasSecurityDomain</a> Let me know if there is anything else you need. The specific issue is <a href="https://issues.jboss.org/browse/JPAPP-5061">https://issues.jboss.org/browse/JPAPP-5061</a> . > > I have looked at the commit diffs of the changes made in linked JIRA issues (3583 for example) but still don't understand what needs to be done with respect to documentation. In the EAP Security Guide ( <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Security_Guide/index.html#sect-JaasSecurityDomain_MBean">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html-single/Security_Guide/index.html#sect-JaasSecurityDomain_MBean</a> ) is mention of KeyStorePass and TrustStoreType but I'm not sure if something needs to be added to their description. > > Are you able to help? If not, can you suggest someone else I might contact? > > -- Marcus Moyses Senior JBoss Core Developer JBoss by Red Hat"                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPAPP-5061">https://issues.jboss.org/browse/JPAPP-5061</a> |
| 9992  | JBPAPP-5020 | Alessio, is there any harm in leaving the saaj-api.jar around when CXF is being used?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JPAPP-5020">https://issues.jboss.org/browse/JPAPP-5020</a> |
| 9993  | JBPAPP-5016 | Remy, what will those defaults be? I currently have a section in the performance tuning guide. It doesn't really cover everything, just the things I have tested that seem to show improvement, but I do talk about what the defaults are, so depending on what you are changing here, I will have to update the guide. If you are changing things that don't overlap than no problem. So, if you could shoot me a note that would be good. Also, I would like to test those defaults in my environment to see if they help or hurt my own tests. Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPAPP-5016">https://issues.jboss.org/browse/JPAPP-5016</a> |
| 9994  | JBPAPP-5009 | Are you expecting to back port this to EAP 4.3 and 5.1? If so, please clone the JIRA and have one in TBD_EAP4 and one in TBD_EAP5. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPAPP-5009">https://issues.jboss.org/browse/JPAPP-5009</a> |
| 9995  | JBPAPP-5006 | Martin, can you verify the instructions?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPAPP-5006">https://issues.jboss.org/browse/JPAPP-5006</a> |
| 9996  | JBPAPP-4975 | So Step 3 currently reads: <title>Deploy or package the deployment descriptor</title> <para>Move the deployment descriptor file to the <filename>deploy</filename> directory of the required server profile in your installation. </para> <para>Alternatively, package the deployment descriptor in the <filename>META-INF</filename> directory of the EJB Jar, or <filename>WEB-INF/classes</filename> of your web application (WAR).</para> If I understand correctly, you want me to change the Step to the following: 3. Deploy or package the deployment descriptor Deploy or package the deployment descriptor in a WAR file, and ensure the WAR is deployed to the WEB-INF folder. Could you please confirm I understand correctly?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPAPP-4975">https://issues.jboss.org/browse/JPAPP-4975</a> |
| 9997  | JBPAPP-4970 | Marek, I still see it there: jboss-eap-5.1.1.ER1/seam/lib/hsqldb.jar jboss-eap-5.1.1.ER1/seam/bootstrap/deploy/messaging/hsqldb-persistence-service.xml jboss-eap-5.1.1.ER1/seam/bootstrap/deploy/hsqldb-ds.xml Is this a problem?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPAPP-4970">https://issues.jboss.org/browse/JPAPP-4970</a> |
| 9998  | JBPAPP-4970 | Attention: Marek Novotny Should this issue's Release Notes text remain as it is or not? Since the issue has been reopened I expect perhaps it should *not* be included in the EAP 5.1.2 Release Notes document.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPAPP-4970">https://issues.jboss.org/browse/JPAPP-4970</a> |
| 9999  | JBPAPP-4946 | /mnt/hudson_workspace/workspace/JBoss-EAP-5.1.x-Testsuite-sun16/JBossEAP_5_1_x/cluster/src/main/org/jboss/ha/framework/server/ClusterPartition.java:1742: cannot find symbol symbol : variable cvs location: class org.jgroups.Version return Version.description + "(" + Version.cvs + ")"; This rings a bell. Didn't we fix for Support a JAR that did not have the Version class?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPAPP-4946">https://issues.jboss.org/browse/JPAPP-4946</a> |
| 10000 | JBPAPP-4945 | Hi Fernando, jettison-1.2-4.ep5.el5 and jettison-1.2-4.ep4.el5 are built with pom and repolib. I saw you've already built jettison 1.2 in rhel6, thank you for help! BTW, which hudson task I should check in future to ensure my build won't break anything? Could you please provide an url? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JPAPP-4945">https://issues.jboss.org/browse/JPAPP-4945</a> |
| 10001 | JBPAPP-4933 | Rebecca, Can you add these comments to the release notes? - Incorrect Numbering: 2.1. Consolidated Trust Store should actually be 2.1.1 and the others following it. Features introduced in 5.1 and features from previous releases are the two major sections. - Section 2.1.1 - This is the first time we are shipping the NSAPI connector, we should mention it. NSAPI is a connector used to connect Sun Java Web server to JBoss Enterprise Application Platform. - Important: Section 2.3 component versions for 5.1 are not in sync with what we are shipping. Some of the components had updates in some of the internal builds CR2 and CR3. The latest can be found here. <a href="https://docspace.corp.redhat.com/docs/DOC-37998">https://docspace.corp.redhat.com/docs/DOC-37998</a> Most of the current versions correspond to CR1 versions documented initially. - Section 2.4.4 Source zip should be <a href="ftp://ftp.redhat.com/pub/redhat/jbeap/5.1.0/en/source/jboss-eap-src-5.1.0.zip">ftp://ftp.redhat.com/pub/redhat/jbeap/5.1.0/en/source/jboss-eap-src-5.1.0.zip</a> - Section 2, features introduced should talk about JDBC4 support which is offered from this release onwards. Hibernate offers support for JDBC4 from this release onwards. <a href="https://jira.jboss.org/browse/JPAPP-4180">https://jira.jboss.org/browse/JPAPP-4180</a> Support for the connector component had existed from earlier. We should check with Jesper Pederson (dev) or Rich Sharples on what we want to call out here. - Section 2 should talk more about performance improvements made in this release. | <a href="https://issues.jboss.org/browse/JPAPP-4933">https://issues.jboss.org/browse/JPAPP-4933</a> |
| 10002 | JBPAPP-4933 | The above issues have been corrected, with the exception of: - JDBC4 support - I've emailed Rich and Jesper for assistance with this. - Performance improvements - I've emailed Andy Miller for assistance, but if you can suggest an alternate source that would be great. - Consolidated Trust Store - this section has been commented out as not applying to EAP 5.1. Is this correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPAPP-4933">https://issues.jboss.org/browse/JPAPP-4933</a> |
| 10003 | JBPAPP-4933 | Hi Laura. I have found that known issue JBPAPP-2571 has been fixed. Related JBM issue (JBMESSAGING-1767) has been fixed in 1.4.7.GA which is included in EAP 5.1. Please could you remove note about this issue from section "Known Issues with this release"? Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPAPP-4933">https://issues.jboss.org/browse/JPAPP-4933</a> |
| 10004 | JBPAPP-4933 | Moved JBPAPP-2571 from known to fixed in EAP 5.1 Release Notes. Renamed jboss-as to jboss-as-web three times in EWP 5.1 Release Notes. Removed JBPAPP-5014 and JBPAPP-2571 from EWP 5.1 Release Notes. Corrected JBoss Messaging and JBoss Web Services CXF versions in section 2.6 of RN as required. However, I was under the impression that a CXF tech preview of 3.1.2.SP6 had gone out alongside/post-release 5.0.1. I've removed the previous version in case I was incorrect, but can someone confirm/deny?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JPAPP-4933">https://issues.jboss.org/browse/JPAPP-4933</a> |

| 10005 | JBPAPP-4933 | Thanks! Looks good to me now. I am closing but how are we going to resolve the structure problem? Do you want a new Jira for it? "The issue with there being only one chapter is due to this book actually being an article - the form is different. I will fix this for the next release, but for now I am leaving it as it is. Every section should now have a heading, though."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPAPPP-4933">https://issues.jboss.org/browse/JPAPPP-4933</a> |
| 10006 | JBPAPP-4920 | Could I please get a description of this issue for the release notes? I need to know what was causing the issue, what effect that had, and how it was fixed. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPAPPP-4920">https://issues.jboss.org/browse/JPAPPP-4920</a> |
| 10007 | JBPAPP-4902 | Hi Hui, can you update this one for us and upload to maven2-brew? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JPAPPP-4902">https://issues.jboss.org/browse/JPAPPP-4902</a> |
| 10008 | JBPAPP-4866 | Hi, is there any test for this issue? Thanks Mirek                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPAPPP-4866">https://issues.jboss.org/browse/JPAPPP-4866</a> |

| 10010 | JBPAPP-4860 | Is EWS able to support the JBoss Cache-based mechanism described in this "HTTP Connectors Load Balancing Guide"? I don't think it can, since AIUI it's just Tomcat with none of the integration hooks EAP provides for running JBoss Cache. (I'm phrasing this as a question since I don't follow this product closely, but I'd be shocked if EWS supports JBC-based session replication.) I don't think Clustered SSO would work on EWS either, for the same reason. The approach being documented is an alternative to the JBoss Cache based session replication discussed in <a href="http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/HTTP_Connectors_Load_Balancing_Guide/clustering-http-state.html">http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/HTTP_Connectors_Load_Balancing_Guide/clustering-http-state.html</a> . It most logically fits along with those. I don't know how best to resolve the issue that much of the content there doesn't apply to EWS.                                                    | <a href="https://issues.jboss.org/browse/JPAPPP-4860">https://issues.jboss.org/browse/JPAPPP-4860</a> |
| 10011 | JBPAPP-4860 | I agree that this is the right spot: <a href="http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/HTTP_Connectors_Load_Balancing_Guide/clustering-http-state.html">http://docs.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/HTTP_Connectors_Load_Balancing_Guide/clustering-http-state.html</a> An option would be to add an admonition to the chapter that this is not support on EWS. Would that be ok?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JPAPPP-4860">https://issues.jboss.org/browse/JPAPPP-4860</a> |
| 10012 | JBPAPP-4860 | Hi Paul, Could you, please, let me know, who is the person that can review the fix? Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JPAPPP-4860">https://issues.jboss.org/browse/JPAPPP-4860</a> |
| 10013 | JBPAPP-4835 | In which case, can it be moved into fix version TBD EAP 5, and cloned for fix version TBD EAP 6 so that we can triage it for release notes properly? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPAPPP-4835">https://issues.jboss.org/browse/JPAPPP-4835</a> |
| 10014 | JBPAPP-4828 | Hi Fernando Can you help with the info for the upgrade procedure? If not, please flick the JIRA to someone who can assist. Cheers Jared                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPAPPP-4828">https://issues.jboss.org/browse/JPAPPP-4828</a> |
| 10015 | JBPAPP-4828 | Fernando responded by email: > Is there currently an upgrade path from 5.1 to 5.1.x for RPMs? I know you could probably just run up2date (RHEL 4) or yum update (RHEL 5) in most cases, but are there any customer gotchas that need to be specified in the upgrade instructions of the Installation Guide? No, just the usual recommendation, backup your stuff, look for .rpm save or .rpm new files if you have modified config files and merge you changes manually, Ahh, this is also standard for servers, but always good to emphasize, "stop the server before upgrading", restart afterwards. Another caveat: it is not supported to change the option made on the initial install (EAP 5.1.0) of CXF for the WS stack, the upgrade will keep that option and attempts to change it will have unpredictable results. The same is valid for the new option, HornetQ for JMS, it requires a new installation, not an upgrade. Note, we haven't yet finished the set of RPMs, never tried ourselves an upgrade from 5.1.1, we may find things we don't know about. Cheers, Fernando | <a href="https://issues.jboss.org/browse/JPAPPP-4828">https://issues.jboss.org/browse/JPAPPP-4828</a> |
| 10016 | JBPAPP-4828 | On QA we can't verify update instructions from 5.1.x to 5.1.2 (= added section to IG), because some blockers occurred (e.g. [JBPAPP-7272 https://issues.jboss.org/browse/JPAPPP-7272]) in ER1 build. So this verification should be postponed to ER2 build. Anne-Louise, could you please agree with my proposal and modify Fix version of this JIRA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPAPPP-4828">https://issues.jboss.org/browse/JPAPPP-4828</a> |
| 10017 | JBPAPP-4828 | Why is this reopened and assigned to me? If this is about instructions for how to install RPMs, it needs to be assigned to Fernando or someone on his team.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPAPPP-4828">https://issues.jboss.org/browse/JPAPPP-4828</a> |
| 10018 | JBPAPP-4796 | Hey Laura, re: "release notes flag" - not sure what you mean. Are you talking to me or the person who will edit the build-thirdparty.xml file? -Ron                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JPAPPP-4796">https://issues.jboss.org/browse/JPAPPP-4796</a> |
| 10019 | JBPAPP-4795 | Hi Marcus, is the new tag available?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPAPPP-4795">https://issues.jboss.org/browse/JPAPPP-4795</a> |
| 10020 | JBPAPP-4795 | I don't think so. Can you ping the project lead (Alexey Loubiansky) please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPAPPP-4795">https://issues.jboss.org/browse/JPAPPP-4795</a> |
| 10021 | JBPAPP-4795 | No Fernando, this "is" the Jira for tracking that update but you changed its summary to '1.0.5' on 20/Aug/'10. The original description says it clearly [1]. Please try to keep Jira clean, makes it impossible for QE to verify the Jiras. [1] "Because of JBPAPP-4786 we need a new release of JBoss Metada (1.0.6?) and modify EAP 5.1 component matrix to use this version."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPAPPP-4795">https://issues.jboss.org/browse/JPAPPP-4795</a> |
| 10022 | JBPAPP-4795 | Alexey, can you provide a tag for metadata 1.0.6 including a fix for the related issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPAPPP-4795">https://issues.jboss.org/browse/JPAPPP-4795</a> |
| 10023 | JBPAPP-4778 | Carlo, what's a FIRO queue? Did you mean FILO?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JPAPPP-4778">https://issues.jboss.org/browse/JPAPPP-4778</a> |
| 10024 | JBPAPP-4778 | Carlo, what documentation is this patch for? Which book?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JPAPPP-4778">https://issues.jboss.org/browse/JPAPPP-4778</a> |
| 10025 | JBPAPP-4778 | One other thought. Why are we using jboss-beans.xml to try to accomplish this, instead of changing the code directly? That also seems like the wrong thing to do to me.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPAPPP-4778">https://issues.jboss.org/browse/JPAPPP-4778</a> |

| 10026 | JBPAPP-4778 | Yeah, I'm aware of the pool size cannot be infinite, in terms of still getting the best possible throughput. I'm not so sure that the pool size as set is right though. The pool size for the HTTP connector is only 200 based on the document above. The best throughput is actually achieved using 600, not 200. So, I would argue its too small. The difference being that throttling the workload with a smaller thread pool just allows it to continue to run at higher number of clients, so our disagreement on this is really over what's most important. Supporting a larger number of clients, or getting the best possible throughput? When customers do their own benchmarks, they typically look for the best possible throughput. You answered Carlo's mistaken claim about the pool size not actually changing through the tests, just the number of sessions, or virtual users. The real question here is what do we do with this? I have been recommending that we close this issue, and not push this. The fact that it also breaks the metrics on the thread pool (admin-console and JON), make it a non-started as well. Can we agree not to apply this? Certainly it cannot be applied as is anyway since it breaks the admin console and JON. | <a href="https://issues.jboss.org/browse/JBPAPP-4778">https://issues.jboss.org/browse/JBPAPP-4778</a> |
| 10027 | JBPAPP-4776 | Verified the note about supported browsers is present in <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Administration_Console_Quick_Start_Guide/Administration_Console_Quick_Start_Guide-Accessing_the_Console.html">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Administration_Console_Quick_Start_Guide/Administration_Console_Quick_Start_Guide-Accessing_the_Console.html</a> . Closing the issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBPAPP-4776">https://issues.jboss.org/browse/JBPAPP-4776</a> |
| 10028 | JBPAPP-4765 | Ondrej, can you verify this in the CR3.5 build? I think this has been marked closed by Dev.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-4765">https://issues.jboss.org/browse/JBPAPP-4765</a> |
| 10029 | JBPAPP-4763 | Ondrej, can you continue on the investigation reported here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBPAPP-4763">https://issues.jboss.org/browse/JBPAPP-4763</a> |
| 10030 | JBPAPP-4763 | Can you set the component? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-4763">https://issues.jboss.org/browse/JBPAPP-4763</a> |
| 10031 | JBPAPP-4762 | Marking it as a blocker since it is a performance issue which needs to be investigated for the EAP 5.1 release. Bruno, could you assign this to somebody in dev?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-4762">https://issues.jboss.org/browse/JBPAPP-4762</a> |
| 10032 | JBPAPP-4759 | Hi Andy, the final date for this document to go to QE is August 18. We will need it a few days before that to check it for style, etc. Josh tells me you are writing the content - can you give me a date you will be able to hand the doc off to us before QE?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-4759">https://issues.jboss.org/browse/JBPAPP-4759</a> |
| 10033 | JBPAPP-4759 | Andy, I had created a perf guide for EPP 4.3 but could not get a chance to create one for EPP5. I would like to create one for EPP 5.1 because couple of customers have already asked for it. IIUC, perf guide for EAP 5.1 is slated to be created post release. Do you have any ETA on this? It will help me immensely.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-4759">https://issues.jboss.org/browse/JBPAPP-4759</a> |
| 10034 | JBPAPP-4759 | Having all these issues added to this container ticket will also help with Docs QE and Engineering QE. Is this guide going to make 5.1.1 Post GA? Should it be realigned with the normal 5.1.1 release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBPAPP-4759">https://issues.jboss.org/browse/JBPAPP-4759</a> |
| 10035 | JBPAPP-4715 | If this needs to go in the Release Notes / Installation Guide, can I get an official summary of the problem, its effects on customers, and any workarounds?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-4715">https://issues.jboss.org/browse/JBPAPP-4715</a> |
| 10036 | JBPAPP-4715 | Rich, is it also valid for clients using older JDKs, like JBoss EAP 4.3 client using JBoss EAP 5.x server?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-4715">https://issues.jboss.org/browse/JBPAPP-4715</a> |
| 10037 | JBPAPP-4715 | Hi guys, can I echo Laura in asking for a summary, effects on customers, and any workarounds, for the Release Notes, please? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBPAPP-4715">https://issues.jboss.org/browse/JBPAPP-4715</a> |
| 10038 | JBPAPP-4691 | Why was "PTG" added to the issue summary? I am not familiar with this abbreviation and I am linking to this Jira in a report and this is adding unnecessary confusion. If its something internal, tags should be used instead.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBPAPP-4691">https://issues.jboss.org/browse/JBPAPP-4691</a> |
| 10039 | JBPAPP-4691 | Attention: Andy Has the information requested in this issue been included in the Performance Tuning Guide? If not, where would you recommend it be added? Maybe the "Stateless Session Beans" section?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBPAPP-4691">https://issues.jboss.org/browse/JBPAPP-4691</a> |
| 10040 | JBPAPP-4691 | I have added the following text to the PTG as section 4.1.4: " <title>Local EJB3 Calls</title> <para> When an application uses a remote EJB3 interface the call is serialized and deserialized by default because this is a requirement of network communication. If the EJB is running in the same JVM as the client calling it, all communications are local so there's no need for serialization or deserialization. To avoid the CPU load involved and so improve the application's responsiveness, enable the system property org.jboss.ejb3.IsLocalInterceptor.passByRef to true, for example: add -Dorg.jboss.ejb3.remoting.IsLocalInterceptor.passByRef=true to JAVA_OPTS in the server's <filename>run.conf</filename> configuration file. </para>" Does this accurately reflect what you intended, Andy?                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-4691">https://issues.jboss.org/browse/JBPAPP-4691</a> |
| 10041 | JBPAPP-4684 | Ivo, can you verify this in CR3.5?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-4684">https://issues.jboss.org/browse/JBPAPP-4684</a> |
| 10042 | JBPAPP-4653 | Will this change?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-4653">https://issues.jboss.org/browse/JBPAPP-4653</a> |
| 10043 | JBPAPP-4611 | Peter, can you verify this in CR3?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-4611">https://issues.jboss.org/browse/JBPAPP-4611</a> |
| 10044 | JBPAPP-4611 | There are two jars in the EAP 5.1.0.CR3 containing other jars: ./server/default/deploy/admin-console.war/plugins/rhq-jmx-plugin.jar [1] ./server/default/deploy/admin-console.war/plugins/jopr-jboss-as-5-plugin.jar [2] The first [1] jar contains only signed jars which is OK. The second [2] jar contains two jars which are not signed: ./lib/rhq-jboss-as-common-3.0.0.EmbJopr2.jar ./lib/jbpm-3.1.1.jar From Common Criteria or Java Security Manager policy point of view I am fine with those two not signed jars, because policy can reference them by location and since we have just two of them it is not going to make policy unreadable. The other argument is that those jars are part of JBoss Admin Console which code cannot be used by other (user's) applications. I would reopen the issue and move fix version to the next release. Anil, what do you think?                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-4611">https://issues.jboss.org/browse/JBPAPP-4611</a> |
| 10045 | JBPAPP-4611 | Peter, can you check in CR3.5 if this issue still holds? The above mentioned jars are now built in brew.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-4611">https://issues.jboss.org/browse/JBPAPP-4611</a> |
| 10046 | JBPAPP-4602 | Should it be built as part of the WS build? Maybe as a separate build? Alessio, any suggestions?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-4602">https://issues.jboss.org/browse/JBPAPP-4602</a> |
| 10047 | JBPAPP-4601 | Although this is a bit older JIRA, I can't find a related info in "Transactions Development Quick Start Guide" nor "Transactions Administrators Guide". Is current state of docs about JBossXTS as supposed to be?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-4601">https://issues.jboss.org/browse/JBPAPP-4601</a> |
| 10048 | JBPAPP-4589 | Martha, I assume this will need to be documented - can you or Yiqiao create a documentation JIRA with instructions, including any channel subscription/JDK requirements?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-4589">https://issues.jboss.org/browse/JBPAPP-4589</a> |
| 10049 | JBPAPP-4551 | Chris, can you tell me where users will be able to download the HornetQ and CXF zips and what they are likely to be named? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-4551">https://issues.jboss.org/browse/JBPAPP-4551</a> |
| 10050 | JBPAPP-4551 | Could you put the changes to the stage, please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-4551">https://issues.jboss.org/browse/JBPAPP-4551</a> |
| 10051 | JBPAPP-4551 | I was not able to find the fixes on the stage. Now I can see there are two versions for EAP on the stage, 5.0 and 5. So now there are also two versions of the Installation Guide, one under the '5.0' section and the other one under the '5' section. Which of these versions is final and should be QE'd?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBPAPP-4551">https://issues.jboss.org/browse/JBPAPP-4551</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | URL                                                                                                   |

| 10052 | JBPAPP-4546 | password_tool.bat is in the \$JBASS_HOME/bin, but after trying to specify keystore (option 1) you get ClassNotFoundException (see at the bottom). password_tool.bat is missing following line: set JBASSPASS_CLASSPATH=%JBASSPASS_CLASSPATH%;%JBASS_HOME%\client\jboss-client.jar Can you add the line, please? Exception in thread "main" java.lang.NoClassDefFoundError: org/jboss/security/plugins/FilePassword at org.jboss.security.integration.password.PasswordMaskManagement.ensureKeyStore(PasswordMaskManagement.java:297) at org.jboss.security.integration.password.PasswordMaskManagement.setKeyStoreDetails(PasswordMaskManagement.java:83) at org.jboss.security.integration.password.PasswordTool.main(PasswordTool.java:121) Caused by: java.lang.ClassNotFoundException: org.jboss.security.plugins.FilePassword at java.net.URLClassLoader\$1.run(URLClassLoader.java:202) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:190) at java.lang.ClassLoader.loadClass(ClassLoader.java:307) at sun.misc.Launcher\$AppClassLoader.loadClass(Launcher.java:301) at java.lang.ClassLoader.loadClass(ClassLoader.java:248) ... 3 more                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-4546">https://issues.jboss.org/browse/JBPAPP-4546</a> |
| 10053 | JBPAPP-4546 | At this point it is not clear if a new build will be done for EAP 5.1 which would include this fix. The jira is resolved with a fix version of EAP 5.1, is this critical to include in EAP 5.1?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBPAPP-4546">https://issues.jboss.org/browse/JBPAPP-4546</a> |
| 10054 | JBPAPP-4546 | Do we need to re-open this jira and put in TBD EAP 5 or should we add a new JIRA for the missing jar to be included in future release? Also, do we need the release notes to be updated with info about the missing jar and on where to get it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBPAPP-4546">https://issues.jboss.org/browse/JBPAPP-4546</a> |
| 10055 | JBPAPP-4546 | Anil, can you please commit this one line change to the tip of the JBPAPP_5_1 branch? I will try and backport it as a patch if we rebuild.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBPAPP-4546">https://issues.jboss.org/browse/JBPAPP-4546</a> |

| 10057 | JBPAPP-4489 | Andy, this is another change needed when switching to hornetq, can you please update the script in the JBPAPP_5_1 branch to include this change? Thanks, Permaine                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-4489">https://issues.jboss.org/browse/JBPAPP-4489</a> |
| 10058 | JBPAPP-4489 | Howard, Would it be possible to create a patch or fix it in a tag for EAP 5.1 CR2? We cannot include a patch which causes exception to come up even if it is harmless. We will start building CR2 next Monday, so we'll need something today or tomorrow. Thanks, Permaine                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBPAPP-4489">https://issues.jboss.org/browse/JBPAPP-4489</a> |
| 10059 | JBPAPP-4483 | Hi Michael Apologies for introducing the incorrect information back into the section again. It's what happens when I'm trying to close off issues close to the release. Don't look deep enough. Regarding [1] "Instead the users can base their application on the mavenized template WAR project "retestasy-jaxrs-war" that comes with the RESTEasy source distribution. " Would customers have to download that from the community? For enterprise customers, we try to avoid this scenario. Is there a project included in the enterprise binary a customer could access? Regarding [2], I have fixed the XML comments. The reason why the comments were formatted strangely here is because you can't comment out a section in XML that contains Comments. The author would have stripped out the comment markup so they could comment out the section.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBPAPP-4483">https://issues.jboss.org/browse/JBPAPP-4483</a> |
| 10060 | JBPAPP-4483 | Hi again Michal That's exactly the information I was looking (and hoping) for. I'll direct the user to the location of the examples in the RESTEasy binary. Are you happy for me to close this issue after incorporating this change? Cheers Jared                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBPAPP-4483">https://issues.jboss.org/browse/JBPAPP-4483</a> |
| 10061 | JBPAPP-4464 | If I understand correctly the "fix version" will not include 4.3.0 CP09. Can you confirm.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-4464">https://issues.jboss.org/browse/JBPAPP-4464</a> |
| 10062 | JBPAPP-4451 | Dennis JGRP-1207 has status Rejected. In what sense is this JIRA issue resolved? Am I to understand that no changes were made?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-4451">https://issues.jboss.org/browse/JBPAPP-4451</a> |
| 10063 | JBPAPP-4443 | Clebert, can you please comment on the above?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBPAPP-4443">https://issues.jboss.org/browse/JBPAPP-4443</a> |
| 10064 | JBPAPP-4443 | JORAM Tests are also consumed by AS6. Why don't you add an ignore on the libraries used by the JORAM tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBPAPP-4443">https://issues.jboss.org/browse/JBPAPP-4443</a> |
| 10065 | JBPAPP-4440 | I have removed the "'-retestasy - a Technology Preview of RESTEasy - a portable implementation of JSR-311 JAX-RS Specification' reference from the Admin and Config guide. Does this resolve the issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-4440">https://issues.jboss.org/browse/JBPAPP-4440</a> |
| 10066 | JBPAPP-4434 | Hi Mladen, you know Solaris better, what do you think? I believe this script comes from the community AS, can this change be incorporated to the trunk if James clone this into a JBAS JIRA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBPAPP-4434">https://issues.jboss.org/browse/JBPAPP-4434</a> |
| 10067 | JBPAPP-4434 | The patch doesn't work. == is not allowed on solaris sh, and -c cannot be first param to grep. Has to be escaped (\-c) Here is the correct one: if { "x\${isJBossRunningPid}" != "x" }; then args="pargs -a \${JBossPid}" test "x\${args}" = "x" && return 0 inst="echo \${args}   grep "\-c \${instance}" 2>/dev/null" test "x\${inst}" = "x" && return 0 fi Do you wish me to commit that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBPAPP-4434">https://issues.jboss.org/browse/JBPAPP-4434</a> |
| 10068 | JBPAPP-4409 | Can this please be cloned for EAP 4.x?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-4409">https://issues.jboss.org/browse/JBPAPP-4409</a> |
| 10069 | JBPAPP-4403 | Here are some comments after checking the docs: Chapter 2: Installation References to tech preview to be removed. Also the jboss-xf version is wrong. Chapter 3: WS Policy Framework Should be moved just before current Chapter 11 (keep all the general policy stuff together) Chapter 10: Messaging tutorial The chapter title should be something like "WS-Reliable Messaging tutorial" Chapter 12: How it works A reference to ws-policy or policies in general in the chapter title would be good Section 14.3 There's a reference to the community version JBossWS-CXF 3.1.1 that should be removed. The same in 14.4.1. Moreover, if you want to refer stack specific samples, those would need to be actually shipped with the EAP distribution (afaik this is currently not the case). The sample mentioned there is in the community version of jboss-xf stack specific testsuite. Otherwise you need to point users to some code online (using fisheye / viewcv) Section 14.4.3 There's a reference to the community jboss-native stack userguide. Is that allowed? Chapters 14 and 15 should be swapped; as you did for WS-RM and WS-Addressing, first you talk about the topic leveraging the doc coming from Apache, then you provide a sample of integration into JBoss. Chapter 16: SOAP Messaging Logging The cxf-extensions-jboss.xml file is actually not available on EAP 5.1, so what's written in the note applies; the whole chapter could then be reviewed with that in mind. Chapter 17: JMS Transport tutorial Remove this, it's actually not available in the version included in EAP 5.1 Chapter 18: CXF configuration Remove this; most of what's there does not apply to the jboss-xf integration. Chapter 19: Logging All the logging related stuff (so everything except 19.4) either do not apply to jboss-xf integration or is already covered in Chapter 16, hence should be removed. | <a href="https://issues.jboss.org/browse/JBPAPP-4403">https://issues.jboss.org/browse/JBPAPP-4403</a> |
| 10070 | JBPAPP-4403 | Besides that, is another section of the documentation going to be available for basic ws doc, jaxws, etc like we used to have for native stack?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBPAPP-4403">https://issues.jboss.org/browse/JBPAPP-4403</a> |
| 10071 | JBPAPP-4403 | Alessio, which books are you referring to in your last comment? Where would this information come from, and is there a reason it wasn't mentioned when the documentation plan for the CXF docs was put forward?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBPAPP-4403">https://issues.jboss.org/browse/JBPAPP-4403</a> |

| 10072 | JBPAPP-4403 | Thanks Alessio. That section will still be available for customers in this release. To avoid duplicating content, I think we should reference that chapter of the Admin and Config Guide. Can you tell us which sections in particular apply to CXF, and where the references to the Admin and Config Guide should be made?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JPAP-4403">https://issues.jboss.org/browse/JPAP-4403</a> |
| 10073 | JBPAPP-4403 | Hi Alessio, I have some questions about your comments. 1. We'd rather avoid referencing community documentation, but I don't know where else we could reference for this information. If you could provide information about configuring the Bouncy Castle provider, or suggest another reference point, that would be great 2. When you say, 'there's a reference to the community version JBossWS-CXF 3.1.1, are you simply referring to the version number? 3. In your first comment, you say that the jbossws-cxf version is wrong; can you tell me where this information comes from (is it the downloadable zip file?), and what version we should be using? 4. Could you please clarify what a sample reference is, and what you would like us to do with it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JPAP-4403">https://issues.jboss.org/browse/JPAP-4403</a> |
| 10074 | JBPAPP-4403 | > Thanks Alessio. That section will still be available for customers in this release. To avoid duplicating content, I think we should reference that chapter of the Admin and Config Guide. Can you tell us which sections in particular apply to CXF, and where the references to the Admin and Config Guide should be made? Here is the list of what applies to *JBossWS-CXF* too: - Chapters 5.1 (just remove the sentence "Even though JAXRPC..." as JAX-RPC is NOT supported with the CXF stack in EAP51), 5.2, 5.3, 5.4, 5.5, 5.6, 5.8, 5.9, 5.10, 5.11, 5.12, 5.13, 5.14, 5.15, 5.16, 5.17, 5.18, 5.19, 5.20, 5.22 (except section 5.22.1.1 Endpoint Config) - Section 5.21.3 As to where put references... well, basically all the stuff above comes logically before everything that's in the current EAP 5.1 CXF guide, as the latter is basically about jbossws-cxf stack specific things.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPAP-4403">https://issues.jboss.org/browse/JPAP-4403</a> |
| 10075 | JBPAPP-4403 | > 1. We'd rather avoid referencing community documentation, but I don't know where else we could reference for this information. If you could provide information about configuring the Bouncy Castle provider, or suggest another reference point, that would be great <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Administration_And_Configuration_Guide/ch05s21s02s04.html">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Administration_And_Configuration_Guide/ch05s21s02s04.html</a> > 2. When you say, 'there's a reference to the community version JBossWS-CXF 3.1.1, are you simply referring to the version number? Yes, given the version in EAP is 3.1.2.SP3, there's no need to provide and reference to a community version. The feature mentioned there is available and the customer most probably doesn't need to know in which community version of the stack that became available. > 3. In your first comment, you say that the jbossws-cxf version is wrong; can you tell me where this information comes from (is it the downloadable zip file?), and what version we should be using? jbossws-cxf-3.1.2.SP3-3.SP3.6.ep5.el4-tp-installer.zip is the name of the downloadable zip file for EAP 5.0. CXF TP. I don't know which name it will have in EAP 5.1, but for sure that will not have 3.1.2.SP3 in it, given the jbossws-cxf version EAP 5.1 is based on is 3.1.2.SP6. You probably need to get in touch with Fernando's team for the exact file name. > 4. Could you please clarify what a sample reference is, and what you would like us to do with it? A sample reference is a reference to a jbossws class being a testsuite sample. For instance things like "you can check the sources of org.jboss.test.ws.jaxws.samples.SecurityTestCase" As said to Laura, I think we should avoid directly mentioning sources that are not actually shipped in the EAP distribution. Either changes are done for shipping them, or we do not reference them. | <a href="https://issues.jboss.org/browse/JPAP-4403">https://issues.jboss.org/browse/JPAP-4403</a> |
| 10076 | JBPAPP-4403 | Hi Alessio, I have made the changes you suggested and staged the book on docstage again. Aside from the section you recommended for removal, are there any other sections that are not directly related to something we support?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPAP-4403">https://issues.jboss.org/browse/JPAP-4403</a> |
| 10077 | JBPAPP-4403 | Hi Alessio, the email you sent was missing two of the documents: EAP51-Rebecca.txt and EAP51-CXF-Doc.txt. Could you send these to me again, please? :) Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPAP-4403">https://issues.jboss.org/browse/JPAP-4403</a> |
| 10078 | JBPAPP-4403 | Alessio, can you get back to Rebecca on this? We are waiting on the missing documents mentioned in the previous comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPAP-4403">https://issues.jboss.org/browse/JPAP-4403</a> |
| 10079 | JBPAPP-4403 | Hi Alessio, have implemented the changes in the diffs. Can you please check here <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.1/html/CXF_User_Guide/index.html">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.1/html/CXF_User_Guide/index.html</a> and let me know what you think? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JPAP-4403">https://issues.jboss.org/browse/JPAP-4403</a> |
| 10080 | JBPAPP-4403 | Alessio, the source document is part of an internal repo for the product docs, so probably not. Bec, can you reapply the missing changes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JPAP-4403">https://issues.jboss.org/browse/JPAP-4403</a> |
| 10081 | JBPAPP-4403 | Hi Alessio, I have NO IDEA what happened to the changes before, but they should be implemented now: <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/JBoss_WS_CXF_User_Guide/index.html">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/JBoss_WS_CXF_User_Guide/index.html</a> I'm not sure if I've removed too much of the Spring XML Configuration; could you please let me know if I have? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JPAP-4403">https://issues.jboss.org/browse/JPAP-4403</a> |
| 10082 | JBPAPP-4385 | How should it look like the patch? Only changed file/s in special branch for the issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPAP-4385">https://issues.jboss.org/browse/JPAP-4385</a> |
| 10083 | JBPAPP-4378 | Should this be documented in the release notes? Can I get a summary of the problem and any available workarounds?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JPAP-4378">https://issues.jboss.org/browse/JPAP-4378</a> |
| 10084 | JBPAPP-4359 | Hi Rostislav, could you please try locally updating to the version there to the one used in EAP 5.1? The maven testsuite builds the classpath using maven dependencies. Assuming this can be fixed just updating the version in the testsuite pom, we need to evaluate whether we want to cut another release for this single change or a simple patch can be applied when running the QA tests.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPAP-4359">https://issues.jboss.org/browse/JPAP-4359</a> |
| 10085 | JBPAPP-4359 | According to <a href="http://neptune.usersys.redhat.com:8080/jboss-support/">http://neptune.usersys.redhat.com:8080/jboss-support/</a> CR3 has JBoss WS Framework 3.1.2.SP8 and HornetQ 2.1.2 Do we still need this note at all??? Sorry, I don't have time to come up to speed on testing this. Can someone in QE please test this and let us know.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JPAP-4359">https://issues.jboss.org/browse/JPAP-4359</a> |
| 10086 | JBPAPP-4359 | Rostislav, I've updated that version number. A couple of questions before I rebuild: 1. We are giving users an instruction to update a pom.xml file - what is the path of that file? 2. We say that tests fail - what tests are these? Is there a file path associated with them?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JPAP-4359">https://issues.jboss.org/browse/JPAP-4359</a> |
| 10087 | JBPAPP-4359 | Hi Joshua. This issue applies to EAP 5.1.0 with standard JBossWS Native stack + installed HornetQ messaging, so I suggest this change: The following tests fail with a java.lang.SecurityException error: --> For EAP 5.1.0 with standard JBossWS Native stack + HornetQ messaging the following tests fail with a java.lang.SecurityException error: 1. We are giving users an instruction to update a pom.xml file - what is the path of that file? It's about pom.xml for WS Native testsuite. Relative path is modules/testsuite/pom.xml, SVN repository path is <a href="http://anonsvn.jboss.org/repos/jbossws/stack/native/tags/jbossws-native-3.1.2.SP7/modules/testsuite/pom.xml">http://anonsvn.jboss.org/repos/jbossws/stack/native/tags/jbossws-native-3.1.2.SP7/modules/testsuite/pom.xml</a> 2. We say that tests fail - what tests are these? Is there a file path associated with them? It's enough to have these test listed as it's now. These tests use JMS as transport protocol.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPAP-4359">https://issues.jboss.org/browse/JPAP-4359</a> |
| 10088 | JBPAPP-4359 | Rostislav, I cannot find the WS Native testsuite in my jboss-eap-5.1 installation. Is this something that is part of the EAP binary install? Is this situation something that users can encounter on their machine?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPAP-4359">https://issues.jboss.org/browse/JPAP-4359</a> |
| 10089 | JBPAPP-4359 | Do we need to tell customers about this in the release note then? It sounds like an internal QE tweak...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPAP-4359">https://issues.jboss.org/browse/JPAP-4359</a> |
| 10090 | JBPAPP-4356 | Jesper, thanks for the email on this - can you create a subtask docs JIRA with the exact information that needs to change in the Admin and Config Guide? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPAP-4356">https://issues.jboss.org/browse/JPAP-4356</a> |

| 10091 | JBPAPP-4353 | I looked at this... I don't normally review documentation, but nothing left out at me. Is this supposed to be assigned to me?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBPAPP-4353">https://issues.jboss.org/browse/JBPAPP-4353</a> |
| 10092 | JBPAPP-4353 | Chris, you're listed as rel-eng lead, so I assigned it to you to review the Installation section - I assumed you would know where the files would end up and whether the download instructions were correct. If not, who is the best person to review this? I understand we do not do RPMs for WFK 1.1, so that whole section should be removed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-4353">https://issues.jboss.org/browse/JBPAPP-4353</a> |
| 10093 | JBPAPP-4353 | Chapter 3.2: I would hope that: "None of the information in this section seemed relevant given that we no longer ship Struts, Spring or GWT. David, Ondrej, please provide additional information if required, or assign to someone who can." would not be included in the final, and that these sections have been updated? Chapter 6 - Is there a link to this doc download - jboss-wfk-docs-1.1.0.zip? The other link only shows a page with a copy of the release notes - http://www.redhat.com/docs/en-US/JBoss_Web_Framework_Kit/ Chapter 7 & 8 "YOUR INPUT HERE" - assuming this will be updated base on actual issues fixed, open.... If this is what is needed - I believe David would be able to compile this for you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-4353">https://issues.jboss.org/browse/JBPAPP-4353</a> |
| 10094 | JBPAPP-4353 | Maybe boiler-plate we need, but don't see that the XFS trademark is ever used in the document outside the Legal Notices. Should it be removed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-4353">https://issues.jboss.org/browse/JBPAPP-4353</a> |
| 10095 | JBPAPP-4339 | Hi Alexey, this a CP release (despite the number change 5.0.1 -> 5.1.0). Is it ok to upgrade metadata from 1.0.2 to 1.0.5 in a CP release? Fully backwards compatible, no side-effects? Anee-Louise (PM) and Laura (Docs) will need a list of issues fixed between 1.0.2 and 1.0.5. Can you add that as a comment to this JIRA please? (assuming the upgrade is ok for a CP) Many thanks, Fernando                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-4339">https://issues.jboss.org/browse/JBPAPP-4339</a> |
| 10096 | JBPAPP-4339 | Many thanks Ales. Carlo, can you comment about JBMETA-277 and possible effects to EAP 5.0.1 customers upgrading to EAP 5.1.0 please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBPAPP-4339">https://issues.jboss.org/browse/JBPAPP-4339</a> |
| 10097 | JBPAPP-4335 | Marius, you seem to have removed all my formatting and language changes in making your modifications... can you revert that and add only the additional lines please? Or just let me know what material has to be added. Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-4335">https://issues.jboss.org/browse/JBPAPP-4335</a> |
| 10098 | JBPAPP-4292 | If we are changing the version of rhq (and EMS) then we need a 1.4.3.SP1 tag for the embjopr right? Or will you simply re-tag 1.4.3.GA? It is OK to re-tag, we haven't given that to anyone else yet....                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBPAPP-4292">https://issues.jboss.org/browse/JBPAPP-4292</a> |
| 10099 | JBPAPP-4292 | Hi Simeon, do you have an update on the status of this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-4292">https://issues.jboss.org/browse/JBPAPP-4292</a> |
| 10100 | JBPAPP-4287 | Please verify in EAP 5.1 documentation on stage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-4287">https://issues.jboss.org/browse/JBPAPP-4287</a> |
| 10101 | JBPAPP-4287 | Guys, I had spent quite some time trying to look up the docs in question and I failed :-D There is just a general installation note in the corp preview and on the knowledge base web page... Can you point me to the archive?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-4287">https://issues.jboss.org/browse/JBPAPP-4287</a> |
| 10102 | JBPAPP-4280 | Could you verify this for accuracy, please, Strong? :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBPAPP-4280">https://issues.jboss.org/browse/JBPAPP-4280</a> |
| 10103 | JBPAPP-4280 | Hi Juraci, I think I have fixed the tabbing/rendering issue. Could you please verify here on stage? <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/Hibernate_Search_Reference_Guide/search-mapping.html#search-mapping-entity">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5/html/Hibernate_Search_Reference_Guide/search-mapping.html#search-mapping-entity</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBPAPP-4280">https://issues.jboss.org/browse/JBPAPP-4280</a> |
| 10104 | JBPAPP-4278 | Ales, transferring this content request from JBPAPP-2635. Can you write some example code for this section? Ideally your material would be inserted immediately following "Another way to limit scanning is to provide the jboss-classloading.xml file." <a href="http://java.dzone.com/articles/jboss-microcontainer-classloading">http://java.dzone.com/articles/jboss-microcontainer-classloading</a> goes into more detail with the jboss-classloading.xml files, but I'm no coder. :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-4278">https://issues.jboss.org/browse/JBPAPP-4278</a> |
| 10105 | JBPAPP-4278 | Below is an email thread in which a JBoss Subject Matter Expert confirms that in fact this information should *NOT* be moved to the Performance Tuning Guide when the "Performance Tuning" chapter of the Admin & Config Guide is removed: ----- Original Message ----- > From: "Russell Dickenson" <rdickens@redhat.com> > To: "Andrig Miller" <anmiller@redhat.com> > Sent: Sunday, January 8, 2012 6:12:58 PM > Subject: Question about JIRA issue for EAP Performance Tuning Guide > > Andy, > > I need your help with a JIRA issue which was raised a long time ago: > <a href="https://issues.jboss.org/browse/JBPAPP-4278">https://issues.jboss.org/browse/JBPAPP-4278</a> > > The gist of the JIRA issue is that someone noted that with the > creation of the PTG the "Performance Tuning" section of the EAP > Admin & Config Guide could be removed. There was a further note > regarding this chapter's removal though: "If this chapter is > removed, a reference to the Classloading Layer chapter of the > Microcontainer User Guide should be added in the Performance Tuning > Guide's equivalent of the VFS Cache Tuning section." I have looked > over the PTG and can't find any reference to VFS, tuning or > otherwise. > > Assuming I'm correct and VFS is not mentioned in the PTG, should this > be added specifically so that this reference can be added, or have > circumstances changed perhaps and there's no longer a need to add > this reference? > > I personally don't think that this should be added to the performance tuning guide. The actually changes only affect deployment performance, not actual runtime performance, and while you may increase the deployment time, the extra memory that the VFS will use, could actually hurt runtime throughput. So, I would not add this information to the performance tuning guide, since its focused on runtime throughput of the customers application, and the VFS tuning has nothing to do with that, and could actually hurt throughput. Also, there are no metrics where they show how much it actually improves deployment time. Most customers aren't going to care if there deployments take 6 seconds versus 5.5, or something like that. | 10106 | JBPAPP-4251 | Martha, is this the same as the JBoss XB component we report in the release notes? That version is currently listed as 2.0.1.GA... should that change for the Beta release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBPAPP-4251">https://issues.jboss.org/browse/JBPAPP-4251</a> |
| 10107 | JBPAPP-4247 | Rosta, can this jira be closed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-4247">https://issues.jboss.org/browse/JBPAPP-4247</a> |
| 10108 | JBPAPP-4229 | On Thu, 2010-01-14 at 14:59 -0300, Hardy Ferentschik wrote: > Speaking of plugins, what does the maven-test-ext-plugin do for us and why > is it needed in > the annotations module? The build seems to work fine even w/o. Its there to mimic behavior JVZ promised me he would add to Maven but never has (in 3 years). Basically it allows you to *dynamically* alter the test classpath. We don't use it per se because its not really intended for us. Its intended for people running the hibernate testsuite(s) against "other databases". The build works ok for us without it there, but it needs to be there. -- Steve Ebersole <st...@hibernate.org> Hibernate.org                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBPAPP-4229">https://issues.jboss.org/browse/JBPAPP-4229</a> |
| 10109 | JBPAPP-4229 | Strong, on Hudson, for testing, it is OK to grab the plugins (all of maven) from central, so I vote we close this as WONTFIX. In Brew you can just patch out the reference, depmap it to nothing or something. Maybe David can suggest how to handle that but a small patch with some '-' lines will do it. Can we close this as WONTFIX?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-4229">https://issues.jboss.org/browse/JBPAPP-4229</a> |
| 10110 | JBPAPP-4229 | so David, would you please import it? I tried to work on jpackage, but don't know how to .. (can't remember the details, I remember i send you and Fernando a mail to ask this)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-4229">https://issues.jboss.org/browse/JBPAPP-4229</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | URL                                                                                                   |

| 10111 | JBPAPP-4229 | David, would you please build this on jdk5? you only build this on jdk6, but hibernate can not be built on jdk6.. we need jdk5 thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPBAPP-4229">https://issues.jboss.org/browse/JPBAPP-4229</a> |
| 10112 | JBPAPP-4229 | Strong, did you say that you no longer need a JDK5 build? If so, then this issue can be marked as Done.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPBAPP-4229">https://issues.jboss.org/browse/JPBAPP-4229</a> |
| 10113 | JBPAPP-4227 | Fernando, can you take this from here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JPBAPP-4227">https://issues.jboss.org/browse/JPBAPP-4227</a> |
| 10114 | JBPAPP-4226 | Manik, is this being included? If so, some mention should be made in the release notes about this Tech Preview. Can you let me know?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JPBAPP-4226">https://issues.jboss.org/browse/JPBAPP-4226</a> |
| 10115 | JBPAPP-4226 | Adding the release notes flag. Manik, Rich, someone will need to give me information on how to connect Infinispan to EAP - what do customers have to do to get Infinispan, and get it working with EAP?                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPBAPP-4226">https://issues.jboss.org/browse/JPBAPP-4226</a> |
| 10116 | JBPAPP-4226 | This is a significant undertaking. We will have to dedicate a person to it full-time. They will need to study Infinispan and then do the productization of the docs. What resources are QE dedicating to this?                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JPBAPP-4226">https://issues.jboss.org/browse/JPBAPP-4226</a> |
| 10117 | JBPAPP-4217 | What is the target version? Please update: <a href="https://docspace.corp.redhat.com/docs/DOC-37998">https://docspace.corp.redhat.com/docs/DOC-37998</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JPBAPP-4217">https://issues.jboss.org/browse/JPBAPP-4217</a> |
| 10118 | JBPAPP-4192 | I cannot see the fixes on stage. Could you update it on stage please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPBAPP-4192">https://issues.jboss.org/browse/JPBAPP-4192</a> |
| 10119 | JBPAPP-4191 | Ales, do you think we should have an admin guide for the MC as part of EAP doc bundle? Do you see the administrator configuring the microcontainer in any ways?                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JPBAPP-4191">https://issues.jboss.org/browse/JPBAPP-4191</a> |
| 10120 | JBPAPP-4191 | What is usually in these admin guides?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JPBAPP-4191">https://issues.jboss.org/browse/JPBAPP-4191</a> |
| 10121 | JBPAPP-4189 | This issue is a clone of JBPAPP-3591 to specifically track EAP5. The last comment on the source JIRA was: Fernando Nasser - 27/Apr/10 03:23 PM Can we move this to 5.0.2 for tracking purposes now?                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JPBAPP-4189">https://issues.jboss.org/browse/JPBAPP-4189</a> |
| 10122 | JBPAPP-4157 | Hi Ruchi, I'm not sure I understand you fully. For example, JBossQueue is not a final class, you can extend it whether your sub class is abstract or not. Also JBossQueue implements javax.jmx.Queue, so it can be casted to javax.jmx.Queue. Am I missing anything there? Howard                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPBAPP-4157">https://issues.jboss.org/browse/JPBAPP-4157</a> |
| 10123 | JBPAPP-4155 | Mike, this chapter is not included in the community version of the AS5 documentation either. Are you sure it is still required? If so, please let us know where in the current Admin and Config Guide it should go. Thankyou. :)                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPBAPP-4155">https://issues.jboss.org/browse/JPBAPP-4155</a> |
| 10124 | JBPAPP-4155 | Mike, I've attached the naming chapter file from 4.2. Can you please review the contents for use with EAP 5.1 and let me know what needs to change before I add it to the Admin and Config Guide for 5.1? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPBAPP-4155">https://issues.jboss.org/browse/JPBAPP-4155</a> |
| 10125 | JBPAPP-4155 | Hi Mike, I have added the Naming chapter into the Admin and Config guide in chapter 17, after Clustered JNDI Services, but I wasn't quite sure where to slot it in. Would you be able to look over it and see if there's a more appropriate place, please? Thanks!                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPBAPP-4155">https://issues.jboss.org/browse/JPBAPP-4155</a> |
| 10126 | JBPAPP-4143 | Ales, which version is expected? Please update <a href="https://docspace.corp.redhat.com/docs/DOC-37998">https://docspace.corp.redhat.com/docs/DOC-37998</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-4143">https://issues.jboss.org/browse/JPBAPP-4143</a> |
| 10127 | JBPAPP-4143 | This used to be top level issue for all potential MC upgrades -- VFS, Reflect, MDR, Man, Kernel, CL, Deployers, ... Hence there is no version. Or is there no need to top level MC component upgrade issue?                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JPBAPP-4143">https://issues.jboss.org/browse/JPBAPP-4143</a> |
| 10128 | JBPAPP-4143 | Hi Ales, I don't see a subtask for JBoss Man but in DOC-37998 it is listed as having to be upgraded to 2.1.1.SP2 Is it no longer to be upgraded and can stay at 2.1.1.GA? Thanks, Fernando                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPBAPP-4143">https://issues.jboss.org/browse/JPBAPP-4143</a> |
| 10129 | JBPAPP-4140 | If the issue is resolved for 4.3.CP09, then we should clone off this issue and make one for EAP 4.2 so this issue can be closed off against 4.3.CP10. Or could we just remove the 4.2 Affects Version and close this ticket off since 4.2 is no longer under active development?                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPBAPP-4140">https://issues.jboss.org/browse/JPBAPP-4140</a> |
| 10130 | JBPAPP-4139 | Hi Rajesh, Could you please just verify that this section has been removed and is now correct? Thanks. <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Seam_Reference_Guide/mail.html">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Seam_Reference_Guide/mail.html</a>                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPBAPP-4139">https://issues.jboss.org/browse/JPBAPP-4139</a> |
| 10131 | JBPAPP-4131 | Please verify in EAP 5.1 documentation on stage.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPBAPP-4131">https://issues.jboss.org/browse/JPBAPP-4131</a> |
| 10132 | JBPAPP-4111 | removed jboss-cache 1.4.1 and pojo cache                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JPBAPP-4111">https://issues.jboss.org/browse/JPBAPP-4111</a> |
| 10133 | JBPAPP-4111 | I have made the changes as specified in the FishEye. Rajesh, could you please verify this for 5.1? Available here: <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html-single/Seam_Reference_Guide/index.html#cache">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html-single/Seam_Reference_Guide/index.html#cache</a>                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPBAPP-4111">https://issues.jboss.org/browse/JPBAPP-4111</a> |
| 10134 | JBPAPP-4111 | Hi. Just a quick comment before goes to archiving... What I encountered when trying the supported version of 3.2.x was that whenever you used the <:cache> tag, an exception occurred. So we had to revert back to using the old 1.4.1 version of jboss cache. Is this now fixed?                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPBAPP-4111">https://issues.jboss.org/browse/JPBAPP-4111</a> |
| 10135 | JBPAPP-4111 | I am not aware of any exception in usage of s:cache component. Could you specify more details about it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPBAPP-4111">https://issues.jboss.org/browse/JPBAPP-4111</a> |
| 10136 | JBPAPP-4089 | Marek, where would I find this information? Would you suggest this forms part of the Seam Reference Guide, or part of the release notes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JPBAPP-4089">https://issues.jboss.org/browse/JPBAPP-4089</a> |
| 10137 | JBPAPP-4089 | Hi Rajesh, I have made the changes as available in the fisheye. Could you please verify these for 5.1? Available here: <a href="http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Seam_Reference_Guide/index.html">http://documentation-stage.bne.redhat.com/docs/en-US/JBoss_Enterprise_Application_Platform/5.0/html/Seam_Reference_Guide/index.html</a>                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-4089">https://issues.jboss.org/browse/JPBAPP-4089</a> |
| 10138 | JBPAPP-4058 | Documented as a known issue in the EAP 4.3.8 release notes:<classname>CacheEntry</classname> resources are not cleaned when <classname>ApplicationContext</classname>s are shut down, causing a memory leak. Is there a workaround available for this?                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JPBAPP-4058">https://issues.jboss.org/browse/JPBAPP-4058</a> |
| 10139 | JBPAPP-4053 | Tyronne, this has been set to Coding in Progress since April. Can you give an update on status and need for this? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPBAPP-4053">https://issues.jboss.org/browse/JPBAPP-4053</a> |
| 10140 | JBPAPP-4052 | I merged the Transactions JTA, JTS, and XTS Programmers Guides into a single Transactions Development Guide for EAP 5.1. Here are the final EAP Transactions deliverables for EAP 5.1: 1. Transactions Administration Guide 2. Transactions Development Quick Start Guide 3. Transactions Development Guide                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JPBAPP-4052">https://issues.jboss.org/browse/JPBAPP-4052</a> |
| 10141 | JBPAPP-3961 | Brian, since Infinispan is only a tech preview this time, can we really say Cache is deprecated? Doesn't deprecated imply 'no longer fully supported'?                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JPBAPP-3961">https://issues.jboss.org/browse/JPBAPP-3961</a> |
| 10142 | JBPAPP-3961 | Attention: Jared Since this is marked with a Fix Version/s of TBD EAP 5, should it be targeted for EAP 5.1.2's Release Notes? It's a Documentation-specific issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPBAPP-3961">https://issues.jboss.org/browse/JPBAPP-3961</a> |
| 10143 | JBPAPP-3961 | Eva - My memory of what you asked in our team meeting is not very clear. IIRC you asked if we were to *definitely* remove from documentation features which had been deprecated but were still supported. I believe we should leave documentation of supported features in place, removing only documentation of features which are no longer supported. Does this give you enough guidance? I'd honestly be ver surprised if any deprecated feature has since been declared unsupported, so there should be very little to do with this issue. I would expect a Release Notes entry to be written but expect that that's all. | <a href="https://issues.jboss.org/browse/JPBAPP-3961">https://issues.jboss.org/browse/JPBAPP-3961</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | URL                                                                                                   |
|-------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| 10144 | JBPAPP-3950 | Yes some customers needlessly put jars in that shouldn't be added, however the bigger case is when a customer deploys a 3rd party product, I've seen several that include api classes for jms and such which should be ignored. When the customer has a 3rd party application, they have to go back to the vendor and get them to make a version with the classes removed so that they can maintain their support agreement. By delegation mode, do you mean to have it check the parent first? In that case it would not allow the customer to override other valid classes.                                                                                                      | <a href="https://issues.jboss.org/browse/JPBAPP-3950">https://issues.jboss.org/browse/JPBAPP-3950</a> |
| 10145 | JBPAPP-3950 | Does this apply to EAP 4.x or 5.x or both? If both, this issue needs to be cloned and the one for 4.x put in TBD EAP 4 and the other one in TBD EAP 5. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPBAPP-3950">https://issues.jboss.org/browse/JPBAPP-3950</a> |
| 10146 | JBPAPP-3935 | Did you pass it the build.properties and with an empty version.tag ? This branch is set for a production build so the behavior without a version.properties is flaky.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPBAPP-3935">https://issues.jboss.org/browse/JPBAPP-3935</a> |
| 10147 | JBPAPP-3879 | Considering that EAP 5.0.1 wasn't released yet, is it OK to run the regression/compatibility tests on 5.0.1 CR1?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-3879">https://issues.jboss.org/browse/JPBAPP-3879</a> |
| 10148 | JBPAPP-3845 | Can I get a description of this for the release notes, please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPBAPP-3845">https://issues.jboss.org/browse/JPBAPP-3845</a> |
| 10149 | JBPAPP-3842 | Laura, can you add the suggested changes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JPBAPP-3842">https://issues.jboss.org/browse/JPBAPP-3842</a> |
| 10150 | JBPAPP-3829 | Why don't you use the full jbossweb.jar, which is in the repository? <a href="http://repository.jboss.org/maven2-brew/jboss/web/jbossweb/2.1.7.GA/jbossweb-2.1.7.GA.jar">http://repository.jboss.org/maven2-brew/jboss/web/jbossweb/2.1.7.GA/jbossweb-2.1.7.GA.jar</a> That is what the dependency is looking for and what the build in Brew uses.                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JPBAPP-3829">https://issues.jboss.org/browse/JPBAPP-3829</a> |
| 10151 | JBPAPP-3829 | Checked the latest build of tomcat6 and jbossweb in Brew, can NOT find CometEvent in jbossweb jars, but in tomcat6 catalina.jar, CometEvent is there. CometEvent comes to tomcat since version 6, so jbossweb should use different catalina, a low version and it doesn't have CometEvent yet. So, we have to upload tomcat6 or upgrade the catalina jbossweb uses, Fernando, how do you think of it?                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JPBAPP-3829">https://issues.jboss.org/browse/JPBAPP-3829</a> |
| 10152 | JBPAPP-3828 | Anil, I have looked over the project and I have some questions about the scope. There are multiple deliverables in the community repo: 1. User Guide - This appears to be a guided tutorial for creating a specific type of application using Microcontainer and POJOs 2. Getting Started Guide - This appears to be an overview for installing and configuring the Microcontainer 3. Reference Guide What level of detail are we looking at? I have been working from the User Guide, but I think the Getting Started Guide may be more the direction you were headed.                                                                                                            | <a href="https://issues.jboss.org/browse/JPBAPP-3828">https://issues.jboss.org/browse/JPBAPP-3828</a> |
| 10153 | JBPAPP-3817 | Hi Fernando, In Brew, mojo-maven2-plugins-jaxb2 has a maven-jaxb2-plugin subpackage, but that maven-jaxb2-plugin has different version and groupid with the needed one, I'd like to add repolib to mojo-maven2-plugins and upload to maven2-brew, then liweinan can create a patch for the pom which has this dependency, this may resolve this problem. Do you have any advice?                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-3817">https://issues.jboss.org/browse/JPBAPP-3817</a> |
| 10154 | JBPAPP-3817 | First of all, which version and groupid has the mojo-maven2-plugins-jaxb2 subpackage? Is this really the same plugin or some other plugin that just happens to be also related to JAXB2? How did we manage to build the resteasy RPM in Brew? Is there a depmap? I am not even sure if depmaps apply to plugins... Check the resteasy Brew root.log and brew.log and find out where the maven-jaxb2-plugin came from                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPBAPP-3817">https://issues.jboss.org/browse/JPBAPP-3817</a> |
| 10155 | JBPAPP-3798 | Hi Anne-Louise Should this issue be placed into a developer's queue, rather than being left unassigned? Cheers J                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-3798">https://issues.jboss.org/browse/JPBAPP-3798</a> |
| 10156 | JBPAPP-3797 | This seems a reasonable RFE, other customers would likely benefit as well and is in-line with our focus on operational eas of use. Needs to be assessed by eng. to ensure it can be done without changing existing behaviour, eg. what happens if the run-as user doesn't have permission to create a pid file ?                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-3797">https://issues.jboss.org/browse/JPBAPP-3797</a> |
| 10157 | JBPAPP-3797 | Lami, can you please be more specific. Which one of the <a href="http://anonsvn.jboss.org/repos/jbossas/branches/">http://anonsvn.jboss.org/repos/jbossas/branches/</a> this needs to go in                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JPBAPP-3797">https://issues.jboss.org/browse/JPBAPP-3797</a> |
| 10158 | JBPAPP-3764 | If the test application still reports uncollected garbage, why is this issue resolved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPBAPP-3764">https://issues.jboss.org/browse/JPBAPP-3764</a> |
| 10159 | JBPAPP-3754 | I've updated the RHEL builds to 1.2.30: mod_jk-1.2.30-2.ep5.el4 mod_jk-1.2.30-1.1.jdk6.ep5.el5 Mladen, Can you please update the hudson build for the other platforms? Thanks, Permaine                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JPBAPP-3754">https://issues.jboss.org/browse/JPBAPP-3754</a> |
| 10160 | JBPAPP-3732 | Rich, as far as I can see, Oracle 9i isn't listed as a supported configuration for EAP 5.0.1, just 4.2 and 4.3: <a href="http://www.jboss.com/products/platforms/application/supportedconfigurations/">http://www.jboss.com/products/platforms/application/supportedconfigurations/</a> Can you advise on this? We don't have any information on support in the documentation itself, so would it be better to ensure the jboss.com page remained up to date?                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPBAPP-3732">https://issues.jboss.org/browse/JPBAPP-3732</a> |
| 10161 | JBPAPP-3731 | Rajesh, I've documented this as part of JBPAPP-3732 in the "Database Certifications" section of the release notes. Is the following still valid if this is TBD? JBoss Enterprise Application Platform 5.0.1 is now certified for the Oracle 11g R2 and Oracle 11g RAC databases when used with Oracle JDBC Driver version 11.2.0.1.0. It is also certified for Sybase ASE 15.0.3 when used with JConnect driver version 6.0.5.                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JPBAPP-3731">https://issues.jboss.org/browse/JPBAPP-3731</a> |
| 10162 | JBPAPP-3731 | Rajesh, changed to "Oracle 11g R2 RAC". This is currently documented for 4.2 as well, is this correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JPBAPP-3731">https://issues.jboss.org/browse/JPBAPP-3731</a> |
| 10163 | JBPAPP-3719 | Here is where it appears in the community docs: <a href="http://labs.jboss.com/file-access/default/members/jbossmessaging/freezone/docs/userguide-1.4.0.SP3/html_single/index.html#inst.remoteclient">http://labs.jboss.com/file-access/default/members/jbossmessaging/freezone/docs/userguide-1.4.0.SP3/html_single/index.html#inst.remoteclient</a> Is this book in the EAP set? If so, is this section in the book? According to Tyrone the information cannot simply be cut-and-pasted. He knows how it needs to be done in EAP.                                                                                                                                               | <a href="https://issues.jboss.org/browse/JPBAPP-3719">https://issues.jboss.org/browse/JPBAPP-3719</a> |
| 10164 | JBPAPP-3719 | Hi Tyrone, Can you provide the relevant information? Thanks. Ben                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JPBAPP-3719">https://issues.jboss.org/browse/JPBAPP-3719</a> |
| 10165 | JBPAPP-3719 | Hi, i tried to find a description in JBM User Guide for EAP 4.3 which would give a list of needed jars for a JMS client to run, but without success. Can you give me a hint where the description was added? I expected something as in <a href="http://docs.jboss.org/jbossmessaging/docs/userguide-1.4.0.SP3/html_single/index.html#inst.remoteclient">http://docs.jboss.org/jbossmessaging/docs/userguide-1.4.0.SP3/html_single/index.html#inst.remoteclient</a> in section 4.4. Thank you                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPBAPP-3719">https://issues.jboss.org/browse/JPBAPP-3719</a> |
| 10166 | JBPAPP-3719 | Laura, could you help me to find the changes? Thank you                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JPBAPP-3719">https://issues.jboss.org/browse/JPBAPP-3719</a> |
| 10167 | JBPAPP-3719 | Hi Howard I need a little help with this question raised by Tyrone. Would you be able to check it out for me, Howard? Thanks for any help you can give me here. Cheers Jared                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JPBAPP-3719">https://issues.jboss.org/browse/JPBAPP-3719</a> |
| 10168 | JBPAPP-3703 | Bill, can you comment on the possible backward incompatibilities that may be encountered when upgrading RESTEasy from 1.1 to 1.2.1 ? This is a CP type of release, where we no longer support the previous version, so we must ensure absolute backwards compatibility.                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JPBAPP-3703">https://issues.jboss.org/browse/JPBAPP-3703</a> |
| 10169 | JBPAPP-3703 | Will you upload the build result into <a href="http://repository.jboss.org/maven2-brew/org/jboss/resteasy/">http://repository.jboss.org/maven2-brew/org/jboss/resteasy/</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JPBAPP-3703">https://issues.jboss.org/browse/JPBAPP-3703</a> |
| 10170 | JBPAPP-3677 | I have a customer in support case [1]. Seems he is experiencing this issue. However the error message he is getting is slightly different. EAP 5.0.1 Oracle Driver Implementation-Version: 11.2.0.1.0 Oracle Server 11.2.0.1 They are requesting an patch for EAP 5.0.1. Any chance of a patch? If so, a timeline would be much appreciated. | 10171 | JBPAPP-3634 | why we need this? if we do it, so, which one should users use in which case? what's the difference between <a href="http://hibernate.sourceforge.net/hibernate-mapping-3.0.dtd">http://hibernate.sourceforge.net/hibernate-mapping-3.0.dtd</a> and " <a href="http://hibernate.sourceforge.net/hibernate-mapping-3.1.dtd">http://hibernate.sourceforge.net/hibernate-mapping-3.1.dtd</a> " ?? take a look of <a "="" href="http://fisheye.jboss.org/browse/Hibernate/core/trunk/core/src/main/resources/org/hibernate/hibernate-mapping-3.0.dtd?r1=15365&amp;r2=17821&amp;u=3&amp;ignore=&amp;k=">http://fisheye.jboss.org/browse/Hibernate/core/trunk/core/src/main/resources/org/hibernate/hibernate-mapping-3.0.dtd?r1=15365&amp;r2=17821&amp;u=3&amp;ignore=&amp;k=</a> this link shows the difference between these two dtd files, the one in hibernate-core jar in eap5 and another in source forge site as you can see the differences came with two project jira <a href="http://opensource.atlassian.com/projects/hibernate/browse/HHH-3275">http://opensource.atlassian.com/projects/hibernate/browse/HHH-3275</a> <a href="http://opensource.atlassian.com/projects/hibernate/browse/HHH-4440">http://opensource.atlassian.com/projects/hibernate/browse/HHH-4440</a> they are new features in hibernate trunk, and they are not available in eap5 for now we have carefully kept the compatibility between every change of that dtd file or if you want to use "hibernate-mapping-3.1.dtd", whatever it is, you can put it in one of your package, e.g. org.aaa.bbb and declare it in hbm files like this: <DOCTYPE hibernate-mapping PUBLIC "-//Hibernate/Hibernate Mapping DTD 3.0//EN" "classpath://aaa/bbb/hibernate-mapping-3.1.dtd"> I leave this open in case others want to discuss more | <a href="https://issues.jboss.org/browse/JBPAPP-3634">https://issues.jboss.org/browse/JBPAPP-3634</a> |
| 10172 | JBPAPP-3634 | Strong, does this need to be documented as a known issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-3634">https://issues.jboss.org/browse/JBPAPP-3634</a> |
| 10173 | JBPAPP-3620 | Will it be before Aug 18? If not, let me know and we can reassign this to TBD EAP 5.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-3620">https://issues.jboss.org/browse/JBPAPP-3620</a> |
| 10174 | JBPAPP-3620 | Hi Marek, are you able to give us any information on this? E.g what changes actually need to be incorporated? Isaac, do you know who in JBDS we could contact for information on this? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBPAPP-3620">https://issues.jboss.org/browse/JBPAPP-3620</a> |
| 10175 | JBPAPP-3620 | Isaac, was the intent behind these two JIRAs similar?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBPAPP-3620">https://issues.jboss.org/browse/JBPAPP-3620</a> |
| 10176 | JBPAPP-3618 | The EWS release will include Tomcat Native 1.1.19. Do we need to be aligned on that version?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-3618">https://issues.jboss.org/browse/JBPAPP-3618</a> |
| 10177 | JBPAPP-3591 | Does this need to be documented for the EAP 4.2.9 and 4.3.8 release notes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBPAPP-3591">https://issues.jboss.org/browse/JBPAPP-3591</a> |
| 10178 | JBPAPP-3591 | Laura, the information about this certification is correctly there, but we need to mention the two issues linked to this one. I changed both to include the "Affects Version" for 4.x series, as they were missing (and weren't included in Release notes probably because of that). So, could you please include them in the Release Notes and assign this issue back to me for verification? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBPAPP-3591">https://issues.jboss.org/browse/JBPAPP-3591</a> |
| 10179 | JBPAPP-3591 | Can we move this to 5.0.2 for tracking purposes now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-3591">https://issues.jboss.org/browse/JBPAPP-3591</a> |
| 10180 | JBPAPP-3529 | Hi Remy, can we avoid making this copy? They may get out of sync again.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBPAPP-3529">https://issues.jboss.org/browse/JBPAPP-3529</a> |
| 10181 | JBPAPP-3529 | Is fixing this really so important ? Not attempting to configure checkInterval would make it default to 0, which would disable background compilation if development is set to false. Moving to the next CR for now.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-3529">https://issues.jboss.org/browse/JBPAPP-3529</a> |
| 10182 | JBPAPP-3499 | Manik, can you let me know any details? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBPAPP-3499">https://issues.jboss.org/browse/JBPAPP-3499</a> |
| 10183 | JBPAPP-3498 | Manik, I need to know if there are any changes required to this document for inclusion in the Enterprise Web Platform. EWP is not meant to expose any remote connections except the web server. Can you tell me which sections need to be removed so that this is the case? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-3498">https://issues.jboss.org/browse/JBPAPP-3498</a> |
| 10184 | JBPAPP-3498 | "Can I run JBoss Cache outside of the JBoss Enterprise Web Platform?" - surely we don't want this? "Can JBoss Cache run as a second level cache inside Hibernate?" - does EWP support hibernate in the first place? If not all of the Hibernate related FAQs can be removed. "Which transaction managers are supported by JBoss Cache?" - does EWP support JTA? Again, these could be removed if unnecessary... HTH Manik                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-3498">https://issues.jboss.org/browse/JBPAPP-3498</a> |
| 10185 | JBPAPP-3498 | Will remove the first. Brian, can you answer the support questions so that I know what to remove?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-3498">https://issues.jboss.org/browse/JBPAPP-3498</a> |
| 10186 | JBPAPP-3498 | "Can JBoss Cache run as a second level cache inside Hibernate?" -- yes, clustered 2nd level caching is supported "Which transaction managers are supported by JBoss Cache?" -- yes, JTA is supported, (although JTS is not)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-3498">https://issues.jboss.org/browse/JBPAPP-3498</a> |
| 10187 | JBPAPP-3498 | I've removed "Can I run JBoss Cache outside of the JBoss Enterprise Web Platform?" Brian, thanks for the quick response. The original content is: Which transaction managers are supported by JBoss Cache? JBoss Cache supports any TransactionManager that is JTA compliant, such as JBoss Transactions. While JBoss Cache does ships with a dummy transaction manager (org.jboss.cache.transaction.DummyTransactionManager), we do not recommend using this for production. It is not thread safe, and is intended for internal testing only. I have added the following: JTS is not supported Java Transaction API (JTA) is supported for use with Enterprise Web Platform. However, Java Transaction Service (JTS) is not supported. Keep this in mind when selecting a transaction manager. Please confirm that this is appropriate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBPAPP-3498">https://issues.jboss.org/browse/JBPAPP-3498</a> |
| 10188 | JBPAPP-3489 | after a manual searching and google site search, javax.transaction:jta:jar:1.0.1B could not be found in: <a href="http://repository.jboss.com/maven2-brew/">http://repository.jboss.com/maven2-brew/</a> and <a href="http://repository.jboss.com/maven2/">http://repository.jboss.com/maven2/</a> could fnasser kindly indicate me where can I find it or is there any better searching tools I can use? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-3489">https://issues.jboss.org/browse/JBPAPP-3489</a> |
| 10189 | JBPAPP-3485 | so, can i resolve this as won't fix?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBPAPP-3485">https://issues.jboss.org/browse/JBPAPP-3485</a> |
| 10190 | JBPAPP-3484 | You're right, I do not like this. Though it has nothing to do with the DTD change. What is the use case for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBPAPP-3484">https://issues.jboss.org/browse/JBPAPP-3484</a> |
| 10191 | JBPAPP-3484 | And have the measured the effect of causing the size of their query plan caches to explode?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-3484">https://issues.jboss.org/browse/JBPAPP-3484</a> |
| 10192 | JBPAPP-3484 | @sebastian I am more concerned with the why, not so much if it is possible (its programming, essentially anything is possible). I hear you saying that the db2 optimizer somehow treats "... where x = ?" differently from "... where x = 'SOME_VALUE'". Is that really what you are saying? What specifically is different? It's able to use an index in one case but not the other? Generally speaking a query optimizer is not about [optimizing results], so I am not really sure what "the optimizer is not able to properly optimize the result for next queries" means. Do you mean that you are asking it hold results for each query and here the "optimizer" is not able to distinguish the "cached results" based on bound parameter values? I am totally guessing here as I am not a db2 user (I have been lucky enough to avoid db2 my whole career) and the database with which I am familiar have a much different usage of the phrase "optimizer" in regards to queries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-3484">https://issues.jboss.org/browse/JBPAPP-3484</a> |
| 10193 | JBPAPP-3484 | Hi Steve, no DB2 in your whole career? Really nice! :) Here's problem with the optimizer: Let's say we have a database table with 500.000 records. 200 records have an index 'a', the rest has an index 'b'. The table is partitioned with this index -> 2 Partitions (a = 200 recs, b=499800 recs). Now you query with "where index=?", ?=a. The optimizer uses a table scan cause there are only 200 records. The access plan is cached. Now you query with "where index=?". ?=b The optimizer should now create a new access plan cause it's better to use the index tree if there are so much records. But there is a cached plan present for query "... index=?" and db2 uses the cached one - and a full table scan is performed. Very, very slow :( If the index-field isn't a parameter-marker db2 uses a new plan every time this query is performed. There's no query plan cache used for db2, thats a bit bad. But the performance improves and costs went down.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBPAPP-3484">https://issues.jboss.org/browse/JBPAPP-3484</a> |

| 10194 | JBPAPP-3484 | I am not sure how this a DB2 or any database specific issue. It is known that with any database there are 'cases' where using a literal value is better than a parameter marker for e.g. ... 'by substituting the actual predicate with a bind variable, you're removing the ability for the optimiser to compare your value with the data distribution in the column, which might make it opt for a full table scan or an index when this isn't appropriate' So the use-case above is one that fits into this category. The simplest solution for these cases is for the application to use a literal value in the query (HQL, Criteria whatever) instead of parameter marker. What is preventing the application from doing this... SQL injection ? I cant see how the index value choice is coming from user input data but even if it is, the app can duly sanitize it. The proposed solution seems a classic example of over engineering to me                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBPAPP-3484">https://issues.jboss.org/browse/JBPAPP-3484</a> |
| 10195 | JBPAPP-3484 | @Sebastian. As mentioned above, i don't think it matters whether this is Oracle or DB2 and also what's preventing the application from using a literal in the HQL or Criteria itself ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBPAPP-3484">https://issues.jboss.org/browse/JBPAPP-3484</a> |
| 10196 | JBPAPP-3484 | Mario, lets take a step back... Would you agree or disagree that this is a database issue? To me it boogles my mind quite honestly that the database does not account for these bind parameters (their values) when determining which execution plan to use, especially when linked to indexed columns, let alone columns used in partitioning.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBPAPP-3484">https://issues.jboss.org/browse/JBPAPP-3484</a> |
| 10197 | JBPAPP-3483 | Documented as a known issue in the EAP 5.0.1 release notes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBPAPP-3483">https://issues.jboss.org/browse/JBPAPP-3483</a> |
