| 6363 | HORNETQ-663 | What's the different between this and HORNETQ-662 ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/HORNETQ-663">https://issues.jboss.org/browse/HORNETQ-663</a> |
| 6364 | HORNETQ-662 | It doesn't hang any more. There are cursors on the page-files now. However dead subscriptions will definitely cause performance issues, as the messages will build up on the folder. However, I'm not sure we can reap dead subscriptions automatically like that. Is this something you mean for rest only?                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/HORNETQ-662">https://issues.jboss.org/browse/HORNETQ-662</a> |
| 6365 | HORNETQ-653 | This is because we changed the functionality to not call listeners on failover, how ever ive been thinking off adding an interface, say FailoverExceptionListener, that extends ExceptionListener so users can still be notified of a failover event. wdyt?                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/HORNETQ-653">https://issues.jboss.org/browse/HORNETQ-653</a> |
| 6366 | HORNETQ-651 | Is HQ 2.3.0 (or later) the version that will go into EAP 6 ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/HORNETQ-651">https://issues.jboss.org/browse/HORNETQ-651</a> |
| 6367 | HORNETQ-651 | This issue is marked as fixed in 2.2.8 but also unresolved. Which is it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/HORNETQ-651">https://issues.jboss.org/browse/HORNETQ-651</a> |
| 6368 | HORNETQ-650 | What's going on with this issue guys?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/HORNETQ-650">https://issues.jboss.org/browse/HORNETQ-650</a> |
| 6369 | HORNETQ-650 | Hi guys, I'm not sure I have any idea about how to do this. Can anyone shed a bit more light on this? Any example in AS7? Thanks Howard                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/HORNETQ-650">https://issues.jboss.org/browse/HORNETQ-650</a> |
| 6370 | HORNETQ-650 | What workaround? Seriously? How hard is it to add a callback interface?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/HORNETQ-650">https://issues.jboss.org/browse/HORNETQ-650</a> |
| 6371 | HORNETQ-650 | why do we have to, its already taken care of, see JMSQueueService                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/HORNETQ-650">https://issues.jboss.org/browse/HORNETQ-650</a> |
| 6372 | HORNETQ-650 | Hi guys, I didn't try this 2.2.5 version yet, but is this change backwards compatible with JBoss6? Do we need to change our hornetq-jboss-beans.xml?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/HORNETQ-650">https://issues.jboss.org/browse/HORNETQ-650</a> |
| 6373 | HORNETQ-640 | Hi Andy, could you provide more info what was done here please? I've just got task to look at this and develop tests for it if necessary. Thank you, Mirek                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/HORNETQ-640">https://issues.jboss.org/browse/HORNETQ-640</a> |
| 6374 | HORNETQ-640 | Thanks Andy for quick answer. Is there also a situation when xa recovery resource is unregistered from transaction manager?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/HORNETQ-640">https://issues.jboss.org/browse/HORNETQ-640</a> |
| 6375 | HORNETQ-626 | I've just noticed that IDEA has shuffled around the import statements a fair bit. I used the existing IDEA project file that is checked in to svn, but this appears to have code style settings that don't match the source formatting. Is this an issue? Does someone have an (or is able to update the existing) ipr file with the correct settings? If so I'll update the patch with the corrected imports.                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/HORNETQ-626">https://issues.jboss.org/browse/HORNETQ-626</a> |
| 6376 | HORNETQ-580 | Clebert, what's the JIRA id for the duplicate? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/HORNETQ-580">https://issues.jboss.org/browse/HORNETQ-580</a> |
| 6377 | HORNETQ-569 | Clebert, can you please check if this could go into 2.3? The effort seems to be rather small but the benefit is much higher. We need this for statistical purposes. Otherwise we must patch this by ourselves what we want to avoid. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/HORNETQ-569">https://issues.jboss.org/browse/HORNETQ-569</a> |

| 6378 | HORNETQ-569 | Justin, many thanks for jumping in an providing a quality implementation including proper documentation and unit tests! Please let me ask a few questions regarding the implementation. Is my general understanding of the interceptors (incoming and outgoing) correct that the return value is used to combine two separate semantics in one: a) determine whether the next interceptor in the chain shall be called (if present) b) determine whether the packet processing shall be continued or aborted So for example in order to skip processing of an incoming message (packet), an interceptor has to return false. What are use cases to do the same on the outgoing message? I noticed the different implementations of blocking and non-blocking processing of outgoing packets #send versus #sendBlocking regarding interceptor evaluation. While in the non-blocking send the execution is just skipped using a return statement, in the non-blocking implementation an IllegalStateException is thrown if an interceptor returns false. Who is supposed to handle/receive this exception and what is the intended purpose? Is it considered to be a programming error if an interceptor returns false to abort any blocking send call (and this runtime exception will rush through the different layers up to the API consumer) or will any above layer handle the runtime exception and convert it to a checked HornetQException? In any case I think the error message "Interceptor failed" could be a bit misleading. If there is an error in the interceptor implementation causing an exception, this will only be logged and have no impact on both interceptor chain and packet processing - it will just be continued. If the interceptor intentionally returns false to abort, I think in both cases the message could give a better indication about the actual purpose. | <a href="https://issues.jboss.org/browse/HORNETQ-569">https://issues.jboss.org/browse/HORNETQ-569</a> |
| 6379 | HORNETQ-563 | Please, always discuss issues on the user's forum before open them... Also: can ou provide a testcase?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/HORNETQ-563">https://issues.jboss.org/browse/HORNETQ-563</a> |
| 6380 | HORNETQ-562 | This description makes it sound like additional tests for STOMP are some sort of feel-good measure. I think my tickets HORNETQ-726 and HORNETQ-742 show that clearly there are important cases not covered by the tests. Is hornetQ STOMP support not intended for production use?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/HORNETQ-562">https://issues.jboss.org/browse/HORNETQ-562</a> |
| 6381 | HORNETQ-556 | Isn't this fixed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/HORNETQ-556">https://issues.jboss.org/browse/HORNETQ-556</a> |
| 6382 | HORNETQ-547 | When will the Version2.3 come to release? Hope the Version2.3 will include the function.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/HORNETQ-547">https://issues.jboss.org/browse/HORNETQ-547</a> |
| 6383 | HORNETQ-542 | What is your expected semantics for this? Having the sender's username or the current user's. If it's the current user on the session of the receiver (like you're proposing), I see no point on this feature. As for the sender's user... you could achieve this with an interceptor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/HORNETQ-542">https://issues.jboss.org/browse/HORNETQ-542</a> |
| 6384 | HORNETQ-515 | You could just have three values of signature, i.e. signature="queue topic generic" where the default is generic. I'm guessing xa should be an element rather than an attribute. Wdyt? Also, I don't think delegation is necessary. Simply keep the current HornetQConnectionFactory class, but create a set of sub classes, HornetQQueueConnectionFactory, HornetQTopicConnectionFactory, HornetQXAConnectionFactory, HornetQXAQueueConnectionFactory, HornetQXATopicConnectionFactory which do not have any methods but simply implement the appropriate interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/HORNETQ-515">https://issues.jboss.org/browse/HORNETQ-515</a> |
| 6385 | HORNETQ-510 | This may not be a bug, but it definitely is restriction that serves no purpose. The spec does state that setClientId must be the first thing that must be called. But its vague in the sense that it does not explicitly define what cannot be called before a call to setClientId is made. For example, would a call to "<connection>.toString()" also prevent subsequent calls to setClientId? I am guessing that the intent of the spec is to ensure that setClientId() cannot be called after any sessions have been opened from the connection. Restricting the sequence of getClientId followed by setClientId serves no purpose. This seems to be same conclusion that folks at Weblogic, SunMQ, and Tibco EMS have come to.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/HORNETQ-510">https://issues.jboss.org/browse/HORNETQ-510</a> |
| 6386 | HORNETQ-462 | Andy, do you have an outline for this chapter? Can I help in any way?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/HORNETQ-462">https://issues.jboss.org/browse/HORNETQ-462</a> |
| 6387 | HORNETQ-447 | What is this task? It seems very hand wavy and general. Please can we have a proper title and description, I have no idea what it involves.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/HORNETQ-447">https://issues.jboss.org/browse/HORNETQ-447</a> |
| 6388 | HORNETQ-446 | Clebert, the only thing I see these changes impacting is the release notes. Do you see any of these subtasks adding/removing from the current HornetQ User Guide?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/HORNETQ-446">https://issues.jboss.org/browse/HORNETQ-446</a> |
| 6389 | HORNETQ-426 | Hi guys, as far as I know tim is not working on this anymore and the 2.1.1 fix version seems weird to me since hornetQ 2.1.1 is released. Can someone plus reassign and update this ticket? Also, deploying that on the main maven repository would be needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/HORNETQ-426">https://issues.jboss.org/browse/HORNETQ-426</a> |
| 6390 | HORNETQ-426 | Cool, good to hear! Can you change the fix version then?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/HORNETQ-426">https://issues.jboss.org/browse/HORNETQ-426</a> |
| 6391 | HORNETQ-426 | come on guys. Is it that hard to get the proper poms metadata? Can I help?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/HORNETQ-426">https://issues.jboss.org/browse/HORNETQ-426</a> |
| 6392 | HORNETQ-416 | To add more details around this feature request. What is desired is that ability to retrieve back: - a list of connections and connection data that includes connection id (a unique identifier for this connection), client IP, jms user id with which client connected, JMS clientid - a list of sessions and session data that includes the connection id, session id (a unique identifier for this session), session mode (transacted or non-transacted) - a list of producers and producer data that includes session id and/or connection id, destination name, producer id - a list of consumers and consumer data that includes session id and/or connection id, destination name, consumer id, boolean indicating if its durable or not, durable subscription name.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/HORNETQ-416">https://issues.jboss.org/browse/HORNETQ-416</a> |
| 6393 | HORNETQ-402 | Andy, it looks like Tim has outlined the features you plan to implement in the thread - do you have an outline of the changes to your documentation with these updates?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/HORNETQ-402">https://issues.jboss.org/browse/HORNETQ-402</a> |
| 6394 | HORNETQ-394 | Why is this appropriate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/HORNETQ-394">https://issues.jboss.org/browse/HORNETQ-394</a> |
| 6395 | HORNETQ-393 | Ive been playing around with this today by pulling out network cables etc and cant seem to recreate the issue. Each lookup creates a new initial context and does a lookup. If there are network issues at this point then this will throw a network exception with a no route to host and retry as per the normal code. For this to hang the network would have to go down in a very small window, after the lookup had hit the server but before the response had been returned. I'm not sure if this would actually hang either as its difficult to recreate. Terry, how were you actually seeing this happen?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/HORNETQ-393">https://issues.jboss.org/browse/HORNETQ-393</a> |
| 6396 | HORNETQ-392 | I know Andy added more tests, so I'm closing this as done. @Andy: You can never have enough tests ;- ) but if you want more, can you add a new task for 2.3.0 please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/HORNETQ-392">https://issues.jboss.org/browse/HORNETQ-392</a> |
| 6397 | HORNETQ-374 | there is already documentation for STOMP (in interoperability.xml). Do you want to move it to its own section?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/HORNETQ-374">https://issues.jboss.org/browse/HORNETQ-374</a> |
| 6398 | HORNETQ-340 | Andy, Finally got around to testing this under TRUNK, and the patch seems to fix the problem. Many thanks. Is this going to be added to the next release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/HORNETQ-340">https://issues.jboss.org/browse/HORNETQ-340</a> |
| 6399 | HORNETQ-329 | @Bill: I believe you created some sort of Pool at your spring integration (as far as i remember from the SVN commits) Can you assign it me back please if you didn't? Or close it if you did it please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/HORNETQ-329">https://issues.jboss.org/browse/HORNETQ-329</a> |

| 6400 | HORNETQ-323 | It's not a patent issue. Patents and copyrights are quite different things. What does Red Hat use in other documentation? Are you 100% sure there are no free fonts available?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/HORNETQ-323">https://issues.jboss.org/browse/HORNETQ-323</a> |

| 6402 | HORNETQ-323 | Did you ask the Red Hat documentation team what they use? No I didn't. I'll ask them if they can help.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/HORNETQ-323">https://issues.jboss.org/browse/HORNETQ-323</a> |
| 6403 | HORNETQ-316 | Hi Howard! Do you have an outline of the config documentation this will require? Can I give you a hand with anything?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/HORNETQ-316">https://issues.jboss.org/browse/HORNETQ-316</a> |
| 6404 | HORNETQ-316 | JGroups (and so Infinispan) have implemented various strategies which work fine on AWS (and others), and more are coming, wouldn't it make sense to reuse the same code? In all cases I'd love to use HornetQ with applications which also use Infinispan and JGroups, so it would be great if the cluster discovery was consistent across all involved technologies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/HORNETQ-316">https://issues.jboss.org/browse/HORNETQ-316</a> |
| 6405 | HORNETQ-316 | Hi Paul, I haven't got time working on it yet. If you have a working solution, that's great. Would you mind put your here for discussion purpose? Thanks, Howard                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/HORNETQ-316">https://issues.jboss.org/browse/HORNETQ-316</a> |
| 6406 | HORNETQ-316 | Hi Clebert, that sounds great. I've been trying to work the JGroups Discovery through trunk, but it's very tightly coupled. A Discovery abstraction will be very useful. What's the timeline for releasing with the Discovery abstracted? Also, where is the abstracted Discovery code at so I can code up a JGroups implementation for you? Thanks, Paul.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/HORNETQ-316">https://issues.jboss.org/browse/HORNETQ-316</a> |
| 6407 | HORNETQ-316 | Cool... where's the dev thread at? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/HORNETQ-316">https://issues.jboss.org/browse/HORNETQ-316</a> |
| 6408 | HORNETQ-316 | Will this be released with 2.3? Is there any work that needs to be done that I can help with?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/HORNETQ-316">https://issues.jboss.org/browse/HORNETQ-316</a> |
| 6409 | HORNETQ-302 | How is this different to creating queues using JMX, Jconsole connected to HornetQ broker? I don't remember having to specify explicitly the configuration attributes.. but I could be forgetting                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/HORNETQ-302">https://issues.jboss.org/browse/HORNETQ-302</a> |
| 6410 | HORNETQ-302 | Judging from the issue on the JMS Spec, it seems that they agreed to the changed in the docs for JMS 2.0. How does this leave this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/HORNETQ-302">https://issues.jboss.org/browse/HORNETQ-302</a> |
| 6411 | HORNETQ-279 | Isn't this already done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/HORNETQ-279">https://issues.jboss.org/browse/HORNETQ-279</a> |
| 6412 | HORNETQ-273 | How is this different from HORNETQ-255 ? Why has a new JIRA been opened?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/HORNETQ-273">https://issues.jboss.org/browse/HORNETQ-273</a> |
| 6413 | HORNETQ-255 | there is indeed a problem with the server resources. here is the scenario: the client deletes the temp queue -> the server will handle the destruction and remove the resources associated to the queue (credit managers, paging store) the client closes the producer -> the client producer will release its outstanding credits -> the server session will handle the request and calls getCreditManagerHolder() -> this method will recreate a paging store and the CreditManagerHolder for the temp queue which was deleted. These resources will then remain in the server forever and accumulate until a OOME occurs. I'm not sure what is the proper fix but we should be more careful about creating server resources when calling getCreditManagerHolder(). E.g. shouldn't we check that there are queues bound to the address before calling this method?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/HORNETQ-255">https://issues.jboss.org/browse/HORNETQ-255</a> |
| 6414 | HORNETQ-243 | Thanks for responding Tim. Maybe, I am having difficulty finding the information I need then in the documentation. Other than specifying hornetq-queues.xml within the classpath when starting up JBoss, can you explain how HornetQ can load 2 separate (different named) XXX-jms.xml and possibly 2 separate XXX-configuration.xml files that complement each other? Again, we are trying to keep all of our application specific configurations separate from the default that installed in the deploy\hornetq.sar deployment in JBoss. Thanks, Dave                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/HORNETQ-243">https://issues.jboss.org/browse/HORNETQ-243</a> |
| 6415 | HORNETQ-229 | Hi Andy, Excellent work ... pulled it down and am playing with it now. Why have I reopened the ticket? The second example in the messages.xml file examples.message-group2 isn't in the examples.xml (I'm guessing on this) file so when the pdf doc generates you get a ??? instead of a reference to the example. Please let me know if you need any more information. Cheers, Brian.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/HORNETQ-229">https://issues.jboss.org/browse/HORNETQ-229</a> |
| 6416 | HORNETQ-216 | I am confused about what you are suggesting here. Can you outline what test you would like to see, then I can tell you if we already have it. Not sure what you mean by "There is no sync on sendMessages on the Bridge".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/HORNETQ-216">https://issues.jboss.org/browse/HORNETQ-216</a> |
| 6417 | HORNETQ-216 | By "There is no sync on sendMessages on the Bridge" I mean, the Bridge will use setBlockOnTransaction(false). I was referring this will be probably be ok since it uses the SendAckHandler. Also, All I'm saying is I didn't find a test validate message consistency after failover on the Bridge. So that would mean.. we don't have a test to support it works. This task is about making sure we have a test. All the failover tests I found so far were about reconnecting the bridge, and not over consistency on the message transfers. Then is simple.. or we have a test, on this case I just couldn't see it and we don't have an issue and we just reject this issue. (no postponing needed) Or we don't have it on which case we need to write tests where a failure happens *while* messages are being transferred through the bridge and we validate consistency here. On which case I wouldn't suggest postponing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/HORNETQ-216">https://issues.jboss.org/browse/HORNETQ-216</a> |
| 6418 | HORNETQ-195 | Isn't there a chicken-and-egg thing here? We need the Ant libs to run the Ant script which invokes Maven which will download the library files. We cannot remove the Ant libs and let Maven download them only when (if?) our build setup use Maven as its top build tool.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/HORNETQ-195">https://issues.jboss.org/browse/HORNETQ-195</a> |
| 6419 | HORNETQ-195 | The build script would call mvn initialize first which downloads the packages, you then set ant home to .m2/and whatever and then run ant, i think? tbf, i think we should totally mavenize the build when we have time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/HORNETQ-195">https://issues.jboss.org/browse/HORNETQ-195</a> |
| 6420 | HORNETQ-195 | should this really be done for 2.1.0.CR1 or can it be postponed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/HORNETQ-195">https://issues.jboss.org/browse/HORNETQ-195</a> |
| 6421 | HORNETQ-193 | wow.. you're fast! I will review this weekend.. I have taken a quick look and it looks good.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/HORNETQ-193">https://issues.jboss.org/browse/HORNETQ-193</a> |
| 6422 | HORNETQ-191 | Is this part of the Failover improvements? It should probably be a sub task then?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/HORNETQ-191">https://issues.jboss.org/browse/HORNETQ-191</a> |
| 6423 | HORNETQ-189 | All in all the patch looks good. I had to tweak a few things to get your example to work, classpath etc and actually it never received the incoming tweet. u may need to check this. also the post office api had changed so i had to change your code slightly. Here are a few minor issues 1. Make sure all your parameters and fields are final where appropriate, i noticed a few places where they weren't 2. I notice in OutgoingTweetsHandler constructor you set up quite a bit stuff, maybe this would be better in the start method. Also in OutgoingTweetsHandler whats the reason for creating a temp queue if it doesn't exist, should this just throw an error? 3. i noticed a few format differences with 'catch(Exception e)' should be on a new line. 4. in OutgoingTweetsHandler handle you are ignoring a few exceptions, is there a better way to do this. 5. IncomingTweetsHandler same as point 2 6. a few magic numbers, i.e. this.paging.setCount(1); and ServerMessage msg = new ServerMessageImpl(this.storageManager.generateUniqueId(), 50);, make these and any others constants or reuse existing constants. 7. The example and test use the titter hornetq account i guess u created. The tests may not work on hudson because of firewall restrictions and i am not sure whether having a public account is a good idea. Is there any way to use a fake twitter URL that we can fake. Might be best to raise this issue on the dev forums and we can all discuss it. | <a href="https://issues.jboss.org/browse/HORNETQ-189">https://issues.jboss.org/browse/HORNETQ-189</a> |

| 6424 | HORNETQ-176 | Do you think you could provide a testcase for it? Also.. there is some code for that on the HornetQMessage. Basically, we just need to move that to the CoreMessage. IMO the code should also deal with conversions. and the test should also do it. This should be a quick change. Let me know if you can do it...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/HORNETQ-176">https://issues.jboss.org/browse/HORNETQ-176</a> |
| 6425 | HORNETQ-174 | Does the paging manager already contain this information? If not, how will you compute it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/HORNETQ-174">https://issues.jboss.org/browse/HORNETQ-174</a> |
| 6426 | HORNETQ-174 | Bijith, could you attach a patch instead of the files? svn diff > HORNETQ-174.diff It is easier for us to review and apply your changes with a patch.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/HORNETQ-174">https://issues.jboss.org/browse/HORNETQ-174</a> |
| 6427 | HORNETQ-173 | > > Not sure what you mean "the default behaviour is significantly flawed". > Then run the attached program with the line "cf.setBlockOnPersistentSend(true);" commented out and see yourself what happens after the HornetQ server is shut down. > > Bear in mind that: > > a) HornetQ is not just a JMS system. Many users are not interested in strict JMS compliance. However, do not forget that many users are interested in strict JMS compliance! Actually I think that if the users choose to use the JMS API, they usually appreciate the proper implementation (according the the JMS specification). > > 2) With the default setting of block-on-persistent-send set to false, as I have mentioned before, coupled with asynchronous send acknowledgements (read the user manual) you can get much higher throughput without losing any of the once and only once guarantees you get with blocking. This is certainly not "flawed" Of course that in this scenario there is nothing flawed. I was writing about a different scenario - behaviour of MessageProducers when the connection to the server fails. > Different users require different things, some want JMS compliance, some don't. The point of HornetQ is that it is configurable to all these types of users, but to say one way is "correct" and another is not is ridiculous. > I completely agree with you that it is nice to have a configurable behaviour, so that users can configure what suits them best. If somebody is willing to change the architecture of the application to be able to benefit from the improved performance of asynchronous send acknowledgements, let them do it. Feel free to make the default parameters whatever you think is the best for your proprietary core API. However, when you claim that HornetQ supports an industry standard API (JMS), I do not understand why you don't provide the proper default behaviour which is required by the API specification. Should I understand it so that you are knowingly trading improved performance for decreased reliability and violation of the JMS API specification? That would seem to be a terribly wrong decision to me... Let me sum it: I think that if you claim that HornetQ is JMS compliant, you should do your best to have the default settings for the JMS clients as conforming to the JMS specification as possible. Sure, make it configurable to be able to do many weird things, many advanced users appreciate it, but do not let the basic users who use the default settings to fall into some stupid trap like losing messages because of some ridiculous performance improvements... The reliability should be the basic requirement of any serious messaging system IMO. | <a href="https://issues.jboss.org/browse/HORNETQ-173">https://issues.jboss.org/browse/HORNETQ-173</a> |
| 6428 | HORNETQ-161 | fixed in the trunk. (see changelog) The jms/embedded example demonstrates the POJOification of the JMS server config. Kenny, could you have a look at the jms/embedded example to check that this new way to configure would work fine with Spring? Please close this issue if that's fine for you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/HORNETQ-161">https://issues.jboss.org/browse/HORNETQ-161</a> |
| 6429 | HORNETQ-161 | Would this mean that the use of hornet-jms.xml would no longer be necessary? The jms/embedded example still uses hornet-jms.xml, but then instantiates a Destination POJO which refers to the destination that had been previously configured in that file.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/HORNETQ-161">https://issues.jboss.org/browse/HORNETQ-161</a> |
| 6430 | HORNETQ-157 | Did you envision to use a different mbean server for each embedded hornetq server? I understand your use case but I think this would make the API more brittle as the JMX clients would have to be aware of the specific domain name as opposed to only connect to different mbean servers. wdyt?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/HORNETQ-157">https://issues.jboss.org/browse/HORNETQ-157</a> |
| 6431 | HORNETQ-128 | Is there any news on that implementation? IMO web-socket is still not production ready and comet (for example with netty nio) fits the current mainstream need well.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/HORNETQ-128">https://issues.jboss.org/browse/HORNETQ-128</a> |
| 6432 | HORNETQ-126 | I believe that the spec has been released is there any more talk about implementing amqp? We are looking at ways we can implement messaging between a .net system and a java system. We originally chose hornetq with this in mind, because at that point it was on the HornetQ's future radar and we didn't need it at the time. Now about a year later we are starting to get to the point that it is on our radar to do. An all of the possibilities are getting put on the table (Using Stomp, Replacing HornetQ, Use rest). I personally would not like to have to throw away our investment around hornetq. We are sending serialized protocol buffer objects as the body of the messages, and would really like a protocol the fully supported binary messaging. Are there any thoughts or timeframes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/HORNETQ-126">https://issues.jboss.org/browse/HORNETQ-126</a> |
| 6433 | HORNETQ-89  | Jeff does it mean that the persistence part will be implemented for 2.3.0.Final?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/HORNETQ-89">https://issues.jboss.org/browse/HORNETQ-89</a>   |
| 6434 | HORNETQ-82  | In release for JBoss AS 6.1.0, this release seems to be broken again, as although the JMX console and the Administrative console both report that the queue is in a Paused state, the subscribers are still able to consume from the queue. Is this behavior as expected? Looking back at JbossMessaging, when "Start/StopDelivery" modes were activated, the queue could still receive objects, but those objects could not be consumed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/HORNETQ-82">https://issues.jboss.org/browse/HORNETQ-82</a>   |
| 6435 | HORNETQ-77  | Is this issue fixed in 2.3.0 RC1 ? Rajika                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/HORNETQ-77">https://issues.jboss.org/browse/HORNETQ-77</a>   |
| 6436 | HORNETQ-72  | Thanks for that Tim. Let me run it back at you to be sure I understand the caveat. When we use this "local VM object ref" feature, it would be wise to destroy the message immediately after send to avoid any misadventant change to the message, correct? P.S. When do you anticipate 2.0 Beta to be available? And will 2.0 be shipping with EAP 5.0? Cheers                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/HORNETQ-72">https://issues.jboss.org/browse/HORNETQ-72</a>   |
| 6437 | HORNETQ-72  | Would be great to have this evolution in a next version of HornetQ (another JMS implementation offers this kind of feature). Performances are really important in my current project. Is it possible to reopen this bug ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/HORNETQ-72">https://issues.jboss.org/browse/HORNETQ-72</a>   |
| 6438 | HORNETQ-67  | Hmmm, Jeff Mesnil sent me an email saying: "Hi Galder, We're preparing the release of JBoss Messaging and there is this old issue you reported. Is it still a concern for you? If it is, I'll fix it for JBM 2.0 otherwise, can you close it? thanks, jeff ~ Jeff Mesnil <jmesnil@redhat.com> Core Developer (JBoss Messaging) JBoss by Red Hat" It's not a concern for me any more, hence I closed it :) Maybe Jeff should talk to you instead? :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/HORNETQ-67">https://issues.jboss.org/browse/HORNETQ-67</a>   |
| 6439 | HORNETQ-67  | What is the target ant version? JBMESSAGING-725 refers to version 1.65. Is that still the plan?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/HORNETQ-67">https://issues.jboss.org/browse/HORNETQ-67</a>   |
| 6440 | HORNETQ-67  | Thanks Ben- Could you attach patch files for the changes? as it's a harder to see what has changed otherwise. Thx                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/HORNETQ-67">https://issues.jboss.org/browse/HORNETQ-67</a>   |
| 6441 | HORNETQ-67  | Ben - question on your patch- Why are you requiring that JAVA_HOME is set?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/HORNETQ-67">https://issues.jboss.org/browse/HORNETQ-67</a>   |
| 6442 | HORNETQ-67  | Ben- I have made the changes so all the examples now also use the distributed ant. I also updated all the examples readmes that referred to the old way of building and also the documentation (user manual and quick start). I don't actually have Windows here, so I was only able to test on Linux. Could you test everything seems ok on Windows - including running the examples both from inside TRUNK and the distro? If all is ok, we can then close the task.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/HORNETQ-67">https://issues.jboss.org/browse/HORNETQ-67</a>   |
| 6443 | HORNETQ-62  | Can we close this ticket? JBAPP-7083 shows the trace is added.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/HORNETQ-62">https://issues.jboss.org/browse/HORNETQ-62</a>   |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | URL                                                                                                         |

| 6444 | HORNETQ-36     | Hi Tim, We have a similar requirement and I see you mentioning, this is already possible MDBs - Can you please throw some light on this. Awaiting your response. My issue is similar to the above and as mentioned in here - <a href="https://community.jboss.org/message/748220">https://community.jboss.org/message/748220</a> From WS: <a href="http://pic.dhe.ibm.com/infocenter/wasinfo/v6r0/index.jsp?topic=%2Fcom.ibm.websphere.nd.doc%2Finfo%2Fae%2Fae%2Ftjt0007_.html">http://pic.dhe.ibm.com/infocenter/wasinfo/v6r0/index.jsp?topic=%2Fcom.ibm.websphere.nd.doc%2Finfo%2Fae%2Fae%2Ftjt0007_.html</a> -Jain                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/HORNETQ-36">https://issues.jboss.org/browse/HORNETQ-36</a>         |
| 6445 | HORNETQ-34     | One thought here. Would it be possible to have this functionality working across a cluster too? I.e. all messages sent using a particular value of JMSXGroupid go to the same consumer on the cluster?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/HORNETQ-34">https://issues.jboss.org/browse/HORNETQ-34</a>         |
| 6446 | HORNETQ-32     | Sorry to Correct, The current functionality is Queue - exception is thrown with a descriptive message when the message is put on the queue. Topic - Message is dropped due to the implementation of the Topic. That is the only case where we actually just drop the message. The current functionality works, but I see the following problems with it... 1. Hard to execute custom logic when you hit MaxSize a. When an exception is thrown for a Queue add and the max hits, a very generic jms exception is thrown. There's little way to know what the problem is without having to parse the exception message.. b. when an exception is thrown for a Topic, since each subscription is a queue, the way that it happens gives no way to find out that you hit max size in any of the subscriber queues 2. I'm not sure hitting max size represents an exception after thinking about it. IMO: Hitting max size is a rule, not an exception state. 3. Using an exception for max size will possibly make users embed some part of their business flow into an exception logic. For instance if they want to send a mail or put the message in another queue, they will have to embed that business flow wherever they have logic to put something on a queue. This would lead to spreading logic in a lot of different places. For these reasons, it seems that some cross cutting solution needs to be done. I can only think of the two already listed(make an overflow queue, add a place where we could put a point cut for aop). The question that I have is for a topic. Since each subscriber queue will get the Max size, if I have 100 subscriptions, will that mean if we 1. use the overflow, we will put a message in the overflow for each subscription(there will be 100 of them) 2. use the overflow, would we need to keep track of the subscriptions that didn't get it and the ones that did? 2. use the aop, we will call the pointcut 100 times. I'm sure these are some of the difficulties that this design has also raised in the past. Jay:) | <a href="https://issues.jboss.org/browse/HORNETQ-32">https://issues.jboss.org/browse/HORNETQ-32</a>         |
| 6447 | HORNETQ-32     | When the "drop-messages-when-full" option is enabled, will it be possible to detect when messages are dropped? If not, then would it be possible to please reopen this Jira? The motivation behind the request is as follows. For non-durable subscribers, we would typically prefer to drop messages, rather than page, for performance reasons. Therefore, I expect the "drop-messages-when-full" setting would be useful here. However, we need to detect this situation and take the appropriate corrective action (e.g. raise a system alarm). Also, more generally, for any subscriber (durable or non-durable) we ultimately need to limit the use of physical resources, whether that be a database or file system. Therefore, at some point, messages will be dropped, with a similar requirement to detect that this has occurred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/HORNETQ-32">https://issues.jboss.org/browse/HORNETQ-32</a>         |
| 6448 | HORNETQ-31     | From a user perspective I have a problem on my hand if I cannot accurately determine the number of messages on a single JMS destination. And it should be a single operation. That is one should not have to get the MessageCount from the address and the MessageCount from the JMS queue or topic to come up with the "real" count. Assuming that there are no filtering rules in place, the message count attribute for the JMS queue or topic should be the total number of messages that were published to the JMS destination. Your original plan was to add a MessageCount attribute to the Address mbean with the intent that a user could make the calculation: Total Messages on Single JMS destination = MessageCount from Queue/Topic + MessageCount from Address Why can we not change this so that the MessageCount attribute of the Queue/Topic includes the MessageCount from the Address?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/HORNETQ-31">https://issues.jboss.org/browse/HORNETQ-31</a>         |
| 6449 | HORNETQ-31     | How would this MessageCount attribute work for a address corresponding to a JMS topic that has multiple durable subscriptions? At this time there is only one address for each JMS topic, irrespective of the number of durable subscriptions. So would there be just a single MessageCount for the entire address or would we get different counts for each durable subscription?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/HORNETQ-31">https://issues.jboss.org/browse/HORNETQ-31</a>         |
| 6450 | HORNETQ-31     | If counting the messages isn't possible that easily, what about some kind of processing time (i.e. time a message was queued) measuring? JMS messages already have the JMSTimestamp field (HornetQMessage appear to have something similar, too), all we need would be some code that calculates the processing time as soon as a message is being received resp. acknowledged/committed (TBD) by the client. The values could be exposed per address/queue/topic-subscriber via JMX. It would be nice, if the average processing time in the past 1, 5, 15 minutes or so could be reported to get some kind of trend information. It would be nice as well, if there would be dedicated values for messages, that haven't been scheduled and for messages that have been scheduled to get realistic values.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/HORNETQ-31">https://issues.jboss.org/browse/HORNETQ-31</a>         |
| 6451 | DEVELOPER-4315 | [~paul.robinson] [~adelaarreola] [~jessk] - This is important...can we get it in the sprint ASAP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-4315">https://issues.jboss.org/browse/DEVELOPER-4315</a> |
| 6452 | DEVELOPER-4315 | [~james.cobb] when does it need to go live? [~adelaarreola] can you make this a high priority once its ready to implement?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-4315">https://issues.jboss.org/browse/DEVELOPER-4315</a> |
| 6453 | DEVELOPER-4315 | [~paul.robinson] - ASAP... Can we have it for Monday (July 24th)? [~jessk] - This ok with you? [~adelaarreola] - Here is the mockup: <a href="http://design.jboss.org/redhatdeveloper/marketing/eap7_cheatsheet/website/images/RHDP_hero_introEAP7cheatsheet_r1v1.png">http://design.jboss.org/redhatdeveloper/marketing/eap7_cheatsheet/website/images/RHDP_hero_introEAP7cheatsheet_r1v1.png</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-4315">https://issues.jboss.org/browse/DEVELOPER-4315</a> |
| 6454 | DEVELOPER-4315 | [~james.cobb] I added the horizontal repeat and forced the height to be same as image, can you check that it looks as it should on smaller windows? Here is a link to review: <a href="https://developers-pr.stage.redhat.com/pr/1958/export/">https://developers-pr.stage.redhat.com/pr/1958/export/</a> [~jessk] I used /cheat-sheets/advanced-red-hat-jboss-enterprise-application-platform-7/ as the CTA link, is this the correct one? thanks :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-4315">https://issues.jboss.org/browse/DEVELOPER-4315</a> |
| 6455 | DEVELOPER-4315 | [~adelaarreola] - The desktop looks good but on the smaller sizes, they aren't designed to repeat. Can we use the existing scaling method for tablet and mobile?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-4315">https://issues.jboss.org/browse/DEVELOPER-4315</a> |
| 6456 | DEVELOPER-4281 | Because of the current status of the Adobe Implementation we are not able to do this. A few words from Marcia on this subject "We use Clicktale to track scrolling on a page. We use Adobe Analytics to capture previous page scroll. If we did use Adobe Analytics, it would mess up the Bounce rate on the page. If someone came to an Article and scrolled all the way down and then left, that would be considered a Bounce because the didn't interact with the page to move to another page. If there was a link tracking server call that fires at the bottom of the page, then Adobe doesn't consider that a bounce because two server calls fired. One on page load and one on link track to capture scroll. Also, we would have to put something in place to only fire that link tracking once as it could fire more than once if the person scrolled up and back down again. "                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-4281">https://issues.jboss.org/browse/DEVELOPER-4281</a> |
| 6457 | DEVELOPER-4281 | How about we have a 'page read' event that the page fires (once) when the Javascript thinks the person has read the page? Would this work around the Workspace limitation of no "greater than" comparisons?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-4281">https://issues.jboss.org/browse/DEVELOPER-4281</a> |

| 6458 | DEVELOPER-4280 | Is it possible to take the feedback on Mondays and implement them the same day? If not I can hold on sending the deck out until you are able to implement up until, say, Wednesday. I'd like to think that most of these things are a top priority and I believe many of the requests are do-able within a few hours. That requires you have the time put aside to do them Monday (and possibly Tuesday), let me know if you don't have that time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-4280">https://issues.iboss.org/browse/DEVELOPER-4280</a> |
| 6459 | DEVELOPER-4280 | I don't have any free time to do this on Mondays. Could we discuss to move our Friday meeting to Thursday to have a bit more time to have able to prepare any remaining items before Monday? Thus we probably won't need to make changes on the same day as the Monday Metrics meeting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-4280">https://issues.iboss.org/browse/DEVELOPER-4280</a> |
| 6460 | DEVELOPER-4254 | [~ldary]: expecting a user to have a YouTube channel, in order to join the chat, seems to much to expect. Am I miss-understanding?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-4254">https://issues.iboss.org/browse/DEVELOPER-4254</a> |
| 6461 | DEVELOPER-4243 | [~hwindzio][~jessk] - I moved this to DEVELOPER because it's website related. On the URL: Currently, the URL "/events/javaone/" redirects to "/events/javaone/2015/" [~jessk] - The graphic header was intentionally year neutral. Do we want to reuse this or replace it with one for 2017?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-4243">https://issues.iboss.org/browse/DEVELOPER-4243</a> |
| 6462 | DEVELOPER-4238 | Yep. [~visuale] - Can you take a look at fixing this? Should be straight forward. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-4238">https://issues.iboss.org/browse/DEVELOPER-4238</a> |
| 6463 | DEVELOPER-4238 | Sorry, I forgot to note that I had changed this script several days ago. The 'cancel reply' links now start with /blog. Have the 404 errors ceased?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-4238">https://issues.iboss.org/browse/DEVELOPER-4238</a> |
| 6464 | DEVELOPER-4231 | [~tnolan] Hello Tiffany, does the blog hyperlink color scheme match the rules now? I think most of this was already up to spec but the blue link color now applies to the sidebar as well. I'm not exactly sure if I'm getting the accessibility-focus correct, though.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-4231">https://issues.iboss.org/browse/DEVELOPER-4231</a> |
| 6465 | DEVELOPER-4228 | Thanks [~visuale]. Can you let us see a preview of what this will look like, when you get chance? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-4228">https://issues.iboss.org/browse/DEVELOPER-4228</a> |
| 6466 | DEVELOPER-4219 | [~lkoranda] Lukas, To make it easy for me to develop the Ansible playbooks that provide the configuration to our main Jenkins slave, I was going to create a simple development environment that can be used locally for easy development and testing. I was planning on using a Vagrant environment with a CentOS 7 VM and the Ansible provisioner to be able to do this. Vagrantfile would be committed into GitHub so that it can be easily shared with other team members. Are you happy with that approach? cheers, Rob                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-4219">https://issues.iboss.org/browse/DEVELOPER-4219</a> |
| 6467 | DEVELOPER-4218 | [~visuale], [~paul.robinson] - Sorry I totally missed this JIRA. Agree with Paul I don't think we need it here. Would it be helpful for bloggers and audiences to be able to list out expertise areas?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-4218">https://issues.iboss.org/browse/DEVELOPER-4218</a> |
| 6468 | DEVELOPER-4218 | [~visuale] Thinking they should be able to pick from our standard categories but also have option to add some in. Will that work?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-4218">https://issues.iboss.org/browse/DEVELOPER-4218</a> |

Please can you take this into account when doing sprint planning?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-4204">https://issues.iboss.org/browse/DEVELOPER-4204</a> |
| 6470 | DEVELOPER-4202 | [~hwindzio] I have the first draft of some content for when a user comes to the Search page without entering a search yet. For example, this could happen if a user "hacks" the URL and just tries to go to /search. Currently, if this happens, a search is performed that pulls in ALL the results across the site. I do not feel like this is a good use of server resources and it is not helpful to the user to just get everything if they haven't even tried to search yet. Would you like to either (1) wait until the Marketing/Content team has a chance to review this or (2) go live with my suggestion after you do a quick review and provide feedback and we can then revisit this as we look at the voice and tone on the site? I will add some notes to the InVision Project and @ mention you for further review and comments. The InVision project is linked to the JIRA issue, but here is also the direct link: <a href="https://redhat.invisionapp.com/share/SPB9XRKGDH/238490555_12-Search_-_Empty_State-36.png">https://redhat.invisionapp.com/share/SPB9XRKGDH/238490555_12-Search_-_Empty_State-36.png</a> thumbnail! Would you be ok with re-using this style? | <a href="https://issues.iboss.org/browse/DEVELOPER-4202">https://issues.iboss.org/browse/DEVELOPER-4202</a> |
| 6471 | DEVELOPER-4200 | [~james.cobb] I think this will need some minor V+D. Can you add your self or [~brock] to the Team info in the description?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-4200">https://issues.iboss.org/browse/DEVELOPER-4200</a> |
| 6472 | DEVELOPER-4200 | [~james.cobb] This is something different than the back to results link. We're looking for a way that user can quickly get to the top of the page to use filters, change search criteria etc. With the lazy loading, it's possible the user may be way down the page and this would ease the pain of having to manually scroll all the way back to the top. The Customer Portal has an example of this type of interaction on their KB pages. Example: <a href="https://access.redhat.com/articles/63269">https://access.redhat.com/articles/63269</a> !2017-06-19_12-09-36.png thumbnail! Would you be ok with re-using this style?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-4200">https://issues.iboss.org/browse/DEVELOPER-4200</a> |
| 6473 | DEVELOPER-4200 | [~ihamilto] Is it enough to say that this should look and function exactly how it does on the Customer Portal? What additional details would you need beyond that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-4200">https://issues.iboss.org/browse/DEVELOPER-4200</a> |
| 6474 | DEVELOPER-4200 | [~ldary] - [~tnolan] and I walked through this and cleared up my misunderstanding of how this functions. Reviewing the wireframes, I was under the impression that this worked like pinterest where the page always adds new results to the bottom and we never see the footer. I'm ok with this pagination free version where the user selects to get additional results. As far as the access use of the up arrow, I'm comfortable with that too. Tiffany and I agreed that it should match the styling of access for a more seamless transition between sites. They use the font awesome "icon-circle-arrow-up" for the icon. Their code for styling queues: height: 44px; width: 44px; padding: 10px; background-color: #333; background-color: rgba(0,0,0,0.8); -webkit-transition: opacity 0.218s; -o-transition: opacity 0.218s; transition: opacity 0.218s; font-size: 24px; line-height: 24px; vertical-align: middle; color: #fff; text-decoration: none; cursor: pointer;                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-4200">https://issues.iboss.org/browse/DEVELOPER-4200</a> |
| 6475 | DEVELOPER-4188 | [~akandel] ""This version in Klipfolio doesn't take into compensate with the % of trackable. I do believe we should show the raw numbers in klipfolio without alteration." I don't know what you're asking. Are you saying that the current view in Klipfolio is taking into account the % trackable?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-4188">https://issues.iboss.org/browse/DEVELOPER-4188</a> |
| 6476 | DEVELOPER-4186 | During review Heinz noticed that first iteration was using the registrations Row 19 "target" instead of active users in row 10 "target # active". In <a href="https://docs.google.com/spreadsheets/d/1y1Y1Zu2xdraMKfy84upNXfliqNzqerWl2A1SCrWjWE">https://docs.google.com/spreadsheets/d/1y1Y1Zu2xdraMKfy84upNXfliqNzqerWl2A1SCrWjWE</a> This has now been corrected. Can this be now closed [~hwindzio]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-4186">https://issues.iboss.org/browse/DEVELOPER-4186</a> |
| 6477 | DEVELOPER-4185 | [~lkrzyzanek] Is there a way to split JBD Registrations by channel in order to split them into: * Net New * Existing Red Hat Account * Existing RHD Member Registrations Similar to what is done with RHT user profile? <a href="https://github.com/searchisko/configuration/blob/master/data/query/rht_user_profile_metrics.md">https://github.com/searchisko/configuration/blob/master/data/query/rht_user_profile_metrics.md</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-4185">https://issues.iboss.org/browse/DEVELOPER-4185</a> |
| 6478 | DEVELOPER-4154 | [~ihamilto] / [~paul.robinson] Not sure I see the value in doing a spike to get the requirements for this story. For me it's as simple as we don't have all of the requirements for this story and as such it can't be played. Putting in a spike to solve that would (in my opinion) simply result in the person that owns the spike going around various members of the team and asking them how to integrate a proposed plan of action. The plan of action however I believe should be agreed by anyone impacted on this and then we can decide if we need to spike any of it (chance are we won't need to, we can simply decompose the work down into stories as I don't expect many surprises here). So in conclusion, is it just easier to call a time-boxed meeting and agree on an implementation and then create the implementation stories from there?                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-4154">https://issues.iboss.org/browse/DEVELOPER-4154</a> |
| 6479 | DEVELOPER-4154 | Thinking about it, wouldn't this process be done during issue refinement, before the issue gets added to the sprint? I think this is what Rob is saying also.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/DEVELOPER-4154">https://issues.iboss.org/browse/DEVELOPER-4154</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | URL                                                                                                         |

| 6480 | DEVELOPER-4154 | [~ldary] [~ihamilto] I think we need to agree on the version of Node to be used here. I think the project is currently using 10.0.45 (I need to check this). I know it's out-of-date, but does that work for us [~ldary] until we can schedule an upgrade? [~ihamilto] A couple of extra tasks that I took from that meeting: * Create a PR configuration for the test framework to default to headless, single run test execution * Select and configure a test reporter to provide clear output of the test results (and ensure this is archived by the build) I also think it's worth us having a think about any more code that gets written to run these tests. We've already kinda duplicated the code for running the acceptance tests for running Blinkr. If we're going to duplicate it again, then that is saying to me that we should re-factor it into a common approach that can be used to execute our code, or look at a simpler way of running these things. cheers, Rob | <a href="https://issues.iboss.org/browse/DEVELOPER-4154">https://issues.iboss.org/browse/DEVELOPER-4154</a> |
| 6481 | DEVELOPER-4149 | Is there any value in doing anything with this besides simply leaving it as HTML?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-4149">https://issues.iboss.org/browse/DEVELOPER-4149</a> |

| 6484 | DEVELOPER-4145 | [~adelaarreola] [~ldary] [~james.cobb] Can this one be marked as done and any additional items added to DEVELOPER-4205?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-4145">https://issues.iboss.org/browse/DEVELOPER-4145</a> |
| 6485 | DEVELOPER-4143 | Hi [~ecurley] – sure, easy to do. Is the "?intcmp=" URL parameter included to record the # of clicks from the blog to the signup page?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-4143">https://issues.iboss.org/browse/DEVELOPER-4143</a> |
| 6486 | DEVELOPER-4143 | [~visuale] – Thanks. Do you know what date that went live? I'm seeing 53 leads in salesforce. Will be interesting to see how that grows. :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-4143">https://issues.iboss.org/browse/DEVELOPER-4143</a> |
| 6487 | DEVELOPER-4125 | Thanks [~visuale], I think this is a lot easier to read. Can you ask [~ecurley] to give the final review?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-4125">https://issues.iboss.org/browse/DEVELOPER-4125</a> |
| 6488 | DEVELOPER-4122 | [~visuale] I've put this in review, as I think [~ecurley] and I need to review it. Can you follow this workflow for other issues, and notify the appropriate reviewer to take a look?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-4122">https://issues.iboss.org/browse/DEVELOPER-4122</a> |
| 6489 | DEVELOPER-4122 | This looks good to me. Can you email [~ecurley] to review too? She probably won't see this notification as JIRA sends a lot of emails!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-4122">https://issues.iboss.org/browse/DEVELOPER-4122</a> |
| 6490 | DEVELOPER-4122 | Thanks [~visuale] and [~paul.robinson]. I'm super excited to see these updates! !Screen Shot 2017-06-02 at 8.52.21 AM.png thumbnail! !Screen Shot 2017-06-02 at 8.52.31 AM.png thumbnail! Two quick questions and wondering if it doing it only on my end. The featured image on some of them seem to have greatly enlarged when moving to the new layout. Are you seeing this as well? (attached screenshot) If yes, is there anything we can do to have them not be so large? And when we scroll down past where the right column has material the blog has a good amount of white space (see attached). Is there a way to make what is in the right hand column adjust down as the infinite scrolling happens? Thanks!                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-4122">https://issues.iboss.org/browse/DEVELOPER-4122</a> |
| 6491 | DEVELOPER-4122 | [~ecurley] I'm not sure the exact behaviour of making the right-bar adjust down. Given that the right-bar is quite long, when will that scroll? It's a bit hard for me to explain here. Maybe you have an example website that does this behaviour?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-4122">https://issues.iboss.org/browse/DEVELOPER-4122</a> |
| 6492 | DEVELOPER-4118 | Axel, can you do a mock up of the chart for the weekly dashboard deck? I believe we may need a couple of adjustments to get it best visualized before thursday's deck that you send out                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-4118">https://issues.iboss.org/browse/DEVELOPER-4118</a> |
| 6493 | DEVELOPER-4114 | Thanks [~visuale]. I think this is a good start, but I worry that the widget is a little hidden. Should we also add a version of it towards the top of the post? Notice how DZone has it in the header of the post: <a href="https://dzone.com/articles/three-rules-of-my-api-communication-strategy">https://dzone.com/articles/three-rules-of-my-api-communication-strategy</a> . Do you have flexibility in the layout of the widget? I.e. can you change what the vote up and down icons look like? Can you change what text is displayed?                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-4114">https://issues.iboss.org/browse/DEVELOPER-4114</a> |
| 6494 | DEVELOPER-4114 | [~visuale][~paul.robinson] - Are these something we can edit?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/DEVELOPER-4114">https://issues.iboss.org/browse/DEVELOPER-4114</a> |
| 6495 | DEVELOPER-4114 | [~james.cobb] do you mean like the which kind of icons can we use? Yes, the current ones have some CSS tweaks applied as it is but they can be swapped for something else entirely.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-4114">https://issues.iboss.org/browse/DEVELOPER-4114</a> |
| 6496 | DEVELOPER-4111 | [~hwindzio] I think you said you had no more requirements. Correct? [~ldary] Can you try prioritise DEVELOPER-4197 towards the top of the stories on this Epic?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-4111">https://issues.iboss.org/browse/DEVELOPER-4111</a> |
| 6497 | DEVELOPER-4109 | Thanks [~ihamilto]. Does this story need anything else then so it can be groomed and added to a sprint?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-4109">https://issues.iboss.org/browse/DEVELOPER-4109</a> |
| 6498 | DEVELOPER-4109 | [~tnolan] Looks fine to be added to a sprint. Will we be working on this or will it be [~krzyzanek]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-4109">https://issues.iboss.org/browse/DEVELOPER-4109</a> |
| 6499 | DEVELOPER-4105 | [~ecurley] [~jessk] - Can you review and add some additional details if I'm missing something? Is this the same as the salesforce id? It looks like redhat.com uses something called an internal campaign id (intcmp). Is that the direction you'd like to take as well?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-4105">https://issues.iboss.org/browse/DEVELOPER-4105</a> |
| 6500 | DEVELOPER-4105 | [~jessk] Ok, thanks for the details. I remember [~ecurley] talking about this recently in a meeting so that makes sense. My schedule is pretty packed this week, so I'm more than ok with not being included in the meeting. I just said that I would create a JIRA story for this, so I did. Once you figure out which one or if you need both, can you just update this JIRA with that info? I think Drupal can and should be able to support having a field for this info that is then used to create the links for the buttons.                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-4105">https://issues.iboss.org/browse/DEVELOPER-4105</a> |
| 6501 | DEVELOPER-4082 | [~ecurley] [~andreacarmona] - Does this email come from Eloqua? If so, who would work on these changes? !RHDP-welcome-email.png thumbnail!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-4082">https://issues.iboss.org/browse/DEVELOPER-4082</a> |
| 6502 | DEVELOPER-4079 | [~paul.robinson] This should be a quick edit. Can someone on your team complete this during the current sprint?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-4079">https://issues.iboss.org/browse/DEVELOPER-4079</a> |
| 6503 | DEVELOPER-4078 | [~paul.robinson] Thanks for including that list. Very helpful. Yes, cheat-sheet and video should be fixed. I checked .com too and they also do use the plural where appropriate. If we could get the cheat-sheets one prioritized first, I think that would assist with our transition to the Drupal format. Is there something that should be done on the backend for that or is it just a matter of updating the URLs in Drupal?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-4078">https://issues.iboss.org/browse/DEVELOPER-4078</a> |
| 6504 | DEVELOPER-4078 | Current work is done at <a href="https://github.com/lightguard/developers.redhat.com/tree/feature/cheatsheet-alias">https://github.com/lightguard/developers.redhat.com/tree/feature/cheatsheet-alias</a> . Do we need to change things that area already published? What about redirects?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-4078">https://issues.iboss.org/browse/DEVELOPER-4078</a> |
| 6505 | DEVELOPER-4078 | [~lightguard] Yes, we will need one redirect for the Advanced Linux Commands one, since that one is published already. Is that something you would do? Current URL - /cheat-sheet/advanced-linux-commands-cheatsheet New URL (not live yet) - /cheat-sheets/advanced-linux-commands                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-4078">https://issues.iboss.org/browse/DEVELOPER-4078</a> |
| 6506 | DEVELOPER-4078 | [~paul.robinson] RE: bq. The person working on this issue needs to create an RHDENG ticket, requesting the redirect. They should then work with Lukas Koranda to coordinate the changes so as to minimise 404s. Does this mean that Jason or I should do this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-4078">https://issues.iboss.org/browse/DEVELOPER-4078</a> |
| 6507 | DEVELOPER-4078 | [~lightguard] Is the cheat sheet alias live in Drupal? Is there something I should approve to get that rolled out? I just tried creating a new one and it did not use the new format.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-4078">https://issues.iboss.org/browse/DEVELOPER-4078</a> |
| 6508 | DEVELOPER-4072 | [~paul.robinson] would it be us that needs to write these, or do we need to find someone else to do this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-4072">https://issues.iboss.org/browse/DEVELOPER-4072</a> |

| 6510 | DEVELOPER-4058 | [~ecurley] - Are you still wanting this to go live June 6?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-4058">https://issues.jboss.org/browse/DEVELOPER-4058</a> |
| 6511 | DEVELOPER-4058 | [~ecurley] James has approved the VD for this hero but wasn't sure if the content is still current. Can you let me know if this is ready to go live or if I should change anything? thanks. <a href="https://developers-pr.stage.redhat.com/pr/1885/export">https://developers-pr.stage.redhat.com/pr/1885/export</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-4058">https://issues.jboss.org/browse/DEVELOPER-4058</a> |
| 6512 | DEVELOPER-4055 | [~mikgue] - Can we get the final approved text for [~adelaarreola]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-4055">https://issues.jboss.org/browse/DEVELOPER-4055</a> |
| 6513 | DEVELOPER-4052 | # Search for "JBoss Sandbox BOMs" # The second item should be labeled as BOM, instead of QUICKSTART The URL of the result has /boms/ in it: <a href="https://developers.redhat.com/quickstarts/sandbox/boms/">https://developers.redhat.com/quickstarts/sandbox/boms/</a> -- Is this labeled incorrectly in the DCP for the type? That may be an issue outside this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-4052">https://issues.jboss.org/browse/DEVELOPER-4052</a> |
| 6514 | DEVELOPER-4052 | [~paul.robinson] Thanks for the info. Who's making the decision to remove those? Is that [~hwindzio]? If we're removing content from the site, I feel like that should probably be part of a larger discussion around how long content should stay on the site and when/if it should be archived. I'm not sure we've ever documented a strategy for this. I think these have some good content, especially the EAP BOMs, so I'm not sure the best strategy is for us to get rid of content that could be helpful just because they have low pageviews. These also seem to tie into some of the tasks related to Job 1. Perhaps there's a better way to present these...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-4052">https://issues.jboss.org/browse/DEVELOPER-4052</a> |
| 6515 | DEVELOPER-4050 | [~tnolan] we currently have this scheduled for the next sprint (starting 2017-06-26). Will you have the wireframe ready for end of this week, or should I push back a sprint?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-4050">https://issues.jboss.org/browse/DEVELOPER-4050</a> |
| 6516 | DEVELOPER-4050 | [~paul.robinson] I'm assigning this one to [~gdoyle] for the UX. [~james.cobb] Initial thought is that we review what is being done on the Customer Portal and come up with something similar. I think it's likely that we would look into using an icon for this. If we went that direction, is this something you think you or [~brock] would assist with as the visual designer?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-4050">https://issues.jboss.org/browse/DEVELOPER-4050</a> |
| 6517 | DEVELOPER-4050 | [~james.cobb] I talked to the customer portal team about their choice of icon (patternfly key : pficon-key), asking if there is a reason they use that instead of something like a lock. They said it is a more friendly representation of premium content. To be consistent with customer portal, UX thinks it would be best to stick with a key for the icon (doesn't have to be the same one). What are your thoughts on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-4050">https://issues.jboss.org/browse/DEVELOPER-4050</a> |
| 6518 | DEVELOPER-4041 | [~unibrew] Can you update this file on the file management server? I've just got a new laptop and I forgot to copy across my SSH keys! They are in my backup, but that's at home, so I won't be able to this until the weekend.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-4041">https://issues.jboss.org/browse/DEVELOPER-4041</a> |
| 6519 | DEVELOPER-4033 | [~visuale]: can you do a quick investigation to scope this out? We are curious if it's an easy fix (install a plugin), or something more complex. Also, can you provide screenshots of what it would look like? I'd like [~ecurley] and [~tnolan] to see what it would look like before it goes live.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-4033">https://issues.jboss.org/browse/DEVELOPER-4033</a> |
| 6520 | DEVELOPER-4033 | [~paul.robinson] My thinking with using a 0 for thumbs-down is that the score would then be a simple percentage score of total likes out of total votes cast. Would the idea for a thumbs-down equalling -1 be that popularity is determined by deviation instead? Also with regard to a "trending" column, whether all-time or month-by-month, how would an article's overall popularity vs. its rating factor into its place in the list? For example, _Article ABC_ could have a 90% positive rating but only have 200 total votes whereas _Article XYZ_ could have a 72% positive rating but more than 4000 total votes. To me, it would seem that the latter post has the bigger impact.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-4033">https://issues.jboss.org/browse/DEVELOPER-4033</a> |
| 6521 | DEVELOPER-4032 | [~dcoughlin1], [~adelaarreola]: Can you update the description with the steps required to achieve this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-4032">https://issues.jboss.org/browse/DEVELOPER-4032</a> |

| 6523 | DEVELOPER-4031 | I added links to the wireframes in the Description. I have alternate (MVP) versions of this page as well. Can you let me know what's feasible? If we do the preferred version, [~james.cobb] or [~brock] should be able to provide the mock-up and graphics by Friday, April 21 at the latest. Let me know if you would need it sooner.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-4031">https://issues.jboss.org/browse/DEVELOPER-4031</a> |
| 6524 | DEVELOPER-4031 | Tiffany - great stuff! Question: During an event, there's commonly a short line of people waiting to enter their emails. What's the best way to reset the form? Set it as Home? Or maybe add a "Try again"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-4031">https://issues.jboss.org/browse/DEVELOPER-4031</a> |
| 6525 | DEVELOPER-4031 | [~james.cobb] That works for me as long as we can easily see it! It would be great if it was large and green/red for yes/no so it's easy to see. My old eyes can't read text on mobile devices. haha! Any chance you or Jason could work on a mock-up early this week? If not, would you be ok with me taking a stab and sending it to you for review?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-4031">https://issues.jboss.org/browse/DEVELOPER-4031</a> |
| 6526 | DEVELOPER-4031 | [~ldary] can you take a look at this? Can you see if someone is available to work on it this week?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-4031">https://issues.jboss.org/browse/DEVELOPER-4031</a> |
| 6527 | DEVELOPER-4031 | Success and failure look the same to me. What am I missing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-4031">https://issues.jboss.org/browse/DEVELOPER-4031</a> |
| 6528 | DEVELOPER-4031 | Thanks James. I think those work. Can you do the mobile design too for font sizing, since that's how most of our users will be accessing this? I didn't see them but I'm on my phone so maybe I missed them. ~ TIFFANY                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-4031">https://issues.jboss.org/browse/DEVELOPER-4031</a> |
| 6529 | DEVELOPER-4031 | They still look the same - what am I missing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-4031">https://issues.jboss.org/browse/DEVELOPER-4031</a> |
| 6530 | DEVELOPER-4031 | helpful - thanks. Should we create a short link for this so people can easily get to it on their phone? Maybe "bit.ly/RHDP-verify" or whatever.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-4031">https://issues.jboss.org/browse/DEVELOPER-4031</a> |
| 6531 | DEVELOPER-4031 | Have we settled on the final URL: <a href="https://developers.redhat.com/verify-member">https://developers.redhat.com/verify-member</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-4031">https://issues.jboss.org/browse/DEVELOPER-4031</a> |
| 6532 | DEVELOPER-4030 | [~mikgue] Does this promo count for this ticket or would you like something in addition? <a href="http://design.jboss.org/redhatdeveloper/marketing/summit_2017/images/RHDev_homepromo_summit2017.png">http://design.jboss.org/redhatdeveloper/marketing/summit_2017/images/RHDev_homepromo_summit2017.png</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-4030">https://issues.jboss.org/browse/DEVELOPER-4030</a> |
| 6533 | DEVELOPER-4030 | I see this is due to go live tomorrow. We need everything confirming today if we want to hit this deadline. CC: [~ldary], [~adelaarreola].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-4030">https://issues.jboss.org/browse/DEVELOPER-4030</a> |

| 6535 | DEVELOPER-4030 | [~mikgue] - Updated the mockup... please refresh. <a href="http://design.jboss.org/redhatdeveloper/marketing/summit_2017/website/images/RHDP_hero_summit_r1v1.png">http://design.jboss.org/redhatdeveloper/marketing/summit_2017/website/images/RHDP_hero_summit_r1v1.png</a> Do we have the landing page staged?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-4030">https://issues.jboss.org/browse/DEVELOPER-4030</a> |
| 6536 | DEVELOPER-4030 | Yes - see here: <a href="https://developers.redhat.com/summit-is-for-developers/">https://developers.redhat.com/summit-is-for-developers/</a> I used a promo page format - is that the correct one or do I need to change it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-4030">https://issues.jboss.org/browse/DEVELOPER-4030</a> |
| 6537 | DEVELOPER-4020 | Isn't this a duplicate of DEVELOPER-4019?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-4020">https://issues.jboss.org/browse/DEVELOPER-4020</a> |
| 6538 | DEVELOPER-4019 | [~dhlady] Can you provide example data for what is stored in some of the variables? I'm trying to decide which ones to use. Specifically: * tcUser * tcDownloadFileName                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-4019">https://issues.jboss.org/browse/DEVELOPER-4019</a> |
| 6539 | DEVELOPER-4017 | [~paul.robinson] [~hwindzio] I don't think I see this one on the PDD Reprioritization list and it does not have a priority. However, it looks like this Epic is slated for Q2. Should this be added to the spreadsheet?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-4017">https://issues.jboss.org/browse/DEVELOPER-4017</a> |
| 6540 | DEVELOPER-4017 | [~paul.robinson][~hwindzio] From our discussion the other day, I believe we decided to still give this one a priority, but not include it in the PDD. Heinz - Can you assign a Q2 priority number to this one here and in the prioritization doc? I added a row for it as the last item in the Q2 list.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-4017">https://issues.jboss.org/browse/DEVELOPER-4017</a> |
| 6541 | DEVELOPER-4017 | [~tnolan] I assign this a priority of 4, since last week it seemed like you had been asking about next epics to work on and I think the timing is right to start on this one. We are seeing people leave the site after viewing the cheatsheet page: <a href="https://docs.google.com/presentation/d/1ciZ7NPhfP9WXKtdaYBUQ1V6OeKXh5kaVjFH-RlCfUc/edit#slide=id.g1d607e393c_0_12">https://docs.google.com/presentation/d/1ciZ7NPhfP9WXKtdaYBUQ1V6OeKXh5kaVjFH-RlCfUc/edit#slide=id.g1d607e393c_0_12</a> From your comments in the previous weekly dashboard : "We have an Epic that is focused on improving this experience <a href="https://issues.jboss.org/browse/DEVELOPER-4017">https://issues.jboss.org/browse/DEVELOPER-4017</a> and we planned to add a section to the cheat sheet page for "more cheat sheets". Can we find other ways to keep them on the site as well? I would think that developers want to stay on topic, so maybe provide related links? | <a href="https://issues.jboss.org/browse/DEVELOPER-4017">https://issues.jboss.org/browse/DEVELOPER-4017</a> |
| 6542 | DEVELOPER-4017 | For example, this one for containers - should we maybe provide links to the Containers topic and also a download for the CDK? <a href="https://developers.redhat.com/promotions/docker-cheatsheet/">https://developers.redhat.com/promotions/docker-cheatsheet/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-4017">https://issues.jboss.org/browse/DEVELOPER-4017</a> |
| 6543 | DEVELOPER-4012 | If it's essentially the same, does it make sense for it to be a new content type? Sounds like it might be easier to include a dropdown in the current content type to specify what it is or where it should go. We can then determine which layout to use based on that info.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-4012">https://issues.jboss.org/browse/DEVELOPER-4012</a> |
| 6544 | DEVELOPER-4012 | [~lightguard] That was what i was thinking originally too. However, are you able to change the default URL based on what the user would select from the drop-down? Also, they may be the same now, but I'm not sure that will always be the case. For example, I'd still like to look into some options to embed the actual cheat sheet on the page. This is not something we would want to do with an eBook. Can you come up with a quick list of benefits/drawbacks for doing a new content type vs. adding some logic to the current one? I'm just not sure what the overall difference would be to recommend/request one over the other for usability and future-proofing.                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-4012">https://issues.jboss.org/browse/DEVELOPER-4012</a> |
| 6545 | DEVELOPER-4012 | [~tnolan]are there fields that are only required for ebooks? Are there fields that should not be included for print books or ebooks? How do we want those displayed? Do we want the form to change once you tick the ebook checkbox?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-4012">https://issues.jboss.org/browse/DEVELOPER-4012</a> |
| 6546 | DEVELOPER-4012 | [~tnolan] [~james.cobb] thanks! should the page also follow the same layout as cheat-sheets for mobile and tablet? and can you let me know which are the must-haves, and lessed priority items like you did with the cheat sheets? Also, just to be sure, should the published date be the date the book's page was published, link in the cheat sheets, or the date the book was published?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-4012">https://issues.jboss.org/browse/DEVELOPER-4012</a> |
| 6547 | DEVELOPER-4012 | Don't we already have this? <a href="http://developer-drupal.web.prod.ext.phx2.redhat.com/node/add/books">http://developer-drupal.web.prod.ext.phx2.redhat.com/node/add/books</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-4012">https://issues.jboss.org/browse/DEVELOPER-4012</a> |
| 6548 | DEVELOPER-4010 | [~adelaarreola] Sorry, but I'm not able to see the downloads section via the provided URL. Is there another way for [~hwindzio] and I to review? <a href="https://issues.jboss.org/browse/DEVELOPER-4010">leap-no-downloads.png</a>   <a href="https://issues.jboss.org/browse/DEVELOPER-4010">thumbnail</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-4010">https://issues.jboss.org/browse/DEVELOPER-4010</a> |
| 6549 | DEVELOPER-4010 | [~tnolan] Here is a screenshot <a href="https://www.dropbox.com/s/crjv5s17r4kxbkh/Screenshot%202017-04-12%2008.39.34.png?dl=0">https://www.dropbox.com/s/crjv5s17r4kxbkh/Screenshot%202017-04-12%2008.39.34.png?dl=0</a> The 'Try It' only shows up on pages with download links, so for example, it wouldn't show in /openshift/download page. Is that correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-4010">https://issues.jboss.org/browse/DEVELOPER-4010</a> |
| 6550 | DEVELOPER-4010 | [~adelaarreola] The font size for TRY IT in the screen capture looks slightly larger than the ALL DOWNLOADS. These should be the same and use the existing ALL DOWNLOADS size. Approved once this change is made. No need for additional review/sign-off. bq. The 'Try It' only shows up on pages with download links, so for example, it wouldn't show in /openshift/download page. Is that correct? Correct. Middleware products are the main focus of this for now.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-4010">https://issues.jboss.org/browse/DEVELOPER-4010</a> |
| 6551 | DEVELOPER-4008 | [~ikoranda] This issue captures the work to get the configuration for our Jenkins slave in the Boston labs managed by Ansible. Is there anything else that you would like to add to this story? cheers, Rob                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-4008">https://issues.jboss.org/browse/DEVELOPER-4008</a> |
| 6552 | DEVELOPER-4002 | [~paul.robinson], how much do we care about having links to the contributor's/author's JBoss Developer profile? We actually don't have that information currently in Drupal and going out and fetching it like we do in awestruct is probably going to be complicated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-4002">https://issues.jboss.org/browse/DEVELOPER-4002</a> |
| 6553 | DEVELOPER-4002 | [~paul.robinson] also, do we want to display the commit history as well?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-4002">https://issues.jboss.org/browse/DEVELOPER-4002</a> |
| 6554 | DEVELOPER-3997 | Didn't someone in IT or DevOps build something already that monitors our page score? I thought they were saying they wanted to build out email notifications too.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-3997">https://issues.jboss.org/browse/DEVELOPER-3997</a> |
| 6555 | DEVELOPER-3995 | Not a lot we can do with this until we have some context. Is this going into the next sprint or shall we bump it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-3995">https://issues.jboss.org/browse/DEVELOPER-3995</a> |
| 6556 | DEVELOPER-3994 | [~lightguard], I've updated the description. Does that make more sense now? I'm not fully sure what Caffelli are suggesting we do. Hoping you or [~ldary] understand this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-3994">https://issues.jboss.org/browse/DEVELOPER-3994</a> |
| 6557 | DEVELOPER-3994 | [~lightguard], [~paul.robinson]: Is this a Drupal or an export thing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3994">https://issues.jboss.org/browse/DEVELOPER-3994</a> |
| 6558 | DEVELOPER-3994 | As component lead, I think [~ldary] needs to refine this issue. [~ldary]: Can you refine before the end of this week?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3994">https://issues.jboss.org/browse/DEVELOPER-3994</a> |
| 6559 | DEVELOPER-3991 | Are you sure you want to take this one, Paul?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-3991">https://issues.jboss.org/browse/DEVELOPER-3991</a> |
| 6560 | DEVELOPER-3991 | [~lightguard] I think this is a Drupal thing, right? Can you schedule it for completion before the end of the quarter? That's when we want all the SEO fixes done by.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3991">https://issues.jboss.org/browse/DEVELOPER-3991</a> |
| 6561 | DEVELOPER-3978 | You can see the videos I created at <a href="https://drive.google.com/drive/u/1/folders/0Bwx86SOh3ez-TEotVjIXYJhelU">https://drive.google.com/drive/u/1/folders/0Bwx86SOh3ez-TEotVjIXYJhelU</a> [~mikgue] has looked at the first one I did. [~paul.robinson], [~mikgue] what else would you two like to see?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-3978">https://issues.jboss.org/browse/DEVELOPER-3978</a> |

| 6562 | DEVELOPER-3974 | [~adelaarreola] I'm not sure if you've pinged [~james.cobb] about this yet, but do you need more specific details for this beyond what is documented in the Unified Style Guide?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-3974">https://issues.iboss.org/browse/DEVELOPER-3974</a> |
| 6563 | DEVELOPER-3974 | [~tnolan] I think I got it :) [~james.cobb] Here is a link to review the CTAs: <a href="http://stumpjumper.lab4.eng.bos.redhat.com:36819/ctas">http://stumpjumper.lab4.eng.bos.redhat.com:36819/ctas</a> The two things that were not clear from the guide were if the black CTA's have a hover color and the same thing for the white *light* CTA. Please let me know if I need to change anything. That /ctas page is only for the review of this Jira, it will be removed but the styles will stay once approved.                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-3974">https://issues.iboss.org/browse/DEVELOPER-3974</a> |
| 6564 | DEVELOPER-3974 | [~adelaarreola] [~james.cobb] Thanks Adela. Heavy and Medium CTAs - The button sizes look off to me as the Medium CTA ends up being larger in height (46px vs 37px). I know you based this on the specs in the Style Guide so I'd like a few days to take this back to the UX Working group for review. I think we need to update the guide to include more information. The line height seems to be making the biggest difference for these. Light CTAs - Please make these bold (font-weight: 800). I just added this info to the guide. I think the white should use the lighter hyperlink blue (#73BCF7) and black should use the default hyperlink blue (#0066CC) for the hover. Refer to the Tried.Tested. Trusted section on .com for examples: <a href="https://www.redhat.com/en">https://www.redhat.com/en</a>                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-3974">https://issues.iboss.org/browse/DEVELOPER-3974</a> |
| 6565 | DEVELOPER-3974 | [~adelaarreola] I heard back from the .com team and they are using line-height: 1.44 for both heavy and medium CTA, which is their default body style. We're updating the guide to reflect this. The difference between the medium CTA and the heavy CTA then is the the medium one is normally just the border like the Medium CTA outline ones you currently have on the ctas example page. I'm not sure we have plans to use a medium CTA solid at this time on this site. If we did, these would be a different color palette than the heavy CTAs. [~james.cobb] - Do you agree that we don't need to define the medium CTA solid styles/colors as part of this story?                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-3974">https://issues.iboss.org/browse/DEVELOPER-3974</a> |
| 6566 | DEVELOPER-3974 | [~adelaarreola] - desktop looks fine. On mobile though... 1) Shouldn't wrap text. 2) [~tnolan] - I'm a fan of full width buttons on the mobile experience although RH.com doesn't do this. Should we advocate that or default to their style?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/DEVELOPER-3974">https://issues.iboss.org/browse/DEVELOPER-3974</a> |
| 6567 | DEVELOPER-3974 | bq. I'm a fan of full width buttons on the mobile experience although RH.com doesn't do this. Should we advocate that or default to their style? [~james.cobb] I'd like to go with the recommendation from the Unified Style Guide (maintain the button size across devices) for now so we're consistent with the other sites. If this is something you feel strongly about, it would be great to have you come to the next UX Working Group meeting to bring it up. I can see both sides. Other option is to use the recommendations for now and A/B test this. That way we'd have data to support a change if the results came back in favor of the full width button. This is something we could execute on pretty quickly if we found a good page to test this with. I can also check with Patty Behre to see if they've done testing already about the button. The .com team has a Mojo page for their tests which has some really interesting info. | <a href="https://issues.iboss.org/browse/DEVELOPER-3974">https://issues.iboss.org/browse/DEVELOPER-3974</a> |
| 6568 | DEVELOPER-3973 | [~james.cobb] [~ecurley] [~adelaarreola] Nice! I really like the v8, but the "Interested in..." is still getting lost on me. What would it look like if you removed that from the blue box and put it underneath?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-3973">https://issues.iboss.org/browse/DEVELOPER-3973</a> |
| 6569 | DEVELOPER-3973 | [~adelaarreola][~tnolan][~ecurley]- We could remove the text out of the excerpt box but we'll have to be careful of the wording so we aren't redundant with "download" OPTION 4: Want to see more? Get the full cheat sheet. [ LOG IN TO DOWNLOAD ] Personally, I don't think we need the text as we say "Cheat Sheet Excerpt" with a quote mark/styled box and a CTA button. If folks can't figure that out, they may not be smart enough to use the cheat sheet. :P                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-3973">https://issues.iboss.org/browse/DEVELOPER-3973</a> |
| 6570 | DEVELOPER-3970 | [~akandel], [~visuale] can I get an update on this please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-3970">https://issues.iboss.org/browse/DEVELOPER-3970</a> |
| 6571 | DEVELOPER-3970 | [~paul.robinson] I'm still stuck trying to figure out how to get this banner to show. As I pointed out in an email yesterday or day before, I do actually cause it to show up, but only when I hit the 404 page (using local, non-EU proxies with or without the VPN on). Is it possible this is related to the fact that I see two cache headers at odd with one another (private and public)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-3970">https://issues.iboss.org/browse/DEVELOPER-3970</a> |
| 6572 | DEVELOPER-3970 | [~paul.robinson] if I can't make the RH/Adobe-based cookie banner work for this, would it be ok to go with a PHP/JS-based workaround? For instance, I saw this plugin while poking around the other day: <a href="https://wordpress.org/plugins/creare-eu-cookie-law-banner/">https://wordpress.org/plugins/creare-eu-cookie-law-banner/</a>   <a href="https://wordpress.org/plugins/creare-eu-cookie-law-banner/">https://wordpress.org/plugins/creare-eu-cookie-law-banner/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-3970">https://issues.iboss.org/browse/DEVELOPER-3970</a> |
| 6573 | DEVELOPER-3970 | [~ldary] I don't know it's something I'm totally missing but that same error as before continues and as a consequence the banner is still not coming up on the test link that was provided. I can't find anything in Stack Overflow about this other than it might be a timing issue. I'm not sure how I might be able to adjust that as it's coming from an external source. Is there anything you could think of that I might be missing? If all else fails, I've tested out "plan B" a little (on a test site), wherein I use a WP plugin with formatting to look consistent with the RH/Adobe EU Cookie banner.                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-3970">https://issues.iboss.org/browse/DEVELOPER-3970</a> |
| 6574 | DEVELOPER-3970 | Yes, I think that errors gone but Adobe might be doing something on their end and once fixed we should know one way or another whether it works or if I go to plan B. Am I right about this [~ldary] ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3970">https://issues.iboss.org/browse/DEVELOPER-3970</a> |
| 6575 | DEVELOPER-3966 | [~ldary] I've fleshed this out a bit now. Some of the issues still need some figuring out before they can be implemented though. Can you take over the coordination of this now please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-3966">https://issues.iboss.org/browse/DEVELOPER-3966</a> |
| 6576 | DEVELOPER-3946 | I think it's something for my team. Basically we need to make a page like <a href="https://github.com/redhat-developer/developers.redhat.com/blob/master/register.html">https://github.com/redhat-developer/developers.redhat.com/blob/master/register.html</a> . slim                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3946">https://issues.iboss.org/browse/DEVELOPER-3946</a> |
| 6577 | DEVELOPER-3946 | [~migue] when do you need this for?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-3946">https://issues.iboss.org/browse/DEVELOPER-3946</a> |
| 6578 | DEVELOPER-3933 | [~tnolan], [~hwindzio]: This needs a link to the PDD and a priority. Do we have this information?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-3933">https://issues.iboss.org/browse/DEVELOPER-3933</a> |

| 6579 | DEVELOPER-3922 | [~ldary] I agree with your concerns. I'm a little confused as to why we needed this? Was this to help fix for the failing downloads in PR environment? i.e. not being redirected to PR environment when attempting to download? (and download not triggering). If so, it still fails for me: {code} Not Found The requested URL /pr/1796/export/downloads/products/cdk/hello-world/ was not found on this server. Additionally, a 404 Not Found error was encountered while trying to use an ErrorDocument to handle the request. {code} {code} https://developers-pr.stage.redhat.com/pr/1796/export/downloads/products/cdk/hello-world/?tcUser=Wendell+Braun&tcWhenSigned=January+17,+2017&tcWhenEnds=January+17,+2018&tcEndsIn=308&tcDuration=365&tcDownloadFileName=cdk-2.4.0.zip&tcRedirect=5000&tcSrcLink=https://developers.stage.redhat.com/download-manager/content/origin/files/sha256/ec/ec9169717d9785d3df6254d55a340f2a9af25b9dc446a680b376a5303028ac0c/cdk-2.4.0.zip&p=Red+Hat+Container+Development+Kit+(CDK)&pv=2.4&tcDownloadURL=https%3A%2F%2Faccess.cdn.redhat.com%2Fcontent%2Forigin%2Ffiles%2Fsha256%2Fec%2Fec9169717d9785d3df6254d55a340f2a9af25b9dc446a680b376a5303028ac0c%2Fcdk-2.4.0.zip%3F_auth_%3D1489616157_8a83ba5b8910cf38bb5ebdc36a7884e8{code} | <a href="https://issues.iboss.org/browse/DEVELOPER-3922">https://issues.iboss.org/browse/DEVELOPER-3922</a> |
| 6580 | DEVELOPER-3906 | [~hwindzio] [~paul.robinson] I wonder if this one can be marked as done since the .io team is handling what I believe this epic was supporting for Summit? Do we have any specific work for the RHDP site?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-3906">https://issues.iboss.org/browse/DEVELOPER-3906</a> |
| 6581 | DEVELOPER-3906 | I have to admit I have no visibility into the openshift.io work, and how the site should tie into this. I'm assuming openshift.io will have a landing page post-summit, but that doesn't deserve an epic. If we close this, can we reopen it later if needed? If yes, I suggest we close it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-3906">https://issues.iboss.org/browse/DEVELOPER-3906</a> |
| 6582 | DEVELOPER-3904 | hrm...i think it should be either [~tnolan] or I. And Tiffany seems exceptionally busy and could use the help. Is it possible to have both of us responsible?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-3904">https://issues.iboss.org/browse/DEVELOPER-3904</a> |
| 6583 | DEVELOPER-3900 | Where should the CTA link to?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-3900">https://issues.iboss.org/browse/DEVELOPER-3900</a> |
| 6584 | DEVELOPER-3894 | BOMs and Architypes complicated this a bit. [~paul.robinson] [~tnolan] [~james.cobb] where can I see the UI and UX for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-3894">https://issues.iboss.org/browse/DEVELOPER-3894</a> |

| 6586 | DEVELOPER-3881 | [~unibrew] I think you are tracking this work in RHDENG. Is that right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-3881">https://issues.iboss.org/browse/DEVELOPER-3881</a> |
| 6587 | DEVELOPER-3881 | [~paul.robinson] I'm wondering what the next steps are for this epic? Will your team be working with James on getting the header and footer in the docs? Ideally we'll want this completed before the docs show up in the search results page that [~tnolan] is working on.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3881">https://issues.iboss.org/browse/DEVELOPER-3881</a> |
| 6588 | DEVELOPER-3881 | Yes, I think that's what needs doing by my team. It looks like we didn't plan this into the work for this quarter. Do you want to add it in and re-prioritise the current work?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-3881">https://issues.iboss.org/browse/DEVELOPER-3881</a> |
| 6589 | DEVELOPER-3880 | Thanks Axel. I will be sure to let Caffelli know this. Can we correct this today? I will then have Caffelli send a report. Do you think a meeting with FB help would be advantageous?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-3880">https://issues.iboss.org/browse/DEVELOPER-3880</a> |
| 6590 | DEVELOPER-3878 | [~rblake] My plan for the broken link check was to do something similar to what you did with the acceptance tests. 1. create _blcheck directory - create an environments dir containing docker-compose file. - Create Dockerfile containing the nmp download of blc and stuff it requires. 2. Create ruby scripts with a _blcheck/run_blc.rb and 'blc_test_options.rb' that is used to run the tests (either run within docker or outside?). {code} opts.on('--update-github-status SHA1', String, 'The SHA to report test results for on GitHub') do  sha1  test_configuration[:github_sha1] = sha1 end {code} 3. Unit tests. 4. Catch up with you regarding the job creation. Initially pointing the results of the tests to the console output until we have better reporting. Was this what you had in mind? I'll catch up with you tomorrow.                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-3878">https://issues.iboss.org/browse/DEVELOPER-3878</a> |
| 6591 | DEVELOPER-3878 | [~paul.robinson] Just an update on this ticket since our last 1-1: I decided to resurrect Blinkr I think for what we need it does exactly that. It just needs a little work. I am currently refactoring the code, I added RuboCop (static code analyser) and there were > 700 offences. Mainly due to the syntax being more for Ruby 1.8.7. Given we're now on Ruby 2.4.1 it's time to update. There are also no unit-tests so it's been difficult to refactor it without knowing if I've broken it. What am I doing and what do I plan to do? In priority order: 1. Fix Rubocop errors (almost done). 2. Add unit-tests (should have been #1 however thought best update code first) 3. Add options for --ignore-external, --ignore-internal links. 4. Dockerize 5. Update Gem README.md and release an update version.                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-3878">https://issues.iboss.org/browse/DEVELOPER-3878</a> |
| 6592 | DEVELOPER-3878 | [~paul.robinson] the work for this is complete. However, after a discussion with [~rblake] we recommends that I finish the work on [fixes/improvements to Blinkr   https://issues.iboss.org/browse/DEVELOPER-4138]. Shall I put this in blocked?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-3878">https://issues.iboss.org/browse/DEVELOPER-3878</a> |
| 6593 | DEVELOPER-3877 | [~tnolan] can you provide the UX for this? Also, what page types should this be applied to? All?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-3877">https://issues.iboss.org/browse/DEVELOPER-3877</a> |
| 6594 | DEVELOPER-3873 | [~tnolan] Dan is working on getting the cheat sheets on the dcp so I should be able to start working on this ticket soon. Is the wireframe for this approved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-3873">https://issues.iboss.org/browse/DEVELOPER-3873</a> |
| 6595 | DEVELOPER-3873 | [~paul.robinson] I added a link to the InVision project. Do you know who on your team will be working on this? Both [~james.cobb] and I can add some developer notes to the InVision mockup and tag him/her.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-3873">https://issues.iboss.org/browse/DEVELOPER-3873</a> |
| 6596 | DEVELOPER-3870 | [~lightguard], [~rblake], [~ldary]: Who do you think should own the requirements gathering for this work? I'm thinking it's one of you three?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-3870">https://issues.iboss.org/browse/DEVELOPER-3870</a> |
| 6597 | DEVELOPER-3868 | [~hwindzio] can you review these requirements. Are they approved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-3868">https://issues.iboss.org/browse/DEVELOPER-3868</a> |
| 6598 | DEVELOPER-3868 | [~hwindzio] I'd like us to push on with this when [~akandel] returns from PTO (8th May). Can you review the requirements by then? It's hard for us to press on without firm requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-3868">https://issues.iboss.org/browse/DEVELOPER-3868</a> |
| 6599 | DEVELOPER-3868 | A couple of comments: * The contact sales button brings you here: https://www.redhat.com/en/about/contact/sales. It is part of the sub-header on the product pages. Not sure why that link shows the link to the 'Help' tab. * "Register for contributor program" - Agreed, ideally we see when they register. But, if we can't attach to submit button then just starting the process is probably good enough. Later, we can see the drop off rate for the form submissions. * "CTA for consulting, training, certification" - In addition, I think we will want to see the engagement broken out for each of these. A couple of additional things we wanted to track, based on the original spreadsheet: *Viewing a StackOverflow question on devs.rh.com. I would think that is similar to viewing a KCS article. Can we track that as a level of engagement? https://developers.redhat.com/stack-overflow/#!q= *Posting a StackOverflow question. We should have their stackID if they are logging in using social log in - StackOverflow. We can then compare that to the post that is being slurped in to see if they have posted the question for a red hat product tag. *Viewing a video at least 25%: https://developers.redhat.com/resources/#!type=video            | <a href="https://issues.iboss.org/browse/DEVELOPER-3868">https://issues.iboss.org/browse/DEVELOPER-3868</a> |

| 6600 | DEVELOPER-3868 | {quote} * The contact sales button brings you here: <a href="https://www.redhat.com/en/about/contact/sales">https://www.redhat.com/en/about/contact/sales</a> . It is part of the sub-header on the product pages. Not sure why that link shows the link to the 'Help' tab. {quote} The example page, provides an example location of where this activity can be started from. I've clarified the description, which should make this clearer. {quote} * "CTA for consulting, training, certification" - In addition, I think we will want to see the engagement broken out for each of these. {quote} Done. {quote} *Viewing a StackOverflow question on devs.rh.com. I would think that is similar to viewing a KCS article. Can we track that as a level of engagement? <a href="https://developers.redhat.com/stack-overflow/#!q=">https://developers.redhat.com/stack-overflow/#!q=</a> {quote} Added. {quote} *Posting a StackOverflow question. We should have their stackID if they are logging in using social log in - StackOverflow. We can then compare that to the post that is being slurped in to see if they have posted the question for a red hat product tag. {quote} This will be hard as we don't have a way of getting this data into Adobe Analytics. Also, I would argue that the user is engaging with StackOverflow, not the RHDP site. {quote} *Viewing a video at least 25%: <a href="https://developers.redhat.com/resources/#!type=video">https://developers.redhat.com/resources/#!type=video</a> {quote}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-3868">https://issues.jboss.org/browse/DEVELOPER-3868</a> |
| 6601 | DEVELOPER-3862 | Just happened to see this JIRA. One caution from UX is that many users have their full email address as their username. What happens with longer "usernames" on Mobile? What use cases/scenarios have you explored for this? FYI [~hwindzio]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-3862">https://issues.jboss.org/browse/DEVELOPER-3862</a> |
| 6602 | DEVELOPER-3862 | [~velias] Would you be able to attach a screenshot? I'm just curious how it looks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-3862">https://issues.jboss.org/browse/DEVELOPER-3862</a> |
| 6603 | DEVELOPER-3854 | [~adelaarreola] [~ldary] [~dcoughlin1] [~rblake] would you all try running the following SQL and letting me know if everything is correct as per the comments? {code:sql} - Removing videos BEGIN; CREATE TEMPORARY TABLE video_id ( nid INT(10), INDEX(nid) ) AS SELECT SUBSTR(source, 7) AS nid FROM `url_alias` WHERE alias LIKE "/video%"; -- These should all return >= 1 (1 due to node_revision__body) SELECT COUNT(1) FROM `node` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_field_revision` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node__body` WHERE entity_id IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_field_data` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_revision__body` WHERE entity_id IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_revision` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) AS nid FROM `url_alias` WHERE alias LIKE "/video%"; DELETE FROM `node` WHERE nid IN (SELECT nid FROM video_id); DELETE FROM `node_field_revision` WHERE nid IN (SELECT nid FROM video_id); DELETE FROM `node__body` WHERE entity_id IN (SELECT nid FROM video_id); DELETE FROM `node_field_data` WHERE nid IN (SELECT nid FROM video_id); DELETE FROM `node_revision__body` WHERE entity_id IN (SELECT nid FROM video_id); DELETE FROM `node_revision` WHERE nid IN (SELECT nid FROM video_id); DELETE FROM `url_alias` WHERE alias LIKE "/video%"; -- All of these should return 0 SELECT COUNT(1) FROM `node` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_field_revision` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node__body` WHERE entity_id IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_field_data` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_revision__body` WHERE entity_id IN (SELECT nid FROM video_id); SELECT COUNT(1) FROM `node_revision` WHERE nid IN (SELECT nid FROM video_id); SELECT COUNT(1) AS nid FROM `url_alias` WHERE alias LIKE "/video%"; DROP TABLE video_id; COMMIT; {code}                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3854">https://issues.jboss.org/browse/DEVELOPER-3854</a> |
| 6604 | DEVELOPER-3854 | [~lightguard] I assume you want this tested against the full database dump and not the "lite" version? My other comment here is a more general "how does the project make database schema changes now and moving forwards". As with most things, what I'd like to see is automation of schema changes and testing of changes before they get applied to production. I'd also like visibility and an audit trail of changes to production schema. So: * Changes to the production database schema are stored in version control using a defined naming pattern * Changes to database schema are raised as pull requests that are reviewed before being applied * Changes to database schema are applied in a testing environment first before being applied to a production database * Changes to database schema are applied using an automated tool and never by hand Coming from a Java background, I have always used [Liquibase  <a href="https://www.liquibase.org">https://www.liquibase.org</a> ] to perform database migrations, but I see that PHP offers something similar e.g. [Phinx  <a href="https://phinx.org/">https://phinx.org/</a> ]. My suggestion would be to use a PHP tool so that we can keep the Drupal container footprint to a minimum. From initial reading it also looks like Phinx is installed using Composer as well, so again that fits in nicely with the way we manage Drupal. Using a tool like Phinx would mean that we can store the DB migrations in Git and then have them automatically applied as part of the Drupal boot sequence. So with some tweaks to the drupal_install_checker.rb, update flow could be: # Start the container # run drush cim # run drush updb # run phinx schema migrations Doing that means that we can automate schema migrations and have them tested in our normal PR build pipeline before applying them to the production database. It feels beyond the scope of this story to do the above. However I think we need to consider it sooner rather than later so that we have an audit trail of the changes that have been made to the Drupal database over time and is it worth playing another user story before this one to setup a database schema migration pattern for Drupal?. [~paul.robinson] what are your thoughts here? | <a href="https://issues.jboss.org/browse/DEVELOPER-3854">https://issues.jboss.org/browse/DEVELOPER-3854</a> |
| 6605 | DEVELOPER-3847 | [~ecurley] Looking at the styling for the excerpt block that [~james.cobb] provided compared (blue background) with your selected excerpts from the cheat sheets (also has a mix of blue background), we may need to modify the excerpt block background color on the page. Also, with the tables from the actual cheat sheets, this does add some complexity as to who can enter that info in the Drupal field. I'm guessing HTML knowledge may be needed to do this. I think it would be good to circle back with [~adelaarreola] on this next week. Adela - Maybe work on the most difficult looking of these first so we can see the worst case scenario and adjust things if needed? Who knows...maybe this isn't an issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-3847">https://issues.jboss.org/browse/DEVELOPER-3847</a> |
| 6606 | DEVELOPER-3847 | [~adelaarreola] [~james.cobb] [~tnolan] So trying to understand correctly, no tables, no headings, nothing that has a two column layout. Is that correct? If yes, that is going to be a bit challenging because many of these don't have paragraphs and the paragraphs they do are often just a basic intro info - not a great excerpt. Thoughts?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-3847">https://issues.jboss.org/browse/DEVELOPER-3847</a> |
| 6607 | DEVELOPER-3846 | [~paul.robinson] [~adelaarreola] - I updated the staging query to show what the cheatsheets dcp config looks like. Can you review at <a href="http://dcp.stage.jboss.org/v2/rest/search?sys_type=cheatsheet&amp;field=_source">http://dcp.stage.jboss.org/v2/rest/search?sys_type=cheatsheet&amp;field=_source</a> ? Staging doesn't seem to have cheatsheets by default, so you may need to add one to test if a merge overwrites the cheatsheet I added.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-3846">https://issues.jboss.org/browse/DEVELOPER-3846</a> |
| 6608 | DEVELOPER-3846 | Can this be closed? I see it up in both staging and production.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-3846">https://issues.jboss.org/browse/DEVELOPER-3846</a> |
| 6609 | DEVELOPER-3844 | [~paul.robinson] I fixed a spelling error in the URL for "cheet". Since Cheat Sheet is 2 words, shouldn't the URL be "/cheat-sheet/" rather than "cheatsheet". If we make it one word in the URL, I think it might be confusing and add more confusion to the "is it one word or two words" question. I know I get confused.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-3844">https://issues.jboss.org/browse/DEVELOPER-3844</a> |
| 6610 | DEVELOPER-3844 | [~adelaarreola] - Can you tell us the differences between the widget for www and the plugin on wordpress? Can we port that one over... or style the widget on www to match the blog?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-3844">https://issues.jboss.org/browse/DEVELOPER-3844</a> |

| 6611 | DEVELOPER-3843 | [*james.cobb] Which image usage? Can this be resolved today? I'd like the engineering work to go into the sprint starting Monday.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/DEVELOPER-3843">https://issues.iboss.org/browse/DEVELOPER-3843</a> |
| 6612 | DEVELOPER-3843 | OK. Sounds like it shouldn't hold up Engineering work? Do you expect the UX/VD to change beyond what image appears there?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3843">https://issues.iboss.org/browse/DEVELOPER-3843</a> |
| 6613 | DEVELOPER-3843 | [*james.cobb] [*tnolan] where can I find the VD or layout (if styles don't change) for the tablet and mobile sizes? Also, can I get the specifications of text sizes, images heights/widths, colors, if buttons are heavy CTAs or light, etc so I can implement it as best as possible?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-3843">https://issues.iboss.org/browse/DEVELOPER-3843</a> |
| 6614 | DEVELOPER-3840 | In Drupal's core developers' infinite wisdom (and after how many rewrites??) they have decided not to give you a means of getting all revisions from an entity. What you need to do is create an query to pull in all the revisions (because....?). Here's the basic idea: <pre>{code:php} \$node_storage = \Drupal::entityTypeManager()-&gt;getStorage('node'); \$nids = \Drupal::entityQuery('node')-&gt;condition('type','page')-&gt;execute(); \$nodes = \$node_storage-&gt;loadMultiple(\$nids); foreach (\$nodes as \$node) { \$result = \$node_storage-&gt;getEntity('node')-&gt;allRevisions() -&gt;condition(\$node-&gt;getEntityType()-&gt;getKey('id'), \$node-&gt;id()) -&gt;sort(\$node-&gt;getEntityType()-&gt;getKey('revision'), 'DESC') -&gt;pager(50) -&gt;execute(); \$revisions = array_keys(\$result); foreach (\$revisions as \$vid) { // version id \$node_storage-&gt;deleteRevision(\$vid); } }</pre> We could do this in a controller and create a route only admins can get to. We may also need to do that in a batching manner. | <a href="https://issues.iboss.org/browse/DEVELOPER-3840">https://issues.iboss.org/browse/DEVELOPER-3840</a> |
| 6615 | DEVELOPER-3838 | [*ldary] will be working on this. Can you try discuss it with him today? We need to get the sprint planned for early Monday.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-3838">https://issues.iboss.org/browse/DEVELOPER-3838</a> |
| 6616 | DEVELOPER-3818 | Paul Robinson, thanks for the ordering fix! For pushing artifacts to DM I am creating issues in RCM Jira (like this one RCM-12018). AFAIK there is an "unpush" process for such artifacts. I was cautious to ask RCM for unpush to not end with a broken link for this artifact on "Downloads" page. Assuming that such changes are propagated to DM automatically, will it be convenient if I will create a RCM issue to unpush this specific artifact (8u111-3 ZIP bundle)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-3818">https://issues.iboss.org/browse/DEVELOPER-3818</a> |
| 6617 | DEVELOPER-3817 | More work than you probably think is my guess. The proposed solution looks good and seems fine, but trying to come up with the correct implementation could take a bit. Balancing the ease of use for content creators and development work to implement it is not going to be easy. Do we add this as a widget you can use in the editor? Do we add another paragraph (to all of the steps) you can fill out? I think those two things need to be figured out first.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-3817">https://issues.iboss.org/browse/DEVELOPER-3817</a> |
| 6618 | DEVELOPER-3817 | [*lightguard] [*paul.robinson] Just a reminder that the MVP for this is some working HTML/code that can be inserted in the existing form field. Sure, it would be great to have something easier down the road, but I don't want that to hold up getting something out soon. The only page we currently need this on is RHEL. CDK has something similar, but with only 3 options vs 22, we don't need the drop-down there. Is there existing show/hide functionality like what is written for the blue bars on that page that can be leveraged? Will the text editor strip out class tags for the divs if we use that as part of the solution? Just did a quick test and the editor did not strip class tags from div. However it did remove the <option> tag. [*lightguard] Can that one be added to the RHD Approved list?                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-3817">https://issues.iboss.org/browse/DEVELOPER-3817</a> |
| 6619 | DEVELOPER-3817 | [*ldary] This is looking really good. I have a working version on the RHEL page in this environment now: <a href="http://stumpjumper.lab4.eng.bos.redhat.com:36748/products/rhel/hello-world#fndtn-bare-metal_build-something-today">http://stumpjumper.lab4.eng.bos.redhat.com:36748/products/rhel/hello-world#fndtn-bare-metal_build-something-today</a> The only thing that is missing the the divider line between the drop-down and the content. Can this be added to the styling for the drop-down? I2017-02-09_10-40-12.png thumbnail! Once that's added, I think this is good to go after a quick review/final approval from [*james.cobb] for V+D.                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-3817">https://issues.iboss.org/browse/DEVELOPER-3817</a> |
| 6620 | DEVELOPER-3810 | Have you contacted Wordpress VIP? It's a real pain we can't redirect <a href="https://developerblog.redhat.com">https://developerblog.redhat.com</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-3810">https://issues.iboss.org/browse/DEVELOPER-3810</a> |
| 6621 | DEVELOPER-3810 | Can the admin console be accessed by using a different domain/IP in the URL?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-3810">https://issues.iboss.org/browse/DEVELOPER-3810</a> |
| 6622 | DEVELOPER-3804 | [*adelarreola] I've marked you as the lead on this Epic. Can you work with [*krzyzanek] when he is ready to add this to the forums. Please help him to ensure the right collector is used in the footer vs 404 page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-3804">https://issues.iboss.org/browse/DEVELOPER-3804</a> |
| 6623 | DEVELOPER-3803 | Hi [*visuale]. This is implemented on the main site pages. Can you make the same change on the blog?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-3803">https://issues.iboss.org/browse/DEVELOPER-3803</a> |
| 6624 | DEVELOPER-3803 | Actually the link is there, but it's not working properly. Can you coordinate with [*adelarreola] and [*paul.robinson] to get this fixed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3803">https://issues.iboss.org/browse/DEVELOPER-3803</a> |
| 6625 | DEVELOPER-3803 | [*visuale] this is still broken, can you take a look?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-3803">https://issues.iboss.org/browse/DEVELOPER-3803</a> |
| 6626 | DEVELOPER-3803 | [*visuale] this doesn't seem to work anymore. Can you investigate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-3803">https://issues.iboss.org/browse/DEVELOPER-3803</a> |
| 6627 | DEVELOPER-3795 | [*james.cobb] Per notes, I've revised this script. Would the attached screenshot from a local test be the correct presentation for list items? IScreen Shot 2017-05-21 at 5.35.04 PM.png thumbnail!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-3795">https://issues.iboss.org/browse/DEVELOPER-3795</a> |
| 6628 | DEVELOPER-3792 | [*james.cobb] I believe this behavior is already in place across the site. Do you know anywhere in specific where this behavior is needed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-3792">https://issues.iboss.org/browse/DEVELOPER-3792</a> |
| 6629 | DEVELOPER-3792 | [*adelarreola] - The current buttons on our site are set to 100% for width on desktop. They should be actually have a fixed padding on the left or right as per the document. the "Heavy CTA" = Red buttons. Button dimensions: • Button width flows with length of text • Padding: Top is 9 pixels; bottom is 9 pixels; sides are 40 pixels Examples where it's not working correctly... 1) Homepage "join" button at the bottom (has overrides) 2) Product page "Hello World" section (has overrides) 3) Product detail download page (has overrides) 3) Downloads page "Popular Downloads" (has overrides) 4) Downloads page "Download" buttons (has overrides) -These should actually be medium CTAs. 5) Events page "learn more" buttons (has overrides) etc... etc.                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3792">https://issues.iboss.org/browse/DEVELOPER-3792</a> |
| 6630 | DEVELOPER-3791 | [*james.cobb] I believe this behavior is already in place across the site. Do you know anywhere in specific where this behavior is needed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-3791">https://issues.iboss.org/browse/DEVELOPER-3791</a> |
| 6631 | DEVELOPER-3781 | [*ldary] I've marked you as lead on this Epic. Can you keep an eye on the issues and ensure a few of them get done each sprint? I'd like to see this done by the end of Q1FY17 if we can. You'll also need to work with the Blog, Forums and Keycloak engineers to get their changes in. Also note, that this has a very low PDD priority, so don't let it delay other Epic-level work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-3781">https://issues.iboss.org/browse/DEVELOPER-3781</a> |
| 6632 | DEVELOPER-3780 | [*adelarreola] [*paul.robinson] Thanks. I moved the doc (a copy) to: <a href="https://drive.google.com/drive/folders/0B_QaDtRa6sAkTTB2V2VFQmgwWUU">https://drive.google.com/drive/folders/0B_QaDtRa6sAkTTB2V2VFQmgwWUU</a> Can one of you provide edit access so I can add a new tab and/or some notes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-3780">https://issues.iboss.org/browse/DEVELOPER-3780</a> |
| 6633 | DEVELOPER-3780 | Thanks [*tnolan], can you work with [*adelarreola] on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-3780">https://issues.iboss.org/browse/DEVELOPER-3780</a> |
| 6634 | DEVELOPER-3768 | When you say "mysql" are you talking about it starting up or actually running? If it's startup time, which it very well may be, that SQL file we're loading is nearly 7G.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3768">https://issues.iboss.org/browse/DEVELOPER-3768</a> |
| 6635 | DEVELOPER-3753 | [*ldary] can you check if we need this or not? If not, I'd like to understand why not.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-3753">https://issues.iboss.org/browse/DEVELOPER-3753</a> |
| 6636 | DEVELOPER-3749 | [*paul.robinson] I believe this is in the actual code for the Drupal pages and not editable via the form for the product content type. If I'm setup with GitHub, is this a change that I could make myself via a PR?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-3749">https://issues.iboss.org/browse/DEVELOPER-3749</a> |

| 6637 | DEVELOPER-3749 | Thanks [~adelaarreola]. Can you add a comma before "which" to make this more grammatically correct? That was my bad for not seeing it sooner. Otherwise, this looks great. Approved. "and conditions of the Red Hat Developer Program{color:red}*, *{color} which provides no-cost subscriptions for development use only."                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/DEVELOPER-3749">https://issues.iboss.org/browse/DEVELOPER-3749</a> |
| 6638 | DEVELOPER-3738 | [~paul.robinson] [~lightguard] Re: should every get-started page have it's first section marked as complete, when visiting it via a download? - No, since not all the products have a Get Started where the first step is to Download. In the future, I would like to get all of products using that format though. The checkbox Jason provided should give us the flexibility needed currently, as well as allow for future changes.                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-3738">https://issues.iboss.org/browse/DEVELOPER-3738</a> |
| 6639 | DEVELOPER-3738 | [~tnolan] I see the 'Pending Download Section' option now. Have you confirmed that this does what you need it to do?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3738">https://issues.iboss.org/browse/DEVELOPER-3738</a> |
| 6640 | DEVELOPER-3714 | how do we close JIRAs as duplicate and/or other?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-3714">https://issues.iboss.org/browse/DEVELOPER-3714</a> |
| 6641 | DEVELOPER-3714 | [~hwindzio] I've removed what I see as the duplicate tasks from this issue. See the description. There are still three places that the OpenShift product name appears outside of the drupalised product pages. Can this change go live now, or does it need to be done at the same time as the name change on the OpenShift product page?                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-3714">https://issues.iboss.org/browse/DEVELOPER-3714</a> |
| 6642 | DEVELOPER-3714 | Yes we can do it at the same time. Can we try get this out today?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-3714">https://issues.iboss.org/browse/DEVELOPER-3714</a> |
| 6643 | DEVELOPER-3708 | Great. Can you create the Story(s) on this Epic and schedule them?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-3708">https://issues.iboss.org/browse/DEVELOPER-3708</a> |
| 6644 | DEVELOPER-3704 | [~hwindzio] when do you need this by? It will need a Mockup and maybe UX work. CC [~tnolan], [~james.cobb].                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/DEVELOPER-3704">https://issues.iboss.org/browse/DEVELOPER-3704</a> |
| 6645 | DEVELOPER-3702 | [~adelaarreola] can you review this issue and makes sure you have all you need to implement it on Monday? It needs to go live on the 14th of Dec, do you have the time to achieve this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-3702">https://issues.iboss.org/browse/DEVELOPER-3702</a> |
| 6646 | DEVELOPER-3702 | [~hwindzio] please review the deprecated text added to each forum: <a href="https://developers-pr.stage.redhat.com/pr/1663/export/forums/">https://developers-pr.stage.redhat.com/pr/1663/export/forums/</a> Do you want the latest forum posts removing from the help pages of these four products also? I.e just show SO content on the help pages of these 4 products.                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-3702">https://issues.iboss.org/browse/DEVELOPER-3702</a> |
| 6647 | DEVELOPER-3702 | [~hwindzio] This is ready to be merged. Do you want it to go live today or tomorrow?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3702">https://issues.iboss.org/browse/DEVELOPER-3702</a> |
| 6648 | DEVELOPER-3696 | What technology tab? What page?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-3696">https://issues.iboss.org/browse/DEVELOPER-3696</a> |
| 6649 | DEVELOPER-3696 | [~lightguard] we should probably update the Product category name option here: <a href="https://github.com/redhat-developer/developers.redhat.com/blob/c37c7b1c9e5f6d3a8b410c6a2004769eae2930c5/_docker/drupal/drupal-filesystem/web/config/sync/field.storage.node.field_product_technology_group.yml#L30">https://github.com/redhat-developer/developers.redhat.com/blob/c37c7b1c9e5f6d3a8b410c6a2004769eae2930c5/_docker/drupal/drupal-filesystem/web/config/sync/field.storage.node.field_product_technology_group.yml#L30</a> . Otherwise it's going to get confusing when assigning a Product to a category. Does this cause problems with any existing Product content using the old "Private Cloud" field name? | <a href="https://issues.iboss.org/browse/DEVELOPER-3696">https://issues.iboss.org/browse/DEVELOPER-3696</a> |
| 6650 | DEVELOPER-3688 | [~rblake] had noticed a few things didn't match up in the PR with the "Definition of Done", good catch Rob, thanks! [~paul.robinson] where are we with the redirects?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-3688">https://issues.iboss.org/browse/DEVELOPER-3688</a> |
| 6651 | DEVELOPER-3678 | Can you add a description for why this is blocked?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-3678">https://issues.iboss.org/browse/DEVELOPER-3678</a> |

| 6653 | DEVELOPER-3678 | [~ldary] It may not be related, however I am still having issues getting results on /resources. On my local machine both inside and outside of docker testing against a pr-site preview it is fine! However when the tests run on Jenkins (PR build) do not get results. I'm baffled! One thing I noticed with the stubbed responses was the search and stack overflow pages have an access-control-origin of `https://developers-pr.stage.redhat.com` However the /resources page has an access-control-origin of http://developers-pr.stage.redhat.com. Should that be https?                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-3678">https://issues.iboss.org/browse/DEVELOPER-3678</a> |
| 6654 | DEVELOPER-3677 | Is this still blocked?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-3677">https://issues.iboss.org/browse/DEVELOPER-3677</a> |
| 6655 | DEVELOPER-3673 | [~paul.robinson] some products have multiple videos, is there a list or something where I can see which video is a product intro?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-3673">https://issues.iboss.org/browse/DEVELOPER-3673</a> |
| 6656 | DEVELOPER-3673 | I added an extra step above: {quote} Change the thumbnail to a frame that has the person's name displayed and one in which the interviewee doesn't look silly. You will likely need to pause the video at a suitable point and upload a screenshot to use as the thumbnail. I couldn't find a better way to do this with the YouTube API. {quote} Can you make this change too?                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-3673">https://issues.iboss.org/browse/DEVELOPER-3673</a> |
| 6657 | DEVELOPER-3670 | When can you get this done? The Getting Started instructions now point to a broken link as 9.0.2 was removed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-3670">https://issues.iboss.org/browse/DEVELOPER-3670</a> |
| 6658 | DEVELOPER-3655 | [~lightguard] is this feasible? Can you schedule it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3655">https://issues.iboss.org/browse/DEVELOPER-3655</a> |
| 6659 | DEVELOPER-3655 | [~mikgue] we can now archive items. Everything that was "deleted" before has now been archived. Content Admins can bring content back from being archived. Are you happy with this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-3655">https://issues.iboss.org/browse/DEVELOPER-3655</a> |
| 6660 | DEVELOPER-3655 | [~mikgue] how does <a href="https://drive.google.com/open?id=0B9M2ZSLcm2xXcFpLY1MxTU5QQQU0">https://drive.google.com/open?id=0B9M2ZSLcm2xXcFpLY1MxTU5QQQU0</a> help?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3655">https://issues.iboss.org/browse/DEVELOPER-3655</a> |
| 6661 | DEVELOPER-3650 | Sooner than later. Is it possible for this or next sprint?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-3650">https://issues.iboss.org/browse/DEVELOPER-3650</a> |
| 6662 | DEVELOPER-3643 | [~ldary] I've just merged the PR. Is this ready to mark as done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-3643">https://issues.iboss.org/browse/DEVELOPER-3643</a> |
| 6663 | DEVELOPER-3643 | [~ldary] I think this is ready to resolve. Is that right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-3643">https://issues.iboss.org/browse/DEVELOPER-3643</a> |
| 6664 | DEVELOPER-3642 | [~ldary] is this now done? If so, can you update the issue status please.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-3642">https://issues.iboss.org/browse/DEVELOPER-3642</a> |
| 6665 | DEVELOPER-3642 | [~ldary] with <a href="https://github.com/redhat-developer/developers.redhat.com/pull/1600">https://github.com/redhat-developer/developers.redhat.com/pull/1600</a> merged, is this now done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-3642">https://issues.iboss.org/browse/DEVELOPER-3642</a> |
| 6666 | DEVELOPER-3628 | I think it's good enough for you or Rob to execute. [~rblake], do you agree?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/DEVELOPER-3628">https://issues.iboss.org/browse/DEVELOPER-3628</a> |
| 6667 | DEVELOPER-3626 | [~adelaarreola], [~lightguard]. If we stop pushing the homepage via Awestruct (as we have planned), how will the hero background image be changed? I believe it is currently part of the style. Can this particular style be in-lined in the HTML, such that it can be edited via Drupal when editing the homepage HTML?                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-3626">https://issues.iboss.org/browse/DEVELOPER-3626</a> |
| 6668 | DEVELOPER-3626 | [~james.cobb] we can up the JBD banner also as the build is now working. Can your team do that via a PR?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-3626">https://issues.iboss.org/browse/DEVELOPER-3626</a> |
| 6669 | DEVELOPER-3622 | [~adelaarreola] do you know why this behaviour has been reverted? I'm sure you fixed this a while ago. Do you remember?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-3622">https://issues.iboss.org/browse/DEVELOPER-3622</a> |
| 6670 | DEVELOPER-3622 | When we switched to Drupal, the default email reverted to the old email. Could this be the same cause?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-3622">https://issues.iboss.org/browse/DEVELOPER-3622</a> |
| 6671 | DEVELOPER-3617 | I've just re-ran the report. See: <a href="https://docs.google.com/spreadsheets/d/16bqTsaUr-PAJmVmM2RdWIEsXnPED0YWanIk6G-8uW82l/edit#gid=1350294889">https://docs.google.com/spreadsheets/d/16bqTsaUr-PAJmVmM2RdWIEsXnPED0YWanIk6G-8uW82l/edit#gid=1350294889</a> . It looks like the articles are still showing http links. Can you take a look? Maybe something funny is happening with the export?                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-3617">https://issues.iboss.org/browse/DEVELOPER-3617</a> |
| 6672 | DEVELOPER-3614 | What is email needed for? Is it part of the content change workflow?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3614">https://issues.iboss.org/browse/DEVELOPER-3614</a> |
| 6673 | DEVELOPER-3587 | [~ihamilto] I understand the slowness of this page is affecting the tests. How urgent is it that we fix this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-3587">https://issues.iboss.org/browse/DEVELOPER-3587</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | URL                                                                                                         |

| 6674 | DEVELOPER-3580 | [~ldary] are you working on this for this sprint? If so, Can you add to the current sprint. We don;t normally add stuff after the start, but I prefer the sprint to reflect reality.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-3580">https://issues.jboss.org/browse/DEVELOPER-3580</a> |
| 6675 | DEVELOPER-3578 | [~tnolan] and/or [~james.cobb] could we get the information for these colors and icons for this (background, borders, text, fonts, etc.)? I didn't see them listed in the linked issue. Also, closing "X" vertical alignment? Seems like middle is the one on the Patternfly example, but wasn't sure because that wasn't specified in the RH Unified Style Guide (which I've made a comment on).                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-3578">https://issues.jboss.org/browse/DEVELOPER-3578</a> |
| 6676 | DEVELOPER-3578 | [~james.cobb] Can you double check the way you labeled the colors? I think you have the Error and Warning mixed up above with the terms. I think it should be Warning (Yellow) and Error (Red). Color-wise, these all look good to me, except the yellow one. Is there more of a shade of orange rather than brownish that can be used for the icon/border? Since it's a warning, I feel like it should have a slightly brighter icon color to draw attention. The brownish gets kinda lost to me.                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-3578">https://issues.jboss.org/browse/DEVELOPER-3578</a> |
| 6677 | DEVELOPER-3578 | [~ldary] Any update on this one? Is there anything else you need from the design team to get this implemented?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-3578">https://issues.jboss.org/browse/DEVELOPER-3578</a> |
| 6678 | DEVELOPER-3578 | [~paul.robinson] [~ldary] [~hwindzio] - Can we get this story added to the next sprint? I think the styles are already defined and approved by [~james.cobb] and it's just a matter of implementing it. I am going to need these styles as part of the progressive profiling work I'm doing, and the page designs for the registration flows.                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3578">https://issues.jboss.org/browse/DEVELOPER-3578</a> |
| 6679 | DEVELOPER-3578 | [~paul.robinson] [~ldary] Can you provide an update on this? Is it falling through the cracks since it has an old Sprint number already assigned to it? It would be very helpful to have these so we can utilize for both the progressive profiling work and the new site outage alerts.                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-3578">https://issues.jboss.org/browse/DEVELOPER-3578</a> |
| 6680 | DEVELOPER-3578 | Thanks [~ldary]. I see that [~adelaarreola] is assigned to work on this. :) It would be great to have a document or mojo location where we documented these so that we can easily refer to them for implementation from other systems such as the Blog and KeyCloak. Do you have any suggestions for this?                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-3578">https://issues.jboss.org/browse/DEVELOPER-3578</a> |
| 6681 | DEVELOPER-3567 | [~jessk] - I assigned this to [~brock] . Do we also want to add this to JBoss Developer's hero since it applies to JBoss?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-3567">https://issues.jboss.org/browse/DEVELOPER-3567</a> |
| 6682 | DEVELOPER-3567 | Thank you [~james.cobb] and [~brock] . Do you think it will be hard to read? I'll check traffic to it with Tiffany in a week or so and see how it's doing. I do like that it matches the event page header though. [~paul.robinson] I will open a jira to implement this.                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-3567">https://issues.jboss.org/browse/DEVELOPER-3567</a> |
| 6683 | DEVELOPER-3560 | [~adelaarreola] It looks really nice. Thanks so much for doing it quickly (so quickly!) One question - The pages that host the videos (like http://developers-pr.stage.redhat.com/pr/1481/build/2365/video/youtube/tEvzJBFizV4/) have title and speaker names running together. See attached screenshot. Can we adjust the font for the speaker name or some other formatting to distinguish between the two? Thanks so much! Iscreenshot-1.png!                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-3560">https://issues.jboss.org/browse/DEVELOPER-3560</a> |
| 6684 | DEVELOPER-3560 | Also, would it look better if "Red Hat Developers at JavaOne 2016" was white, larger and in the header graphic? I'm not sure how amenable the header is for this, due to the variation in colours used.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-3560">https://issues.jboss.org/browse/DEVELOPER-3560</a> |
| 6685 | DEVELOPER-3560 | [~adelaarreola]It looks great. Thank you. A few questions/comments... * I removed speakers names from the YouTube video titles. I moved them to the description area so we still had them. * The landing page that hosts the videos - hasn't updated yet....guessing it will just take some time? (http://developers-pr.stage.redhat.com/pr/1481/build/2372/video/youtube/35_yWad7liQ/) * On the landing page that hosts the video I noticed there's a speaker field but we don't have speaker names there. How is that populated? Assuming it's being fed from the youtube data also? If the default is the YouTube account name (Red Hat Developers), Lets just remove it. Thanks again!                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-3560">https://issues.jboss.org/browse/DEVELOPER-3560</a> |
| 6686 | DEVELOPER-3555 | [~paul.robinson] This looks like it should be a fairly quick task. Can it get added to a sprint and completed before March 1? We're still going to need this for when we combine the search/resources pages.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-3555">https://issues.jboss.org/browse/DEVELOPER-3555</a> |
| 6687 | DEVELOPER-3554 | [~paul.robinson] The SOLP is definitely the priority. However, we do have a lot of ads floating around that are driving people to the EAP Downloads page, specifically. If this could get implemented by the end of next week, I think that would be fine. Does that work from your end?                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-3554">https://issues.jboss.org/browse/DEVELOPER-3554</a> |
| 6688 | DEVELOPER-3553 | [~james.cobb] what pages are you referring to, and which titles? Do you mean titles like: https://www.dropbox.com/s/0ct24rv1ndputik/Screenshot%202016-11-23%2012.48.28.png?dl=0 on http://developers.redhat.com/projects/?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-3553">https://issues.jboss.org/browse/DEVELOPER-3553</a> |
| 6689 | DEVELOPER-3550 | [~paul.robinson] It would be great if we could get this work prioritized for this week/next week. The urgency is because we'd like for this to be in place before all the promos for Don's book start going out. There's a big opportunity here to improve conversions. One other thing to note is the "Email Link" button. [~ecurley] and I talked about this along with Mark's team. For the initial release of that button, we'd like for it to be a mailto link that has some body text which includes a link back to the promo page. [~ecurley] - Would be able to provide the copy? Paul or someone on his team should be able to let you know what all the parameter options are such as subject line, body text, etc. | <a href="https://issues.jboss.org/browse/DEVELOPER-3550">https://issues.jboss.org/browse/DEVELOPER-3550</a> |
| 6690 | DEVELOPER-3550 | [~paul.robinson] I'm not sure how to get links for [~tnolan] and [~james.cobb] to review, [this PR  https://github.com/redhat-developer/developers.redhat.com/pull/1572/files] has the CSS changes, and I have the html changes on my laptop. In order to get Tiffany a staging link to preview, I would need my PR to be merged into staging, but not production (it would possibly break the current microsite styles) and then I could go into the staging drupal gui and update the HTML pages. In other words, how should I handle the review of pages that were migrated as pure HTML?                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-3550">https://issues.jboss.org/browse/DEVELOPER-3550</a> |
| 6691 | DEVELOPER-3550 | [~adelaarreola][~paul.robinson] Agreed on only having to implement the change in Drupal, not the other HTML pages. Do you have a URL [~james.cobb] and I can review?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-3550">https://issues.jboss.org/browse/DEVELOPER-3550</a> |
| 6692 | DEVELOPER-3550 | [~james.cobb] which version of firefox are you running? It looks fine on mine https://www.dropbox.com/s/jkl19qug79666l6/Screenshot%202016-11-04%2007.46.39.png?dl=0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-3550">https://issues.jboss.org/browse/DEVELOPER-3550</a> |
| 6693 | DEVELOPER-3550 | [~adelaarreola][~tnolan] Desktop: the image usage is very large. We're going to set the rule that we size the image at 270px wide as the source. We'll need to adjust the columns to 6/18 so the spacing is ~30px between the image and the content. Mobile: 1) I've attached a screenshot to illustrate but the vertical spacing is quite inconsistent. We need to adjust the space above and below the content and the titles so it is consistent with the product mobile views. 2) Can we center the "email link" button below the download button. Global: We shouldn't force all caps on the title. Is this a drupal template change?                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-3550">https://issues.jboss.org/browse/DEVELOPER-3550</a> |
| 6694 | DEVELOPER-3550 | [~adelaarreola] Just getting to this as I was in training today. What promotions are live with this change and is there HTML changes that need to occur in order for things like the email link to show up? Is this info documented anywhere so we don't have to bug you about it? :)                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-3550">https://issues.jboss.org/browse/DEVELOPER-3550</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | URL                                                                                                         |

| 6695 | DEVELOPER-3550 | [~tnolan] We have that doc here: <a href="https://docs.google.com/spreadsheets/d/1v-DNZvjpyw69Gx_2t2rgeALWjbt2_dnme6k2M5PXL58/edit#gid=2016133270">https://docs.google.com/spreadsheets/d/1v-DNZvjpyw69Gx_2t2rgeALWjbt2_dnme6k2M5PXL58/edit#gid=2016133270</a> . Is this what you were thinking about?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3550">https://issues.jboss.org/browse/DEVELOPER-3550</a> |
| 6696 | DEVELOPER-3550 | Thanks [~james.cobb]. Did you delete the old versions of the page too?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3550">https://issues.jboss.org/browse/DEVELOPER-3550</a> |
| 6697 | DEVELOPER-3540 | [~james.cobb] - Is this still an issue? I've looked through a couple of the product pages and compared them on a local build vs. production. The pages look like they are pulling in the correct graphics, maybe we're having caching issues?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-3540">https://issues.jboss.org/browse/DEVELOPER-3540</a> |
| 6698 | DEVELOPER-3536 | <a href="http://static.jboss.org/_root/images/rhd/topic/RHDev_topics_primopromo_microservicesicon_20sept2016.png">http://static.jboss.org/_root/images/rhd/topic/RHDev_topics_primopromo_microservicesicon_20sept2016.png</a> How is this? [~james.cobb] [~lincolnthree]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3536">https://issues.jboss.org/browse/DEVELOPER-3536</a> |
| 6699 | DEVELOPER-3503 | For 10.0, I was required to hard code [0] a bunch of links in this file [1] ... will that be required for 10.1? If so, will the people creating the new docs also be responsible for adding/replacing links in that file so they'll appear here [2]? [0] <a href="https://github.com/redhat-developer/developers.redhat.com/commit/3bfc172ec4129d70d57e2f30b61eac2c0b03d6ec">https://github.com/redhat-developer/developers.redhat.com/commit/3bfc172ec4129d70d57e2f30b61eac2c0b03d6ec</a> [1] <a href="https://github.com/redhat-developer/developers.redhat.com/blob/master/products/devstudio/_common/product.yml#L17-L68">https://github.com/redhat-developer/developers.redhat.com/blob/master/products/devstudio/_common/product.yml#L17-L68</a> [2] <a href="http://developers.redhat.com/products/devstudio/docs-and-apis/">http://developers.redhat.com/products/devstudio/docs-and-apis/</a> | <a href="https://issues.jboss.org/browse/DEVELOPER-3503">https://issues.jboss.org/browse/DEVELOPER-3503</a> |
| 6700 | DEVELOPER-3503 | Internal doc looks good (at least as far as there's a 10.1 section which duplicates the 10.0 content). Redirect still not in place. Will these be live before EOD today? Announcements are supposed to be tomorrow.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-3503">https://issues.jboss.org/browse/DEVELOPER-3503</a> |
| 6701 | DEVELOPER-3503 | [~nickboldt] I'd prefer to go live today, as long as it's not too soon. There's been some outages the last few days that have impacted our ability to push changes. I wouldn't want these to come back tomorrow and prevent this change going through. Who needs to make the call?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-3503">https://issues.jboss.org/browse/DEVELOPER-3503</a> |
| 6702 | DEVELOPER-3498 | [~paul.robinson] Happens automatically? Then what is this variable used for? <a href="https://github.com/redhat-developer/developers.redhat.com/pull/1442/files#diff-58cf26cee5226e736168698e99de542eL4">https://github.com/redhat-developer/developers.redhat.com/pull/1442/files#diff-58cf26cee5226e736168698e99de542eL4</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-3498">https://issues.jboss.org/browse/DEVELOPER-3498</a> |
| 6703 | DEVELOPER-3496 | I don't see the change live on <a href="http://developers.redhat.com/products/devstudio/overview/">http://developers.redhat.com/products/devstudio/overview/</a> ... does some other magic have to happen to make it go to production?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3496">https://issues.jboss.org/browse/DEVELOPER-3496</a> |
| 6704 | DEVELOPER-3496 | [~dcoughlin1] I made a mistake and supplied the wrong URL link. Can you update it to this please? <a href="http://developers.redhat.com/products/cdk/overview/">http://developers.redhat.com/products/cdk/overview/</a> (LMK if I should create a new ticket)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-3496">https://issues.jboss.org/browse/DEVELOPER-3496</a> |
| 6705 | DEVELOPER-3496 | The source I put into the page (via my PR) had this: <code>{code}link:../devsuite/overview/{code}</code> But when the page is rendered, the link is bad -- it includes a 3rd ../ segment and sends the user to [1] instead of [2]. <code>{code}&lt;a href="../devsuite/overview/"&gt;{code}</code> Is it expected that the adoc, when rendered as html, injects another ../ segment? [1] <a href="http://developers.redhat.com/devsuite/overview/">http://developers.redhat.com/devsuite/overview/</a> [2] <a href="http://developers.redhat.com/products/devsuite/overview/">http://developers.redhat.com/products/devsuite/overview/</a> ... I see this issue is fixed. Must have been looking at an old cached copy.                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-3496">https://issues.jboss.org/browse/DEVELOPER-3496</a> |
| 6706 | DEVELOPER-3496 | What exactly was deployed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-3496">https://issues.jboss.org/browse/DEVELOPER-3496</a> |
| 6707 | DEVELOPER-3496 | Should we link to the devsuite page so we can tell people there's an online installer for devstudio (which is inside the devsuite installer)? cc: [~dgalovin] If so, PR: <a href="https://github.com/redhat-developer/developers.redhat.com/pull/1462">https://github.com/redhat-developer/developers.redhat.com/pull/1462</a> for review/approval.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-3496">https://issues.jboss.org/browse/DEVELOPER-3496</a> |
| 6708 | DEVELOPER-3495 | [~james.cobb] Would you or someone on your team be able to make 2 mock-ups of the alert message using one of the product pages, like: <a href="http://developers.redhat.com/products/fuse/overview/">http://developers.redhat.com/products/fuse/overview/</a> I think we could either put the alert directly above or directly below the "Hello World" banner, but I'm not sure which would look better without seeing it. I was originally thinking that we could place the alert at the top of the first "white" background section, so it's not above the page title banner, but then I saw that a lot of the pages being redirected to are currently the product pages.                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-3495">https://issues.jboss.org/browse/DEVELOPER-3495</a> |
| 6709 | DEVELOPER-3495 | [~paul.robinson] - Why is this marked done? I haven't seen this in action. [~ldary] - Was this marked as done by accident?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-3495">https://issues.jboss.org/browse/DEVELOPER-3495</a> |
| 6710 | DEVELOPER-3495 | Sorry [~lightguard] but we all don't monitor the PRs on Github for changes. It's been customary for links to page/elements for review to be posted in the JIRA comments for the non-devs to view. Can we please get a link to a page with this element in place?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-3495">https://issues.jboss.org/browse/DEVELOPER-3495</a> |
| 6711 | DEVELOPER-3495 | [~ldary] Can you update the JS to cover every page on the site? They will most likely all be redirected to as part of the JBD to RHD migration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-3495">https://issues.jboss.org/browse/DEVELOPER-3495</a> |
| 6712 | DEVELOPER-3495 | Looks like [~tnolan]'s request has not yet been addressed: <a href="http://stumpjumper.lab4.eng.bos.redhat.com:36563/events/devnation/2016?referrer=jbd">http://stumpjumper.lab4.eng.bos.redhat.com:36563/events/devnation/2016?referrer=jbd</a> Otherwise, is this ready to go once the tests pass?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-3495">https://issues.jboss.org/browse/DEVELOPER-3495</a> |
| 6713 | DEVELOPER-3491 | current page shows version "10.0" - should be 1.0 It also refers to running DevSuite on OpenShift - but it should likely be running DevStudio on OpenShift. What is "JBoss AS application server on OpenShift"? Is this redundant?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-3491">https://issues.jboss.org/browse/DEVELOPER-3491</a> |
| 6714 | DEVELOPER-3491 | Paul, Thanks. Three things: 1. Can you also remove the "get a production subscription" part? It's inconsistent with the other products. 2. Updated text: To download DevSuite you must have an account and accept the terms and conditions of the Red Hat Developer Program which provides \$0 subscriptions for development use only. 3. why does it say "Restricted"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-3491">https://issues.jboss.org/browse/DEVELOPER-3491</a> |
| 6715 | DEVELOPER-3477 | [~paul.robinson] Will this include all possible page filters (Type, keyword, product, date(s), sort and # results) or a subset of those?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3477">https://issues.jboss.org/browse/DEVELOPER-3477</a> |
| 6716 | DEVELOPER-3477 | [~adelaarreola] It's great to see this progressing. I'm curious about the minimum of 2 parameters though as that makes the URL "messy". I'd like to see sys_type displayed as just "type" in the URL. What is the minimum 2 parameters and is there a way to just have a default value if one of them is not included? Ideally, I'd like to see something like "type=blogpost" or "keyword=eap". I'm still in all-day meetings tomorrow (Thurs) but could make some time on Friday to chat more about this. I totally understand system constraints, but maybe we can come up with some alternative options here to make this a little more user friendly?                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-3477">https://issues.jboss.org/browse/DEVELOPER-3477</a> |
| 6717 | DEVELOPER-3477 | [~adelaarreola] Sorry, I meant to send this sooner, but my laptop was constantly crashing on Friday. Thanks for scheduling the meeting. As discussed, please make the following name changes to the parameters in the URL: (this is required for UX sign-off) * change change sys_type to "type" * change project to "product" * change sortBy to "sort" * For the sorting, change most-recent to "most_recent" (for consistent use of the underscore vs a dash) * change query to "q" so it's consistent with search Nice to have as it's very "ugly": (not required for UX sign-off) * For code artifact, can we combine all the jboss developer parameters and just have that as "type=code" or type="code_artifact"?                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3477">https://issues.jboss.org/browse/DEVELOPER-3477</a> |
| 6718 | DEVELOPER-3471 | [~paul.robinson] - Can you reset the cache when you get a chance? The project.properties have been updated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-3471">https://issues.jboss.org/browse/DEVELOPER-3471</a> |
| 6719 | DEVELOPER-3471 | Which cache do you mean?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3471">https://issues.jboss.org/browse/DEVELOPER-3471</a> |
| 6720 | DEVELOPER-3471 | [~paul.robinson] - The project.properties file was updated by the project manager. Don't we need to remove Undertow from DCP and reindex?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-3471">https://issues.jboss.org/browse/DEVELOPER-3471</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | URL                                                                                                         |
|------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| 6721 | DEVELOPER-3455 | [~james.cobb] Sounds great! Do you happen to know the best way to see what pages currently have alerts other than poking around? As one of the next steps, and once we have the designs, I'd like to document which versions (info, warning, etc.) should be used where. Right now, I think almost all of our alerts use the same style.                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-3455">https://issues.jboss.org/browse/DEVELOPER-3455</a> |
| 6722 | DEVELOPER-3455 | [~james.cobb] [~morgan_thomas] I think this is a great first pass. Can we use the same background colors and text colors (if they pass contrast tests) as the Portal? Those should be brand compliant. I think we could also go a little smaller with the icon sizes to allow for enough padding (whitespace) between them and the border. For the error one, I think that one should be an "x" instead of reusing the "i".                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-3455">https://issues.jboss.org/browse/DEVELOPER-3455</a> |
| 6723 | DEVELOPER-3455 | Hello Hello, Here is v2 with edits, can you review [~tnolan] [~james.cobb] ?<br><a href="http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/pages/images/RHD_alertstyle_r1v2.png">http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/pages/images/RHD_alertstyle_r1v2.png</a>                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-3455">https://issues.jboss.org/browse/DEVELOPER-3455</a> |
| 6724 | DEVELOPER-3455 | [~tnolan] Maybe we can keep those dismissible alerts as an "info" and then they can have the "x". Is the image you attached already apart of RHD?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3455">https://issues.jboss.org/browse/DEVELOPER-3455</a> |
| 6725 | DEVELOPER-3455 | [~james.cobb] I think this is ready to go to the implementation side. I'm guessing that we will need JIRAs in both RHDENG and DEVELOPER to make sure we get these updated, as well as the location for the main site, and Keycloak pages. Are you aware of any existing alerts on the blog or in the forums?                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-3455">https://issues.jboss.org/browse/DEVELOPER-3455</a> |
| 6726 | DEVELOPER-3451 | [~paul.robinson] I took a look at the online checker and I think that anything smaller that our base font size (16px) should be considered as "smaller text". [~james.cobb] - Do you agree?                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-3451">https://issues.jboss.org/browse/DEVELOPER-3451</a> |
| 6727 | DEVELOPER-3441 | So how would the images be added to the system when a new Topic is being created? Sounds like a PR would need to be raised on the CSS before the content creator can make the topic. Also, I guess the image would break when a content creator changed the title (such that it no longer matches an image name)?                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3441">https://issues.jboss.org/browse/DEVELOPER-3441</a> |
| 6728 | DEVELOPER-3416 | [~lightguard] [~paul.robinson] - Are we putting redirects into place for this or is there another solution? Just curious as this has been blocking for a quite a bit now.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-3416">https://issues.jboss.org/browse/DEVELOPER-3416</a> |
| 6729 | DEVELOPER-3411 | I like it. Is there a place to try it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-3411">https://issues.jboss.org/browse/DEVELOPER-3411</a> |
| 6730 | DEVELOPER-3408 | I generally understand your comment, [~rblake], but missing some details. I've found this, but nothing is working for me and possibly a user error/issue:<br><a href="https://www.aspedia.net/faq/how-do-i-create-anchor-link-drupal">https://www.aspedia.net/faq/how-do-i-create-anchor-link-drupal</a> Can you point to a file that has this in place? Thanks, Mike                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-3408">https://issues.jboss.org/browse/DEVELOPER-3408</a> |
| 6731 | DEVELOPER-3408 | Can I assume we can do this in Drupal HTML mode? If so, cool. Can you supply a sample?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-3408">https://issues.jboss.org/browse/DEVELOPER-3408</a> |
| 6732 | DEVELOPER-3408 | Yes, you can do this with Drupal. When you're editing something you can switch to source mode, it's a button on the right of the WYSIWYG editor. What you need to do is create a link with an id attribute: {code:html} <a id="google" href="https://www.google.com">Google</a> {code} Next, when you want to link to that within the same document you'd created text similar to: {code:html} <a href="#google">Link to Google</a> {code} You'll notice the 'href' in the second link starts with a '#' it is then followed by the id of the first link. This actually works for any element within a document. You can link to any HTML element that has an id. | <a href="https://issues.jboss.org/browse/DEVELOPER-3408">https://issues.jboss.org/browse/DEVELOPER-3408</a> |
| 6733 | DEVELOPER-3408 | [~mikgue], does my previous comment fulfill what you need?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-3408">https://issues.jboss.org/browse/DEVELOPER-3408</a> |
| 6734 | DEVELOPER-3408 | I'm still missing some context. What would really help is a sample RHDev drupal page where I can see the code and results. Would you mind assembling something simple? Thanks, Mike                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3408">https://issues.jboss.org/browse/DEVELOPER-3408</a> |
| 6735 | DEVELOPER-3408 | ids can only be added to h2, h3, h4, h5, and h6 currently. Should we decide we need to allow other elements to have an id we can make that change within Drupal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-3408">https://issues.jboss.org/browse/DEVELOPER-3408</a> |
| 6736 | DEVELOPER-3394 | [~mbenitez] do you need anything from my team now, or are you all set?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-3394">https://issues.jboss.org/browse/DEVELOPER-3394</a> |
| 6737 | DEVELOPER-3394 | [~paul.robinson] [~mbenitez] I see I've been assigned this issue. What is the selected solution? It's a bit rambling and I'm not sure what's going on with this or if it applies to me.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-3394">https://issues.jboss.org/browse/DEVELOPER-3394</a> |
| 6738 | DEVELOPER-3382 | Hi [~adelaarreola] Can we take the word 'free' out of this line: Stop by booth 5301 to snag a free t-shirt, stickers or other Red Hat freebies we'll be handing out. So it's: Stop by booth 5301 to snag a T-shirt, stickers or other Red Hat freebies we'll be handing out. Also, Can we do something to denote sessions that are on different days? Like a bold "Tuesday" and a horizontal line or something similar to separate the days of the week in our schedule? Does that make sense?                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-3382">https://issues.jboss.org/browse/DEVELOPER-3382</a> |
| 6739 | DEVELOPER-3377 | Is this a duplicate of <a href="https://issues.jboss.org/browse/DEVELOPER-3274">https://issues.jboss.org/browse/DEVELOPER-3274</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-3377">https://issues.jboss.org/browse/DEVELOPER-3377</a> |
| 6740 | DEVELOPER-3368 | [~tnolan] there's some naming discrepancies going on here too. The first link says "Enterprise Application Server" and the link to customer portal under the table says "JBoss EAP". Which correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3368">https://issues.jboss.org/browse/DEVELOPER-3368</a> |
| 6741 | DEVELOPER-3368 | [~tnolan] From all download pages?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-3368">https://issues.jboss.org/browse/DEVELOPER-3368</a> |
| 6742 | DEVELOPER-3337 | [~jessk] when does this need to go live?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-3337">https://issues.jboss.org/browse/DEVELOPER-3337</a> |
| 6743 | DEVELOPER-3337 | [~jessk] - Do we have a marketing direction for this? Some content direction?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-3337">https://issues.jboss.org/browse/DEVELOPER-3337</a> |
| 6744 | DEVELOPER-3337 | [~jessk]: Isn't this dependent on a landing page for cheat sheets? If not, where would the primary CTA go?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-3337">https://issues.jboss.org/browse/DEVELOPER-3337</a> |
| 6745 | DEVELOPER-3337 | [~jessk]: Do you have an update on when you need this by?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-3337">https://issues.jboss.org/browse/DEVELOPER-3337</a> |
| 6746 | DEVELOPER-3337 | [~adelaarreola] this is now merged. Can you add the SP for this please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-3337">https://issues.jboss.org/browse/DEVELOPER-3337</a> |
| 6747 | DEVELOPER-3321 | Did you try the linkchecker from <a href="https://github.com/linkcheck/linkchecker">https://github.com/linkcheck/linkchecker</a> as well? This looks like a fork basically because the maintainer of the original abandoned it and others in the community have picked it up. Try this one as well and let us know how it stacks up with the other one. I think either linkchecker or brokenlinkchecker are my top picks. Not sure why VPN is an issue for monkeytest. Couldn't we run it on a server inside our vpn or is this a hosted service?                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3321">https://issues.jboss.org/browse/DEVELOPER-3321</a> |
| 6748 | DEVELOPER-3321 | [~ihamilto] I'm slightly skeptical that all the broken links on the site have a single cause. I had expected us to have way more. Are you sure BLC is finding them all? For example, does it find broken links that are created by JS? E.g in the results of /resources?                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-3321">https://issues.jboss.org/browse/DEVELOPER-3321</a> |
| 6749 | DEVELOPER-3321 | There's a bunch of 404s and 403s on here: <a href="https://developers.redhat.com/products/dotnet/hello-world/">https://developers.redhat.com/products/dotnet/hello-world/</a> . Does BLC find them?                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3321">https://issues.jboss.org/browse/DEVELOPER-3321</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | URL                                                                                                         |
|------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| 6750 | DEVELOPER-3321 | [~paul.robinson] how are you testing to get the 403 & 404s? I am ignoring external url's, otherwise there would be 50+ more broken links. b/c does find the 403 on this page as reported in DEVELOPER-3819. All occurrences where the "DOWNLOAD" button is visible on mobile layout fail with a 403 on staging. {code} Getting links from: https://developers-pr.stage.redhat.com/pr/1736/export/products/dotnet/hello-world/  ---BROKEN--- https://developers-pr.stage.redhat.com/pr/1736/export/products/dotnet/downloads/ (HTTP_403)  ---BROKEN--- https://developers-pr.stage.redhat.com/pr/1736/export/products/dotnet/download/ (HTTP_403) Finished! 120 links found. 118 excluded. 2 broken. {code} Does this match what you see? Currently there is no way of automated (that I can find) link checking JS created links. This can be done with the ScreamingFrog premium standalone app. | <a href="https://issues.jboss.org/browse/DEVELOPER-3321">https://issues.jboss.org/browse/DEVELOPER-3321</a> |
| 6751 | DEVELOPER-3321 | I use https://chrome.google.com/webstore/detail/check-my-links/ojkcdipcgfaekbeaelpakgnjffglf. You can then browse to https://developers.redhat.com/products/dotnet/hello-world/ and click the 'check my links' button, to see: https://www.dropbox.com/s/7wppoygyuzry78x/Screenshot%202017-02-03%2011.25.45.png?dl=0 and https://www.dropbox.com/s/f51nszzgxbwwq9f/Screenshot%202017-02-03%2011.26.18.png?dl=0 and https://www.dropbox.com/s/conkgmx2nw5hhxq/Screenshot%202017-02-03%2011.26.30.png?dl=0. We had issues with Blinkr when checking JS generated links also. I think this was because we needed to run PhantomJS or similar to render every page. I'm happy to mark this Spike as done. Can you create a story for incorporating BLC into our build?                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-3321">https://issues.jboss.org/browse/DEVELOPER-3321</a> |
| 6752 | DEVELOPER-3312 | I know the details, but I'm honestly not sure how to describe that it's done :( Do we say we have groups in place and people can follow a prescribed workflow? Do we say content must flow in a prescribed workflow to be published?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-3312">https://issues.jboss.org/browse/DEVELOPER-3312</a> |
| 6753 | DEVELOPER-3312 | Maybe describe the manual tests we need to follow in order to check it's working? We need that anyway in order to do a review.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-3312">https://issues.jboss.org/browse/DEVELOPER-3312</a> |
| 6754 | DEVELOPER-3287 | [~tnolan] what do you suggest here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3287">https://issues.jboss.org/browse/DEVELOPER-3287</a> |
| 6755 | DEVELOPER-3287 | [~paul.robinson] I'd like to understand more about requirements for products like CDK. They have to start with some sort of download, even though it's not the actual "product", right? Where is this request coming from and do you happen to know who would be the best resource to figure requirements?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-3287">https://issues.jboss.org/browse/DEVELOPER-3287</a> |
| 6756 | DEVELOPER-3287 | [~paul.robinson] We do have a default download for CDK now, as of May. Is this an issue still for any other products?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-3287">https://issues.jboss.org/browse/DEVELOPER-3287</a> |
| 6757 | DEVELOPER-3279 | [~drieden] when does this need to go live? We need a variety of content pieces to do this. I would suggest working with [~lincolnthree] to get this together, then my team can implement the page on the site. You can take a look at http://developers.redhat.com/products/eap/ for an example of what we need. There's a number of pages, all linked from the left-hand navigation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-3279">https://issues.jboss.org/browse/DEVELOPER-3279</a> |
| 6758 | DEVELOPER-3273 | I think this is going to be quite a lot of work to change. What's the impact of leaving this unchanged?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-3273">https://issues.jboss.org/browse/DEVELOPER-3273</a> |
| 6759 | DEVELOPER-3273 | It's confusing for users, and I'm pretty sure that corporate marketing wouldn't be too happy about products being presented using different version specifications than those that have been chosen by product teams. That said, the mandatory z-numbers can be overlooked, I guess. But the ".GA" at the end is really weird. It looks like something internal, not intended for public eyes. When I showed it to people, the almost universal reaction was "What's that GA doing there?". If we could get rid of the ".GA", that'd be great. (I understand this already works, only the number must be in quotes because the system expects a string.)                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-3273">https://issues.jboss.org/browse/DEVELOPER-3273</a> |
| 6760 | DEVELOPER-3273 | Ok, we can probably drop the GA relatively easily. Do any of the products need the GA suffix?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-3273">https://issues.jboss.org/browse/DEVELOPER-3273</a> |
| 6761 | DEVELOPER-3273 | [~rkratky] - Can you please review http://developers-pr.stage.redhat.com/pr/1273/build/1762/? If you notice any issues, please let me know.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-3273">https://issues.jboss.org/browse/DEVELOPER-3273</a> |
| 6762 | DEVELOPER-3256 | [~jessk] - Do you approve of this text change?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-3256">https://issues.jboss.org/browse/DEVELOPER-3256</a> |
| 6763 | DEVELOPER-3236 | Ack to Andy's target for this link (https://access.redhat.com/documentation/en/red-hat-jboss-a-mq/?version=7.0-alpha). Can we add this link to http://www.jboss.org/products/amq/overview/ please.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-3236">https://issues.jboss.org/browse/DEVELOPER-3236</a> |
| 6764 | DEVELOPER-3213 | [~unibrew] Great thanks for reviewing it so quickly! Also, Paul was aiming to have this in production by tomorrow, do you think you will be finished with the boosting updates today? or when should we expect those changes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-3213">https://issues.jboss.org/browse/DEVELOPER-3213</a> |
| 6765 | DEVELOPER-3207 | Isn't this work already covered by: DEVELOPER-3197, DEVELOPER-3157 & DEVELOPER-3158?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-3207">https://issues.jboss.org/browse/DEVELOPER-3207</a> |
| 6766 | DEVELOPER-3207 | PRs to set current_version = 10.0.0.GA: https://github.com/redhat-developer/developers.redhat.com/pull/1204 https://github.com/jboss-developer/www.jboss.org/pull/1039 [~paul.robinson] does this change still need to happen? Is this how the Resources page [1] decides which doc to show? Or does it just load the latest, making this variable (and these PRs) irrelevant? [1] https://www.jboss.org/products/devstudio/resources/                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-3207">https://issues.jboss.org/browse/DEVELOPER-3207</a> |
| 6767 | DEVELOPER-3207 | I've added some doc links (as collected from [1]) into the https://github.com/redhat-developer/developers.redhat.com/pull/1204 PR. Is that what you were expecting? [~mhusnain] please review. I can apply the same list of docs for the second PR, too. [1] https://access.redhat.com/documentation/en/red-hat-jboss-developer-studio/?version=10.0                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-3207">https://issues.jboss.org/browse/DEVELOPER-3207</a> |
| 6768 | DEVELOPER-3206 | Alternatively, we could provide a service that returns the HTML for the header and footer. That way any changes to them will automatically propagate to the other services. The customer portal team do this. They call it "The Chrome Service". Would this work better for your needs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-3206">https://issues.jboss.org/browse/DEVELOPER-3206</a> |
| 6769 | DEVELOPER-3179 | Can this item be closed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-3179">https://issues.jboss.org/browse/DEVELOPER-3179</a> |
| 6770 | DEVELOPER-3172 | [~james.cobb], I see you assigned this to me. I believe this is just a SOLP, can your team handle it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-3172">https://issues.jboss.org/browse/DEVELOPER-3172</a> |
| 6771 | DEVELOPER-3161 | [~dcoughlin1] Did you push these updates to RHD as well? The .NET content page on RHD has the old content. Can you check for me? Thank you so much!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3161">https://issues.jboss.org/browse/DEVELOPER-3161</a> |

| 6777 | DEVELOPER-3141 | [~velias] Thanks for the review I have now updated scenarios based on your comments: Login Page:<br>https://github.com/RubyGemTSL/developers.redhat.com/blob/9469d034442841d7bb3fc8a8acf02feb045870e7/_cucumber/features/login_register/basic_login.feature<br>Registration Page:<br>https://github.com/RubyGemTSL/developers.redhat.com/blob/9469d034442841d7bb3fc8a8acf02feb045870e7/_cucumber/features/login_register/basic_registration.feature<br>Social Registration Page:<br>https://github.com/RubyGemTSL/developers.redhat.com/blob/9469d034442841d7bb3fc8a8acf02feb045870e7/_cucumber/features/login_register/social_registration.feature<br>Can you please have a quick review if they are OK give me a thumbsup on the PR?<br>https://github.com/RubyGemTSL/developers.redhat.com/blob/9469d034442841d7bb3fc8a8acf02feb045870e7/_cucumber/features/login_register/social_registration.feature<br>Thanks! | <a href="https://issues.iboss.org/browse/DEVELOPER-3141">https://issues.iboss.org/browse/DEVELOPER-3141</a> |
| 6778 | DEVELOPER-3130 | [~james.cobb] Can you add the latest mockups here so [~hwindzio] can take a look?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3130">https://issues.iboss.org/browse/DEVELOPER-3130</a> |
| 6779 | DEVELOPER-3130 | Thanks [~james.cobb]. I think I remember seeing a version for when the user isn't logged in. Do you have that mockup handy too?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-3130">https://issues.iboss.org/browse/DEVELOPER-3130</a> |
| 6780 | DEVELOPER-3130 | Great, there is the single sheet of paper as the Knowledgebase icon I was looking for! I guess Tiffany and I were looking at the lock icon when guests are locked out (which is really not the icon for Knowledgebase but for being locked out). I'm just noticing this, but in the link James sent we have another 'Article' link/icon at the top. Does that bring you to the Knowledgebase articles (is it a dup?), or is another type of content with the same name?                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-3130">https://issues.iboss.org/browse/DEVELOPER-3130</a> |
| 6781 | DEVELOPER-3130 | [~hwindzio][~tnolan] - To answer your second question but yes, we have another type called "Article" and now we're adding "Knowledgebase Article/Solution". It is a bit confusing... Should it just say "Knowledgebase"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/DEVELOPER-3130">https://issues.iboss.org/browse/DEVELOPER-3130</a> |
| 6782 | DEVELOPER-3128 | Just stumbled across this ticket. I assume this should apply to all RHD articles, Get Started, etc. content that links to any RHCP protected articles? Should there be a macro similar to #{cdn(site.base_url)} to make it easy to put the right links in content that will do SSO to the right prod/staging environment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/DEVELOPER-3128">https://issues.iboss.org/browse/DEVELOPER-3128</a> |
| 6783 | DEVELOPER-3128 | [~rterzi] yes it does apply to all links. I agree, a function would be useful, can you raise a separate JIRA ticket for that? You make a good point about the other places that link to these articles. We should search for such occurrences.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-3128">https://issues.iboss.org/browse/DEVELOPER-3128</a> |
| 6784 | DEVELOPER-3112 | Attached the files, but whats next? [~james.cobb]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-3112">https://issues.iboss.org/browse/DEVELOPER-3112</a> |
| 6785 | DEVELOPER-3108 | [~tnolan] how important is this for summit?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-3108">https://issues.iboss.org/browse/DEVELOPER-3108</a> |
| 6786 | DEVELOPER-3108 | [~james.cobb] Looking good! A few things: * Font size for the outside location: Sorry, it's hard to tell from the mockup, but is the font size also slightly smaller from the main size once it moves into the upper position? I think it would help to see an example with input plus the label on the outside too for comparison. * With KISS in mind, I'm not sure we need the "x" or the "Show" button either. I know the Warby Parker example had these, but I feel like they add unnecessary visual clutter for features that are probably not used very often. I can try to see if there is some UX research on their usage.                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-3108">https://issues.iboss.org/browse/DEVELOPER-3108</a> |
| 6787 | DEVELOPER-3108 | [~james.cobb] Sounds good. Can we also change the border color of the active field to a blue? I'm not sure if this is a standard form style, but right now, the active field gets a blue border and a soft "glow". The soft glow may not work here, but I'd still like to see the blue border to indicate an active field. Thoughts?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-3108">https://issues.iboss.org/browse/DEVELOPER-3108</a> |
| 6788 | DEVELOPER-3108 | [~james.cobb] +1 to the grey, especially since we'll probably have a red button for the primary action. Is the "Case Sensitive" styled on that one as well? If so, I'd like to see that with less contrast (lighter grey) so it does not conflict with the field or draw the eye too much. Other than that, I think this is good to go!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-3108">https://issues.iboss.org/browse/DEVELOPER-3108</a> |
| 6789 | DEVELOPER-3108 | [~adelaaarreola] It's done? Should I review it? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-3108">https://issues.iboss.org/browse/DEVELOPER-3108</a> |
| 6790 | DEVELOPER-3108 | [~adelaaarreola] I'm finishing implementation on keycloak and here are few things: 1. min-width - remove it. It's breaking layout on mobile.<br>https://github.com/adelasofia/developers.redhat.com/blob/2011b71ee84aee03b5f036629aedd399811ca6e4/stylesheets/_adaptive-placeholder.scss#L10 2. label is not correctly positioned for <select> form field can you add that "bottom" magic for "select" as well? Thanks. 3. text-align for last element:<br>https://github.com/adelasofia/developers.redhat.com/blob/2011b71ee84aee03b5f036629aedd399811ca6e4/stylesheets/_adaptive-placeholder.scss#L69 what for this is? Preview here: https://rhdssodev-lkrzyzan.itos.redhat.com/auth/realms/rhd/account/                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-3108">https://issues.iboss.org/browse/DEVELOPER-3108</a> |
| 6791 | DEVELOPER-3105 | [~sgilda] when do you want this live? ASAP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-3105">https://issues.iboss.org/browse/DEVELOPER-3105</a> |
| 6792 | DEVELOPER-3099 | [~ganandan-Redhat] I see switchyard here: https://www.dropbox.com/s/u1bkmdumhp2xyke/Screenshot%202016-05-29%2013.00.39.png?dl=0 on http://developers.redhat.com/products/fuse/community/. Did you expect it to appear somewhere else?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-3099">https://issues.iboss.org/browse/DEVELOPER-3099</a> |
| 6793 | DEVELOPER-3099 | [~tcunning] - Can you please provide a one-line description for SwitchYard?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-3099">https://issues.iboss.org/browse/DEVELOPER-3099</a> |
| 6794 | DEVELOPER-3098 | [~aileenc], [~ganandan-Redhat], what in particular would you like the focus of this video to be? Otherwise we will just come up with a script of questions to have Hiram answer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-3098">https://issues.iboss.org/browse/DEVELOPER-3098</a> |
| 6795 | DEVELOPER-3098 | I think the topics covered in the current video with James are good, but the answers will have changed a bit in the last 3 years since that video was shot. What is Fuse? What can you do with the current release of Fuse? What is the focus for the next releases? Adding [~chirino] for his input.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-3098">https://issues.iboss.org/browse/DEVELOPER-3098</a> |
| 6796 | DEVELOPER-3096 | [~ganandan-Redhat] I was unable to find the videos you are referring to. Could you verify that they are still there? Also, if I understand you correctly, you want to remove all resources from the learn page, beginning with "JBoss Fuse on OpenShift - How to Connect to Twitter" including any "older" resource?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-3096">https://issues.iboss.org/browse/DEVELOPER-3096</a> |
| 6797 | DEVELOPER-3096 | Please remove anything from 2 years and older. Also, can we add Christina Lin's videos from the Getting Started pages? Please also ensure https://vimeo.com/150873903 is present - its new and relevant as we moved forward in the product line.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-3096">https://issues.iboss.org/browse/DEVELOPER-3096</a> |
| 6798 | DEVELOPER-3095 | The currently linked page does have a link to https://access.redhat.com/products/red-hat-jboss-fuse/, but I agree it would be better to go direct. Fixing this requires a change to the layout and product configuration. I see this as a nice-to-have prior to Summit. Agree?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-3095">https://issues.iboss.org/browse/DEVELOPER-3095</a> |

| 6801 | DEVELOPER-3093 | Who on Docs team is building the REST API, is there a tracker for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-3093">https://issues.jboss.org/browse/DEVELOPER-3093</a> |
| 6802 | DEVELOPER-3093 | Is there any update on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-3093">https://issues.jboss.org/browse/DEVELOPER-3093</a> |
| 6803 | DEVELOPER-3093 | If you can move to 6.3 easily then that works for me. I only suggested the redirect as I thought we were stalled waiting for the REST API. When you have draft of the Developer site updates can you share it for review?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-3093">https://issues.jboss.org/browse/DEVELOPER-3093</a> |
| 6804 | DEVELOPER-3087 | [~rblake] - The module seems to be working as intended; however, I didn't make any changes here. Jason suggested that I update the README. Is there anything else that needs to be completed here, or should I just plan on adding a quick walkthrough of how to view the diffs? Also, I don't know that I have access to that Phase2 documentation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3087">https://issues.jboss.org/browse/DEVELOPER-3087</a> |
| 6805 | DEVELOPER-3085 | What metrics and in which reporting tools are we talking about in this context?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-3085">https://issues.jboss.org/browse/DEVELOPER-3085</a> |
| 6806 | DEVELOPER-3080 | [~paul.robinson] I have a bit of a problem with product pages. DCP reported on missing descriptions and titles for quite a list of paths under /products/* but almost all of them are about index files that automatically redirect to overview.html e.g. <a href="http://developers.redhat.com/products/amq/">http://developers.redhat.com/products/amq/</a> . I believe we shouldn't have those index files in sitemap as giving them descriptions/titles and making searchable doesn't make sense IMO. Moreover, the overview.html files were not reported as those with missing descriptions because they are automatically generated by this code: <code>{code} - page.description   = truncate_para(page._overview, 150) {code}</code> Still, I'd argue we should provide better descriptions for those. WDYT? | <a href="https://issues.jboss.org/browse/DEVELOPER-3080">https://issues.jboss.org/browse/DEVELOPER-3080</a> |
| 6807 | DEVELOPER-3080 | I think the right approach is: 1) Put the redirects into Apache for redirecting <a href="http://developers.redhat.com/products/X/">http://developers.redhat.com/products/X/</a> to <a href="http://developers.redhat.com/products/X/overview">http://developers.redhat.com/products/X/overview</a> . Please use a wildcard/variable for 'X' so that it works for all current and future products. 2) Delete all the html redirects that are now redundant. Will this issue be complete after this work?                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-3080">https://issues.jboss.org/browse/DEVELOPER-3080</a> |
| 6808 | DEVELOPER-3080 | Well staging is part of the standard releasing process so I was counting this in already. Nevertheless, I have no idea how your PR envs are done. Is Lukas K. the person to handle this as well or somebody from your team? As for now I have this task created for Lukas <a href="https://issues.jboss.org/browse/ORG-3312">https://issues.jboss.org/browse/ORG-3312</a>                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-3080">https://issues.jboss.org/browse/DEVELOPER-3080</a> |
| 6809 | DEVELOPER-3080 | Sounds good to me. I started thinking though. What's the point of having overview pages if by the content they are really the index pages? Why lengthen the url with additional word?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-3080">https://issues.jboss.org/browse/DEVELOPER-3080</a> |
| 6810 | DEVELOPER-3077 | I assume that the only way to tell that a page is a topic page is by checking that its title contains "topic" word. What if somebody will use this word in any other random title? Or is there a convention that forbids that and we should be good? Otherwise, it would require quite a bit of changes to add some new field in document that tells whether this is a topic page and then propagate it with data.                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-3077">https://issues.jboss.org/browse/DEVELOPER-3077</a> |
| 6811 | DEVELOPER-3077 | [~unibrew]: I agree, testing for 'Topic' in the title is going to be brittle. However, I'm not sure of another way to programmatically detect a topic page from the DCP documents. Is there a way to hard-code the boosts? There won't be that many topic pages added to the site, so we might be able to handle that manually.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-3077">https://issues.jboss.org/browse/DEVELOPER-3077</a> |
| 6812 | DEVELOPER-3066 | [~tnolan] - I appears that the changes to the product overview pages don't involve either the new StackOverflow or Forums integration. Isn't this out of scope for the Summit release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3066">https://issues.jboss.org/browse/DEVELOPER-3066</a> |
| 6813 | DEVELOPER-3066 | A quick question about the "Latest Resources" section. Currently it's represented with just blogs in the wireframe. Is it correct to assume this will cover all resources? I assume so but just want to clarify so functionality is correctly built.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3066">https://issues.jboss.org/browse/DEVELOPER-3066</a> |
| 6814 | DEVELOPER-3060 | [~tnolan] Where can I find the content and links for the "Professional services and support" section of the Product Help pages?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-3060">https://issues.jboss.org/browse/DEVELOPER-3060</a> |
| 6815 | DEVELOPER-3060 | [~tnolan] can you point me to a wireframe or whatever that needs the content? Also, when is it needed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3060">https://issues.jboss.org/browse/DEVELOPER-3060</a> |
| 6816 | DEVELOPER-3059 | [~james.cobb] where can I find the icons/graphics for this page?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-3059">https://issues.jboss.org/browse/DEVELOPER-3059</a> |
| 6817 | DEVELOPER-3046 | [~burrstutter] you're the reporter, would you mind checking <a href="http://developers-pr.stage.redhat.com/pr/1115/build/1220/dotnet/">http://developers-pr.stage.redhat.com/pr/1115/build/1220/dotnet/</a> to see if it meets your criteria please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3046">https://issues.jboss.org/browse/DEVELOPER-3046</a> |
| 6818 | DEVELOPER-3045 | [~rblake], [~lightguard]: After talking to Phase2, it seems like this is not needed anymore? I'm thinking this due to: 1) The user's session is stored in the DB. 2) Changes to the Drupal config are done in-place without restarting the web server. Am I missing something?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-3045">https://issues.jboss.org/browse/DEVELOPER-3045</a> |
| 6819 | DEVELOPER-3044 | [~rterzi] This should now be fixed in master as a by-product of DEVELOPER-2933. Could you please re-test when you have time. cheers, Rob                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-3044">https://issues.jboss.org/browse/DEVELOPER-3044</a> |
| 6820 | DEVELOPER-3039 | Can you login to the site manually, when it's running on Drupal on your computer? I suspect you just need 'localhost' adding to the staging KeyCloak instance. [~lkrzyzanek] should be able to help.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3039">https://issues.jboss.org/browse/DEVELOPER-3039</a> |
| 6821 | DEVELOPER-3039 | [~lkrzyzanek] - Can you add <a href="http://docker:4242">http://docker:4242</a> ? I think this should solve the keycloak issues on local docker instances.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-3039">https://issues.jboss.org/browse/DEVELOPER-3039</a> |
| 6822 | DEVELOPER-3039 | [~lkrzyzanek] - Can we add <a href="http://stumpjumper.lab4.eng.bos.redhat.com:32778/">http://stumpjumper.lab4.eng.bos.redhat.com:32778/</a> as well? I noticed that the login is broken here as well. Also, is it possible to add all of the docker ports in the 32000 range (or at least 32700 - 32900)? Sorry to ping you with all these, but the ports are assigned dynamically. And can the same be done for <a href="http://stumpjumper.lab4.eng.bos.redhat.com">http://stumpjumper.lab4.eng.bos.redhat.com</a> ?                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-3039">https://issues.jboss.org/browse/DEVELOPER-3039</a> |
| 6823 | DEVELOPER-3039 | This is my error log from the acceptance test target...I can't seem to get it to work properly locally. [~ihamilto] - have you been able to get tests running locally?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3039">https://issues.jboss.org/browse/DEVELOPER-3039</a> |
| 6824 | DEVELOPER-3035 | [~james.cobb] Thank you James, can I get the static urls for the images you attached?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-3035">https://issues.jboss.org/browse/DEVELOPER-3035</a> |
| 6825 | DEVELOPER-3035 | [~adelaarreola] - Can we adjust the link color for the "Need Help" strip? <code>.stack-help a { color: #08C0FC; Hover: color: #46a1da;</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-3035">https://issues.jboss.org/browse/DEVELOPER-3035</a> |
| 6826 | DEVELOPER-3022 | Feels like we need the docker-compose per environment for this. Maybe we simply create new files and edit the control.rb script for v1? [~rblake] what do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-3022">https://issues.jboss.org/browse/DEVELOPER-3022</a> |
| 6827 | DEVELOPER-3019 | [~james.cobb]: The page is being requested to go live on the 15th of May. Can you get this image ready CoB Thursday 12th May?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-3019">https://issues.jboss.org/browse/DEVELOPER-3019</a> |
| 6828 | DEVELOPER-3019 | [~ecurley] I think James is going to need more details. What do you want on the image?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-3019">https://issues.jboss.org/browse/DEVELOPER-3019</a> |
| 6829 | DEVELOPER-3012 | Maybe just #1 until GA? WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-3012">https://issues.jboss.org/browse/DEVELOPER-3012</a> |
| 6830 | DEVELOPER-3007 | [~dcoughlin] I was working on this last week and noticed some fields are not on the DCP, * Number of votes for each question * Number of views * Name of the answer's author is it possible to add these? [~paul.robinson] [~tnolan] I noticed that most questions don't have an 'accepted answer'. So, does the answer need to be 'accepted' in order for it to show up on this page? If not, should I skip that question?                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-3007">https://issues.jboss.org/browse/DEVELOPER-3007</a> |
| 6831 | DEVELOPER-2988 | I like it. Do we use a period at the end of Survey? [~rayploski-launch] - thoughts?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2988">https://issues.jboss.org/browse/DEVELOPER-2988</a> |

| 6832 | DEVELOPER-2988 | [~james.cobb]Do we have social banners for the Developer Survey also? Can we add text to the promo banner to say, "How do you stack up?" ? Thank you! Jess                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-2988">https://issues.iboss.org/browse/DEVELOPER-2988</a> |
| 6833 | DEVELOPER-2987 | [~ecurley] [~paul.robinson] what should the URL be for this page?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-2987">https://issues.iboss.org/browse/DEVELOPER-2987</a> |
| 6834 | DEVELOPER-2987 | [~adelaarreola] - Link we will link to for document is TBD. [~newtonm] is working on getting it up in download manager. [~paul.robinson] - what URL would you like?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-2987">https://issues.iboss.org/browse/DEVELOPER-2987</a> |
| 6835 | DEVELOPER-2977 | Is this for the RHSC 2.2 release? Do you want all the existing content to be updated for the new release? Or do you want to provide instructions on how to access the beta until the release happens?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-2977">https://issues.iboss.org/browse/DEVELOPER-2977</a> |
| 6836 | DEVELOPER-2977 | Sounds good. What's the rough/approximate schedule for beta and GA? Do you want the RHSC/DTS TTHWs updated for GA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-2977">https://issues.iboss.org/browse/DEVELOPER-2977</a> |
| 6837 | DEVELOPER-2977 | Red Hat Software Collections 2.2 Beta is now available and includes these additions and updates: open source databases (MariaDB 10.1, MongoDB 3.2, and PostgreSQL 9.5); open source languages (Node.js v4.2.2, Python 3.5, Ruby 2.3, and Rails 4.2); and Maven 3.3; plus updates of MongoDB 2.6, Python 2.7, Apache 2.4, and Thermostat 1.4. Instructions for installing them can be found here[https://access.redhat.com/site/documentation/en-US/Red_Hat_Software_Collections/2-Beta/html-single/2.2_Release_Notes/index.html#sect-Installation-Subscribe].                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-2977">https://issues.iboss.org/browse/DEVELOPER-2977</a> |
| 6838 | DEVELOPER-2977 | Rob - looks great. Can you rephrase "Release highlights" to something like "New additions". We have a number that are brand new and more that are updated, so I want to distinguish these as brand new. Use some other wording if you prefer. Otherwise, good to go.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-2977">https://issues.iboss.org/browse/DEVELOPER-2977</a> |
| 6839 | DEVELOPER-2976 | [~mikgue] Can you add the specifics for this and let [~paul.robinson]'s team know exactly what needs to be added. I'm not sure what's involved here.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-2976">https://issues.iboss.org/browse/DEVELOPER-2976</a> |
| 6840 | DEVELOPER-2976 | [~rterzi] you've shared a number of emails on this. Do you already know the answers here? ^^ If not, I'll look into it. Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-2976">https://issues.iboss.org/browse/DEVELOPER-2976</a> |
| 6841 | DEVELOPER-2976 | Sorry, I'm not sure if I understand what is being asked. I'll be glad to update the page once I'm sure what you want. The CDK downloads page, http://developers.redhat.com/products/cdk/download/, Step 3 links to RHCP for the vagrant boxes. Do you want me to replace those with download manager links like the Get Started Page has? What's the plan to keep these pages updated? The Downloads page is mostly an out of date clone of the Get Started page. If there has to be a Download link/page, maybe it should just redirect to the Get Started page?                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-2976">https://issues.iboss.org/browse/DEVELOPER-2976</a> |
| 6842 | DEVELOPER-2970 | Do you have a recommendation on which way we should redirect? Should we favour https over http?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-2970">https://issues.iboss.org/browse/DEVELOPER-2970</a> |
| 6843 | DEVELOPER-2970 | [~martymartin]: I'm not sure redirecting all traffic to use HTTP is the right approach. We have some activities that must be done over HTTPS (e.g. login, registration, etc). If we wanted to use HTTPS for everything, why would we need to switch to using relative URLs? Couldn't we just ensure that the fully-qualified URLs use HTTPS?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-2970">https://issues.iboss.org/browse/DEVELOPER-2970</a> |
| 6844 | DEVELOPER-2970 | What is going to happen with http redirects created on developers.redhat.com? For example we use in DevSuite online installer: * http://developers.redhat.com/redirect/to/virtualbox-5.0.26.download * http://developers.redhat.com/redirect/to/virtualbox-macos-5.0.26.download Will they continue to work? The problem is virtualbox download is not available over https. Can we configure https redirect for http URL? Is that possible? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-2970">https://issues.iboss.org/browse/DEVELOPER-2970</a> |
| 6845 | DEVELOPER-2970 | [~dgalovin] the HTTPS version of the links work for me, downloading via a web browser: * https://developers.redhat.com/redirect/to/virtualbox-5.0.26.download * https://developers.redhat.com/redirect/to/virtualbox-macos-5.0.26.download Is the problem that these files are being downloaded by something else (i.e not a web browser) that can't handle HTTPS?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-2970">https://issues.iboss.org/browse/DEVELOPER-2970</a> |
| 6846 | DEVELOPER-2970 | [~paul.robinson] Thank for creating the redirects! They work for me. I have one question though. How does it work after this issue is fixed and developers site force to use https? I assume when devsuite installer hits http://developers.redhat.com/redirect/to/whatever redirect it is going to be redirected to https://developers.redhat.com/redirect/to/whatever and if latter is configured as redirect to external URL it would trigger download. Does that sound right? If it does then current release has already taken care of with https redirects in place, but we still have to take care of four previous releases and create https redirects to match listed below: 1. http://developers.redhat.com/redirect/to/virtualbox-5.0.8.download 2. http://developers.redhat.com/redirect/to/vagrant-1.7.4.download When those two are created DevSuite Installers should have no issues with using redirects on developers.redhat.com. | <a href="https://issues.iboss.org/browse/DEVELOPER-2970">https://issues.iboss.org/browse/DEVELOPER-2970</a> |
| 6847 | DEVELOPER-2969 | [~martymartin] thanks for the report. Can you explain in more detail what the problem is here, as I'm not seeing it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-2969">https://issues.iboss.org/browse/DEVELOPER-2969</a> |
| 6848 | DEVELOPER-2960 | Hi [~paul.robinson], Are these two scenarios that David outlined still valid? According to David a user should NOT need be logged in, in order to download JBoss/Red Hat Developer Studio. However this is not the case currently. Could you confirm whether or not these two scenarios are still valid? Also do we really need to be logged in to download cheat sheets? Both cases currently require a site visitor to log in or register.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-2960">https://issues.iboss.org/browse/DEVELOPER-2960</a> |
| 6849 | DEVELOPER-2951 | [~lightguard] Apparently it will be MariaDB 10.0.14 that we'll be provided with. Can you update from MySQL to a version of Maria DB close to 10.0.14? Sorry for messing around :-)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-2951">https://issues.iboss.org/browse/DEVELOPER-2951</a> |
| 6850 | DEVELOPER-2942 | [~paul.robinson]/[~lightguard] Things that still are unclear about this issue that need to be resolved before we can estimate: * What is the actual deployment mechanism e.g. is the do we simply update the current Drupal instance in-place or is there a blue/green deployment scenario * What is acceptable to content editors for v1 when a deployment happens e.g. ** The site may go down briefly why it happens and they lose content ** They absolutely cannot lose content they are working on and therefore deployments take place at scheduled times                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-2942">https://issues.iboss.org/browse/DEVELOPER-2942</a> |
| 6851 | DEVELOPER-2915 | [~tnolan] I think this is covered by your re-working of the topics page UX. Correct? If so, I suggest closing this as a duplicate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-2915">https://issues.iboss.org/browse/DEVELOPER-2915</a> |
| 6852 | DEVELOPER-2913 | Oh perfect. That is much easier! Do you want as Visual JIRA's or Website JIRA's?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-2913">https://issues.iboss.org/browse/DEVELOPER-2913</a> |
| 6853 | DEVELOPER-2911 | There's a related issue to this: how do we handle a/b testing and metrics javascript? I don't know of a way to do for a dev/staging/prod check as that doesn't exist in drupal (that I'm aware of anyway). I'm also worried about this possibly messing up metrics if it's included in a non prod environment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-2911">https://issues.iboss.org/browse/DEVELOPER-2911</a> |
| 6854 | DEVELOPER-2905 | Can this be done today [~adelaarreola] [~paul.robinson]? The site has been updated for CDK 2 GA, but the download links point to beta (which are no longer available). cc [~rterzi]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-2905">https://issues.iboss.org/browse/DEVELOPER-2905</a> |
| 6855 | DEVELOPER-2905 | What's needed: 1. Download manager needs links for CDK 2.0.0 GA files. (cdk-2.0.0.zip and the 3 vagrant boxes) 2. The Downloads page needs to be updated to point to cdk-2.0.0.zip instead of (-beta5.zip). http://developers.redhat.com/downloads/                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-2905">https://issues.iboss.org/browse/DEVELOPER-2905</a> |
| 6856 | DEVELOPER-2904 | [~rblake], [~lightguard]. Is this still an issue, now that we don't run Blinkr?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-2904">https://issues.iboss.org/browse/DEVELOPER-2904</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | URL                                                                                                         |

| 6857 | DEVELOPER-2901 | [~dhlady] - There will be a new GA version of CDK 2 - targeted for Tuesday. Will that have a new URL? Also, per the question above, I submitted a ticket here: <a href="https://issues.jboss.org/browse/ORG-3028">https://issues.jboss.org/browse/ORG-3028</a> . It needs a better ticket name as that was just a guess when I created it earlier this week. Regardless, please see David's questions there and correct/clarify anything I had put in. BTW - in addition to the 2 downloads mentioned in the description (JBDS and CDK), did we discuss this morning adding a 3rd item for a "JBDS for container development" download thingy? This is what ORG-3028 would relate to. Mike                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-2901">https://issues.jboss.org/browse/DEVELOPER-2901</a> |
| 6858 | DEVELOPER-2901 | [~paul.robinson] The version for JBoss Dev Studio updated as expected today but the date is showing April 2 instead of April 19. See: <a href="https://db.tt/fuSzt0BY">https://db.tt/fuSzt0BY</a> The date looks correct though on: <a href="http://developers.redhat.com/products/devstudio/download/">http://developers.redhat.com/products/devstudio/download/</a> Are we using a different date field on the main downloads page than is on the individual product download page?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2901">https://issues.jboss.org/browse/DEVELOPER-2901</a> |
| 6859 | DEVELOPER-2900 | [~tnolan] I don't know which download URLs you're referring to but the latest configuration in the Download Manager for JBDS is 9.1.0.Beta 2. Who made the request to create the Download URLs as they should know what the status is.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-2900">https://issues.jboss.org/browse/DEVELOPER-2900</a> |
| 6860 | DEVELOPER-2900 | Can someone clarify what this means? [~tnolan] [~adelaarreola] {quote}For the Tech preview link, the url should take the user through the Full User flow. Other URLs stay the same and use the same flow as they do now.{quote} Does that mean "require SSO login & check entitlements before allowing the download", like we do for the JBDS EAP installer (but not for the other zips & jars, which are 100% free)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2900">https://issues.jboss.org/browse/DEVELOPER-2900</a> |
| 6861 | DEVELOPER-2900 | Is JBDS-3665 == "the same workflow as CDK and RHEL which makes sure they are a full user" ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2900">https://issues.jboss.org/browse/DEVELOPER-2900</a> |
| 6862 | DEVELOPER-2900 | [~paul.robinson] How can we make the docs listed on <a href="http://developers.redhat.com/products/devstudio/docs-and-apis/">http://developers.redhat.com/products/devstudio/docs-and-apis/</a> (shows latest 9.1.0.GA docs) also appear on <a href="https://www.jboss.org/products/devstudio/resources/">https://www.jboss.org/products/devstudio/resources/</a> (still showing old 9.0.0.GA docs) ? Seems like the code's the same in both .adoc pages and in the _common/product.yml files for both repos.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2900">https://issues.jboss.org/browse/DEVELOPER-2900</a> |
| 6863 | DEVELOPER-2896 | [~ecurley], [~james.cobb]: Do we have the graphics for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2896">https://issues.jboss.org/browse/DEVELOPER-2896</a> |
| 6864 | DEVELOPER-2892 | [~ecurley] - I also have graphics for jboss.org. Do we want a promo there too? [~paul.robinson][~adelaarreola]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2892">https://issues.jboss.org/browse/DEVELOPER-2892</a> |
| 6865 | DEVELOPER-2886 | I have completed a first draft of the IoT topics page on the noted Google doc. @Lincoln, Please review and feel free to provide any text edits or recommendations (you can ignore the current comments, these are reference from the internal review process with IoT team stakeholders). Can you please provide a timeline as to when we think we can get this first iteration of the page published? Also, Note that the tags that should be used to populate the dynamic content areas of the page should be any/all IoT related tags: * iot * IoT * internet of things * Internet of Thins * Internet of Things (Industry)                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2886">https://issues.jboss.org/browse/DEVELOPER-2886</a> |
| 6866 | DEVELOPER-2886 | I suggest the following process: 1. Michelle and Lincoln work together to finalise the content 2. Adela builds the IoT Topic page from the finalised content 3. Any further content changes are made directly by Lincoln or Michelle. 4. The Page is pushed to production once Lincoln is happy that it is good enough. 5. Future edits will be made directly via the content team. Essentially, I'd like a process where Adela touches this once. Does this work?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2886">https://issues.jboss.org/browse/DEVELOPER-2886</a> |
| 6867 | DEVELOPER-2886 | [~lincolnthree], [~mdiserio]: can you confirm that you are happy with my above proposed approach?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2886">https://issues.jboss.org/browse/DEVELOPER-2886</a> |
| 6868 | DEVELOPER-2886 | Hi Paul, I am happy with the above approach, but to clarify #5. Future edits will be made directly via the content team. Is the process that I submit a Jira request? Any additional details I should be aware of? Additionally, it would be super awesome if we could go live with the page by the end of next week because we will then promote developers.redhat.com on the collateral, etc. at IoT World Congress May 10 (10k attendees). Ambitious or do-able? [~lincolnthree] I made some updates to the draft content per your recommendation (forcing James Falkner, TMM, to assist with reducing the marketing tone). As part of that, I changed the content in one of the white boxes in order to make the content that was there the first link in the Blue Box (because I wanted the CTA in the text to be immediately relevant). Please let me know what you think at your earliest convenience. -Michele                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-2886">https://issues.jboss.org/browse/DEVELOPER-2886</a> |

| 6870 | DEVELOPER-2886 | [~mdiserio] Do you know which Red Hat Products you'd consider to be related to IoT? Could you list them here? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2886">https://issues.jboss.org/browse/DEVELOPER-2886</a> |
| 6871 | DEVELOPER-2886 | [~adelaarreola] is this still blocked? If so, can you add an explanation so we can chase it up?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2886">https://issues.jboss.org/browse/DEVELOPER-2886</a> |
| 6872 | DEVELOPER-2886 | In the bottom 2 rows of the dynamically populated content boxes there are duplicate entires ([screenshot attached ^IoT_Topic_duplicate-entries.png]). The 2 blue circles show the duplicates for "Re-Watch: Messaging for IoT - Virtual JBoss User..." and the red circles show the duplicates for "An Enterprise Developer's Journey to the IoT". Are these duplicates because they have more than one of the IoT tags? Can we fix this to avoid duplicate content appearing? Thanks again, the page looks great!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2886">https://issues.jboss.org/browse/DEVELOPER-2886</a> |
| 6873 | DEVELOPER-2886 | Hi Adela, When I click on the Orange box it just re-loads the IoT Topics page. The URL should be <a href="http://developers.redhat.com/video/youtube/mli5c-oTN1U/">http://developers.redhat.com/video/youtube/mli5c-oTN1U/</a> Is that happening for you? Thanks so much for the quick turn-around, it is greatly appreciated. -Michele                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2886">https://issues.jboss.org/browse/DEVELOPER-2886</a> |
| 6874 | DEVELOPER-2886 | Looks great, thank you. What are the next steps? When will this page go live?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2886">https://issues.jboss.org/browse/DEVELOPER-2886</a> |
| 6875 | DEVELOPER-2880 | [~mikgue] it looks like you have the Asciodoc, can you raise a PR for it? [~adelaarreola] should be able to help you out with it if you have problems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-2880">https://issues.jboss.org/browse/DEVELOPER-2880</a> |
| 6876 | DEVELOPER-2874 | [~mikgue] we don't do camel case for URLs, does <a href="http://developers.redhat.com/promotions/devnation-discount-code">http://developers.redhat.com/promotions/devnation-discount-code</a> work for you?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2874">https://issues.jboss.org/browse/DEVELOPER-2874</a> |
| 6877 | DEVELOPER-2870 | [~lincolnthree] [~dcoughlin1] Do we have a clear idea of what items originate from *.redhat.com domains? If so could they be added to the definition of done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2870">https://issues.jboss.org/browse/DEVELOPER-2870</a> |
| 6878 | DEVELOPER-2869 | [~adelaarreola] I've added the content in PR #988 ( <a href="https://github.com/redhat-developer/developers.redhat.com/pull/988">https://github.com/redhat-developer/developers.redhat.com/pull/988</a> ) Do any of the templates need to change to add the 5th tab?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2869">https://issues.jboss.org/browse/DEVELOPER-2869</a> |
| 6879 | DEVELOPER-2869 | [~adelaarreola] Mike found some typos. I tried to edit on GitHub, but it keeps marking entire sections as changed that I haven't been touched. (The section starting with the alternate install instructions (all 5 copies of it gets marked as changed and I think it's loosing the headings/links in the process. Can you please pick up the file from <a href="https://github.com/rctrh/rh-tthw/blob/master/install-rhel7-combined.adoc">https://github.com/rctrh/rh-tthw/blob/master/install-rhel7-combined.adoc</a> ) (Raw: <a href="https://raw.githubusercontent.com/rctrh/rh-tthw/master/install-rhel7-combined.adoc">https://raw.githubusercontent.com/rctrh/rh-tthw/master/install-rhel7-combined.adoc</a> ). I verified that there were no changes against the 'get-started.adoc' in your PR. You can view the commit to see the diff here: <a href="https://github.com/rctrh/rh-tthw/commit/90ad209850c7854b8973ed3c7dd116537d7013cf">https://github.com/rctrh/rh-tthw/commit/90ad209850c7854b8973ed3c7dd116537d7013cf</a> ) Thanks & sorry for the trouble. | <a href="https://issues.jboss.org/browse/DEVELOPER-2869">https://issues.jboss.org/browse/DEVELOPER-2869</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | URL                                                                                                         |

| 6880 | DEVELOPER-2868 | I think this issue has been resolved. I don't see the book error on Blinkr anymore. EDIT: [~paul.robinson] - Can this be closed? <a href="http://developers-pr.stage.redhat.com/pr/1004/blinker/887/report.html">http://developers-pr.stage.redhat.com/pr/1004/blinker/887/report.html</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2868">https://issues.jboss.org/browse/DEVELOPER-2868</a> |
| 6881 | DEVELOPER-2866 | [~james.cobb] If I understand #1 correctly, you want the word 'download' on the 'Try Red Hat Enterprise Linux' box to be a link to download RHEL... However, since the box itself is a link, should I remove the box's link? [~ecurley] Please let me know when the content is ready so I can add it :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2866">https://issues.jboss.org/browse/DEVELOPER-2866</a> |

| 6883 | DEVELOPER-2862 | what is the content for the new hero?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2862">https://issues.jboss.org/browse/DEVELOPER-2862</a> |
| 6884 | DEVELOPER-2847 | So you've now got a URL which will cause the right sections to be visible? Do you change the change the "current URL" when a tab is selected? How does the download manager get the URL to return to?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2847">https://issues.jboss.org/browse/DEVELOPER-2847</a> |
| 6885 | DEVELOPER-2847 | [~adelaarreola] Links to the tabs looks and works great! One edit/question: * On the second big box at the top (the one that changes) now, can the title on the corresponding blue bar (further down the page) be updated as well? Right now it says "2. Install, Configure, and Verify" and does not change with the tab selection like the top big blue box does.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2847">https://issues.jboss.org/browse/DEVELOPER-2847</a> |
| 6886 | DEVELOPER-2837 | Wow - big section. Is this really a "troubleshooting". Should there be a point above that says "If you see something different, blah, blah...go to this section..."?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2837">https://issues.jboss.org/browse/DEVELOPER-2837</a> |
| 6887 | DEVELOPER-2830 | [~rterzi] I was expect 4 steps. How do we get there?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2830">https://issues.jboss.org/browse/DEVELOPER-2830</a> |
| 6888 | DEVELOPER-2830 | [~paul.robinson] I'm happy to do PRs. However last time I submitted one you decided since I couldn't see the output I should just be handing the changes to Adela. I don't think automatic CI builds were happening on PRs then. How much effort is it to setup a development environment? I'm comfortable with docker/vagrant boxes/RHEL, etc. I have a RHEL VM box that I do all my Red Hat VPN work in.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2830">https://issues.jboss.org/browse/DEVELOPER-2830</a> |
| 6889 | DEVELOPER-2830 | [~rterzi] are you all set? Need anything?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2830">https://issues.jboss.org/browse/DEVELOPER-2830</a> |
| 6890 | DEVELOPER-2830 | I thought [~adelaarreola] was working on this to deal with the template/design questions at least for the getting-started pages. Did it ever get integrated in stage? I haven't seen anything. (The 4 CDK TTHWs changes are straightforward, I can do a PR for those if necessary)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-2830">https://issues.jboss.org/browse/DEVELOPER-2830</a> |
| 6891 | DEVELOPER-2830 | Is there a branch for the CDK updates?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2830">https://issues.jboss.org/browse/DEVELOPER-2830</a> |
| 6892 | DEVELOPER-2830 | Ok, what's the new target date for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-2830">https://issues.jboss.org/browse/DEVELOPER-2830</a> |
| 6893 | DEVELOPER-2830 | [~adelaarreola] - Should the tabs still have the blocks [large-17.columns.recommended] and [large-17.columns.recommended]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2830">https://issues.jboss.org/browse/DEVELOPER-2830</a> |
| 6894 | DEVELOPER-2830 | [~rterzi] Adela needs to know: do we want all links including internal ones to open in a new window? She doesn't understand your asciidoc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2830">https://issues.jboss.org/browse/DEVELOPER-2830</a> |
| 6895 | DEVELOPER-2830 | [~adelaarreola] - Yes, the links should open in new tabs similar to RHEL. I've updated [https://github.com/rctrh/rh-tthw/blob/master/cdk-get-started-combined.adoc] Just like the RHEL getting started guide the first download should NOT open in a new window, it should trigger the download manager / registration flow. Sorry, I forgot about the new download flow when updating this. Where there any other problems with the AsciiDoc?                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-2830">https://issues.jboss.org/browse/DEVELOPER-2830</a> |
| 6896 | DEVELOPER-2830 | [~adelaarreola] I picked up your changes. What are the many syntax errors? I see you removed the sections I left in, but commented out, is // not valid for leaving comments in the AsciiDoc? I don't get an error when I run it through asciidoctor or in github's renderer. This is the diff between your version and mine. [https://github.com/rctrh/rh-tthw/commit/007f52f328803ac0c56c1e092eaf1af424278eb8] Note: Most of the changes are related to the '_window='_blank' which I had added to my version. Where do you want me to submit the changes to add back the window='_blank'? [https://github.com/rctrh/rh-tthw/blob/master/cdk-get-started-combined.adoc] is now up to date. Let me know if you want me to submit a PR and which branch/repo I should submit it against at this point. Also, What tool are you using for editing AsciiDoc? Do you have something that is checking syntax? Thanks | <a href="https://issues.jboss.org/browse/DEVELOPER-2830">https://issues.jboss.org/browse/DEVELOPER-2830</a> |
| 6897 | DEVELOPER-2830 | Yes, the tabs in step 4 look fine. Should "NODEJS" be changed to "NODE.JS"? Otherwise, good by me.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-2830">https://issues.jboss.org/browse/DEVELOPER-2830</a> |
| 6898 | DEVELOPER-2829 | [~paul.robinson] [~adelaarreola] - I've tweaked a screenshot to reflect the new color bands. Can we put these changes in the queue for FE?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2829">https://issues.jboss.org/browse/DEVELOPER-2829</a> |
| 6899 | DEVELOPER-2829 | [~james.cobb] this looks like a small tweak, is it something you or your team can do?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2829">https://issues.jboss.org/browse/DEVELOPER-2829</a> |
| 6900 | DEVELOPER-2828 | [~adelaarreola], [~wesbos]. I don't think it's feasible to return the user to the previous section. However, I think we can make the tab-selection more sticky. How about: 1. When a user selects a tab, or the page is loaded with a tab specified in the URL: Save the selected tab in local browser storage. 2. When the user visits the page (and no tab is specified in the URL): Select the tab specified in local browser storage (if one set for that product).                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2828">https://issues.jboss.org/browse/DEVELOPER-2828</a> |
| 6901 | DEVELOPER-2828 | This is certainly better than what we have. Would it be possible to return people to the section within a tab (1 through 4)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2828">https://issues.jboss.org/browse/DEVELOPER-2828</a> |
| 6902 | DEVELOPER-2819 | [~paul.robinson], can we put these up on Jboss.org? <a href="http://static.jboss.org/images/hero/hero_desktop_1175x400_devnation2016.png">http://static.jboss.org/images/hero/hero_desktop_1175x400_devnation2016.png</a> <a href="http://static.jboss.org/images/hero/hero_mobile_480x500_devnation2016.png">http://static.jboss.org/images/hero/hero_mobile_480x500_devnation2016.png</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-2819">https://issues.jboss.org/browse/DEVELOPER-2819</a> |
| 6903 | DEVELOPER-2809 | [~james.cobb] Thanks a lot! [~ecurley] what should the url be?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-2809">https://issues.jboss.org/browse/DEVELOPER-2809</a> |
| 6904 | DEVELOPER-2808 | [~james.cobb] Where can I find the graphic?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-2808">https://issues.jboss.org/browse/DEVELOPER-2808</a> |
| 6905 | DEVELOPER-2805 | Just to confirm, so we want to link to Customer Portal for the Red Hat Enterprise Linux 7.2 CDK Vagrant Box? Is there a way to include that on our site too at some point? If we are going to the Portal, I'd like for the link to have the little external link indicator and then open in a new window/tab.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2805">https://issues.jboss.org/browse/DEVELOPER-2805</a> |
| 6906 | DEVELOPER-2803 | [~mikgue] Where should I place this content? Also, GoogleDocs does not allow me to save images from it's documents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2803">https://issues.jboss.org/browse/DEVELOPER-2803</a> |
| 6907 | DEVELOPER-2803 | Sorry - I thought I had written it down - this will be at the very beginning of Step 2. For all tabs. How shall I get you the image?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2803">https://issues.jboss.org/browse/DEVELOPER-2803</a> |
| 6908 | DEVELOPER-2803 | Is there a way to add a local file to a Jira ticket?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2803">https://issues.jboss.org/browse/DEVELOPER-2803</a> |
| 6909 | DEVELOPER-2789 | Does this still need to be done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-2789">https://issues.jboss.org/browse/DEVELOPER-2789</a> |
| 6910 | DEVELOPER-2786 | This made sense a month ago, but no longer (longer story). Can we change the text to read: Got a technical CDK question? Please join the CDK beta mailing list, <a href="mailto:container-tools@redhat.com">container-tools@redhat.com</a> , and get answers from the Red Hat CDK Team. Thanks, Mike                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2786">https://issues.jboss.org/browse/DEVELOPER-2786</a> |

| 6916 | DEVELOPER-2769 | [~wesbos] Feel free to ping me on HipChat if you have any questions. For the product names, order and description text, you can use the wireframe: <a href="https://redhatdevelopers.mybalsamiq.com/projects/octopus-build-2016/Downloads">https://redhatdevelopers.mybalsamiq.com/projects/octopus-build-2016/Downloads</a> [~mikgue] Can you or someone on your team provide the version and date information for each download? Is one easier than the other to get? I believe we have a different story to make this automated, so we would just need something for the interim.                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2769">https://issues.jboss.org/browse/DEVELOPER-2769</a> |
| 6917 | DEVELOPER-2769 | [~tnolan]how should I capture them? BTW - I know nothing about these version numbers and dates so will need to find someone who knows.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-2769">https://issues.jboss.org/browse/DEVELOPER-2769</a> |
| 6918 | DEVELOPER-2769 | [~mikgue] Ok, let's not worry about them for this version of the page then. [~wesbos] For the sections where we have a version or date being displayed, can you add placeholders for them in the code, but not display any information for now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2769">https://issues.jboss.org/browse/DEVELOPER-2769</a> |
| 6919 | DEVELOPER-2769 | That's great news about the versioning and dates. It looks like the PR finished and the page can be previewed via: <a href="http://developers-pr.stage.redhat.com/pr/965/build/681/downloads/">http://developers-pr.stage.redhat.com/pr/965/build/681/downloads/</a> [~wesbos] Is this ready for feedback or are you still working on a few things?                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-2769">https://issues.jboss.org/browse/DEVELOPER-2769</a> |
| 6920 | DEVELOPER-2769 | [~wesbos] Are the descriptions being pulled in dynamically from somewhere? [~mikgue] provided ones to be specifically used on this page. I also noticed that the banner background does not extend past 1800px now. Can this be fixed? Additional updates to the text: * JBOSS DEVELOPMENT AND MANAGEMENT should be: ACCELERATED DEVELOPMENT AND MANAGEMENT * CLOUD PRODUCTS should be "PRIVATE CLOUD" * The products within each section should be ordered alphabetically now as shown in the wireframe. [~james.cobb] "I'm for having the link there but it goes to the actual download. Folks see the name, click on the name and get the download." I'd like to remove the link for now as I requested and will keep an eye on heatmaps especially the first few weeks this is live to see if users try to click it. | <a href="https://issues.jboss.org/browse/DEVELOPER-2769">https://issues.jboss.org/browse/DEVELOPER-2769</a> |
| 6921 | DEVELOPER-2769 | [~tnolan] - 1) All of the header graphics on the main pages are designed to tile horizontally. [~wesbos] - Can we change the css to have it repeat for larger sizes? 2) The title link - sure... monitoring the heat maps sounds good to me.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2769">https://issues.jboss.org/browse/DEVELOPER-2769</a> |
| 6922 | DEVELOPER-2769 | im not sure then - the code is there and working locally. I can't see staging and no one seems to know why. I'd just merge this and worry about the bg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-2769">https://issues.jboss.org/browse/DEVELOPER-2769</a> |
| 6923 | DEVELOPER-2768 | I like the first one r2v1 better for the All section since that puts more focus on the download button. The header styles well to separate the categories so I'm ok with the icons being removed. :) Can you come up with an alternate option for the Most Popular? I'm losing that section in the header as it looks like it's part of the header as opposed to page content.                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2768">https://issues.jboss.org/browse/DEVELOPER-2768</a> |
| 6924 | DEVELOPER-2767 | Can we aim to have the review completed today on this? This would allow us to ideally start the implementation next week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-2767">https://issues.jboss.org/browse/DEVELOPER-2767</a> |
| 6925 | DEVELOPER-2767 | I like it and good by me. Well done [~tnolan] Will this page become editable via Drupal down the road?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-2767">https://issues.jboss.org/browse/DEVELOPER-2767</a> |
| 6926 | DEVELOPER-2767 | [~mikgue] Thanks for adding these so quickly. Can you make a few minor wording tweaks to have them all start with nouns so they are consistent? I think a few of them start with an action verb instead. If it's easier to keep the short with using a verb, then we can do that across the board too. Either way, I think they should use a consistent format.                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2767">https://issues.jboss.org/browse/DEVELOPER-2767</a> |
| 6927 | DEVELOPER-2762 | [~ray.ploski] - Can you please confirm this content is complete and accurate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2762">https://issues.jboss.org/browse/DEVELOPER-2762</a> |
| 6928 | DEVELOPER-2761 | [~ray.ploski] and [~akandel], it looks like one of the promos either has been changed out already or hasn't been changed out yet. It's not prescribed in the Google doc, but would you like me to remove Red Hat from the CDK image as well?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2761">https://issues.jboss.org/browse/DEVELOPER-2761</a> |
| 6929 | DEVELOPER-2761 | Thanks Ray. [~paul.robinson][~akandel] - How do we proceed from here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2761">https://issues.jboss.org/browse/DEVELOPER-2761</a> |
| 6930 | DEVELOPER-2757 | [~morgan_thomas] - Please note this goes out before the .NET related work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-2757">https://issues.jboss.org/browse/DEVELOPER-2757</a> |
| 6931 | DEVELOPER-2757 | [~ecurley] I can do the top banner for JBoss, is there a Jira for that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2757">https://issues.jboss.org/browse/DEVELOPER-2757</a> |
| 6932 | DEVELOPER-2753 | [~ecurley] Have these links been created? If so, where can I find them?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2753">https://issues.jboss.org/browse/DEVELOPER-2753</a> |
| 6933 | DEVELOPER-2753 | Put them on the .NET mock up: <a href="https://docs.google.com/a/redhat.com/presentation/d/1hNJ4v8dTxhns1yZmvm5arQ-bDgSY_s2mrstJleu3F9c/edit?usp=sharing">https://docs.google.com/a/redhat.com/presentation/d/1hNJ4v8dTxhns1yZmvm5arQ-bDgSY_s2mrstJleu3F9c/edit?usp=sharing</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2753">https://issues.jboss.org/browse/DEVELOPER-2753</a> |
| 6934 | DEVELOPER-2750 | Thanks [~adelaarreola]. Is it possible to change the font color for the side links to highlight which section you're in as the user scrolls down the page, like on the Quickstarts? <a href="http://developers.redhat.com//quickstarts/unifiedpush/push-helloworld-ios/index.html">http://developers.redhat.com//quickstarts/unifiedpush/push-helloworld-ios/index.html</a> Other than that, this looks great!                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2750">https://issues.jboss.org/browse/DEVELOPER-2750</a> |
| 6935 | DEVELOPER-2734 | Thanks [~adelaarreola] A few minor changes: Get an invite as Red Hat co-hosts cocktail hour. - remove ". Can we pull the YouTube link? And the register for DevNation is hitting a redirect page - is that because it's in staging?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-2734">https://issues.jboss.org/browse/DEVELOPER-2734</a> |
| 6936 | DEVELOPER-2734 | [~ecurley] here's the latest, can you review? <a href="http://developers-pr.stage.redhat.com/pr/903/build/581/events/msbuild/2016/">http://developers-pr.stage.redhat.com/pr/903/build/581/events/msbuild/2016/</a> Once you approve, I'll push it into production.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-2734">https://issues.jboss.org/browse/DEVELOPER-2734</a> |
| 6937 | DEVELOPER-2734 | [~adelaarreola] Link wasn't showing updates. Am I missing them?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2734">https://issues.jboss.org/browse/DEVELOPER-2734</a> |
| 6938 | DEVELOPER-2734 | [~ecurley] That's very odd, are you sure you were looking at the right preview link? I know I sent you too many yesterday :D Here is a screenshot of what has changed <a href="https://www.dropbox.com/s/j2oswov1u47dbh1/Screenshot%202016-03-24%2009.01.16.png?dl=0">https://www.dropbox.com/s/j2oswov1u47dbh1/Screenshot%202016-03-24%2009.01.16.png?dl=0</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2734">https://issues.jboss.org/browse/DEVELOPER-2734</a> |
| 6939 | DEVELOPER-2732 | Content available here: <a href="https://docs.google.com/a/redhat.com/document/d/1orWHd6ELOGYqExh2LWjrvtyuoCL5kSc1DozWS4PVSg/edit?usp=sharing">https://docs.google.com/a/redhat.com/document/d/1orWHd6ELOGYqExh2LWjrvtyuoCL5kSc1DozWS4PVSg/edit?usp=sharing</a> [~ray.ploski] - Mike did a once through. Do you want to review or shall [~adelaarreola] move forward?                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2732">https://issues.jboss.org/browse/DEVELOPER-2732</a> |
| 6940 | DEVELOPER-2716 | Thanks [~dcoughlin1]. Does your import process handle sub directories? I don't see many new quickstarts there. The beginner, camel, cxf and switchyard directories (at <a href="https://github.com/jboss-fuse/quickstarts/tree/6.2.1.GA">https://github.com/jboss-fuse/quickstarts/tree/6.2.1.GA</a> ) contain numerous quickstarts each.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-2716">https://issues.jboss.org/browse/DEVELOPER-2716</a> |
| 6941 | DEVELOPER-2716 | [~dcoughlin1] this latest version looks great - thanks! Could you pass on some details on the QSTools checks we need to pass for the switchyard quickstarts?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2716">https://issues.jboss.org/browse/DEVELOPER-2716</a> |
| 6942 | DEVELOPER-2716 | [~rafabene] - The fuse quickstarts have a nested file structure. Is it possible to run qstools on that? We are currently having problems rendering the switchyard directory because the READMEs don't follow the qstools conventions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2716">https://issues.jboss.org/browse/DEVELOPER-2716</a> |
| 6943 | DEVELOPER-2716 | Hey [~aileenc], would you like me to point the "Demo Source" link to <a href="https://github.com/jboss-fuse/quickstarts/tree/master/beginner">https://github.com/jboss-fuse/quickstarts/tree/master/beginner</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2716">https://issues.jboss.org/browse/DEVELOPER-2716</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | URL                                                                                                         |

| 6944 | DEVELOPER-2711 | This is really looking great, [~adelaarreola]! Some updates for the next iteration: # Change the Thank you message to "Thank you for downloading Red Hat Enterprise Linux." (first line) and "Your download should start automatically. If you have any problems with the download, please use the [direct link]." (second line). All other text should be removed. # Virtual Box is one word "VirtualBox" # Step 1 boxes should be "Download Red Hat Enterprise Linux". # Remove the times (10 minutes, etc) from the boxes, both up top and within the page text. Only on this Get Started page not throughout the site. # Collapse step 1 text if the Thank you message is there. # Change the step 4 layout to use vertical tabs. See the latest wireframe. <a href="https://redhatdevelopers.mybalsamiq.com/projects/octopus-build-2016/RHEL%20-%20Get%20started%20%28post-download%29">https://redhatdevelopers.mybalsamiq.com/projects/octopus-build-2016/RHEL%20-%20Get%20started%20%28post-download%29</a> . [~james.cobb] Can you provide the styling for these? # For the step 4 content, can we keep them all the same height? I think Python is the tallest one, so maybe use that height as a gauge? # We talked about moving the Troubleshooting and FAQ at the bottom of the page elsewhere. [~mikgue] Is that something we still plan to do? | <a href="https://issues.iboss.org/browse/DEVELOPER-2711">https://issues.iboss.org/browse/DEVELOPER-2711</a> |
| 6945 | DEVELOPER-2711 | We're really getting there! Thanks [~adelaarreola] Some additional edits/fixes: # The Thank you message at the top looks like it repeats "Red Hat Enterprise Linux" in the text. I see "Thank you for downloading Red Hat Enterprise Linux {color:red}Red Hat Enterprise Linux{color}" . # We need a space between _the_ and _direct_ in the additional sentence in the Thank you message. "please use the direct link." # Step 4 content: [~mikgue] It looks like we're using "CPP" now instead of C/C++. Is that intentional? # Step 4 layout/style: A few things and [~james.cobb] please chime in. A) I'd like to see a different font color for "Recommended" to highlight it and make it stand out more. B) I'd like to see a larger font size used for the first item in the list, the recommended one, to differentiate it more from the others. See the Perl tab. C) Can we add lines or some other separation between the items like on the Perl tab?                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-2711">https://issues.iboss.org/browse/DEVELOPER-2711</a> |
| 6946 | DEVELOPER-2710 | [~paul.robinson] Paul, what are you looking for me to do? It looks like you just re-assigned this to me.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-2710">https://issues.iboss.org/browse/DEVELOPER-2710</a> |
| 6947 | DEVELOPER-2710 | I set you as the assignee, as you are the one working on it. Are you asking Tiffany to review it? If so, can you mark it as 'in review'. See: <a href="https://www.dropbox.com/s/se0c3laxpauk8qr/Screenshot%202016-03-14%2013.57.17.png?dl=0">https://www.dropbox.com/s/se0c3laxpauk8qr/Screenshot%202016-03-14%2013.57.17.png?dl=0</a> for a pointer on how to do it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-2710">https://issues.iboss.org/browse/DEVELOPER-2710</a> |
| 6948 | DEVELOPER-2710 | Can we aim to have the review completed today on this? This would allow us to do the implementation next week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-2710">https://issues.iboss.org/browse/DEVELOPER-2710</a> |
| 6949 | DEVELOPER-2710 | [~adelaarreola] what time should we get updates to you to be part of Prod on Monday?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-2710">https://issues.iboss.org/browse/DEVELOPER-2710</a> |
| 6950 | DEVELOPER-2709 | Due to some changes to the content and learning that both steps 2 and 3 could change depending on the user's desired configuration, I made a new version of the wireframe and am placing this sub-task back into review status. Here is the proposed new wireframe: <a href="https://redhatdevelopers.mybalsamiq.com/projects/octopus-build-2016/RHEL%20-%20Get%20started%20%28post-download%29">https://redhatdevelopers.mybalsamiq.com/projects/octopus-build-2016/RHEL%20-%20Get%20started%20%28post-download%29</a> Because I'd like to keep this to a single page for the RHEL "Get Started", I also made a few modifications: # I added a primary tab bar to the top of the page. - It is very important that we are able to swap the content for the tabs WITHOUT reloading the entire page. This is due to people hitting this page directly after download. We want to retain the "Thanks" as well as showing step one completed no matter which primary tab they select after the download. [~paul.robinson] - Is this possible? # We would need a new secondary tab style for the Languages section. [~james.cobb] is looking into some options for this.                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-2709">https://issues.iboss.org/browse/DEVELOPER-2709</a> |
| 6951 | DEVELOPER-2709 | Thanks [~james.cobb]. Do you consider that style a primary or secondary style then? We need to go two levels deep on the RHEL Get Started pages. Tab set one: Bare Metal, Hyper-V, VirtualBox, VMware Each of those has multiple steps (1-4) Within Step 4, we would need another set of tabs for the language selection, which I think would be considered a secondary set of tabs. So it would go Primary Tabs > Steps > Secondary Tabs. Feel free to ping me if this doesn't make sense (which is quite likely, lol)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-2709">https://issues.iboss.org/browse/DEVELOPER-2709</a> |
| 6952 | DEVELOPER-2709 | Why are we trying to put all of this content on one page? We already have a multi-language selection method for Getting Started as seen here: <a href="http://developers.redhat.com/products/rhel/get-started-rhel7-perl/">http://developers.redhat.com/products/rhel/get-started-rhel7-perl/</a> Is there a business need to have all of this content on "one page"? Seems to me that we're adding visual complexity and load time as we'll need to load all of the tabbed content.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-2709">https://issues.iboss.org/browse/DEVELOPER-2709</a> |
| 6953 | DEVELOPER-2709 | Can we aim to have the review completed today on this? This would allow us to do the implementation next week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-2709">https://issues.iboss.org/browse/DEVELOPER-2709</a> |
| 6954 | DEVELOPER-2703 | [~mikgue] Where can I find this content?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-2703">https://issues.iboss.org/browse/DEVELOPER-2703</a> |
| 6955 | DEVELOPER-2703 | [~mikgue] is this the issue you are working on here: <a href="https://github.com/redhat-developer/developers.redhat.com/pull/964">https://github.com/redhat-developer/developers.redhat.com/pull/964</a> I think the plan was for [~adelaarreola] to take Mike's code from that PR and fix the problems. [~adelaarreola] do you have everything you need to do that? For example, do you know what it is intended to look like?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-2703">https://issues.iboss.org/browse/DEVELOPER-2703</a> |
| 6956 | DEVELOPER-2703 | A few things: # delete all of the old stuff - everything above "New to RHEL" (except the title) # can you standardize on the table widths? # can you align the columns of the various tables (similar to item above) # can you remove a space/line above each table so that it's closer to the text above it? # For the Perl table, can you replace "docker pull rhsc1/perl-520-rhel7" with this "docker pull registry.access.redhat.com/rhsc1/perl-520-rhel7" Looks great! Thanks. Mike                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-2703">https://issues.iboss.org/browse/DEVELOPER-2703</a> |

| 6961 | DEVELOPER-2696 | [~brock] Survey report isn't done yet. Sorry. Let's swap with a blog that has been getting tons of hits: <a href="http://developers.redhat.com/blog/2016/02/24/10-things-to-avoid-in-docker-containers/">http://developers.redhat.com/blog/2016/02/24/10-things-to-avoid-in-docker-containers/</a> Work for you [~lincolnthree]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-2696">https://issues.iboss.org/browse/DEVELOPER-2696</a> |
| 6962 | DEVELOPER-2695 | Here are the homepage backgrounds for .NET [~james.cobb] do you approve? Also the desktop version does pattern.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-2695">https://issues.iboss.org/browse/DEVELOPER-2695</a> |
| 6963 | DEVELOPER-2695 | [~ecurley] - Do we have new content for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-2695">https://issues.iboss.org/browse/DEVELOPER-2695</a> |
| 6964 | DEVELOPER-2691 | [~paul.robinson] I can take a look during my next sprint which starts mid-week next week. Does that work ok for timing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-2691">https://issues.iboss.org/browse/DEVELOPER-2691</a> |
| 6965 | DEVELOPER-2691 | [~tnolan] No problem, waiting makes sense as we should consider uniformity across RH properties. What throw-away work are you thinking about?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-2691">https://issues.iboss.org/browse/DEVELOPER-2691</a> |

| 6966 | DEVELOPER-2686 | Hey Jason, this looks interesting so far! Do you want to sit us down for a demo at some point? It's a little hard to guess with confidence at what this means. Wdyt?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-2686">https://issues.iboss.org/browse/DEVELOPER-2686</a> |
| 6967 | DEVELOPER-2685 | [~lightguard] what's the status of this? Do you have a URL at which I can view the site?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-2685">https://issues.iboss.org/browse/DEVELOPER-2685</a> |
| 6968 | DEVELOPER-2685 | Is it this job that will build the pilot environment of Drupal? If so, I think it will be triggered on a change to master, in the same way our current production job is rebuilt. So, it's not really a 'nightly' job. Perhaps the scope of this issue has changed since it was first envisaged?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-2685">https://issues.iboss.org/browse/DEVELOPER-2685</a> |
| 6969 | DEVELOPER-2685 | Random permission issue * http://atholl.eng.hst.ams2.redhat.com:33777/projects -- Fixed with new data dump * JS not firing on http://atholl.eng.hst.ams2.redhat.com:33777/community/contributor/ -- Still an issue * Only one (badly styled) connector on: http://atholl.eng.hst.ams2.redhat.com:33777/products/fuse/connectors -- JS issue is breaking this, not sure what though * No latest content on http://atholl.eng.hst.ams2.redhat.com:33777/ -- Probably just needs to be updated * No Events on http://atholl.eng.hst.ams2.redhat.com:33777/events * Links on left wrong on http://atholl.eng.hst.ams2.redhat.com:33777/products/cdk/get-started * Javascript on topics pages for adding news items doesn't work * Acceptance tests failing: {code} @site_user @logout @javascript Scenario: Customer verifies their account # _cucumber/features/login_register/basic_registration.feature:10 Given I am on the Registration page # _cucumber/features/step_definitions/common/navigation_steps.rb:1 Expected page title to be Register   Red Hat Developers, but was Red Hat Developers   Red Hat Developers (RuntimeError) ./_cucumber/lib/pages/base_page.rb:37:in 'loaded?' ./_cucumber/lib/pages/register_page.rb:26:in 'rescue in open' ./_cucumber/lib/pages/register_page.rb:22:in 'open' ./_cucumber/features/step_definitions/common/navigation_steps.rb:2:in '/^(I am they are) on the ([^"]*) page\$/' _cucumber/features/login_register/basic_registration.feature:11:in 'Given I am on the Registration page' And I complete the registration form # _cucumber/features/step_definitions/register_steps.rb:9 Then I should be logged in # _cucumber/features/step_definitions/common/navigation_steps.rb:10 HTML screenshot: _cucumber/screenshots/screenshot_2016-03-17-20-35-36.334.html Image screenshot: _cucumber/screenshots/screenshot_2016-03-17-20-35-36.334.png HTML screenshot: _cucumber/screenshots/screenshot_2016-03-17-20-35-52.330.html Image screenshot: _cucumber/screenshots/screenshot_2016-03-17-20-35-52.330.png The test failed on page: Red Hat Developers   Red Hat Developers @site_user @logout @javascript Scenario: Newly registered site visitor navigates to product Download page and clicks on download, accepts Redhat T&C's should initiate download. # _cucumber/features/downloads/featured_downloads.feature:12 Given I register a new account # _cucumber/features/step_definitions/register_steps.rb:1 And I am on the Product Download page for eap # _cucumber/features/step_definitions/downloads.steps.rb:1 When I click to download the featured download of "Enterprise Application Server" # _cucumber/features/step_definitions/downloads.steps.rb:16 @site_user @javascript Scenario: Password validation # _cucumber/features/login_register/basic_registration.feature:17 Given I am on the Registration page # _cucumber/features/step_definitions/common/navigation_steps.rb:1 Expected page title to be Register   Red Hat Developers, but was Red Hat Developers   Red Hat Developers (RuntimeError) ./_cucumber/lib/pages/base_page.rb:37:in 'loaded?' ./_cucumber/lib/pages/register_page.rb:26:in 'rescue in open' ./_cucumber/lib/pages/register_page.rb:22:in 'open' ./_cucumber/features/step_definitions/common/navigation_steps.rb:2:in '/^(I am they are) on the ([^"]*) page\$/' _cucumber/features/login_register/basic_registration.feature:18:in 'Given I am on the Registration page' When I try to enter passwords that do not match # _cucumber/features/step_definitions/register_steps.rb:18 Then I should see a warning that "Passwords don't match" # _cucumber/features/step_definitions/register_steps.rb:24 HTML screenshot: _cucumber/screenshots/screenshot_2016-03-17-20-36-16.042.html Image screenshot: _cucumber/screenshots/screenshot_2016-03-17-20-36-16.042.png HTML screenshot: _cucumber/screenshots/screenshot_2016-03-17-20-36-19.386.html Image | <a href="https://issues.iboss.org/browse/DEVELOPER-2685">https://issues.iboss.org/browse/DEVELOPER-2685</a> |
| 6970 | DEVELOPER-2685 | Can you assign those issues to the 'Drupal Live' release? If it's a blocker for the pilot, then put it on the 'Drupal Pilot' release. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-2685">https://issues.iboss.org/browse/DEVELOPER-2685</a> |
| 6971 | DEVELOPER-2681 | How is this different than a link?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-2681">https://issues.iboss.org/browse/DEVELOPER-2681</a> |
| 6972 | DEVELOPER-2681 | [~lightguard] did you mean to mark as 'implemented'? If so, what's the rational?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-2681">https://issues.iboss.org/browse/DEVELOPER-2681</a> |
| 6973 | DEVELOPER-2680 | [~paul.robinson] [~dhladyk] When will RHEL have a DM link from here? http://developers.stage.redhat.com/downloads/ Or is it somewhere else that I don't see.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/DEVELOPER-2680">https://issues.iboss.org/browse/DEVELOPER-2680</a> |
| 6974 | DEVELOPER-2679 | [~wesbos] is this feasible? [~lkrzyzanek] when do you need this by?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-2679">https://issues.iboss.org/browse/DEVELOPER-2679</a> |
| 6975 | DEVELOPER-2679 | Is it pushed to production already?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-2679">https://issues.iboss.org/browse/DEVELOPER-2679</a> |
| 6976 | DEVELOPER-2677 | [~mikgue] - Does this work for you? ^^                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-2677">https://issues.iboss.org/browse/DEVELOPER-2677</a> |

| 6978 | DEVELOPER-2669 | [~rblake] it seems like #2 relates to DEVELOPER-2541? Can you tidy these issues up, as you are suggesting? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-2669">https://issues.iboss.org/browse/DEVELOPER-2669</a> |
| 6979 | DEVELOPER-2666 | "Developers have multiple options when seeking to obtain a Red Hat Enterprise Linux developer subscription - see the details here[link]" - Where should I direct the link on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/DEVELOPER-2666">https://issues.iboss.org/browse/DEVELOPER-2666</a> |
| 6980 | DEVELOPER-2666 | Do I need to make any changes to this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-2666">https://issues.iboss.org/browse/DEVELOPER-2666</a> |
| 6981 | DEVELOPER-2666 | [~mikgue] I submitted a new PR for this, but I think I'm a little confused on the requirement. Is it supposed to mirror the RHEL downloads page and include that extra line?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/DEVELOPER-2666">https://issues.iboss.org/browse/DEVELOPER-2666</a> |
| 6982 | DEVELOPER-2666 | [~dcoughlin1] This looks good. Can you make the first lines bold to make sure people read it? other than that - good to go.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/DEVELOPER-2666">https://issues.iboss.org/browse/DEVELOPER-2666</a> |
| 6983 | DEVELOPER-2665 | Is http://developers.redhat.com/downloads/ really the right place? Isn't http://developers.redhat.com/products/rhel/download/ better?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-2665">https://issues.iboss.org/browse/DEVELOPER-2665</a> |
| 6984 | DEVELOPER-2662 | [~paul.robinson] We'd like to link to 2 different PDFs from this page. What's the process to get these added and indexed on RHD? PDF 1: http://static.iboss.org/rhd/docs/rhel_developer_getting_started_guide.pdf PDF 2: http://static.iboss.org/rhd/docs/selinux_for_red_hat_developers.pdf                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/DEVELOPER-2662">https://issues.iboss.org/browse/DEVELOPER-2662</a> |
| 6985 | DEVELOPER-2662 | Can we aim to have the review completed today on this? This would allow us to do the implementation next week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-2662">https://issues.iboss.org/browse/DEVELOPER-2662</a> |
| 6986 | DEVELOPER-2662 | [~tnolan] You've assigned this to me - what is it you need me to do? :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-2662">https://issues.iboss.org/browse/DEVELOPER-2662</a> |
| 6987 | DEVELOPER-2656 | [~mikgue] how will this link from the overview page? Is it a link on the left-hand side? If so, what text should be displayed on the link?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-2656">https://issues.iboss.org/browse/DEVELOPER-2656</a> |
| 6988 | DEVELOPER-2653 | A couple of things. 1. Shouldn't DTS and SCL stuff be on their own respective Update pages? 2. The other items are don't feel like they'd be part of a RHEL update page, as they really fall under "latest news" (like the page is called). Do we have site plans for "news" items?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-2653">https://issues.iboss.org/browse/DEVELOPER-2653</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | URL                                                                                                         |

| 6989 | DEVELOPER-2653 | [~mikgue] We can remove the 2 that are related to DTS and SCL, but that only leaves 2 on the page then, unless you have others to add? How old are these updates anyway and is it really worth including them other than not losing legacy content? For a DTS and SCL Updates tab, I don't think it's worth it to add that tab right now for just one item on those tabs. Same question as above...how old are these? I was also thinking about a "news" item but we do not have that on the site yet. It's possible the blog could fill that need.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-2653">https://issues.iboss.org/browse/DEVELOPER-2653</a> |
| 6990 | DEVELOPER-2653 | I'm getting confused. Isn't the point for an Updates tab to show history? What's there for DTS and SCL are from the Fall timeframe. If one is insufficient, then we can add a prior release, too. The two other items are less important by themselves, but RHEL does have an obvious history as well.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-2653">https://issues.iboss.org/browse/DEVELOPER-2653</a> |
| 6991 | DEVELOPER-2653 | [~mikgue] Ok, thanks for the additional info about the dates on those. It was hard to tell how recent they were from the CP site. We can add updates tabs for those other 2 then, but would need a separate JIRA for each and we would need to make sure we maintain those too as updates roll out. For RHEL Updates, we would only display 2 items for now, unless you have new ones that we can add. Please let me know if we need more items on this page than the 2. With the DTS and SCL landing pages being removed from the menu, how are users supposed to get to those pages now anyway? This is probably a side convo. :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-2653">https://issues.iboss.org/browse/DEVELOPER-2653</a> |
| 6992 | DEVELOPER-2653 | So I guess I should create 2 Jira's for SCL and DTS Updates pages, yes? I'll assemble the content. As for the RHEL Update, I'll see what else I can find. I don't follow you on this one: "With the DTS and SCL landing pages being removed from the menu, how are users supposed to get to those pages now anyway? Being removed from which menu. If you mean, the CP site, it's up to us. (that's why I started this convo. :) ) Much of the content is also available in a PDF/product brief but I recall that you don't like PDFs - would like understand why someday. Maybe during our side convo. :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-2653">https://issues.iboss.org/browse/DEVELOPER-2653</a> |
| 6993 | DEVELOPER-2644 | [~paul.robinson] I can't define the definition of done for this ticket as there is no description. Could you please provide some context?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-2644">https://issues.iboss.org/browse/DEVELOPER-2644</a> |
| 6994 | DEVELOPER-2644 | [~adelaarreola] the content is here: <a href="https://issues.iboss.org/browse/DEVELOPER-2699">https://issues.iboss.org/browse/DEVELOPER-2699</a> . Can you confirm that you have all you need to implement this today?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-2644">https://issues.iboss.org/browse/DEVELOPER-2644</a> |
| 6995 | DEVELOPER-2642 | [~adelaarreola] This looks very good. Can you insert a line under "Download Red Hat Enterprise Linux 7"? I want the text underneath to not be associated with the link. After that, good to go.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-2642">https://issues.iboss.org/browse/DEVELOPER-2642</a> |
| 6996 | DEVELOPER-2632 | [~lightguard] this seems unnecessary now. WDYT? please close if you agree.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-2632">https://issues.iboss.org/browse/DEVELOPER-2632</a> |

If so, can you create new issues under this Epic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-2617">https://issues.iboss.org/browse/DEVELOPER-2617</a> |
| 6998 | DEVELOPER-2617 | [~ecurley] For Octopus, we need move the JEE book to a spotlight. What should come off?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-2617">https://issues.iboss.org/browse/DEVELOPER-2617</a> |
| 6999 | DEVELOPER-2615 | Where will this link from?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-2615">https://issues.iboss.org/browse/DEVELOPER-2615</a> |
| 7000 | DEVELOPER-2615 | I'm not sure what you mean by 'resource'. Specifically what type of resource? Blog post, article, or something else? Can you provide a link to the page you would like it linking from and indicate where on the page you want the link? This might help me to understand what your requirements are.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-2615">https://issues.iboss.org/browse/DEVELOPER-2615</a> |
| 7001 | DEVELOPER-2615 | [~paul.robinson] - What branch to use as the base? Where should images (screenshots) go?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-2615">https://issues.iboss.org/browse/DEVELOPER-2615</a> |
| 7002 | DEVELOPER-2615 | FYI - for anyone tracking this. There are three pieces that are part of this: # Install RHEL 7 (physical machine) - Is this a ticket for this one? # Install RHEL 7 VirtualBox VM - DEVELOPER-2613 # Install RHEL 7 VMware, this one, DEVELOPER-2615 This one, VMware, will be the *last one published*. The first one will be the Install RHEL 7. (located here: <a href="https://github.com/rctrh/rh-tthw/blob/master/get-started-rhel7-install.adoc">https://github.com/rctrh/rh-tthw/blob/master/get-started-rhel7-install.adoc</a> ). However, These were originally formatted to be TTHWs with the 3 sections/3 boxes. I will reformat and update for an article layout since that is the new direction. On the TTHWs there was an AsciiDoctor macro I think for locating the image. Is it the same for articles? It doesn't work in the local repo, it just gives broken images. Is there a trick for that? I've cloned the repo, but I don't have a development site setup to test against, so I won't be able to see what it looks like until it gets staged. {{ image:#{cdn(site.base_url)}/images/products/rhel/rhel7-install/rhel_7_1_a_0.png}}[Screenshot Boot Splash]}}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-2615">https://issues.iboss.org/browse/DEVELOPER-2615</a> |
| 7003 | DEVELOPER-2615 | Is there a naming and/or directory hierarchy for articles? These three articles will be for RHEL. Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-2615">https://issues.iboss.org/browse/DEVELOPER-2615</a> |
| 7004 | DEVELOPER-2614 | What link are you waiting for? I suggest getting the PR in if you don't get the link before the end of the week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-2614">https://issues.iboss.org/browse/DEVELOPER-2614</a> |
| 7005 | DEVELOPER-2614 | [~mikgue] I should probably take this to a separate email thread. That sentence needs a little minor improvement. You will need a Red Hat Enterprise Linux 7 system with a current Red Hat subscription that allows you to download software and updates from Red Hat. If you don't have a Red Hat Enterprise Linux subscription, register on developers.redhat.com [ <a href="https://developers.redhat.com">https://developers.redhat.com</a> ] and download Red Hat Enterprise Linux Developer Suite[ <a href="https://developers.redhat.com/products/rhel/download/">https://developers.redhat.com/products/rhel/download/</a> ] Or maybe make it simpler: You will need a Red Hat Enterprise Linux 7 system with a current Red Hat subscription that allows you to download software and updates from Red Hat. If you don't have a Red Hat Enterprise Linux subscription, get Red Hat Enterprise Linux Developer Suite[ <a href="https://developers.redhat.com/products/rhel/download/">https://developers.redhat.com/products/rhel/download/</a> ] after registering at developers.redhat.com [ <a href="https://developers.redhat.com">https://developers.redhat.com</a> ] (both gloss over that you will get/still need a subscription, but it's \$0/no-cost/free for developers.) Note: This also should go in the FAQ. It's in all the others, but I left it out of the Java one until we figured out what the text should be. Old: I don't have a current Red Hat subscription, can I get an evaluation? + If you don't have a Red Hat Enterprise Linux subscription, you can try it for free. Get started with an evaluation at link: <a href="https://access.redhat.com/products/red-hat-enterprise-linux/evaluation/">https://access.redhat.com/products/red-hat-enterprise-linux/evaluation/</a> . Developers should select the Red Hat Enterprise Linux Developer Workstation option to ensure your evaluation includes additional tools from the Red Hat Developer Toolset and Red Hat Software Collections. New: As a developer, how can I get a Red Hat Enterprise Linux subscription? + If you don't have a Red Hat Enterprise Linux subscription, register on developers.redhat.com [ <a href="https://developers.redhat.com">https://developers.redhat.com</a> ] and download Red Hat Enterprise Linux Developer Suite[ <a href="https://developers.redhat.com/products/rhel/download/">https://developers.redhat.com/products/rhel/download/</a> ] | <a href="https://issues.iboss.org/browse/DEVELOPER-2614">https://issues.iboss.org/browse/DEVELOPER-2614</a> |
| 7006 | DEVELOPER-2614 | As discussed, use these: You will need a Red Hat Enterprise Linux 7 system with a current Red Hat subscription that allows you to download software and updates from Red Hat. If you don't have a Red Hat Enterprise Linux subscription, get Red Hat Enterprise Linux Developer Suite[ <a href="https://developers.redhat.com/products/rhel/download/">https://developers.redhat.com/products/rhel/download/</a> ] after registering at developers.redhat.com <a href="https://developers.redhat.com">https://developers.redhat.com</a> . As a developer, how can I get a Red Hat Enterprise Linux subscription? + If you don't have a Red Hat Enterprise Linux subscription, register on developers.redhat.com <a href="https://developers.redhat.com">https://developers.redhat.com</a> and download Red Hat Enterprise Linux Developer Suite[ <a href="https://developers.redhat.com/products/rhel/download/">https://developers.redhat.com/products/rhel/download/</a> ]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-2614">https://issues.iboss.org/browse/DEVELOPER-2614</a> |

| 7016 | DEVELOPER-2586 | [~dcoughlin1] - Hey Dan... this is marked as in review, where can I review it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-2586">https://issues.jboss.org/browse/DEVELOPER-2586</a> |
| 7017 | DEVELOPER-2586 | [~paul.robinson][~wesbos] [~dcoughlin1] - The spacing looks fine between the promos and the associated text but another related question came up. At desktop sizes, the width of the promos are much narrower than the rest of the page. I looked into the css and I question why we have a calculated width for these elements. Current CSS... .spotlight-item { width: calc(20% - 16px); I changed it in my inspector to this and it looked great... .spotlight-item { width: calc(20%); Why are we adding the " - 16p" at desktop sizes? Granted, I'm using chrome on mac and there may be a browser concern for this.                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2586">https://issues.jboss.org/browse/DEVELOPER-2586</a> |
| 7018 | DEVELOPER-2586 | [~james.cobb] if the above turns out to be an issue, can you create a new JIRA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2586">https://issues.jboss.org/browse/DEVELOPER-2586</a> |
| 7019 | DEVELOPER-2584 | [~mikgue] where should this article be linked from? Is due to go live on Project Octopus launch or ASAP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2584">https://issues.jboss.org/browse/DEVELOPER-2584</a> |
| 7020 | DEVELOPER-2568 | Both the items in the screenshot are in the spreadsheet with 2016 dates. If these are wrong, can you update the dates in the spreadsheet?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2568">https://issues.jboss.org/browse/DEVELOPER-2568</a> |
| 7021 | DEVELOPER-2568 | Was digging into this - and noticed a few things that aren't pulling up. Not letting me add attachment so will send to you. But dates for DevNation are off. Saying June 25-27th on the site. http://developers.redhat.com/events/ JavaLand should be March 8 - 10th but on site saying the 7th - 17th. And the month listed above the cards isn't matching up with the card. Would it be helpful to screenshare?                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2568">https://issues.jboss.org/browse/DEVELOPER-2568</a> |
| 7022 | DEVELOPER-2561 | Should I move this to blocking in the meantime?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2561">https://issues.jboss.org/browse/DEVELOPER-2561</a> |
| 7023 | DEVELOPER-2561 | Yes, I have some notes from a meeting yesterday regarding the breadcrumbs and will be creating a few JIRAs as a result later today. For this story specifically, we do not want to rename the breadcrumbs but to remove them instead. [~paul.robinson] - Should this Story be removed and a new one created or should this one just be revised? Our plan is to remove all breadcrumbs from the site because the content does not go deep enough now to have users get "lost" as to where they are in the sitemap. The new menu and IA really flattened the structure so breadcrumbs no longer add significant value.                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-2561">https://issues.jboss.org/browse/DEVELOPER-2561</a> |
| 7024 | DEVELOPER-2558 | [~wesbos] it looks like the switch to using the REST API on the DL-Man didn't consider the green button. Can you add this pack in please? It should download the featured artefact for that product.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-2558">https://issues.jboss.org/browse/DEVELOPER-2558</a> |
| 7025 | DEVELOPER-2557 | [~lincolnthree] what new content? Is this now added to the staging build? Can you review it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-2557">https://issues.jboss.org/browse/DEVELOPER-2557</a> |
| 7026 | DEVELOPER-2550 | Are you still creating one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2550">https://issues.jboss.org/browse/DEVELOPER-2550</a> |
| 7027 | DEVELOPER-2545 | [~lightguard] have you got enough info to know what the issue is? I know we discussed it on the call. If so, can you confirm with Olly that there is already a feature in Awestruct to do this. Otherwise, it might be worth adding the feature at the same time as the logging improvements you are doing this week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2545">https://issues.jboss.org/browse/DEVELOPER-2545</a> |
| 7028 | DEVELOPER-2545 | Is that working alright for you [~oshaw]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2545">https://issues.jboss.org/browse/DEVELOPER-2545</a> |
| 7029 | DEVELOPER-2544 | [~tnolan] is this in progress? If so, can you update the status please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-2544">https://issues.jboss.org/browse/DEVELOPER-2544</a> |
| 7030 | DEVELOPER-2532 | Article or 1 page Microsite would work here i think. When does this need to go live?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-2532">https://issues.jboss.org/browse/DEVELOPER-2532</a> |
| 7031 | DEVELOPER-2532 | [~mikgue] - Are you moving forward with a Blog post for this content instead? I think we discussed that as an option instead of using an Article.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2532">https://issues.jboss.org/browse/DEVELOPER-2532</a> |
| 7032 | DEVELOPER-2532 | [~paul.robinson] this would be needed in a couple of weeks. Don't have a date handy. [~tnolan] I'm afraid I don't recall that. If it's a blog, everyone would see the discount code and we don't want that. With an article, we'd want it behind the Reg wall to force people to register. We can use a blog to announce the discount code, however. Which reminds me how are articles assigned to the front/behind the reg wall?                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2532">https://issues.jboss.org/browse/DEVELOPER-2532</a> |
| 7033 | DEVELOPER-2532 | [~mikgue] [~lincolnthree] - We haven't talked about where articles would fit with the reg wall. I figured that they would be like most of the content, which does not require you to be logged in, right? Do you have a doc in progress for what should/shouldn't require registration? I don't think I've seen that plan yet or that we have a way to support that from the back-end. I understand the reluctance to use a blog for this, as what you say about not revealing the code to the world makes sense. What's to prevent someone from just sharing the code elsewhere, though? I'm not sure what we can do short-term, but long-term I think we should have a "promotion" content type that would require users to be logged in to see it. I still don't think an article is the right place for something like this that is short-lived content. | <a href="https://issues.jboss.org/browse/DEVELOPER-2532">https://issues.jboss.org/browse/DEVELOPER-2532</a> |
| 7034 | DEVELOPER-2532 | Have we done anything like this in the past? One other option would be for the user to fill out a form, verify they are a member and we email them the code.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-2532">https://issues.jboss.org/browse/DEVELOPER-2532</a> |
| 7035 | DEVELOPER-2532 | I'm not aware of us doing this before. The form/email would be good. Should we get approval from Harry if he wants to collect more info for the discount?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2532">https://issues.jboss.org/browse/DEVELOPER-2532</a> |
| 7036 | DEVELOPER-2532 | [~mikgue] [~paul.robinson] I think we have a promo page live for this now. Is that correct? Can this be closed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2532">https://issues.jboss.org/browse/DEVELOPER-2532</a> |
| 7037 | DEVELOPER-2529 | [~crobson], [~tnolan]: Can you review that this is something we want to do?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2529">https://issues.jboss.org/browse/DEVELOPER-2529</a> |
| 7038 | DEVELOPER-2520 | [~mikgue] - Should I plan on just removing those product folders? Or, do I need to remove references to these products as well?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2520">https://issues.jboss.org/browse/DEVELOPER-2520</a> |

| 7043 | DEVELOPER-2493 | This is done when all problems are in JIRA, that are discovered from: 1. Acceptance tests 2. Visiting all major pages on the site and checking they look right, and the key functionality works I appreciate the above is still a bit vague.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2493">https://issues.jboss.org/browse/DEVELOPER-2493</a> |
| 7044 | DEVELOPER-2491 | [~lightguard], [~oshaw]: can you review this description please. Does it give us what we need to review where the bottlenecks are in the system?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2491">https://issues.jboss.org/browse/DEVELOPER-2491</a> |
| 7045 | DEVELOPER-2491 | Could we log these to a different file instead? Logging to the console slows things down, it's been observed before, Doing a perf logging in .awestruct probably isn't a bad idea in general, but I'm not sure how much we want to log to the console. Awestruct used to log every page as it was created, but others in the community didn't want that level of granularity in their builds. There's a verbose flag ('-w') currently, but it doesn't do much if you're not in debug. We could add some additional logging to the console that way without too much trouble.                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2491">https://issues.jboss.org/browse/DEVELOPER-2491</a> |
| 7046 | DEVELOPER-2491 | I agree logging every page to the console is too much. We have about 1200 pages. What do you think about logging the extension just before it executes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2491">https://issues.jboss.org/browse/DEVELOPER-2491</a> |
| 7047 | DEVELOPER-2491 | Sure, verbose is fine. There would be ~50 lines of output if you included all the extensions, helpers and transformers registered in pipeline.rb. Would verbose log any other stuff that we don't want?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2491">https://issues.jboss.org/browse/DEVELOPER-2491</a> |
| 7048 | DEVELOPER-2491 | What would we use the perf.log for? I'm wondering if we need that now? The verbose logging of when an extension, helper or transformer runs fulfills the requirements I think. [~oshaw] agreed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2491">https://issues.jboss.org/browse/DEVELOPER-2491</a> |
| 7049 | DEVELOPER-2491 | Do we need it now? I don't know, maybe not but if we're trying to diagnose performance problems (I've had at least one person in the community ask for help) it would be good to have that option. We wouldn't log it every time. While I've worked on the RHD site I've had a few times where I needed to measure performance. I hacked the branch I was working on, but that's as far as it ever went.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2491">https://issues.jboss.org/browse/DEVELOPER-2491</a> |
| 7050 | DEVELOPER-2491 | Can you expand on what this perf.log is? Is it a dump from ruby to be analysed by some tooling, or is it a tonne of log statements, kind of like a TRACE level log in Java?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-2491">https://issues.jboss.org/browse/DEVELOPER-2491</a> |
| 7051 | DEVELOPER-2488 | [~lkrzyzanek], I think we want a named query like: http://dcp2.jboss.org/v2/rest/search/developer_materials. That also includes sys_type of 'blogpost' and sys_type of 'book'. We'd also need to be able to filter by tags (optional) and a query string (optional). Can you create this for us please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2488">https://issues.jboss.org/browse/DEVELOPER-2488</a> |
| 7052 | DEVELOPER-2488 | Shouldn't this be in DONE state? I finished implementing this last week, it was reviewed and pushed to all possible DCP instances.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2488">https://issues.jboss.org/browse/DEVELOPER-2488</a> |
| 7053 | DEVELOPER-2487 | BTW, I see the big green "download now" buttons don't exist anymore. Is that a consequence of this change to REST API, too?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-2487">https://issues.jboss.org/browse/DEVELOPER-2487</a> |
| 7054 | DEVELOPER-2487 | [~paul.robinson] Seems my PR failed to build... can you tell me what's wrong with those URLs I added? https://github.com/jboss-developer/www.jboss.org/pull/1023<br>Or is the problem this? {code} fatal: could not read Username for 'https://github.com': No such device or address {code} --<br>https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/www.jboss.org-pull-player-executor/2331/console                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2487">https://issues.jboss.org/browse/DEVELOPER-2487</a> |
| 7055 | DEVELOPER-2487 | I've submitted a new version of PR 1023 with the links to Beta1 (not Beta2) docs updated so we can at least see what that looks like on staging. Of course that might not be strictly necessary if we just use http://www.jboss.org/products/devstudio/resources/ with its "See More Documentation" link to<br>https://access.redhat.com/documentation/en/red-hat-jboss-developer-studio/... which shows by default the Beta1 docs (later this week, the Beta2 docs). [~mhusnain]<br>What do you think? Do we want to call out the Beta docs on http://www.jboss.org/products/devstudio/resources/ or just "hide" them under the "See More" link? Here's what the resources page would look like if my PR above is applied to change all the links to 9.1.Beta1 versions instead of 9.0.0.GA versions: http://www-stg.jboss.org/pr/1023/build/2333/products/devstudio/resources/                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2487">https://issues.jboss.org/browse/DEVELOPER-2487</a> |
| 7056 | DEVELOPER-2487 | Looks like with the latest import of 9.1.0 Beta(space)2 we lose the filesize of the EAP bundled installer and the "2" of Beta2 wraps to the next line. Can we fix those?<br>http://developers.redhat.com/products/devstudio/download/ lalignment-and-filesize-problems.png! https://www.jboss.org/products/devstudio/download/ lalignment-and-filesize-problems2.png!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-2487">https://issues.jboss.org/browse/DEVELOPER-2487</a> |
| 7057 | DEVELOPER-2480 | [~james.cobb] can you review: http://it-developers-pr.stage.redhat.com/pr/715/build/678/products/. It looks done to me. I believe the mockup is based on an old wireframe where the primary CTA was for 'Downloads'. Correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2480">https://issues.jboss.org/browse/DEVELOPER-2480</a> |
| 7058 | DEVELOPER-2473 | [~mkgue] I'm also confused by this. Can you explain what you want doing with this adoption page? We could convert it to an article maybe?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2473">https://issues.jboss.org/browse/DEVELOPER-2473</a> |
| 7059 | DEVELOPER-2472 | [~tnolan], [~crobson], can you advise on where this content should go?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2472">https://issues.jboss.org/browse/DEVELOPER-2472</a> |
| 7060 | DEVELOPER-2472 | [~paul.robinson] This git hub source is in the TTHW format, so is it not the RHEL product "get started" page?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2472">https://issues.jboss.org/browse/DEVELOPER-2472</a> |

| 7061 | DEVELOPER-2472 | [~tnolan] I agree, it should go as another square (in the first position, before 'CPP') on <a href="http://developers.redhat.com/products/rhel/get-started">http://developers.redhat.com/products/rhel/get-started</a> . What text and image should be on the button?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/DEVELOPER-2472">https://issues.iboss.org/browse/DEVELOPER-2472</a> |
| 7062 | DEVELOPER-2472 | Can we get this one on staging ASAP? The other 2 (in separate JIRAs) are a lower priority but we'd like to have this one to test the user flow. Also, the title of it should be: *Install Red Hat Enterprise Linux for Development*. We're not going to use quick start or quickstart for this since we have other content that use those terms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-2472">https://issues.iboss.org/browse/DEVELOPER-2472</a> |
| 7063 | DEVELOPER-2472 | Hi [~rterzi], I noticed that sections for the updated <a href="https://github.com/rctrh/rh-tthw/blob/master/install-rhel7.adoc">https://github.com/rctrh/rh-tthw/blob/master/install-rhel7.adoc</a> still have FIX ME lines. Is that content still in progress or what should I change those to? cc: [~mikgue]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-2472">https://issues.iboss.org/browse/DEVELOPER-2472</a> |
| 7064 | DEVELOPER-2472 | Yes, it's still a WIP, but we need to see it in template. * Note: Before registration can proceed, you will be required to agree to the terms and conditions at <a href="http://www.redhat.com/wapps/ugc/">www.redhat.com/wapps/ugc/</a> if you haven't already done so. [*FIXME* hopefully this can be deleted.] -- *Keep this for now * * Step 4 Content - [*FIXME* - Where do the tabs come from?] This should be replaced by the tabs you are integrating. * FAQ question 4: {noformat} link: <a href="http://developers.redhat.com/products/developertoolset/get-started-rhel7-cpp/">http://developers.redhat.com/products/developertoolset/get-started-rhel7-cpp/</a> [Get started developing with C++ and Eclipse from the Red Hat Developer Toolset] {noformat} * FAQ question 5 - [FIXME Note: I didn't give this much testing], that can be deleted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-2472">https://issues.iboss.org/browse/DEVELOPER-2472</a> |
| 7065 | DEVELOPER-2472 | Note: I will supply some additional VirtualBox FAQs that need to be added to the troubleshooting and FAQ section. [~adelarreola] [~paul.robinson] - Do you have any suggestions on better formatting/markup for the FAQs? In particular to differentiate the questions from the answers?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-2472">https://issues.iboss.org/browse/DEVELOPER-2472</a> |
| 7066 | DEVELOPER-2472 | [~rterzi] Thanks for the clarification!... Also as I was adding the content for <a href="https://github.com/rctrh/rh-tthw/blob/master/install-rhel7-vbox.adoc">https://github.com/rctrh/rh-tthw/blob/master/install-rhel7-vbox.adoc</a> I noticed that you have multiple broken links for images. I looked in your images folders and could not find some of the missing images (ubuntu-vbox-06-settings1.png and ubuntu-vbox-04-settings4.png). Can you email them to me so I can add them to the site? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-2472">https://issues.iboss.org/browse/DEVELOPER-2472</a> |
| 7067 | DEVELOPER-2472 | Was there an updated build last night where I can see how it all looks?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-2472">https://issues.iboss.org/browse/DEVELOPER-2472</a> |
| 7068 | DEVELOPER-2472 | [~adelarreola] Ok, that looks good. I have a bunch of edits that I need to make across all the sections of the RHEL getting started guide. What's the easiest way to do this? Is PR #922 the most recent version? [~https://github.com/adelasofia/developers.redhat.com/blob/DEVELOPER-2472-b/products/rhel/get-started.adoc] I could make a copy of that in my repo, and then commit edits against it which would like you pick up diffs or the whole file.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/DEVELOPER-2472">https://issues.iboss.org/browse/DEVELOPER-2472</a> |
| 7069 | DEVELOPER-2472 | [~adelarreola] - when do you need this to make it into Stage tonight? cc [~rterzi]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-2472">https://issues.iboss.org/browse/DEVELOPER-2472</a> |
| 7070 | DEVELOPER-2472 | [~adelarreola] - I need to make some edits to the rhel-install guide. Did you make any changes? Which repo/branch has the latest version?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/DEVELOPER-2472">https://issues.iboss.org/browse/DEVELOPER-2472</a> |
| 7071 | DEVELOPER-2472 | Looks good. Can it be promoted to staging for testers?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-2472">https://issues.iboss.org/browse/DEVELOPER-2472</a> |
| 7072 | DEVELOPER-2471 | [~mikgue] what do you want the label to be under each item on <a href="http://developers.redhat.com/products/rhel/get-started/">http://developers.redhat.com/products/rhel/get-started/</a> ? Also, what image should we use?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/DEVELOPER-2471">https://issues.iboss.org/browse/DEVELOPER-2471</a> |
| 7073 | DEVELOPER-2471 | [~tnolan] [~james.cobb] I'm not sure where or how to place these, is there a wireframe or mockup I can look at?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-2471">https://issues.iboss.org/browse/DEVELOPER-2471</a> |
| 7074 | DEVELOPER-2471 | They need to link from: <a href="http://developers.redhat.com/products/rhel/get-started/">http://developers.redhat.com/products/rhel/get-started/</a> I suggest these labels: * Containerized Python * Containerized PHP * Containerized Node.js * Containerized Ruby [~mikgue] do you approve these labels? If not, can you approve a different set? [~mikgue] can you also confirm what you want the images to look like? You suggested the technology's logo, somehow incorporated with a shipping container. [~james.cobb] is that achievable this week?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/DEVELOPER-2471">https://issues.iboss.org/browse/DEVELOPER-2471</a> |
| 7075 | DEVELOPER-2471 | Are these using the regular format for getting started or the new Article format? regular getting started format: <a href="http://developers.redhat.com/products/rhel/get-started-rhel7-perl/">http://developers.redhat.com/products/rhel/get-started-rhel7-perl/</a> If we are combining two different types of page layouts here, should we make some sort of visual indicator? [~tnolan] ^^ Thoughts? [~paul.robinson] We can get the four images this week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-2471">https://issues.iboss.org/browse/DEVELOPER-2471</a> |
| 7076 | DEVELOPER-2471 | I'm not sure. Can we have a quick meeting to discuss when [~mikgue] is available?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-2471">https://issues.iboss.org/browse/DEVELOPER-2471</a> |
| 7077 | DEVELOPER-2471 | Sorry, I'm confused. Are these 4 new Getting Started pages being linked from the CDK page or on the RHEL page?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-2471">https://issues.iboss.org/browse/DEVELOPER-2471</a> |
| 7078 | DEVELOPER-2471 | Where do you mean by "from here"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-2471">https://issues.iboss.org/browse/DEVELOPER-2471</a> |
| 7079 | DEVELOPER-2471 | [~rterzi] Rob, can you review these? They look good to me.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-2471">https://issues.iboss.org/browse/DEVELOPER-2471</a> |
| 7080 | DEVELOPER-2471 | These look good to me. What links to these? Will the new Step 4 in RHEL be the only place?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-2471">https://issues.iboss.org/browse/DEVELOPER-2471</a> |
| 7081 | DEVELOPER-2470 | [~wesbos] how can we review this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-2470">https://issues.iboss.org/browse/DEVELOPER-2470</a> |
| 7082 | DEVELOPER-2468 | OK. Can you ping the reviewer please. is it [~james.cobb]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-2468">https://issues.iboss.org/browse/DEVELOPER-2468</a> |
| 7083 | DEVELOPER-2457 | [~crobson] [~ray.ploski] [~ecurley] [~mikgue] [~james.cobb] [~paul.robinson] [~burrstutter] Here's a first draft of the updated center content section for the homepage: <a href="https://redhatdevelopers.mybalsamiq.com/projects/hard-launch/Home">https://redhatdevelopers.mybalsamiq.com/projects/hard-launch/Home</a> Some method to my madness... *New CTAs* When I was in Raleigh a few weeks ago, Ellie and Laura from RH.com talked with us one day and made an comment that really struck home with me. I've heard this from a few other people as well. When a user comes to our homepage, how do they know who we are and what we offer? Yes, we have the new about page which will answer this is more detail, but there isn't any static, consistent content so that users know they are in the "right" place. I think it's great that we have a lot of news, events, etc highlighted, but there is nothing there to anchor the user and give them that initial context. I made an attempt to help solve this by creating a place for 3 primary Call-to-Action cards. I am open to other ideas here too and just wanted to get the conversation going. I am ok with not including this section for Hard Launch. *New header and intro text for the content section* I added in the content Emily provided a while ago. However, I feel like this could also use a header to that entire section to help separate it and again to give the user some context. *Suggested* I gave this section more real estate, as well as some room for a description and thumbnail. I think these are more important than the Latest items, especially since this is a curated list, and thus gave them more space and details. *Latest* I felt like this could appear more as a news feed, with just an icon, title and date. It also seemed to be less important as the suggested content, so we can show more of them but with less detail. One final thought when looking at the homepage is that the Join RHD is way down the page. I can tell you from the heatmaps so far, that people are not making it down there. If we had this as a much smaller banner (less height) we could potentially move this right under the 5 featured items. GitHub developer does a great job with this: <a href="https://developer.github.com/">https://developer.github.com/</a> | <a href="https://issues.iboss.org/browse/DEVELOPER-2457">https://issues.iboss.org/browse/DEVELOPER-2457</a> |

| 7084 | DEVELOPER-2457 | I think we're straying away from the original intent of the site. We've gone away from trying to get folks to the information they need quickly (remember our commitment to TTHW?) and have decided we're going to market to the developers... or more accurately spoon feed stuff WE think is important. I look at our successful competitors and they aren't overloading their home page of content, they are directing traffic to areas of interest by their users. <a href="https://developer.github.com/">https://developer.github.com/</a> <a href="https://developers.google.com/">https://developers.google.com/</a> <a href="https://developer.salesforce.com/">https://developer.salesforce.com/</a> <a href="https://developer.apple.com/">https://developer.apple.com/</a> <a href="https://developers.facebook.com/">https://developers.facebook.com/</a> I keep thinking back to my discussions with developers at JavaOne. They HATE being marketed to and I'm afraid we may be slipping down that slope further.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2457">https://issues.jboss.org/browse/DEVELOPER-2457</a> |
| 7085 | DEVELOPER-2445 | Do you need any more details? I just added a description.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2445">https://issues.jboss.org/browse/DEVELOPER-2445</a> |
| 7086 | DEVELOPER-2442 | [~paul.robinson] What is the best URL to use for the most recent version of search?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2442">https://issues.jboss.org/browse/DEVELOPER-2442</a> |
| 7087 | DEVELOPER-2426 | [~adelaarreola] is this still blocked? If so, do you know why?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2426">https://issues.jboss.org/browse/DEVELOPER-2426</a> |

| 7091 | DEVELOPER-2403 | [~adelaarreola] looks like this is unblocked now. Correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-2403">https://issues.jboss.org/browse/DEVELOPER-2403</a> |
| 7092 | DEVELOPER-2393 | Thanks for getting this sorted! Where abouts can we review it? Can you add this to Wes' branch for the HardLaunch work?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2393">https://issues.jboss.org/browse/DEVELOPER-2393</a> |
| 7093 | DEVELOPER-2392 | I just noticed that the title word/s "About" or "About us" are not in the hero. Are we still planning to include those or are they being added in implementation instead?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2392">https://issues.jboss.org/browse/DEVELOPER-2392</a> |
| 7094 | DEVELOPER-2391 | Is this close enough for [~james.cobb] and team to also complete VD by the 29th?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2391">https://issues.jboss.org/browse/DEVELOPER-2391</a> |
| 7095 | DEVELOPER-2391 | [~tnolan] was this approved? If so, can you mark as done. FYI, there's another issue for the copy, so this just covers the wireframe.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-2391">https://issues.jboss.org/browse/DEVELOPER-2391</a> |
| 7096 | DEVELOPER-2385 | [~adelaarreola] is this still blocked? If so, do you know why?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2385">https://issues.jboss.org/browse/DEVELOPER-2385</a> |

| 7103 | DEVELOPER-2366 | [~paul.robinson], I think that since the Resources page updates are a lower priority than other items for Hard Launch, we can probably wait until Build. Agree?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2366">https://issues.jboss.org/browse/DEVELOPER-2366</a> |

Can you review please.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2359">https://issues.jboss.org/browse/DEVELOPER-2359</a> |
| 7105 | DEVELOPER-2355 | [~ecurley] [~ray.ploski] Can you let us know by EOD today (Mon.) or first thing tomorrow if the wireframe is approved and ready for Front-end and Visual Design? Any changes you'd like to be made?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2355">https://issues.jboss.org/browse/DEVELOPER-2355</a> |
| 7106 | DEVELOPER-2355 | Great! Thanks [~ecurley]! I'm going to mark this as "Completed", then. [~paul.robinson] - Will this trigger emails to people that own sub-tasks then? Or do I still need to notify people that the wireframe is done and work can begin on Front-end and Visuals?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2355">https://issues.jboss.org/browse/DEVELOPER-2355</a> |
| 7107 | DEVELOPER-2353 | [~rayploski-launch], where should this image go now that the get-started page is no longer present?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2353">https://issues.jboss.org/browse/DEVELOPER-2353</a> |

| 7109 | DEVELOPER-2352 | Thanks, I think it looks good. Just a few minor update requests: 1. Can you please get rid of the : after the titles of the five narratives? We don't need them since the titles are bold. 2. Can you please make the black call out box the same height as the left hand overview text, so that the two are vertically aligned, rather than the same size horizontally? I've sent this link to Steve O'Keefe and Conor O'Neil for one last review.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2352">https://issues.jboss.org/browse/DEVELOPER-2352</a> |
| 7110 | DEVELOPER-2352 | [~rebecca1021] What did you have in mind for those links?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2352">https://issues.jboss.org/browse/DEVELOPER-2352</a> |
| 7111 | DEVELOPER-2350 | [~dhlady] is this also covered by our review earlier today? Can it be marked as resolved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2350">https://issues.jboss.org/browse/DEVELOPER-2350</a> |
| 7112 | DEVELOPER-2349 | [~rebecca1021] There was a lot of changes made to the solution pages in the run-up to the summit release. Can you let me know if there is anything outstanding on this issue or whether it can be resolved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-2349">https://issues.jboss.org/browse/DEVELOPER-2349</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | URL                                                                                                         |

| 7113 | DEVELOPER-2345 | [~paul.robinson] do you really need a new registered query? You can use a minor modification of your URL example to get what you need:<br>{{http://dcp.stage.jboss.org/v2/rest/search?field=sys_title&field=sys_url_view&type=rht_website&query=cdi&size=10&query_highlight=true}} If the data were available on existing dcp the URL would be:<br>{{http://dcp.jboss.org/v1/rest/search?field=sys_title&field=sys_url_view&type=rht_website&query=cdi&size=10&query_highlight=true}} It is possible to create a new registered query but if the above URL gives you all you need then I think you can start using it right away without need for new query. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-2345">https://issues.jboss.org/browse/DEVELOPER-2345</a> |
| 7114 | DEVELOPER-2340 | Duh. Question, [~paul.robinson]: While these are "tags" at the RHD end, are you referring to the "categories" or "tags" in WordPress? Or both? My recollections is the former.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2340">https://issues.jboss.org/browse/DEVELOPER-2340</a> |
| 7115 | DEVELOPER-2339 | [~james.cobb] Can you review this screenshot: <a href="https://www.dropbox.com/s/ufz8ft5z9scw7px/Screenshot%202015-05-26%2009.23.34.png?dl=0">https://www.dropbox.com/s/ufz8ft5z9scw7px/Screenshot%202015-05-26%2009.23.34.png?dl=0</a> Is that the right thing to show when a user is logged in? Clicking on the user's name will take them to their profile page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2339">https://issues.jboss.org/browse/DEVELOPER-2339</a> |
| 7116 | DEVELOPER-2337 | [~ecurley] I believe there is a requirement for this Microsite. Can you provide the content please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2337">https://issues.jboss.org/browse/DEVELOPER-2337</a> |
| 7117 | DEVELOPER-2335 | [~james.cobb] I think this is a duplicate? Do you have link to the issue(s) it duplicated?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2335">https://issues.jboss.org/browse/DEVELOPER-2335</a> |

| 7119 | DEVELOPER-2333 | [~rebecca1021] What did you have in mind for those links?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-2333">https://issues.jboss.org/browse/DEVELOPER-2333</a> |
| 7120 | DEVELOPER-2312 | [~adelaarreola] Can you take a look at the container solution (now merged) and: 1) Add a link to it to the bottom of the homepage. See other solution links for an example. 2) Improve the L&F on the overview and adoption pages 3) Add an illustration to the overview if you have time and one is available.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-2312">https://issues.jboss.org/browse/DEVELOPER-2312</a> |
| 7121 | DEVELOPER-2297 | Can you look into adding logic to render _partials/solution-left-menu.html.slim selectively like you did with the learn and buzz?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2297">https://issues.jboss.org/browse/DEVELOPER-2297</a> |
| 7122 | DEVELOPER-2289 | Okay, just one quick change. Can you please change the slash (/) in the first sentence of the intro to a comma (,)? Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2289">https://issues.jboss.org/browse/DEVELOPER-2289</a> |
| 7123 | DEVELOPER-2287 | [~adelaarreola] how was it incorrect? Intentionally it's almost the same as JBDS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2287">https://issues.jboss.org/browse/DEVELOPER-2287</a> |
| 7124 | DEVELOPER-2282 | I created the necessary graphics for Fedora and OpenShift Commons (both regular sized and featured size). I put them on the design site.<br><a href="http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/upstream/images/fedora_500x400.png">http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/upstream/images/fedora_500x400.png</a><br><a href="http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/upstream/images/fedora_200x150.png">http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/upstream/images/fedora_200x150.png</a><br><a href="http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/upstream/images/openshiftcommons_500x400.png">http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/upstream/images/openshiftcommons_500x400.png</a><br><a href="http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/upstream/images/openshiftcommons_200x150.png">http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/upstream/images/openshiftcommons_200x150.png</a> [~paul.robinson] Paul, should we host them on static.jboss.org/foo? I tried to post them there but I don't have the access privileges to create new directories at the root level. Should they be posted there or do we need to have an equivalent for RHD (static.developers.redhat.com)? | <a href="https://issues.jboss.org/browse/DEVELOPER-2282">https://issues.jboss.org/browse/DEVELOPER-2282</a> |
| 7125 | DEVELOPER-2280 | This has been merged into master - can close.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2280">https://issues.jboss.org/browse/DEVELOPER-2280</a> |
| 7126 | DEVELOPER-2278 | What are we to do about the mobile view of this banner? I'll create a mobile size image based on the sizes we use for jboss developer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2278">https://issues.jboss.org/browse/DEVELOPER-2278</a> |
| 7127 | DEVELOPER-2275 | [~dhlady] the chrome on <a href="http://developers.redhat.com/">http://developers.redhat.com/</a> is current. Can you update the download-manager please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-2275">https://issues.jboss.org/browse/DEVELOPER-2275</a> |
| 7128 | DEVELOPER-2275 | Hi [~james.cobb], I was not able to find the place you mentioned in the html. Also I should not be the one modifying the CSS. I would be a little worried, that I screw up other development. Will you, please, ping me when you are on-line so we can have a look on it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-2275">https://issues.jboss.org/browse/DEVELOPER-2275</a> |
| 7129 | DEVELOPER-2273 | [~crobson], [~kpassmore]: Do you know what categories we decided to use here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2273">https://issues.jboss.org/browse/DEVELOPER-2273</a> |
| 7130 | DEVELOPER-2273 | Thanks, Are we copying these categories from somewhere? For example, how do we know which product to put in which category?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2273">https://issues.jboss.org/browse/DEVELOPER-2273</a> |
| 7131 | DEVELOPER-2267 | By mobile do we also mean tablets (Ipad, Chromebooks)? Or do we test them as desktop? Should we have a separate issue for tablets?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-2267">https://issues.jboss.org/browse/DEVELOPER-2267</a> |
| 7132 | DEVELOPER-2267 | Looks good! Can we have it trigger at tablet size (~975px) as the current header starts collapsing ungracefully at around that size and the mobile nav doesn't switch over until around 475px. Are there any changes to the html that we'll have to make for the login screens or are all the changes just in our CSS files?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2267">https://issues.jboss.org/browse/DEVELOPER-2267</a> |
| 7133 | DEVELOPER-2267 | What is the width for mobile device? Is it going to be same as "small" column width? I'm asking because zurb foundation comes with small, medium and large column sizes and PR build has different min-width compared to min-width for large columns. I would say that new compacted header should be only on width where small column size is active. Header on medium size should be similar to large but slightly compacted by less padding/margins.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-2267">https://issues.jboss.org/browse/DEVELOPER-2267</a> |
| 7134 | DEVELOPER-2267 | Or are you pushing the change into production right now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-2267">https://issues.jboss.org/browse/DEVELOPER-2267</a> |
| 7135 | DEVELOPER-2267 | [~lkrzyzanek] Okay- will send another PR fixing this                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2267">https://issues.jboss.org/browse/DEVELOPER-2267</a> |
| 7136 | DEVELOPER-2267 | Thanks Libor... can you share this with David so it gets pushed to the T&C's page as well?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2267">https://issues.jboss.org/browse/DEVELOPER-2267</a> |
| 7137 | DEVELOPER-2264 | OK, can you investigate the feasibility? Then we can decide on whether it's worth implementing now or later.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2264">https://issues.jboss.org/browse/DEVELOPER-2264</a> |
| 7138 | DEVELOPER-2252 | Was it ever discussed how we would gather the email addresses of the people that submit this form? Given that we show this when everything is screwed, what infrastructure can we use?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2252">https://issues.jboss.org/browse/DEVELOPER-2252</a> |
| 7139 | DEVELOPER-2252 | I got a note from Ray the other day asking if I could support this with an Eloqua form, the answer is yes. He said this was not Lead gen but he did want the email addresses to be stored in Eloqua. Because is not Lead gen we don't need to worry about picking up Campaign tracking codes out of the cookies and passing them in the form submit nor an Offer ID. This means that submitting this form will not result in a Lead be created in Salesforce nor will it result in a Campaign Membership record in Salesforce. But this does beg the question, what do you want to do with the people who submit this form? Usually, in situations like, this we just have 3 processing steps in the form in Eloqua: 1- Save the email address to the database 2- Add the email address to a Shared List so you can email all of the people, if needed 3- Send an email to someone@redhat.com telling them about the form submission Its seems like we are going to need #1 and #2, do you want #3? If so, what email address? Thanks, Greg                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2252">https://issues.jboss.org/browse/DEVELOPER-2252</a> |
| 7140 | DEVELOPER-2252 | [~gregmanetti], I suppose this choice doesn't affect the way this form will be integrated with Eloqua. We're very short on time here so I'd like to integrate it ASAP, while we wait for an answer from Ray, Paul or Mark if they want #3. My guess however would be that only #1 and #2 will be needed. Either way, could you tell me how to integrate this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2252">https://issues.jboss.org/browse/DEVELOPER-2252</a> |
| 7141 | DEVELOPER-2252 | [~james.cobb] is this still needed? Is it out of date, or maybe already resolved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2252">https://issues.jboss.org/browse/DEVELOPER-2252</a> |

| 7142 | DEVELOPER-2237 | Should this be in the Review board? Note that this is for indexing non-middleware developer materials, which i don't yet think we have a plan for.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2237">https://issues.jboss.org/browse/DEVELOPER-2237</a> |
| 7143 | DEVELOPER-2235 | Hi ["crobson], This page has been marked as approved on both the deliverables spreadsheet and in the wireframe itself. Is it ready to be handed over to front-end?<br>Thanks, Adela                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2235">https://issues.jboss.org/browse/DEVELOPER-2235</a> |
| 7144 | DEVELOPER-2230 | A ticket has been filed to web@redhat.com (SN Incident INC0270155) for the initial redirect of the top pages. We also need to redirect from developer.redhat.com. There are MANY subpages that will require redirects - that will take time to sort through and I suggest post-launch. Are there other redirects you're thinking about?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2230">https://issues.jboss.org/browse/DEVELOPER-2230</a> |
| 7145 | DEVELOPER-2217 | How should this work? Is this really back-end part of the website?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2217">https://issues.jboss.org/browse/DEVELOPER-2217</a> |
| 7146 | DEVELOPER-2217 | This is usually a checkbox during registration. I thought this could be added to User Profile in KC (Not implemented yet - KEYCLOAK-311). [~pmuir] What is requirement from UX perspective? How (un)subscribe should work?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2217">https://issues.jboss.org/browse/DEVELOPER-2217</a> |
| 7147 | DEVELOPER-2217 | In that case we should remove both checkboxes on account page. Subscribe happens automatically and unsubscribe happens on link in mail. Is it correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2217">https://issues.jboss.org/browse/DEVELOPER-2217</a> |
| 7148 | DEVELOPER-2217 | If you'd like to keep those checkboxes what is the API that we should call when user will "doing" subscribe and unsubscribe by clicking checkboxes? If there is no such API I would prefer to replace those checkboxes by text explaining how it works something like "You're automatically subscribed to newsletter. You can unsubscribe by clicking on link in newsletter"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2217">https://issues.jboss.org/browse/DEVELOPER-2217</a> |
| 7149 | DEVELOPER-2217 | Can we find all email addresses for people that have the "Subscribe to Newsletter" ticked in the profile?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2217">https://issues.jboss.org/browse/DEVELOPER-2217</a> |
| 7150 | DEVELOPER-2217 | Also, can we ensure the two tick-boxes default to ticked? In my account they are both un-ticked. I don't think i changed them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-2217">https://issues.jboss.org/browse/DEVELOPER-2217</a> |
| 7151 | DEVELOPER-2217 | [~paul.robinson] Answering to your question "Can we find all email addresses for people that have the "Subscribe to Newsletter" ticked in the profile?" Yes it's possible. I can query Keycloak DB to get such list. But you mentioned earlier including information who signed Terms & Conditions. If you'd like to get list of e-mails who have "subscribe to newsletter" and have signed T&C then it's *not* technically possible to do that.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2217">https://issues.jboss.org/browse/DEVELOPER-2217</a> |
| 7152 | DEVELOPER-2207 | [~dhlady] from talking to you yesterday, it seems like setting this up is in-progress. Would it be more accurate to move this to the 'back-end' board and mark as 'in progress'? If so, can you make the change please.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2207">https://issues.jboss.org/browse/DEVELOPER-2207</a> |
| 7153 | DEVELOPER-2194 | [~rebecca1021], Ray was saying you've done this. Can you provide us a link to the copy so that we can put it on the site?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2194">https://issues.jboss.org/browse/DEVELOPER-2194</a> |
| 7154 | DEVELOPER-2193 | Hi Paul, I just wanted to ask, what is the status of this ticket and I found out it was automatically assigned to me. Which is not the proper person to solve it. I am not sure, if it should be handled by you or by the Visual team. Whoever should be responsible for this page, it would be useful for me, if such page existed. I do not need its final version, but I would like to add it to DM staging configuration, so we can see how it works.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2193">https://issues.jboss.org/browse/DEVELOPER-2193</a> |
| 7155 | DEVELOPER-2193 | The thank you pages are created. Here's the one for EAP: <a href="http://rhd.jboss.org/products/eap/get-started/#!project=eap">http://rhd.jboss.org/products/eap/get-started/#!project=eap</a> We just need to have the download manager redirect to here for Red Hat Developer downloads. Do you have docs that tell me how to do this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-2193">https://issues.jboss.org/browse/DEVELOPER-2193</a> |
| 7156 | DEVELOPER-2193 | Hi Paul, I have not updated the documentation yet, but Download manager behaves the same way as in the case of JBoss Developer thank you pages. You as the administrator only need to fill the additional field in the product page of the administration, and the user needs to request the file using RHD domain. One example from my local environment. I entered [ <a href="http://rhd.jboss.org/products/eap/get-started?">http://rhd.jboss.org/products/eap/get-started?</a> ] to the product dialog of Enterprise Application Server product. After some debugging I found out you add the part after hash and if I do that myself, your page does not work properly. So this is it for admin. As the user I requested [ <a href="http://developer-stg.redhat.com:8080/download-manager/file/jboss-eap-6.4.0.Beta.zip">http://developer-stg.redhat.com:8080/download-manager/file/jboss-eap-6.4.0.Beta.zip</a> ] (developer-stg.redhat.com is my testing domain for RHD requests). Download manager investigated the requested file and found out, that this file is to be served with "No terms and conditions" model, which results in following redirect:<br>[ <a href="http://rhd.jboss.org/products/eap/get-started?tcUser=David+Hladky&amp;tcDownloadFileName=jboss-eap-6.4.0.Beta.zip&amp;tcRedirect=5000&amp;tcSrcLink=http%3A%2F%2Flocalhost%3A8080%2Fdownload-manager%2Fcontent%2Fforigin%2Ffiles%2Fsha256%2Ff019aeac85191bb6bb4aefceb5856b37744ae57350b25738dd20444e39a6faea%2Fjboss-eap-6.4.0.Beta.zip&amp;p=Enterprise+Application+Server&amp;pv=6.4.0+Beta&amp;tcDownloadURL=https%3A%2F%2Faccess.cdn.redhat.com%2Fcontent%2Fforigin%2Ffiles%2Fsha256%2Ff019aeac85191bb6bb4aefceb5856b37744ae57350b25738dd20444e39a6faea%2Fjboss-eap-6.4.0.Beta.zip%3F_auth_%3D1431554550_50d2215d6c67e06065e0c34c2676d2">http://rhd.jboss.org/products/eap/get-started?tcUser=David+Hladky&amp;tcDownloadFileName=jboss-eap-6.4.0.Beta.zip&amp;tcRedirect=5000&amp;tcSrcLink=http%3A%2F%2Flocalhost%3A8080%2Fdownload-manager%2Fcontent%2Fforigin%2Ffiles%2Fsha256%2Ff019aeac85191bb6bb4aefceb5856b37744ae57350b25738dd20444e39a6faea%2Fjboss-eap-6.4.0.Beta.zip&amp;p=Enterprise+Application+Server&amp;pv=6.4.0+Beta&amp;tcDownloadURL=https%3A%2F%2Faccess.cdn.redhat.com%2Fcontent%2Fforigin%2Ffiles%2Fsha256%2Ff019aeac85191bb6bb4aefceb5856b37744ae57350b25738dd20444e39a6faea%2Fjboss-eap-6.4.0.Beta.zip%3F_auth_%3D1431554550_50d2215d6c67e06065e0c34c2676d2</a> ] Your web page is working as well, because the download started for me. But let us investigate the link a bit further: - I realized, that I incorrectly encoded parameters using URI encoding in the past, that is not correct for query parameters. So I fixed it - I noticed you are adding #!project=eap to the end of the requests. This is not correct, because you do this even for links, that are not EAP (tested on Data Virtualization). That is why I added two new parameters p=product name and pv=product version name. I suppose those two can actually help you solving this issue and eventually help wit the customization of the page as well. Instead of product name, I could give you product code, if it would be better for you (the same code Eloqua uses) - for RHD-64 we created a feature called Featured artifact - see RHD-151. I suppose this link might be useful here as well? Now when it is already implemented it would be trivial to add it here. | 7157 | DEVELOPER-2192 | [~paul.robinson] for the pages with the old layout, should the developer materials at the bottom also still show?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2192">https://issues.jboss.org/browse/DEVELOPER-2192</a> |
| 7158 | DEVELOPER-2171 | [~ray.ploski] I think you said this was done. Is that right? You need to move it through the workflow to mark sit as done. "Handover to review" -> "start work" -> "Done"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2171">https://issues.jboss.org/browse/DEVELOPER-2171</a> |

| 7160 | DEVELOPER-2159 | Is this ready to go then? Are we using the svg or the png version? Anywhere specific you want this on the overview page?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-2159">https://issues.jboss.org/browse/DEVELOPER-2159</a> |
| 7161 | DEVELOPER-2036 | [~ecurley], [~newtonm]: is this now done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2036">https://issues.jboss.org/browse/DEVELOPER-2036</a> |
| 7162 | DEVELOPER-2036 | [~newtonm] did you add this to GTM? If so, who's the best person to debug this? Axel?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-2036">https://issues.jboss.org/browse/DEVELOPER-2036</a> |
| 7163 | DEVELOPER-2031 | Ok [~lvcekl]. Are you waiting on anything to start the indexing? I appreciate that we need to tidy up the sitemap, but can that come slightly later?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2031">https://issues.jboss.org/browse/DEVELOPER-2031</a> |
| 7164 | DEVELOPER-2031 | [~paul.robinson] I created a new indexer for RHD website and installed it on staging ( <a href="http://dcp.stage.jboss.org/">http://dcp.stage.jboss.org/</a> ). It indexed 1192 pages for the first (full-reindex) run. Do you think you can have a look at the data and tell me if it looks ok to you? Ping me on IRC if you need mot help with this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2031">https://issues.jboss.org/browse/DEVELOPER-2031</a> |
| 7165 | DEVELOPER-2031 | [~lvcekl] could yo please clarify what river you have installed in dcp.stage? Could you please push it to dcp2 as [~paul.robinson] needs it in production (since whole website in production already uses dcp2). Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-2031">https://issues.jboss.org/browse/DEVELOPER-2031</a> |

| 7167 | DEVELOPER-2030 | [~paul.robinson]Not approved as of yet. [~c.wong] and [~mikgue], could you weigh in? Let me know if you'd like something different.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-2030">https://issues.jboss.org/browse/DEVELOPER-2030</a> |
| 7168 | DEVELOPER-2030 | This one looks like it's missing a space between "JBoss" and "Enterprise". Or is it just me?<br><a href="https://issues.jboss.org/secure/attachment/12396642/hero_desktop_1175x400_eap_01112016.png">https://issues.jboss.org/secure/attachment/12396642/hero_desktop_1175x400_eap_01112016.png</a> BTW, there's a "Wildfly 9 Now Available" banner on JBoss.org. Will this replace the Wildfly banner? Probably makes most sense... Could we also place a banner on the Wildfly site? Or is that something I need to bring up directly with Wildfly team members? We might want to tweak the wording for the Wildfly site. Something like, "Like Wildfly? Try Red Hat JBoss Enterprise Application Platform for your enterprise Java applications." Maybe I should open up a separate JIRA for that? Thanks, Christina                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2030">https://issues.jboss.org/browse/DEVELOPER-2030</a> |
| 7169 | DEVELOPER-2030 | Looks good Adela. Will this be the same one for RHDev?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2030">https://issues.jboss.org/browse/DEVELOPER-2030</a> |
| 7170 | DEVELOPER-2029 | Hi Jason - Can we see something with a guy in it? I know odd request but 90%+ of our contributors will likely be male and I'd like something they will more identify with. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-2029">https://issues.jboss.org/browse/DEVELOPER-2029</a> |
| 7171 | DEVELOPER-2029 | Thanks Jason. Can we ditch the tie look? These contributors will be more developers contributing content. Audience this will target: Enterprise developers - some with presentation skills but more computer focused skills. They love a good t-shirt at a conference and likely will grab stickers. They will be primarily writing blogs, maybe creating a few videos, and submitting screen captured demos.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2029">https://issues.jboss.org/browse/DEVELOPER-2029</a> |
| 7172 | DEVELOPER-2029 | [~ecurley][~paul.robinson], Should we assign this over to the front-end dev team to put it up?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-2029">https://issues.jboss.org/browse/DEVELOPER-2029</a> |
| 7173 | DEVELOPER-2029 | What text do you want under the image, and what spotlight should it replace?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-2029">https://issues.jboss.org/browse/DEVELOPER-2029</a> |
| 7174 | DEVELOPER-2029 | [~ecurley] : Can you supply the content requested by Paul?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2029">https://issues.jboss.org/browse/DEVELOPER-2029</a> |
| 7175 | DEVELOPER-2027 | Perhaps I missed the meeting on Mega Menus but when was it decided we were to have a mega menu? It was my understanding that we were using simple flyouts. Current flyout design: <a href="http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/pages/images/RHD_home_final_flyout.png">http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_2_0/pages/images/RHD_home_final_flyout.png</a> I have real problems with them for our site. 1) The "featured content" on the right comes off as marketing fluff which I believe our developer audience would likely reject. I personally feel navigation needs to be about way finding only. 2) The current mockups in Balsalmiq don't display any overview page for the sections. This would mean the user goes directly to subpages or we have to include a link to the overview pages. RedHat.com does this by adding a button for the main sectional pages. I find this VERY frustrating as it adds a click between me and the content. I think we'll just be creating barriers. 3) This sort of mega menu is a nightmare on Mobile. This Redhat.com site is AWFUL on mobile as it injects an additional hamburger icon for these navigation pages. It's a nightmare. | <a href="https://issues.jboss.org/browse/DEVELOPER-2027">https://issues.jboss.org/browse/DEVELOPER-2027</a> |
| 7176 | DEVELOPER-2023 | What do you mean by 'landing page'? Is this an article, microsite, product page, topic, or something else?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-2023">https://issues.jboss.org/browse/DEVELOPER-2023</a> |
| 7177 | DEVELOPER-2023 | I'm adjusting the scope of this issue as we are not sure yet what the output of this issue will be. Some things that would help to know: * What is the business objective for this section of the site? * What are the driving factors for the timing? * Do we have an existing page that is similar to what you're looking to do? * How do we expect and want users to get to this content? * What do we want users to do next? Once we know/discuss this information, I can work on some user flows to support this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-2023">https://issues.jboss.org/browse/DEVELOPER-2023</a> |
| 7178 | DEVELOPER-2023 | [~paul.robinson] I can't seem to be able to move 2 existing issues to this Epic. Can you take a look? Both <a href="https://issues.jboss.org/browse/DEVELOPER-2023">https://issues.jboss.org/browse/DEVELOPER-2023</a> and <a href="https://issues.jboss.org/browse/DEVELOPER-2584">https://issues.jboss.org/browse/DEVELOPER-2584</a> should be listed here.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-2023">https://issues.jboss.org/browse/DEVELOPER-2023</a> |
| 7179 | DEVELOPER-2022 | [~morgan_thomas] what's the status of this? Is it done? CC [~james.cobb]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-2022">https://issues.jboss.org/browse/DEVELOPER-2022</a> |
| 7180 | DEVELOPER-2021 | [~crobson], [~tnolan]. Do you have an ETA on this? I'm in the process of planning [~wesbos]' work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-2021">https://issues.jboss.org/browse/DEVELOPER-2021</a> |
| 7181 | DEVELOPER-2021 | Ok, that sounds good [~paul.robinson]. [~ecurley] - Can you update the wireframe text in Balsamiq to fill out the: * sub-title text * the brief descriptions for each of the resource types Instructions, but feel free to ping me if you'd like me to walk you through it. # Go to: <a href="https://redhatdevelopers.mybalsamiq.com/projects/hard-launch/Resources%20%28more%20information%29">https://redhatdevelopers.mybalsamiq.com/projects/hard-launch/Resources%20%28more%20information%29</a> # Click the Edit link located near the top right # Click on the text you would like to change. It will then get a box around it. Only the text that you can edit is clickable. All other elements are locked. # When finished, click the save icon that has a cloud at the top left of the screen. # You can add a note then in the pop-up as to your changes and check the Send email notifications option if you're all done and want to let the group know.                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-2021">https://issues.jboss.org/browse/DEVELOPER-2021</a> |
| 7182 | DEVELOPER-2021 | [~mikgue] - Can you assist with the content? - see above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-2021">https://issues.jboss.org/browse/DEVELOPER-2021</a> |
| 7183 | DEVELOPER-2021 | I have to ask this question. How is this page different than the search page? If we present them with a full list of the content, then ask the user to filter down until they find it useful, it sounds a lot like "search" to me.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-2021">https://issues.jboss.org/browse/DEVELOPER-2021</a> |
| 7184 | DEVELOPER-2021 | [~tnolan] - I get where you are coming from on the browsing nature of this page being how folks will intend to use it but don't agree with the current presentation. When a person gets to this page, they will HAVE to filter it to get ANY useful information if we don't luckily strike on some content of interest with the default. If they are clicking and filtering anyway, why don't we give them categories to select from (can't by topic as that's what the "Topics" section should cover). In the current design we show this sort of prefiltering at the top but it looks like it's in a hidden pane. To me, the content in the hidden pane should be the primary way for folks to browse and therefore given primary status on the page. If a user clicks on "Videos" then they land on a page of default videos that has the keyword and other filter options.                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-2021">https://issues.jboss.org/browse/DEVELOPER-2021</a> |
| 7185 | DEVELOPER-2021 | [~tnolan] I reviewed what RH.com did with their resources and I find it much more logical and intuitive. I say we lift that pattern. I strongly disagree with pushing this if we aren't 100%. This would mean front end would have to implement this page TWICE. We have seen a pattern of "release this now and fix it later" that never gets re-addressed because the teams are too busy to circle back. Can we discuss this at the Wednesday meeting?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-2021">https://issues.jboss.org/browse/DEVELOPER-2021</a> |
| 7186 | DEVELOPER-2020 | Do we have videos for RHEL that we can add to the site?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-2020">https://issues.jboss.org/browse/DEVELOPER-2020</a> |
| 7187 | DEVELOPER-2020 | [~paul.robinson] Paul, I think I'll be needing privs to the youtube account (at least it appears, per the instructions, that I should not index videos via the group account. Also, can we use videos from ANY YouTube playlist? Add to Octopus launch please.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-2020">https://issues.jboss.org/browse/DEVELOPER-2020</a> |
| 7188 | DEVELOPER-2019 | [~ecurley] [~ray.ploski] [~mikgue] - Do we have content suggestions for these three new promos?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-2019">https://issues.jboss.org/browse/DEVELOPER-2019</a> |
| 7189 | DEVELOPER-2019 | #1 - This will be on the top 12 articles: <a href="http://developerblog.redhat.com/2015/12/14/12-top-blog-articles-of-2015/">http://developerblog.redhat.com/2015/12/14/12-top-blog-articles-of-2015/</a> #2 How about learn Node.js? Not sure we have enough articles to assemble for this. #3 Should people be directed to the DN site? Or could we get away with having them register first? (I'm thinking no, but asking anyway)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-2019">https://issues.jboss.org/browse/DEVELOPER-2019</a> |

| 7190 | DEVELOPER-2019 | 1) Devnation, we need the dates and location for the event. We'll address this again once we work out the revised branding. 2) Node.JS... Do we want to the copy to be more directed to the vacationing developers? "Have some downtime? Learn Node.js" 3) on the 12 top posts graphic... use the darker red verses the grey for the bars (ribbon simulation).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-2019">https://issues.iboss.org/browse/DEVELOPER-2019</a> |
| 7191 | DEVELOPER-2019 | I'd like to use the gray ribbon for the blog article and will schedule it for next week. If someone needs to manually post the banner, then let's wait until the first week of January. Can I download the pic as is, or does anyone need to do anything to it first?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-2019">https://issues.iboss.org/browse/DEVELOPER-2019</a> |
| 7192 | DEVELOPER-2019 | Do we have links. [~newtonm] - Do you need a separate JIRA for this to push them live?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-2019">https://issues.iboss.org/browse/DEVELOPER-2019</a> |

Can you update the issue status accordingly please.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-2018">https://issues.iboss.org/browse/DEVELOPER-2018</a> |
| 7194 | DEVELOPER-2018 | [~adelaarreola] is the CDK page just going to be another product detail page? Is there going to be more than one CDK page?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/DEVELOPER-2018">https://issues.iboss.org/browse/DEVELOPER-2018</a> |
| 7195 | DEVELOPER-2018 | [~adelaarreola] No problem! Would you like me to append the header images to this Jira or wait for one to come down the line for the CDK page?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-2018">https://issues.iboss.org/browse/DEVELOPER-2018</a> |
| 7196 | DEVELOPER-2018 | Will the CDK be in the hard launch?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/DEVELOPER-2018">https://issues.iboss.org/browse/DEVELOPER-2018</a> |
| 7197 | DEVELOPER-2008 | [~crobson], [~james.cobb]. What do you think about this? This idea came from feedback by Mark Little and Julien Ponge.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-2008">https://issues.iboss.org/browse/DEVELOPER-2008</a> |
| 7198 | DEVELOPER-2003 | [~james.cobb] where can I find the assets for this page? i.e. the dotted graphic and the 'Join the red hat developer...' graphic? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-2003">https://issues.iboss.org/browse/DEVELOPER-2003</a> |
| 7199 | DEVELOPER-1997 | So the first 2, I understand and like. For the 3rd, it feels like the "X" is telling me that videos will be hidden. Is the "X" displayed quickly so it would not be interpreted this way?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-1997">https://issues.iboss.org/browse/DEVELOPER-1997</a> |
| 7200 | DEVELOPER-1997 | This is looking great! I just have a few things though when comparing the design to the wireframe. *Initial view* *Code icon - I'm not familiar with the one being used here. Will all our developers understand this one (including .netters)? *Get Started icon - What other options do we have here? A lightbulb conveys more of an "idea" to me. *The sorting elements should be under the horizontal line. This allows for the # of results to be displayed above the line and so it matches the positioning on the search results page. *The wireframe had a 1 px border box around each of the individual results to help scanability. I'm open to other ideas than a border, but would like to see some clearer separation here. *Description text for each result should only show 3 lines of text, the VD show 4. 3 lines allows for plenty of room to get an idea of what the resource is about, and reduces the amount of space used for each result. It would also match up better, space-wise with the ones that have a thumbnail. *Filtered view* *Same comments as above *I'm concerned about the spacing for the Products drop-down. Are we going to have enough space if we plug in the longest titled one? *Actually, I'm not sure if we will have any data to fill in the Programming Language drop-down, so we may have more space. [~paul.robinson] - Are we able to use the Language currently? *The spacing around the Custom publish date fields seems odd to me. Do we have enough room to have these next to the date field instead of under it...like the wireframe? [~mikguel] - I believe the type filters would work just like on RH.com. You can see how they work: <a href="http://www.redhat.com/en/resources">http://www.redhat.com/en/resources</a> | <a href="https://issues.iboss.org/browse/DEVELOPER-1997">https://issues.iboss.org/browse/DEVELOPER-1997</a> |
| 7201 | DEVELOPER-1993 | [~adelaarreola] was this ever done? Is it still needed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-1993">https://issues.iboss.org/browse/DEVELOPER-1993</a> |
| 7202 | DEVELOPER-1977 | Who needs to review this? Also, is the next step to produce the actual header graphic?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/DEVELOPER-1977">https://issues.iboss.org/browse/DEVELOPER-1977</a> |
| 7203 | DEVELOPER-1973 | We added "Developer Blog" under "Community" once we noticed it was missing last week. It's on the wireframe but doesn't look like it's made it into the build yet. Can you add this in? It should be listed first. <a href="https://redhatdevelopers.mybalsamiq.com/projects/hard-launch/Navigation">https://redhatdevelopers.mybalsamiq.com/projects/hard-launch/Navigation</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/DEVELOPER-1973">https://issues.iboss.org/browse/DEVELOPER-1973</a> |
| 7204 | DEVELOPER-1973 | [~wesbos]: When the menus appear, and I click on a link (such as the for the EAP product page), nothing happens. Can you fix this as a priority, as it's making it harder for other people to review the rebrand and topics work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-1973">https://issues.iboss.org/browse/DEVELOPER-1973</a> |
| 7205 | DEVELOPER-1967 | I think the issue here was setting page specific stuff in the global header (i.e 'chrome'). For example, the Facebook and Twitter meta-data is set by the page, and is not global across the site. This allows us to set, for example, a video page's thumbnail as the twitter card image. Have you got this working in Drupal?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/DEVELOPER-1967">https://issues.iboss.org/browse/DEVELOPER-1967</a> |
| 7206 | DEVELOPER-1967 | Is this done, or a dup?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/DEVELOPER-1967">https://issues.iboss.org/browse/DEVELOPER-1967</a> |
| 7207 | DEVELOPER-1946 | We need to decide how to handle the categories. In particular, is the current list correct, and how do we specify which project goes into which category?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-1946">https://issues.iboss.org/browse/DEVELOPER-1946</a> |
| 7208 | DEVELOPER-1945 | [~newtonm] Who's working on this? Can you update the Assignee?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/DEVELOPER-1945">https://issues.iboss.org/browse/DEVELOPER-1945</a> |
| 7209 | DEVELOPER-1940 | [~wesbos] do you need any visual design work doing for the global re-brand, or will it just be needed for the specific changes to specific pages?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/DEVELOPER-1940">https://issues.iboss.org/browse/DEVELOPER-1940</a> |
| 7210 | DEVELOPER-1934 | [~paul.robinson] and [~tnolan] I have added first draft of acceptance criteria for your review. I also have the following questions: 1. What are the Publish date drop down items? 2. What are the sort results drop down items? 3. Tags, are they clickable? What happens when you click on the tag? Should each have zero or more tags? 4. Contributor, is it clickable? where does it go? 5. What is the maximum number of characters that can be entered into the keyword search box?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/DEVELOPER-1934">https://issues.iboss.org/browse/DEVELOPER-1934</a> |
| 7211 | DEVELOPER-1934 | {quote} Scenario: All results must have a label that relates to that product. Given I am on the Resources page When I enter "Red Hat Container Development Kit" into the Keyword's box Then the results should contain the label "Red Hat Container Development Kit" {quote} What do you mean by 'label' here? Is it 'tag' that you mean? If so, I don't think it's a requirement that all results must be tagged with a related product. Not all our content has this tag.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/DEVELOPER-1934">https://issues.iboss.org/browse/DEVELOPER-1934</a> |
| 7212 | DEVELOPER-1934 | {quote} # IH: I'm not sure about this one, needs more detail from Paul or Tiffany Scenario: Videos should show thumbnail only - if they are unique. Given I am on the Resources page When I click to filter results by "Video" Then the results should contain a thumbnail {quote} The requirement here is that items of type video must have a thumbnail, others must not.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/DEVELOPER-1934">https://issues.iboss.org/browse/DEVELOPER-1934</a> |

Given I am on the Resources page When I enter "Red Hat Container Development Kit" into the Keyword's box Then the results should contain the label "Red Hat Container Development Kit" PR Q: What do you mean by 'label' here? Is it 'tag' that you mean? If so, I don't think it's a requirement that all results must be tagged with a related product. Not all our content has this tag. IH A: This was a scenario that we discussed in our meeting?, By the Author link there is a product label in the wireframes of "Red Hat Container Development Kit"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/DEVELOPER-1934">https://issues.iboss.org/browse/DEVELOPER-1934</a> |
| 7214 | DEVELOPER-1934 | [~tnolan], [~paul.robinson] and I have completed the scenarios for this ticket. Can you have a quick review of the AC so that [~adelaarreola] can start work on it this week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/DEVELOPER-1934">https://issues.iboss.org/browse/DEVELOPER-1934</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | URL                                                                                                         |

| 7215 | DEVELOPER-1934 | Okay just pushed the latest. A few outstanding issues: 1) Contributors endpoint is always empty - is this still working I've hidden the contributors for now. 2) Not sure how to turn off case sensitivity. Pinging [~lkrzyzanek] about this. 3) We need to add 'blog' and 'book' to the developer materials query. [~lkrzyzanek] can you do this for us? 4) We need to add 'activity_date_interval' to the developer materials query. Again [~lkrzyzanek] can we add this? I commented on GitHub                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1934">https://issues.jboss.org/browse/DEVELOPER-1934</a> |
| 7216 | DEVELOPER-1934 | [~unibrew], OK, maybe I misunderstood. What additional content will come in? Will there be more than just Blogposts?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1934">https://issues.jboss.org/browse/DEVELOPER-1934</a> |
| 7217 | DEVELOPER-1934 | Because one of the sys_types is 'article' then you'll also get all documents from https://developer.jboss.org. Other sys_types names that are listed for the query are not used in jbossorg provider. Would this be ok for you?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1934">https://issues.jboss.org/browse/DEVELOPER-1934</a> |
| 7218 | DEVELOPER-1934 | So you mean, things like this will appear: https://developer.jboss.org/people/tremes/blog/2016/06/03/tracking-your-cdi-extension-actions? What about: https://developer.jboss.org/wiki/StudentResearchProjects. Would that appear?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1934">https://issues.jboss.org/browse/DEVELOPER-1934</a> |
| 7219 | DEVELOPER-1934 | What is PR build URL for review please ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1934">https://issues.jboss.org/browse/DEVELOPER-1934</a> |
| 7220 | DEVELOPER-1934 | I now see blog post, but no books. Outstanding issues: 1. No books returned 2. if I do a search, select a result, then hit 'back', I see: https://www.dropbox.com/s/18rh57tnkb8h1rx/Screenshot%202016-06-20%2016.18.28.png?dl=0 3. Dates appear to render incorrectly. See 'October 9, 113' on the first item when visiting http://developers-pr.stage.redhat.com/pr/1100/build/1449/resources/ I think all three of the above are blockers for release. Also, I spotted these regressions: 1. Video thumbnails are no longer displayed in the result (where present, e.g videos) 2. The result type icon is missing from the results 3. I'm seeing results of type 'jbossorg_contributor_profile'. Notice how Libor and Rysiek's profiles appear at the top of the results: https://www.dropbox.com/s/n2c7eb62f6w7vzj/Screenshot%202016-06-21%2008.16.54.png?dl=0 And finally, I notice that you are now using 'http://dcp.stage.jboss.org/v2/rest/search?' instead of the registered query 'http://dcp2.jboss.org/v2/rest/search/developer_materials?'. Has that always been the case or was it a casualty of the merge? | <a href="https://issues.jboss.org/browse/DEVELOPER-1934">https://issues.jboss.org/browse/DEVELOPER-1934</a> |
| 7221 | DEVELOPER-1931 | Below is the product description which can be used for OpenShift online. Is there other content needed for this page? If so, please give me the specific requirements and I will create content Thanks, Rebecca Faster Application Delivery with Red Hat OpenShift Online Break down IT productivity barriers. Trying to deliver more apps faster is often met by chronic productivity roadblocks. We believe the path to better IT efficiency and innovation lies in the cloud—via public Platform-as-a-Service (PaaS) with OpenShift Online by Red Hat®, or private PaaS with Red Hat's award-winning OpenShift Enterprise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1931">https://issues.jboss.org/browse/DEVELOPER-1931</a> |
| 7222 | DEVELOPER-1929 | Who needs to review this? Also, is the next step to produce the actual header graphic?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1929">https://issues.jboss.org/browse/DEVELOPER-1929</a> |
| 7223 | DEVELOPER-1925 | [~paul.robinson] - is this issue a duplicate of 384?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1925">https://issues.jboss.org/browse/DEVELOPER-1925</a> |
| 7224 | DEVELOPER-1922 | Is this ready for review? If so, can you update the status please.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1922">https://issues.jboss.org/browse/DEVELOPER-1922</a> |
| 7225 | DEVELOPER-1922 | [~brock], I really like the darker banner in r2v1. This is looking great! One of my concerns though is how we can visually differentiate the cards from the Follow Red Hat block. Have you guys talked about maybe adding a shadow, small image or watermark to the cards that would help identify these as cards and be used throughout the site?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1922">https://issues.jboss.org/browse/DEVELOPER-1922</a> |
| 7226 | DEVELOPER-1922 | [~james.cobb] or [~brock] Where can I find the assets these pages, like the page header images and the background images for the primary promos? or are those in a separate upcoming jira?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1922">https://issues.jboss.org/browse/DEVELOPER-1922</a> |
| 7227 | DEVELOPER-1921 | We'd never planned to pull it from the DCP. It just comes from categories.yml. Can you take a look at how we implement it now and advise on whether the a-z ordering is possible?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1921">https://issues.jboss.org/browse/DEVELOPER-1921</a> |
| 7228 | DEVELOPER-1916 | That job failed. Did you manage to review this with another job?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1916">https://issues.jboss.org/browse/DEVELOPER-1916</a> |
| 7229 | DEVELOPER-1916 | Does that mean that this issue is blocked on DEVELOPER-2367?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-1916">https://issues.jboss.org/browse/DEVELOPER-1916</a> |
| 7230 | DEVELOPER-1916 | Is this resolved now? If not, what needs to be reviewed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1916">https://issues.jboss.org/browse/DEVELOPER-1916</a> |
| 7231 | DEVELOPER-1914 | [~james.cobb]: Is the issue here to just remove this text: "Let's walk through everything you need to build your first application.". Or is there some UX required to "rethink the arrangement of the Buy it and Try it elements if we reduce the content"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-1914">https://issues.jboss.org/browse/DEVELOPER-1914</a> |
| 7232 | DEVELOPER-1911 | Shall we stand up our own blog instance or use the one that Mike guerette has?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1911">https://issues.jboss.org/browse/DEVELOPER-1911</a> |
| 7233 | DEVELOPER-1905 | Who needs to review this? Also, is the next step to produce the actual header graphic?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1905">https://issues.jboss.org/browse/DEVELOPER-1905</a> |
| 7234 | DEVELOPER-1876 | [~paul.robinson]/[~lightguard] - Can either of you please confirm that this is required for v1. I'm also not 100% on what this epic/story is trying to deliver. cheers, Rob                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-1876">https://issues.jboss.org/browse/DEVELOPER-1876</a> |
| 7235 | DEVELOPER-1830 | @This is served up in Magnolia. When does it make sense to port this old content?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1830">https://issues.jboss.org/browse/DEVELOPER-1830</a> |
| 7236 | DEVELOPER-1828 | [~paul.robinson] This is done, I just assumed I had to send all of the SlideShare work under the same PR, should I create one just for this part?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1828">https://issues.jboss.org/browse/DEVELOPER-1828</a> |
| 7237 | DEVELOPER-1828 | [~adelaarreola], can you give an update on your findings. We can mark this as Done once that is reviewed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1828">https://issues.jboss.org/browse/DEVELOPER-1828</a> |
| 7238 | DEVELOPER-1828 | After speaking to [~adelaarreola]: 1. Embed a Slide deck in a page (Ensures we can embed the content on the RHD site) [WORKS] 2. Add slide decks to an album (is this even possible?) using the SlideShare site interface (Ensures that we can create product albums, for associating slides with a product) [NO ALBUM FUNCTIONALITY, NEED TO USE A SPREADSHEET TO LIST DECKS] 3. Pull slide meta-data via a REST API for a given slide deck (specified by a URL) [WORKS] 4. Pull slide meta-data via a REST API for all slide decks in an album (specified by a URL) [NO ALBUM FUNCTIONALITY, NEED TO USE A SPREADSHEET TO LIST DECKS]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-1828">https://issues.jboss.org/browse/DEVELOPER-1828</a> |
| 7239 | DEVELOPER-1824 | You say this is implemented. Where did you put the docs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1824">https://issues.jboss.org/browse/DEVELOPER-1824</a> |
| 7240 | DEVELOPER-1821 | [~mikgue] Thanks! [~tnolan] Please review for general consistency with the CDK page and let me know if you see anything we need to fix up before handing to front end. [~james.cobb] I'd like you to check out the callout in the header for visual styling. We will be using the callout area both on the containers page, and on the CDK product page in place of the try/buy bar (https://jboss.hotgloo.com/projects/73926/editor#ux228a33xft2bq). Do you want to use the same styling as the Try/Buy Bar, or would you want a unique styling for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1821">https://issues.jboss.org/browse/DEVELOPER-1821</a> |
| 7241 | DEVELOPER-1821 | I'm working with [~mikgue] to finalize this content today. Google doc: [https://docs.google.com/a/redhat.com/document/d/15EJu9DWzK4f8PWRHgx_1YtbyvczLQKt_fGBDBmuZw5k/edit?usp=sharing]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1821">https://issues.jboss.org/browse/DEVELOPER-1821</a> |
| 7242 | DEVELOPER-1821 | [~paul.robinson], can you let [~mikgue] and I know what's missing before handing over to the Front-end? The google doc (linked above) is updated with the content changes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1821">https://issues.jboss.org/browse/DEVELOPER-1821</a> |

| 7246 | DEVELOPER-1821 | [~mikgue] what do you mean by 'callout'? Is it this: <a href="https://www.dropbox.com/s/xhgpwoxaoh0adi/Screenshot%202016-02-17%2007.51.12.png?dl=0">https://www.dropbox.com/s/xhgpwoxaoh0adi/Screenshot%202016-02-17%2007.51.12.png?dl=0</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1821">https://issues.jboss.org/browse/DEVELOPER-1821</a> |
| 7247 | DEVELOPER-1821 | yes. Is there a more common term for it??                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1821">https://issues.jboss.org/browse/DEVELOPER-1821</a> |
| 7248 | DEVELOPER-1820 | Handing over to Visual Design. [~james.cobb] - Can you create an ad or card treatment style for the "Need help?" It will be located under the left nav. [Wireframe   <a href="https://jboss.hotgloo.com/projects/73926/editor#/ux228a33xft2bq">https://jboss.hotgloo.com/projects/73926/editor#/ux228a33xft2bq</a> ]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1820">https://issues.jboss.org/browse/DEVELOPER-1820</a> |
| 7249 | DEVELOPER-1820 | How about this [~paul.robinson], [~tnolan] ? "Got a technical CDK question? Head on over to Stack Overflow (linux-containers) to ask and Red Hatters will be on the lookout." Also, what about if we added something like "Got Stack privileges? Thank you for creating a new 'cdk' tag!" Mike                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1820">https://issues.jboss.org/browse/DEVELOPER-1820</a> |
| 7250 | DEVELOPER-1820 | We discussed this on HipChat. We felt this was better: {quote} Got a technical CDK question? Head on over to Stack Overflow (tag: linux-containers) to ask and Red Hatters will be on the lookout. {quote} Also, is 'Red Hatters' the right language?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1820">https://issues.jboss.org/browse/DEVELOPER-1820</a> |
| 7251 | DEVELOPER-1820 | I see where you're headed now with this. How about this? Got a technical CDK question? You can submit questions on Stack Overflow (tag: linux-containers) and get answers from the Red Hat CDK Team.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1820">https://issues.jboss.org/browse/DEVELOPER-1820</a> |
| 7252 | DEVELOPER-1820 | [~tnolan], [~mikgue]. Are we still happy with this approach?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1820">https://issues.jboss.org/browse/DEVELOPER-1820</a> |
| 7253 | DEVELOPER-1820 | [~burrstutter] Burr - what do you think on this? Stack overflow, or the mailing list, or both? Or should the Stack portion be deferred until CDK GA (March)? To promote the CDK 2 beta mailing list, here's some text we can use: "We want your CDK beta feedback so join the upstream mailing list, container-tools@redhat.com. Go and join at <a href="https://www.redhat.com/mailman/listinfo/container-tools">https://www.redhat.com/mailman/listinfo/container-tools</a> ." Thoughts?                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1820">https://issues.jboss.org/browse/DEVELOPER-1820</a> |
| 7254 | DEVELOPER-1809 | Beyond the speed and testing (very important!) are there any business drivers that we're unable to achieve without this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1809">https://issues.jboss.org/browse/DEVELOPER-1809</a> |
| 7255 | DEVELOPER-1809 | [~ldary] so it seems like this is done. In addition there should be a JIRA issue for having Drupal select what JS to deliver on a per-page basis? Can you create an issue for that please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1809">https://issues.jboss.org/browse/DEVELOPER-1809</a> |
| 7256 | DEVELOPER-1806 | Is this now resolved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1806">https://issues.jboss.org/browse/DEVELOPER-1806</a> |
| 7257 | DEVELOPER-1805 | Can this be closed? Should be fixed by <a href="https://github.com/awestruct/awestruct/commit/a05d111bc1cdced301610bbfe75ea37cdc29d3c2">https://github.com/awestruct/awestruct/commit/a05d111bc1cdced301610bbfe75ea37cdc29d3c2</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1805">https://issues.jboss.org/browse/DEVELOPER-1805</a> |
| 7258 | DEVELOPER-1805 | Check the tags on the video links. Why aren't they showing Red Hat tags?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1805">https://issues.jboss.org/browse/DEVELOPER-1805</a> |
| 7259 | DEVELOPER-1799 | [~paul.robinson] - So, it doesn't look like the blogs are being pushed to dcp1 anymore (my guess is because most of the Rivers are configured for DCP2). Should I incorporate dcp2 for this? Both RHD and jboss.org use dcp2 for their buzz sections.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1799">https://issues.jboss.org/browse/DEVELOPER-1799</a> |
| 7260 | DEVELOPER-1799 | So, it looks like <a href="https://github.com/searchisko/configuration/blob/resources_query/data/query/resources.md">https://github.com/searchisko/configuration/blob/resources_query/data/query/resources.md</a> can now be used on dcp2. Should I implement this on the page, or should I wait until it has been merged into the master searchisko configuration?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1799">https://issues.jboss.org/browse/DEVELOPER-1799</a> |
| 7261 | DEVELOPER-1799 | [~wesbos] is this still blocked? If so, what's blocking it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-1799">https://issues.jboss.org/browse/DEVELOPER-1799</a> |
| 7262 | DEVELOPER-1797 | I added a small block to the Video Presentation wireframe. Basic idea is to reuse the style from the Hello World on the product pages and add it to the top right of the page. We may need to play around with the height depending on the amount of content. I'm hoping that we can keep these succinct though. [~crobson], any additional feedback or comments before we move this issue along in the workflow? [ <a href="https://jboss.hotgloo.com/projects/73926/editor#/u9busf7g0w885f8">https://jboss.hotgloo.com/projects/73926/editor#/u9busf7g0w885f8</a> ]                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1797">https://issues.jboss.org/browse/DEVELOPER-1797</a> |
| 7263 | DEVELOPER-1797 | [~paul.robinson], I updated the wireframe with some more realistic content. The idea is that we add the title of the related item in the first line, then reuse the same middle text and button action, that are on the full width bar. I can add in the sales-y stuff too if you think we need it, but would rather keep this simple. Does that help? <a href="https://jboss.hotgloo.com/projects/73926/editor#/u9busf7g0w885f8">https://jboss.hotgloo.com/projects/73926/editor#/u9busf7g0w885f8</a>                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1797">https://issues.jboss.org/browse/DEVELOPER-1797</a> |
| 7264 | DEVELOPER-1797 | Can we also include a hover effect of going to solid red so it will look like the current buttons?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1797">https://issues.jboss.org/browse/DEVELOPER-1797</a> |
| 7265 | DEVELOPER-1795 | This is coming along. Thanks for your work on this. Additional data: Can we get the publish date added and an author (if available)? Descriptions: # What is the number of characters being returned right now for the descriptions? We should be able to go up to at least 3 lines. # The descriptions also seem like they are being truncated oddly. For example, in a "jboss fuse" search, I see a result with the title of "Watch JBoss Fuse : Loan Broker Demo : on laptop". The description displayed in the search results starts with "1. Early Access running on a laptop." while the actual description starts with "This demo shows JBoss Fuse 6.1 Early Access". # Extra spaces are being removed after sentences for some reason. Example: "CDI has proven itself to be a great asset for Java.The many features it provides " is missing a space between Java and The. There are others that look like this too. | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7266 | DEVELOPER-1795 | Further questions that need to be added to AC: 1. If there is no search text entered, will the 'Search' button be disabled? 2. Do we have wireframes for mobile? Will there be a search field? If so how should it look?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7267 | DEVELOPER-1795 | [~tnolan] We would need content approval on the below scenario (I just made the message up myself) Scenario: I search for something should return *no* entries, such as "bfefwfbhbn" Given I am on the Home page When I search for "bfefwfbhbn" Then I should see a message "Sorry there were no results found matching bfefwfbhbn" And there will be no results displayed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7268 | DEVELOPER-1795 | [~paul.robinson] [~tnolan] We should also have a scenario to check the maximum characters for the search box. Can you provide me with that number?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7269 | DEVELOPER-1795 | Is there a URL I can use to review this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7270 | DEVELOPER-1795 | [~james.cobb] For the search term highlight color in the description text, I see that the Customer Portal uses #fcf8e3, are you ok with using this same color or do you have an alternative you'd like to be used here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |

| 7271 | DEVELOPER-1795 | [~tnolan] - should the search box on the Search page also contain a Search and X button? The wiframe includes them?<br><a href="https://redhatdevelopers.mylbalsamiq.com/projects/hard-launch/Search">https://redhatdevelopers.mylbalsamiq.com/projects/hard-launch/Search</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7272 | DEVELOPER-1795 | [~tnolan] - Do we have an example of the usage?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7273 | DEVELOPER-1795 | [~james.cobb] do we have a visual design for the search box in the chrome? See: <a href="https://www.dropbox.com/s/o8fc0nypzywdd3/Screenshot%202016-05-26%2014.49.52.png?dl=0">https://www.dropbox.com/s/o8fc0nypzywdd3/Screenshot%202016-05-26%2014.49.52.png?dl=0</a> Also, [~tnolan]: What should the text in the site-chrome search-box show? It's currently 'Filter by Keyword', which I don't think is right.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7274 | DEVELOPER-1795 | [~tnolan] I think this is looking good. Do you have any other feedback (other than the quality of the results)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7275 | DEVELOPER-1795 | [~paul.robinson] [~wesbos] This is definitely looking good! I reviewed this as the latest build: <a href="http://developers-pr.stage.redhat.com/pr/1086/build/1284/">http://developers-pr.stage.redhat.com/pr/1086/build/1284/</a> * The dates with each result: They all say "about 19 hours ago". I think we should only have dates appear on resource-type content, such as videos, blog posts etc. and not appear for general pages like product overview etc. I'm not sure what date options you have access to, but this should be a publish date or something similar. The dates should also be formatted as mon day year (like we use on the homepage) instead of using "time ago". * [~james.cobb] Is there a slightly larger font size we can use for the date on the results? Do you have a recommendation? * Can we fill in 2 full rows of the description? The second line seems to stop only after a few words. Maybe increase the max length for the data being returned here? Other than those minor things. Looks good!                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7276 | DEVELOPER-1795 | [~wesbos], [~james.cobb]: Do you have an update on [~tnolan]'s feedback?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7277 | DEVELOPER-1795 | [~wesbos] [~paul.robinson] Here's some additional feedback based on the most recent implementation. I queried containers: <a href="http://developers-pr.stage.redhat.com/pr/1086/build/1327/search?q=containers">http://developers-pr.stage.redhat.com/pr/1086/build/1327/search?q=containers</a> # The date being used for both pages (like CDK - Updates) and resources (like cmt: Container Managed Transactions (CMT)) are all showing up as the same date. Is there another date field option that can be used here? The cmt: Container Managed Transactions (CMT), when you click through, has a publish date of Apr 22, 2016. The web pages (Like CDK - Updates) don't need to show a date as I'm guessing these would all be the same. # I'm not seeing a change in the font size for the date. Per [~james.cobb], this should be 14px. # Many of the pages being returned for containers are all using the same description. "Red Hat Container Development Kit Hello World! Build Something Today Let's walk through everything you need to build your first application. Get Started" : Can we content from the page to create the description instead? - Nevermind on this one. I see why this is happening. [~paul.robinson] : Can we have the Get Started band removed in this build so we can see how these pages show up in search? | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7278 | DEVELOPER-1795 | [~tnolan] we'd need to remove the 'Get Started' bar from production to have that updated in the search results. Can we do that now, or do we need to wait for the new product overview pages (currently scheduled for post-summit).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1795">https://issues.jboss.org/browse/DEVELOPER-1795</a> |
| 7279 | DEVELOPER-1793 | [~lvicck] - Just looking at this now - the pagination seems to be working - did you implement this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1793">https://issues.jboss.org/browse/DEVELOPER-1793</a> |
| 7280 | DEVELOPER-1793 | [~lvicck] - I'm a bit confused as to the difference between 'size' and 'from'. It seems the API only returns 9 documents at a time? If so, what is the point of having 'size25=true' if it only gives a max of 9? Are we supposed to make multiple requests if we want to show more than 9 at once? Would we have to do the math to figure out how to show page 25 items on page 5? Seems a overly complicated if that is true.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1793">https://issues.jboss.org/browse/DEVELOPER-1793</a> |
| 7281 | DEVELOPER-1793 | [~wesbos] which server are you testing your queries against? Try <a href="http://dcp2.jboss.org/v2/rest/search/developer_materials?size15=true">http://dcp2.jboss.org/v2/rest/search/developer_materials?size15=true</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1793">https://issues.jboss.org/browse/DEVELOPER-1793</a> |
| 7282 | DEVELOPER-1793 | Ah - I'm using this url: <a href="http://dcp2-searchisko.rhcloud.com/v2/rest/search/developer_materials?size25=true">http://dcp2-searchisko.rhcloud.com/v2/rest/search/developer_materials?size25=true</a> Should I not be?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1793">https://issues.jboss.org/browse/DEVELOPER-1793</a> |
| 7283 | DEVELOPER-1791 | Looks like the plugin is in place. What's left to be done on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1791">https://issues.jboss.org/browse/DEVELOPER-1791</a> |
| 7284 | DEVELOPER-1788 | [~dhlady] Does this sound feasible, or will we hit problems doing this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1788">https://issues.jboss.org/browse/DEVELOPER-1788</a> |
| 7285 | DEVELOPER-1788 | Ideally staging PR builds should use an instance of the dl-man as close as possible to production. This will ensure that when we tests PR build, it behaves the same as it will in production. For this reason, we've used production instances of DL-man and SSO up until now. However, a problem came when we started doing regular testing of login and downloads on every PR build. These extra requests started to interfere with statistics in production data. Therefore we decided it best to move PRs to use staging instances of the back-end services. To make this work we need: 1) Data to be synced regularly from production dl-man to staging dl-man. Ideally nightly. 2) The staging instance of DL-man to be reliable. I.e it needs to stay up and functional. 3) New versions of DL-man to be backward compatible with client's configured to use previous version. This ensures that PR builds continue to work when a new version of the DL-man is put into staging prior to a release. Does this sound sensible?                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1788">https://issues.jboss.org/browse/DEVELOPER-1788</a> |
| 7286 | DEVELOPER-1788 | {quote} It does sound sensible, however it would require implementing the automatic sync between production and staging, which is not trivial, especially due to firewall problems. {quote} This will be less of a problem once we start using the REST API. At least then we will not have broken links. How often do you currently push production data back to the staging instance? {quote} Another approach would be adding a specific query parameter, that would opt out request from being processed by statistics. {quote} This is possible. However, we have similar issues for SSO as well. If we move to using the staging instance of SSO, we also need to use staging instance of DL-man.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1788">https://issues.jboss.org/browse/DEVELOPER-1788</a> |
| 7287 | DEVELOPER-1788 | Is this okay to switch over now? What are the staging urls for the DL manager?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1788">https://issues.jboss.org/browse/DEVELOPER-1788</a> |
| 7288 | DEVELOPER-1788 | [~dhlady] we are nearly done with tidying up the data in the production download manager. When this is done, can you push the changed data to the staging download manager?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1788">https://issues.jboss.org/browse/DEVELOPER-1788</a> |
| 7289 | DEVELOPER-1788 | [~vladimir_v] are you able to copy the production data for dl-man to the staging instance? This will help our testing as we'll be using up-to-date data. Ideally this task would be done nightly, is that possible?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1788">https://issues.jboss.org/browse/DEVELOPER-1788</a> |
| 7290 | DEVELOPER-1788 | I created this ticket for syncing the data: <a href="https://engineering.redhat.com/rt/Ticket/Display.html?id=386065">https://engineering.redhat.com/rt/Ticket/Display.html?id=386065</a> [~dhlady]: can you please confirm that you are happy with my suggested approach?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1788">https://issues.jboss.org/browse/DEVELOPER-1788</a> |
| 7291 | DEVELOPER-1788 | Thanks [~dhlady], As i also mentioned in the ticket, a one-off data copy would get us a long way here. Do you now have the permissions to do that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1788">https://issues.jboss.org/browse/DEVELOPER-1788</a> |
| 7292 | DEVELOPER-1786 | [~james.cobb], Can you add the event card header image to the right location on static.jboss.org? I believe we need 2 sizes, one for RHD and the other for JBD?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1786">https://issues.jboss.org/browse/DEVELOPER-1786</a> |
| 7293 | DEVELOPER-1786 | [~james.cobb]: can you point me to the location of these on the filemgmt server's file system? Also, don't we need a JBD version too? I'll try write up some docs around this, as there seems to be some confusion among the team.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1786">https://issues.jboss.org/browse/DEVELOPER-1786</a> |
| 7294 | DEVELOPER-1784 | Thanks [~lvicck]. Do you know how this compares to JBD? Also can you provide a list of the offending pages?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1784">https://issues.jboss.org/browse/DEVELOPER-1784</a> |

| 7295 | DEVELOPER-1784 | [~lvcek] using the jboss-developer account, I don't have access to the queries above. Can you save off the results from the queries above (just the ones for the data_rht_website content)? Hopefully we'll just need to run it once, so probably not worth giving me admin access.                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1784">https://issues.jboss.org/browse/DEVELOPER-1784</a> |
| 7296 | DEVELOPER-1784 | Thanks [~lvcek], Might be easier to make it public. Are there any security concerns here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1784">https://issues.jboss.org/browse/DEVELOPER-1784</a> |
| 7297 | DEVELOPER-1783 | [~velias] can you review Adela's PR? Also, does this need to go live at the same time as the CDK 2 Beta download, or can it go live before?                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1783">https://issues.jboss.org/browse/DEVELOPER-1783</a> |
| 7298 | DEVELOPER-1783 | [~velias] it was done in error. I thought I fixed it shortly after though. Can you check this issue and RHD-1072 to make sure they make sense?                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1783">https://issues.jboss.org/browse/DEVELOPER-1783</a> |
| 7299 | DEVELOPER-1777 | [~crobson], is RHEL the only one that has/will have "children"? Maybe, since that's such a big product, we style that one a little different and then keep the sub-product ones (now being indented in the design) like the others on the page? I would love to hear more ideas from [~james.cobb] and team though.                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1777">https://issues.jboss.org/browse/DEVELOPER-1777</a> |
| 7300 | DEVELOPER-1777 | Thanks [~tnolan]. Is it ready for front-end dev? If so, please handover to front-end (using buttons above): <a href="https://www.dropbox.com/s/yyqh4w87ss8qnqu/Screenshot%202015-11-24%2009.01.39.png?dl=0">https://www.dropbox.com/s/yyqh4w87ss8qnqu/Screenshot%202015-11-24%2009.01.39.png?dl=0</a>                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1777">https://issues.jboss.org/browse/DEVELOPER-1777</a> |
| 7301 | DEVELOPER-1777 | Idea for the Note text style for the Get Started page that we talked about in the CDK meeting this morning: <a href="https://db.tt/MZvOz6mt">https://db.tt/MZvOz6mt</a> [~james.cobb], can you provide the border and/or background colors for this based upon our site theme?                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1777">https://issues.jboss.org/browse/DEVELOPER-1777</a> |
| 7302 | DEVELOPER-1777 | [~tnolan] is this for all of the 'Notes' in the multiple CDK Get Started pages? or is this a new style for the 'Notes' in ALL products' get started pages?                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1777">https://issues.jboss.org/browse/DEVELOPER-1777</a> |
| 7303 | DEVELOPER-1777 | Will this callout only appear on the Get Started pages then?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-1777">https://issues.jboss.org/browse/DEVELOPER-1777</a> |
| 7304 | DEVELOPER-1776 | Add video game to 404 page? <a href="https://github.com/leereilly/games">https://github.com/leereilly/games</a> <a href="https://mattsurabian.com/duckhunt/">https://mattsurabian.com/duckhunt/</a> <a href="http://www.dougmccinnes.com/html-5-asteroids/">http://www.dougmccinnes.com/html-5-asteroids/</a>                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1776">https://issues.jboss.org/browse/DEVELOPER-1776</a> |
| 7305 | DEVELOPER-1776 | Ping [~lightguard] - how do we add a 404?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1776">https://issues.jboss.org/browse/DEVELOPER-1776</a> |
| 7306 | DEVELOPER-1776 | Hey [~newtonm] - looks like we need to add a line to the Apache .htaccess - something like 'ErrorDocument 404 /404.html' Could we do this?                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1776">https://issues.jboss.org/browse/DEVELOPER-1776</a> |
| 7307 | DEVELOPER-1772 | Can you provide a link to the PR in here please. We need a way to track the review process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1772">https://issues.jboss.org/browse/DEVELOPER-1772</a> |
| 7308 | DEVELOPER-1771 | What's the status of this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1771">https://issues.jboss.org/browse/DEVELOPER-1771</a> |
| 7309 | DEVELOPER-1771 | I think ideally we would pull these from 'app.namespace'. We could have these set on page load in the body, right before we load the JS files. Is that doable?                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1771">https://issues.jboss.org/browse/DEVELOPER-1771</a> |
| 7310 | DEVELOPER-1771 | Are you hard coding localhost here? Or is that just generated?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1771">https://issues.jboss.org/browse/DEVELOPER-1771</a> |
| 7311 | DEVELOPER-1771 | I don't want to generate any JavaScript in .js files - just the code that is embedded into a script tag on the page- does that make sense?                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1771">https://issues.jboss.org/browse/DEVELOPER-1771</a> |
| 7312 | DEVELOPER-1770 | Pete, When is this needed by? Can you give it a fix version?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-1770">https://issues.jboss.org/browse/DEVELOPER-1770</a> |
| 7313 | DEVELOPER-1770 | [~pmuir], [~maxandersen]: Is this still a requirement? I'm not saying it's something we plan to work on soon, just deciding whether to close as 'out of date' or not.                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1770">https://issues.jboss.org/browse/DEVELOPER-1770</a> |
| 7314 | DEVELOPER-1736 | [~james.cobb], [~myfear]: When does this need to go live?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1736">https://issues.jboss.org/browse/DEVELOPER-1736</a> |
| 7315 | DEVELOPER-1736 | What is the URL? It seems, nothing is working: <a href="http://jboss.org/events/events/judcon/2015/brno/">http://jboss.org/events/events/judcon/2015/brno/</a> <a href="http://jboss.org/events/events/judcon/2016/brno/">http://jboss.org/events/events/judcon/2016/brno/</a> <= the expected one :) <a href="http://developers.redhat.com/events/events/judcon/2015/brno/">http://developers.redhat.com/events/events/judcon/2015/brno/</a> <a href="http://developers.redhat.com/events/events/judcon/2016/brno/">http://developers.redhat.com/events/events/judcon/2016/brno/</a> Thanks, m | <a href="https://issues.jboss.org/browse/DEVELOPER-1736">https://issues.jboss.org/browse/DEVELOPER-1736</a> |
| 7316 | DEVELOPER-1733 | What do you mean: they are no longer issues with it as all the current product have featured artifact (this can change when a new product will be added) or you check this state and the page does not break up when the featured artifact is not present. If it is the second case, then this ticket can be closed. If it is the first case, then it needs to be fixed still.                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1733">https://issues.jboss.org/browse/DEVELOPER-1733</a> |
| 7317 | DEVELOPER-1729 | [~crobson] is this approved yet? If not, is it close enough for [~adelaaarola] to start work on it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1729">https://issues.jboss.org/browse/DEVELOPER-1729</a> |
| 7318 | DEVELOPER-1729 | [~paul.robinson] Wireframe is complete and approved. Should I pass off to Visual Design or Front End? There is a banner needed by visual team at the top, and the pictures for the speaker may need to be created/edited.                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1729">https://issues.jboss.org/browse/DEVELOPER-1729</a> |
| 7319 | DEVELOPER-1729 | Thanks Adela. Comments: * Are these white bits expected? <a href="https://www.dropbox.com/s/86l7zzsw00mcty4/Screenshot%202015-10-12%2017.09.21.png?dl=0">https://www.dropbox.com/s/86l7zzsw00mcty4/Screenshot%202015-10-12%2017.09.21.png?dl=0</a> . Looks like the top of another word is being chopped off. * Should the heading be 'full bleed'? It looks quite 'intense' at the moment. However, I'll defer to someone with a 'design eye'. * Remember to add content to share button Otherwise, looks great!                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-1729">https://issues.jboss.org/browse/DEVELOPER-1729</a> |
| 7320 | DEVELOPER-1729 | Is the resolution on the banner high enough? I'm viewing it on a retina display, so that might be the issue. Here's a screenshot, not sure if you will see the change in sharpness between the banner text and the rest of the page: <a href="https://www.dropbox.com/s/6vh6ovndoazz63u/Screenshot%202015-10-14%2011.14.51.png?dl=0">https://www.dropbox.com/s/6vh6ovndoazz63u/Screenshot%202015-10-14%2011.14.51.png?dl=0</a>                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1729">https://issues.jboss.org/browse/DEVELOPER-1729</a> |
| 7321 | DEVELOPER-1718 | If we're going to use these on the site too, should they be the illustration styling, or will we make separate images for that use? (example: <a href="http://developers.redhat.com/products/eap/overview/">http://developers.redhat.com/products/eap/overview/</a> )                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1718">https://issues.jboss.org/browse/DEVELOPER-1718</a> |
| 7322 | DEVELOPER-1718 | Are these ready to go on the CDK product page?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1718">https://issues.jboss.org/browse/DEVELOPER-1718</a> |
| 7323 | DEVELOPER-1717 | What about this: <a href="https://origin-it-developers.redhat.com/auth/js/keycloak.js">https://origin-it-developers.redhat.com/auth/js/keycloak.js</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-1717">https://issues.jboss.org/browse/DEVELOPER-1717</a> |
| 7324 | DEVELOPER-1716 | Markus, did they supply you with a mockup of the cover we can use in the banner?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-1716">https://issues.jboss.org/browse/DEVELOPER-1716</a> |
| 7325 | DEVELOPER-1716 | [~brock] Those images are sized for JBoss Developer. Can you create a set for RHD?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1716">https://issues.jboss.org/browse/DEVELOPER-1716</a> |
| 7326 | DEVELOPER-1716 | Are we to run this promo on both RHD and jboss.org?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1716">https://issues.jboss.org/browse/DEVELOPER-1716</a> |
| 7327 | DEVELOPER-1716 | [~brock] The links for the RHD mockups don't work, is it different than the JBoss.org mockup?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1716">https://issues.jboss.org/browse/DEVELOPER-1716</a> |
| 7328 | DEVELOPER-1713 | David, We have a series of yaml files containing this data. Here's an example for EAP: <a href="https://github.com/jboss-developer/www.jboss.org/blob/master/products/eap/_common/product.yml#L26-L171">https://github.com/jboss-developer/www.jboss.org/blob/master/products/eap/_common/product.yml#L26-L171</a> Would that be enough to recreate most of the data?                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1713">https://issues.jboss.org/browse/DEVELOPER-1713</a> |
| 7329 | DEVELOPER-1713 | I am afraid it is not readable for me. I do not see a way how to map the things in it to the actual files. Would you be able to create let us say a spreadsheet, that contains lines with columns: product, product version, file name (including the access.cdn path), description (optional), TC model (anonymous/no tc/Zero Dollar) (optional)?                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1713">https://issues.jboss.org/browse/DEVELOPER-1713</a> |
| 7330 | DEVELOPER-1713 | [~dcoughlin1] - Have you inputted the data for this DL manager?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1713">https://issues.jboss.org/browse/DEVELOPER-1713</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | URL                                                                                                         |
|------|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| 7331 | DEVELOPER-1713 | Also, there are quite a few that are being displayed on <a href="http://it-developers-pr.stage.redhat.com/pr/332/build/826/products/devstudio/download/">http://it-developers-pr.stage.redhat.com/pr/332/build/826/products/devstudio/download/</a> (e.g. <a href="https://www.dropbox.com/s/bdblkdtovx22q5q/JBoss_Developer_Studio_-_Downloads.jpg?dl=0">https://www.dropbox.com/s/bdblkdtovx22q5q/JBoss_Developer_Studio_-_Downloads.jpg?dl=0</a> ) that are not displayed on <a href="http://developers.redhat.com/products/devstudio/download/">http://developers.redhat.com/products/devstudio/download/</a> . Should I just be ignoring those for now?                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1713">https://issues.jboss.org/browse/DEVELOPER-1713</a> |
| 7332 | DEVELOPER-1713 | [~paul.robinson] [~dhladky] I can link the products together. Should I add those products and set them as master for the zero dollar/No T&C?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1713">https://issues.jboss.org/browse/DEVELOPER-1713</a> |
| 7333 | DEVELOPER-1713 | Can this be closed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1713">https://issues.jboss.org/browse/DEVELOPER-1713</a> |
| 7334 | DEVELOPER-1712 | [~ecurley] Is the content for this microsite ready? If so, where can I find it? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1712">https://issues.jboss.org/browse/DEVELOPER-1712</a> |
| 7335 | DEVELOPER-1712 | Hi Paul - Here was the feedback I had sent Adela. My apologies as we were communicating in hipchat back and forth. Can we add a line space in the red hat booth band between the 17:00? and the "Meet the ..." Devovx for Kids - should say "Devovx4Kids" And that band will need to be hidden until Wednesday of the conference In the "Meet Markus" headline. Can we swap "BUY" for "GET"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1712">https://issues.jboss.org/browse/DEVELOPER-1712</a> |
| 7336 | DEVELOPER-1701 | [~mikgue] Can you respond to Libor's query?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1701">https://issues.jboss.org/browse/DEVELOPER-1701</a> |
| 7337 | DEVELOPER-1701 | Will this work? <a href="https://en.support.wordpress.com/export/">https://en.support.wordpress.com/export/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1701">https://issues.jboss.org/browse/DEVELOPER-1701</a> |
| 7338 | DEVELOPER-1701 | [~mguerri] just read the answer from wordpress and I'd like to give a try the export file: <a href="https://en.support.wordpress.com/export/">https://en.support.wordpress.com/export/</a> Could you please export whole blog and send me to my RH e-mail? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-1701">https://issues.jboss.org/browse/DEVELOPER-1701</a> |
| 7339 | DEVELOPER-1701 | [~mikgue] Thanks a lot. I had to fix few character issues but it works for me. [~paul.robinson] here is output of all entries from feed. Please check: <a href="https://planet-stg.jboss.org/#tags=feed_group_name_nonmiddleware">https://planet-stg.jboss.org/#tags=feed_group_name_nonmiddleware</a> The archive is perfect but I just realised that current feed ( <a href="https://developerblog.redhat.com/feed/">https://developerblog.redhat.com/feed/</a> ) doesn't provide whole content and has only "description" which is short version of it. Planet doesn't index whole content then (e.g. <a href="https://planet-stg.jboss.org/post/behind_the_internet_of_things_middleware_demo_at_red_hat_summit">https://planet-stg.jboss.org/post/behind_the_internet_of_things_middleware_demo_at_red_hat_summit</a> ). [~mikgue] is it possible to change the setting of this actual feed to serve whole content as well? | <a href="https://issues.jboss.org/browse/DEVELOPER-1701">https://issues.jboss.org/browse/DEVELOPER-1701</a> |
| 7340 | DEVELOPER-1701 | Also, will this process ensure the posts are re-indexed as new tags are added? Someone will need to go through all the existing posts and assign product tags to the ones we need to appear on a product page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1701">https://issues.jboss.org/browse/DEVELOPER-1701</a> |
| 7341 | DEVELOPER-1701 | [~krzyzanek] I've created a PR for 4. <a href="https://github.com/redhat-developer/developers.redhat.com/pull/353">https://github.com/redhat-developer/developers.redhat.com/pull/353</a> Note, that it will pull data from dcpbeta-searchisko.rhcloud.com. Is that a problem?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1701">https://issues.jboss.org/browse/DEVELOPER-1701</a> |
| 7342 | DEVELOPER-1701 | Actually the last link should be working (you need to be on the VPN): <a href="http://it-developers-pr.stage.redhat.com/pr/353/build/1294/products/softwarecollections/buzz/">http://it-developers-pr.stage.redhat.com/pr/353/build/1294/products/softwarecollections/buzz/</a> Does that look right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1701">https://issues.jboss.org/browse/DEVELOPER-1701</a> |
| 7343 | DEVELOPER-1701 | Could you please create jira issue for it and link it. Thanks. I'll create separate issue about using "snippet" in planet.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1701">https://issues.jboss.org/browse/DEVELOPER-1701</a> |
| 7344 | DEVELOPER-1701 | Can we try one out? Does UX need to do anything??                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-1701">https://issues.jboss.org/browse/DEVELOPER-1701</a> |
| 7345 | DEVELOPER-1697 | Why is this a 'nice to have', isn't it critical to the Q1FY16 release? Or did you have an alternative way to view entitlements?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1697">https://issues.jboss.org/browse/DEVELOPER-1697</a> |
| 7346 | DEVELOPER-1697 | I changed the class of work based on Deliverables table. This similar one RHD-63 is Must have.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1697">https://issues.jboss.org/browse/DEVELOPER-1697</a> |
| 7347 | DEVELOPER-1697 | Thanks David. I notice you also released the mock API too. Do we need the Mock one, now that this is ready?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1697">https://issues.jboss.org/browse/DEVELOPER-1697</a> |
| 7348 | DEVELOPER-1697 | Hi [~wesbos], I just added the cors header to the available downloads response. I allowed it for all origins and GET requests (other methods are not supported anyway). The RPM is being built As for 2 it is definitely a bug, that should be addressed. I will create a ticket for it and fix it as soon as possible. Ideally today. [~paul.robinson], will you mind, if I simplify and fix the response? I am not sure if the service is already used somewhere as it is.                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1697">https://issues.jboss.org/browse/DEVELOPER-1697</a> |
| 7349 | DEVELOPER-1697 | [~dhladky] what do you mean by "simplify and fix the response"? Neither JBoss Developer or Red Hat Developers are using this API yet in production. So I don't have a problem with you changing the API.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1697">https://issues.jboss.org/browse/DEVELOPER-1697</a> |
| 7350 | DEVELOPER-1697 | How does it differ to the previous version of the response?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1697">https://issues.jboss.org/browse/DEVELOPER-1697</a> |
| 7351 | DEVELOPER-1697 | [~paul.robinson] I've just pushed another version - right now I'm linking to the generic release notes page because there is not way to dynamically generate this url - they are all too different. We need the data to go into the DCP. [~dhladky] - Could we get the ability to add a "download" to the download manager that isn't a file, but a link? We need each release to have a link to the release notes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1697">https://issues.jboss.org/browse/DEVELOPER-1697</a> |
| 7352 | DEVELOPER-1697 | Why do you need a download manager for it? Do you want to enforce some subscription on the release notes as well? If so, you can put the release notes to access.cdn just like any other file. If you do not need the release notes to be protected, then you do not need DM for the release notes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1697">https://issues.jboss.org/browse/DEVELOPER-1697</a> |
| 7353 | DEVELOPER-1697 | Hi, so how about adding the link to the product version then (I suppose this is the right place for the info) and adding it to the available downloads rest service (another property of product version). Are you aware of any other links you would like to be added? Please, create a new ticket for this feature as it is definitely not part of this ticket.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-1697">https://issues.jboss.org/browse/DEVELOPER-1697</a> |
| 7354 | DEVELOPER-1696 | OK, Some additional comments. Carousel... 1) The switcher should be turned off once a person clicks on a link in the carousel bar. As it works now, I click on an item in the bar that looks interesting and it goes to that slide (yeah!) then after 5 seconds it starts rotating again (boo!). 2) The block quote is actually a super light blue and the bold copy is white. The blue hex color: #eafbff 3) The job title /company spacing is still far too much "Vice President, Software Engineering / Red Hat Inc." The company should be much tighter to the job title. 4) Hmmm... the download icon is titled "Icon_RH_Software_Transfer-Download_RGB_Shiny.svg" and I'll separately attach it to this jira. 5) "The SVG icon can't have a gradient in the BG unless we use images." Not following you here. What icon's have gradients? Do you mean the photo in the carousel?                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1696">https://issues.jboss.org/browse/DEVELOPER-1696</a> |
| 7355 | DEVELOPER-1683 | I just checked a bunch of these and the dates and ordering seems correct - can we close this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-1683">https://issues.jboss.org/browse/DEVELOPER-1683</a> |
| 7356 | DEVELOPER-1667 | [~paul.robinson] For the descriptions, should I just plan on pasting in information from the about sections of the websites? I noticed that most of the descriptions start with "Join Redhat..." and have been customized. For now, I am just leaving the descriptions blank.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-1667">https://issues.jboss.org/browse/DEVELOPER-1667</a> |
| 7357 | DEVELOPER-1663 | [~james.cobb], [~crobson]: should this live at <a href="http://developers.redhat.com/resources">http://developers.redhat.com/resources</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1663">https://issues.jboss.org/browse/DEVELOPER-1663</a> |

| 7361 | DEVELOPER-1656 | Do I close this? I am moving on to pushing this into the staging environment. There are some things that need to be done beforehand (mainly just getting Rysiek approve the template), but I think I'm ready to move onto the next step here.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-1656">https://issues.jboss.org/browse/DEVELOPER-1656</a> |
| 7362 | DEVELOPER-1652 | Please can you add a description?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-1652">https://issues.jboss.org/browse/DEVELOPER-1652</a> |
| 7363 | DEVELOPER-1647 | [~paul.robinson] Hey Paul, can you provide me with access to this Youtube account?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1647">https://issues.jboss.org/browse/DEVELOPER-1647</a> |
| 7364 | DEVELOPER-1647 | You were invited to be a manger a while ago. Can you search your email, maybe in the spam.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1647">https://issues.jboss.org/browse/DEVELOPER-1647</a> |
| 7365 | DEVELOPER-1647 | [~paul.robinson] So, many of the generic "Virtual: JBUG" are presentations that either don't have slides or don't actually have a good view of the presentation. I have changed a few, but is it acceptable to pull a snapshot of just the presenter or should I plan to leave the generic thumbnail?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-1647">https://issues.jboss.org/browse/DEVELOPER-1647</a> |
| 7366 | DEVELOPER-1644 | [~ecurley] can you take a look at the copy on the Wireframe. The JBoss EAP one talks about RHEL. Can you also check you are happy with the rest of the text?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1644">https://issues.jboss.org/browse/DEVELOPER-1644</a> |
| 7367 | DEVELOPER-1644 | [~lkrzyzanek] once we create the page, is it you that will wire it into the registration flow?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1644">https://issues.jboss.org/browse/DEVELOPER-1644</a> |
| 7368 | DEVELOPER-1644 | Conceptually I'm good with it but the text will need to change on them. OSE doesn't have a getting started experience. Shall I change it here or in hotgloo?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1644">https://issues.jboss.org/browse/DEVELOPER-1644</a> |
| 7369 | DEVELOPER-1644 | [~ecurley], [~ray.ploski]: are you happy with this page? See: <a href="http://it-developers-pr.stage.redhat.com/pr/545/build/1130/confirmation/">http://it-developers-pr.stage.redhat.com/pr/545/build/1130/confirmation/</a> I've checked the process, and the user is directed to this page after verifying their email.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1644">https://issues.jboss.org/browse/DEVELOPER-1644</a> |
| 7370 | DEVELOPER-1644 | It looks like the text gets cut off behind the button for the EAP get started. Can we set it up so that the text has an upper size limit and becomes ellipsis (...) if it overflows that limit?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1644">https://issues.jboss.org/browse/DEVELOPER-1644</a> |
| 7371 | DEVELOPER-1641 | Can you tell me where this wrong link is?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1641">https://issues.jboss.org/browse/DEVELOPER-1641</a> |
| 7372 | DEVELOPER-1638 | Keycloak login server doesn't provide a single URL right now. However I think we can achieve this UX requirement by a single static page <a href="http://developers.redhat.com/register">http://developers.redhat.com/register</a> which would either have some text plus button "Register Now" or display nothing and put javascript that will immediatelly redirect user to register page. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1638">https://issues.jboss.org/browse/DEVELOPER-1638</a> |
| 7373 | DEVELOPER-1636 | [~velias] The issue reporter field was mandatory. I set it to [~dcoughlin1] as he'll be working on setting this up. Can you make it optional, or create a new user for this. It's not ideal that the crazy comments, that we'll inevitably get, will be accredited to dan :-)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-1636">https://issues.jboss.org/browse/DEVELOPER-1636</a> |
| 7374 | DEVELOPER-1636 | can you use my email address initially. We can re-think that later.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1636">https://issues.jboss.org/browse/DEVELOPER-1636</a> |
| 7375 | DEVELOPER-1636 | [~crobson], [~james.cobb]: can you review: <a href="http://it-developers-pr.stage.redhat.com/">http://it-developers-pr.stage.redhat.com/</a> . Notice the feedback link in bottom right. I went for the least obtrusive option. We can select something with more visibility if you prefer. Maybe we walk through the options in a quick call?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1636">https://issues.jboss.org/browse/DEVELOPER-1636</a> |
| 7376 | DEVELOPER-1636 | [~paul.robinson][~crobson] - So I click the link and only see the homepage that doesn't have a "got feedback option. Is there a direct link to a page where I can see this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1636">https://issues.jboss.org/browse/DEVELOPER-1636</a> |
| 7377 | DEVELOPER-1634 | Are we looking to do this now, or after initial launch?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1634">https://issues.jboss.org/browse/DEVELOPER-1634</a> |
| 7378 | DEVELOPER-1633 | I think we should change the icons to illustrations. Shall we create a separate JIRA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-1633">https://issues.jboss.org/browse/DEVELOPER-1633</a> |
| 7379 | DEVELOPER-1631 | [~crobson] is this approved? Can it be handed over to front-end?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1631">https://issues.jboss.org/browse/DEVELOPER-1631</a> |
| 7380 | DEVELOPER-1631 | These look great. And agree on the card version. [~crobson] What area of the headers are you looking at? My two cents - There is a lot going on up top on this one: <a href="http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/images/RHDev_products_getstarted_dualpath_r1v1.jpg">http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/images/RHDev_products_getstarted_dualpath_r1v1.jpg</a> A couple of options (would love both of your thoughts) -Delete the "let's walk through..." in the Hello World section. With 4 things there it is hard to know what to do. -I'm normally a fan of allowing folks to easily contact sales but I wonder if it is premature up top. This is a first getting started. Maybe something down below? On this page: <a href="http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/images/RHDev_products_getstarted_dualpath_r1v1.jpg">http://design.jboss.org/redhatdeveloper/website/redhatdeveloper_1_0/images/RHDev_products_getstarted_dualpath_r1v1.jpg</a> I would consider shortening "How to get started with Red Hat..." to just "Get started with Red Hat..." small change but more actionable and will reduce some of the wrap. Are you in need for shorter header copy from what exists now? I can trim if needed. | <a href="https://issues.jboss.org/browse/DEVELOPER-1631">https://issues.jboss.org/browse/DEVELOPER-1631</a> |
| 7381 | DEVELOPER-1628 | Can this go into production now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1628">https://issues.jboss.org/browse/DEVELOPER-1628</a> |
| 7382 | DEVELOPER-1628 | [~lkrzyzanek] Can we push the RHD change live now, and the JBD change later today or tomorrow?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1628">https://issues.jboss.org/browse/DEVELOPER-1628</a> |
| 7383 | DEVELOPER-1623 | Do we still plan to run these tests against production? Not sure it makes sense anymore?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1623">https://issues.jboss.org/browse/DEVELOPER-1623</a> |
| 7384 | DEVELOPER-1603 | Hi Paul. I'm working to get the Hello world approved this week and if yes we will need a RH Mobile section within products. We are planning on promoting the Hello World for Mobile at NodeConf on Sept. 6th. Do you have a URL that we will use when that section goes up? James and I are working on a postcard to hand out directing people there. Thanks! Emily                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1603">https://issues.jboss.org/browse/DEVELOPER-1603</a> |
| 7385 | DEVELOPER-1603 | {quote} Is there a way to make the 4 icons in a row across the bottom or would 2 on each row work? {quote} For consistency with other products, I think it would be better to go with 3. Otherwise we'll end up with having to resize the content. Can one of those items be dropped?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-1603">https://issues.jboss.org/browse/DEVELOPER-1603</a> |
| 7386 | DEVELOPER-1603 | Also, would it be better to move the 3 key feature further up? We added those to the other product pages as a way to quickly grab the reader and use it as a way of getting them interested enough to read the more detailed information below. I would suggest adding it after the opening paragraph.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-1603">https://issues.jboss.org/browse/DEVELOPER-1603</a> |
| 7387 | DEVELOPER-1603 | [~james.cobb], [~brock]: Can you advise on what images to use on here: <a href="http://it-developers-pr.stage.redhat.com/pr/381/build/790/products/mobileplatform/overview/">http://it-developers-pr.stage.redhat.com/pr/381/build/790/products/mobileplatform/overview/</a> . I'm looking at these ones that are scaling badly: <a href="https://www.dropbox.com/s/b4qsh8i9o21gsvb/Screenshot%202015-09-03%2020.30.40.png?dl=0">https://www.dropbox.com/s/b4qsh8i9o21gsvb/Screenshot%202015-09-03%2020.30.40.png?dl=0</a> Do we have illustrations?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1603">https://issues.jboss.org/browse/DEVELOPER-1603</a> |
| 7388 | DEVELOPER-1603 | [~ecurley]: should the link to Mobile learn, really filter on 'iOS'? See this link on the overview page: {quote} See Mobile in action <a href="http://developers.redhat.com/mobile/learn/#!query=iOS">http://developers.redhat.com/mobile/learn/#!query=iOS</a> {quote}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1603">https://issues.jboss.org/browse/DEVELOPER-1603</a> |
| 7389 | DEVELOPER-1603 | Thanks Jason, I don't know wether we want scalable .svg or transparent .png. Can you check with [~james.cobb]? We want to push this live tomorrow, not sure if it's feasible to get the illustrations in that time-frame?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1603">https://issues.jboss.org/browse/DEVELOPER-1603</a> |
| 7390 | DEVELOPER-1599 | Given that we plan to use Drupal's CDN integration, do we still need this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1599">https://issues.jboss.org/browse/DEVELOPER-1599</a> |
| 7391 | DEVELOPER-1595 | Can we list the languages in alphabetical order: node, Python, Ruby? Otherwise, good to go. Mike                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1595">https://issues.jboss.org/browse/DEVELOPER-1595</a> |
| 7392 | DEVELOPER-1592 | [~brock] Can you review Adela's build: <a href="http://it-developers-pr.stage.redhat.com/pr/613/build/197">http://it-developers-pr.stage.redhat.com/pr/613/build/197</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1592">https://issues.jboss.org/browse/DEVELOPER-1592</a> |

| 7393 | DEVELOPER-1464 | One minor addition, can we add the month and year under the title? This was on the CDK wireframe and I just noticed it was missing here. It should be the smaller font size and a slightly lighter grey color. [https://db.tt/VHXDP7aN]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1464">https://issues.jboss.org/browse/DEVELOPER-1464</a> |
| 7394 | DEVELOPER-1463 | Content from Markus [about judcon] JUDCon is coming to town! After some time of silence, it is about time to have another JUDCon. 2016 will start off with JUDCon Brno and we're very proud to be part of the DevConf.cz conference with a full day track of Microservices, Mobile, Cloud and Java EE. The JBoss Users and Developers Conferences are developer gatherings held around the globe to give JBoss users the chance to talk to and collaborate with leaders in the JBoss Community, and to allow the project leads and engineers to learn from and collaborate with end users. The JBoss Core Developers, along with the open source community, create and support the projects that drive innovation and help lead development in standards bodies like the Java Community Process, the Apache Software Foundation, OASIS, W3C and other open standards organizations. [JUDCon Schedule] Friday, February 5th 2016 9:50 Knowledge driven micro services - Maciej Swiderski [Microservices] 10:40 SilverWare: Microservices - Martin Wiech [Microservices] 11:30 Docker, Vagrant and Kubernetes walks into an Eclipse'd bar - Max Rydahl Andersen [Mobile & Cloud] 12:20 Java Enterprise-ish development without hassle - Jakub Marchwicki [JavaEE] 13:10 Getting S#it Done With JBoss Forge: A Gentle Path into Java EE 7 Applications - Koen Ars + Sebastien Blanc [Java EE] 14:00CI/CD with Openshift and Jenkins - Ari LiVigni, Aaron Weitekamp, Michal Fojtik [ Mobile & Cloud] 14:50 Red Hat Mobile Application Platform + OpenShift Online - John Frizelle [Mobile & Cloud] 15:40 You've Got Microservices Now Secure Them - Steven Pousty [Microservices] 16:30 Taming Microservices Testing with Docker and Arquillian Cube - Aslak Knutsen [Mobile & Cloud] 17:20 WildFly Swarm: does my fatjar look big in this? - Mark Little [JavaEE] 18:10 Are you ready for a new WildFly security? Elytron! - Josef Cacek [JavaEE] [talk category description] Microservices As an architectural pattern, Microservices has graduated from being an esoteric buzzword and has great potential in many organizations - ranging from startups and large consumer internet organizations to enterprises. The microservices talks help bring in real world experience and first hand information from the engineers working on the future. Mobile & Cloud While mobile left the real hype and turned into commodity for many users, the combination with cloud and changing requirements in today's enterprises still influence the way we built mobile applications. The mobile and cloud talks by our engineers help you to make the best out of both. JavaEE As the backbone of Red Hat JBoss Middleware and used by literally every enterprise in the world we added the most interesting talks about latest developments to this category and invite you to brush up your knowledge and experience first hand information from our engineers. [more] Information about the city and venue: http://devconf.cz/city-and-venue Link to the code of conduct: http://devconf.cz/code-conduct                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1463">https://issues.jboss.org/browse/DEVELOPER-1463</a> |
| 7395 | DEVELOPER-1463 | constantly growing business demands more and more focus is put on gathering business knowledge and making use of it in IT. Knowledge Is Everything - that's a slogan that lots of business domains is catching up right now. On the other hand, recent trends in software development are shifting into micro services environments where loosely coupled, standalone and independent services provide access to various business assets. With that in mind, knowledge driven micro service idea came into live to combine couple of great technologies together to satisfy such needs: - vert.x - toolkit for building reactive applications on JVM - jBPM and Drools flexible process and rule engines that provide excellent execution environment for business assets - the knowledge - hazelcast - in memory data grid - various programming languages (Java, JavaScript, Scala, Groovy) to attract various development teams This session is about illustrating how easily and fast you can build knowledge driven micro services and scale them to almost no limits. All in reactive and polyglot fashion with powerful clustering. Scale individual knowledge micro services without a hassle and allow various languages to easily interact with business knowledge without a need to know where they are located. It all goes via clustered event bus provided by Vert.x, backed by deployable knowledge archives provided by jBPM and Drools, clustering delivered by hazelcast data grid and allow polyglot client side access. It's all about business knowledge that can be delivered as software solution with: - flexibility - speed of development - isolated scalability - manageability Come and see how to transform your IT solutions into knowledge driven micro services with Vert.x, jBPM, Drools and Hazelcast. This session will be full of life demos to actually show the running micro services driven by business knowledge. Speaker info: Maciej Swiderski Red Hat, Senior Software Engineer Speaker image: https://static.sched.org/a7/950423/avatar.jpg.320x320px.jpg?e9e Session #2: SilverWare: Microservices 10:40 - 11:20 Description: SilverWare.io is a minimalist, yet powerful, modularized, highly configurable and container-free implementation of Microservices. Builds on technologies you are familiar with. Start creating the Internet of Things today! Speaker Info: Martin Wiech I am working for RedHat since 2014 as middleware QE. Speaker image: None Session #3: Docker, Vagrant and Kubernetes walks into an Eclipse'd bar 11:30 - 12:10 Description: Today's software industry is booming with tools like Docker, Kubernetes, Vagrant and more to enable faster turnaround times via virtualization. How does Eclipse the IDE deal with that? Can it deal with it? How should it and its users deal with it? Come to this talk and hear how and what Eclipse Linux Tools and JBoss Tools are doing in the area. It will give a brief overview on the Docker and Vagrant tooling in Linux Tools and then how that is used and combined in Kubernetes and OpenShift Tools. The talk will show how you can use Docker and Vagrant practically today with plain Eclipse to improve your own local development experience and then shortly cover how it all comes together in the cloud and container space. Some basic understanding of the container and virtualization technologies are recommended, but not an absolute requirement. Speaker Info: Max Rydahl Andersen Born and raised in Denmark, worked on health care software systems for some time. In that work I bumped into this small project called Hibernate and had to fix a couple of things in it to make it useful Since then I've been working on Hibernate Core, Hibernate Tools, Seam and now lately JBoss Tools and Developer Studio Speaker image: https://static.sched.org/a7/2534492/avatar.jpg.320x320px.jpg?512 Session #4: Java Enterprise-ish development without hassle 12:20 - 13:00 Description: This happens in every community: You don't need Rails, to build a web application in Ruby. You don't need templating engine for PHP - PHP is a templating language! We over engineer and over engineer, again and again. Same happens in Java. Hibernate + EJB + JSF is not the only blessed stack for development of web application... one can argue it's the worst. | <a href="https://issues.jboss.org/browse/DEVELOPER-1463">https://issues.jboss.org/browse/DEVELOPER-1463</a> |

| 7397 | DEVELOPER-1461 | I can add code to pull this image into the site; however, all non-default card banners are currently coming from http://static.jboss.org/images/rhd/events/event_(*)_picturename_*.png. If possible, can you place the file under http://static.jboss.org/images/rhd/events? Also, is it possible to rename the file to *_event_*_makerfile_judcon2016brno.png instead of events_makerfile_judcon2016brno.png? Sorry for all the changes. If it's not possible, please let me know and I'll add in the javascript logic to do this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1461">https://issues.jboss.org/browse/DEVELOPER-1461</a> |
| 7398 | DEVELOPER-1442 | [~dcoughlin1] Can you work on this today please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1442">https://issues.jboss.org/browse/DEVELOPER-1442</a> |
| 7399 | DEVELOPER-1437 | Hi [~james.cobb], can the text on these graphics be moved a little to the left? Right now it gets cut off once the window becomes smaller because the text is positioned outside the page's content area                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1437">https://issues.jboss.org/browse/DEVELOPER-1437</a> |
| 7400 | DEVELOPER-1436 | Can we make this as a developers.redhat.com microsite?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-1436">https://issues.jboss.org/browse/DEVELOPER-1436</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | URL                                                                                                         |

| 7401 | DEVELOPER-1435 | Looks good overall. It would have been nice if the new section included the standalone installer from 9.0.0.GA too so users wouldn't have to click show downloads. Is that possible ?                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-1435">https://issues.jboss.org/browse/DEVELOPER-1435</a> |
| 7402 | DEVELOPER-1435 | How about we add a new "release notes" entry, which links to the blog? PR: <a href="https://github.com/jboss-developer/www.jboss.org/pull/1006">https://github.com/jboss-developer/www.jboss.org/pull/1006</a> This mirrors what EAP does, eg., on this page <a href="http://www.jboss.org/products/eap/download/">http://www.jboss.org/products/eap/download/</a>                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1435">https://issues.jboss.org/browse/DEVELOPER-1435</a> |
| 7403 | DEVELOPER-1434 | [~sparulka] when is this due by? We have some other high priority stuff on at the moment. Would late this week or early next week work?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1434">https://issues.jboss.org/browse/DEVELOPER-1434</a> |
| 7404 | DEVELOPER-1434 | This is due today. Product GA was yesterday Dec 7 and I had communicated this earlier and had already submitted the content changes except the actual links to the bits. Very minor content changes. I received the CDN links for the GA bits yesterday night (Dec 7). I sent the GA availability announcement today at noon (Dec 8). So appreciate if this is posted by atleast Dec 9 EOD. Doable?                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1434">https://issues.jboss.org/browse/DEVELOPER-1434</a> |
| 7405 | DEVELOPER-1434 | [~sparulka] Can you review the build ^^                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1434">https://issues.jboss.org/browse/DEVELOPER-1434</a> |
| 7406 | DEVELOPER-1434 | [~sparulka] Adela is working on the fixes know. Are you going to be available to do a final review over the next 2hrs? I'll keep an eye out and merge the PR once you approve.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1434">https://issues.jboss.org/browse/DEVELOPER-1434</a> |

| 7416 | DEVELOPER-1348 | [~paul.robinson] or [~pmuir], Should this be added to downloads.jboss.org or can I link directly to dropbox? Thanks! Dan                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1348">https://issues.jboss.org/browse/DEVELOPER-1348</a> |
| 7417 | DEVELOPER-1348 | Who can add the download to downloads.jboss.org since it isn't stored with download-manager ( <a href="https://www.jboss.org/download-manager/ui/administration/products.jsf?renew=1">https://www.jboss.org/download-manager/ui/administration/products.jsf?renew=1</a> )? Is Paul the only one? The current one should be added, which is on dropbox, PREVIEW-DataVirtWebUI-11Jun2015.war. Prior JIRAs for updating webui: <a href="https://issues.jboss.org/browse/DEVELOPER-1305">https://issues.jboss.org/browse/DEVELOPER-1305</a> <a href="https://issues.jboss.org/browse/DEVELOPER-1224">https://issues.jboss.org/browse/DEVELOPER-1224</a> | <a href="https://issues.jboss.org/browse/DEVELOPER-1348">https://issues.jboss.org/browse/DEVELOPER-1348</a> |
| 7418 | DEVELOPER-1348 | [~lightguard] Hey Jason, do you know who would be able to upload this to downloads.jboss.org?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1348">https://issues.jboss.org/browse/DEVELOPER-1348</a> |
| 7419 | DEVELOPER-1347 | Thanks [~nickboldt]. Please can you email me when they are ready? I've got quite a lot of other things to coordinate over the coming days, so don't want to miss this. [~dcoughlin1] can you prepare the same change for <a href="http://developers.redhat.com">http://developers.redhat.com</a> please.                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1347">https://issues.jboss.org/browse/DEVELOPER-1347</a> |

| 7421 | DEVELOPER-1328 | Pete - Since this was deployed, shall I go in and create a new macro for this new Data Layer Variable "product_code" within GTM? After that, I will update the macro {{Eloqua High Value URL}} with the updated URL values (with new macro) in the Lookup Table. After that, I will create a new version and have you review and Publish. Does this sound ok?                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1328">https://issues.jboss.org/browse/DEVELOPER-1328</a> |
| 7422 | DEVELOPER-1324 | [~paul.robinson] I know where to update it, but is there a good place to pull it. I just want to make sure that I have the correct profile information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1324">https://issues.jboss.org/browse/DEVELOPER-1324</a> |
| 7423 | DEVELOPER-1324 | Can this be merged and closed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1324">https://issues.jboss.org/browse/DEVELOPER-1324</a> |
| 7424 | DEVELOPER-1316 | [~paul.robinson] I have the PR ready, should I just hold onto it and rebase when requested?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1316">https://issues.jboss.org/browse/DEVELOPER-1316</a> |
| 7425 | DEVELOPER-1309 | Do you have a web page that represents the Devvxx4Kids stuff done by your JUG? We can put your details in this area: <a href="https://www.dropbox.com/s/wgqi0jwzfvla244/Screenshot%202015-04-17%2009.14.33.png?dl=0">https://www.dropbox.com/s/wgqi0jwzfvla244/Screenshot%202015-04-17%2009.14.33.png?dl=0</a> of <a href="http://www.jboss.org/devovxx4kids/">http://www.jboss.org/devovxx4kids/</a> . A link isn't essential (the Vancouver one doesn't have one). But if you have it then great!                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1309">https://issues.jboss.org/browse/DEVELOPER-1309</a> |
| 7426 | DEVELOPER-1309 | Sorry Paul, my bad. Our event was described here: <a href="http://rivierajug.org/xwiki/bin/view/Main/201411-devovxx4kids">http://rivierajug.org/xwiki/bin/view/Main/201411-devovxx4kids</a> , we don't have a dedicated page for it yet but the whole team wants to do it on a regular basis so it won't be the last. I did not quite understand what you told me: how do I actually edit that page? I mean, I do see where it should go, but not how I can get the page's source.                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1309">https://issues.jboss.org/browse/DEVELOPER-1309</a> |
| 7427 | DEVELOPER-1304 | [~paul.robinson] That sounds good. Which banner should I replace on the main site?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1304">https://issues.jboss.org/browse/DEVELOPER-1304</a> |
| 7428 | DEVELOPER-1300 | [~paul.robinson] We're already late on our release schedule (mea culpa), so is it something you can process ASAP? Do you have any ETA? Thanks for your help!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-1300">https://issues.jboss.org/browse/DEVELOPER-1300</a> |

| 7431 | DEVELOPER-1295 | Rajesh, Can you give a link to what tag line was used for 6.0 ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1295">https://issues.jboss.org/browse/DEVELOPER-1295</a> |
| 7432 | DEVELOPER-1295 | {quote} With this release, we no longer bundle EAP within the BRMS installer. To get started BRMS users will also need access to EAP 6.4 zip. Can this also be included in the downloads section? {quote} I think we need to update the get-started instructions to include this step. This is where we normally put installation instructions like this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1295">https://issues.jboss.org/browse/DEVELOPER-1295</a> |
| 7433 | DEVELOPER-1295 | Instructions to download EAP under get-started works as well. It would fit well under the "Installation Instructions" section. This would probably be step no.2. Could we link to the EAP 6.4 downloads page on jboss.org? Does the wording below look good? "JBoss BPM Suite from 6.1 release onwards does not bundle EAP inside its installer. Visit the EAP downloads page and obtain EAP version 6.4 before using the JBoss BPM Suite installer"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-1295">https://issues.jboss.org/browse/DEVELOPER-1295</a> |
| 7434 | DEVELOPER-1295 | Did we manage to get in that note about EAP ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-1295">https://issues.jboss.org/browse/DEVELOPER-1295</a> |
| 7435 | DEVELOPER-1295 | Should "JBoss BPM Suite from 6.1 release onwards does not bundle EAP inside its installer. Visit the EAP downloads page and obtain EAP version 6.4 before using the JBoss BPM Suite installer" be posted under both BRMS and BPM Suite? I have it added to BPMSuite right now, but I'll wait to submit the PR in case you'd like it under both.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1295">https://issues.jboss.org/browse/DEVELOPER-1295</a> |
| 7436 | DEVELOPER-1295 | [~rrajesh], I think having it as step 2 is confusing. The first step tells the user to download the installer. Many will then try and run the installer, which won't work as step 2 is not done yet. Also, I think it needs to be made clearer that EAP needs installing as well as downloading. How about: 1. JBoss BRMS from 6.1 release onwards does not bundle EAP inside its installer. Visit the EAP downloads page to download and then install EAP version 6.4 before using the JBoss BRMS installer. 2. Visit the JBoss BRMS download page and download the installer. 3. Make sure you have a JDK of your choice installed. We recommend OpenJDK or Oracle JDK. 4. You can now (optionally) install the Integration Stack for JBoss Developer Studio. This provides IDE support for developing JBoss BRMS applications. For more details, see the installation instructions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1295">https://issues.jboss.org/browse/DEVELOPER-1295</a> |
| 7437 | DEVELOPER-1285 | Do you know when you expect the CDN links to be available?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1285">https://issues.jboss.org/browse/DEVELOPER-1285</a> |
| 7438 | DEVELOPER-1273 | [~kpeeples] Can you provide the full information that we need? There's a handy checklist here: https://github.com/jboss-developer/www.jboss.org/blob/master/CONTRIBUTING.md#how-to-request-a-new-product-download                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1273">https://issues.jboss.org/browse/DEVELOPER-1273</a> |
| 7439 | DEVELOPER-1273 | Are there source or maven repo links that need to be added as well, or should I just add the installer?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1273">https://issues.jboss.org/browse/DEVELOPER-1273</a> |
| 7440 | DEVELOPER-1273 | I'd assume it's just a single download, as Kenny would have said otherwise. Can you proceed on this understanding. Kenny, please correct us ASAP if this isn't the case.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-1273">https://issues.jboss.org/browse/DEVELOPER-1273</a> |
| 7441 | DEVELOPER-1271 | Yes we can do this. Can you work with [~james.cobb], who's team will produce the graphics.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1271">https://issues.jboss.org/browse/DEVELOPER-1271</a> |
| 7442 | DEVELOPER-1271 | [~philsimpson] Are we looking at two different releases here? BPM Suite 6.1 BRMS 6.1 How do we want to word this exactly?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1271">https://issues.jboss.org/browse/DEVELOPER-1271</a> |
| 7443 | DEVELOPER-1271 | These look great! Couple of things - - Can we add JBoss to the product name? JBoss BPM Suite 6.1 - For the CTA button can we have "Learn More" instead of "Try It Now"? Since its not going directly to a download page. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1271">https://issues.jboss.org/browse/DEVELOPER-1271</a> |
| 7444 | DEVELOPER-1271 | [~paul.robinson] Should I plan on adding this in place of another banner or in addition to the others? Also, what should I put for the "alt" on the image links?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1271">https://issues.jboss.org/browse/DEVELOPER-1271</a> |
| 7445 | DEVELOPER-1271 | Looks like the release is delayed a couple days due to dependency on EAP 6.4. Can we push this banner to April 16? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1271">https://issues.jboss.org/browse/DEVELOPER-1271</a> |
| 7446 | DEVELOPER-1270 | Which pages in particular do you want to change? http://www.jboss.org/products/bpmsuite/overview/ is based on: https://github.com/jboss-developer/www.jboss.org/blob/master/products/bpmsuite/overview.adoc If you look carefully you can see where the various sections of the asciidoc file are inserted into the page layout. You could edit the adoc file maybe?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-1270">https://issues.jboss.org/browse/DEVELOPER-1270</a> |
| 7447 | DEVELOPER-1269 | [~paul.robinson] why is this still trying to do deployments? We released Beta1 on Mar 5, and CR1 last week. Surely this shouldn't be still staging old PRs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1269">https://issues.jboss.org/browse/DEVELOPER-1269</a> |

| 7448 | DEVELOPER-1266 | Looks like you've had a copy-and-paste catastrophe :-). Can you provide the right link?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-1266">https://issues.jboss.org/browse/DEVELOPER-1266</a> |
| 7449 | DEVELOPER-1266 | Hi [~mfusco], It seems like the link you provided isn't working. Both safari and chrome say the server for the page isn't responding. Is there another link I can use? (I'll try it again later to see if it works) Adela                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1266">https://issues.jboss.org/browse/DEVELOPER-1266</a> |
| 7450 | DEVELOPER-1266 | Do you mean this url? <a href="http://www.ated.ch/corsi/8/devoxx4kids_3142.html">http://www.ated.ch/corsi/8/devoxx4kids_3142.html</a> Weird, I just tried it both Firefox and Chrome and it works for me. Please let me know.<br>Thanks, Mario                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1266">https://issues.jboss.org/browse/DEVELOPER-1266</a> |
| 7451 | DEVELOPER-1266 | Hi [~mfusco] Sorry to bother you again. I am adding the event to the <a href="http://jboss.org/events/">http://jboss.org/events/</a> page, but I need a description for the thumbnail. Can you send me one when you get a chance so I can add the event to this page as well? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1266">https://issues.jboss.org/browse/DEVELOPER-1266</a> |
| 7452 | DEVELOPER-1266 | How about you create a generic Devoxx4Kids image that we can use for all such events?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1266">https://issues.jboss.org/browse/DEVELOPER-1266</a> |
| 7453 | DEVELOPER-1258 | In general, this seems sensible to me. I think we can work-around the expensive nature of doing this indexing, by doing it infrequently and outside of the main indexing. Do you need access to quickstart versions prior to those available today?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-1258">https://issues.jboss.org/browse/DEVELOPER-1258</a> |
| 7454 | DEVELOPER-1258 | Doesn't it make sense to address this as part of the issue we have to add versioning to all developer materials, thus allowing JBDS to select the materials by target product version?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1258">https://issues.jboss.org/browse/DEVELOPER-1258</a> |
| 7455 | DEVELOPER-1258 | [~pmuir], [~tmancini], [~akazakov]: dear fearless leaders, what priority should we put on to making quickstarts/examples available *per* runtime version, in Devstudio (and the website)? As currently only the latest version is available. I'm asking because [~paul.robinson] and I need to do some sensible planning for implementing this feature.                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-1258">https://issues.jboss.org/browse/DEVELOPER-1258</a> |
| 7456 | DEVELOPER-1249 | Can this be deleted?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-1249">https://issues.jboss.org/browse/DEVELOPER-1249</a> |
| 7457 | DEVELOPER-1248 | this is about right. As I mentioned in JBDS-3273, couldn't we get a quickstart_id collection instead? AFAIK, some quickstarts are meant to be used together (typically client & server). Also, how can we add more metadata for each client? I'm thinking JBoss Tools specific things, like eclipse plugin/server requirements                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1248">https://issues.jboss.org/browse/DEVELOPER-1248</a> |
| 7458 | DEVELOPER-1248 | Can you give me some specific examples of where you need the "quickstart_id collection"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1248">https://issues.jboss.org/browse/DEVELOPER-1248</a> |
| 7459 | DEVELOPER-1248 | {quote} Also, how can we add more metadata for each client? I'm thinking JBoss Tools specific things, like eclipse plugin/server requirements {quote} This would be harder. We'd need a deterministic way of picking that content out of the quickstart code. For example, in this file: <a href="https://github.com/jboss-developer/jboss-eap-quickstarts/blob/6.4.x-develop/bean-validation/README.md">https://github.com/jboss-developer/jboss-eap-quickstarts/blob/6.4.x-develop/bean-validation/README.md</a> . For the other meta-data we look for required text patterns (e.g: 'Author: Karel Piwko').                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1248">https://issues.jboss.org/browse/DEVELOPER-1248</a> |
| 7460 | DEVELOPER-1248 | Daniel, how do you get these fields show up in the response to <a href="http://dcp.jboss.org/v1/rest/search?content_provider=jboss-developer&amp;content_provider=rht&amp;field=github_repo_url&amp;field=sys_title&amp;field=sys_tags&amp;query=sys_type:(jbossdeveloper_quickstart)&amp;size=1">http://dcp.jboss.org/v1/rest/search?content_provider=jboss-developer&amp;content_provider=rht&amp;field=github_repo_url&amp;field=sys_title&amp;field=sys_tags&amp;query=sys_type:(jbossdeveloper_quickstart)&amp;size=1</a> ?                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1248">https://issues.jboss.org/browse/DEVELOPER-1248</a> |
| 7461 | DEVELOPER-1248 | [~fbriçon] what should the value of the 'download' attribute contain?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1248">https://issues.jboss.org/browse/DEVELOPER-1248</a> |
| 7462 | DEVELOPER-1248 | This link downloads the entire repo containing the QS, not the individual QS. Is this what you want? E.g: <a href="https://github.com/jboss-developer/jboss-eap-quickstarts/archive/6.3.0.GA.zip">https://github.com/jboss-developer/jboss-eap-quickstarts/archive/6.3.0.GA.zip</a> BTW, there's no way, that I know of, to download just the quickstart dir from Github as a zip.                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1248">https://issues.jboss.org/browse/DEVELOPER-1248</a> |
| 7463 | DEVELOPER-1248 | [~paul.robinson] the git_commit is being pushed through for all of them that I can tell. I ran a straight print out to a local file and double-checked these items. It's peculiar that the first half of them don't seem to get the updates. Could it have to do with the rest endpoint not actually updating the database? Would Lukas know how to go about this?                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1248">https://issues.jboss.org/browse/DEVELOPER-1248</a> |
| 7464 | DEVELOPER-1248 | Can you provide a reproduction steps for us to investigate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-1248">https://issues.jboss.org/browse/DEVELOPER-1248</a> |
| 7465 | DEVELOPER-1248 | Can you provide an update on where you are with this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1248">https://issues.jboss.org/browse/DEVELOPER-1248</a> |
| 7466 | DEVELOPER-1246 | [~paul.robinson] Currently, the /events page has calendar ranges that can be used and by default is showing only current/future events. Is this issue still relevant, or can I close it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1246">https://issues.jboss.org/browse/DEVELOPER-1246</a> |
| 7467 | DEVELOPER-1242 | When will this go into production?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1242">https://issues.jboss.org/browse/DEVELOPER-1242</a> |
| 7468 | DEVELOPER-1218 | [~manaRH] We still need Ticket Monster updating. Can you create a separate issue for that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1218">https://issues.jboss.org/browse/DEVELOPER-1218</a> |
| 7469 | DEVELOPER-1204 | Can you assign to Adela, once the wireframes are approved.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1204">https://issues.jboss.org/browse/DEVELOPER-1204</a> |
| 7470 | DEVELOPER-1187 | [~paul.robinson] So the Red Hat Event does show up, but the shadowman logo is not appearing next to it ( <a href="https://www.dropbox.com/s/e9m8n4d1pkvj0p1/Events_featuring_JBoss.png?dl=0">https://www.dropbox.com/s/e9m8n4d1pkvj0p1/Events_featuring_JBoss.png?dl=0</a> ). We eventually want it to display like <a href="https://www.dropbox.com/s/vezzw1s4gahko1s/jbossdeveloper_getinvolved_events-1200px_png_1728%C3%972160_.png?dl=0">https://www.dropbox.com/s/vezzw1s4gahko1s/jbossdeveloper_getinvolved_events-1200px_png_1728%C3%972160_.png?dl=0</a> , right? Should this be done by styling? The ruby block already differentiates between Red Hat and non-Red Hat events, the css doesn't show any references to the logos. | <a href="https://issues.jboss.org/browse/DEVELOPER-1187">https://issues.jboss.org/browse/DEVELOPER-1187</a> |
| 7471 | DEVELOPER-1181 | Which dcp instance is this? I'm wondering if we have lingering quickstarts where we've changed an id or something. Chances are they aren't returned anymore when people search for them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1181">https://issues.jboss.org/browse/DEVELOPER-1181</a> |
| 7472 | DEVELOPER-1180 | <a href="https://github.com/jboss-developer/jboss-stacks/commit/02149f933af5d3b3df2ca0823875e1af6f99efc">https://github.com/jboss-developer/jboss-stacks/commit/02149f933af5d3b3df2ca0823875e1af6f99efc</a> fixed it for me. Thanks a lot Rafael!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1180">https://issues.jboss.org/browse/DEVELOPER-1180</a> |
| 7473 | DEVELOPER-1170 | Yes, it is possible. I would suggest to update relevant mapping configurations and store it into a new branch of Searchisko. I will be happy to review it and then we elaborate a plan of releasing it into production (and staging of course) and merge it. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1170">https://issues.jboss.org/browse/DEVELOPER-1170</a> |
| 7474 | DEVELOPER-1166 | I think I see what you mean: 1. Visit: <a href="http://www.jboss.org/products/dataviert/get-started/">http://www.jboss.org/products/dataviert/get-started/</a> 2. Click on the link to 'Download JBoss Data Virtualization 6.0.0.GA Jar (Installer)'. 3. This downloads jboss-dv-installer-6.0.0.GA-redhat-4.jar, yet the instructions tell you to unzip. Is this the issue you are referring to? If so, it's already happening in production, so not relevant to this particular issue. I've opened a new issue for it: <a href="https://issues.jboss.org/browse/DEVELOPER-1182">https://issues.jboss.org/browse/DEVELOPER-1182</a> DEVELOPER-1182 aside, is this change good to merge?                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-1166">https://issues.jboss.org/browse/DEVELOPER-1166</a> |
| 7475 | DEVELOPER-1165 | Whereabouts would you like this text putting?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1165">https://issues.jboss.org/browse/DEVELOPER-1165</a> |

| #    | Requirement    | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | URL                                                                                                         |
|------|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| 7476 | DEVELOPER-1165 | Actually, we already have a feature in place to show this, although there are no examples live at the moment. This data normally goes in the blue early release box on the right-hand side of the product page. However, you don't get as much space as you would need for the text above. How about we put a summary in the blue box and then add the text above to the body of the overview page? I can't easily provide you with a mockup at the moment, so this is probably best holding until January. However, we are not pushing any more changes to the site until the 5th of January anyway so it makes little difference. [~dcoughlin1], if you understand what I'm getting at, and you have time, you could raise a PR with these changes: 1) Add the full text above to the body of the product overview page. Maybe straight after the 3 icon block: <a href="https://www.dropbox.com/s/8kmn8hdj9yaqes0/Screenshot%202014-12-19%2017.17.53.png?dl=0">https://www.dropbox.com/s/8kmn8hdj9yaqes0/Screenshot%202014-12-19%2017.17.53.png?dl=0</a> 2) Add 250 characters of "lorem ipsum" to the tag_line property on the 6.1 Beta download (once you've added that download, as requested in the another issue) in the DV product.yml. See here for an example: <a href="https://github.com/jboss-developer/www.jboss.org/blob/master/products/eap/_common/product.yml#L49">https://github.com/jboss-developer/www.jboss.org/blob/master/products/eap/_common/product.yml#L49</a> . 250 characters might be too much, but it will give us an idea of what it looks like and how much is a sensible amount of text. | <a href="https://issues.jboss.org/browse/DEVELOPER-1165">https://issues.jboss.org/browse/DEVELOPER-1165</a> |
| 7477 | DEVELOPER-1165 | Also, let us know if you want the full text (in the description) adding to the overview page. If you do want it, I have some queries about the text: 1) The text "Big Data technology including Cloudera Impala ..." seems a bit confusing to me. It sounds like DV includes these technologies. I think you mean something like "New Integration with Big Data technologies including ...". Can you clarify this? 2) This sentence is confusing me: "Improving Productivity and Deployment with a new Security audit log dashboard, simplified custom translator, EAP 6.3, RHEL 7, MariaDB and Azul JVM". I think these are separate new things: * Improving Productivity and Deployment with a new Security audit log dashboard * simplified custom translator * EAP 6.3 * RHEL 7 * MariaDB * Azul JVM In which case I understand how the first two items are new things in DV. However, it's not clear to me what you mean with the following four items. Is it support for these technologies that is new? If you do decide to have this text on the main body of the overview page, then you would have a bit more space available than you probably thought you had when producing the original text. Therefore you could make use of lists to clarify the text if you want.                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1165">https://issues.jboss.org/browse/DEVELOPER-1165</a> |
| 7478 | DEVELOPER-1165 | [~dcoughlin1] yes please. Can you add it add the end of the 'detail' section: <a href="https://github.com/jboss-developer/www.jboss.org/blob/master/products/datavirt/overview.adoc#detail">https://github.com/jboss-developer/www.jboss.org/blob/master/products/datavirt/overview.adoc#detail</a> so that it appears before resources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1165">https://issues.jboss.org/browse/DEVELOPER-1165</a> |
| 7479 | DEVELOPER-1165 | How about this: <a href="https://www.dropbox.com/s/vetwhfs5eeiz0sl/Screenshot%202015-01-15%2009.36.11.png?dl=0">https://www.dropbox.com/s/vetwhfs5eeiz0sl/Screenshot%202015-01-15%2009.36.11.png?dl=0</a> Changes: * Added the title: "What's new in JBoss Data Virtualization 6.1 Beta?" * Moved the current title down to the beginning of the section * Collapsed the bullets into the opening sentence: "For JBoss Data Virtualization 6.1 Beta, we focused on Big Data, Cloud and other Productivity and deployment improvements." [~kpalko] and [~kpeeples]: are you happy with these changes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1165">https://issues.jboss.org/browse/DEVELOPER-1165</a> |
| 7480 | DEVELOPER-1165 | This screen shot looks good. Will this text be displayed close to the "download" button so that users will know what they are getting when they download? thanks, Kim                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-1165">https://issues.jboss.org/browse/DEVELOPER-1165</a> |
| 7481 | DEVELOPER-1165 | Hi Syed, Can you please help craft a short (100 - 250 char) text around What's New in JDV 6.1 for the beta download button? thanks, Kim                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1165">https://issues.jboss.org/browse/DEVELOPER-1165</a> |
| 7482 | DEVELOPER-1165 | [~srasheed], We've had a think about this and we think the best we can offer at this moment is to add the the ~250 chars description, that you provided above, to the right-hand-bar, with a "read more" link that points to the full list of new features. Can you create a customer portal article for the full feature list? This would be better than linking to the PDF. I appreciate that this might not be exactly what you were hoping for. In which case, can you open a new issue explaining your requirements in some detail. We'll do our best to get to it, but I can say that with our current workload it's unlikely to be in the next few weeks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1165">https://issues.jboss.org/browse/DEVELOPER-1165</a> |
| 7483 | DEVELOPER-1159 | This is in reference to the ../index reference that has been giving jboss.org issues with all of the quickstarts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1159">https://issues.jboss.org/browse/DEVELOPER-1159</a> |
| 7484 | DEVELOPER-1154 | Those links seem to have an erroneous trailing '0'. However, looking at <a href="http://www.jboss.org/products/fsw/overview/">http://www.jboss.org/products/fsw/overview/</a> and <a href="http://www.jboss.org/products/fsw/">http://www.jboss.org/products/fsw/</a> I don't see the broken links. Can you double check? It might be fixed now.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-1154">https://issues.jboss.org/browse/DEVELOPER-1154</a> |
| 7485 | DEVELOPER-1148 | [~paul.robinson] Can I comment this out in Blinkr.yaml?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1148">https://issues.jboss.org/browse/DEVELOPER-1148</a> |
| 7486 | DEVELOPER-1148 | I've just given permission to edit via your gmail address. Can you re-check?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1148">https://issues.jboss.org/browse/DEVELOPER-1148</a> |
| 7487 | DEVELOPER-1148 | [~paul.robinson] None of these are on the spreadsheet anymore. Do I need to hit Lukas up for a reindex?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1148">https://issues.jboss.org/browse/DEVELOPER-1148</a> |
| 7488 | DEVELOPER-1144 | {quote} modify the instructions for zip vs install {quote} In step 3, we tell the user how to install from a zip. Are you saying we should add instructions for how to install from an installer too? Ideally we would display different instructions based on what artefact is downloaded, but again we'd need DEVELOPER-712 to do this. In the short term we could add extra instructions for the installer. Is that what you would like?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1144">https://issues.jboss.org/browse/DEVELOPER-1144</a> |
| 7489 | DEVELOPER-1144 | Does JBDS 8 and 7, with the IS plugin, work with both datavirt 6.0.0.GA and 6.1.0.ALPHA? If so, given that we can't yet customise the get-started page by download, we could just link to the JBDS 8 and IS instructions: <a href="http://www.jboss.org/products/devstudio/get-started/#ExtraSection">http://www.jboss.org/products/devstudio/get-started/#ExtraSection</a> . Could that work?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-1144">https://issues.jboss.org/browse/DEVELOPER-1144</a> |
| 7490 | DEVELOPER-1139 | [~paul.robinson] My plan is to comment this out until a new link is provided. Is that okay? If not, who should I contact to get the correct link?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1139">https://issues.jboss.org/browse/DEVELOPER-1139</a> |
| 7491 | DEVELOPER-1131 | Are we wanting to use the README.md files for this or something else? The README file isn't quite up to par with the rest of our developer materials.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-1131">https://issues.jboss.org/browse/DEVELOPER-1131</a> |
| 7492 | DEVELOPER-1103 | {quote} JBoss Developer Studio provides an easy-to-use integration development environment built on Eclipse. The JBoss Developer Studio Integration Stack provides tooling for developing, configuring and deploying Fuse applications. {quote} Is it this text that you want moving? Also, I'm not sure what you mean by the "runtime download button". Can you explain or provide a screenshot?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-1103">https://issues.jboss.org/browse/DEVELOPER-1103</a> |
| 7493 | DEVELOPER-1103 | Aileen, the jbds page outlines that. Not much room if want some simple button added. Got a suggestion on how to fix it? /max <a href="http://about.me/maxandersen">http://about.me/maxandersen</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1103">https://issues.jboss.org/browse/DEVELOPER-1103</a> |

The JBoss Developer Studio Integration Stack provides tooling for developing, configuring and deploying Fuse applications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1103">https://issues.jboss.org/browse/DEVELOPER-1103</a> |
| 7495 | DEVELOPER-1103 | Is it intentional that the 2nd download button is a different size and colour? I'm not a UX person, but would have kept them consistent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1103">https://issues.jboss.org/browse/DEVELOPER-1103</a> |
| 7496 | DEVELOPER-1075 | [~sparulka] How important is it to change the text under "JBoss xPaaS services for OpenShift"? This is currently generic across all products, and the text you proposed wouldn't make sense for EAP. We can make this more customisable, but it would make maintenance harder and more error-prone.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1075">https://issues.jboss.org/browse/DEVELOPER-1075</a> |
| 7497 | DEVELOPER-1075 | [~dcoughlin1] Can you work on this today please? Don't worry about the change to the download page, I can do that.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1075">https://issues.jboss.org/browse/DEVELOPER-1075</a> |

| 7498 | DEVELOPER-1075 | [~paul.robinson] For the resources portion, this information is rendered from /_layouts/product-resources.html.slim. I can remove all of the entities in the product.yml and leave the 'See More Documentation' (https://access.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Fuse)? Is there a way to do this without changing the template .slim file? ~Dan                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1075">https://issues.jboss.org/browse/DEVELOPER-1075</a> |
| 7499 | DEVELOPER-1063 | [~paul.robinson] Would it be better if I address only JBoss Developer in this? For now, I am going to list each authors errors in separate Issues. Ex: "Vimeos with Duplicate/Truncated Descriptions - Eric Schabell" With each of the issues.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1063">https://issues.jboss.org/browse/DEVELOPER-1063</a> |
| 7500 | DEVELOPER-1057 | Sameer, The page you are referring to provides results from a search. In this case you are searching for all developer materials that are related to the Fuse product. We don't currently provide customisable ordering, but we could in the future. However, it would more likely be the ability to order by recency, difficulty, duration etc. What ordering algorithm did you use to establish the above order?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1057">https://issues.jboss.org/browse/DEVELOPER-1057</a> |
| 7501 | DEVELOPER-1057 | Ok, 1) is now live: http://www.jboss.org/products/fuse/get-started/ 2) We are the process of improving the entire developer-materials UX. In the process we will design how to do DEVELOPER-885. So it's in progress, but it will be a while. Do you have a urgent requirement for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-1057">https://issues.jboss.org/browse/DEVELOPER-1057</a> |
| 7502 | DEVELOPER-1057 | (2) as soon as possible please..lot of pressure to improve the overall getting started experience for Fuse..DEVELOPER-1053 was very important and I am glad we have done that..however we still need to make the videos easily consumable.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-1057">https://issues.jboss.org/browse/DEVELOPER-1057</a> |
| 7503 | DEVELOPER-1057 | Given that we have alternatives, I think this current issue is a "won't fix". Could you create a new issue for the guides? If you can identify roughly what you want to appear in each guide, we can use it as input for the general design work around the guides infrastructure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1057">https://issues.jboss.org/browse/DEVELOPER-1057</a> |
| 7504 | DEVELOPER-1056 | Jason, Can you provide examples of what you think the RDF should look like for these items? I wasn't totally happy with containsProjects and containedWithinProjects, but couldn't think of anything better. I guess the problem is that it sounds like the codebase is contained within another project, rather than the other project simply uses the other project as a dependency and maybe ships with it in its binary. I think "consumes" and "consumedBy" is better, but feel like there's something clearer that is eluding us. [~pmuir], you are usually good at coming up with names, what do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1056">https://issues.jboss.org/browse/DEVELOPER-1056</a> |
| 7505 | DEVELOPER-1053 | After discussion with Sameer and Christina we would like to do the following. I attached the markdown file as well: Replace the 'Try a quickstart or example. Watch a video' with 'Build your first application' and then the content below which is the markdown I tested in a markdown editor: Follow the below series to build your first application. You will build some simple examples as well as build a Home Loan Application using JBoss Fuse to integrate different enterprise systems. The Home Loan Application accepts a loan request from the customer and provides a loan decision including a home mortgage rate. The series walks you through each step of the application development lifecycle from start to finish.   Demonstration Description   Material    -----   -----    What is JBoss Fuse?   Demo Source: https://github.com/kpeeples/jboss-fuse-websockets-demo <br> Video 1: http://vimeo.com/user16928011/fusetting-started-part1 <br> Video 2: http://vimeo.com/user16928011/fuse-getting-started-part2 <br> Video 3: http://vimeo.com/user16928011/fuse-getting-started-part3     What is Apache Camel? What are Enterprise Integration Patterns (EIP)?   Demo Source: https://github.com/kpeeples/fuse-eip-quickstart     Build the Home loan application using EIP's   Demo Source: https://github.com/weimeilin79/homeloan-part1 <br> Video 1: https://vimeo.com/99901083     Business requirements change. Extend the home loan application. New SaaS applications? No problem..   Demo Source: https://github.com/weimeilin79/homeloan-part2 <br> Video 1: https://vimeo.com/100685377 <br> Video 2: https://vimeo.com/100872412     Business expanding. Extend the home loan application to partners, suppliers.   Demo Source: https://github.com/weimeilin79/homeloan-part3 <br> Video 1: https://vimeo.com/101265926     Innovate further. Try, experiment, test, deploy.   Video 1: https://vimeo.com/101266094 | <a href="https://issues.jboss.org/browse/DEVELOPER-1053">https://issues.jboss.org/browse/DEVELOPER-1053</a> |
| 7506 | DEVELOPER-1053 | When will this be live?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-1053">https://issues.jboss.org/browse/DEVELOPER-1053</a> |
| 7507 | DEVELOPER-1047 | Some more issues: * Tabbing though the items still (regularly) selects the 'required' text. Reproduce by trying to select the first text-box on the first page and then pressing tab a few times. Notice that it keeps on selecting the 'required' text field. * Hitting on the 'down arrow' on the 'team member role selector' creates a blue rectangle, rather than the drop-down. Clicking further to the left works as expected. This also happens if you click on a person's name in the right hand box. See here: https://www.dropbox.com/s/uxd6412dv1rave3/Screenshot%202014-10-20%2009.19.51.png?dl=0. This isn't a major issue, so just fix if it's simple. * Add this text to the 'Versions' page to make it clearer what we expect here: "Use this page to provide details of recent releases. There's no need to provide every single release for the project. For example, you could provide the latest GA release, the latest early-access release from an upcoming GA release and maybe the latest GA release that is available in a current product. Looking at the RDF produced for Narayana: https://github.com/jbosstm/project-metadata/blob/master/narayana.rdf * Should the 'Project Lead' be in a 'maintainer' block? * Despite adding two releases only one (the second one I added to the form) is present. * The description for the JTA specification is missing I temporarily added a Twitter account (Narayana has no social media). This is the result: {code} <foaf:account> <foaf:OnlineAccount> <rdf:type rdf:resource="http://xmlns.com/foaf/0.1/OnlineChatAccount" /> <foaf:accountServiceHomepage rdf:resource="http://www.twitter.com" /> <foaf:accountName>removeThisSection</foaf:accountName> </foaf:OnlineAccount> </foaf:account> {code} Should the "rdf:resource" be set to "http://xmlns.com/foaf/0.1/OnlineChatAccount"? I'm not sure how important this is.                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-1047">https://issues.jboss.org/browse/DEVELOPER-1047</a> |
| 7508 | DEVELOPER-1043 | [~james.cobb] - do you know when you will be ready to pass this over to me?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1043">https://issues.jboss.org/browse/DEVELOPER-1043</a> |
| 7509 | DEVELOPER-1043 | Yes, only some is available at the moment. Does it look OK with the limited info?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1043">https://issues.jboss.org/browse/DEVELOPER-1043</a> |
| 7510 | DEVELOPER-1040 | Dan, can you create these as I still don't have access myself.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-1040">https://issues.jboss.org/browse/DEVELOPER-1040</a> |
| 7511 | DEVELOPER-1012 | I've noticed some of the requests made for contributors are being aborted because there are others going on. Don't we want all of those to go through? cc [~wesbos]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-1012">https://issues.jboss.org/browse/DEVELOPER-1012</a> |
| 7512 | DEVELOPER-1012 | Don't we basically have this done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-1012">https://issues.jboss.org/browse/DEVELOPER-1012</a> |
| 7513 | DEVELOPER-1012 | I think so, [~pmuir] as the reporter, can you confirm?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-1012">https://issues.jboss.org/browse/DEVELOPER-1012</a> |
| 7514 | DEVELOPER-1011 | I don't think that makes any sense. What do we fallback to?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-1011">https://issues.jboss.org/browse/DEVELOPER-1011</a> |
| 7515 | DEVELOPER-1009 | [~paul.robinson] Apparently, I can't assign this to you. What are the next steps?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-1009">https://issues.jboss.org/browse/DEVELOPER-1009</a> |

| 7516 | DEVELOPER-996 | [~james.cobb] will the homepage banners always be either png or jpg, or could they be either in the future?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-996">https://issues.jboss.org/browse/DEVELOPER-996</a> |
| 7517 | DEVELOPER-994 | [~pmuir] Where did we decide to host our own extension schema, jboss.org? [~paul.robinson] I'm a bit confused by your #4. What do you mean we don't allow projects to provide a logo?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-994">https://issues.jboss.org/browse/DEVELOPER-994</a> |
| 7518 | DEVELOPER-994 | [~lightguard], [~pmuir]: We currently have James make an image at the right size, quality and dimensions and put it on static.jboss.org manually in a predictable location. This is not ideal, but it ensures we get good quality logos that fit correctly on the page. My comment was more a statement of what we do now, to open up discussion. Rather cryptic, I agree ;-) Anyway, if we keep the logo field, what is it used for? I see these options: 1) Grab the logo they suggest and do what we can with it automatically. Maybe we could validate the minimum dimensions in the DOAP form. 2) Have James use the logo as a suggestion. He can chose to use as is, modify it, or recreate entirely, then manually add it to static.jboss.org. I appreciate that 1) is more in-line with our goals around self-service, but I fear we will get a real mess of logos. | <a href="https://issues.jboss.org/browse/DEVELOPER-994">https://issues.jboss.org/browse/DEVELOPER-994</a> |
| 7519 | DEVELOPER-994 | Also, # Can the description field be made larger? # We should probably limit the number of characters for "Project Name", "Short Description" and "Description". [~james.cobb] do you have any limits imposed by your mockup? # What is "Browse URL"? # Make it clear which are optional and which mandatory. # What is "Community Account"? # Allow people to be removed, currently they can just be added. If you make a mistake, I think you have to start again with the entire form. # The logo URL should not be mandatory # User Forum and Developer forum # IRC/Chat room address # Why does the form need both a "Generate DOAP" and "Download DOAP" link? Isn't the latter enough?                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-994">https://issues.jboss.org/browse/DEVELOPER-994</a> |
| 7520 | DEVELOPER-994 | I have no character limits in place at this point. Do you have a suggestion for the max number of characters?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-994">https://issues.jboss.org/browse/DEVELOPER-994</a> |
| 7521 | DEVELOPER-994 | Before I forget... Should the "release name" be mandatory?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-994">https://issues.jboss.org/browse/DEVELOPER-994</a> |
| 7522 | DEVELOPER-994 | Sorry, we have had no requests for design on this page but we can. Do we want this to also have the Developer Look and Feel?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-994">https://issues.jboss.org/browse/DEVELOPER-994</a> |
| 7523 | DEVELOPER-994 | Is this a project somewhere? Perhaps we can tweak the css a bit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-994">https://issues.jboss.org/browse/DEVELOPER-994</a> |
| 7524 | DEVELOPER-994 | [~lightguard], [~james.cobb]: Sorry for being unclear. I meant to ask: {quote} James Cobb: do you have any limits imposed by your *upstream projects page* mockup? {quote} The mockup of the upstream projects page has several areas of text. If we allow projects to provide too much text, it will not fit in those areas as currently designed. We can truncate, but better to have the project leads provide something that fits in the first place. I agree, we don't want any visual-design work done on this page as it is internal only. We might need UX input though as a lot of people are going to be filling this in without having one of us sat by their side explaining how to do it.                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-994">https://issues.jboss.org/browse/DEVELOPER-994</a> |
| 7525 | DEVELOPER-979 | [~paul.robinson] I'm not sure that I fully understand this. So I found the different README.mds that are generating the errors. Should I create separate issues per quickstart and list the respective broken links?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-979">https://issues.jboss.org/browse/DEVELOPER-979</a> |
| 7526 | DEVELOPER-979 | How are you getting on with this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-979">https://issues.jboss.org/browse/DEVELOPER-979</a> |
| 7527 | DEVELOPER-958 | I notice you re-opened this 2 days ago. Is there something outstanding on this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-958">https://issues.jboss.org/browse/DEVELOPER-958</a> |
| 7528 | DEVELOPER-958 | Should this jira be assigned to [~lvlcek] also ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-958">https://issues.jboss.org/browse/DEVELOPER-958</a> |
| 7529 | DEVELOPER-958 | [~rafabene] Can you specify exactly which items to be removed? A DCP query is probably the best if you can construct one. [~lvlcek] does this make sense, or would you like the list in some other format?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-958">https://issues.jboss.org/browse/DEVELOPER-958</a> |
| 7530 | DEVELOPER-958 | [~rafabene] the above link currently selects 29 documents in production DCP. Do you want me to remove all these documents from DCP (production and if available on staging then also on staging)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-958">https://issues.jboss.org/browse/DEVELOPER-958</a> |
| 7531 | DEVELOPER-958 | [~rafabene] I deleted 29 documents from production and 59 from staging. Shall we move the ticket to RESOLVED state now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-958">https://issues.jboss.org/browse/DEVELOPER-958</a> |
| 7532 | DEVELOPER-956 | [~lkrzyzanek] what about urls like these: <a href="https://community.jboss.org/people/tomjenkinson">https://community.jboss.org/people/tomjenkinson</a> <a href="https://community.jboss.org/en/datagrid">https://community.jboss.org/en/datagrid</a> <a href="http://community.jboss.org/wiki/MavenGettingStarted-Users">http://community.jboss.org/wiki/MavenGettingStarted-Users</a> Will they be moved to developer.jboss.org? Will redirects be put in place?                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-956">https://issues.jboss.org/browse/DEVELOPER-956</a> |
| 7533 | DEVELOPER-949 | How about we set it manually and then document that this link needs updating whenever a new TiMo release is added to the site? The documentation would go as an extra step in <a href="https://github.com/jboss-developer/www.jboss.org/blob/master/CONTRIBUTING.md#updating-developer-materials-versions">https://github.com/jboss-developer/www.jboss.org/blob/master/CONTRIBUTING.md#updating-developer-materials-versions</a> . I agree this is still error-prone, but it's simpler and doesn't preclude a more rigorous approach should it prove problematic in the future.                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-949">https://issues.jboss.org/browse/DEVELOPER-949</a> |
| 7534 | DEVELOPER-935 | Does it need to be Font-Awesome? What about this icon: <a href="http://theblogicon.com/">http://theblogicon.com/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-935">https://issues.jboss.org/browse/DEVELOPER-935</a> |
| 7535 | DEVELOPER-933 | [~pmuir] - can you create an experiment in Google analytics? The instructions are here: <a href="https://developers.google.com/analytics/solutions/experiments-client-side#configure">https://developers.google.com/analytics/solutions/experiments-client-side#configure</a> We are doing a javascript swap-out so we don't need urls, just insert fake ones as it says.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-933">https://issues.jboss.org/browse/DEVELOPER-933</a> |
| 7536 | DEVELOPER-933 | [~pmuir] did they give you an experiment code? Is it moRTWrZ2RgCt2XT5fJPqrQ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-933">https://issues.jboss.org/browse/DEVELOPER-933</a> |
| 7537 | DEVELOPER-908 | [~wesbos] AM I right in thinking that we now expire this data after a few mins/hrs? If so, do we do that on RHD, JBD or both?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-908">https://issues.jboss.org/browse/DEVELOPER-908</a> |
| 7538 | DEVELOPER-907 | What do we want each of those to say, do we have approved text somewhere?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-907">https://issues.jboss.org/browse/DEVELOPER-907</a> |
| 7539 | DEVELOPER-893 | Hi [~pmuir], Do you want the link in the technologies secondary navigation to take you to the current /research page or to the current research/centre page? I was a bit confused. * <a href="http://www.jboss.org/research/">http://www.jboss.org/research/</a> * <a href="http://www.jboss.org/research/centre/">http://www.jboss.org/research/centre/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-893">https://issues.jboss.org/browse/DEVELOPER-893</a> |
| 7540 | DEVELOPER-864 | Nick, We need the downloads configuring in the download manager, before we can put this on the site. Can you provide us with the CDN urls for each file download you added? We'll get the download-manager updated to handle them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-864">https://issues.jboss.org/browse/DEVELOPER-864</a> |
| 7541 | DEVELOPER-864 | [~paul.robinson], I don't see beta 3 in customer portal yet. Is there another place that I should look to get the SHA-256 numbers?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-864">https://issues.jboss.org/browse/DEVELOPER-864</a> |
| 7542 | DEVELOPER-864 | [~nickboldt], [~dcoughlin1]: Thanks, I've merged it now. Did either of you check that the download file sizes are correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-864">https://issues.jboss.org/browse/DEVELOPER-864</a> |

| 7544 | DEVELOPER-863 | What about the quickstarts and videos, those are staying?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-863">https://issues.jboss.org/browse/DEVELOPER-863</a> |
| 7545 | DEVELOPER-848 | Can we use this one? <a href="http://www.redhat.com/about/events-webinars/webinars/20140619-data-driven-business-decisions-made-easy">http://www.redhat.com/about/events-webinars/webinars/20140619-data-driven-business-decisions-made-easy</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-848">https://issues.jboss.org/browse/DEVELOPER-848</a> |
| 7546 | DEVELOPER-819 | So, I have been having issues finding the Narayana broken link. Can I use Gateln or another project as the test?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-819">https://issues.jboss.org/browse/DEVELOPER-819</a> |
| 7547 | DEVELOPER-819 | Just so that I don't add the links incorrectly into blinkr.yaml, should it look like this? <a href="https://www.dropbox.com/s/isz8z2x1pxf1hjc/blinkr_regex.jpg">https://www.dropbox.com/s/isz8z2x1pxf1hjc/blinkr_regex.jpg</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-819">https://issues.jboss.org/browse/DEVELOPER-819</a> |
| 7548 | DEVELOPER-819 | [~dcoughlin1] I'm not sure that ignore is correct. I would have thought you could list the URL verbatim, without having to use a regex or escape sequence. See: <a href="https://github.com/pmuir/blinkr/blob/master/README.md#usage">https://github.com/pmuir/blinkr/blob/master/README.md#usage</a> . I would do: {code} - url: <a href="https://github.com/jbosstm#BLACKTIE-449">https://github.com/jbosstm#BLACKTIE-449</a> message: Couldn't resolve host name {code} @pmuir is this correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-819">https://issues.jboss.org/browse/DEVELOPER-819</a> |
| 7549 | DEVELOPER-819 | Can I continue creating JIRA's in the respective projects? I am just checking to make sure that no changes need to be made.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-819">https://issues.jboss.org/browse/DEVELOPER-819</a> |
| 7550 | DEVELOPER-807 | Sounds good. I have been searching for the actual training demonstrations on Google. It looks like they have been changed over to Eric Schabell's .org page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-807">https://issues.jboss.org/browse/DEVELOPER-807</a> |
| 7551 | DEVELOPER-807 | [~paul.robinson] I don't see any links to howtojboss within the project anymore, it looks like new links were added. Should this be closed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-807">https://issues.jboss.org/browse/DEVELOPER-807</a> |
| 7552 | DEVELOPER-807 | [~paul.robinson] I'm not sure if I should've created a new issue for this DEVELOPER-1117; however, it looks like the domain for howtojboss.com has expired. Should Eric Schabell be looped in on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-807">https://issues.jboss.org/browse/DEVELOPER-807</a> |
| 7553 | DEVELOPER-806 | [~dcoughlin1]: You need to fix the filename to point to the bpm suite download. This is already done in brms/product.yml; see this line "filename: jboss-bpm suite-6.0.1.GA-source.zip". Can you raise a PR, to change the links for each dup. It's a known issue that clicking on the link redirects to the wrong getting-started page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-806">https://issues.jboss.org/browse/DEVELOPER-806</a> |

| 7555 | DEVELOPER-804 | [~dcoughlin1] can you remove these links. [~sparulka] if you decide to add some new ones, after this is resolved, can you create a new issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-804">https://issues.jboss.org/browse/DEVELOPER-804</a> |
| 7556 | DEVELOPER-791 | I don't see the link at the top of the page. Can you provide a screenshot of the link?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-791">https://issues.jboss.org/browse/DEVELOPER-791</a> |
| 7557 | DEVELOPER-790 | [~lightguard]: Sure, I appreciate that we can't get a release of Awestruct just for our stuff. Do you know roughly when the next release is due? I'm thinking it might be safer to wait for that. The current build time of 13m is still pretty good.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-790">https://issues.jboss.org/browse/DEVELOPER-790</a> |
| 7558 | DEVELOPER-782 | [~lightguard] We need to be able to identify which projects appear in the featured area. I don't think it makes sense to put this data in Searchisko as the project data is shared, so we shouldn't be adding stuff specific to JBoss Developer in there. How about we make a .yaml file that lists the three featured projects? The featured projects are of the page is then generated at site build time, with the "All Projects" area continuing to be populated with JavaScript?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-782">https://issues.jboss.org/browse/DEVELOPER-782</a> |
| 7559 | DEVELOPER-782 | [~paul.robinson] it was [~james.cobb] - I think they were 5 max, we can do three no problem. Which three should we feature right now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-782">https://issues.jboss.org/browse/DEVELOPER-782</a> |
| 7560 | DEVELOPER-782 | [~james.cobb] - we are going to use three featured projects - Narayana, Weld and DeltaSpike. Can you give me the images for those? Or ideally host them? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-782">https://issues.jboss.org/browse/DEVELOPER-782</a> |
| 7561 | DEVELOPER-781 | Do I need access to dcpbeta-searchisko to add the detail for this webinar? I see that the JSON is coming from here, but I'm not sure how to add the content information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-781">https://issues.jboss.org/browse/DEVELOPER-781</a> |
| 7562 | DEVELOPER-738 | [~maxandersen] My problems with a single overview page were: 1) Where do we weave it into the current navigation? 2) Is it really what a user wants to see? Seems like information overload to me. My preference would be to slice it by product and display the appropriate slice on each product page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-738">https://issues.jboss.org/browse/DEVELOPER-738</a> |
| 7563 | DEVELOPER-738 | [~maxandersen] do you mean <a href="https://developer.jboss.org/maven">https://developer.jboss.org/maven</a> or <a href="https://www.jboss.org/maven">https://www.jboss.org/maven</a> ? Did you have a particular system in-mind to host this page? Either way, I think we need to revisit how we are handling Boms and Archetypes on the developer portals ( <a href="http://www.jboss.org">www.jboss.org</a> and <a href="http://developers.redhat.com">developers.redhat.com</a> ). I also take your point that a single page showing everything would be useful as well as the "product view" on the product pages.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-738">https://issues.jboss.org/browse/DEVELOPER-738</a> |
| 7564 | DEVELOPER-733 | [~petemuir] [~pmuir] Can you please push this to production ASAP? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-733">https://issues.jboss.org/browse/DEVELOPER-733</a> |
| 7565 | DEVELOPER-717 | Yes, I suppose we could further define what "Stand-alone" means, but when you juxtapose it next to "With EAP" I would like to think that most users would see "ah, it's the same thing but one has EAP and one does not". Explaining the update sites would take more than a couple words... if you've never used JBoss Central within JBDS, a picture is much more helpful. <a href="http://tools.jboss.org/documentation/whatsnew/jbosstools/4.2.0.Beta2.html#ui-changes">http://tools.jboss.org/documentation/whatsnew/jbosstools/4.2.0.Beta2.html#ui-changes</a> Maybe we could change that column into optional links to a walkthrough install guide [1] / more info [2] / getting started guide [3]? URL in the products.yaml could vary but the link label could just be "More Info" or "Documentation" ... maybe [~mmurray] or [~maxandersen] have an opinion on how to best use that space? [1] <a href="http://tools.jboss.org/documentation/videos/jbds5_installation.html">http://tools.jboss.org/documentation/videos/jbds5_installation.html</a> (needs updating to JBDS 8) [2] <a href="http://tools.jboss.org/documentation/index.html">http://tools.jboss.org/documentation/index.html</a> or <a href="https://access.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Developer_Studio/8.0/">https://access.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Developer_Studio/8.0/</a> [3] <a href="https://access.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Developer_Studio/7.1/html/Getting_Started_Guide/index.html">https://access.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Developer_Studio/7.1/html/Getting_Started_Guide/index.html</a> (needs a new version for JBDS 8) | <a href="https://issues.jboss.org/browse/DEVELOPER-717">https://issues.jboss.org/browse/DEVELOPER-717</a> |

| #    | Requirement   | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | URL                                                                                                       |

| 7566 | DEVELOPER-701 | We've gone back and forth on this topic many times it feels like. I never remember the final result. At one point we discussed no longer showing these - as they should exist on MeetUp and we would just pull in the events. I think Mark N. advocated for still having some information about the locations of user groups on JBoss Developer, which I could see. If we want something on JBoss Developer, can we talk as a group about what the requirements are - what information do we think JBoss Developer should own in this space? Then it can get assigned to me.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-701">https://issues.jboss.org/browse/DEVELOPER-701</a> |
| 7567 | DEVELOPER-683 | [~paul.robinson] new the data has been re-indexed as part of upgrade to 1.1.0. Can you check please? Resolving...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-683">https://issues.jboss.org/browse/DEVELOPER-683</a> |
| 7568 | DEVELOPER-677 | I'm not saying stay with the status quo - I'm saying we should add blog title, but not get rid of the blurb. Part of writing good blog posts should be writing the meta-description that search engines use (and we're pretty much acting as a search engine here). <a href="http://blog.hubspot.com/marketing/how-to-write-blog-post-simple-formula-ht">http://blog.hubspot.com/marketing/how-to-write-blog-post-simple-formula-ht</a> (meta description section). <a href="http://www.socialmediaexaminer.com/26-tips-for-writing-great-blog-posts/">http://www.socialmediaexaminer.com/26-tips-for-writing-great-blog-posts/</a> (#4 - description). Now - I can't disagree with the fact that a lot of people don't do this. We can send out of "how to write good blog posts" snippet to the core. But even if they still don't write good descriptions - are we losing anything? If we drop down to just title & name - it means that you don't get any extra useful information even for those bloggers who take the time to do this. If we leave the blurb, it means that some of them are not that useful if people don't use them right (and maybe having useless blurbs shown will help them start to do this right!), but you still have the title/author to look at as we would change all blog posts to show the title that we are not today. | <a href="https://issues.jboss.org/browse/DEVELOPER-677">https://issues.jboss.org/browse/DEVELOPER-677</a> |
| 7569 | DEVELOPER-673 | Would DEVELOPER-1082 solve this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-673">https://issues.jboss.org/browse/DEVELOPER-673</a> |
| 7570 | DEVELOPER-672 | The Vimeo player is HTML5 in browsers that support it (around 65%), and automatically degrades to flash in browsers that don't support it. I suspect that [~ssiddique]'s customers are using old versions of Internet Explorer that doesn't support HTML5 anyway. Vimeo offers the option to download the file using MP4 (270p, 380p, 720p) and MOV (720p), if you visit the vimeo page. We need to understand more from [~ssiddique] about what in particular is locked down in this environment - is it old browsers? Is it the ability to install Flash? Is it that particular websites (inc vimeo) are banned?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-672">https://issues.jboss.org/browse/DEVELOPER-672</a> |
| 7571 | DEVELOPER-668 | Which JS are we talking about? I'm a bit confused there. Would this be displayed when they download something?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-668">https://issues.jboss.org/browse/DEVELOPER-668</a> |
| 7572 | DEVELOPER-668 | I'm seeing js that references thank you, maybe it's the same as the T&C, can anyone verify?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-668">https://issues.jboss.org/browse/DEVELOPER-668</a> |
| 7573 | DEVELOPER-668 | I've read these three or four times now and I'm still not 100% sure what needs to be done here, sorry (maybe because the title and description no longer have much to do with the current ideas in the comments). We have a javascript call that does something for thankyou after we download, and we have a REST call to determine the status of the T&C for the logged in user. Are we saying we need to check the status, display the T&C if they haven't agreed, log that somewhere then proceed to the download?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-668">https://issues.jboss.org/browse/DEVELOPER-668</a> |
| 7574 | DEVELOPER-668 | My understanding is that we need to add a banner of some-sort to here: <a href="http://www.jboss.org/terms-and-conditions/">http://www.jboss.org/terms-and-conditions/</a> . The banner would identify if the user has already signed the \$0 subscription. This information is discovered by a REST call, to Libor's service. I think Libor's service requires you to specify a download file to see if the user has agreed to the licence on that file. I guess we could pick a file with the \$0 licence, but that seems a bit brittle as that file's license could change or it could be removed. Am I missing something here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-668">https://issues.jboss.org/browse/DEVELOPER-668</a> |
| 7575 | DEVELOPER-668 | What we need is: 1) User logs in 2) User visits /terms-and-conditions in their web browser by typing in the address 3) If user has signed the t&c show, using a banner, that they have signed the t&c, and on what date. Specifically, Libor's service is one you can query based on the logged in user. David's service requires you to do a download to get this info.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-668">https://issues.jboss.org/browse/DEVELOPER-668</a> |
| 7576 | DEVELOPER-668 | [~lightguard] Make sure you login to the right SSO server. I got this to work: 1) Visit <a href="https://community-stg.jboss.org">https://community-stg.jboss.org</a> 2) Login 3) Visit <a href="https://community-stg.jboss.org/api/custom/v1/account/info">https://community-stg.jboss.org/api/custom/v1/account/info</a> However, I have not signed the agreement in the community-stg environment. [~lkrzyzanek] how would I do that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-668">https://issues.jboss.org/browse/DEVELOPER-668</a> |
| 7577 | DEVELOPER-668 | [~lkrzyzanek], does this endpoint support CORS? Looks like I'm blocked by not actually being able to make the call to the service.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-668">https://issues.jboss.org/browse/DEVELOPER-668</a> |
| 7578 | DEVELOPER-668 | My understanding is that this page is on Magnolia: <a href="http://www.jboss.org/developer-program/termsandconditions">http://www.jboss.org/developer-program/termsandconditions</a> . [~lkrzyzanek] is this correct? [~lightguard] is there some other T&C page that you were thinking about and if so, where is it linked from?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-668">https://issues.jboss.org/browse/DEVELOPER-668</a> |
| 7579 | DEVELOPER-664 | [~petemuir] ok, it is logo :) If I am not mistaken then all is needed is something like: <code>{code} var template = "&lt;li class=\"upstream\"&gt;" + "&lt;div class=\"defaultprojectimage\"&gt;" + "&lt;a class=\"image-link\" href=\"\" + getCorrectUrl(props.sys_url_view) + \"\"&gt;&lt;img onerror=\"this.style.display='none'\" src=\"\" + \"http://static.jboss.org/\" + (props.specialcon    props.sys_project) + \"/images/\" + (props.specialcon    props.sys_project) + \"_200x150.png\"&gt;&lt;/a&gt;&lt;/div&gt;" + "&lt;h3 class=\"solution-name\"&gt;&lt;a class=\"solution-name-link\" href=\"\" + getCorrectUrl(props.sys_url_view) + \"\"&gt;" + props.projectName + "&lt;/a&gt;&lt;/h3&gt;&lt;p&gt;&lt;/p&gt;"; {code} [here] <a href="https://github.com/jboss-developer/www.jboss.org/blob/master/javascripts/projects.js#L76">https://github.com/jboss-developer/www.jboss.org/blob/master/javascripts/projects.js#L76</a>. Of course this is hack-ish but illustrates the idea. WDYT?</code>                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-664">https://issues.jboss.org/browse/DEVELOPER-664</a> |
| 7580 | DEVELOPER-664 | so specialcon essentially overrides the project name in this case? Wouldn't it just be better to put the correct icon in the correct place on static?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-664">https://issues.jboss.org/browse/DEVELOPER-664</a> |
| 7581 | DEVELOPER-664 | {quote} Wouldn't it just be better to put the correct icon in the correct place on static? {quote} From MPOW yes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-664">https://issues.jboss.org/browse/DEVELOPER-664</a> |
| 7582 | DEVELOPER-664 | [~dhlady] [~lvleck] we don't seem to have specialcon field available in <a href="http://dcpbeta-searchisko.rhcloud.com/v1/rest/search?sys_type=project_info&amp;field=_source&amp;query=NOT+archived%3Atrue+AND+hibernate&amp;size=500">http://dcpbeta-searchisko.rhcloud.com/v1/rest/search?sys_type=project_info&amp;field=_source&amp;query=NOT+archived%3Atrue+AND+hibernate&amp;size=500</a> at all. Do you know why?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-664">https://issues.jboss.org/browse/DEVELOPER-664</a> |
| 7583 | DEVELOPER-664 | BTW, the thing with {{project_info}} data is that we do not have fully automated way of updating it right now. The way how the data gets from the source (like property files on github and Magnolia) to DCP is quite complicated right now and some scenarios need careful manual interaction: - like renaming project or project keys - what should happen if one project is removed from the sources? We probably should not remove it from DCP automatically - etc ... I do not like it but can not think of quick fix for now. It can be quite a pain to keep all DCP instances in sync due to this as well. This all being said we would appreciate if you can report us all changes to {{project_info}} data that you are aware of. This can help us in keeping the data in shape. Hopefully we will have better and more transparent way of getting this data to DCPs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-664">https://issues.jboss.org/browse/DEVELOPER-664</a> |
| 7584 | DEVELOPER-655 | How can I filter by tags via the DCP? Seems this url (a regular buzz url + sys_tags on the end), doesn't filter for that tag <a href="http://dcpbeta-searchisko.rhcloud.com/v1/rest/search?field=sys_url_view&amp;field=sys_title&amp;field=sys_contributors&amp;field=sys_description&amp;field=sys_updated&amp;field=author&amp;field=sys_tags&amp;query=&amp;size=8&amp;sys_type=blogpost&amp;sortBy=new-create&amp;sys_tags=EAP">http://dcpbeta-searchisko.rhcloud.com/v1/rest/search?field=sys_url_view&amp;field=sys_title&amp;field=sys_contributors&amp;field=sys_description&amp;field=sys_updated&amp;field=author&amp;field=sys_tags&amp;query=&amp;size=8&amp;sys_type=blogpost&amp;sortBy=new-create&amp;sys_tags=EAP</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-655">https://issues.jboss.org/browse/DEVELOPER-655</a> |

| 7587 | DEVELOPER-628 | Is this a duplicate of DEVELOPER-628? Or maybe it should be rolled into that issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-628">https://issues.jboss.org/browse/DEVELOPER-628</a> |
| 7588 | DEVELOPER-626 | Do the table cells have to be so narrow as to cause line wrapping? Why not make *Version* and *Release Date* narrower and use the recovered horizontal space to not have to wrap "Stand-<br/>alone)" ? In fact if you drop the *Description* column entirely, since it's redundant to the *Download* column, you will likely have enough horizontal space to not have to line-wrap anything in the *Download* column. Is that doable?                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-626">https://issues.jboss.org/browse/DEVELOPER-626</a> |
| 7589 | DEVELOPER-620 | [~ray.ploski] what do you mean by "Out of sync"? Can you provide some specific examples?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-620">https://issues.jboss.org/browse/DEVELOPER-620</a> |
| 7590 | DEVELOPER-605 | I am confused on this. The fusebyexample link redirects to <a href="http://www.jboss.org/products/amq/resources/">http://www.jboss.org/products/amq/resources/</a> . What information should I be adding?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-605">https://issues.jboss.org/browse/DEVELOPER-605</a> |
| 7591 | DEVELOPER-587 | We have it in the address bar, but that's probably not intuitive for people. Should we add this to the metadata section?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-587">https://issues.jboss.org/browse/DEVELOPER-587</a> |
| 7592 | DEVELOPER-565 | Is this relevant any longer?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-565">https://issues.jboss.org/browse/DEVELOPER-565</a> |
| 7593 | DEVELOPER-565 | [~dcoughlin1] What did you have in mind for this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-565">https://issues.jboss.org/browse/DEVELOPER-565</a> |
| 7594 | DEVELOPER-565 | [~ray.ploski] I know you wanted me to add this a while back. Did you want documentation on how to add new releases to the products pages?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-565">https://issues.jboss.org/browse/DEVELOPER-565</a> |
| 7595 | DEVELOPER-552 | [~kpeeples] Are you providing Fuse docker stuff? If not, do you know who is?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-552">https://issues.jboss.org/browse/DEVELOPER-552</a> |
| 7596 | DEVELOPER-549 | [~kpeeples] are you providing A-MQ docker stuff? If not, do you know who is?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-549">https://issues.jboss.org/browse/DEVELOPER-549</a> |
| 7597 | DEVELOPER-517 | Can you fix this [~wesbos] please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-517">https://issues.jboss.org/browse/DEVELOPER-517</a> |
| 7598 | DEVELOPER-505 | [~crobson] This is on the site now, but we still need it in the download manager ( <a href="http://www-beta.jboss.org/download-manager">http://www-beta.jboss.org/download-manager</a> ) - as [~paul.robinson] is away, can you add it there? Assign back to me when done.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-505">https://issues.jboss.org/browse/DEVELOPER-505</a> |
| 7599 | DEVELOPER-505 | [~james.cobb] - Can you take a look at the beta info in the right rail? It appears we really could use some sort of grouping mechanism in this case so the description & the downloads look like a single message in the right rail, not two separate entities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-505">https://issues.jboss.org/browse/DEVELOPER-505</a> |
| 7600 | DEVELOPER-491 | I think most of the code is there to do this now (if we have the info on their profiles of course). However, we don't have a standard way to display this. [~crobson] what do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-491">https://issues.jboss.org/browse/DEVELOPER-491</a> |
| 7601 | DEVELOPER-491 | I put together a quick mock-up of how I'm thinking this should work from an interactive standpoint. I think this works for the quickstarts, videos, etc where you have authors, and the get involved page quite well. We might need to consider how this would apply to technology overview page, videos on the product overview pages, etc. where we have more dedicated space today to show the user information. [~james.cobb] - can you take this and consider the visual styling?                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-491">https://issues.jboss.org/browse/DEVELOPER-491</a> |
| 7602 | DEVELOPER-491 | Will do some design work on this. [~wesbos] - Would this be a fixed overlay box size? If so, we'll need to make it large enough to handle long names. [~lkrzyzanek] - Libor, is there any way to find out our longest username?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-491">https://issues.jboss.org/browse/DEVELOPER-491</a> |
| 7603 | DEVELOPER-468 | [~crobson] [~wesbos] - I reviewed the changes in hotgloo and I think you're right and we should be able to incorporate those elements we already have on other pages. Does that work for you Wes or do you want a specific PSD of this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-468">https://issues.jboss.org/browse/DEVELOPER-468</a> |
| 7604 | DEVELOPER-465 | [~crobson] [~james.cobb]: Can you review?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-465">https://issues.jboss.org/browse/DEVELOPER-465</a> |
| 7605 | DEVELOPER-462 | Hrm, i see we are specifying _source as the field, does that mean it searches all the subfields? I was getting partials back when doing the searchbar                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-462">https://issues.jboss.org/browse/DEVELOPER-462</a> |
| 7606 | DEVELOPER-462 | Cool, [~lvicck] or [~velias], is there something we need to do in our searching to make that work without always doing a wildcard search behind the scenes, or is that just the way need to make this work?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-462">https://issues.jboss.org/browse/DEVELOPER-462</a> |
| 7607 | DEVELOPER-462 | I think we want to wildcard either side of the query string. So a search for "cloak" should return "KeyCloak". Correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-462">https://issues.jboss.org/browse/DEVELOPER-462</a> |
| 7608 | DEVELOPER-462 | Don't think this feature is now used on the preview site built but I would like to point out regarding the second API (project name suggestions api) it can also return something like "did you mean" if the user query is not an exact match of project name substring. For example: Search: fie Results: Infinispan, Blacktie, JBoss Profiler However, we should check that the project name suggestion API does not return projects that we do not want to list on upstream projects page (for example archived projects?). I do not think this API now takes any restrictions into account, IIRC it works with all available project info data equally. If any restrictions are needed we would need to extend this API.                       | <a href="https://issues.jboss.org/browse/DEVELOPER-462">https://issues.jboss.org/browse/DEVELOPER-462</a> |
| 7609 | DEVELOPER-462 | [~paul.robinson] in that case we need to open a new ticket for project name suggestion API. Currently it does not allow to filter baed on {{archived}} field (or any other field). How critical is this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-462">https://issues.jboss.org/browse/DEVELOPER-462</a> |
| 7610 | DEVELOPER-462 | [~lvicck] We seem good for now. Although I am confused. This approach: <a href="http://www-stg.jboss.org/pr/392/build/397/projects/">http://www-stg.jboss.org/pr/392/build/397/projects/</a> using project name suggestions api, doesn't return archived projects. Try searching for Narayana and notice that only one result comes back This approach: <a href="http://www-stg.jboss.org/pr/392/build/396/projects/">http://www-stg.jboss.org/pr/392/build/396/projects/</a> using wildcard on both sides of the keyword search, does return archived projects. Try searching for Narayana and notice that two result comes back (one is the archived jbossts project). Here it seems the suggestion API is obeying the archived filter. Correct? | <a href="https://issues.jboss.org/browse/DEVELOPER-462">https://issues.jboss.org/browse/DEVELOPER-462</a> |
| 7611 | DEVELOPER-443 | Did DEVELOPER-412 fix this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-443">https://issues.jboss.org/browse/DEVELOPER-443</a> |
| 7612 | DEVELOPER-443 | I can't reproduce this issue. 1) If I control-click a link, it just opens a context sensitive menu (see <a href="http://guides.macrumors.com/control-click">http://guides.macrumors.com/control-click</a> ). I'm assuming you are actually saying it's broken when you try to open a link in a new tab 2) If I select open in a new tab from the context sensitive menu, it opens a new tab with the link in it in Chrome, Safari and Firefox. Can you let me know how to reproduce properly?                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-443">https://issues.jboss.org/browse/DEVELOPER-443</a> |
| 7613 | DEVELOPER-437 | Not a fan of having the callout box floating up above the line for the page content title ( we don't do it anywhere else). How about we put them side by side like the modified screen grab?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-437">https://issues.jboss.org/browse/DEVELOPER-437</a> |
| 7614 | DEVELOPER-414 | I have added the following downloads to the beta download manager: EAP 6.3.0 Alpha A-MQ 6.1.0 GA Fuse 6.1.0 GA JBDS 8.0.0 Beta (no T&C's) JBDS 8.0.0 Beta (with EAP - Zero dollar sub/T&C's needed)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-414">https://issues.jboss.org/browse/DEVELOPER-414</a> |

| #    | Requirement   | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | URL                                                                                                       |

| 7615 | DEVELOPER-414 | Dan, can you add these new downloads to the site and create appropriate short urls in here: <a href="http://www-beta.jboss.org/download-manager">http://www-beta.jboss.org/download-manager</a> . I don't think it's changed much, if at all, since you last did it. But if you are unsure, you could do one first and have me review it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-414">https://issues.jboss.org/browse/DEVELOPER-414</a> |
| 7616 | DEVELOPER-414 | [~crobson] what should the download page look like, when a Alpha or Beta is available? Does the Alpha or Beta appear on that page? Is it before or after the latest GA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-414">https://issues.jboss.org/browse/DEVELOPER-414</a> |
| 7617 | DEVELOPER-414 | [~petemuir] - Will the above approach work since the right rail will go away when the alpha/beta period is over - or will this not work because we need to keep those downloads available to people after the period is over? Not sure based on discussions we've had about alpha/beta/promoted build availability what the right direction is here!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-414">https://issues.jboss.org/browse/DEVELOPER-414</a> |
| 7618 | DEVELOPER-414 | Are alphas and betas removed or kept once the GA is out?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-414">https://issues.jboss.org/browse/DEVELOPER-414</a> |
| 7619 | DEVELOPER-414 | Hey Paul, Is this what you are looking for on the website portion?<br><a href="https://github.com/Dantheman720/www.jboss.org/commit/7d9be44e17fdbbd06d0930c306201b52e56deb43">https://github.com/Dantheman720/www.jboss.org/commit/7d9be44e17fdbbd06d0930c306201b52e56deb43</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-414">https://issues.jboss.org/browse/DEVELOPER-414</a> |
| 7620 | DEVELOPER-414 | [~dcoughlin1], this looks right to me. Have you checked the file sizes are right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-414">https://issues.jboss.org/browse/DEVELOPER-414</a> |
| 7621 | DEVELOPER-414 | [~dcoughlin1], i've merged the PR and updated <a href="http://www-stg.jboss.org">www-stg.jboss.org</a> . Can you go make the links work? BTW, it's a known issue that some of the downloads appear out of order.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/DEVELOPER-414">https://issues.jboss.org/browse/DEVELOPER-414</a> |
| 7622 | DEVELOPER-414 | [~dcoughlin1] are you adding the alphas and betas? Can you give me an ETA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-414">https://issues.jboss.org/browse/DEVELOPER-414</a> |
| 7623 | DEVELOPER-408 | Pete, what do we need to achieve in order to consider this issue resolved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-408">https://issues.jboss.org/browse/DEVELOPER-408</a> |
| 7624 | DEVELOPER-372 | [~crobson], with respect to pt. 3, what would you recommend as the optimum number, both for mobiles and desktops ? I'll try and adapt the items in the page to suit both.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-372">https://issues.jboss.org/browse/DEVELOPER-372</a> |
| 7625 | DEVELOPER-360 | [~lightguard], [~pmuir]: Do we now have target_product set for all types now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-360">https://issues.jboss.org/browse/DEVELOPER-360</a> |
| 7626 | DEVELOPER-357 | [~pmuir] I nearly finished the mapper. But to use it we have to upgrade content type configurations in <a href="http://jboss-developer.json">jboss-developer.json</a> But to do this I need to know structure of data you push there to be able to correctly update configurations. Do you plan to use it for <a href="http://jbossdeveloper_quickstart">jbossdeveloper_quickstart</a> type only as we talked over IRC, or for any other type also? Send me structure of input data please.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-357">https://issues.jboss.org/browse/DEVELOPER-357</a> |
| 7627 | DEVELOPER-297 | [~wesbos] - Right now we don't swap to the hamburger icon at 1024, so tablets won't be able to use dropdown navigation well if we switch to this. Is there a way to recognize the device and use the hamburger for tablets and regular nav for PCs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-297">https://issues.jboss.org/browse/DEVELOPER-297</a> |
| 7628 | DEVELOPER-281 | [~lightguard] If you are running low on things to do, can you take this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-281">https://issues.jboss.org/browse/DEVELOPER-281</a> |
| 7629 | DEVELOPER-281 | [~crobson] where are we placing the stars for people to rate an item? I just went through the wireframes and I don't see a location for people to rate things. I see where we're displaying the average rating, but I'm not seeing where we expect people to rate them.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-281">https://issues.jboss.org/browse/DEVELOPER-281</a> |
| 7630 | DEVELOPER-281 | [~lightguard] ({'Access-Control-Allow-Origin'}) header is added to the response from DCP when request contains ({'Origin'}) header. Check it is present there. It is also necessary to set <a href="http://jbossdeveloper_quickstart">jbossdeveloper_quickstart</a> into XMLHttpRequest. I tested my tutorial code which uses <a href="http://dcp-stg.jboss.org">http://dcp-stg.jboss.org</a> just now, and it works as expected in both Firefox and Chrome. Which browser do you use?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-281">https://issues.jboss.org/browse/DEVELOPER-281</a> |
| 7631 | DEVELOPER-273 | [~ray.ploski] Also, is it possible to get higher-res profile images from these guys?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-273">https://issues.jboss.org/browse/DEVELOPER-273</a> |
| 7632 | DEVELOPER-266 | Is this issue still relevant?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-266">https://issues.jboss.org/browse/DEVELOPER-266</a> |
| 7633 | DEVELOPER-262 | cool - what is the actual rss.url ? would like to check if jbds "just works" with it or need some yahoo pipes filtering in worst case ;)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-262">https://issues.jboss.org/browse/DEVELOPER-262</a> |
| 7634 | DEVELOPER-258 | Where do I get the credentials from, and how do I set them in my environment? Once that is done, do I just do this: <code>{code} rake clean preview[staging] {code}</code> I think it would be useful to have something documented. I'm not suggesting you paste in the credentials, but knowing what env vars to set and who to ask for the values would be handy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-258">https://issues.jboss.org/browse/DEVELOPER-258</a> |
| 7635 | DEVELOPER-252 | Should this issue also cover having the buzz you generate be exposed as an RSS feed so we can show the same in jbds central ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-252">https://issues.jboss.org/browse/DEVELOPER-252</a> |
| 7636 | DEVELOPER-244 | [~pmuir] I look at Developer Materials on <a href="http://www-beta.jboss.org">www-beta.jboss.org</a> and I see no pagination, it seems to be neverending. Am I looking at the right place?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-244">https://issues.jboss.org/browse/DEVELOPER-244</a> |
| 7637 | DEVELOPER-243 | How's this coming along [~vineet.reynolds]?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-243">https://issues.jboss.org/browse/DEVELOPER-243</a> |
| 7638 | DEVELOPER-238 | Is there an example of what the correct URL string is supposed to be? For instance, they all carry this portion: " <a href="http://www.jboss.org/download-manager/f/">http://www.jboss.org/download-manager/f/</a> ", as in " <a href="http://www.jboss.org/download-manager/f/fuse/6.0.0.GA/(Full%20Zip)">http://www.jboss.org/download-manager/f/fuse/6.0.0.GA/(Full%20Zip)</a> ". I can find these projects at <a href="http://www.jboss.org/projects">http://www.jboss.org/projects</a> but is there some sort of download-manager component, as the URL indicates, that's not currently available?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-238">https://issues.jboss.org/browse/DEVELOPER-238</a> |
| 7639 | DEVELOPER-238 | Is there by chance already login redirect functionality in the development site? And can it be incorporated into the same popup feature that was just put in for the event buttons?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-238">https://issues.jboss.org/browse/DEVELOPER-238</a> |
| 7640 | DEVELOPER-236 | [~crobson] what type of popup should we use here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-236">https://issues.jboss.org/browse/DEVELOPER-236</a> |
| 7641 | DEVELOPER-233 | [~james.cobb] I noticed: <a href="https://github.com/jboss-developer/jboss-developer-site/commit/f348c98ecca2813a09bd51e4f7a9c8444c1939c">https://github.com/jboss-developer/jboss-developer-site/commit/f348c98ecca2813a09bd51e4f7a9c8444c1939c</a> . Can Cheyenne also wire up this page to the links on the videos in <a href="http://www-stg.jboss.org/products/eap/resources/">http://www-stg.jboss.org/products/eap/resources/</a> , or do we need to do that bit?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-233">https://issues.jboss.org/browse/DEVELOPER-233</a> |
| 7642 | DEVELOPER-233 | Jason, Can you make it so that when the user clicks on the video's title, it goes to the detail page? For example... 1) Go to: <a href="http://localhost:4242/products/eap/resources/">http://localhost:4242/products/eap/resources/</a> 2) Click on "London JBUG, April 2012: Developing Apps the JBoss Way" 3) Observe that it shows a jpg, not the detail page Also, the breadcrumb seems to still be broken. It shows: <code>{code}</code> Get Started > Developer Materials > Video Name <code>{code}</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-233">https://issues.jboss.org/browse/DEVELOPER-233</a> |
| 7643 | DEVELOPER-224 | Okay I've implemented this. Can someone check the copy before it's merged? <a href="https://github.com/jboss-developer/www.jboss.org/pull/156">https://github.com/jboss-developer/www.jboss.org/pull/156</a> Currently setup like this:<br>Subject: Why Subscribe to JBoss? Body: Here are a few reasons to subscribe to JBoss. You can view them all at <a href="http://jboss.org/why-subscribe">http://jboss.org/why-subscribe</a> More capability, less cost Delivered via subscription. So you pay for what's most important to you. Service Software that works. No vendor lock-in The development process is open. The technology is open. There are no secrets, no surprises, no lock-in. Award-winning support Ranked highest in customer satisfaction over Oracle, IBM, and BEA in an independent study 2 years running. Performance Just ask our customers why they trust Red Hat JBoss Middleware with their mission-critical applications. Modular architecture Robust enough to handle large, complex Java™ EE workloads, yet agile and flexible enough to run lighter ones. | <a href="https://issues.jboss.org/browse/DEVELOPER-224">https://issues.jboss.org/browse/DEVELOPER-224</a> |
| 7644 | DEVELOPER-223 | Ray, Is Dan in Jira? I don't seem to see him, so can't assign it to him.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-223">https://issues.jboss.org/browse/DEVELOPER-223</a> |
| 7645 | DEVELOPER-223 | Are we still waiting for data for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-223">https://issues.jboss.org/browse/DEVELOPER-223</a> |
| 7646 | DEVELOPER-222 | I think we need to explore our options on where to store the image. Do we store a link to the original or a copy of the original?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-222">https://issues.jboss.org/browse/DEVELOPER-222</a> |

| #    | Requirement   | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | URL                                                                                                       |

| 7647 | DEVELOPER-222 | sys_description has all the html stripped, so we'd need to add in sys_content, which will increase the payload, possibly quite a bit depending on the size of the blogs we're pulling down. Pulling out images will certainly be easier if we parse the content as HTML, but that opens us up to possible XSS issues. We could attempt to use Regexp to find the image, but JavaScript doesn't support lookbehind assertions which may further complicate the regex we'd need to write :( I also went through some results from the DCP and many blogs look like the first image is a tracking image. I can craft up some javascript regex, just tried, to grab the sources and find images then take the first one that's an actual image. Shall we proceed with that attempt and see what comes out the other side?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-222">https://issues.jboss.org/browse/DEVELOPER-222</a> |
| 7648 | DEVELOPER-222 | To be able to get "hero" image for blog posts would be very useful and is cool idea. Though, I have couple of questions: # If the blog post contains more than one image, how we select the best one? May be we should store also metadata of this image (size, number of colors, alt value?) which can help us use some heuristics to automate hero detection. A manually verified flag for hero image should be considered as well. # Where we will store the images? I am against storing binary image data into DCP (Lucene index). We should store it somewhere where each image can have a public URL (so browsers can load them quickly without need to interact with DCP at all). # How about copyrighted images? # Are we going to download (and override) all images again with every reindexing? What if the blog post becomes unavailable as time goes? Shall we still keep its images?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-222">https://issues.jboss.org/browse/DEVELOPER-222</a> |
| 7649 | DEVELOPER-222 | I think we should think a little bit about making this more general (yet simple). I can imagine this can be useful for any kind of content (and since we want to introduce a new {{sys_}} field, it should be more generic). How about this. Let's introduce two new fields: # {{sys_featured_image_url}}: is expected to contain at most a single URL (or is empty or not provided at all) # {{sys_image_urls}}: is expected to contain any number of image URLs In your case you would check only {{sys_featured_image_url}} field and use it if provided. On the other hand this will also support other use cases, for example tweet can contain several image urls and it can make sense to display all of them while none of them is featured (as twitter does itself - [example here] https://twitter.com/AngLandiMoSobra/status/555334969241776129). In compact search results it make sense to display only {{sys_featured_image_url}} and in more detailed search results it can make sense to display more images. This will also allow to disable individual featured image while all image URL links are still kept with the document. Moreover if we could rely on the order of images in {{sys_image_urls}} field then we could turn {{sys_featured_image_url}} field to a field called {{sys_featured_image_number}} which would only contain position (number) in the {{sys_image_urls}} list. But I am not sure about this option. I think Elasticsearch returns list items in consistent order but I am not sure if this is "officially" guaranteed (thus might change in the future?). WDYT? | <a href="https://issues.jboss.org/browse/DEVELOPER-222">https://issues.jboss.org/browse/DEVELOPER-222</a> |
| 7650 | DEVELOPER-221 | I see this is for 1.1, but I know something was done in the buzz section with filters, did we fix this one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-221">https://issues.jboss.org/browse/DEVELOPER-221</a> |
| 7651 | DEVELOPER-219 | I think this might be possible using histogram facet and might be already supported in Searchisko. But before I try to give you some query examples, do you think you can provide me more info about what type of chart/data do you want to present on the page? I am not sure I fully follow.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-219">https://issues.jboss.org/browse/DEVELOPER-219</a> |
| 7652 | DEVELOPER-219 | One thing we should pay attention to in this case is how many XHR requests this page will need to execute to get all the data. Right now it seems it will be one or two requests per product forum. There are 11 forums on the page ATM. Firing that many requests may not be very good idea. Not only it will be probably slowed down by the browser (do they still allow only two concurrent requests per domain?) but also the risk is at our public webproxy which throttles number of requests a client can do per second. Unfortunately, I can not think of some quick workaround now but going forward situations like this should be avoided. I think this could be addressed by https://github.com/searchisko/searchisko/issues/123 (specifically by the multi_search).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-219">https://issues.jboss.org/browse/DEVELOPER-219</a> |
| 7653 | DEVELOPER-219 | [~lightguard] did you see this query: http://dcp-stg.jboss.org/v1/rest/search?facet=activity_dates_histogram&project=jbosseap&sys_type=forumthread&size=0&activity_date_interval=month&activity_dates_histogram_interval=day Notice the 'date_histogram' section. It gives you the number of posts (count entry) on a particular date (time entry). It is returning too many results at the moment so we would need to filter those out. I think it also omits an entry for days with no posts created. Is this enough? {code} activity_dates_histogram: { _type: "date_histogram", entries: [ { time: 1381968000000, count: 1 }, { time: 1382054400000, count: 2 }, { time: 1382572800000, count: 1 }, ... {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-219">https://issues.jboss.org/browse/DEVELOPER-219</a> |
| 7654 | DEVELOPER-219 | Wouldn't it be simpler to just add the project id to: https://github.com/jboss-developer/www.jboss.org/blob/master/_config/forums.yml? for example: {code} eap: name: 'JBoss EAP' id: jbosseap url: https://community.jboss.org/en/jbosseap description: 'An application platform for hosting your apps that provides an innovative modular, cloud-ready architecture, powerful management and automation, and world class developer productivity.' {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-219">https://issues.jboss.org/browse/DEVELOPER-219</a> |
| 7655 | DEVELOPER-219 | Why do we have the wrong codes for some products?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-219">https://issues.jboss.org/browse/DEVELOPER-219</a> |
| 7656 | DEVELOPER-219 | [~petemuir] What you mean? Think of it as hash ID. They could have been MD5 hash codes as well.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-219">https://issues.jboss.org/browse/DEVELOPER-219</a> |
| 7657 | DEVELOPER-219 | [~petemuir] OK, good to know. We will need to change it. Do you know if there is anything similar for projects?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-219">https://issues.jboss.org/browse/DEVELOPER-219</a> |
| 7658 | DEVELOPER-219 | [~james.cobb] can you review http://www-stg.jboss.org/pr/428/build/635/forums/ please                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-219">https://issues.jboss.org/browse/DEVELOPER-219</a> |
| 7659 | DEVELOPER-218 | We should use the same method for submitting the data as this form does: http://www.jboss.org/contact.html and use the same server to receive and process the data. One thing of concern is that the jboss.org contact form has AntiSpam control. We might need to work this into our form, in order to get our request accepted by the server. [~visuale], can you find out if the AntiSpam is needed by the server and report back.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-218">https://issues.jboss.org/browse/DEVELOPER-218</a> |
| 7660 | DEVELOPER-218 | Do you by chance know if the regular JBoss website was built with Magnolia CMS? I see a lot of script that looks based in Magnolia – don't know if that means the whole site is built on that platform or if it's just some that some of the front-end UI borrows from Magnolia's front end UI. I've asked in the chat room and inquired with Pete Muir as well. If it is the case that JBoss uses Magnolia, then we'll need our own separate solution here, yes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-218">https://issues.jboss.org/browse/DEVELOPER-218</a> |
| 7661 | DEVELOPER-218 | [~visuale] Yes, the current jboss.org does use magnolia. Can't we just re-use the same back-end? I.e the service that the form submits to?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-218">https://issues.jboss.org/browse/DEVELOPER-218</a> |
| 7662 | DEVELOPER-218 | I've tried out Magnolia in the past (a very little bit) but if memory serves and as this example shows (http://documentation.magnolia-cms.com/display/DOCS/Form+module#Formmodule-Installing), I believe that Magnolia's form processor would be entirely-self contained and not using some kind of service on in its host environment. This example runs though how to get the form data into a database: http://wiki.magnolia-cms.com/display/WIKI/Storing+form+data+in+the+Data+module There's also, of course, an example for getting the form data processed and sent as a regular email. I guess a question here would be what should the end recipient of the form be? I assume an email, of course, but will submissions also end up in a database?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/DEVELOPER-218">https://issues.jboss.org/browse/DEVELOPER-218</a> |

| 7663 | DEVELOPER-218 | Are you still able to set this up, or shall I assign to someone else?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/DEVELOPER-218">https://issues.jboss.org/browse/DEVELOPER-218</a> |
| 7664 | DEVELOPER-218 | [~newtonm] [~unibrew] what will the URL of this form be after the launch? The same?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-218">https://issues.jboss.org/browse/DEVELOPER-218</a> |
| 7665 | DEVELOPER-216 | Do you know of any tools out there to help us with a creation of script like this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-216">https://issues.jboss.org/browse/DEVELOPER-216</a> |
| 7666 | DEVELOPER-216 | Is selenium the right tool for the job? We have over 600 pages in the site. Even doing it in parallel, selenium will take a very long time to go through the site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-216">https://issues.jboss.org/browse/DEVELOPER-216</a> |
| 7667 | DEVELOPER-216 | Sure. We want to make our own using the underlying tools, or do we want to use wraith in our solution? If we can use wraith with the patches you sent (assuming they take them) I'm all for not having to recreate the screenshot capture and diffing, but if not, it isn't the end of the world.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/DEVELOPER-216">https://issues.jboss.org/browse/DEVELOPER-216</a> |
| 7668 | DEVELOPER-213 | There are no resources for EWS - we have not invested in this area for any sort of materials. Would we be able to remove some headers from the page if there is no content in them?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/DEVELOPER-213">https://issues.jboss.org/browse/DEVELOPER-213</a> |
| 7669 | DEVELOPER-210 | I've committed some changes for this here: <a href="https://github.com/sbryzak/jboss-developer-site/commit/bfbd85efbb65680652a128081bb0d26292902967">https://github.com/sbryzak/jboss-developer-site/commit/bfbd85efbb65680652a128081bb0d26292902967</a> Here's what I've done so far: 1) Implemented the script to close the popup (using JQuery) 2) Added an anchor for the direct download link 3) Added an anchor that links to the terms and conditions page 4) Used the abbreviated product name in the title of the popup (e.g. "Thank you for downloading JBoss EAP") A couple of questions: a) Should the agreement date for the terms and conditions (i.e. September 25, 2013) be hard coded? Or should it be a dynamic value (e.g. the current date)? b) Is the direct link URL correct? I used the same download URL that is used in Step 1 of the Instructions for Installation. | <a href="https://issues.jboss.org/browse/DEVELOPER-210">https://issues.jboss.org/browse/DEVELOPER-210</a> |
| 7670 | DEVELOPER-210 | I haven't sent a pull request with the changes yet, are you able to see my commit from the URL I pasted? It's possible that GitHub might restrict access since it's a private repo - if that's the case I can send a pull request to the master repo with my changes. On the other issues - a) how do we obtain the date on which the user signed the agreement? b) the download link seems to be the only one we have defined, hopefully it's correct                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/DEVELOPER-210">https://issues.jboss.org/browse/DEVELOPER-210</a> |
| 7671 | DEVELOPER-210 | It looks like it's going to be difficult to get the agreement date. I suggest we set the text to: {code} By downloading this product you have agreed with our terms and conditions. See your profile for the date you subscribed. You will be notified again in 364 days after your subscription ends. {code} Where "your profile" links to the users profile on Jive. I think this is achievable at the moment? Lets create another Jira issue for looking up the date from Jive. Does this work?                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-210">https://issues.jboss.org/browse/DEVELOPER-210</a> |
| 7672 | DEVELOPER-210 | Added DEVELOPER-226 for adding the date. [~sbryzak2] I think this issue is ready for merge now? Is the PR ready?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-210">https://issues.jboss.org/browse/DEVELOPER-210</a> |
| 7673 | DEVELOPER-207 | What changes if an item is featured? We're looking for a short-term hack, yes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-207">https://issues.jboss.org/browse/DEVELOPER-207</a> |
| 7674 | DEVELOPER-207 | Will this always been a series of images and text? If it is we might be able to get away with a yaml file containing the image url and the text.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-207">https://issues.jboss.org/browse/DEVELOPER-207</a> |
| 7675 | DEVELOPER-202 | [~pmuir] I seem to recall you having discussions with Lukas around contributor details in the DCP. Can you update this issue with what details we can get from the DCP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/DEVELOPER-202">https://issues.jboss.org/browse/DEVELOPER-202</a> |
| 7676 | DEVELOPER-202 | I can imagine some "contributor profile proxy" url on DCP side. This will be used when you can show user profile. You will simply pass identifier from sys_contributor there. When used, then DCP will search for relevant profile, and then redirect browser to final contributor profile in jive. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-202">https://issues.jboss.org/browse/DEVELOPER-202</a> |
| 7677 | DEVELOPER-196 | [~unibrew2] Can you make a Magnolia form that looks like this: <a href="http://design.jboss.org/jbossdeveloper/sitesdesign/jbossdeveloper_1_0/concepts/get_involved/images/jbossdeveloper_getinvolved_events_addevent-1200px.png">http://design.jboss.org/jbossdeveloper/sitesdesign/jbossdeveloper_1_0/concepts/get_involved/images/jbossdeveloper_getinvolved_events_addevent-1200px.png</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/DEVELOPER-196">https://issues.jboss.org/browse/DEVELOPER-196</a> |

| 7679 | DEVELOPER-193 | [~wesbos]: Can the "For Linux or Mac" bit be removed from what is displayed? That's now implied by the selected OS. It also adds a lot of cruft as it appears in many places on the page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-193">https://issues.jboss.org/browse/DEVELOPER-193</a> |
| 7680 | DEVELOPER-179 | [~lightguard] where did we get to with querying the dcp for URLs to profile pages on Jive?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/DEVELOPER-179">https://issues.jboss.org/browse/DEVELOPER-179</a> |
| 7681 | DEVELOPER-179 | Do we still have a question where we're at here, do we want to document something?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/DEVELOPER-179">https://issues.jboss.org/browse/DEVELOPER-179</a> |
| 7682 | DEVELOPER-179 | How much more of this is missing/outstanding?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-179">https://issues.jboss.org/browse/DEVELOPER-179</a> |
| 7683 | DEVELOPER-178 | Catherine, could you check that you agree I've selected the right endpoints for the URLs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/DEVELOPER-178">https://issues.jboss.org/browse/DEVELOPER-178</a> |
| 7684 | DEVELOPER-172 | Would a js library help us here? for example highlight.js to give us syntax highlighting. Or maybe something more heavyweight providing line-numbers, a copy-to-clipboard button and a title?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/DEVELOPER-172">https://issues.jboss.org/browse/DEVELOPER-172</a> |
| 7685 | DEVELOPER-172 | We could use a library, but the base font in red looks horrible. Highlight.js work work okay. Is that how we'd like to proceed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/DEVELOPER-172">https://issues.jboss.org/browse/DEVELOPER-172</a> |
| 7686 | DEVELOPER-172 | Do we need [~james.cobb] or [~crobson] to approve this? My concern would be that going with the OOTB <a href="http://highlightjs.org/">http://highlightjs.org/</a> is going to look odd, without an appropriate L&F applied.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/DEVELOPER-172">https://issues.jboss.org/browse/DEVELOPER-172</a> |
| 7687 | DEVELOPER-161 | Catherine, do you want me to sub this text in?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/DEVELOPER-161">https://issues.jboss.org/browse/DEVELOPER-161</a> |
| 7688 | DEVELOPER-159 | Question for James - should we have "home" as a navigation option in the tray? On the website it is obvious that we don't have a home button on the navigation banner, so people know to click the logo, but on mobile format people might default to opening the tray and then have to close it to get back to the logo for the home page.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/DEVELOPER-159">https://issues.jboss.org/browse/DEVELOPER-159</a> |
