| 12656 | JBTIS-498   | <p>Re: #5, I see you now have two identical copies of the directory.xml file: <a href="https://devstudio.redhat.com/9.0/staging/updates/integration-stack/discovery/9.0.0.Alpha2/devstudio-integration-stack-directory.xml">https://devstudio.redhat.com/9.0/staging/updates/integration-stack/discovery/9.0.0.Alpha2/devstudio-integration-stack-directory.xml</a> <a href="https://devstudio.redhat.com/9.0/staging/updates/integration-stack/discovery/9.0.0.Alpha2/devstudio-directory.xml">https://devstudio.redhat.com/9.0/staging/updates/integration-stack/discovery/9.0.0.Alpha2/devstudio-directory.xml</a> Why do you create two of them?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTIS-498">https://issues.jboss.org/browse/JBTIS-498</a> |
| 12657 | JBTIS-492   | <p>Sure - a couple of questions... [~nickboldt] Where can I find the upstream directory XML file? (jbosstools-directory.xml) - <a href="http://download.jboss.org/jbosstools/mars/staging/updates/central/4.3.0.Beta1/jbosstools-directory.xml">http://download.jboss.org/jbosstools/mars/staging/updates/central/4.3.0.Beta1/jbosstools-directory.xml</a> ? <a href="http://download.jboss.org/jbosstools/discovery/staging/4.3.0.Alpha1/jbosstools-directory.xml">http://download.jboss.org/jbosstools/discovery/staging/4.3.0.Alpha1/jbosstools-directory.xml</a> ? Is this the correct JBTIS update site? <a href="http://download.jboss.org/jbosstools/mars/snapshots/updates/integration-stack/aggregate/4.3.0.Beta1">http://download.jboss.org/jbosstools/mars/snapshots/updates/integration-stack/aggregate/4.3.0.Beta1</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTIS-492">https://issues.jboss.org/browse/JBTIS-492</a> |

------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| 12658 | JBTIS-492   | <p>Central Discovery now builds *SNAPSHOTS* here: <a href="http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-discovery.central_master/">http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-discovery.central_master/</a> (master)</p> <p><a href="http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-discovery.central_4.3.mars/">http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-discovery.central_4.3.mars/</a> (currently Beta1a, built from Beta1x branch) then when *STAGING* for QE: <a href="http://download.jboss.org/jbosstools/mars/staging/builds/jbosstools-4.3.0.Beta1-build-discovery.central/">http://download.jboss.org/jbosstools/mars/staging/builds/jbosstools-4.3.0.Beta1-build-discovery.central/</a></p> <p><a href="http://download.jboss.org/jbosstools/mars/staging/updates/discovery.central/4.3.0.Beta1/">http://download.jboss.org/jbosstools/mars/staging/updates/discovery.central/4.3.0.Beta1/</a> There are also equivalent URLs for the *EARLY ACCESS* site: <a href="http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-discovery.earlyaccess_master/">http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-discovery.earlyaccess_master/</a> (master)</p> <p><a href="http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-discovery.earlyaccess_4.3.mars/">http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-discovery.earlyaccess_4.3.mars/</a> (currently Beta1a, built from Beta1x branch)</p> <p><a href="http://download.jboss.org/jbosstools/mars/staging/builds/jbosstools-4.3.0.Beta1-build-discovery.earlyaccess/">http://download.jboss.org/jbosstools/mars/staging/builds/jbosstools-4.3.0.Beta1-build-discovery.earlyaccess/</a></p> <p><a href="http://download.jboss.org/jbosstools/mars/staging/updates/discovery.earlyaccess/4.3.0.Beta1/">http://download.jboss.org/jbosstools/mars/staging/updates/discovery.earlyaccess/4.3.0.Beta1/</a> Once *DEVELOPMENT* milestones are released: <a href="http://download.jboss.org/jbosstools/mars/development/updates/discovery.central/">http://download.jboss.org/jbosstools/mars/development/updates/discovery.central/</a> (contains Alpha2)</p> <p><a href="http://download.jboss.org/jbosstools/mars/development/updates/">http://download.jboss.org/jbosstools/mars/development/updates/</a> (contains Alpha2) ---- For JBDS, the URLs are essentially the same as above, but swap <a href="http://download.jboss.org/jbosstools/mars/">http://download.jboss.org/jbosstools/mars/</a> for <a href="https://devstudio.redhat.com/9.0/">https://devstudio.redhat.com/9.0/</a> and use 9.0 instead of 4.3...</p> <p><a href="https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.central_4.3.master/">https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.central_4.3.master/</a> <a href="https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.central_4.3.mars/">https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.central_4.3.mars/</a> <a href="https://devstudio.redhat.com/9.0/staging/builds/devstudio-9.0.0.Beta1-build-discovery.central/">https://devstudio.redhat.com/9.0/staging/builds/devstudio-9.0.0.Beta1-build-discovery.central/</a></p> <p><a href="https://devstudio.redhat.com/9.0/staging/updates/discovery.central/9.0.0.Beta1/">https://devstudio.redhat.com/9.0/staging/updates/discovery.central/9.0.0.Beta1/</a> <a href="https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.earlyaccess_4.3.master/">https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.earlyaccess_4.3.master/</a> <a href="https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.earlyaccess_4.3.mars/">https://devstudio.redhat.com/9.0/snapshots/builds/jbosstools-discovery.earlyaccess_4.3.mars/</a></p> <p><a href="https://devstudio.redhat.com/9.0/staging/builds/devstudio-9.0.0.Beta1-build-discovery.earlyaccess/">https://devstudio.redhat.com/9.0/staging/builds/devstudio-9.0.0.Beta1-build-discovery.earlyaccess/</a></p> <p><a href="https://devstudio.redhat.com/9.0/staging/updates/discovery.earlyaccess/9.0.0.Beta1/">https://devstudio.redhat.com/9.0/staging/updates/discovery.earlyaccess/9.0.0.Beta1/</a> <a href="https://devstudio.redhat.com/9.0/development/updates/discovery.central/">https://devstudio.redhat.com/9.0/development/updates/discovery.central/</a> (not yet available) <a href="https://devstudio.redhat.com/9.0/development/updates/">https://devstudio.redhat.com/9.0/development/updates/</a> (not yet available) You can also see this information here: <a href="http://download.jboss.org/jbosstools/configuration/ide-config.properties">http://download.jboss.org/jbosstools/configuration/ide-config.properties</a> ----- {quote} Is this the correct JBTIS update site? <a href="http://download.jboss.org/jbosstools/mars/snapshots/updates/integration-stack/aggregate/4.3.0.Beta1">http://download.jboss.org/jbosstools/mars/snapshots/updates/integration-stack/aggregate/4.3.0.Beta1</a> {quote} Yes, but if you can omit the needless path segment <code>"/aggregate/"</code> that'd be super.</p> | <a href="https://issues.jboss.org/browse/JBTIS-492">https://issues.jboss.org/browse/JBTIS-492</a> |
| 12659 | JBTIS-492   | Sure. [~nickboldt] I was using <a href="https://raw.githubusercontent.com/jbosstools/jbosstools-build-ci/master/publish/publish.sh">https://raw.githubusercontent.com/jbosstools/jbosstools-build-ci/master/publish/publish.sh</a> - now switching to <a href="https://raw.githubusercontent.com/jbosstools/jbosstools-build-ci/jbosstools-4.3.x/publish/promote.sh">https://raw.githubusercontent.com/jbosstools/jbosstools-build-ci/jbosstools-4.3.x/publish/promote.sh</a> correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTIS-492">https://issues.jboss.org/browse/JBTIS-492</a> |
| 12660 | JBTIS-487   | I have migrated the four features using the guidelines in <a href="https://github.com/jbosstools/jbosstools-devdoc/blob/master/source/how_to_use_license_features.adoc">https://github.com/jbosstools/jbosstools-devdoc/blob/master/source/how_to_use_license_features.adoc</a> and I am getting this during a build: {code} [ERROR] Failed to execute goal org.eclipse.tycho:tycho-packaging-plugin:0.23.1:package-feature (default-package-feature) on project org.switchyard.tools.feature: E:\Users\bfritzpat\github\tools\eclipse\features\org.switchyard.tools.feature\build.properties: bin.includes value(s) [license.html] do not match any files. -> [Help 1] {code} Does JBTIS expose org.jboss.tools.foundation.license.feature in a way that we need to import it as a required feature in downstream projects?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTIS-487">https://issues.jboss.org/browse/JBTIS-487</a> |
| 12661 | JBTIS-487   | When I look at the latest JBTIS 4.3. Alpha2 / JBDS 9.0.0.Alpha2 bits I see this: * in JBT: !IS-projects-using-old-license.png! * in JBDS: !IS-projects-using-old-license_2.png! is this because you didn't publish your newer bits into the IS composites/aggregates? Or is the problem in SwitchYard itself? What's the latest version available w/ the fixed features / license terms? Something newer than 2.1.0.v20150821-1353-H598-Alpha1?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTIS-487">https://issues.jboss.org/browse/JBTIS-487</a> |
| 12662 | JBTIS-484   | Hey [~blafond] - once the Mars build is stabilized - can you take a look at this? It's a mechanical change.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-484">https://issues.jboss.org/browse/JBTIS-484</a> |
| 12663 | JBTIS-483   | [~bbrodt] - Could you look at this for your Mars build. The instructions are very straightforward. Thxk!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTIS-483">https://issues.jboss.org/browse/JBTIS-483</a> |
| 12664 | JBTIS-483   | Hey [~bbrodt] - it looks like your original PR was modified and pushed - is there a Mars build that has this updated? thxk!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-483">https://issues.jboss.org/browse/JBTIS-483</a> |
| 12665 | JBTIS-483   | Hey [~bbrodt] - I don't think I can use that URL - it's a nexus internal URL - can I get one captured as a beta someplace friendlier??? Thks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTIS-483">https://issues.jboss.org/browse/JBTIS-483</a> |
| 12666 | JBTIS-483   | Hey [~mbiarnes], [~KrisVerlaenen] - I'm looking for an Eclipse Mars build of drools 6.4.0 that I can access for the Integration Stack. The current version I'm pulling into the stack is: <a href="http://download.jboss.org/jbpm/release/6.3.0.Final/updatesite/">http://download.jboss.org/jbpm/release/6.3.0.Final/updatesite/</a> Bob found the above site that appears to be not-for-public-consumption. Is there a <a href="http://download.jboss.org/jbpm/...">http://download.jboss.org/jbpm/...</a> drools site (doesn't have to be .Final) that I could use? Also - could the above license issue be addressed as well?? Thxkx!!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTIS-483">https://issues.jboss.org/browse/JBTIS-483</a> |
| 12667 | JBTIS-483   | Last chance [~KrisVerlaenen] [[~bbrodt] - do you have a released Mars-based 6.4.0 drools that you'd like to include in JBDSIS 9.0.0.Beta1??? i.e. <a href="http://download.jboss.org/jbpm/release/6.4.0.Final/updatesite/">http://download.jboss.org/jbpm/release/6.4.0.Final/updatesite/</a> #.Final is not required                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a | 12668 | JBTIS-482   | [~nickboldt] - cool script - where can I find find.sh?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTIS-482">https://issues.jboss.org/browse/JBTIS-482</a> |
| 12669 | JBTIS-471   | Hey [~bbrodt] - I think org.jboss.tools.runtime.drools.detector.feature org.drools.eclipse.feature org.guvnor.tools.feature org.eclipse.bpmn2.feature org.eclipse.bpmn2.modeler org.jbpm.eclipse.feature org.kie.eclipse.feature need to change. Can you take a look at the version format of those?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTIS-471">https://issues.jboss.org/browse/JBTIS-471</a> |

| 12670 | JBTIS-471   | <p>Did more digging and I can't see how your tests depend on JMock. So, here's another commit on the PR [1], which runs them but they fail with a curious error: [1] <a href="https://github.com/nickboldt/bpel/commit/52652ad8e6079d76d8a7d7c435945a8b25bea649">https://github.com/nickboldt/bpel/commit/52652ad8e6079d76d8a7d7c435945a8b25bea649</a> {code} [INFO] Expected eclipse log file: /home/nboldt/eclipse/workspace-eclipse/org.eclipse.bpel/tests/org.eclipse.bpel.ui.tests/target/work/data/.metadata/.log [INFO] Command line: [/opt/jdk1.8.0_60/jre/bin/java, -Dosgi.noShutdown=false, -Dosgi.os=linux, -Dosgi.ws=gtk, -Dosgi.arch=x86_64, -Xms64m, -Xmx1024m, -XX:MaxPermSize=128M, -Dorg.eclipse.swtbot.search.timeout=15000, -Dosgi.clean=true, -jar, /home/nboldt/.m2/repository1/p2/osgi/bundle/org.eclipse.equinox.launcher/1.1.1.R36x_v20101122_1400/org.eclipse.equinox.launcher-1.1.1.R36x_v20101122_1400.jar, -data, /home/nboldt/eclipse/workspace-eclipse/org.eclipse.bpel/tests/org.eclipse.bpel.ui.tests/target/work/data, -install, /home/nboldt/eclipse/workspace-eclipse/org.eclipse.bpel/tests/org.eclipse.bpel.ui.tests/target/work, -configuration, /home/nboldt/eclipse/workspace-eclipse/org.eclipse.bpel/tests/org.eclipse.bpel.ui.tests/target/work/configuration, -application, org.eclipse.tycho.surefire.osgi.booter.utitest, -testproperties, /home/nboldt/eclipse/workspace-eclipse/org.eclipse.bpel/tests/org.eclipse.bpel.ui.tests/target/surefire.properties, -testApplication, org.eclipse.ui.ide.workbench, -product, org.eclipse.sdk.ide, -nouithread] Java HotSpot(TM) 64-Bit Server VM warning: ignoring option MaxPermSize=128M; support was removed in 8.0 Launching application org.eclipse.ui.ide.workbench... ----- T E S T S -----</p> <p>java.lang.reflect.InvocationTargetException at sun.reflect.NativeMethodAccessorImpl.invoke0(Native Method) at sun.reflect.NativeMethodAccessorImpl.invoke(NativeMethodAccessorImpl.java:62) at sun.reflect.DelegatingMethodAccessorImpl.invoke(DelegatingMethodAccessorImpl.java:43) at java.lang.reflect.Method.invoke(Method.java:497) at org.apache.maven.surefire.util.ReflectionUtils.invokeMethodWithArray2(ReflectionUtils.java:208) at org.apache.maven.surefire.booter.ProviderFactory\$ProviderProxy.invoke(ProviderFactory.java:156) at org.apache.maven.surefire.booter.ProviderFactory.invokeProvider(ProviderFactory.java:82) at org.eclipse.tycho.surefire.osgi.booter.OsgiSurefireBooter.run(OsgiSurefireBooter.java:91) at org.eclipse.tycho.surefire.osgi.booter.AbstractUITestApplication.runTests(AbstractUITestApplication.java:44) at org.eclipse.ui.internal.testing.WorkbenchTestable\$1.run(WorkbenchTestable.java:71) at java.lang.Thread.run(Thread.java:745) Caused by: java.lang.RuntimeException: Bug in saff's brain: Suite constructor, called as above, should always complete at org.junit.runner.Request.classes(Request.java:72) at org.apache.maven.surefire.junitcore.JUnit4RunnerWrapper.createRequestAndRun(JUnit4RunnerWrapper.java:102) at org.apache.maven.surefire.junitcore.JUnit4RunnerWrapper.executeEager(JUnit4RunnerWrapper.java:85) at org.apache.maven.surefire.junitcore.JUnit4RunnerWrapper.execute(JUnit4RunnerWrapper.java:54) at org.apache.maven.surefire.junitcore.JUnit4RunnerProvider.invoke(JUnit4RunnerProvider.java:134) ... 11 more {code} See <a href="http://fossies.org/linux/privat/junit-4.12-sources.jar/org/junit/runner/Request.java">http://fossies.org/linux/privat/junit-4.12-sources.jar/org/junit/runner/Request.java</a> for the source of that error message.</p> | <a href="https://issues.jboss.org/browse/JBTIS-471">https://issues.jboss.org/browse/JBTIS-471</a> |
| 12671 | JBTIS-471   | Hey again [~bbrodrt] - I'm currently picking up a bpel 1.0.5.Final from last August. Are you sure this is 1.0.5? --P                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTIS-471">https://issues.jboss.org/browse/JBTIS-471</a> |
| 12672 | JBTIS-471   | [~bbrodrt] I think the question was: Are these two sites equivalent? * <a href="http://download.eclipse.org/bpel/updates/mars/1.0.5">http://download.eclipse.org/bpel/updates/mars/1.0.5</a> (new with full qualifier) * <a href="http://download.eclipse.org/bpel/site/1.0.5">http://download.eclipse.org/bpel/site/1.0.5</a> (1.0.5.Final, no qualifier)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-471">https://issues.jboss.org/browse/JBTIS-471</a> |
| 12673 | JBTIS-471   | Nick: why can't I call my next 1.0.5 something like 1.0.501 (since you're suggestion a triple digit service release number anyway)? Besides, I'm not planing on making any more changes to BPTEL editor - it's basically at EOL anyway (except it still needs to be in Neon) Paul: yes, I haven't changed anything in jbosstools-bpel either.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTIS-471">https://issues.jboss.org/browse/JBTIS-471</a> |
| 12674 | JBTIS-471   | I think I've got them all. Can we call this one done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTIS-471">https://issues.jboss.org/browse/JBTIS-471</a> |
| 12675 | JBTIS-471   | [~bbrodrt] - Hi Bob - Could you tweak your build versions for consistency? Give a time of 0800 and a build 212: * JBoss Drools Core 6.4.0.201601201107 should be 6.4.0-v201601201107-0800-B212 * BPMN2 Metamodel 1.2.1.Final-v20160119-1829 should be 1.2.1.Final-v20160119-1829-B212 * BPMN2 Modeler - Diagram Editor 1.2.3.CR2-v20160209-2002 should be 1.2.3.CR2-v20160209-2002-B212 * BPMN2 Modeler - jBPM Runtime Extension Feature 1.2.3.CR2-v20160209-2002 should be 1.2.3.CR2-v20160209-2002-B212 [~bftzpat] - Could you make a small tweak to your versions as well: SwitchYard 2.1.0.v20160211-1448-H632-Beta2 should be 2.1.0.Beta2-v20160211-1448-B632 Same for the other 2 SY features. [~apodhrad] - please comment if the above is correct.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-471">https://issues.jboss.org/browse/JBTIS-471</a> |
| 12676 | JBTIS-447   | Hi [~apodhrad], as discussed, I have made the necessary changes to the doc. Can you please have a look? ( <a href="http://docbuilder.usersys.redhat.com/23023/">http://docbuilder.usersys.redhat.com/23023/</a> ) Thanks - supriya                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTIS-447">https://issues.jboss.org/browse/JBTIS-447</a> |
| 12677 | JBTIS-447   | I agree - looks good. One quick thing - we're emphasizing Fuse Tooling - in sections 4 and 5, can we move 'JBoss Fuse Development' to first in the list?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTIS-447">https://issues.jboss.org/browse/JBTIS-447</a> |
| 12678 | JBTIS-438   | Hey [~kcbabo] - where did you find jaxb-impl in the TP?? I found a bunch of org.eclipse.jpt.jaxb.feature. for web services but that's not what your want. Just checking... Thkx                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTIS-438">https://issues.jboss.org/browse/JBTIS-438</a> |
| 12679 | JBTIS-437   | [~maxandersen] [~nickboldt] Seeing what Max and Nick have for an opinion. There appears to be a single required jar (~90kb). Is this a candidate for locus or <a href="http://download.jboss.org/jbosstools/updates/requirements/">http://download.jboss.org/jbosstools/updates/requirements/</a> ??                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTIS-437">https://issues.jboss.org/browse/JBTIS-437</a> |
| 12680 | JBTIS-437   | Sounds more like 5 jars, if you read Keith's details re: commons-lang(2 or 3) & jackson-* /updates/requirements is where we store p2-mirrored update sites. If these are not p2 artifacts, they'd need to be bundled into Locus for you to use them as osgi dependencies. TPs can only contains osgi plugins/features; AFAIK you can't include maven deps directly w/o first re-wrapping them via Locus (or Orbit). Can you use any of the json/jackson stuff in Eclipse's Orbit? Here's the latest mirror [1] we've pulled, which includes: * com.fasterxml.jackson * org.codehaus.jackson * org.glassfish.jersey.media.jersey-media-json-jackson * com.fasterxml.jackson.jaxrs.jackson-jaxrs-json-provider [1] <a href="http://download.jboss.org/jbosstools/updates/requirements/orbit/S20150428165605/plugins/">http://download.jboss.org/jbosstools/updates/requirements/orbit/S20150428165605/plugins/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTIS-437">https://issues.jboss.org/browse/JBTIS-437</a> |
| 12681 | JBTIS-437   | Hey [~nickboldt] - could you please :) take a look at this PR: <a href="https://github.com/jbosstools/jbosstools-locus/pull/43">https://github.com/jbosstools/jbosstools-locus/pull/43</a> I think it's close - need to figure out the dependencies. I've modified the locus TP but can't get an Import-Package to find the two packages I've added: Import-Package: com.fasterxml.jackson.core.jackson-databind, javax.validation.validation-api So - the pom from the import of the package lists a set of dependencies here: <a href="https://repo1.maven.org/maven2/org/jsonschema2pojo/jsonschema2pojo-core/0.4.13/jsonschema2pojo-core-0.4.13.pom">https://repo1.maven.org/maven2/org/jsonschema2pojo/jsonschema2pojo-core/0.4.13/jsonschema2pojo-core-0.4.13.pom</a> Most of these dependencies Fuse Data Trans didn't need to specify in their local libs dependencies capture. Should all of these be part of the Import-Package of the jsonschema2pojo manifest? Thkx (in advance...)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTIS-437">https://issues.jboss.org/browse/JBTIS-437</a> |

| 12682 | JBTIS-431   | Updated JBTIS TP 4.2.3.CR1a repo and nexus. [~phantomjinx] - please try rebuilding teiid designer w/ jbtis tp version 4.2.3.CR1a . Also - Barry gave me a teiid des to use for the first CR1 capture for QE to test: 9.0.2.Beta1 . Should I hold off giving this to QE (waiting for an update with this TP) or should I go ahead with 9.0.2.Beta1?<br>https://github.com/jbosstools/jbosstools-integration-stack/commit/73d3c92caaa66577cc1bacaf6ccf729b2f57d617<br>http://download.jboss.org/jbosstools/targetplatforms/jbttarget/4.2.3.CR1a/                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-431">https://issues.jboss.org/browse/JBTIS-431</a> |
| 12683 | JBTIS-429   | Hey [~bfitzpat] - I've got what I need to spin an initial JBTIS 4.2.2. Do you think you'll have a SwitchYard update soon?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTIS-429">https://issues.jboss.org/browse/JBTIS-429</a> |
| 12684 | JBTIS-429   | It's been held up to at least the end of the week. Go ahead without me and let's shoot for a SY update for an 8.0.3?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTIS-429">https://issues.jboss.org/browse/JBTIS-429</a> |
| 12685 | JBTIS-416   | Hey [~mhusnain] - I should have generated this in your Jira. Is there any way to get this paragraph into the 8.0.1.GA release notes? If not then just comment as such and I'll close it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTIS-416">https://issues.jboss.org/browse/JBTIS-416</a> |
| 12686 | JBTIS-416   | Thanks Misha - looks good to me. [~apodhrad] - what do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTIS-416">https://issues.jboss.org/browse/JBTIS-416</a> |
| 12687 | JBTIS-412   | [~pleacu] where can I find the website with the link to release notes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTIS-412">https://issues.jboss.org/browse/JBTIS-412</a> |
| 12688 | JBTIS-379   | [~nickboldt] - Do you think it's okay to create a stable/ final community p2 update site that has Beta or CR components or should I create two p2 update sites (similar to the jbdevstudio proposal)? What should I name them? http://download.jboss.org/jbosstools/updates/stable/integration-stack/aggregate/4.2.0.Final<br>http://download.jboss.org/jbosstools/updates/development/luna/integration-stack/aggregate/4.2.0.Final-earlyaccess<br>http://download.jboss.org/jbosstools/updates/development/luna/integration-stack/aggregate/4.2.0-earlyaccess                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-379">https://issues.jboss.org/browse/JBTIS-379</a> |
| 12689 | JBTIS-355   | as discussed during f2f this initially would only happen when they are GA, thus this should *not* (at first) need any new updatesite. If we want to expose development/non-final installs on marketplace for IS *then* that will be required - but then we are talking an install that is will be working/targeting development releases of JBoss Tools / Developer Studio content comes from. This might not be a problem since 8.x should be api backwards compatible anyways but it is just something both core and IS team need to be aware about. That's why at f2f it was discussed as being done for 7.0 first (we need to cleanup the updatesite first so there is just one updatesite like for devstudio 8) and then do it for devstudio 8 when going GA. btw. I'm not following what this item is about: "In JBDS 8.1, add a new com.jboss.devstudio.core.central.feature that packages up com.jboss.devstudio.core.central plugin; include this in com.jboss.devstudio.core.feature instead of the plugin?" ? what is this solving ? what is it needed for ?                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-355">https://issues.jboss.org/browse/JBTIS-355</a> |
| 12690 | JBTIS-355   | {quote} btw. I'm not following what this item is about: "In JBDS 8.1, add a new com.jboss.devstudio.core.central.feature that packages up com.jboss.devstudio.core.central plugin; include this in com.jboss.devstudio.core.feature instead of the plugin?" ? what is this solving ? what is it needed for ?{quote}<br>This is there to allow a JBDS IS marketplace install to include the JBDS Central feature. Today, the only way to force-install JBDS IS + Central is to install JBDS IS + JBDS, which for more slimmed-down JBDS IS installs (eg., one for just Fuse tooling) would be excessively disk-heavy. So, by splitting out the JBDS Central branding plugin into its own feature, we can have a Marketplace entry that includes JBDS Central w/o also dragging in all of JBDS. (Marketplace entries cannot include plugins, only features.) I have not yet opened a JIRA for that item because we don't have an actual schedule for JBDS 8.1 yet. If we have agreement on the notion of doing a 8.1 release, then I can open a JBDS JIRA and assign it accordingly to the correct target milestone, with dev_ACK enabled.. | <a href="https://issues.jboss.org/browse/JBTIS-355">https://issues.jboss.org/browse/JBTIS-355</a> |
| 12691 | JBTIS-355   | I'm not following how creating a com.jboss.devstudio.core.central.feature helps this situation about having a slimmer central. The splitting up is a jboss tools level issue, not devstudio. For me there are two issues: 1) getting the list of toplevel features to install central as it is today 2) looking at cutting down the footprint of these features IF they are found too excessive. Is the above devstudio.core feature #1 ? or also #2 ? #1 my belief (at least during f2f was that this was doable today) , #2 is something we said we would *possibly* look into. neither of these we need a date for to create the jiras - create the jiras first so they can be triaged would be better.                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTIS-355">https://issues.jboss.org/browse/JBTIS-355</a> |
| 12692 | JBTIS-355   | why are we now creating these feature groupings ? have we solved the problem of updates of these without requiring respin of them ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTIS-355">https://issues.jboss.org/browse/JBTIS-355</a> |
| 12693 | JBTIS-355   | So - to be clear - the list above differs from JBoss Central connectors by: + adding JBoss Fuse Development - removing SOA 5.x Development Would it make things simpler by having the Eclipse Marketplace entries match JBDSIS JBoss Central connectors exactly? All we would need to do is keep SOA 5.x and add JBoss Fuse. Also - please review: https://docs.google.com/a/redhat.com/presentation/d/1DVVAAghj7w2meTKG9QLA-VtO1j3jdzKd1gstach7U/edit#slide=id.g439643f45_2_8                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-355">https://issues.jboss.org/browse/JBTIS-355</a> |
| 12694 | JBTIS-355   | With this suggested commit [1] in this PR [2], I've added a JBoss Fuse Development connector to JBDS IS in Central. [1] https://github.com/nickboldt/jbosstools-integration-stack/commit/3948e4478abf00f8b7d46d18f536bebe862087f [2] https://github.com/jbosstools/jbosstools-integration-stack/pull/265 So the only difference therefore between what I've set up in that PR for *JBDS IS on Eclipse Marketplace* vs. *JBDS IS in JBoss Central* is that Marketplace currently does NOT include a soa-legacy (SOA 5.x) feature. [~alansantos] [~maxandersen] [~pleacu] Could you please decide if you want a 5th "wrapper feature" in the JBDS IS Eclipse Marketplace entry to facilitate the installation of SOA 5.x stuff? My understanding from JBTIS-258 ( https://issues.jboss.org/browse/JBTIS-358?focusedCommentId=13027520&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13027520 ) was you only wanted 4 features listed. Shall I prepare a 3rd PR and put the soa-legacy (SOA 5.x) feature back in?                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-355">https://issues.jboss.org/browse/JBTIS-355</a> |
| 12695 | JBTIS-355   | JDV is currently going GA. My current plan is to wait until B*MS and FSW goes GA and then enable all JBDSIS tooling in Eclipse Marketplace at the same time. Does that sound okay to you? (esp [~maxandersen] [~nickboldt] )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTIS-355">https://issues.jboss.org/browse/JBTIS-355</a> |
| 12696 | JBTIS-355   | Why do we want to wait with the marketplace entry ? is it not better to get it live and tested/seen live ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTIS-355">https://issues.jboss.org/browse/JBTIS-355</a> |
| 12697 | JBTIS-355   | I didn't want to stress out the first Luna tooling release since it was minimal (just the DataVirt tools) - the rest as EA. I agree it would be better to get some live testing before Fuse comes along. I'll split the difference and plan on an Eclipse Marketplace presence for JBDSIS 8.0.1 (B*MS). Then we can test all of the JDV and BPM stuff. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTIS-355">https://issues.jboss.org/browse/JBTIS-355</a> |
| 12698 | JBTIS-355   | [~nickboldt] - these two hidden container features are now available (B*MS and JDV) in JBDSIS 8.0.1.GA: {code} <feature id="com.jboss.devstudio.integration-stack.bpr.feature" path="..../devstudio/site-ga/com.jboss.devstudio.integration-stack.bpr.feature"/> <feature id="com.jboss.devstudio.integration-stack.ds.feature" path="..../devstudio/site-ga/com.jboss.devstudio.integration-stack.ds.feature"/> {code} *at your convenience* - can we see what it will take to get these in Eclipse Marketplace? Thxk                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTIS-355">https://issues.jboss.org/browse/JBTIS-355</a> |

| 12699 | JBTIS-355   | [~pleacu] we just need some text for this entry and we should be okay. Here is my suggestion based on JBDS from <a href="https://marketplace.eclipse.org/content/red-hat-jboss-developer-studio-luna">https://marketplace.eclipse.org/content/red-hat-jboss-developer-studio-luna</a> <code>{code}</code> Title: Red Hat JBoss Developer Studio w/Integration Stack <version> Red Hat JBoss Developer Studio w/Integration Stack <version> includes <a href="https://marketplace.eclipse.org/content/red-hat-jboss-developer-studio-luna[jboss-developer-studio]">https://marketplace.eclipse.org/content/red-hat-jboss-developer-studio-luna[jboss-developer-studio]</a> plus: * BRMS Tooling * JBoss Data Virtualization JBoss Developer Studio w/Integration Stack adds support for JBoss and related technologies, such as Teiid and Drools. For a quick overview, see <link to docs/overview?> More videos here: <a href="http://docs.jboss.org/tools/movies/">http://docs.jboss.org/tools/movies/</a> See also: <a href="http://www.redhat.com/products/jbossenterprisemiddleware/developer-studio/">http://www.redhat.com/products/jbossenterprisemiddleware/developer-studio/</a> This release was built with Eclipse 4.4.2 (Luna SR2), but should also work with other Luna or Eclipse 4.4.x versions. Luna SR2 JEE bundle recommended: <a href="http://www.eclipse.org/downloads/packages/eclipse-ide-java-ee-developers...">http://www.eclipse.org/downloads/packages/eclipse-ide-java-ee-developers...</a> NOTE: Use with latest Java 7 higher than jdk-7u45 or Java 8 versions. NOTE: If you encounter problems, please open a <a href="https://jira.jboss.org/jira/browse/JBDS[JIRA]!">https://jira.jboss.org/jira/browse/JBDS[JIRA]!</a> <code>{code}</code> WDDY ?                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTIS-355">https://issues.jboss.org/browse/JBTIS-355</a> |
| 12700 | JBTIS-355   | I assume the only two features we need are: <code>{code}</code> com.jboss.devstudio.integration-stack.bpr.feature <code>{code}</code> com.jboss.devstudio.integration-stack.ds.feature <code>{code}</code> since they should auto include devstudio, correct ? btw. what does bpr and ds stand for ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTIS-355">https://issues.jboss.org/browse/JBTIS-355</a> |
| 12701 | JBTIS-354   | Should we close this since now not the priority and we will do it for JBDS 8 based installis instead and don't have to reorg JBDS 7 updatesites to support this then ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTIS-354">https://issues.jboss.org/browse/JBTIS-354</a> |

Those are the correct rel notes - not sure why the customer can't see them or who translates them...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTIS-348">https://issues.jboss.org/browse/JBTIS-348</a> |
| 12703 | JBTIS-348   | [~ganandan-Redhat] and [~lcarlon] - The release notes in [3] above are accessible and correct. Is there another step that's missing here - the customer (in Japan) can't download them and I am unaware of any further process. Thkx                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTIS-348">https://issues.jboss.org/browse/JBTIS-348</a> |
| 12704 | JBTIS-348   | Thanks, [~mmusaji]. [~nmoore], can you work with Paul to convert and stage the release notes on the CSP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTIS-348">https://issues.jboss.org/browse/JBTIS-348</a> |
| 12705 | JBTIS-348   | Hi Paul, I've spoken with Michelle Murray, and she has provided me with a procedure to create a release notes document which can be downloaded and printed. The procedure involves scraping the release notes text from the relevant Jiras using a script. I have noticed that most (if not all) of the Jiras are closed and do not have any release notes text. This procedure is used by the JBDS documentation team and would be a good idea to follow the same procedure as Michelle suggested that the JBDS IS doco should be hosted on the JBDS documentation portal page. Michelle suggested that we reopen the closed Jiras, update the settings to say that the Jiras affect the Release notes, and add sample release notes text to the Jira. After that the developers would need to add the release notes text, then we can close the Jiras again. I'm happy to do the reopening and setting changes, if I have permission, and Michelle has provided sample release notes text, which I can add to each Jira. Would you be able to persuade the developers to add release notes text to the Jiras? The procedure is outlined in this Mojo doc - <a href="https://mojo.redhat.com/docs/DOC-944745">https://mojo.redhat.com/docs/DOC-944745</a> Thanks, Nichola Moore                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-348">https://issues.jboss.org/browse/JBTIS-348</a> |
| 12706 | JBTIS-348   | Hey [~nmoore] - I think the immediate issue is to simply convert the existing 7.0.3.GA JBDSIS release notes ([3] above) into a CSP version. I don't know what the procedure is for that (does docs create a ticket to update the CSP?). As for the extended procedure mentioned above - it appears great but I'd bet there would be a fair amount of angst re-opening all of those Jiras. I also don't have the authority to get the component owners to accept this procedure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTIS-348">https://issues.jboss.org/browse/JBTIS-348</a> |
| 12707 | JBTIS-348   | Paul Leacu - I've created a version of the Release Notes using our usual style sheet. I know Michelle uses a specific release notes style sheet so hers looks slightly different, but this has all we need (plus a few bits we don't but I can't get rid of those!). What we need now is to update the JBoss Developer Studio splash page so that the customer can see the link to the release notes. Are the JBDS and JBDSIS releases numbered the same? I'm afraid I can't even send you a link so you can have a look. There's no presence on our stage server to link to. I'll try to work it out on Monday. I'm just letting you know that work is in progress and it's all not too far away! Regards, Nichola                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTIS-348">https://issues.jboss.org/browse/JBTIS-348</a> |
| 12708 | JBTIS-348   | Hi Paul, Finally! Please can you have a look at <a href="http://documentation-devel.engineering.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Developer_Studio_Integration_Stack/7.0/html-single/7.0.3_Release_Notes/index.html">http://documentation-devel.engineering.redhat.com/site/documentation/en-US/Red_Hat_JBoss_Developer_Studio_Integration_Stack/7.0/html-single/7.0.3_Release_Notes/index.html</a> and let me know if there needs to be any changes. Thanks, Nichola                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTIS-348">https://issues.jboss.org/browse/JBTIS-348</a> |
| 12709 | JBTIS-339   | {quote}Where "direct-references" is what we do now, with a simple <references> block added to content.jar!/content.xml, and "composite-with-references" is the more complex tree structure we're proposing?{quote} Yes. How much do you like it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-339">https://issues.jboss.org/browse/JBTIS-339</a> |
| 12710 | JBTIS-339   | There is no reference at all. Did you apply that on a site where you have some "associateSites" ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTIS-339">https://issues.jboss.org/browse/JBTIS-339</a> |
| 12711 | JBTIS-339   | So how does an IS component pom change from the old/bad assocSites in order to build an independent update site with references?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-339">https://issues.jboss.org/browse/JBTIS-339</a> |
| 12712 | JBTIS-339   | Having compositeArtifacts different is normal, because the "references" repo doesn't contain any artifacts, it contains just references. Are IS component inheriting your pom configuration? If yes, then you only need to change the IS parent pom. Note that Mojo is currently a SNAPSHOT version, so we'll probably need to release it before using it more widely.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTIS-339">https://issues.jboss.org/browse/JBTIS-339</a> |
| 12713 | JBTIS-339   | Great! So I'm merging my PR, then repository-utils 0.21.1-SNAPSHOT will contain this feature. When do you plan to make a release of JBT-IS ? We'll make a release of the tycho-plugins just before that.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTIS-339">https://issues.jboss.org/browse/JBTIS-339</a> |
| 12714 | JBTIS-339   | Ok. technically, I can do it from now on. However, I prefer to make sure we won't do that for nothing and we won't need to re-release tomorrow. Have you validated, on JBT-IS side that the withReferences vs "plain" approach satisfies your use-cases? On JBT, we're happy with using the plain URL in discovery and having to composite it with whatever seems necessary, and keeping control on the sites we reference/composite.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTIS-339">https://issues.jboss.org/browse/JBTIS-339</a> |
| 12715 | JBTIS-339   | Ok - good point. So now JBTIS can create a fully resolved "withReferences" composite update site and in theory the existing JBTIS discovery poms should continue to work. I'll verify that. So JBDSIS (which draws from JBTIS) doesn't carry associateSites - it pulls from a mirror-target-to-repo. Is that not affected by this? We pass into our IS poms upstream discovery and composite urls. <a href="https://github.com/jbosstools/jbosstools-integration-stack/blob/master/jbosstools/pom.xml">https://github.com/jbosstools/jbosstools-integration-stack/blob/master/jbosstools/pom.xml</a> <a href="https://github.com/jbosstools/jbosstools-integration-stack/blob/master/devstudio/pom.xml">https://github.com/jbosstools/jbosstools-integration-stack/blob/master/devstudio/pom.xml</a> The JBTIS/JBDSIS discovery plugins has embedded 8.0-development/central/integration-stack in them - does that need to go? <a href="https://github.com/jbosstools/jbosstools-integration-stack/blob/master/jbosstools/discovery/org.jboss.tools.central.discovery.integration-stack/plugin.xml#L27">https://github.com/jbosstools/jbosstools-integration-stack/blob/master/jbosstools/discovery/org.jboss.tools.central.discovery.integration-stack/plugin.xml#L27</a> <a href="https://github.com/jbosstools/jbosstools-integration-stack/blob/master/devstudio/discovery/com.jboss.jbds.central.discovery.integration-stack/plugin.xml#L56">https://github.com/jbosstools/jbosstools-integration-stack/blob/master/devstudio/discovery/com.jboss.jbds.central.discovery.integration-stack/plugin.xml#L56</a> I need to get fuseide functional as an independently installable update site (withReferences) and have it supply a "references" plain site to the IS. IS that just adding the same composite reference strategy? So - I need some help from [~mickael_istria] and [~nickboldt] to just look over the IS poms with me if you can spare the time. | <a href="https://issues.jboss.org/browse/JBTIS-339">https://issues.jboss.org/browse/JBTIS-339</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | URL                                                                                               |

| 12716 | JBTIS-339   | ["leacu] the "fuseide independent installable update site" is *just* for community testing, right ? the supported version will come from JBDSIS updatesites and planned to be put on marketplace. correct ? btw. if fuseide updates into JBTIS anyway - is there a reason for them to not just tell users to use the JBTIS update site ? Just one quick thing I noticed is that jboss.is.update.url should be changed to match the naming in ide.properties.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTIS-339">https://issues.jboss.org/browse/JBTIS-339</a> |
| 12717 | JBTIS-339   | btw. why not just have fabric8 in JBTIS ? excluded in JBDSIS like we had for savara ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-339">https://issues.jboss.org/browse/JBTIS-339</a> |
| 12718 | JBTIS-339   | ["mickael_istria] - I see you've merged the PR for this feature in repository-utils 0.21.1-SNAPSHOT. I need to create the JBTIS 4.2.0.Beta1 release early next week so I'll need the updated tycho-plugins - is it available? I believe the withReferences vs "plain" approach satisfies the primary use case. Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTIS-339">https://issues.jboss.org/browse/JBTIS-339</a> |
| 12719 | JBTIS-339   | Yes 0.21.1-SNAPSHOT with this change is already available in JBoss Snapshot repo (https://repository.jboss.org/nexus/content/repositories/snapshots/org/jboss/tools/tycho-plugins/0.21.1-SNAPSHOT/ ). You can already use it. I can let you have fun with it and unless you find something wrong, I'll release it as 0.21.1 on Monday morning (european time). Is it good for you?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTIS-339">https://issues.jboss.org/browse/JBTIS-339</a> |
| 12720 | JBTIS-332   | Merging these changes broke the build at hudson.eclipse.org. After spending about a day on trying to figure this out, I finally gave up and reverted the changes. The existing build did generate an SDK feature which included source jars for all of the plugins - why was that not sufficient? Anyway, unless someone smarter than I can figure out what the problem is, I'm going to leave things as they are...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTIS-332">https://issues.jboss.org/browse/JBTIS-332</a> |
| 12721 | JBTIS-331   | what kind of earlyaccess are we talking here ? on jboss tools I assume this is just being added into jbosstools development updatesite - no special thing here (sure we can mark it as earlyaccess since it won't be there when jbosstools GA's). But for it to be visible in JBoss Tools Final and from developer studio the earlyaccess content needs to goto the earlyaccess p2 repository, just changing the certificate ID does not do anything on its own. This paragraph: "It is not necessary to refactor (or copy) your plugin to include .earlyaccess in the name, UNLESS you plan to have one plugin for "early access" and one for "released" content, as we do in JBT/JBDS. (You can also include both types of content in the same plugin.)" sounds *very* wrong to me. Why does IS not need to have separate earlyaccess content like core do ? what makes it okay their updatesites gets automatically added ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-331">https://issues.jboss.org/browse/JBTIS-331</a> |
| 12722 | JBTIS-331   | I'm not talking about the discovery file - that one can be one or two (I prefer two since then it is consistent). What i'm talking about is that the PR's I see and the text above talks as if adding the certificate flag to the connector is enough. We can't add the JBTIS-*development* update site url into our Final or GA discovery catalogs. It has to be on earlyaccess otherwise we are going to mix streams/updatesites/TP's afaics. Users Help > Update will be affected without them or us wanting that. Again, why is JBT-IS not doing it like we do for our earlyaccess ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTIS-331">https://issues.jboss.org/browse/JBTIS-331</a> |
| 12723 | JBTIS-331   | {quote} Also - I assume we are going to set jboss.is.update.url to be http://download.jboss.org/jbosstools/updates/development since thats how it would work ever since https://issues.jboss.org/browse/JBDS-3086 have been made in effect ? (central is now composite into / of the main updatesite) {quote} Do we want to consider JBT-IS as one of the main update sites (just like Core or Central)? If so then your suggestion is probably what we'll need to do. When JBT is still in Beta and JBT-IS too: * Set jboss.is.update.url to http://download.jboss.org/jbosstools/updates/development in ide-config.properties * Make http://download.jboss.org/jbosstools/updates/development also reference JBT-IS development site When JBT is released and JBT-IS is still in Beta * Update JBT-IS discovery jar to add Early-Access * Set jboss.is.update.url to JBT-IS development site * Remove JBT-IS development site from http://download.jboss.org/jbosstools/updates/releases/luna When JBT is released and JBT-IS too * Update JBT-IS discovery to remove Early Access * Add JBT-IS release site to http://download.jboss.org/jbosstools/updates/releases/luna * Set jboss.is.update.url to http://download.jboss.org/jbosstools/updates/releases/luna in ide-config.properties                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTIS-331">https://issues.jboss.org/browse/JBTIS-331</a> |
| 12724 | JBTIS-331   | So latest release of JBT-IS is always on Central site and accessible together with latest release of JBT (at the same releases/luna URL). Milestones of JBT-IS are added to Early-Access catalog (and have their own URLs). Is that it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTIS-331">https://issues.jboss.org/browse/JBTIS-331</a> |
| 12725 | JBTIS-331   | no, ....why is this so hard ;) we have the following sites for our plugins: /nightly /staging /development /stable (edited, was release by error before) Each matching the state we are in various development phases. in past we had integration-stack, central, etc. versions of these handed out as public separate sub-urls The change in JBDS-3086 is that these are now composited so we only need to use the root of these sites (/development, /release) when published to users to consume it. Internally we still have individual sites for compositing/testing, but they aren't supposed to be exposed as stable urls to users. Then the intent is that when we do milestones we make it available in the matching category. i.e. right now we got JBoss Tools CR1 in /development and optimally we would get JBoss Tools IS Beta into /development too and thus made available in jboss central for install. when JBoss Tools core goes Final, IS Beta can't just be listed as being installable thus IF we want it available we have /earlyaccess site to provide this and users will have to go and explicit enable EA to get it. Since you can't just have Final central pointing to /development site since then you will be mixing JBoss Tools 4.2.1.x into the release unknowingly. I can see it is probably a bad thing if when are in Core Alpha/Beta/CR1 that IS won't show up as Earlyaccess when it will be that in Final/GA of tools. Thus we could still use the EA marker, but still at GA time integration stack needs to physically be in /earlyaccess location not in /development. | <a href="https://issues.jboss.org/browse/JBTIS-331">https://issues.jboss.org/browse/JBTIS-331</a> |
| 12726 | JBTIS-331   | So we've identified that repository references are making things possibly inconsistent. JBIDE-18541 should provide a tool to avoid direct repository references but still providing ability to link other repos silently. But this is a mid-term solution. For a first iteration, here are a few suggested actions: * Have earlyaccess site compositing http://download.jboss.org/jbosstools/updates/development/luna/integration-stack/aggregate/ * -Have integration stack discovery catalog reference on the JBT URL (from ide-config.properties): jboss.discovery.site.url and jboss.discovery.earlyaccess.site.url (as opposed to what I suggested to Paul with creation of a dedicated property for integration-stack)- We do want to keep the specific is property for testing, and give ability to reference other property, eg: jboss.discovery.site.integration-stack.url jbosstools 4.2.0=\${jboss.discovery.site.url} * Remove references from early-access aggregate site to JBT core development                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-331">https://issues.jboss.org/browse/JBTIS-331</a> |

| 12728 | JBTIS-318   | <p>Hey [~KrisVerlaenen] - I noticed that jBPM3 is actually generating the source bundles correctly. I think what I need is something like this for each feature pom.xml:</p> <pre>&lt;build&gt;   &lt;plugins&gt;     &lt;plugin&gt;       &lt;groupId&gt;org.eclipse.tycho.extras&lt;/groupId&gt;       &lt;artifactId&gt;tycho-source-feature- plugin&lt;/artifactId&gt;     &lt;/plugin&gt;     &lt;plugin&gt;       &lt;groupId&gt;org.eclipse.tycho&lt;/groupId&gt;       &lt;artifactId&gt;tycho-p2- plugin&lt;/artifactId&gt;     &lt;/plugin&gt;   &lt;/plugins&gt; &lt;/build&gt; wdyt?</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/JBTIS-318">https://issues.iboss.org/browse/JBTIS-318</a> |
| 12729 | JBTIS-318   | <p>Hey Kris - Currently - drools/jBPM6/guvnor are the only IS components not generating source bundles. What's interesting is jBPM3 is generating them correctly. Is this something you could look at fairly soon - it's needed for JBDSIS 8.0.0. Thanks, --paul</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/JBTIS-318">https://issues.iboss.org/browse/JBTIS-318</a> |
| 12730 | JBTIS-295   | <p>[~maxandersen] - Is this Jira intended for the IS infrastructure itself to add support for integration testing or for the IS components (i.e. SwitchYard) to add packaged bundle testing support?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/JBTIS-295">https://issues.iboss.org/browse/JBTIS-295</a> |
| 12731 | JBTIS-295   | <p>[~maxandersen] [~mickael_istria] - Opinions wanted... Looking at some older Jira - I believe all of the IS components now use the IS TP. Both JBTIS and JBDSIS are run through the p2 director install tests here: <a href="https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/jbosstools-install-p2director.install-tests.integration-stack.matrix_master/">https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/jbosstools-install-p2director.install-tests.integration-stack.matrix_master/</a> Also - SwitchYard uses the JBTIS TP and performs their own unit testing prior to being aggregated. Do you guys see a good use for using Mickael's p2installed surefire runtime test support at the IS level or does it not apply given unit testing at the component level? Thkx!</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/JBTIS-295">https://issues.iboss.org/browse/JBTIS-295</a> |
| 12732 | JBTIS-295   | <p>When SwitchYard (as an example) uses the JBTIS TP to run its unit test against it it will *not* necessarily load all parts of JBDS - it will only load/start the bundles your test and its dependencies declare. With Michael's approach here you can run tests inside a specific version of developer studio (i.e. devstudio 9.1 beta) instead of just the dependency set. Thus I think it would help catch other kind of errors - but that would probably need new tests that are more integration level tests (i.e. does SwitchYard start in JBDS without any errors as opposed to testing SY unit level features works).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/JBTIS-295">https://issues.iboss.org/browse/JBTIS-295</a> |
| 12733 | JBTIS-295   | <p>[~apodhrad] - Hey Andrej - I know you've got testing infrastructure that utilizes the tycho testing support where it loads a specific JBDS. I think at one point I tried running those but they were too comprehensive for a smoke test tied to the JBDS build. Is it possible to construct some fast smoke tests for Fuse and maybe Teiid Designer? WDYT?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JBTIS-295">https://issues.iboss.org/browse/JBTIS-295</a> |
| 12734 | JBTIS-295   | <p>Actually, the "fast" suite of smoke tests for Fuse tooling is in progress. Our plan is to run such smoke tests for each PR (just with JBTIS dependencies as a verification job). Moreover, every night we execute some subset of tests for the latest build of Fuse tooling with the latest version of JBDS (currently only with 9.x). Something similar we plan for the Teiid Designer but not for the other components (there are no changes or only small changes). I'm not sure what's the exact goal of this issue. All work mentioned above will be done on Fuse (resp. TD) side so that developers can immediately see what's wrong.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/JBTIS-295">https://issues.iboss.org/browse/JBTIS-295</a> |
| 12735 | JBTIS-290   | <p>Paul &amp; Max, I've added the #2 part to the appropriate ModeShape JCR plugin. Will one of you be doing the #1 part for the ModeShape JCR feature? Or would you like me to do that? Also, when I try to build locally now the *{{usage plugin}}* cannot be found. In the past I've used *{{-Punified.target}}* when building locally. Is the usage plugin found somewhere else now? Thanks</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/JBTIS-290">https://issues.iboss.org/browse/JBTIS-290</a> |
| 12736 | JBTIS-290   | <p>usage plugin have not moved since it was created. What are you trying to build exactly?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/JBTIS-290">https://issues.iboss.org/browse/JBTIS-290</a> |
| 12737 | JBTIS-290   | <p>You must have put a "settings.xml" file at the root of the ModeShape Tools code because there is not one there. And whatever you have in it is making it all magically work:-) Can you send me yours or at least the parts of it that you think would help. Thanks Paul.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/JBTIS-290">https://issues.iboss.org/browse/JBTIS-290</a> |
| 12738 | JBTIS-290   | <p>Hey [~elvisisking] - did this ever get resolved? We need at least one feature resolved for Modeshape for 8.0.x. Have you added: org.jboss.tools.usage;resolution:=optional;x-installation:=greedy into your MANIFEST.MF? We're currently tracking MODESHAPE("org.jboss.tools.modeshape.rest.feature", "org.jboss.tools.modeshape.rest"), thkx, --paul</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/JBTIS-290">https://issues.iboss.org/browse/JBTIS-290</a> |
| 12739 | JBTIS-290   | <p>I left comments on the PR but I'll repeat it here in summary: A) the names gets appended into a lenght limited string thus we want as *short* names as we can, thus TEIID is better than TEIIDDESIGNER B) we want to limit what we track to truly unique features - for example we don't no more track ARCHIVES since its always part of Server now. In that context, is Guvnor really relevant to track independently?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/JBTIS-290">https://issues.iboss.org/browse/JBTIS-290</a> |
| 12740 | JBTIS-289   | <p>Hey [~bfitzpat] - I'm assembling a kepler maintenance release of the IS now (JBTIS 4.1.6/ JBDSIS 7.0.3) - should we build/promote a kepler version of ESB with your examples fix?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/JBTIS-289">https://issues.iboss.org/browse/JBTIS-289</a> |
| 12741 | JBTIS-289   | <p>Hey [~bfitzpat] - the staging area's last build is from July - don't know why it didn't stage. Could you rebuild the 4.1.x version again and let me know when it's ready? I'll promote it form staging and update the stack.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/JBTIS-289">https://issues.iboss.org/browse/JBTIS-289</a> |
| 12742 | JBTIS-278   | <p>Hey [~nickboldt] - would the link go here [1] or at the download page for jbds 7.1.1? Also - is there a dummy login so I can see what the CSP JBDS download page looks like? [1] <a href="https://access.redhat.com/site/products/red-hat-jboss-developer-studio/">https://access.redhat.com/site/products/red-hat-jboss-developer-studio/</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/JBTIS-278">https://issues.iboss.org/browse/JBTIS-278</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | URL                                                                                               |

| 12743 | JBTIS-278   | I would list it with the JBDS 7.1.x content. That's what we did for JBDS 5:<br>https://access.redhat.com/jbossnetwork/restricted/listSoftware.html?downloadType=distributions&product=jbossdeveloperstudio&version=5.0.0 As to a login, you can register using your redhat address. Not sure how? Try this link:<br>https://www.redhat.com/wapps/sso/login.html?redirect=%2Fwapps%2Feval%2Findex.html%3Fevaluation_id%3D1002 Then go here:<br>https://access.redhat.com/jbossnetwork/restricted/listSoftware.html?product=jbossdeveloperstudio&downloadType=distributions                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTIS-278">https://issues.jboss.org/browse/JBTIS-278</a> |
| 12744 | JBTIS-253   | ["phantomjinx] what is that script that sounds like it is "blindly" setting include/exclude versions on all plugin dependencies ? Sounds like that could lead to some funky limitations in upgrade paths...or that you made something great that we could use elsewhere. Got a link ? Great to hear things seem to work even after our major change in server adapters. Did you try run it too or just build it for now ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTIS-253">https://issues.jboss.org/browse/JBTIS-253</a> |
| 12745 | JBTIS-245   | Last years promises was that we would at least get alpha builds running so we are not yet repeating not having IS tooling at all available for next release of JBDS 8. Could we at least do one that contains the components that will work on Luna out of the box ? We have many things that need IS feedback for the changes we are doing in JBT core/JBDS core like based on bug reports from users and IS QE: * Runtime less server to allow defining a server without having a local runtime * Refactored JBoss server adapter to have better management support (incl. wildfly/eap 6.x new requirements) * Allow installation of earlyaccess components from Central Luna itself is what will provide: * Java 8 support * Support for eclipse on newer Linux versions (GTK3 on fedora 20/Ubuntu) - kepler will and does have issues. * much faster maven import/support ...and of course bugfixes etc. | <a href="https://issues.jboss.org/browse/JBTIS-245">https://issues.jboss.org/browse/JBTIS-245</a> |
| 12746 | JBTIS-241   | Shouldn't this be logged against the TEIID project, not JBTIS?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTIS-241">https://issues.jboss.org/browse/JBTIS-241</a> |
| 12747 | JBTIS-241   | Bear in mind that the reason that Server Tools went from 2.4 to 3.0 is big api changes and refactorings. Might also precipitate a similar version change in Teiid. Also, I'm not sure that we should expect the same version of Teiid to work on both Kepler and Luna. Should we?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-241">https://issues.jboss.org/browse/JBTIS-241</a> |
| 12748 | JBTIS-241   | you have some points. We do wire into AS api to discover Teiid submodule existence and contributing to the Server view contents. Until we investigate/upgrade to Luna target platform and new AS 3.0 version, we won't know for sure. From a Product standpoint, what will we be supporting for the rest of the year? DV6/DV6.1 == JBDS 7.x ? If so, then compatibility with JBDS 8.0 will be left to JBTIS 8.0 build?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTIS-241">https://issues.jboss.org/browse/JBTIS-241</a> |
| 12749 | JBTIS-241   | We also have to set expectations. * For a user wishing to use the combination of JBDS 8.0.alpha2 and Teiid - which tooling should he use - and when will it be available? * Must this user wait for JBDSIS 7.0.1? * What about users wishing to use JBDS 8.0.alpha2 and FSW6 - do we think that they can safely use JBDSIS 7.0.0?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-241">https://issues.jboss.org/browse/JBTIS-241</a> |
| 12750 | JBTIS-235   | How about a new (optional) update site which contains doc plugins for contributing components? devstudio.jboss.com/updates/4.0/help ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTIS-235">https://issues.jboss.org/browse/JBTIS-235</a> |
| 12751 | JBTIS-235   | The "eclipse" help generated from docbook using Maven, currently has no "branding" applied. Current "Hibernate" help has none. So when we include "Help" from each project in JBDS, do we build it with "JBDS/Red Hat" branding? or leave it generic? If "generic", then there would be no changes required, moving from Project to Product builds. If you want "branding", then there will be a change in Help "source" that needs to be applied for Product. This will be difficult if we're pulling "bits" from projects to directly create the bits for the product.                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTIS-235">https://issues.jboss.org/browse/JBTIS-235</a> |
| 12752 | JBTIS-235   | ["pleacu] is this something we could move to JBTIS? Are there resources for such a thing? If not we can just close this as Won't Fix or Rejected, I guess.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-235">https://issues.jboss.org/browse/JBTIS-235</a> |
| 12753 | JBTIS-221   | Complete list of affected files: [^anonsvn.jboss.org_refs_in_examples.xml.txt] Workspaces in use include: * ["snjeza] (seam, portlet, resteasy, weld, richfaces, jbossas7) * Denny (esb) * ["elvisking] (teiid designer) * ["jdoyle] (teiid designer) * Grid (bpel, esb) * ["rcernich] (esb) * ["fbricon] (archetypeRepo?) * ["bfitzpat] (SOA 5.2) * ["dgalovin] (richfaces) So... the people mentioned above (except for Denny and Grid) need to migrate this content to a new location in github. Do we want to host all this stuff in a new repo, or just put it into https://github.com/jbosstools/jbosstools-download.jboss.org/tree/master/jbosstools/examples ? Should the JBTIS stuff be split out into a separate repo? (cc: ["pleacu] )                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-221">https://issues.jboss.org/browse/JBTIS-221</a> |
| 12754 | JBTIS-221   | If we move these files, how many older installations of JBDS pointing to those paths will need to be updated? We're going back 3 or 4 years on some of these examples aren't we? I just worry about all the potential breakage coming down the line. As far as the ESB examples from Denny & Grid, I've moved those to github in the esb repository for 4.1.x and master. They are here now: https://github.com/jbosstools/jbosstools-esb/tree/master/quickstarts                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-221">https://issues.jboss.org/browse/JBTIS-221</a> |
| 12755 | JBTIS-221   | I'm not suggesting we MOVE old stuff, but rather that we COPY the old stuff into a new place from which ongoing maintenance would occur (like when we migrated from SVN -> Github). So the old stuff, if referenced by JBDS 7 and earlier, would still exist in the old/ugly locations, but from JBDS 8 onward only the CORRECT URLs would be used in the examples *.xml files on download.jboss.org. I also like the idea of co-locating these examples in the projects for which they are relevant, as Brian did for ESB. ["bfitzpat] did you also get the examples from Rob C, and the BPEL examples? And what of the floor show that had been spoken of? In an empty house? In the middle of the night? What diabolical plan had seized Fitz' crazed imagination? [1] [1] http://lmgtfy.com/?q=and%20what%20of%20the%20floorshow?                                                                        | <a href="https://issues.jboss.org/browse/JBTIS-221">https://issues.jboss.org/browse/JBTIS-221</a> |
| 12756 | JBTIS-219   | Support for secure storage password: <appArgLine>-eclipse.password resources/security/password</appArgLine> where password is a file containing the password                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTIS-219">https://issues.jboss.org/browse/JBTIS-219</a> |
| 12757 | JBTIS-197   | ["apodhrad]: Just noticed that https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/jbosstools-integration-stack-tests.aggregate_41 is COMPILING but not RUNNING the tests. Should it be RUNNING them too? (We could just remove the -DskipTests flag in the maven config.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTIS-197">https://issues.jboss.org/browse/JBTIS-197</a> |
| 12758 | JBTIS-187   | Could you set Fix Version? It is in development but what version it is targeted for?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTIS-187">https://issues.jboss.org/browse/JBTIS-187</a> |
| 12759 | JBTIS-152   | Hey Phantom - We're trying to isolate the component dependencies to the JBTIS TP. For JBDS-IS, we will only be providing plugins from the TP site, so if it's not there, users won't be able to install. Are you using the latest JBTIS TP? https://repository.jboss.org/nexus/content/repositories/releases/org/jboss/tools/integration-stack/target-platform/4.1.2.Final/ https://github.com/jbosstools/jbosstools-integration-stack/blob/master/target-platform/integration-stack-base.target#L111-119 This shows the jackson core/mapper in it.                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTIS-152">https://issues.jboss.org/browse/JBTIS-152</a> |

| 12760 | JBTIS-152   | This is to allow a user to install Teiid Designer plugins without needing to add the orbit repository as a separate update site in their Eclipse IDE. As it stands, Teiid Designer plugins do not install in a virgin eclipse installation, using the JBT-IS update site, due to lacking access to the jackson plugins. The pull request fixes that -without displaying the contents of orbit to the user- but does insert orbit as an associative update site in the user's available update sites. So is there is another way around this? From Nick, we have had [https://issues.jboss.org/browse/TEIIDDES-1843], which adds the dependencies to the Designer update site. Is that going to be a preferred option, despite my misgivings (see my comment on that JIRA).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTIS-152">https://issues.jboss.org/browse/JBTIS-152</a> |
| 12761 | JBTIS-118   | It seems like this is an issue in the target platform (Locus is clean). Can you try including the necessary bundles from Gemini in your target-platform? Locus won't include bundles that are available in other p2 repository.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-118">https://issues.jboss.org/browse/JBTIS-118</a> |
| 12762 | JBTIS-118   | [^phantomjinx]: Can you rebuild / reinstall Teiid Designer as you did initially, and report back if the above changes have helped to resolve the missing packages? If not, can you provide steps to reproduce the console messages? I don't see them when building or installing, as noted above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTIS-118">https://issues.jboss.org/browse/JBTIS-118</a> |
| 12763 | JBTIS-113   | Should this issue move to the new JBTIS project? The ability to have more control over dependencies could be resolved by component-specific target platforms (ie each component uses a target-definition or some repositories in its pom to specify dependencies).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTIS-113">https://issues.jboss.org/browse/JBTIS-113</a> |
| 12764 | JBTIS-110   | Rob, do you have any ideas on this one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTIS-110">https://issues.jboss.org/browse/JBTIS-110</a> |
| 12765 | JBTIS-97    | Hey Paul - Would you like this for Kepler+ releases (JBTIS 4.1.0 SOA-P 6.0 Beta 1 and beyond)? Is it okay to skip modifying the Juno release? Thanks! --paul                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTIS-97">https://issues.jboss.org/browse/JBTIS-97</a>   |
| 12766 | JBTIS-93    | What version of designer is included in this integration stack build? This change has been implemented in Teiid Designer 8.2.0 (current master). Do you need an alpha release? in what timeframe?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTIS-93">https://issues.jboss.org/browse/JBTIS-93</a>   |
| 12767 | JBTIS-93    | Hey Barry/Paul - This is needed for the Kepler SOA-P 6.0 Beta 1 which is using the same URL as the Juno Alpha 2: <a href="http://download.jboss.org/jbosstools/updates/release/juno/soa-tooling/teiiddesigner/8.1.0.Final/">http://download.jboss.org/jbosstools/updates/release/juno/soa-tooling/teiiddesigner/8.1.0.Final/</a> Would you like me to grab a newer release for the Kepler release? Thanks, --paul                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTIS-93">https://issues.jboss.org/browse/JBTIS-93</a>   |
| 12768 | JBTIS-93    | Hey Barry/Paul - The powers-that-be want a JBDSIS 7.0.0.Beta1 with just SOA 5.3 support in it asap. This replaces the JBDSIS 6.0.0 that was built from Juno. That means I'll need your kepler teiid 8.2.Alpha soon so I can build the production JBDSIS p2 installer for SOA 5.3 support. I'll use the same teiid 8.2.Alpha for the JBTIS 4.1.0 kepler community release (2 for 1!). Please let me know when it's ready (urgency++). Thanks! --paul                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTIS-93">https://issues.jboss.org/browse/JBTIS-93</a>   |
| 12769 | JBTIS-88    | Hey guys, Because emf compare 2.1 and graphiti 0.10 are part of kepler, which is already mirrored, can you just update the target platform to pull these features/bundles from the kepler mirror on jboss.org? Seems like that would be simplest. Also, Paul, once all these changes are complete, can you release a 4.0.1 target platform that I can use for pulling in these dependencies? Thanks, Rob                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTIS-88">https://issues.jboss.org/browse/JBTIS-88</a>   |
| 12770 | JBTIS-88    | Hey [^nickboldt] - No dice on ssh access (to either). I'll work on that - could you mirror these for me so I can create an aggregated TP for JBTIS 4.0.1 (SOA-P 6 Alpha 2)? Thanks!!! --paul <a href="http://download.eclipse.org/bpel/site/1.0.3/">http://download.eclipse.org/bpel/site/1.0.3/</a> <a href="http://download.eclipse.org/bpmn2-modeler/updates/kepler/0.2.6/">http://download.eclipse.org/bpmn2-modeler/updates/kepler/0.2.6/</a> <a href="http://download.eclipse.org/bpmn2-modeler/updates/juno/0.2.6/">http://download.eclipse.org/bpmn2-modeler/updates/juno/0.2.6/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTIS-88">https://issues.jboss.org/browse/JBTIS-88</a>   |
| 12771 | JBTIS-83    | Next up will figure out where to create an examples plug-in and include it in the right places... This is the IRC chat I'm basing some of this on: (6:52:15 AM) maxandersen: pleacu: the idea is not to add *more* connectors, but to make the right examples be part of the *existing* connectors. (6:52:16 AM) pleacu: maxandersen: its commented out anyway - but the idea was to install the exAmple - this will be your legacy-examples connector (6:52:53 AM) pleacu: ahh - ok - could add IUs to the JBoss SOA legacy development connector (6:52:56 AM) maxandersen: pleacu: yeah so the right connector to add these legacy examples is this: <a href="https://github.com/jbosstools/jbosstools-integration-stack/blob/master/devstudio/discovery.com.jboss.jbds.central.discovery.integration-stack/plugin.xml#L107">https://github.com/jbosstools/jbosstools-integration-stack/blob/master/devstudio/discovery.com.jboss.jbds.central.discovery.integration-stack/plugin.xml#L107</a> (6:53:08 AM) pleacu: yep (6:53:11 AM) maxandersen: but we'll still need some plugin where this extension gets added. (6:53:59 AM) maxandersen: that extension would depend on central/project examples in core. (6:54:08 AM) maxandersen: I mean that plugin would depend on that. (6:55:59 AM) maxandersen: so if we can find a good place for those we should be good. (6:56:37 AM) maxandersen: hava integration-stack.soa-legacy.examples bundle that provides this ? (6:56:54 AM) maxandersen: or push down into esb / bpel to declare it ? (6:57:16 AM) bfitzpat: do we really want to split 'em up or keep 'em together as we've talked about doing? (6:57:35 AM) pleacu: maxandersen: don't know... (6:58:10 AM) maxandersen: bfitzpat: split up : no need to introduce new pluign at IS stack level, keep together: should be done at IS stack level is how i see it. (6:58:22 AM) maxandersen: doesn't make much sense esb enables bpel examples and the other way around does it ? (6:58:40 AM) maxandersen: then if you install esb you'll get bpel examples that wont work well and/or vice versa ? | <a href="https://issues.jboss.org/browse/JBTIS-83">https://issues.jboss.org/browse/JBTIS-83</a>   |
| 12772 | JBTIS-83    | As these are NEW properties to be added to the ide-config.properties file, then we can safely add the above lines to the file so you can test it. <a href="https://github.com/jbosstools/jbosstools-download.jboss.org/pull/387">https://github.com/jbosstools/jbosstools-download.jboss.org/pull/387</a> However, I notice your filepath uses a specific commitID and that the filename has "7.1." in the name, rather than 8.0. Is that intentional? If you used "latest in a branch" rather than "specific SHA hash" you would be able to more easily update this on the fly w/o having to update the IDE config file.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTIS-83">https://issues.jboss.org/browse/JBTIS-83</a>   |
| 12773 | JBTIS-83    | Ok. Have updated all the paths to the zips in the project examples.xml file to NOT be the static revision in the latest PR - <a href="https://github.com/jbosstools/jbosstools-esb/pull/56/files">https://github.com/jbosstools/jbosstools-esb/pull/56/files</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTIS-83">https://issues.jboss.org/browse/JBTIS-83</a>   |
| 12774 | JBTIS-83    | [^pleacu] - Beautiful! Will we have an updated Kepler one as well once we get BP EL worked out?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-83">https://issues.jboss.org/browse/JBTIS-83</a>   |
| 12775 | JBTIS-81    | Hey Andrej - The SOA-P 6.0 Alpha for JBTIS 4.0.0 (Juno) is closed to all but show-stopper bugs. Can this wait for the SOA-P 6.0 Beta for JBTIS 4.1.0 (Kepler)? If not then you need to raise this to Anne-Louise, Len DiMaggio and the PMs. --paul                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTIS-81">https://issues.jboss.org/browse/JBTIS-81</a>   |
| 12776 | JBTIS-81    | Hi Paul, does it mean that there will be no final JBTIS update site for Juno? By final I mean a version which can be turned into a product for JBDS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTIS-81">https://issues.jboss.org/browse/JBTIS-81</a>   |
| 12777 | JBTIS-73    | Nothing has changed for ESB since 4.0, so do we really need to change anything?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-73">https://issues.jboss.org/browse/JBTIS-73</a>   |
| 12778 | JBTIS-73    | Looking at the jbosstools-integration-stack project, there are no "compositeArtifacts.xml" or "compositeContent.xml" files in the devstudio/site directory. What should I do there?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTIS-73">https://issues.jboss.org/browse/JBTIS-73</a>   |
| 12779 | JBTIS-71    | Hey Bob - We're picking up the updated BPMN2 modeler feature target dependency from <a href="http://download.jboss.org/jbosstools/updates/requirements/bpmn2-modeler/0.2.6.201306192132_520130619_kepler/">http://download.jboss.org/jbosstools/updates/requirements/bpmn2-modeler/0.2.6.201306192132_520130619_kepler/</a> The BP EL component feature we're picking up from: <a href="http://download.jboss.org/jbosstools/builds/staging/jbosstools-4.0_stable_branch.component-bpel/all/repo/">http://download.jboss.org/jbosstools/builds/staging/jbosstools-4.0_stable_branch.component-bpel/all/repo/</a> for Kepler. Is that correct? If yes then you we can close this JIRA. Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTIS-71">https://issues.jboss.org/browse/JBTIS-71</a>   |

| 12780 | JBTIS-70    | Hey Paul, Were you going to create an individual JIRA for each component? The next tooling release for SwitchYard will be 1.0. Depending on the project schedule, I'm not sure whether or not the 1.0 release will target Kepler or will remain on Juno. I suspect other projects may already be compatible with Kepler. If that is the case, those projects should not have to provide a specific Kepler build (i.e. their current release may work just fine). Rob                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTIS-70">https://issues.jboss.org/browse/JBTIS-70</a> |
| 12781 | JBTIS-66    | To answer your other questions, Nick: a) Um...good question. Is "I haven't gotten around to doing that" an acceptable answer? ;) Hint: I could use some help with this b) I'm doing maintenance releases on an as-needed basis; there's no fixed schedule. c) I don't believe there's anything in 0.2.5 that SY needs (Rob Cernich?). This latest build was required for Savara. d) Nope, the BPMN2 metamodel is fixed...it's perfect...no bugs here :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTIS-66">https://issues.jboss.org/browse/JBTIS-66</a> |
| 12782 | JBTIS-66    | [~bbrodt] Anything left to be done here? [~pleacu] I see you don't have a version of BPMN2 Modeler in your Kepler-based target platform site [1] or your aggregate update site [2]. What's left to be done to make that happen? [1] <a href="https://github.com/jbosstools/jbosstools-integration-stack/blob/master/target-platform/integration-stack-base.target">https://github.com/jbosstools/jbosstools-integration-stack/blob/master/target-platform/integration-stack-base.target</a> [2] <a href="http://download.jboss.org/jbosstools/updates/integration/kepler/integration-stack/aggregate/4.1.0/">http://download.jboss.org/jbosstools/updates/integration/kepler/integration-stack/aggregate/4.1.0/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTIS-66">https://issues.jboss.org/browse/JBTIS-66</a> |
| 12783 | JBTIS-64    | Closed/rejected PR - this change will wait for JBTIS-66. It will go into the kepler mainline capture for SOA-P 6.0 Beta/ JBDS 7.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTIS-64">https://issues.jboss.org/browse/JBTIS-64</a> |
| 12784 | JBTIS-64    | Hey Gary - Would you like for me to take the Savara 2.1.2.Final for both the SOA-P 6.0 Alpha 2 (Juno) and the SOA_P 6.0 Beta 1 (Kepler) from this update site? <a href="http://download.jboss.org/savara/releases/updates/2.1.2.Final/">http://download.jboss.org/savara/releases/updates/2.1.2.Final/</a> The BPMN2 Modeler is at 0.2.6 now. Thanks! --paul                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-64">https://issues.jboss.org/browse/JBTIS-64</a> |
| 12785 | JBTIS-50    | OK, looks like we have the latest BPMN2 modeler (0.2.4) Let 'er rip!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTIS-50">https://issues.jboss.org/browse/JBTIS-50</a> |
| 12786 | JBTIS-44    | Hey Barry, Could you please reassign to the responsible party and ask Paul to update the component owner? Thanks, Rob                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTIS-44">https://issues.jboss.org/browse/JBTIS-44</a> |
| 12787 | JBTIS-32    | commit comment says: "JBIDE-11101 move org.jboss.tools.runtime.esb.detector plugin and feature from jbosstools-runtime-soa project to jbosstools-esb project (master branch 1.5.200)", but runtime-soa jbosstools-4.0.x branch still have the same esb runtime detector plugin. The same state is in master branch for both affected components. Should we remove esb runtime detector plugin from jbosstools-runtime-soa?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTIS-32">https://issues.jboss.org/browse/JBTIS-32</a> |
| 12788 | JBTIS-16    | Which version of parent pom and target-platform do you use? I think we can integrate that change in Trunk (3.4.0.M1-SNAPSHOT) and branch (3.3.2-SNAPSHOT) target-platforms. Would it be fine for you? You'd just have to change parent version to 3.3.2-SNAPSHOT.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTIS-16">https://issues.jboss.org/browse/JBTIS-16</a> |
| 12789 | JBTIS-16    | Doug, This is a dependency specific to SOA plugins. I don't think we can easily add it to the indigo TP. Can you mirror the graphiti stuff and add it to this site you use <a href="http://download.jboss.org/jbosstools/updates/indigo/soa-tooling/SR2">http://download.jboss.org/jbosstools/updates/indigo/soa-tooling/SR2</a> ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTIS-16">https://issues.jboss.org/browse/JBTIS-16</a> |
| 12790 | JBTIS-16    | Pulled a Graphiti 0.10 mirror... can that be used instead of 0.9? <a href="http://download.jboss.org/jbosstools/updates/requirements/graphiti/0.10.0.v20121219-0836/">http://download.jboss.org/jbosstools/updates/requirements/graphiti/0.10.0.v20121219-0836/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTIS-16">https://issues.jboss.org/browse/JBTIS-16</a> |
| 12791 | JBTIS-16    | Which project in JBT core does require Graphiti? If none, we should remove Graphiti from JBT & JBDS target and make it part of the soa target extension suggested in JBIDE-11121.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTIS-16">https://issues.jboss.org/browse/JBTIS-16</a> |
| 12792 | JBTIS-13    | Paul, I'm project lead for Teiid Designer org.teiid.datatools.connectivity.feature_7.7.2.v20121212-2348-H174-Nightly-SOA.jar org.teiid.designer.feature_7.7.2.v20121212-2348-H174-Nightly-SOA.jar org.teiid.designer.runtime.feature_7.7.2.v20121212-2348-H174-Nightly-SOA.jar Our latest project release is 8.0 and update site is at: <a href="http://download.jboss.org/jbosstools/updates/development/juno/soa-tooling/teiidesigner/8.0.0.Final/">http://download.jboss.org/jbosstools/updates/development/juno/soa-tooling/teiidesigner/8.0.0.Final/</a> Barry From: "Paul Leacu" <pleacu@redhat.com> To: "Maciej Swiderski" <mmswiders@redhat.com>, "Kris Verlaenen" <kverlaen@redhat.com>, "Gary Brown" <gbrown@redhat.com>, "William Collins" <bicollin@redhat.com>, "Brian Fitzpatrick" <bfitzpat@redhat.com>, "Lars Heinemann" <lheinema@redhat.com>, "Barry Lafond" <blafond@redhat.com>, "Mark Drilling" <mdrillin@redhat.com>, "Paul Richardson" <parichar@redhat.com>, "Ted Jones" <tjones@redhat.com>, "Dan Florian" <dflorian@redhat.com>, "John Verhaeg" <jverhaeg@redhat.com>, "Bob Brodt" <bbrodt@redhat.com>, "Rob Cernich" <rcernich@redhat.com> Sent: Monday, January 7, 2013 11:33:03 AM Subject: JBoss Integration Tools info Hey - I've been working with Rob C to produce an aggregate/composite update site project for the layered release of the JBoss tools integration stack. The good news is that we've made sufficient progress that we need to know the particulars in more detail. You're receiving this email because I believe that you can provide some portion of the specifics I need. The aggregated IS capture is 162 plugins - could you please review the attached features and plugins file and... 1. Identify which features/plugins you are responsible for (or which most closely 'belong' to you). 2. Specify the location of the most recent stable update site/repository. 3. Identify the full version of the latest release of your plugins. I'll update the target dependencies, composite and site files and see if we can produce an independent layered IS release! Thanks in advance! --paul | <a href="https://issues.jboss.org/browse/JBTIS-13">https://issues.jboss.org/browse/JBTIS-13</a> |
| 12793 | JBTIS-11    | Hi Paul Could you remove the pi4soa feature from site.xml. compositeArtifacts.xml - looks fine, although found it interesting that all other urls were download.jboss.org, except savara which was downloads.jboss.org. Both seem to map onto the same location though, so it is fine, or you might want to change it to be consistent with the others. The target platform looks ok - although worried about the BPMN2 feature still being based on a nightly build. I think we need to coordinate with Bob Brodt to make sure there is a stable release of this project (although Bob is not the lead he may be able to help), and also that the latest version of the BPMN2 modeler is released before the integration stack is released.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTIS-11">https://issues.jboss.org/browse/JBTIS-11</a> |

| 12794 | JBTIS-11    | <p>Hi Paul The Savara features/plugins all start with org.savara and org.scribble. The stable release is here: <a href="http://downloads.jboss.org/savara/releases/updates/2.x">http://downloads.jboss.org/savara/releases/updates/2.x</a> (version 2.0.0.Final) This site also bundles the Eclipse BPMN2 and BPEL editors, as well as the WS-CDL tools (features/plugins beginning with org.pi4soa). The BPMN2 and BPEL editors have been available as separate releases for some time, so the ones in this update site can be ignored. However if you could also include the org.pi4soa feature/plugins. The dev release is here: <a href="http://downloads.jboss.org/savara/releases/updates/milestones/current">http://downloads.jboss.org/savara/releases/updates/milestones/current</a> (version 2.1.0.M2 currently) In M3 the number of plugins will be reduced and the org.scribble plugins will no longer be distributed as plugins, but embedded in a savara plugin. Regards Gary ----- Original Message ----- &gt; Hey -&gt; I've been working with Rob C to produce an aggregate/composite &gt; update site project for the layered release of the JBoss &gt; tools integration stack. The good news is that we've made &gt; sufficient progress that we need to know the particulars in &gt; more detail. You're receiving this email because I believe &gt; that you can provide some portion of the specifics I need. &gt; The aggregated IS capture is 162 plugins - could you please &gt; review the attached features and plugins file and... &gt;&gt; 1. Identify which features/plugins you are responsible for (or &gt; which most closely 'belong' to you). &gt; 2. Specify the location of the most recent stable update &gt; site/repository. &gt; 3. Identify the full version of the latest release of your &gt; plugins. &gt;&gt; I'll update the target dependencies, composite and site files and see &gt; if we can produce an independent layered IS release! &gt;&gt; Thanks in advance! &gt;&gt; --paul</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTIS-11">https://issues.jboss.org/browse/JBTIS-11</a> |
| 12795 | JBTIS-10    | <p>Hi Paul, Here is the info requested. Notice there is one more plugin listed than you had. Also included test features which were not in your list (but probably not needed here). 1. Features/Plugins I'm responsible for: org.jboss.tools.modeshape.jcr.feature org.jboss.tools.modeshape.jcr.test.feature org.jboss.tools.modeshape.rest.feature org.jboss.tools.modeshape.rest.test.feature org.jboss.tools.modeshape.client org.jboss.tools.modeshape.jcr org.jboss.tools.modeshape.jcr.doc.user org.jboss.tools.modeshape.jcr.ui org.jboss.tools.modeshape.rest org.jboss.tools.modeshape.rest.doc.user org.jboss.tools.modeshape.ui 2. Stable/Development update-site (version 3.0.0): <a href="http://download.jboss.org/jbosstools/updates/development/juno/soa-tooling/modeshape/">http://download.jboss.org/jbosstools/updates/development/juno/soa-tooling/modeshape/</a> 3. Staging update-site (version 3.1.0): <a href="http://download.jboss.org/jbosstools/builds/staging/modeshape-tools-continuous/all/repo/">http://download.jboss.org/jbosstools/builds/staging/modeshape-tools-continuous/all/repo/</a> Let me know if you need anything else. Thanks, Dan ----- Original Message ----- &gt;&gt; Hey -&gt; I've been working with Rob C to produce an aggregate/composite &gt; update site project for the layered release of the JBoss &gt; tools integration stack. | 12796 | JBTIS-9     | <p>Hi Koen - Could you please verify the jBPM configuration in the JBoss Integration Stack and make sure the upstream component target dependencies are correct? Please note the new location of the files to be reviewed: <a href="https://github.com/jbosstools/jbosstools-integration-stack/blob/master/aggregate-site/site.xml">https://github.com/jbosstools/jbosstools-integration-stack/blob/master/aggregate-site/site.xml</a> <a href="https://github.com/jbosstools/jbosstools-integration-stack/blob/master/releases/compositeArtifacts.xml">https://github.com/jbosstools/jbosstools-integration-stack/blob/master/releases/compositeArtifacts.xml</a> <a href="https://github.com/jbosstools/jbosstools-integration-stack/blob/master/releases/compositeContent.xml">https://github.com/jbosstools/jbosstools-integration-stack/blob/master/releases/compositeContent.xml</a> <a href="https://github.com/jbosstools/jbosstools-integration-stack/blob/master/target-platform/base.target">https://github.com/jbosstools/jbosstools-integration-stack/blob/master/target-platform/base.target</a> We need your input ASAP. Thanks!! --paul</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTIS-9">https://issues.jboss.org/browse/JBTIS-9</a>   |
| 12797 | JBTIS-9     | Hi Paul, I have never dealt with the above artifacts. What exactly do you want me to do with them? Cheers, Koen                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTIS-9">https://issues.jboss.org/browse/JBTIS-9</a>   |
| 12798 | JBTIS-8     | <p>Paul, 1. Following features and plugins all included in one update site *** Features org.guvnor.tools.feature_5.3.5.Final.jar org.drools.eclipse.feature_5.3.5.Final.jar org.jbpm.eclipse.feature_5.3.5.Final.jar org.jbpm.eclipse.task.feature_5.3.5.Final.jar *** Plugins org.guvnor.eclipse.webdav_5.3.5.Final.jar org.guvnor.tools_5.3.5.Final.jar org.drools.eclipse_5.3.5.Final.jar org.jbpm.eclipse_5.3.5.Final.jar org.jbpm.eclipse.task_5.3.5.Final.jar 2. Latest release droolsjbpm 5.5.0.Final <a href="https://repository.jboss.org/nexus/content/groups/public-jboss/org/drools/org.drools.updatesite/5.5.0.Final/org.drools.updatesite-5.5.0.Final-assembly.zip">https://repository.jboss.org/nexus/content/groups/public-jboss/org/drools/org.drools.updatesite/5.5.0.Final/org.drools.updatesite-5.5.0.Final-assembly.zip</a> 3. Snapshot releases for 6.0 <a href="https://repository.jboss.org/nexus/content/groups/public-jboss/org/drools/org.drools.updatesite/6.0.0-SNAPSHOT/">https://repository.jboss.org/nexus/content/groups/public-jboss/org/drools/org.drools.updatesite/6.0.0-SNAPSHOT/</a> There are some other plugins related to jBPM and Drools as well: The following features / plugins are related to jBPM3. Has the decision been made that they will be included in the aggregated update site? As I think it might be that we will no longer include these for JBDS6. Features org.jboss.tools.jbpm3.feature_4.5.0.Beta2-v20121106-1148-B1927.jar org.jboss.tools.jbpm.common.feature_4.5.0.Beta2-v20121106-1148-B1927.jar org.jboss.tools.jbpm.convert.feature_4.5.0.Beta2-v20121106-1148-B1927.jar org.jbpm.gd.jpdl.feature_4.5.0.Beta2-v20121106-1148-B1927.jar Plugins org.jbpm.gd.jpdl_4.5.0.Beta2-v20121106-1148-B1927.jar org.jboss.tools.jbpm.common_4.5.0.Beta2-v20121106-1148-B1927.jar org.jboss.tools.jbpm.convert_4.5.0.Beta2-v20121106-1148-B1927.jar The following features / plugins are extensions to the first set of droolsjbpm tools, responsible for detecting a drools or jbpm runtime for specific platforms. They were created / maintained by the JBT / JBDS teams however. Features org.jboss.tools.runtime.drools.detector.feature_1.4.0.Beta2-v20121221-1759-B60.jar org.jboss.tools.runtime.jbpm.detector.feature_1.4.0.Beta2-v20121221-1759-B60.jar Plugins org.jboss.tools.runtime.drools.detector_1.4.0.Beta2-v20121221-1759-B60.jar org.jboss.tools.runtime.jbpm.detector_1.4.0.Beta2-v20121221-1759-B60.jar Kris On 01/07/2013 06:33 PM, Paul Leacu wrote: &gt; Hey -&gt; I've been working with Rob C to produce an aggregate/composite update site project for the layered release of the JBoss tools integration stack. The good news is that we've made sufficient progress that we need to know the particulars in more detail. You're receiving this email because I believe that you can provide some portion of the specifics I need. The aggregated IS capture is 162 plugins - could you please review the attached features and plugins file and... &gt;&gt; 1. Identify which features/plugins you are responsible for (or which most closely 'belong' to you). &gt; 2. Specify the location of the most recent stable update site/repository. &gt; 3. Identify the full version of the latest release of your plugins. &gt;&gt; I'll update the target dependencies, composite and site files and see if we can produce an independent layered IS release! &gt;&gt; Thanks in advance! &gt;&gt; --paul</p> | <a href="https://issues.jboss.org/browse/JBTIS-8">https://issues.jboss.org/browse/JBTIS-8</a>   |
| 12799 | JBTIS-2     | Is this a done issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTIS-2">https://issues.jboss.org/browse/JBTIS-2</a>   |
| 12800 | JBTIS-1     | <p>Hey Nick, Mickael, We're working on putting a process together for handling things like this for SOA tools. That said, this looks OK with the following exceptions: * The guvnor/jbpm entries should be removed * The bpmn2 modeler need to be from ../site/0.1.0 I have not verified the specific versions of some of the other dependencies (e.g. OCL, bpel). Thanks for putting this together. Rob</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTIS-1">https://issues.jboss.org/browse/JBTIS-1</a>   |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | URL                                                                                             |

| 12801 | JBTIS-1     | [^elvisking]: how do you know that it's using the suggested soa target platform? That's why I'd like you to try step 1 to 4, so we are sure you are actually testing the new SOA target-platform.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/JBTIS-1">https://issues.iboss.org/browse/JBTIS-1</a>   |
| 12802 | JBTIS-1     | No problem, Dan. Your use case just shows that I should find a more direct way for you to test. I've worked on something simpler, can you please *ALL* give it a try asap? Just follow *exactly* those instructions: If you're using JBT parent pom # change parent pom version to 4.1.0.JBIDE-11121-SNAPSHOT # run "mvn clean verify -P soa -Dno.jbosstools.site-Dtycho.localArtifacts=ignore" If you're *not* using JBT parent: # Remove/comment from your pom all <repositories> and target-platform-definition-configuration # put in your pom.xml: <code>xml</code> <plugin> <groupId>org.eclipse.tycho</groupId> <artifactId>target-platform-configuration</artifactId> <version>\${tychoVersion}</version> <configuration> <target> <artifact> <groupId>org.jboss.tools.target-platforms.soatools</groupId> <artifactId>multiple</artifactId> <version>4.2.1-a-SNAPSHOT</version> <classifier>multiple</classifier> </artifact> </target> </configuration> </plugin> {code} # Run a "mvn clean verify" Please post your build log there.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JBTIS-1">https://issues.iboss.org/browse/JBTIS-1</a>   |
| 12803 | JBTIS-1     | Hey y'all...I know you THINK I'm supposed to know what all of this means, but really I don't have much of a clue. I know there's this thing called a ".target" file which I can create using an eclipse wizard, but beyond that...all of the words here parse like english (well, most of them) but they don't really make much sense to me. What exactly am I supposed to do here? I tried following the steps 1-5 described by Mickael above, but haven't gotten very far. What I see is [ERROR] Plugin org.jboss.tools.tycho-plugins:target-platform-utils:0.0.1-SNAPSHOT or one of its dependencies could not be resolved: Failed to read artifact descriptor for org.jboss.tools.tycho-plugins:target-platform-utils:jar:0.0.1-SNAPSHOT: Could not find artifact org.jboss.tools.tycho-plugins:tar-get-platform-utils:pom:0.0.1-SNAPSHOT in tycho-snapshots (https://oss.sonatype.org/content/groups/public/) -> [Help 1] which makes not much sense to me HELP 1!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/JBTIS-1">https://issues.iboss.org/browse/JBTIS-1</a>   |
| 12804 | JBTIS-1     | Based on what I see here [0], your Juno-based target platform requires: Graphiti 0.9.1 Guava 10.0.1 (from Orbit R20120526062928) OCL 4.0.1 EMF Compare 1.3.2 -> requires EMF 2.8 EMF Query OCL 1.6 -> requires EMF 2.8, OCL 4.0, UML2 4.0 All of which is included in here [1]. As well as: BPMN2 0.7.0 and BPMN2 Modeler 0.1.0 [2] BPEL 1.0.2 [3] and of course... JBT 4.0 JBT Tests 4.0 --- Questions: 1. EMF Compare 1.3 is only compatible w/ Eclipse 3.8, not 4.2 [4]. What depends on this, and can version 2.0 be used instead, which works w/ Eclipse 3.8 AND with 4.2? Or 2. UML2 4.0 is not in your TP, though if I recall correctly (and they haven't removed the requirement) Teiid Designer requires UML2. Should it be added to your TP? I suspect you're resolving that dependency because it's already included in the JBT target platform [5] ? If that's the case then I believe it should be removed from ours and added to yours instead. 3. Graphiti 0.9 is in both your TP and the JBT one [5], yet I don't think anything in JBT requires it. It was most likely added to support something in the SOA-P/BRMS tooling space before you started having your own TP. It too should probably be removed from ours in favour of it being in yours - no need to be in both. Observation: 1. I've added a mirror on download.jboss.org for the only requirement I saw above that's not already there - the older version of the bpmn2 stuff, now mirrored here [2]. As such, you should be able to have all the URLs in your TP point to download.jboss.org URLs instead of the 8 eclipse.org ones, and get better performance when building the target platform site. You can even simplify the TP since of those 8 URLs, 6 can be collapsed down into a single one [1], leaving only BPEL and BPMN2 as separate entries, followed by the JBoss Tools stuff. -- [0] https://jenkins.mw.lab.eng.bos.redhat.com/hudson/job/pleacu-jbosstools-intstack-aggregate/ws/sources/target-platform/integration-tools.target/*view*/ [1] http://download.jboss.org/jbosstools/updates/requirements/juno/201209280900-R/ [2] http://download.jboss.org/jbosstools/updates/requirements/bpmn2-modeler/201211132058/ *NEW* [3] http://download.jboss.org/jbosstools/updates/requirements/bpel/1.0.2.v20121121-1634-CI/ [4] http://wiki.eclipse.org/EMF_Compare#Compatibility [5] http://download.jboss.org/jbosstools/updates/juno/SR1a/REPO/ | <a href="https://issues.iboss.org/browse/JBTIS-1">https://issues.iboss.org/browse/JBTIS-1</a>   |
| 12805 | LOCUS-46    | not following why you say JBDS has jboss-tools-locus as name and JBT has something different. JBDS naming is for "product artifacts", thus not really relevant here. and the jbt consistent name would be jbosstools-locus-1.3.0-<version>[SNAPSHOT]-updatesite.zip afaiak. What other artifacts are you seeing the jbosstools-1.3.0-SNAPSHOT-updatesite-locus.zip format ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/LOCUS-46">https://issues.iboss.org/browse/LOCUS-46</a> |
| 12806 | LOCUS-45    | I'm lost - we did not have locus publish to dl.jboss.org before did we ? why do we need to have these urls configured and linked now ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/LOCUS-45">https://issues.iboss.org/browse/LOCUS-45</a> |
| 12807 | LOCUS-42    | doesn't this require addiitonal dependencies in locus or are they already provided from somewhere else ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/LOCUS-42">https://issues.iboss.org/browse/LOCUS-42</a> |
| 12808 | LOCUS-42    | Hey [^nickboldt], [^mickael_istria] - I know you guys are finishing up on the Beta1 9.0 TP. Could you assign this so it's not lost - it's needed so I can spin a 9.0.x Beta1 JBTIS TP for use with Data Trans in Fuse Tooling. There's only the one jar. Thxkl                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/LOCUS-42">https://issues.iboss.org/browse/LOCUS-42</a> |
| 12809 | LOCUS-42    | [^pleacu] Which jar(s) do you need us to add from Orbit into the JBT/JBDS target platforms for 4.50.0.Beta1 ? You said there were 4 6 days ago, and today you say there's only one jar. Can you submit a PR to update our TP so I know exactly what you need/want? https://github.com/jbosstools/jbosstools-devdoc/blob/master/building/target_platforms/target_platforms_updates.adoc https://github.com/jbosstools/jbosstools-target-platforms/pulls Or, if this is something that ONLY IS needs, why not just add the jar(s) to your JBTIS/JBDSIS TP? Why does it need to be upstream in JBT/JBDS TP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/LOCUS-42">https://issues.iboss.org/browse/LOCUS-42</a> |
| 12810 | LOCUS-42    | I wasn't thinking of adding it to the JBT TP, I was thinking it belonged in Locus (where I could pick it up from the JBTIS TP). I can find org.apache.commons.lang3_3.1.0.v201403281430.jar and the three jackson jars. It looks at this point like we need the jsonschema2pojo-core jar and two jaxb libraries (ref: https://issues.iboss.org/browse/JBTIS-438) - 3 total Project page/sources: https://jaxb.java.net/ Version: 2.2.7 (no hard requirement on this specific version that I know of) License and owner: CDDL v1.1 and GPL v2 Original p2 repo: unknown JBoss mirror: unknown Include Sources: Yes Affected projects: Fuse IDE Include in JBDS: unknown Type of dependency: unknown non-p2 repository: https://repo1.maven.org/maven2/com/sun/xml/bind/jaxb-xjc/2.2.7/jaxb-xjc-2.2.7.pom I thought the way to add the jars to JBTIS/JBDSIS TP was through Locus - how can I add them directly into my TP??                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/LOCUS-42">https://issues.iboss.org/browse/LOCUS-42</a> |
| 12811 | LOCUS-42    | Sorry, misunderstood. Thought you meant all the things you needed were already in Orbit (and therefore could be directly added to your TP). So to confirm, you want three new jars in Locus 1.3.0: * jsonschema2pojo-core jar, * jaxb-xjc jar and * jaxb-impl jar I don't see anywhere else in this JIRA or in JBTIS-438 where you've explicitly asked for these three, so I wanted to confirm I've successfully read the tea leaves of this cryptic request. (It'd be cool if you could update your issues' descriptions/titles when they evolve to include more work .:D) Is that correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/LOCUS-42">https://issues.iboss.org/browse/LOCUS-42</a> |
| 12812 | LOCUS-42    | woow now ....CDDL and GPL v2 ? these are *not* kosher to use. is that truly their license ?!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/LOCUS-42">https://issues.iboss.org/browse/LOCUS-42</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | URL                                                                                             |

| 12813 | LOCUS-42    | actually CDDL is possibly okay, I need to check - we've had issues with it in past. And is JAXB *absolutely* required ? What is it used for ? is it just for annotations or actually needed by jsonschema2pojo ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/LOCUS-42">https://issues.iboss.org/browse/LOCUS-42</a> |
| 12814 | LOCUS-42    | Hey [~kcbabo] - hoping that we can revisit this now that Fuse Tooling has shipped. Can you respond to Max's question above concerning JAXB? Also it appears that we're good to go with the jsonschema2pojo-core jar - [~mickael_istria] can we look into getting that into locus? Thx                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/LOCUS-42">https://issues.iboss.org/browse/LOCUS-42</a> |
| 12815 | LOCUS-42    | [~mickael_istria] - what's the version branch for the next mars locus release? Is it still 1.3.0.Final? 1.3.1.?? Thx                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/LOCUS-42">https://issues.iboss.org/browse/LOCUS-42</a> |
| 12816 | LOCUS-42    | Hey [~kcbabo] - I'd like to use version 0.4.13 of jsonschema2pojo - looks like it came out last week. If it causes trouble we can back off of it. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/LOCUS-42">https://issues.iboss.org/browse/LOCUS-42</a> |
| 12817 | LOCUS-42    | [~maxandersen] [~kcbabo] [~nickboldt] [~mickael_istria] This is a cleaned up version of the #42 PR. It adds jsonschema2pojo 0.4.13 and modifies the internal locus target platform to add referenced jars from eclipse orbit: com.fasterxml.jackson.core.jackson-annotations com.fasterxml.jackson.core.jackson-core com.fasterxml.jackson.core.jackson-databind javax.validation org.junit https://github.com/jbosstools/jbosstools-locus/pull/47 *This is less than the list of dependencies listed in the source dependencies list:* https://repo1.maven.org/maven2/org/jsonschema2pojo/jsonschema2pojo-core/0.4.13/jsonschema2pojo-core-0.4.13.pom I built this into a local IS TP: https://github.com/jbosstools/jbosstools-integration-stack/pull/386 I also modified the Fuse Data Trans editor plugin to ref the updated IS TP: https://github.com/pleacu/fuseide/tree/LOCUS-42 Everything compiles successfully. If this is agreeable I'd suggest we build a -SNAPSHOT locus and a -SNAPSHOT JBTIS TP and see someone from Fuse Data Trans wants to complete my branch changes. WDYall? | <a href="https://issues.iboss.org/browse/LOCUS-42">https://issues.iboss.org/browse/LOCUS-42</a> |
| 12818 | LOCUS-40    | Would https://code.google.com/p/powermock-osi/ fit your needs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/LOCUS-40">https://issues.iboss.org/browse/LOCUS-40</a> |
| 12819 | LOCUS-40    | [~jcantrill] Is this something you would see being installed OOTB in JBoss Tools? Also in JBDS? Or something that we could add to Central as an optional add-on for both JBT/JBDS users?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/LOCUS-40">https://issues.iboss.org/browse/LOCUS-40</a> |
| 12820 | LOCUS-40    | The PR only includes one feature - for mockito-junit. What about the other three mocks? {code} org.powermock.easymock-junit.feature.feature.group 1.5.4.1 org.powermock.easymock-testng.feature.feature.group 1.5.4.1 org.powermock.mockito-testng.feature.feature.group 1.5.4.1 {code} Would anyone in JBTIS or JBT benefit from those? WDYT, [~adietish], [~xcoulon], [~phantomjinx] (ref: JBIDE-12971, JBIDE-14315)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/LOCUS-40">https://issues.iboss.org/browse/LOCUS-40</a> |
| 12821 | LOCUS-40    | [~nickboldt] I think it depends on what is currently be used in the code base. Do we have any unit tests that utilize 'testng'? Do we have any unit tests that utilize easymock? It is my opinion for uniformity across the code base we should promote one or the other and limit the feature group. The alternative is to add them since it doesn't 'cost' us anything right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/LOCUS-40">https://issues.iboss.org/browse/LOCUS-40</a> |
| 12822 | LOCUS-40    | [~phantomjinx] The use with files is only an example. I am also using the approach where I create tmp-files and kick them off afterwards. There are plenty of cases where you cannot rely on interfaces, you need more power than proxies. Mockito has such means but afaik powermock goes far beyond what mockito has to offer. So far mockito was fully sufficient to me. Up to [~jcantrill] to weigh the benefits/costs. Can you elaborate? [~nickboldt] I dont think that there's any need for the additional testing (we use junit) and easymock (comparable to mockito, no benefit) features.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/LOCUS-40">https://issues.iboss.org/browse/LOCUS-40</a> |
| 12823 | LOCUS-40    | btw. why is multiple junit 4.x versions needed? shouldn't we be okay using one specific 4?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/LOCUS-40">https://issues.iboss.org/browse/LOCUS-40</a> |
| 12824 | LOCUS-40    | is that mockito-core/javaassist not supposed to be the one from our locus ? it seem to still be the one from powermock?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/LOCUS-40">https://issues.iboss.org/browse/LOCUS-40</a> |
| 12825 | LOCUS-39    | [~mickael_istria] I believe it is actually possible to "aggregate" any amount of maven call in one using maven-invoker plugin. Basically it lets you to invoke maven from maven, but from user perspective it looks like single maven call. That would first call EBR builds for required bundles, install them into local repo and then call maven again to build p2repository. I am also curious why we don't use inclusion of actual jar inside bundle and then expose it through OSGi, for exmple like that https://github.com/jbosstools/jbosstools-locus/compare/jbosstools:master...dgoalvin:locus-dmg-question?expand=1. Are there any class loading related problems?                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/LOCUS-39">https://issues.iboss.org/browse/LOCUS-39</a> |
| 12826 | LOCUS-39    | {quote} am also curious why we don't use inclusion of actual jar inside bundle and then expose it through OSGi, for exmple like that https://github.com/jbosstools/jbosstools-locus/compare/jbosstools:master...dgoalvin:locus-dmg-question?expand=1. Are there any class loading related problems?{quote} This has an extra cost on Equinox performances. It's the main reason why Orbit does this as well. Also, nested jars can confuse PDE which doesn't add them correctly in the classpath and so on. So overall, it's not as good as repackaging in plain OSGi.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/LOCUS-39">https://issues.iboss.org/browse/LOCUS-39</a> |
| 12827 | LOCUS-39    | https://wiki.eclipse.org/Tycho/Packaging_Types#p2-installable-unit Would this feature help?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/LOCUS-39">https://issues.iboss.org/browse/LOCUS-39</a> |
| 12828 | LOCUS-36    | This JIRA lacks information. What does this do, why do we need it, and do we want it in the upcoming 1.0.0.Final release, or in master branch for 1.0.1 / 1.1.0?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/LOCUS-36">https://issues.iboss.org/browse/LOCUS-36</a> |
| 12829 | LOCUS-36    | It adds Eclipse-SourceReferences to bundles. Cf * http://wiki.eclipse.org/PDE/UI/SourceReferences * http://wiki.eclipse.org/Tycho/FAQ#How_to_generate_Eclipse-SourceReferences_MANIFEST_header.3F Another benefit of this Eclipse-SourceReferences is that it puts in the MANIFEST.MF a reference to the commit/tag that was used to build the bundle. As for the version, I'd be tempted to say 1.0.0.Final, but is it an extra-effort compared to only 1.0.1. As it's a non-blocking improvement, I'd vote for the easiest solution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/LOCUS-36">https://issues.iboss.org/browse/LOCUS-36</a> |
| 12830 | LOCUS-35    | [~fbricon], [~rob.stryker] and [~adietish] you are the users of the dmr library. Can you test that the bundles produced by the #39 PR works with your usecases ? Should be done by removing your embedded dmr or dependency to as.dmr and see if things works.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/LOCUS-35">https://issues.iboss.org/browse/LOCUS-35</a> |
| 12831 | LOCUS-35    | So do you want dmr 1.3 or is it ok to merge the PR for 1.2.2 ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/LOCUS-35">https://issues.iboss.org/browse/LOCUS-35</a> |
| 12832 | LOCUS-28    | Here are several possible approaches: * Embed jars in bundle * Explode jars and put the .class files in bundle * Get source and recompile [~maxandersen] Which one do you want?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/LOCUS-28">https://issues.iboss.org/browse/LOCUS-28</a> |
| 12833 | LOCUS-28    | As your PR has already been applied, I checked it out, built it, and discovered that there are no class files in the fest jars. So here's a fix for that and a few others cleanup items: https://github.com/jbosstools/jbosstools-locus/pull/2 Unfortunately, it appears I don't have push rights. [~maxandersen], [~mickael_istria] or [~phantomjinx], can you review and apply the PR? [~maxandersen] is there a reason I don't have commit rights? :(                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/LOCUS-28">https://issues.iboss.org/browse/LOCUS-28</a> |
| 12834 | LOCUS-25    | Cool - not sure why I didn't spot that big blue attachment yesterday :) WDYT about the issue of a possible race condition on this static variable when running concurrent tests ? Is there no way in Mockito to refer to the "current configuration" to set it per mockito 'instance' instead of globally ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/LOCUS-25">https://issues.iboss.org/browse/LOCUS-25</a> |
| 12835 | LOCUS-25    | okay so Mockito keeps it state per-thread ? thats comforting at least.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/LOCUS-25">https://issues.iboss.org/browse/LOCUS-25</a> |
| 12836 | LOCUS-24    | anyone know how the eclipse orbit is setup ? do they have a one big source repo with builds for these we could look at ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/LOCUS-24">https://issues.iboss.org/browse/LOCUS-24</a> |

| 12837 | LOCUS-24    | when they update do they do a full rebuild of orbit for this ? i assume not, which would be a reason to have various versions/tags of it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/LOCUS-24">https://issues.iboss.org/browse/LOCUS-24</a> |
| 12838 | LOCUS-24    | Nice but why do we need the source for *all* of these ? wouldn't a reference to their maven central GAV be enough for most cases ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/LOCUS-24">https://issues.iboss.org/browse/LOCUS-24</a> |
| 12839 | LOCUS-24    | Hey, if we migrate this to a new project, <a href="https://github.com/jbosstools/jbosstools-locus">https://github.com/jbosstools/jbosstools-locus</a> , and fix the namespaces such that <code>s/org.jbosstools/org.jboss.tools/g</code> , do we need all the 1:1 feature wrappers? * We can add plugins to our TP (features are not needed). * We can have our plugins depend on locus plugins, and be installed to an update site, then to a user's Eclipse. * We can have our features include or depend on locus plugins, and be installed to an update site, then to a user's Eclipse. * We only need features IFF there's a use case for a user to be installing Mockito or another Locus component *DIRECTLY*, via p2 Install, or JBoss Central, and you need the *additional metadata that only a feature provides*. So, is there a reason to have <code>org.jboss.tools.locus.*.feature</code> features? As of Tycho 0.16 and Kepler, we can publish all the individual plugins to an update site w/o the need for feature wrappers. Then those plugins can be installed via p2 Install. (Not sure about Central however.) | 12840 | LOCUS-24    | Who should the provider be for these? Sourceforge? Google Code? or JBoss by Red Hat? I would think us, but IANAL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/LOCUS-24">https://issues.iboss.org/browse/LOCUS-24</a> |
| 12841 | LOCUS-24    | +1, this looks good. About license, there is not such license attribute in plugin itself, so I guess p2 installer doesn't show anything for bundles. The remaining question is about qualifiers. Maybe it would make sense to use the <code>jgit-timestamp</code> provider for those since we don't want them to contain some <code>BUILD_STREAM</code> and other JBT specific labels. WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/LOCUS-24">https://issues.iboss.org/browse/LOCUS-24</a> |
| 12842 | LOCUS-24    | on first look this looks very awesome! I want to try execute this and see the actual result. I can't make that today unfortunately. Is the screenshots missing ? the links are broken here and I see no attachments. with respect to license - what does Orbit do ? and with respect to installing - I hope all in locus are stuff that is included by others, not something to install manually.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/LOCUS-24">https://issues.iboss.org/browse/LOCUS-24</a> |
| 12843 | LOCUS-24    | the biggest remaining issue is the mockito stuff which breaks the API of that bundle. can we exclude that for M7 without any bad sideeffects ? [~phantomjinx] did you ever hear back from mockito guys - seem both your and my recent comment went completely unanswered :(                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/LOCUS-24">https://issues.iboss.org/browse/LOCUS-24</a> |
| 12844 | LOCUS-24    | I've finally gotten around to publish my README.md PR at <a href="https://github.com/nickboldt/jbosstools-locus/pull/1">https://github.com/nickboldt/jbosstools-locus/pull/1</a> This is/was very much based on what is found on Orbit docs about how to do these bundles. In doing so i've found some discrepancies compared to Orbit we'll need to react to. 1) we are adding jar's inside a bundle instead of using the actual real jar with updated manifest.mf - and advantage/disadvantage to this ? 2) fest contains multiple jar's incl. javadoc jar - that seems wrong. Why is it not one bundle per jar ? 3) Required execution environment is set to java 6 - is that true for all ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/LOCUS-24">https://issues.iboss.org/browse/LOCUS-24</a> |
| 12845 | LOCUS-24    | I'm looking at locus this morning and noticed when building both <a href="http://download.jboss.org/jbosstools/updates/juno">http://download.jboss.org/jbosstools/updates/juno</a> and <a href="http://download.jboss.org/jbosstools/updates/kepler">http://download.jboss.org/jbosstools/updates/kepler</a> and both their associated TP sites gets added to the build. Why is that ? Everything in locus is supposed to have *zero* dependencies on these so why are they included ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/LOCUS-24">https://issues.iboss.org/browse/LOCUS-24</a> |
| 12846 | LOCUS-23    | [~mickael_istria] Have tested the PR. * Built in jenkins under the <code>jbosstools-locus.site_branch-testing</code> project (build #2) - successful * Build published to <a href="http://download.jboss.org/jbosstools/updates/nightly/locus/provisional">http://download.jboss.org/jbosstools/updates/nightly/locus/provisional</a> - successful * Re-generated Teiid Designer's target locally against this new provisional build and validated - successful * Executed Designer build and tests - successful On that basic happy for it to be merged. Assuming it is merged, what is the turnaround going to be for seeing this in the integration-stack?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/LOCUS-23">https://issues.iboss.org/browse/LOCUS-23</a> |
| 12847 | LOCUS-23    | [~maxandersen] re. JBTIS. No problem. I can raise a JIRA on Paul to take the new version of locus. When would that new version of locus be available to take? re. provisional. I set up this link some time ago so that devs would not have to generate a local TP for Teiid Designer and that the 'new' saxon version would be available to builds in jenkins. It seemed a logical addendum to the publishing script in jenkins to set the <code>TARGET_FOLDER</code> variable, ie. <code>-PARENT_FOLDER locus -TARGET_FOLDER provisional</code> . The objective was to get new versions of Teiid Designer building with the new target-platform (new saxon version) until at such point the JBTIS version can be updated in the former's poms use the new version containing the new locus containing the new version of saxon. Thus, the current Teiid Designer target-platform pom looks like this <a href="https://github.com/Teiid-Designer/teiid-designer/blob/master/target-platform/pom.xml">https://github.com/Teiid-Designer/teiid-designer/blob/master/target-platform/pom.xml</a> - note the commented-out sections and the attaching of the <code>[teiid-designer-extras-4.2.0.Final.target]</code> <a href="https://github.com/Teiid-Designer/teiid-designer/blob/master/target-platform/teiid-designer-extras-4.2.0.Final.target">https://github.com/Teiid-Designer/teiid-designer/blob/master/target-platform/teiid-designer-extras-4.2.0.Final.target</a> If this objective can be achieved in a better way, can you point it out for me. Apologies if this was the incorrect protocol. | <a href="https://issues.iboss.org/browse/LOCUS-23">https://issues.iboss.org/browse/LOCUS-23</a> |
| 12848 | LOCUS-21    | Can this wait until Kepler M6 is out, or is it more urgent?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/LOCUS-21">https://issues.iboss.org/browse/LOCUS-21</a> |
| 12849 | LOCUS-21    | [~mgagyi] Matej, is this something that you could use in your test? FestAssert adds nice syntactic sugar to assertions, my guess is that this is something that you could nicely use when doing tests? If yes, then what about trying this out and report to [~nickboldt] in this jira?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/LOCUS-21">https://issues.iboss.org/browse/LOCUS-21</a> |
| 12850 | LOCUS-21    | We don't want to add things that people could use in TP, we really to add things that people want or need to use, so that it's sure they will use them. So [~mgagyi], do you want or need festassert? Will you use it if we introduce it in TP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/LOCUS-21">https://issues.iboss.org/browse/LOCUS-21</a> |
| 12851 | LOCUS-21    | Are you aware of anyone who could use assertJ in an OSGi world? Does it have OSGi bundles? A p2 repo? If yes, then we can probably include it in next (4.50.0.Alpha2-SNAPSHOT) TP. Please make another Jira request dedicated to AssertJ and close this one as out-of-date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/LOCUS-21">https://issues.iboss.org/browse/LOCUS-21</a> |

|-------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| 12852 | LOCUS-17    | I would think we want a "latest best" URL too, which would initially point to 1.0.0, then later 1.0.1, etc. Convention dictates that everything under /updates/ is then qualified by a TYPE or release: <a href="http://download.jboss.org/jbosstools/updates/stable/">http://download.jboss.org/jbosstools/updates/stable/</a> <a href="http://download.jboss.org/jbosstools/updates/development/">http://download.jboss.org/jbosstools/updates/development/</a> <a href="http://download.jboss.org/jbosstools/updates/integration/">http://download.jboss.org/jbosstools/updates/integration/</a> <a href="http://download.jboss.org/jbosstools/updates/nightly/">http://download.jboss.org/jbosstools/updates/nightly/</a> And, to avoid having lots of locus-* folders in the root of /updates/, I'd prefer to see locus<version>/ than locus-<version>/. Thus, I would suggest this: <a href="http://download.jboss.org/jbosstools/updates/stable/locus/">http://download.jboss.org/jbosstools/updates/stable/locus/</a> --> points to latest stable release -> <a href="http://download.jboss.org/jbosstools/updates/stable/kepler/core/locus/">http://download.jboss.org/jbosstools/updates/stable/kepler/core/locus/</a> This pattern is the same for JBoss Tools: <a href="http://download.jboss.org/jbosstools/updates/stable/">http://download.jboss.org/jbosstools/updates/stable/</a> --> points to latest stable release -> <a href="http://download.jboss.org/jbosstools/updates/stable/juno/">http://download.jboss.org/jbosstools/updates/stable/juno/</a> (currently 4.0.1) In fact, we already (sort of) have this, but only for /integration/ since we haven't had a /development/ or /stable/ release yet: <a href="http://download.jboss.org/jbosstools/updates/integration/locus/">http://download.jboss.org/jbosstools/updates/integration/locus/</a> (manually updated to point at latest release) -> <a href="http://download.jboss.org/jbosstools/updates/integration/kepler/core/locus/">http://download.jboss.org/jbosstools/updates/integration/kepler/core/locus/</a> I think we need to decide, like with Orbit (and its R-build releases which are not always backward compatible w/ previous releases), if 1.0.0 is a "Juno+" release, or since it's used for projects which are based on Kepler, whether it should be considered a "Kepler+" release. And then going forward, if we decide a baseline eclipse target based on the stuff that uses it, or what's in Locus & its TP. Personally, I think it makes sense for Locus 1.0.0 to be under /stable/kepler/core/locus/1.0.0.Final/, because: * it's stable * it's used by Kepler-based projects * core is there because it lets me use my existing promote.sh script w/o having to change it ( #laziness #reuse ) * it's locus (/locus/ is a composite of all the contained releases therein) Then, if we do a Locus release that depends on Luna, it would be /stable/luna/core/locus/1.0.0.Final/, but all subsequent releases depending on Kepler would be 1.0.x. Make sense? | <a href="https://issues.jboss.org/browse/LOCUS-17">https://issues.jboss.org/browse/LOCUS-17</a>   |
| 12853 | LOCUS-15    | what does orbit do?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/LOCUS-15">https://issues.jboss.org/browse/LOCUS-15</a>   |
| 12854 | LOCUS-13    | QE has consistently said they LIKE having BUILD_NUMBER used in qualifiers. Why would we remove them? (qualifier is always changing because of timestamp too)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/LOCUS-13">https://issues.jboss.org/browse/LOCUS-13</a>   |
| 12855 | LOCUS-13    | Would QE be happy enough with Git commit id? [~ldimaggio] [~mmalina] any opinion on that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/LOCUS-13">https://issues.jboss.org/browse/LOCUS-13</a>   |
| 12856 | LOCUS-13    | Yeah, I'm with Nick on this one. I think we're quite happy with the build number - it gives us a distinct ID that we can rely on. I get the point that you cannot reproduce a qualifier twice, but as Nick says, you couldn't have the date either. Having the corresponding git hash somewhere (is there a place for it? manifest? I don't know) wouldn't be bad, but I don't think build qualifier (=part of filename) is the right place. My \$0.02 :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/LOCUS-13">https://issues.jboss.org/browse/LOCUS-13</a>   |
| 12857 | LOCUS-13    | I did not see this jira - we discussed early on for Locus that since this site will be used across multiple versions of Eclipse and from different installations it would be important we did not unnecessarily bump the version of the libraries. That said, is this the actual issue [~pleacu] bumped into ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/LOCUS-13">https://issues.jboss.org/browse/LOCUS-13</a>   |
| 12858 | LOCUS-13    | I'm not sure how to interpret your answer. Is it ok to remove the SNAPSHOT/Final distinction in build?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/LOCUS-13">https://issues.jboss.org/browse/LOCUS-13</a>   |
| 12859 | LOCUS-13    | Removing BUILD_ALIAS won't remove the B## suffix. It will only remove the .Final part. Do you ALSO want to remove the BUILD_NUMBER? {quote}The action here would be simply be to configure tycho-packaging-plugin to remove reference to BUILD_NUMBER.{quote} Oh, I see you do. Or did. But don't now? Plugins in <a href="http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-locus.site_master/latest/all/repo/plugins/">http://download.jboss.org/jbosstools/mars/snapshots/builds/jbosstools-locus.site_master/latest/all/repo/plugins/</a> show names like org.jboss.tools.locus.dmr_1.3.0.Final-v20150430-1349-B77.jar But when we rebuild, even if we remove the .Final bit, we'll get org.jboss.tools.locus.dmr_1.3.0.v20150430-1349-B78.jar And then each build after that, assuming no code change to the plugin (so no timestamp change)... org.jboss.tools.locus.dmr_1.3.0.v20150430-1349-B79.jar org.jboss.tools.locus.dmr_1.3.0.v20150430-1349-B80.jar ...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/LOCUS-13">https://issues.jboss.org/browse/LOCUS-13</a>   |
| 12860 | JBTM-2905   | This class was added to demonstrate how to support new log record types in the tooling. The bug is that it was included in the default list of types. What is your plan to fix this, are you going to remove it from the default list?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-2905">https://issues.jboss.org/browse/JBTM-2905</a> |
| 12861 | JBTM-2905   | [~mmusgrov] ok, that could be my wrong in understanding the issue here. Without the header reader I got troubles to get working ExpiredAssumedCompleteScanner. But I could take it from a wrong end. In that case, this change would be superfluous and the fix should go in opposite way - removing from the default list and leaving header reader in the test package. Can you please elaborate a bit on what is the correct way of fixing it? Thanks in advance!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-2905">https://issues.jboss.org/browse/JBTM-2905</a> |
| 12862 | JBTM-2835   | What does the error look like with your patch? What is the effect of the NPE?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTM-2835">https://issues.jboss.org/browse/JBTM-2835</a> |
| 12863 | JBTM-2822   | Hi [~tomjenkinson], during the check ups JBEAP issues I got to this issue and when applying the same test as I have for JBTM-2636 I found out that there is a branch in code where deferred exception is not added - that's when heuristic happens. Is it intentional? This kind of update fixes the issue that I refer to: <a href="https://github.com/ochaloup/narayana/commit/cb2ab4252a6c2e1106751d28103daefea42e86f6">https://github.com/ochaloup/narayana/commit/cb2ab4252a6c2e1106751d28103daefea42e86f6</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-2822">https://issues.jboss.org/browse/JBTM-2822</a> |
| 12864 | JBTM-2822   | Sorry Ondra - I don't quite follow. Which branch does not have this commit in?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-2822">https://issues.jboss.org/browse/JBTM-2822</a> |
| 12865 | JBTM-2733   | Hi [~tomjenkinson], I was wondering on your comment <a href="https://issues.jboss.org/browse/JBTM-2733?focusedCommentId=13284121#comment-13284121">https://issues.jboss.org/browse/JBTM-2733?focusedCommentId=13284121#comment-13284121</a> and now I found some time to go through the XA spec for it. I wasn't able to find reason behind why the recover sequence should be {{xa_recover(START), xa_commit/rb, xa_recover(END)}} and can't be e.g. like {{xa_recover(START END), xa_commit/rb}}. Would you be so kind and elaborate a bit on this? Or can you point me to spec/article where I got information how this is expected to be used? It's quite possible that I just haven't read/searched properly. I'm just curious. Thanks in advance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-2733">https://issues.jboss.org/browse/JBTM-2733</a> |
| 12866 | JBTM-2686   | Where is the link to the PR?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-2686">https://issues.jboss.org/browse/JBTM-2686</a> |

| 12872 | JBTM-2599   | [~lbarreiro] - understood. Will do the release as the PR passed. It will be tomorrow AM (UK) though. I don't think characterising this as a bug (in Narayana) is correct so changing the issue type. Also, please can you add a description? Probably just replicate your comment <a href="https://issues.jboss.org/browse/JBTM-2599?focusedCommentId=13145088&amp;page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13145088">https://issues.jboss.org/browse/JBTM-2599?focusedCommentId=13145088&amp;page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-13145088</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-2599">https://issues.jboss.org/browse/JBTM-2599</a> |
| 12873 | JBTM-2591   | Yes, using 5.2.9.Final produces an example that works ... 15:43:35,988 INFO [org.jboss.weld.deployer] (MSC service thread 1-1) WFLYWELD0006: Starting Services for CDI deployment: ROOT.war 15:43:36,055 INFO [org.jboss.weld.Version] (MSC service thread 1-1) WELD-000900: 2.2.16 (SP1) 15:43:36,303 INFO [org.jboss.weld.deployer] (MSC service thread 1-3) WFLYWELD0009: Starting weld service for deployment ROOT.war 15:43:38,196 INFO [stdout] (ServerService Thread Pool -- 58) StartupBean call 15:43:38,217 INFO [stdout] (ServerService Thread Pool -- 58) MyEJB call 15:43:38,217 WARN [com.arjuna.ats.arjuna] (ServerService Thread Pool -- 58) ARJUNA012094: Commit of action id 0:ffff0a80121:-26a9308d:567c12a6:b invoked while multiple threads active within it. 15:43:38,218 WARN [com.arjuna.ats.arjuna] (ServerService Thread Pool -- 58) ARJUNA012107: CheckedAction::check - atomic action 0:ffff0a80121:-26a9308d:567c12a6:b committing with 1 threads active! 15:43:38,602 INFO [javax.enterprise.resource.webcontainer.jsf.config] (ServerService Thread Pool -- 58) Initializing Mojarra 2.2.12-jbossorg-2 20150729-1131 for context " 15:43:40,112 INFO [org.wildfly.extension.undertow] (ServerService Thread Pool -- 58) WFLYUT0021: Registered web context: / 15:43:40,151 INFO [org.jboss.as.server] (ServerService Thread Pool -- 34) WFLYSRV0010: Deployed "ROOT.war" (runtime-name : "ROOT.war") 15:43:40,264 INFO [org.jboss.as] (Controller Boot Thread) WFLYSRV0060: Http management interface listening on http://127.0.0.1:9990/management 15:43:40,266 INFO [org.jboss.as] (Controller Boot Thread) WFLYSRV0051: Admin console listening on http://127.0.0.1:9990 15:43:40,266 INFO [org.jboss.as] (Controller Boot Thread) WFLYSRV0025: WildFly Full 9.0.2.Final (WildFly Core 1.0.2.Final) started in 14595ms - Started 330 of 510 services (221 services are lazy, passive or on-demand) I won't raise a pull request because maybe there's a reason it shouldn't be 5.2.9.Final. Whoever takes this issue should provide the right fix, i.e., don't wait for me :) | <a href="https://issues.jboss.org/browse/JBTM-2591">https://issues.jboss.org/browse/JBTM-2591</a> |
| 12874 | JBTM-2564   | Because if so we need to do it in a profile at a guess. Unless those arguments work on an IPv6 box. Do we know which quickstarts need those? [~hhovsepy] - can you raise a PR if you have the fix on your box so we can check it works on our CI cluster too please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-2564">https://issues.jboss.org/browse/JBTM-2564</a> |
| 12875 | JBTM-2564   | Hi [~hhovsepy] - I thought Mike said you had tested a fix locally? If so, please can you commit it and PR it and I can amend it as necessary? Alternatively just paste in the surefire config you tested as a comment and I will try it here.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-2564">https://issues.jboss.org/browse/JBTM-2564</a> |
| 12876 | JBTM-2564   | Did you need any fixes to Narayana to make it work on IPv6 because I think [~hhovsepy] is reporting they don't work for him? I think the reason they would work on IPv6+IPv4 is arq will be fine to run with its IPv4 args. I therefore don't think we can mark it as resolved because the QS are running on IPv6 with IPv4 too so that is difference to the summary+description of this issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-2564">https://issues.jboss.org/browse/JBTM-2564</a> |
| 12877 | JBTM-2564   | As I understood, this task was created to add new maven profile into several quickstarts to pass IPv6 parameters (mentioned in earlier comments), right? Is it already done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-2564">https://issues.jboss.org/browse/JBTM-2564</a> |

| 12879 | JBTM-2553   | Hi Amos, thanks for reporting this. I don't know why you are seeing that error. It's very odd because \$this is the only local variable reference that we can identify when there is no local variable table. Could you try changing the rule to use \$0 instead of \$this and see if that makes it work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-2553">https://issues.jboss.org/browse/JBTM-2553</a> |
| 12880 | JBTM-2553   | Doh! I see Amos is way ahead of me here (nice work, Amos :-). The trace statement Amos inserted shows that the local variable checking code has found an entry in the local var table for \$this but one that starts at bytecode offset 4 and ends at offset 535. The injection code is trying to inject the rule at offset 0 i.e. at entry to the code. This is after transformation by Jacoco. With no transformation the local var this is found starting at offset 0. I have not yet looked at the Jacoco code but it seems pretty obvious what is happening. When Jacoco inserts profiling instructions into the method it updates the start and end offsets for entries in the local variable table to take account of the new code. One of those profiling instruction sequences will be injected at the start of the method and Jacoco appears to be shifting the local var start offset for this so that it comes into scope after the profiling code rather than at bytecode 0. No doubt it is also shifting the start position for method parameter entries. This is at best unhelpful; actually, I think it is an error because this and the parameters are /always/ in scope from the start of the method even if code is inserted before the start. I thought that ASM fixed this as a special case. Which version of Jacoco is being used here? The latest Jacoco version uses ASM 5 which should deal with this problem. Have you tried updating to a later Jacoco? If that doesn't work I'll take this up with the Jacoco developers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-2553">https://issues.jboss.org/browse/JBTM-2553</a> |
| 12881 | JBTM-2553   | Thanks for the detailed explanation Andrew - it certainly sounds a complex issue. Do you know of any other coverage frameworks that Byteman might interoperate with today? If not we can just disable the byteman tests under coverage testing. If you do get a Jacoco issue reference please can you let us know so we can reference it here? Thanks again!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-2553">https://issues.jboss.org/browse/JBTM-2553</a> |
| 12882 | JBTM-2532   | Did you put back a commit for the unit tests for now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-2532">https://issues.jboss.org/browse/JBTM-2532</a> |
| 12883 | JBTM-2522   | I meant <a href="https://github.com/jbosstm/performance/tree/master/comparison">https://github.com/jbosstm/performance/tree/master/comparison</a> , but I'm not sure it's going to work. Is it possible to use JMH to test Arquillian tests? Or applications in WildFly deployed manually?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-2522">https://issues.jboss.org/browse/JBTM-2522</a> |
| 12884 | JBTM-2495   | The failures related to the upgrading to the activemq artimes in WFLY 10. Also in the Step 5, you should run with standalone-blacktie.xml {code} copy docs/examples/configs/standalone-blacktie.xml wildfly-<version>standalone/configurations bin/standalone.sh -c standalone-blacktie.xml {code} I'm sorry that I can not find in the QS to say use WFLY 9 but I will update the README.md to say it should integrate with the master from WFLY. can you show me where you find the information to run with WFLY 9 ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-2495">https://issues.jboss.org/browse/JBTM-2495</a> |

| 12885 | JBTM-2495   | I have tried using Wildfly 10 and it worked. Thanks for the help. I used Wildfly 9 as 10 was a beta and was not sure it was stable. Also there was no mention that Blacktie only integrates with master from WFLY.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-2495">https://issues.jboss.org/browse/JBTM-2495</a> |
| 12886 | JBTM-2490   | Hi Hayk, Would you have chance to work on this at all? You have marked it as a blocker so trying to work out the priority as you didn't mark a fix version. Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-2490">https://issues.jboss.org/browse/JBTM-2490</a> |
| 12887 | JBTM-2481   | Hi ["gytis], this has been Coding in Progress for a while. Is it worth marking "Work Stopped" as I don't think you are currently coding on this one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-2481">https://issues.jboss.org/browse/JBTM-2481</a> |
| 12888 | JBTM-2481   | Are we not planning to make the release completely automatic and incorporating it into our CI?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-2481">https://issues.jboss.org/browse/JBTM-2481</a> |
| 12889 | JBTM-2478   | a "Tricks" section to the README.md if the SVG file gets too big. Brendan is working on a Python version of FlameGraph <a href="https://github.com/brendangregg/FlameGraph/tree/master/dev">https://github.com/brendangregg/FlameGraph/tree/master/dev</a> which has search support: Search -> com/arjuna -> Purple nodes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-2478">https://issues.jboss.org/browse/JBTM-2478</a> |

| 12892 | JBTM-2458   | What was the resolution?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-2458">https://issues.jboss.org/browse/JBTM-2458</a> |
| 12893 | JBTM-2440   | Do you know why these only seemed to start failing when we upgraded to JDK8?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-2440">https://issues.jboss.org/browse/JBTM-2440</a> |
| 12894 | JBTM-2440   | Hi Mike, Am I right in thinking that this should be fixed, but we still have JBTM-2454? If so it is worth closing this one. Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-2440">https://issues.jboss.org/browse/JBTM-2440</a> |
| 12895 | JBTM-2440   | I asked ["adinn] to provide an opinion about whether it could be the annotation rather than the agent loading functionality that is the root cause of the problem and he suspects that it is most likely a bug in the dynamic agent loading behaviour in the J9 compiler. He also gave a good analysis of the issue which I am including here: {quote} I downloaded IBM's Java 7 SDK and tried to use it to build Byteman. That's enough to thoroughly test the use of the agent. The tests on the Byteman agent maven module are configured to install the agent from the command line using the -javaagent option (I do that rather than use the BMUnitRunner to auto-load because I don't want failures in BMUnit to stop the agent jar being built). These tests all worked ok. So, the IBM JDK does support all the functionality of the Byteman agent when you load it from the command line. The maven tests in the BMUnit maven module rely the BMUnitRunner annotation to auto-install the agent into an already running test JVM and this is what failed. The error output is attached. As you can see from the first exception trace the IBM JVM does implement dynamic loading -- the Attach operation is fielded and J9 tries to install the agent by executing com.ibm.tools.attach.javaSE.Attachment.loadAgentLibrary If you look at the cause of the exception you can see that this eventually calls into org.jboss.byteman.agent.Main.premain which is the Byteman entry point. This tries to register its ClassFileTransformer (InstrumentationImpl.addTransformer) and at this point J9 blows up. It is objecting to the agent's request for the ClassFileTransformer to be installed as a 'retransformable' transformer. That means it wants to be able to handle retransformations of existing classes as well as being given a chance to modify newly loaded classes. This seems a tad odd because when the Byteman agent is loaded on the command line it also asks its ClassFileTransformer to be installed as a retransformable transformer. So, the refusal by J9 must be some sort of policy decision on its part. I suspect that this may be a performance hack -- J9 may be willing to not perform certain optimizations in order to allow for retransformers if you install them from the get go but otherwise may decide to switch on optimizations that mean subsequent use of retransformers won't work. Whatever the reason IBM have done this you are snookered until you can get them to remove this restriction. n.b. it is a legitimate (i.e. JVM TI agent spec-compliant) behaviour but it's not exactly very useful. I will make enquiries to see if I can talk to someone in IBM and get this removed or, at least, find a way to relax it but I am not sure I will have any traction. I think there is only one workaround which will fix this if you want to use BMUnit on both OpenJDK/Oracle and IBM. You will need to switch to loading the agent from the command line (whatever JVM you are using). To do this you need to: i) install the agent on the command line of the test JVM by configuring java command line argument -javaagent:/path/to/byteman.jar=listener:true ii) stop BMUnit from loading the agent by adding adding the property setting -Dorg.jboss.byteman.contrib.bmunit.agent.inhibit n.b. you will need to build the path to the byteman jar by referencing the relevant dependency in your maven repo dir. you should be able to do that using by substituting maven property values (repo dir + byteman dependency version) into the path n.b. if you don't do the load yourself then you may want to set some other -javaagent options and/or Byteman system properties. The auto load will do the equivalent of adding boot:/path/to/byteman.jar to the -javaagent line and adding -Dorg.jboss.byteman.allow.config.update as a system property setting. The former allows you to inject into JDK runtime classes. The latter allows BMUnit to pay heed to your any options specified using a BMUnitConfig annotation on your test class. regards, Andrew Dinn {quote} | <a href="https://issues.jboss.org/browse/JBTM-2440">https://issues.jboss.org/browse/JBTM-2440</a> |
| 12896 | JBTM-2432   | Is there anything in Narayana that requires Java8 though? If not then why not still allow that at build time?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-2432">https://issues.jboss.org/browse/JBTM-2432</a> |
| 12897 | JBTM-2432   | That's WildFly and I do understand why they're moving to 8. However, if someone wants to build a component project using 7 then why wouldn't we allow that within that project until/unless we add features only available in 8?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-2432">https://issues.jboss.org/browse/JBTM-2432</a> |
| 12898 | JBTM-2412   | Thanks Tom, Which component would that be. Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-2412">https://issues.jboss.org/browse/JBTM-2412</a> |
| 12899 | JBTM-2398   | After the code review I have moved the implementation of the new methods into VolatileStore and TwoPhaseVolatileStore and added a new property to the store configuration bean to control the behaviour. As expected the change has no effect on the benchmarks for the new stores: -i 1 -wi 10 -f 1 -t 10 -r 100 # 10 warm up iterations and then a single iteration lasting 100 seconds using 1 thread c.a.a.j.x.p.VolatileStoreBenchmark.testVolatileStore thrpt 1 637563.988 NaN ops/s c.a.a.j.x.p.TypedVolatileStoreBenchmark.testVolatileStore thrpt 1 185962.192 NaN ops/s c.a.a.j.x.p.TwoPhaseVolatileStoreBenchmark.testVolatileStore thrpt 1 144480.394 NaN ops/s c.a.a.j.x.p.TypedTwoPhaseVolatileStoreBenchmark.testVolatileStore thrpt 1 107737.372 NaN ops/s                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-2398">https://issues.jboss.org/browse/JBTM-2398</a> |
| 12900 | JBTM-2392   | Looks like a duplicate of JBTM-2216 to me. <a href="https://github.com/jbosstm/narayana/blame/master/ArjunaJTA/jta/classes/com/arjuna/ats/internal/jta/recovery/arjunacore/XARecoveryModule.java">https://github.com/jbosstm/narayana/blame/master/ArjunaJTA/jta/classes/com/arjuna/ats/internal/jta/recovery/arjunacore/XARecoveryModule.java</a> Its fixed in WFLY master version (was fixed in Narayana 5.0.4 which should be in WFLY since 9.Beta1).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-2392">https://issues.jboss.org/browse/JBTM-2392</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | URL                                                                                               |

| 12901 | JBTM-2390   | I am surprised you think its an anomaly. As an example, when you turn volatile store on our performance is something much more than a 15 fold improvement iirc?<br>Some suggestions: 1. Are you using HQ store (can you use it in this config)? 2. Have you tried enabling the volatile store? In terms of notx vs emptytx I expect that is all down to the creation of the TX endpoints. You could profile the server to get more details there. I imagine your participants are no-ops so in the no tx case you have 2 no-op calls vs the empty tx case where you have 3 no-ops (I will class commit() here as a no-op as I assume it really is very little) and 1 op (the creation of the tx endpoints). Seems reasonable to me. In the emptytx case, can you drop the commit calls (without it falling over) to see the cost of the commit vs the create?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/JBTM-2390">https://issues.iboss.org/browse/JBTM-2390</a> |
| 12902 | JBTM-2379   | Is it OK to raise this one now that 2377 is merged thanks?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.iboss.org/browse/JBTM-2379">https://issues.iboss.org/browse/JBTM-2379</a> |
| 12903 | JBTM-2379   | Great, please can you let me know when the PR is merged so I can start the 5.1.1 release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/JBTM-2379">https://issues.iboss.org/browse/JBTM-2379</a> |
| 12904 | JBTM-2366   | EDIT: The first link will need to be viewed using: <a href="https://drive.draw.io/?#G0B9c6AWh-picmQklPZXp5M19nalk">https://drive.draw.io/?#G0B9c6AWh-picmQklPZXp5M19nalk</a> as the text does not seem to be visible on the Google Docs preview ----- Gytis has a draft, I have shared it publicly but its still very much in development: <a href="https://drive.google.com/file/d/0B9c6AWh-picmQklPZXp5M19nalk/view?usp=sharing">https://drive.google.com/file/d/0B9c6AWh-picmQklPZXp5M19nalk/view?usp=sharing</a> For comparison, this is the existing version: <a href="http://narayana.io/images/narayana-architecture-diagram.jpg">http://narayana.io/images/narayana-architecture-diagram.jpg</a> I think we need to align the cosmetics with other JBoss.org projects. Are isometric boxes still the most graphically clear?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/JBTM-2366">https://issues.iboss.org/browse/JBTM-2366</a> |
| 12905 | JBTM-2358   | We should try to get the best JDBC results we can so should try to use a database that is either on the same machine ideally. Does haverstraw host a postgres?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/JBTM-2358">https://issues.iboss.org/browse/JBTM-2358</a> |
| 12906 | JBTM-2345   | Would we need a variant of WFLY-1119 (Assign an unique NodeID automatically) to avoid conflicts (ie would different images share the same JDBC store). Also it is possible to point the tooling (ObjStoreBrowser) at a filesystem to manage the logs although it is unsupported (normally it is done via a JMX browser connected to the TM process). Do we need similar functionality for accessing the JDBC store directly?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/JBTM-2345">https://issues.iboss.org/browse/JBTM-2345</a> |
| 12907 | JBTM-2344   | Happy to go with either, I wonder if Container could be confused with JEE container though. Maybe Cloud? I had a quick look at other projects and Forge has Docker and LiveOak seemed to use Cloud. I am happy with Docker though even with the potential overloading.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/JBTM-2344">https://issues.iboss.org/browse/JBTM-2344</a> |
| 12908 | JBTM-2343   | How is this different to the current class that allows thread-to-transaction association and disassociation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/JBTM-2343">https://issues.iboss.org/browse/JBTM-2343</a> |
| 12909 | JBTM-2334   | Does that address the same use case though? If not then we should re-examine what we're doing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/JBTM-2334">https://issues.iboss.org/browse/JBTM-2334</a> |
| 12910 | JBTM-2318   | Agreed. Maybe create a separate JIRA for the tooling?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/JBTM-2318">https://issues.iboss.org/browse/JBTM-2318</a> |
| 12911 | JBTM-2318   | Yeah, I haven't upgraded the logging for the component. The only thing I can think is that maybe the default used to be WARN or something? From looking at the log statements there looks to be three statements, its the way the log messages are formatted that is causing each of the statements to bridge two lines. The logging format looks to be the format generated by JDK logging rather than log4j so I guess this is in an IDE? {code} 2014-12-18 16:30:49,755 [main] INFO (ats.arjuna :88 ) - ARJUNA012163: Starting service com.arjuna.ats.arjuna.recovery.ActionStatusService on port 51214 2014-12-18 16:30:49,765 [main] INFO (ats.arjuna :327 ) - ARJUNA012337: TransactionStatusManagerItem host: 127.0.0.1 port: 51214 2014-12-18 16:30:49,765 [main] INFO (ats.arjuna :138 ) - ARJUNA012170: TransactionStatusManager started on port 51214 and host 127.0.0.1 with service com.arjuna.ats.arjuna.recovery.ActionStatusService {code} I am happy for those statements to move down to debug but the reason they are info is the default option seems to be to choose a random port so it might be the case then that people would all enable debug just to get at that. I can see why with multiple processes on the same machine why electing a port dynamically has some advantages but I know that WFLY at least configure a default of 4713. (4712 for recovery port). Why don't we use those defaults and only then log the statement at INFO if the user changes the port to 0? | <a href="https://issues.iboss.org/browse/JBTM-2318">https://issues.iboss.org/browse/JBTM-2318</a> |
| 12912 | JBTM-2299   | It looks like we don't need it as we has removed the TAO dependency in JBTM-1665 and used the http rest methods to access the TM [~tomjenkinson], Does it make sense?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/JBTM-2299">https://issues.iboss.org/browse/JBTM-2299</a> |
| 12913 | JBTM-2296   | [~tomjenkinson], you had a go with it some time ago. Do you think it's usable enough to be merged into our dockerfiles repo?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.iboss.org/browse/JBTM-2296">https://issues.iboss.org/browse/JBTM-2296</a> |
| 12914 | JBTM-2286   | Hi Mark, I clarified the description a bit. Its an addition, not a replacement of the existing standalone set. Its for ease of publishing on the site. Hope you agree it would be beneficial for that. Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/JBTM-2286">https://issues.iboss.org/browse/JBTM-2286</a> |
| 12915 | JBTM-2279   | Wouldn't it have been easier/better/less invasive to have hidden this within a call to something like getCheckedActionFactory()? _checkedAction = _checkedActionFactory.getCheckedAction(get_uid(), type()); + _checkedAction = allowCheckedActionFactoryToBeOverriden ? arjPropertyManager + .getCoordinatorEnvironmentBean().getCheckedActionFactory() + .getCheckedAction(get_uid(), type()) + : defaultCheckedActionFactory.getCheckedAction(get_uid(), + type());                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/JBTM-2279">https://issues.iboss.org/browse/JBTM-2279</a> |
| 12916 | JBTM-2270   | JTS participant records are not in-lined with the transaction log so they appear in a separate part of the log store. The tooling only shows participants for JTA records which do have their participants inlined. Ondrej, is the Fix version field (6.0.0) ok? I just noticed that Gytis is down as the assignee so I will let him update that field.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/JBTM-2270">https://issues.iboss.org/browse/JBTM-2270</a> |

| 12917 | JBTM-2264   | <p>Hi Evgeniy, I have raised a pull request for this in our transactional driver code. I have also deployed a snapshot version of Narayana with the change already in there for you to have a go with. I have tested it locally (extensively) and it works for me. I can see the SNAPSHOT over here: <a href="https://repository.jboss.org/nexus/content/groups/public/org/jboss/narayana/jta/narayana-jta/5.0.4.Final-SNAPSHOT/">https://repository.jboss.org/nexus/content/groups/public/org/jboss/narayana/jta/narayana-jta/5.0.4.Final-SNAPSHOT/</a>. All you should need to do is change your pom to this version. Now for some background. BTM and Atomikos are not strictly spec compliant in my mind as their core transaction processing engine performs simple pointer comparison to determine if two XAResources are equivalent rather than the spec defined approach of using isSameRM. You can see the pointer comparison for yourself over here: <a href="https://github.com/bitronix/btm/blob/master/btm/src/main/java/bitronix/tm/internal/XAResourceManager.java#L194">https://github.com/bitronix/btm/blob/master/btm/src/main/java/bitronix/tm/internal/XAResourceManager.java#L194</a> You can see where the spec has pseudo code that demonstrates how the transaction manager is intended to use isSameRM in section "3.4.9 Identifying Resource Manager Instance" over here: <a href="https://jcp.org/en/jsr/detail?id=907">https://jcp.org/en/jsr/detail?id=907</a> If two XAR are not equivalent you are meant to generate a new Xid for the branch and call start with TMNOFLAGS (as BTM/Atomikos will in this case, even though its technically the same RM) and if they are equivalent you use the same Xid and call start with TMJOIN (as we do). It turns out that there are a number of resource managers that return true to isSameRM but cannot handle the TMJOIN flag. It also turns out that this is a known issue with some of the drivers and Ironjacamar (Red Hats JCA implementation in Wildfly) already works around that for a number of drivers by wrapping their XAResources with an is-same-rm-override flag that returns false. The impact of this is that although your test would work in WildFly, there is a slight performance impact as the RM has two branches, plus should you touch the same tables you may be able to deadlock. Anyway, as you were using transactional driver rather than ironjacamar you have hit this issue. I have effectively backported that U workaround for a number of drivers which are also not compliant to our transactional driver code. The reason we haven't gone to pointer comparison is: 1. Spec compliance - we don't break that 2. There is an issue with overriding isSameRM which affects app servers performing a process known as transaction inflow. Due to limitations with the transaction inflow API (discussed at length elsewhere, for example <a href="https://issues.jboss.org/browse/JBTM-622">https://issues.jboss.org/browse/JBTM-622</a>) a transaction manager is not permitted to generate different Xids for resources. As such if we override the same rm report from the RM, RMs which correctly implement isSameRM and accept TMJOIN would be unfairly penalised as they would get: {code} xaResource1.start(xid1, TMNOFLAGS) xaResource2.start(xid1, TMNOFLAGS) {code} Which is a protocol error. Hope it helps, Tom</p> | <a href="https://issues.jboss.org/browse/JBTM-2264">https://issues.jboss.org/browse/JBTM-2264</a> |
| 12918 | JBTM-2262   | BTW what did these scripts do in the old days? Did they add the jacorb jar explicitly?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-2262">https://issues.jboss.org/browse/JBTM-2262</a> |
| 12919 | JBTM-2259   | One of the reasons we haven't done this to date is that it's not standards compliant. Why isn't the ordering that JTA allowed in the interposed option sufficient?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-2259">https://issues.jboss.org/browse/JBTM-2259</a> |
| 12920 | JBTM-2259   | OK, but this is not compliant with the standards and therefore if some other transaction engine is used it will break. The reason ordering of resources and synchronisations isn't supported in the standards is because it becomes very hard to manage global ordering in a heterogenous environment. Are we really happy to add something which basically ties IronJacamar and Narayana together? I'm no so sure. While it's nice to add something like resource ordering, as we do with AbstractRecords, it should be done cautiously, in situations where no other option is possible, or as an optimisation, i.e., so without it the system still works, but may be slower, less efficient etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-2259">https://issues.jboss.org/browse/JBTM-2259</a> |
| 12921 | JBTM-2245   | Hi Tom, Mike, What is the planned fixed version of this task? Is there already a support of shutdown(timeout) in Narayana? I am asking as we have RFE <a href="https://issues.jboss.org/browse/EAP7-86">https://issues.jboss.org/browse/EAP7-86</a> resolved and ready for QA. Thanks, Hayk.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTM-2245">https://issues.jboss.org/browse/JBTM-2245</a> |
| 12922 | JBTM-2231   | Hi Jesper, Please can you give me some ideas of what this for? Is it the UJ tracer? I have no problem with adding it, please just provide some context as there could be more I can give you. Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-2231">https://issues.jboss.org/browse/JBTM-2231</a> |
| 12923 | JBTM-2231   | Hi Jesper, Is the attached PR what you were thinking? Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-2231">https://issues.jboss.org/browse/JBTM-2231</a> |
| 12924 | JBTM-2230   | As mentioned on the call, we need to be mindful of when we introduce this new interface method as it will require implementations to add the new method when they wish to upgrade. We could add it to a new interface. As there are various options here Mike we should create a design discussion and mention it to various teams. Can you create the discussion and flag it to Jesper (and Andy) to make sure known XARW impls are aware of the requirements (Andy obviously knows but he might want to contribute if Jesper has any observations).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-2230">https://issues.jboss.org/browse/JBTM-2230</a> |
| 12925 | JBTM-2224   | Can you point me at the forum posting where this was discussed? Then I can take my comments there rather than in JIRA.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-2224">https://issues.jboss.org/browse/JBTM-2224</a> |
| 12926 | JBTM-2210   | Granted I haven't updated my local copy for a few weeks, but these warnings seemed to come all of a sudden and a lot of them to boot. Was this expected?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-2210">https://issues.jboss.org/browse/JBTM-2210</a> |
| 12927 | JBTM-2210   | So all of these warnings have been there for 7 months?!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-2210">https://issues.jboss.org/browse/JBTM-2210</a> |
| 12928 | JBTM-2210   | No, failing on warn is probably not a good idea. I'm surprised that I didn't see it earlier, since I built the source quite a bit only a few weeks ago. I'm also surprised no one else caught it if it's been around that long. Do we regularly check the build logs? Even building in the cloud or an IDE should generate the same warnings (e.g., in Eclipse).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-2210">https://issues.jboss.org/browse/JBTM-2210</a> |
| 12929 | JBTM-2209   | Hi Jesper, Please can you add a few more details to the Jira on the reasons for the change? Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-2209">https://issues.jboss.org/browse/JBTM-2209</a> |
| 12930 | JBTM-2209   | Thanks, but that's about as much use to me as a chocolate fireguard! ;) Or giving me a scalar number when I need a vector. What was the test used? How many iterations? We could do this ourselves of course, but it'd be so much simpler if you've already done that work :-). And yes, I see the test code you added, but I was looking for some test that worked in situ with the Stack usage within Narayana.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-2209">https://issues.jboss.org/browse/JBTM-2209</a> |
| 12931 | JBTM-2209   | Great work on the fix and the benchmark, I agree it looks like it is worth merging. Mike, may I ask you to do the honours please as it is your PR now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-2209">https://issues.jboss.org/browse/JBTM-2209</a> |
| 12932 | JBTM-2206   | I don't think we should change ArjunaCore/arjuna/classes/com/arjuna/ats/arjuna/coordinator/CheckedAction.java as it is in the public API so unless it has considerable performance win the cost of update apps to use the new API is probably not justified. As to the rest of the changes, can you give us a brief indication of the performance benefit of this particular change?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-2206">https://issues.jboss.org/browse/JBTM-2206</a> |
| 12933 | JBTM-2206   | Can you include a link to the forum posting here for future reference?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-2206">https://issues.jboss.org/browse/JBTM-2206</a> |
| 12934 | JBTM-2203   | Hi Jesper, Thanks for creating the separate issues! Can you now share the relative performance benefit of the enhancement please, same for JBTM-2209, JBTM-2207, JBTM-2208 and JBTM-2206? Thanks! Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-2203">https://issues.jboss.org/browse/JBTM-2203</a> |
| 12935 | JBTM-2203   | I don't think we can remove the *Mutex() methods from StateManager as these are part of the public API so people that inherit from that class would no longer have access to them (as you saw in the tests you had to modify). Please can you provide a few more details on what the performance win was with removing the Reentrant lock to help evaluate the benefit vs the drawback of the API change?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-2203">https://issues.jboss.org/browse/JBTM-2203</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | URL                                                                                               |

| 12936 | JBTM-2203   | Hold on ... doesn't this changed the public API of StateManager and LockManager? Whilst the latter is a superset of the previous API, the former isn't and potentially breaks other classes from users that may inherit from StateManager. Did we deprecate as discussed last July? Did we determine what the cost/benefit is of doing this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTM-2203">https://issues.jboss.org/browse/JBTM-2203</a> |
| 12937 | JBTM-2202   | What does this have to do with REST transactions? If it's local-only, then distribution over REST is not an option.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-2202">https://issues.jboss.org/browse/JBTM-2202</a> |
| 12938 | JBTM-2189   | For clarity in future if others come to this issue, can you please describe what problem you've seen and hence why you've submitted a patch. "fails to bootstrap properly" isn't sufficient. Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-2189">https://issues.jboss.org/browse/JBTM-2189</a> |
| 12939 | JBTM-2189   | After applying the change proposed to ConfigurationInfo, the following exception (which is addressed by the proposed change in AbstractPropertiesFactory) occurs:<br>java.io.FileNotFoundException: \naintegration-1.0-SNAPSHOT.one-jar.jar (The system cannot find the file specified) at java.util.zip.ZipFile.open(Native Method)<br>at java.util.zip.ZipFile.<init>(Unknown Source) at java.util.zip.ZipFile.<init>(Unknown Source) at java.util.jar.JarFile.<init>(Unknown Source) at<br>java.util.jar.JarFile.<init>(Unknown Source) at sun.net.www.protocol.jar.URLJarFile.<init>(Unknown Source) at<br>sun.net.www.protocol.jar.URLJarFile.getJarFile(Unknown Source) at sun.net.www.protocol.jar.JarFileFactory.get(Unknown Source) at<br>sun.net.www.protocol.jar.JarURLConnection.connect(Unknown Source) at sun.net.www.protocol.jar.JarURLConnection.getInputStream(Unknown Source) at<br>java.net.URL.openStream(Unknown Source) at com.arjuna.common.util.property.service.AbstractPropertiesFactory.load<br>FromFile(AbstractPropertiesFactory.java:142) at com.arjuna.common.util.property.service.AbstractPropertiesFactory.getP<br>ropertiesFromFile(AbstractPropertiesFactory.java:100) ... 33 more                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-2189">https://issues.jboss.org/browse/JBTM-2189</a> |
| 12940 | JBTM-2189   | Hi Chris, Many thanks for your interest in Narayana. Normally for something like this it is best to start with a discussion on our forums over here:<br><a href="https://community.jboss.org/en/jbosstm">https://community.jboss.org/en/jbosstm</a> . That said, please can you add a little more detail into the description as to the nature of the bug. We do already function in Java SE and also complex classloader hierarchies so this may be a corner case which we would be happy to work with you to address. I am not familiar with OneJar, is it a maven plugin that will put all the dependency jar classes into the same Jar as the application jar? The main problem with your report as it stands is that we don't have a well defined reason for why the change needs to be made, if you can express the motivation for the change in more general terms then we can get it merged. As you say, the fix looks like it should work in our currently supported options so it shouldn't be a problem to get it merged once we have more context to backup the need to merge it. Once we understand the problem better, and we proceed with your approach, please can you: 1. Sign the CLA over here: <a href="https://cla.jboss.org/">https://cla.jboss.org/</a> (project is JBoss Transactions) 2. Fork: <a href="https://github.com/jbosstm/narayana">https://github.com/jbosstm/narayana</a> 3. Raise a pull request on the main repo with your fix in. It should be easier to review inline, plus it will get CI run on it. Many thanks for the contribution! Tom                                                      | <a href="https://issues.jboss.org/browse/JBTM-2189">https://issues.jboss.org/browse/JBTM-2189</a> |
| 12941 | JBTM-2184   | What's the procedure for ensuring our artifacts make it into maven central? How are you determining our missing dependencies?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-2184">https://issues.jboss.org/browse/JBTM-2184</a> |
| 12942 | JBTM-2184   | So my guess is that we need to add the dependency to ArjunaJTA/narayana-jta/pom.xml - what is the easiest way to test that? I ran tattletale over narayana-jta and it reports transitive dependencies on other stuff as well (org.hornetq.core and org.jfree). Does that imply we need to add explicit dependencies on those too?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-2184">https://issues.jboss.org/browse/JBTM-2184</a> |
| 12943 | JBTM-2184   | Just trying to work out, what were you doing to cause the issue? For example the ArjunaJTA/maven qs doesn't exhibit this behaviour after I fixed it to have the correct runtime dependencies. Some of the quickstarts do import the SPI correctly as they must need to use this behaviour: [tom@dhcppc1 quickstart](JBTM-2182) (15:40:29) \$ grep pom transaction-spi ./jca-and-tomcat/pom.xml ./jta-and-hibernate/pom.xml ./jca-and-hibernate/pom.xml It looks like "provided" scope dependencies of constituent modules have not been included in shaded poms. Some of this goes away if we start to recommend users to use the raw modules rather than the uber jars created by the shade plugin as then the poms are self documenting (like in WildFly). At the moment it is effectively assumed that you would know which jars to include if you use the uber jars as the Jars do not document the requirement. The disadvantage of the none-uber jar is only for JTS as you would be required to provide a configuration file to enable JTS, at the moment it is selected by the jar. Unfortunately I can't get a shaded pom to include provided scope at all, I could make it runtime but then it would still be dependent on the Jars being available which for some situations shouldn't be required. Will have a think...                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-2184">https://issues.jboss.org/browse/JBTM-2184</a> |
| 12944 | JBTM-2183   | Have we seen this behaviour elsewhere in the past? I don't recall it. A change in Oracle? Or just lucky for us so far not to have seen it? As to changing the default, we can't do that until the EAP 7 timeframe even if we wanted to. Plus, we'd better be able to show that this has no impact on performance, reliability etc. in environments where the RM doesn't exhibit this behaviour. Otherwise may be best to err on the side of caution and perhaps catch the error in recovery and swap in the alternate behaviour for the next sweep.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-2183">https://issues.jboss.org/browse/JBTM-2183</a> |
| 12945 | JBTM-2180   | As a start on this task I have enabled the Oracle® JRockit Flight Recorder for a subset of the performance tests in the perf CI job ( <a href="http://172.17.131.2/job/narayana-performance/">http://172.17.131.2/job/narayana-performance/</a> ). Flight data is stored in the maven build directory (target/test-classes/*.jfr) and can be read using the jmc tool available in the standard JDK (edition 7u40 and above). What is the best way to evaluate other options given that there are many alternatives (and trying out each one involves engineering work): * JDK Collections (much of our code hasn't been updated to take advantage of newer releases (Jesper has been looking into this); * Goldman Sachs Collections; * Google Collections (Guava); * javolution; * Highly Scalable Java; * ... Tests with flight data currently include: Core: com.hp.mwtests.ts.arjuna.performance.Performance1 com.hp.mwtests.ts.arjuna.performance.Performance2 com.hp.mwtests.ts.arjuna.performance.Performance3 com.hp.mwtests.ts.arjuna.performance.Performance4 JTA: com.arjuna.ats.jta.xa.performance.OnePhase2PCPerformanceDefaultUnitTest com.arjuna.ats.jta.xa.performance.OnePhase2PCPerformanceVolatileUnitTest com.arjuna.ats.jta.xa.performance.OnePhasePerformanceDefaultUnitTest com.arjuna.ats.jta.xa.performance.OnePhasePerformanceVolatileUnitTest JTS com.hp.mwtests.ts.jts.local.synchronizations.Performance com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance1 com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance2 com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance3 | <a href="https://issues.jboss.org/browse/JBTM-2180">https://issues.jboss.org/browse/JBTM-2180</a> |
| 12946 | JBTM-2163   | Hi [~zhfeng], Does your current pull request enable the recovery manager? If not we should make sure you have done that as a top priority before closing this issue. Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-2163">https://issues.jboss.org/browse/JBTM-2163</a> |
| 12947 | JBTM-2159   | Huh? Assume I can't view the Bugzilla, which may go part way to explaining my confusion :-). Is this a race condition between recovery and application? If so it should be taken care of already within the transaction code.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-2159">https://issues.jboss.org/browse/JBTM-2159</a> |
| 12948 | JBTM-2151   | Should I remove the fix version number as I don't believe this is work that is currently scheduled?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-2151">https://issues.jboss.org/browse/JBTM-2151</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | URL                                                                                               |

| 12949 | JBTM-2122   | [~tomjenkinson] Not fully sure if our discussion at <a href="https://issues.jboss.org/browse/JBEAP-610?focusedCommentId=13147405#comment-13147405">https://issues.jboss.org/browse/JBEAP-610?focusedCommentId=13147405#comment-13147405</a> is directly connected to this issue but you previous comments seem to me so. What I remember by (~hvospepy)'s investigation it seemed that JTS works with 2pc for propagated transactions at any time (meaning even with one resource enlisted). Later on that was found that we have (?) some trouble in test and 1pc is used. Your reference of <a href="https://c.na7.visual.force.com/apex/Case_View?sbst=01560781">https://c.na7.visual.force.com/apex/Case_View?sbst=01560781</a> seems to me not related as it's rather caused by the fact discussing at <a href="https://issues.jboss.org/browse/JBEAP-225">https://issues.jboss.org/browse/JBEAP-225</a> and <a href="https://issues.jboss.org/browse/WFLY-4608">https://issues.jboss.org/browse/WFLY-4608</a> which is based on issue in container. _plus as action item from f2f I would say that what you mentions in your first comment is not so. if we are not wrong in our settings then jts and jboss remotng run 1pc_ | <a href="https://issues.jboss.org/browse/JBTM-2122">https://issues.jboss.org/browse/JBTM-2122</a> |
| 12950 | JBTM-2119   | Hi Lami, Would you be interested in contributing a pull request for this enhancement? If so, please can you sign the CLA over here: <a href="https://cla.jboss.org/index.seam">https://cla.jboss.org/index.seam</a> (the project is JBoss Transactions) The raise a pull request against either 4.17 or master over here: <a href="https://github.com/jbosstm/narayana/pulls">https://github.com/jbosstm/narayana/pulls</a> Many thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-2119">https://issues.jboss.org/browse/JBTM-2119</a> |
| 12951 | JBTM-2116   | Is this something that needs to be meaningful in a distributed environment? What about a heterogeneous environment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-2116">https://issues.jboss.org/browse/JBTM-2116</a> |
| 12952 | JBTM-2116   | I added a forum reference for this which I found. I am extrapolating a little, but is the issue related to calling hashCode in JTS afterCompletion in a subordinate node and are there other scenarios you have found it to be volatile?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-2116">https://issues.jboss.org/browse/JBTM-2116</a> |
| 12953 | JBTM-2081   | I think that if we are allowing defaults for all values (good idea) then it should be possible for someone to deploy a transactional application without a property file. Maybe give a warning or output in Info?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-2081">https://issues.jboss.org/browse/JBTM-2081</a> |
| 12954 | JBTM-2081   | Hi Mark, The issue is that jts is not a strict superset of jta. To be able to provide a single binary containing both JTS and JTA, you therefore need a properties file. Otherwise you have to decide the java hardcoded defaults at compile time, which means using code templates in the jta module compile. We could look at only requiring the properties file once you get to JTA or greater level of the framework? What do you think? Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-2081">https://issues.jboss.org/browse/JBTM-2081</a> |
| 12955 | JBTM-2081   | Would the intention also be to no longer ship a default jbossts-properties.xml file in the jars, and to no longer be able to change the default name of the config file in the manifest.mf?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-2081">https://issues.jboss.org/browse/JBTM-2081</a> |
| 12956 | JBTM-2081   | What values are in the default properties file these days?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-2081">https://issues.jboss.org/browse/JBTM-2081</a> |
| 12957 | JBTM-2081   | The original Android code should still be in my Android branch on svn. The vert.x code is <a href="https://github.com/nmcl/mod-stm">https://github.com/nmcl/mod-stm</a> Try removing the property file? Note, this is 5.0.0.Final of TS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-2081">https://issues.jboss.org/browse/JBTM-2081</a> |
| 12958 | JBTM-1972   | JIRA is not the appropriate place to ask this question. Please can you raise it via the forums at <a href="http://www.jboss.org/ejb3">http://www.jboss.org/ejb3</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-1972">https://issues.jboss.org/browse/JBTM-1972</a> |
| 12959 | JBTM-1955   | We should make sure we are using the PRODUCT variable throughout. We should also add variables for the target app server (IMO). This will allow us to use Narayana and WildFly for the community docs and JBossTS and JBoss AS in the product docs. Does this last point make sense?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-1955">https://issues.jboss.org/browse/JBTM-1955</a> |
| 12960 | JBTM-1955   | I've read through the XTS docs. I've applied the minor changes (mostly typos) here: <a href="https://github.com/jbosstm/documentation/commit/238a06aa9e50ff03144c7f542c08f1b36a9e6b93">https://github.com/jbosstm/documentation/commit/238a06aa9e50ff03144c7f542c08f1b36a9e6b93</a> . Gytis, Can you apply this to the 4.17 branch please? I also have some ideas about how to layout the docs for the new feature-work done in Narayana 5. I will discuss this with Gytis when we meet to discuss the XTS docs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-1955">https://issues.jboss.org/browse/JBTM-1955</a> |
| 12961 | JBTM-1943   | Ondrej Chaloupka < <a href="mailto:ochaloup@redhat.com">ochaloup@redhat.com</a> > made a comment on [bug 1009981] <a href="https://bugzilla.redhat.com/show_bug.cgi?id=1009981">https://bugzilla.redhat.com/show_bug.cgi?id=1009981</a> ] Hi Tom, I help to Mirek with verification of this issue. The correct name of attribute that is needed to be set is com.arjuna.ats.jta.orphanSafetyInterval (default is 10000) Mirek ran his test with several values of the attribute. When we set the attribute to be 20s (20000) we still get the XAExceptions time to time. When we redefine the time being 40s (40000) the exception disappeared from the log. I think that I can verify this issue just don't you think that it would be better to set the default interval time a bit bigger? For not to get the error as default behavior. But I'm not sure how would it influence the whole recovery process. It's true that the problem occurs on faster machines under the load of receiving a bigger amount of messages. Ondra                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-1943">https://issues.jboss.org/browse/JBTM-1943</a> |
| 12962 | JBTM-1943   | Ondrej Chaloupka < <a href="mailto:ochaloup@redhat.com">ochaloup@redhat.com</a> > made a comment on [bug 1009981] <a href="https://bugzilla.redhat.com/show_bug.cgi?id=1009981">https://bugzilla.redhat.com/show_bug.cgi?id=1009981</a> ] Hi Tom, a one more request. I've added a doc text to this bug but I don't think that my text is well written. Could you please check it and polish it? Thank you Ondra                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-1943">https://issues.jboss.org/browse/JBTM-1943</a> |
| 12963 | JBTM-1942   | Is this issues resolved now? /cc [~paul.robinson]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-1942">https://issues.jboss.org/browse/JBTM-1942</a> |
| 12964 | JBTM-1930   | The definitive documentation for CLI subsystems are in the XSDs (docs/schema/jboss-as-txn_<version>.xsd). Rather than duplicate this documentation and risk it diverging my preference is to simply point the community docs at this file. Does anyone have any objections with this approach?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-1930">https://issues.jboss.org/browse/JBTM-1930</a> |
| 12965 | JBTM-1925   | Gytis, I've had a look at this issue and updated the description with what should now work. Tom and I have tried it out. It's going to be quite time-consuming, and I still have a few M5 issues left to do. Can you take a look at this please. Re-assign it back if you don't think you will have time to do it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-1925">https://issues.jboss.org/browse/JBTM-1925</a> |
| 12966 | JBTM-1915   | Is this still likely for tomorrow?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-1915">https://issues.jboss.org/browse/JBTM-1915</a> |
| 12967 | JBTM-1909   | Seems like a few things broke or changed behaviour due to 1875. Can we have a better vetting process in future to either prevent these things creeping in or at least document them such that they don't come as a surprise?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-1909">https://issues.jboss.org/browse/JBTM-1909</a> |
| 12968 | JBTM-1908   | I notice qa and rts have printSummary set to true. Maybe do that for everything anyway? Whatever we do, we should be consistent though.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTM-1908">https://issues.jboss.org/browse/JBTM-1908</a> |
| 12969 | JBTM-1908   | Did we upgrade the surefire version recently?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-1908">https://issues.jboss.org/browse/JBTM-1908</a> |
| 12970 | JBTM-1855   | [~gytis], [~zhfeng] mentioned that he had asked you to review: <a href="https://github.com/zhfeng/narayana/commit/b51faee71db0977898f471e806b5e88162100945">https://github.com/zhfeng/narayana/commit/b51faee71db0977898f471e806b5e88162100945</a> Have you had chance to do this yet?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-1855">https://issues.jboss.org/browse/JBTM-1855</a> |
| 12971 | JBTM-1852   | I see. Now I understand the issue but not the context nor the solution, thanks. How does the participant recover and who rolls back the participant if there is no transaction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-1852">https://issues.jboss.org/browse/JBTM-1852</a> |
| 12972 | JBTM-1838   | Done in 4.17 using EAP: <a href="https://github.com/jbosstm/quickstart/commit/5d7a4ea39bea48c90b63de783381ced493ba343e">https://github.com/jbosstm/quickstart/commit/5d7a4ea39bea48c90b63de783381ced493ba343e</a> Gytis: can you apply to master using WildFly. I think the commands are the same, but you will need to test them. Also, you will need to rename the occurrences of JBoss EAP 6.1 with WildFly. I think it should be less specific about the actual version downloaded. Just tell the user to go get WildFly from the download page and then unzip it. This will stop it going out of date every time a new version is released.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-1838">https://issues.jboss.org/browse/JBTM-1838</a> |

| 12973 | JBTM-1821   | Conversation with Gytis on a potential solution: pprobinson: whilst you are at it, can you have a quick check to see if you can add modules to the classloader in that phase too? [12:06pm] gytist: you mean dependencies like org.jboss.xts? [12:10pm] pprobinson: yeah [12:10pm] pprobinson: I want to scan for the use of @Transactional and then add the org.jboss.jts dependency to the deployment [12:10pm] gytist: I think it is, some of the subsystems automatically add dependencies [12:11pm] pprobinson: yeah, that was my thoughts too [12:11pm] pprobinson: for example, if persistence.xml is present, you add the jpa deps [12:11pm] gytist: I saw it when I was researching my issue on Monday [12:11pm] gytist: need to find it again [12:12pm] gytist: grep for this class WSDependenciesProcessor [12:12pm] gytist: that's what you need [12:12pm] pprobinson: great, thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-1821">https://issues.jboss.org/browse/JBTM-1821</a> |

| 12975 | JBTM-1816   | How are you running the test. The following syntax used to work but not anymore: {code} ./build.sh -f ArjunaJTS/pom.xml test -Dtest=com.hp.mwtests.ts.jts.orbspecific.recovery.JavalIdRecoveryUnitTest -Didlj-enabled {code}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-1816">https://issues.jboss.org/browse/JBTM-1816</a> |
| 12976 | JBTM-1816   | The reason in the difference in the tests is because if JacORB runs first it has put its RC entry in the object store. You can replicate the issue by using the ObjectStore in the attached jacob-rc-in-object-store.tgz. If you put it as ArjunaJTS/jts/target/test-classes/ObjectStore then even ". /build.sh -f ArjunaJTS/jts/pom.xml test -Dtest=JavalIdRecoveryUnitTest -Didlj-enabled" would fail. iirc the RC manager uses a known UID hence why running JacORB then JDKORB in the same ObjectStore will be a problem. If you notice, the specific test that fails isn't actually the one that is generated in the log you posted, so success or fail you get those log messages. i.e. those log messages come from tests where failure is expected. That being said, I don't know if there are any tests where success is expected - we should make sure we have some of those as that log message implies that the JDK orb hasn't been configured correctly. i.e. do we have a test that correctly initializes a JDK ORB RC manager? The only tests I see in JavalIdRecoveryUnitTest are testing failure scenarios.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-1816">https://issues.jboss.org/browse/JBTM-1816</a> |
| 12977 | JBTM-1809   | Did this get resolved? I saw some commits on the 4.17 branch                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-1809">https://issues.jboss.org/browse/JBTM-1809</a> |
| 12978 | JBTM-1808   | Tom, I was thinking that this would be good for Amos to investigate. Can you add any ideas you may have to the above text and then assign accordingly?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-1808">https://issues.jboss.org/browse/JBTM-1808</a> |
| 12979 | JBTM-1808   | Maybe this isn't worth the bother? How about we split the job up into 5 1hr pieces and defer this task until we are in a position where we are using too much CI time?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-1808">https://issues.jboss.org/browse/JBTM-1808</a> |
| 12980 | JBTM-1789   | Hi Paul, Can you list the files that are in the uber jars but not in the individual jars? The AS currently just consumes the uber jars so I want to make sure when we move to using the individual jars in the AS we can anticipate any further modifications required. Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-1789">https://issues.jboss.org/browse/JBTM-1789</a> |
| 12981 | JBTM-1788   | Hi Tom, [tom@dhcppc1 quickstart]((4.17.4.Final)) \$ git name-rev HEAD HEAD tags/4.17.4.Final [tom@dhcppc1 quickstart]((4.17.4.Final)) \$ find . -name \pom.xml -exec grep -l 4.17.5 {} \; [tom@dhcppc1 quickstart]((4.17.4.Final)) \$ I can't find any reference to 4.17.5 on that tag (SNAPSHOT or otherwise). Can you try to find which file has that reference in? Maybe somehow your repo is corrupted? Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-1788">https://issues.jboss.org/browse/JBTM-1788</a> |
| 12982 | JBTM-1772   | Is this not something that the build can automate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-1772">https://issues.jboss.org/browse/JBTM-1772</a> |
| 12983 | JBTM-1770   | Hi Mike, This issue was marked as "Resolved, Done" but there is no "Fix Version" specified. Please can you update the Jira with the version of the software where you fixed this? Also, can you then close the issue (assuming its not an in development version). Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-1770">https://issues.jboss.org/browse/JBTM-1770</a> |
| 12984 | JBTM-1754   | Hi Paul, The dir name and artifact id are effectively fixed at the moment. However, as you say we have more flexibility on the "project name" field. Can you update your table with an example of your preferred project name for those modules you have referenced originally, please? Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-1754">https://issues.jboss.org/browse/JBTM-1754</a> |

| 12985 | JBTM-1754   | Hi Paul, is the "Narayana: " prefix implied and therefore a little redundant (I realise I added the redundancy myself with JBossJTS, so just trying to get your opinion here)? if not the table looks good to me - thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-1754">https://issues.jboss.org/browse/JBTM-1754</a> |
| 12986 | JBTM-1742   | In what way did it break the build? I thought I had built everything when I changed this yesterday.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTM-1742">https://issues.jboss.org/browse/JBTM-1742</a> |
| 12987 | JBTM-1721   | Is there a pull request for this on WildFly or does it require M5?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-1721">https://issues.jboss.org/browse/JBTM-1721</a> |
| 12988 | JBTM-1707   | Hi, Could you please confirm, can we use JBossTS 4.3.GA release for above mentioned problem. Thanks, Sube                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-1707">https://issues.jboss.org/browse/JBTM-1707</a> |
| 12989 | JBTM-1699   | Should we link this to JBTM-1970 as well?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-1699">https://issues.jboss.org/browse/JBTM-1699</a> |
| 12990 | JBTM-1695   | Hi Weinan, We left as much of the old builds directory structure in place as maven could cope with. Please can you clarify if there is an EAP issue with the code in these folders as we have previously decided not to make cosmetic changes to the structure? Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTM-1695">https://issues.jboss.org/browse/JBTM-1695</a> |
| 12991 | JBTM-1694   | {quote} we are using a custom fork but only for community testing {quote} That's what our thirdparty-releases repository [1] is for, so ideally we should upload the patched release there. Were the patches also submitted to upstream emma so they can get into a future release? Moving the emma tests to a profile would be good. [1] <a href="https://community.jboss.org/wiki/MavenDeployingThirdpartyRelease">https://community.jboss.org/wiki/MavenDeployingThirdpartyRelease</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-1694">https://issues.jboss.org/browse/JBTM-1694</a> |
| 12992 | JBTM-1689   | Which profiles do your team regularly use? I guess we should keep just the most commonly used ones?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTM-1689">https://issues.jboss.org/browse/JBTM-1689</a> |
| 12993 | JBTM-1689   | I would be happy to remove: all, core, jta, jts, jts-idlj and stm from /pom.xml [~marklittle] does use "mvn install -Pstm", but perhaps he will be happy to use: "mvn install -pl STM -am" instead? Leave it with me and I will raise the pull request if Mark is happy to stop using the profile. For completeness, this is what would be replaced: all (as used in EAP builds) = mvn install -am -pl ArjunaCore/arjunacore jta = mvn install -am -pl ArjunaJTA/narayana-jta jts = mvn install -am -pl ArjunaJTS/narayana-jts-jacob jts-idlj = mvn install -am -pl ArjunaJTS/narayana-jts-idlj -Didlj-enabled=true stm = mvn install -am -pl stm                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-1689">https://issues.jboss.org/browse/JBTM-1689</a> |
| 12994 | JBTM-1680   | Please can you add an estimate for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-1680">https://issues.jboss.org/browse/JBTM-1680</a> |
| 12995 | JBTM-1679   | [~tomjenkinson], maybe this would be worth pushing to 5.next?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-1679">https://issues.jboss.org/browse/JBTM-1679</a> |
| 12996 | JBTM-1679   | How is this different to JBTM-1107? Should we close this as a duplicate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-1679">https://issues.jboss.org/browse/JBTM-1679</a> |
| 12997 | JBTM-1679   | I think we should just close it and add it into the details for JBTM-1107 as it seems somewhat intrinsic to the behaviour. If you agree, please can you make the change?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-1679">https://issues.jboss.org/browse/JBTM-1679</a> |
| 12998 | JBTM-1672   | Please can you clarify the reason to disable the maven-securefire-plugin? If it is still needed, please can you raise a separate Jira for this one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTM-1672">https://issues.jboss.org/browse/JBTM-1672</a> |
| 12999 | JBTM-1658   | Assign this to me, as I think I know what the problem is?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-1658">https://issues.jboss.org/browse/JBTM-1658</a> |
| 13000 | JBTM-1645   | How about we do this: Split the PR job into a multi config with the same split as Narayana: MAIN XTS QA_JTA QA_JTS_JACORB QA_JTS_JDKORB These will all be scheduled in a random order, which is annoying if you are willing to merge based on a sub-set of tests. It wastes resources, and causes you to wait longer as the tests you are uninterested in may be scheduled first. The solution is to specify in the description which of the above groups you wish to skip. This is similar to what you mention above, but a bit more course-grained and fits in more neatly with the hudson multi-config approach. You can get the PR description with the following command. There's probably a better approach, but this works: curl -s <a href="https://api.github.com/repos/jbosstm/narayana/pulls/279">https://api.github.com/repos/jbosstm/narayana/pulls/279</a>   grep \"body\": I don't think it makes sense to allow MAIN to be skipped, and if you want to skip one lot of QA tests, you probably want to skip them all? So how about we just have these two options: skipXTS skipQA We could add more fine-grained options if it proves useful. I don't see the point in specifying who can do this. If a contributor skips some tests that need to pass, we simply tell them to update the description and re-test. | <a href="https://issues.jboss.org/browse/JBTM-1645">https://issues.jboss.org/browse/JBTM-1645</a> |
| 13001 | JBTM-1645   | How about if the pull just changes a JacORB qa test? Or just an XTS test, that would be rationale to skip MAIN wouldn't it? Agreed on the white listing, we just need to be vigilant :)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-1645">https://issues.jboss.org/browse/JBTM-1645</a> |
| 13002 | JBTM-1643   | Why focus solely on JTS? Why not support something like this for each component?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-1643">https://issues.jboss.org/browse/JBTM-1643</a> |
| 13003 | JBTM-1641   | I was unable to duplicate the problem on jboss-as-8.0.0.Alpha1-SNAPSHOT. I was able to duplicate it on EAP. I agree that printing the stacktrace in this instance is excessively verbose. We are in the process of reworking the transactions SPI and as part of that work I will rationalise the debug logging, however we may not make the changes in time for wildfly 8 release. I have added a link from JBTM-1699 (Changes to the transaction SPI) to make sure we don't lose sight of this JIRA. Would you object to me closing this issue "as will not fix".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTM-1641">https://issues.jboss.org/browse/JBTM-1641</a> |
| 13004 | JBTM-1635   | Hi Jesper, Do you want me to pretty-print the flag or is the int enough? I don't think you can OR the flags on delist so the int should be enough? Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-1635">https://issues.jboss.org/browse/JBTM-1635</a> |
| 13005 | JBTM-1602   | I just noticed this change in the code and tracked it back to github (no JIRA associated with it, so I couldn't see what the issue was): try { Object syncObject = ((BasicAction.Current() != null) ? getMutex() : BasicAction.Current()); synchronized (this) { synchronized (getMutex()) { synchronized (syncObject) { I'm not sure why this change is in here, but need to check because it doesn't look right. Ignoring the fact that we now have 3 locks being acquired before the actual lockHeld lock, we're also potentially acquiring the same lock twice (syncObject could be getMutex())!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-1602">https://issues.jboss.org/browse/JBTM-1602</a> |
| 13006 | JBTM-1598   | Hi Weinan, I can do this, but is it not ok for these all to be in the root pom in a dependency management section? I thought that was the preferred route for jboss projects? e.g. <a href="https://github.com/jbosstm/narayana/blob/master/pom.xml">grep https://github.com/jbosstm/narayana/blob/master/pom.xml</a> for "common<" Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-1598">https://issues.jboss.org/browse/JBTM-1598</a> |
| 13007 | JBTM-1584   | Should this be done as part of the BLACKTIE-381 / BLACKTIE-202 package?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-1584">https://issues.jboss.org/browse/JBTM-1584</a> |
| 13008 | JBTM-1583   | How about using rest rather than SOAP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-1583">https://issues.jboss.org/browse/JBTM-1583</a> |
| 13009 | JBTM-1576   | So is this replacing sockets with JNI calls - I would have expected sockets (domain sockets on unix) to be faster than JNI. Have you considered java NIO memory mapped files which will be faster than both JNI and sockets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-1576">https://issues.jboss.org/browse/JBTM-1576</a> |
| 13010 | JBTM-1576   | Hi Mike, There are two considerations in this: 1. Performance - Amos, please review Mikes comment "Have you considered java NIO memory mapped files which will be faster than both JNI and sockets." 2. Administration - deploying into the AS container for admin seems like it would be easier than managing standalone C processes and an AS? In terms of performance, I am considering the (unlikely, but ramp it down a bit and it might be more likely) case of someone trying to send a 4GB .iso to a service. Would a socket be quicker than JNI call (or your NIO mapped files - out of interest, can these be accessed from C)? I talked to Andrew Dinn and he thought (maybe my question wasn't phrased well enough to him) that JNI would be faster than socket (we didn't consider NIO). Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-1576">https://issues.jboss.org/browse/JBTM-1576</a> |
| 13011 | JBTM-1576   | Please can you add an estimate for this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-1576">https://issues.jboss.org/browse/JBTM-1576</a> |

| 13012 | JBTM-1573   | In HybridSessionImpl::send we call apr_socket_timeout_set(stompConnection->socket, 1); and abandon the send if we don't get the message receipt in time. Where in the code are we doing a blocking wait when the transaction timeout is set?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-1573">https://issues.jboss.org/browse/JBTM-1573</a> |

| 13014 | JBTM-1568   | do you know the jbossas jira for this way to deploy a war as module ? does it need more configuration ? just for merge stemconnect and blacktie-admin-servers ear the estimate is 4h                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-1568">https://issues.jboss.org/browse/JBTM-1568</a> |
| 13015 | JBTM-1568   | I can not access ncl openvpn as my crt has been expired. can you mail me these txt ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-1568">https://issues.jboss.org/browse/JBTM-1568</a> |
| 13016 | JBTM-1568   | Would it be possible for you to push the fix directly without the need for a PR (since it currently breaks all of our builds). Also why aren't we using the wildfly version that is built during the main narayana build.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-1568">https://issues.jboss.org/browse/JBTM-1568</a> |
| 13017 | JBTM-1565   | Hi Crispin, Please can you: 1. Sign our CLA: <a href="https://cla.jboss.org/index.seam">https://cla.jboss.org/index.seam</a> (choose JBoss Transactions rather than BlackTie) 2. Raise a pull request for your change? This will then run CI over the proposed enhancement and double check it for us I will then merge the PR after it passes :) Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-1565">https://issues.jboss.org/browse/JBTM-1565</a> |
| 13018 | JBTM-1558   | Can you provide more detail to this task, since I thought we already had an SPI?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-1558">https://issues.jboss.org/browse/JBTM-1558</a> |
| 13019 | JBTM-1558   | There are a few SPI related issues at the moment. Maybe cross-link them?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-1558">https://issues.jboss.org/browse/JBTM-1558</a> |
| 13020 | JBTM-1556   | What do you mean by a remote thread? We should be using interposition in all distributed cases, which means the Synchronisation will be registered with a subordinate coordinator.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-1556">https://issues.jboss.org/browse/JBTM-1556</a> |
| 13021 | JBTM-1556   | Regarding the question about what I meant by the "remote thread" case: {quote} <tomjenkinson> smarlow: AS1:EJB1 enlists JPA(XAR1) then calls AS2:EJB2 over JTS <tomjenkinson> smarlow: AS2:EJB2 enlists JPA(XAR2) this is done by a jacob request processor thread at random <tomjenkinson> smarlow: AS1:EJB1 calls commit on the transaction, JPA(XAR1) afterCompletion is handled in the same thread as before - this is fine - but then the call to AS2 to commit the transaction goes over a different jacob request processor, now afterCompletion in AS2 is done by a different thread {quote} The above doesn't raise any concurrency concerns since there is no (active) application thread on AS2 at the time that AS2 invokes the Synchronization.afterCompletion. Another case, would be similar to the above but with one difference. AS1:EJB1 enlists JPA(XAR1) then loops on calling AS2:EJB2 over JTS AS2:EJB2 enlists JPA(XAR2) and does processing and returns Looping continues until the transaction times out while current application execution is in AS2:EJB2 or just in AS1:EJB1. I don't think that only checking the reaper thread name covers when the transaction times out when the application thread of execution, is in AS2:EJB2. Question 1: Does the root coordinator (AS1) reaper always handle transaction timeout or can the subordinate coordinator (AS2) reaper also handle transaction timeout? I'm not sure how the subordinate coordinator would handle timeout (maybe by sending an out of band message to its parent coordinator that propagates up to the root coordinator?) Even so, it would be chaotic to have multiple coordinators cancelling the transaction at the same time. Regarding the idea of having globally searchable "being cancelled" (I assume you mean by the reaper) list, sounds better than my current "reaper thread" name check. The globally searchable list would also cover the second (above) case when the application execution is in AS2:EJB2 while (concurrently) an AS2 background orb thread sees the cancel message from the root coordinator. | <a href="https://issues.jboss.org/browse/JBTM-1556">https://issues.jboss.org/browse/JBTM-1556</a> |
| 13022 | JBTM-1556   | When each coordinator handles the timeout, does it also cancel its subordinates (as if the subordinate is one of the resources)? Or is it more like the coordinator times out the subordinate (as a resource) which means blocking until the subordinate has completed the subordinate level (reaper) timing out of its (subordinate) resources? In other words, could the subordinate coordinator Synchronization.afterCompletion() be called from a transport thread ever or only from a reaper thread?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-1556">https://issues.jboss.org/browse/JBTM-1556</a> |
| 13023 | JBTM-1526   | Please can you itemize the dependencies that you are worried about - thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-1526">https://issues.jboss.org/browse/JBTM-1526</a> |
| 13024 | JBTM-1526   | Hi Weinan, Please can you provide an update on which dependencies you are worried about? We might be cutting a 4.17.4 soon and would like to hear from you, thanks! Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-1526">https://issues.jboss.org/browse/JBTM-1526</a> |
| 13025 | JBTM-1526   | Hi Weinan, Please can you raise a Jira for the second issue (orb.idl) as we don't see that on our machines, it might be environmental so let us know the OS etc and assign it [~mmusgrov] Please can you raise a pull request for the first one? Thanks! Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-1526">https://issues.jboss.org/browse/JBTM-1526</a> |
| 13026 | JBTM-1503   | Just wondered what had necessitated this? Not that it is a problem but we should record in the Jira why this decision was made.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-1503">https://issues.jboss.org/browse/JBTM-1503</a> |
| 13027 | JBTM-1485   | Does this change represent a possible backward incompatibility?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-1485">https://issues.jboss.org/browse/JBTM-1485</a> |

| 13029 | JBTM-1479   | It appears that the commit for JBICA-1011 made it into IronJacamar 1.0.16.Final. Is the quickstart working now? Where do I find it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTM-1479">https://issues.jboss.org/browse/JBTM-1479</a> |

| 13032 | JBTM-1479   | I think that might be enough information to log a bug report against IronJacamar? Can you link this bug as dependent on the one you raise? Also can you provide the link to the stackoverflow article just in case. Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/JBTM-1479">https://issues.iboss.org/browse/JBTM-1479</a> |
| 13033 | JBTM-1469   | I think we should just take one of the existing quickstarts from the Narayana quickstart repo (multi-hop or multi-service) and simplify it for the following scenario: 1. Client begins TX 2. Client updates a DB 3. Client invokes service 4. Service updates another DB 5. Client commits TX Where client and Service are both EJBs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/JBTM-1469">https://issues.iboss.org/browse/JBTM-1469</a> |
| 13034 | JBTM-1463   | you are right in your concern and that is what I am trying to address but ineloquently I was thinking more about changes to narayana that need a change to jbosstm somehow being able to test both pulls at once. Maybe we could somehow put convention when you raise a pull request for jbosstm that you can put a comment to say something like: "requires: https://github.com/jbosstm/jboss-as/pull/217" We can then somehow use that info in the narayana.sh to pull in that branch rather than S_BRANCH, what do you think? I know you did some work with using rest to talk to git hub to comment on pulls, could it possibly download the comment for the pull in order to grep it for that info?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/JBTM-1463">https://issues.iboss.org/browse/JBTM-1463</a> |
| 13035 | JBTM-1463   | Please can you add an estimate for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JBTM-1463">https://issues.iboss.org/browse/JBTM-1463</a> |
| 13036 | JBTM-1454   | Why? Also, will you be testing HTTP versus IIOP initially to get a base?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JBTM-1454">https://issues.iboss.org/browse/JBTM-1454</a> |
| 13037 | JBTM-1424   | Please can you add a component for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JBTM-1424">https://issues.iboss.org/browse/JBTM-1424</a> |
| 13038 | JBTM-1424   | Shouldn't this also be fixed for 4.17?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.iboss.org/browse/JBTM-1424">https://issues.iboss.org/browse/JBTM-1424</a> |
| 13039 | JBTM-1423   | Please can you add a component for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JBTM-1423">https://issues.iboss.org/browse/JBTM-1423</a> |
| 13040 | JBTM-1412   | I think the test didn't have long enough to crash and be detected, it was set for 5 seconds but the fact your build of JTA takes an hour tells me that node is sloooow ;) I have given it a minute now (5 seconds x 20 attempts), hopefully that will be enough. The other failures are cascading off that one but I fixed that now too (was using @AfterClass rather than @After - d'oh) If you want to test this, the following will get you to my code and run the integration unit tests: git remote add tomjenkinson git://github.com/tomjenkinson/jbosstm.git git fetch tomjenkinson git checkout -b JBTM-1412 tomjenkinson/JBTM-1412 ./build.sh -f ArjunaJTS/integration/pom.xml (Assuming you are relatively current with master, if you are quite out of date it will be worth a full build)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/JBTM-1412">https://issues.iboss.org/browse/JBTM-1412</a> |
| 13041 | JBTM-1407   | It should be trivial to do that *today* for JDK orb with profiles as you can activate a profile by the presence of a file, e.g. JAVA_HOME/lib/orb.idl. However, JacORB would be in the classpath unless you specifically disabled it with a different profile so its presence would be guaranteed. Now, in the future when AS7-5582 is implemented, the "JDK" orb will be a maven dependency (same as JacORB), i.e. it will be available by default in the classpath. Lets say we made the change today as a convenience until AS7-5582 is available, the question is do we really want to have unpredictable results in the build. Lets say the user attempts this new default, detection based build but does still expect both a JDK orb and JacORB version but we as can't locate orb.idl (say they are on pi) and just build the JacORB version - what would you expect then, log a warning?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/JBTM-1407">https://issues.iboss.org/browse/JBTM-1407</a> |
| 13042 | JBTM-1407   | Since I'm still receiving the following using the latest JDK 7 build for OSX ... [ERROR] Failed to execute goal org.apache.maven.plugins:maven-surefire-plugin:2.9:test (surefire-idlj) on project jts: Execution surefire-idlj of goal org.apache.maven.plugins:maven-surefire-plugin:2.9:test failed: java.lang.reflect.InvocationTargetException; nested exception is java.lang.reflect.InvocationTargetException: null: com.arjuna.ArjunaOTS/OTSAbstractRecordPOA: com.arjuna.ArjunaOTS.OTSAbstractRecordPOA -> [Help 1] I'm assuming we haven't made the automatic build the default? Building for both ORBs is something that has only just happened. So users currently really don't expect an IDL build. However, as a developer what I'd prefer is for the build system to not cr*p out :- ) if it can only find one ORB. If it can't find both and I asked it to build JTS then that's definitely an error. But if I just specify JTS on the build line I think I'm either meaning "Build JTS with JacORB" (given the last 7 years of history) or "Build JTS and I really don't care which ORB you use". Therefore, I suggest changing the build so that it only fails if it can't find either ORB. If it can't find both ORBs then at the end it should print out a message saying which one failed to build. Plus add a jacorb option to the build to correspond to the idlj option, so someone can specify "build jacorb only". This would mean the following: ./build.sh -P jts --> build with any ORB, I really don't care which ./build.sh -P jts idlj --> build with only the IDL ORB ./build.sh -P jts jacorb --> build with only JacORB | <a href="https://issues.iboss.org/browse/JBTM-1407">https://issues.iboss.org/browse/JBTM-1407</a> |
| 13043 | JBTM-1398   | Should org.jboss.as.weld.deployment.WeldAttachments be lifted into its own subsystem that doesn't depend on EJB3?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/JBTM-1398">https://issues.iboss.org/browse/JBTM-1398</a> |
| 13044 | JBTM-1398   | I think this is resolved for now. Do you agree Tom?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.iboss.org/browse/JBTM-1398">https://issues.iboss.org/browse/JBTM-1398</a> |
| 13045 | JBTM-1382   | Hi Mike, THANKS for raising this, I keep forgetting! Can we put the output in testoutput/ that way we can have a git ignore on just testoutput rather than testoutput TEST*.txt. Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.iboss.org/browse/JBTM-1382">https://issues.iboss.org/browse/JBTM-1382</a> |
| 13046 | JBTM-1382   | The JIRA asks for output to be sent to qa/testoutput (not qa). For a qa run against both orbs if you look in the testoutput directory you will find two zips (testoutput-jacorb.zip and testoutput-idlj.zip) which contain the testoutput directory and the TEST*.txt files corresponding to each run. To see it working look at the latest narayana-dualstack job (I did notice that bttny-pulls-narayana CI job does not archive testoutput so I have updated that job config). I think I may have misunderstood your requirement. Did you mean move all the TEST*.txt files into testoutput but leave the zip files in the qa directory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/JBTM-1382">https://issues.iboss.org/browse/JBTM-1382</a> |
| 13047 | JBTM-1369   | Can we have an update on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/JBTM-1369">https://issues.iboss.org/browse/JBTM-1369</a> |

| 13048 | JBTM-1369   | <p>We have four JTS performance unit tests - they all run 1000 empty transactions with each test using a different method to begin the txn. I got the following figures from our CI cluster but if you want to try them on your own machine do the following: Build narayana with JDK orb support enabled: {code}./build.sh -Didlj-enabled=true clean install -DskipTests{code} To run just a specific test, such as Performance2 for example: {code}./build.sh -f ArjunaJTS/jts/pom.xml -Didlj-enabled=true -Dtest=com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance2{code} View the results in the surefire report directories: {code}JacORB: ArjunaJTS/jts/target/surefire-reports/com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance1-output.txt JDK ORB: ArjunaJTS/jts/target/idlj-surefire-reports/com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance1-output.txt{code} The results generally show jacorb performance as being significantly better on our CI cluster but, interestingly, on my laptop JDK orb seemed to do better: {code:title=com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance1} 1000 txns (OTSimpleManager.current), no participants (with warm up of 10 txns): idlj Average time for empty transaction = 1.284000039100647 Transactions per second = 778.8161756602676 jacorb Average time for empty transaction = 1.3229999542236328 Transactions per second = 755.8579248680498 {code} {code:title=com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance2} 1000 txns (TSimpleManager.factory().create()), no participants (with warm up of 10 txns): idlj Average time for empty transaction = 3.48799991607666 Transactions per second = 286.6972546045273 jacorb Average time for empty transaction = 2.115999937057495 Transactions per second = 472.5898061181409 {code} {code:title=Test: com.hp.mwtests.ts.jts.orbspecific.local.performance.Performance3} 1000 txns (ArjunaTransactionImple), no participants (with warm up of 10 txns): idlj Average time for empty transaction = 0.05400000140070915 Transactions per second = 18518.5180381656 jacorb Average time for empty transaction = 0.052000001072883606 Transactions per second = 19230.76883399276 {code} {code:title=Test: com.hp.mwtests.ts.jts.local.synchronizations.Performance} 1000 txns (org.omg.CosTransactions.Current) each registering a single synchronization idlj TPS: 191.20458891013382 jacorb TPS: 309.2145949288807 {code}</p> | <a href="https://issues.jboss.org/browse/JBTM-1369">https://issues.jboss.org/browse/JBTM-1369</a> |
| 13049 | JBTM-1369   | Can you paste in the commands you used to get those numbers, please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-1369">https://issues.jboss.org/browse/JBTM-1369</a> |
| 13050 | JBTM-1369   | What version of JacORB was used please?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-1369">https://issues.jboss.org/browse/JBTM-1369</a> |
| 13051 | JBTM-1369   | What hardware architecture is your CI cluster?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-1369">https://issues.jboss.org/browse/JBTM-1369</a> |
| 13052 | JBTM-1359   | Why has this been linked to the JDBC object store work? I'd like to understand the relative priority of this to other tasks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-1359">https://issues.jboss.org/browse/JBTM-1359</a> |
| 13053 | JBTM-1359   | Thanks, but it still doesn't seem that there is clarity on what exactly is required. What is the problem that we're trying to fix? Is it only for JTA? Until we have answers to these and other questions there's no point in implementing anything.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-1359">https://issues.jboss.org/browse/JBTM-1359</a> |
| 13054 | JBTM-1357   | It's worth pointing out that the script is inherited from AS7's build.sh, do you think you could try to raise this "upstream" so to speak?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-1357">https://issues.jboss.org/browse/JBTM-1357</a> |
| 13055 | JBTM-1357   | I've been using it for a while on my machine and I think it's currently too colourful to be adopted across the board. I think we just want to colour: 1. Test failures red 2. overall build success as green 3. overall build failure as red 4. ERROR as red 5. WARN as orange The output should then be mostly default colour with the important stuff highlighted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-1357">https://issues.jboss.org/browse/JBTM-1357</a> |
| 13056 | JBTM-1340   | Hi Mark, Please can you upload the test you were using and the name of the tool that outputted the profiling information? We can look at tuning TxStats, I am thinking a listener pattern might help? Before that though, the test and profiler settings would be useful. Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTM-1340">https://issues.jboss.org/browse/JBTM-1340</a> |
| 13057 | JBTM-1339   | When the linked JIRA is ready make sure JTS functions with the JDK orb                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-1339">https://issues.jboss.org/browse/JBTM-1339</a> |
| 13058 | JBTM-1339   | Isn't this out of date now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-1339">https://issues.jboss.org/browse/JBTM-1339</a> |
| 13059 | JBTM-1339   | OK, thanks. Does the title of the issue need changing now though? I'm assuming we're not back porting this to AS7 and only focussing on WildFly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-1339">https://issues.jboss.org/browse/JBTM-1339</a> |
| 13060 | JBTM-1338   | How do I get access to BaseTransaction in AS7? As JNDI lookup (java:boss/UserTransaction) returns ServerVMClientUserTransaction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-1338">https://issues.jboss.org/browse/JBTM-1338</a> |
| 13061 | JBTM-1328   | Was this a one-off?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTM-1328">https://issues.jboss.org/browse/JBTM-1328</a> |
| 13062 | JBTM-1328   | Hi Mike, This issue was marked as "Resolved, Done" but there is no "Fix Version" specified. Please can you update the Jira with the version of the software where you fixed this? Also, can you then close the issue (assuming its not an in development version). Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-1328">https://issues.jboss.org/browse/JBTM-1328</a> |
| 13063 | JBTM-1310   | Does this affect all versions or 4.17.1+ in particular?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-1310">https://issues.jboss.org/browse/JBTM-1310</a> |
| 13064 | JBTM-1254   | Mike, Does that mean that you agree with me that we should resolve this as "won't fix"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-1254">https://issues.jboss.org/browse/JBTM-1254</a> |
| 13065 | JBTM-1251   | You don't need to branch the quickstart, narayana, or docs branches to create these jobs. Currently 5.x and 4.17 share a common branch (master) so both sets of jobs build against master. The place in which they differ is that 4.17 builds against 4_BRANCH of our jboss-as fork and 5.x against 5_BRANCH. They also differ in what is tested as TXF is only tested in 5.x. I would suggest we create the jobs now, but the problem is that we are going to double the load on Hudson as any change is going to trigger both the EAP61 and the narayana-500 version of the job. The reason why I'm keen to get some narayana 5.x CI is that TXF is currently not getting any CI. Maybe I could just create some TXF jobs in the mean time until this is resolved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-1251">https://issues.jboss.org/browse/JBTM-1251</a> |
| 13066 | JBTM-1247   | What is the use case for this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-1247">https://issues.jboss.org/browse/JBTM-1247</a> |
| 13067 | JBTM-1227   | Did this make it into PropertiesFactory?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-1227">https://issues.jboss.org/browse/JBTM-1227</a> |
| 13068 | JBTM-1217   | Seems to be related to REM3-158. Ivo, I'm on PTO until August 28th. Can you try rebuilding AS7 with XNIO 3.0.6 and then re-testing on the IPv6 node?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-1217">https://issues.jboss.org/browse/JBTM-1217</a> |
| 13069 | JBTM-1212   | Amos, Has this been done for the docs yet?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-1212">https://issues.jboss.org/browse/JBTM-1212</a> |
| 13070 | JBTM-1212   | Can we mark this as resolved now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-1212">https://issues.jboss.org/browse/JBTM-1212</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | URL                                                                                               |
|-------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| 13071 | JBTM-1199   | The only way I have found to check an old version of the AS (but still having our commits from 5_BRANCH) is as follows: 0. cd jboss-as 1. git checkout 5_BRANCH (assumes you haven't checked this out yet, if you already have this such as by having ran scripts/hudson/narayana.sh git checkout master git branch -D 5-BRANCH git checkout 5_BRANCH) 2. git pull --rebase --ff-only upstream master (to get up to date) 3. Go to: https://github.com/jbossas/jboss-as/commits/master and find a commit you want to check against, e.g one from July 3rd when build was still working: https://github.com/jbossas/jboss-as/commit/55fca1401f399591d009c211205f2e6ef94f876b 4. Use this in a git rebase: git rebase -i 55fca1401f399591d009c211205f2e6ef94f876b^ (you need the ^ to include that commit in the rebase) 5. delete all the commits after that commit (dd in vi) but leave our commits in at the bottom of the rebase 6. You will get a rebase issue on the first one, simply open pom.xml and remove the jbossjsts part of pom.xml which came from HEAD -- grep in pom.xml for an "=" sign), then: git add pom.xml git rebase --continue 7. You should now be able to build the AS as per that commit but with our commits on top MAVEN_OPTS=-XX:MaxPermSize=256m ./build.sh "\$@" clean install -DskipTests 8. cd ./ 9. export JBOSS_HOME=\$(WORKSPACE)/jboss-as/build/target/ls -1 \$(WORKSPACE)/jboss-as/build/target   grep jboss-as` 10. ./build.sh -f XTS/localjunit/pom.xml --projects xtstest,crash-recovery-tests -Parq "\$@" clean install -Dtest=TestATCrashDuringCommit#MultiParticipantPrepareAndCommitTest After you have verified that that version works, try a later revision of AS, however you will need to delete your local branch first! This will be tedious, so to reduce the number of checks, the first thing to do is identify the day where a commit was added that broke our build, then use a binary tree search style to cut down the options on that day. Suggested commits to try: https://github.com/jbossas/jboss-as/commit/2e2f1a7dfcebebb282987d2d8e2df4407de036ac https://github.com/jbossas/jboss-as/commit/f2d65c311d67c61d953bd17c079f4169c3dbf8aa Tom | <a href="https://issues.jboss.org/browse/JBTM-1199">https://issues.jboss.org/browse/JBTM-1199</a> |
| 13072 | JBTM-1199   | I can confirm that the the build started to break was between the following two jboss-as commits. I know this because: FAILED = https://github.com/jbossas/jboss-as/commit/f2d65c311d67c61d953bd17c079f4169c3dbf8aa PASSED = https://github.com/jbossas/jboss-as/commit/55fca1401f399591d009c211205f2e6ef94f876b Please can you start checking the commits inbetween to see which specific commit broke the build?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-1199">https://issues.jboss.org/browse/JBTM-1199</a> |
| 13073 | JBTM-1199   | Amos, please can you investigate why https://github.com/jbossas/jboss-as/commit/435c862b9514bfcf0a036bb2b916ac3dc63b4f4a would stop the XTS crash recovery tests from working? I noticed some things to do with "Reload" perhaps AS7 has some behaviour that reloads the server automatically now?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-1199">https://issues.jboss.org/browse/JBTM-1199</a> |
| 13074 | JBTM-1199   | I added a comment onto that commit, please enable notifications for updates to that commit, my comment is https://github.com/jbossas/jboss-as/commit/435c862b9514bfcf0a036bb2b916ac3dc63b4f4a#commitcomment-1579773, you can enable updates by going to the bottom of the page and searching for: "Email notifications for these commit notes"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-1199">https://issues.jboss.org/browse/JBTM-1199</a> |
| 13075 | JBTM-1192   | Can resolve when this: http://172.17.131.2/job/btny-pulls-quickstarts/31/ is seen testing TXF.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-1192">https://issues.jboss.org/browse/JBTM-1192</a> |
| 13076 | JBTM-1188   | Where did the requirement for a per-tx override come from? Is the existing global config option not sufficient?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTM-1188">https://issues.jboss.org/browse/JBTM-1188</a> |
| 13077 | JBTM-1187   | Amos, What made you think "the client handler chain can be added by txframework automatically"? This is a feature we have planned but we don't have it yet. Did you read it in some docs somewhere?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-1187">https://issues.jboss.org/browse/JBTM-1187</a> |
| 13078 | JBTM-1182   | With recent changes to transactional fileio repo, is this still relevant? Also what about the AS7 RPMs that have already been produced for Fedora: don't they duplicate this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-1182">https://issues.jboss.org/browse/JBTM-1182</a> |
| 13079 | JBTM-1173   | How to run the tests: # ipv4: {noformat} mvn clean test {noformat} # ipv6: {noformat} mvn clean test -Dipv6 -Parq-jbossas-managed-7 {noformat} Note that for IPv6 the XTS demo app needs to be compiled with HOSTNAME set to [::1] in jboss.properties file.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-1173">https://issues.jboss.org/browse/JBTM-1173</a> |
| 13080 | JBTM-1173   | I won't be able to test this before Weds. If it's urgent, could someone else test the pull? It sounds like we have many other IPv6 (JBTM-1156) issues that will be pushed to 5.final, so we could push this too and I'll look at it and JBTM-1156 on Weds when I hope to be back to work.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-1173">https://issues.jboss.org/browse/JBTM-1173</a> |
| 13081 | JBTM-1166   | Hi Mike, This issue was marked as "Resolved, Done" but there is no "Fix Version" specified. Please can you update the Jira with the version of the software where you fixed this? Also, can you then close the issue (assuming its not an in development version). Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-1166">https://issues.jboss.org/browse/JBTM-1166</a> |
| 13082 | JBTM-1156   | Great, are you working with Paul on resolving the XTS issues? +1 on the JDBC tests                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-1156">https://issues.jboss.org/browse/JBTM-1156</a> |
| 13083 | JBTM-1147   | Please can you add an estimate for this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-1147">https://issues.jboss.org/browse/JBTM-1147</a> |
| 13084 | JBTM-1116   | Good points, lets rework this Jira as an opportunity to simply: 1. Ensure the Javadocs in isolation are still correct, fully explained 2. Ensure the documentation explains the architecture of our configuration mechanism 3. Ensure the documentation builds on point 2 to reference the relevant beans when configuring common deployment scenarios, e.g. which properties do you need to enable hornetq/JDBC object store                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-1116">https://issues.jboss.org/browse/JBTM-1116</a> |
| 13085 | JBTM-1082   | As workaround is possible to define java opt argument -XX:-UseSplitVerifier Put it to file sharedbuild.xml to the tag <junit> like: <jvmarg value="-XX:-UseSplitVerifier" /> I suppose that this problem is caused by the fact that the emma library was compiled with older version of compiler that we are trying to use for compiling TS sources. Some links e.g. here http://stackoverflow.com/questions/7970622/java-7-jvm-verifyerror-in-eclipse Do you think that the workaround is enough for solving this jira or should be tried to recompile emma or dive to some other investigation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTM-1082">https://issues.jboss.org/browse/JBTM-1082</a> |
| 13086 | JBTM-1073   | Worth a link to where this was done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-1073">https://issues.jboss.org/browse/JBTM-1073</a> |
| 13087 | JBTM-1072   | I commented on the pull re the password in narayana.sh, not ideal, can it be externalized into the job config? Also, I commented to say what happens if you are running this locally on a checked out pull, can we make the default that the commenting is disabled and job config enables it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-1072">https://issues.jboss.org/browse/JBTM-1072</a> |
| 13088 | JBTM-1072   | Tom, btny-pulls-blacktie and btny-pulls-quickstarts are tied to Windows2008. btny-pulls-documentation will run on any machine (including windows). It's not going to be trivial to get this working on windows: {code} function comment_on_pull { if [ "\$COMMENT_ON_PULL" = "" ]; then return; fi PULL_NUMBER=\$(echo \$GIT_BRANCH   awk -F '/' '{ print \$2 }'   awk -F '/' '{ print \$2 }') if [ "\$PULL_NUMBER" = "" ] then JSON="{ \"body\": \"\\$1\" }" curl -d "\$JSON" -u jbosstm-bot:\$BOT_PASSWORD https://api.github.com/repos/\$GIT_ACCOUNT/\$GIT_REPO/issues/\$PULL_NUMBER/comments else echo "Not a pull request, so not commenting" fi } {code} I guess the only way to do this is by having the job run cygwin with a bash script that does the above. I don't fancy finding Windows commands for all of the above! WDYT?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-1072">https://issues.jboss.org/browse/JBTM-1072</a> |
| 13089 | JBTM-1063   | Hi Amos, Please can you backport this to the branch? Thanks! Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-1063">https://issues.jboss.org/browse/JBTM-1063</a> |
| 13090 | JBTM-1063   | Amos, {quote} and now jboss-as version is 7.1.2.SNAPSHOT and jbossts version is 4.16.2.Final {quote} What do you mean by this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-1063">https://issues.jboss.org/browse/JBTM-1063</a> |

| 13091 | JBTM-1063   | Hi, I have updated the config on the jobs to use this new script thanks Amos! Paul, please can you give Amos a pointer on the xts commands? Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/JBTM-1063">https://issues.iboss.org/browse/JBTM-1063</a> |
| 13092 | JBTM-1063   | Paul, I checkout 5_BRANCH on jboss-as and build fail with following: [ERROR] Failed to execute goal on project jboss-as-transactions: Could not resolve dependencies for project org.jboss.as:jboss-as-transactions:jar:7.1.1.Final: The following artifacts could not be resolved: org.jboss.jbossts:jbossjts:jar:5.0.0.M2-SNAPSHOT, org.jboss.jbossts:jbossjts-integration:jar:5.0.0.M2-SNAPSHOT: Failure to find org.jboss.jbossts:jbossjts:jar:5.0.0.M2-SNAPSHOT in http://repository.jboss.org/nexus/content/groups/public/ was cached in the local repository, resolution will not be reattempted until the update interval of jboss-public-repository-group has elapsed or updates are forced It looks like we should change groupId from "org.jboss.jbossts" to "org.jboss.narayana" can you confirm this change? Amos                                                                                                                                                                                                                              | <a href="https://issues.iboss.org/browse/JBTM-1063">https://issues.iboss.org/browse/JBTM-1063</a> |
| 13093 | JBTM-1063   | Amos, Can you give us an update on when this will be ported to the 4.16 branch?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/JBTM-1063">https://issues.iboss.org/browse/JBTM-1063</a> |
| 13094 | JBTM-1063   | Paul, I ran these test commands on my machine and it failed with <testcase classname="com.arjuna.qa.junit.LocalUnitRunner" name="testCallServlet" time="0.01"><error message="org/apache/commons/logging/LogFactory" type="java.lang.NoClassDefFoundError">java.lang.NoClassDefFoundError: org/apache/commons/logging/LogFactory at org.apache.commons.httpclient.HttpClient.<init>(Unknown Source) at com.arjuna.qa.junit.HttpUtils.accessURL(HttpUtils.java:97) at com.arjuna.qa.junit.LocalUnitRunner.testCallServlet(LocalUnitRunner.java:40) Caused by: java.lang.ClassNotFoundException: org.apache.commons.logging.LogFactory at java.net.URLClassLoader\$1.run(URLClassLoader.java:202) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:190) at java.lang.ClassLoader.loadClass(ClassLoader.java:306) at sun.misc.Launcher\$AppClassLoader.loadClass(Launcher.java:301) at java.lang.ClassLoader.loadClass(ClassLoader.java:247) </error> </testcase> did I miss some jars ? | <a href="https://issues.iboss.org/browse/JBTM-1063">https://issues.iboss.org/browse/JBTM-1063</a> |
| 13095 | JBTM-1063   | I think that was fixed by <a href="https://issues.iboss.org/browse/JBTM-1086">https://issues.iboss.org/browse/JBTM-1086</a> Have you done an 'svn up' on the 4.16 branch?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JBTM-1063">https://issues.iboss.org/browse/JBTM-1063</a> |
| 13096 | JBTM-1063   | how about commands on the txbridge tests?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JBTM-1063">https://issues.iboss.org/browse/JBTM-1063</a> |
| 13097 | JBTM-1061   | I just put this on HORNETQ-274: Hi I just trawled the the Jira and forum postings I ls'd my .m2/repository/org/hornetq find . -name \pom.xml in the AS7 version of hornetq but can't find the dependency to import for this. Do you know that this work was done? If so, do you happen to know what I should replace: <dependency><groupId>org.hornetq</groupId> <artifactId>hornetq-core</artifactId> </dependency> with? I also can't find it by grepping the internet, e.g. <a href="http://mvnrepository.com/artifact/org.hornetq">http://mvnrepository.com/artifact/org.hornetq</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/JBTM-1061">https://issues.iboss.org/browse/JBTM-1061</a> |
| 13098 | JBTM-1052   | Is this still required? We could do with a better description to explain the actual motivation or leave this closed as "incomplete description".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/JBTM-1052">https://issues.iboss.org/browse/JBTM-1052</a> |
| 13099 | JBTM-1051   | A better solution would be to have this problem detected in the AS7 testsuite. This would prevent the error from even being accepted into the AS7 codebase. Ivo, can this type of check be made in the allTests junit suite?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.iboss.org/browse/JBTM-1051">https://issues.iboss.org/browse/JBTM-1051</a> |
| 13100 | JBTM-1051   | I would add that I believe this issue can be (not formally, but effectively) resolved through education. Who ever makes a change to src/main/resources/standalone/configuration/*xml should be made aware that they should also update src/main/resources/docs/examples/config/*xml This issue should affect: ./messaging/src/test/resources/standalone-with-messaging.xml ./modcluster/src/test/resources/standalone-modcluster.xml ./build/src/main/resources/docs/examples/configs/standalone-hornetq-colocated.xml ./build/src/main/resources/docs/examples/configs/standalone-xts.xml ./build/src/main/resources/docs/examples/configs/standalone-minimalistic.xml ./build/src/main/resources/docs/examples/configs/standalone-jts.xml ./build/src/main/resources/docs/examples/configs/standalone-osgi-only.xml So I see it as broader than XTS. That said, +1 on checking whether the testsuite can detect it, but I don't know if the other configs are tested during testsuite.                                                                    | <a href="https://issues.iboss.org/browse/JBTM-1051">https://issues.iboss.org/browse/JBTM-1051</a> |
| 13101 | JBTM-1051   | PS, shouldn't this issue be moved to an AS7 Jira?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/JBTM-1051">https://issues.iboss.org/browse/JBTM-1051</a> |
| 13102 | JBTM-1051   | I don't even know where standalone-jts.xml is referenced from :) In my quickstarts I show people how to change the config manually. I wonder who added the jts one? Maybe that is an option for XTS? Explain the manual configuration?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/JBTM-1051">https://issues.iboss.org/browse/JBTM-1051</a> |
| 13103 | JBTM-1051   | Ivo, Of course, I forgot these tests would do this also. Do your tests fail if the server boots with errors, even though XTS is still functioning correctly? We still have the problem where a minor change is forgotten; one which doesn't break XTS and doesn't fail the server boot. However, these are relatively minor and could probably be checked manually every now and then.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.iboss.org/browse/JBTM-1051">https://issues.iboss.org/browse/JBTM-1051</a> |
| 13104 | JBTM-1051   | Can this be moved to an AS7 Jira?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.iboss.org/browse/JBTM-1051">https://issues.iboss.org/browse/JBTM-1051</a> |
| 13105 | JBTM-1031   | I've just added 4.17.4 to the fix version. Can you cherry-pick your commit from master and raise a pull request on 4.17?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/JBTM-1031">https://issues.iboss.org/browse/JBTM-1031</a> |
| 13106 | JBTM-1016   | I suggest we add a dependency on BYTEMAN-190 for this task. Amos, if you agree, can you add the dependency please? | 13110 | JBTM-968    | Quick notes after Andrew explained the XTS structure to me: {quote} XTS project layout WS-AS, Activity service (needed? - yes but need to know why) WS-CF (general purpose context management), useful WS-C Client and coordinator side impl of the oasis standard (current) Activation and registration service WS-T oasis TX protocol specific services for client, coord, ws negotiation (WS-AT and WS-BA) WS-TX JBoss specific APIs which drive WS-C and WS-T services {quote}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-968">https://issues.jboss.org/browse/JBTM-968</a> |
| 13111 | JBTM-956    | Hi Amos, is this closed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-956">https://issues.jboss.org/browse/JBTM-956</a> |
| 13112 | JBTM-948    | Ah, ok. So what you are saying is that this will work on Hudson as you have fixed this problem before for other jobs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-948">https://issues.jboss.org/browse/JBTM-948</a> |
| 13113 | JBTM-948    | Paul, what CI environment did you mean in your comment [1]? Yes, I was talking about Hudson as it is the primary environment for QE testing. If I run the tests locally on my laptop I usually don't need headless mode as I want to see how the test is going and thus see its actions performed in Firefox in front of my eyes. This is the reason why the tests look so at the moment. But I can change them to better fit to your requirements. On Hudson if you want to run a selenium test you need to enable 'Run Xvnc during build' and select some of selenium slaves at 'Label Expression'. Then the selenium test should work. | 13120 | JBTM-852    | <p>Firstly some background. It is possible to configure different stores for different purposes. Each store is a singleton so each store type is shared. We currently use at least four stores (XTS uses some others): - an action store for transaction and participant logs; - a recovery store (which defaults to the action store); - a state store for use with TxO and is not used with JTA (or JTS); - a communications store for storing connectivity information such as ORB endpoints or transaction manager status items. Calling <code>arjPropertyManager.getObjectStoreEnvironmentBean()</code> looks up the default store and is equivalent to:</p> <pre>BeanPopulator.getNamedInstance(ObjectStoreEnvironmentBean.class, "default")</pre> <p>and is used to configure the action store. The other stores can be configured by looking up a specific named <code>ObjectStoreEnvironmentBean</code>. Use "default" or "stateStore" to configure the action and state stores respectively. Use "communicationStore" to configure the communications store. So the actual bug/feature is that looking up the default store environment bean via the properties manager (<code>arjPropertyManager.getObjectStoreEnvironmentBean()</code>) should return a bean that will configure all stores. However this could be risky (for example it could interfere with XTS behaviour) so my preference would be to force the user to be specific about which stores he wants an environment bean for by making the <code>getObjectStoreEnvironmentBean</code> call take the store name as a parameter. But that leaves the difficult issue of how to specify which store to use in the properties file</p> <pre>&lt;entry key="ObjectStoreEnvironmentBean.objectStoreType"&gt;XYZStore&lt;/entry&gt;</pre> <p>since this entry is only applied to the default store. We could simply document the behaviour in <code>jboss-props.xml</code> and tell users to explicitly set the communications store programmatically if required. So the communications store type would have to be set as follows: <code>BeanPopulator.getNamedInstance(ObjectStoreEnvironmentBean.class, "communicationStore").setObjectStoreType(com.arjuna.ats.internal.arjuna.objectstore.VolatileStore.class.getName());</code> Is this latter approach acceptable to all concerned?</p> | <a href="https://issues.jboss.org/browse/JBTM-852">https://issues.jboss.org/browse/JBTM-852</a> |
| 13121 | JBTM-846    | Further to previous comment ... for instance what do we (or customers) expect from the statistics gathering routines in this new environment? Should it be measuring all transactions created and terminated in the JVM, or on a per transaction manager basis?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-846">https://issues.jboss.org/browse/JBTM-846</a> |
| 13122 | JBTM-846    | To address Davids requirement we need to support <code>1xArjunaCore</code> (for the MSC) and <code>1xArjunaJTA</code>   <code>ArjunaJTS</code> (for the EJB container). The problem is the recovery manager, are we expecting to launch two of those in the same VM? I presume we have to in order to cleanly separate the MSC from the EJB container (e.g. different object stores)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-846">https://issues.jboss.org/browse/JBTM-846</a> |
| 13123 | JBTM-846    | Why would we need to recovery managers? As long as the transactions are unique and things like the nodename are shared by recovery, it should be possible to have one instance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-846">https://issues.jboss.org/browse/JBTM-846</a> |
| 13124 | JBTM-846    | Allowing multiple TMs in the same JVM is a generic statement and although WF needs this, there may be other users who want it for different reasons. I think we should either define this as a generic problem which we can try to solve for other use cases (do we know them all?) or we should refocus this solely on the WF use case and then come back to a more general requirement if/when it comes back up.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-846">https://issues.jboss.org/browse/JBTM-846</a> |
| 13125 | JBTM-845    | Isn't this duplicated by JBTM-1451?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-845">https://issues.jboss.org/browse/JBTM-845</a> |
| 13126 | JBTM-829    | Hi, Please can you confirm that I am right in thinking you mean that we should remove the version numbers from the remaining dependencies in <code>maven/pom-template.xml</code> where they have a corresponding version number in the AS7 pom tree? Ta                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTM-829">https://issues.jboss.org/browse/JBTM-829</a> |
| 13127 | JBTM-817    | <p>I'm in the process of validating the trace output from these tests and I think doing this automatically is not going to be a trivial process. I have some ideas around how the byteman scripts can be re-factored to simplify the validation process and to also improve scalability so that we can introduce more complex, multi-party tests. Therefore I am removing the requirement to validate the trace output from this issue. Validation will come in a later release. Hopefully this will turn this issue into a much more straight forward task. So to confirm, the requirements for this issue are to:</p> <ul style="list-style-type: none"> <li># Run the tests as part of the AS7 test suite (as per Ivo's pattern: <a href="https://github.com/istudens/jboss-as/compare/xts_tests#diff-0">https://github.com/istudens/jboss-as/compare/xts_tests#diff-0</a>)</li> <li># Automate the running of each crash recovery test without any Byteman rules. This provides some test coverage and ensures we have a valid system before the Byteman rules are applied.</li> <li># Automate each valid combination of Byteman script to TestCase. The Byteman scripts specify which tests are available.</li> <li># Gather the output from all test runs in separate files for "eyeball validation". Until this validation is automated, I (with the help of Andrew initially) will do this validation. The output files should be named "<code>&lt;byteman script name&gt;:&lt;test class name&gt;</code>". For example: "<code>ATCrashDuringCommit.MultiParticipantPrepareAndCommitTest</code>".</li> </ul> <p>Amos: does this make sense? Is this in line with how you are currently implementing the feature?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-817">https://issues.jboss.org/browse/JBTM-817</a> |
| 13128 | JBTM-817    | Also, I don't think we need Arquillian to crash the app server as Byteman is doing that for us. This is good as Arquillian is unlikely to have this feature as part of a JBoss AS release soon enough. Amos: Does this make sense, or am I missing something?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-817">https://issues.jboss.org/browse/JBTM-817</a> |
| 13129 | JBTM-813    | <p>Email from Jonathan re ArjunaJTS: JTS install guide is same as core except name and:</p> <ul style="list-style-type: none"> <li>- add first and last bullet point paras for 'preparing your system' section</li> <li>- add 'specifying the ORB to use' and 'the interface repository' sections</li> <li>- the 'loading the distribution' section is obsolete, just junk it.</li> <li>- add 'installing into non-default location' section</li> <li>- operating system services needs additional note on <code>PUT_JACORB_HOME_HERE</code></li> <li>- additional 'web services component' section.</li> </ul> <p>JTS admin guide is same as core except name and:</p> <ul style="list-style-type: none"> <li>- intro paragraph adds mention of web services</li> <li>- add 'OTS/J2EE transaction service management' (except it's now 'Java EE' not 'J2EE')</li> <li>- add 'web service transaction management' section</li> <li>- in periodic recovery section, <code>RecoveryEnvironmentBean.recoveryExtensions</code> module list is wrong for JTS - it should be per the xml in <code>ArjunaJTS/jboss-props-arjuna.xml</code></li> <li>- add 'orb specific configurations' section</li> <li>- add 'initialising JBossTS applications' section</li> </ul> <p>side note: the docs dialect is actually 'en_GB' not 'en_US', hence 'initialising' not 'initializing' and such. What is the company policy on this - do we need to standardise it? The docbook layout seems to assume the canonical version is 'en_US'. Likewise A4 vs. US letter for pdf page size. Jonathan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-813">https://issues.jboss.org/browse/JBTM-813</a> |
| 13130 | JBTM-810    | The controlling property is <code>com.arjuna.ats.arjuna.recovery.recoveryListener</code> (in bean <code>RecoveryEnvironmentBean</code> ). With a socket based recovery manager the TM/RM can easily detect whether another RM is managing an object store. Changing the default puts the onus on the user to make sure that only one RM is managing it. So my question is: is it the intention to make the user responsible for getting it right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-810">https://issues.jboss.org/browse/JBTM-810</a> |
| 13131 | JBTM-810    | Would the same problem exist if you opened up two RMs on different ports but against the same <code>ObjectStore</code> ? If so, +1 on the user getting it right.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-810">https://issues.jboss.org/browse/JBTM-810</a> |

| 13132 | JBTM-809    | Is there any documentation that explains what is going on here? Will JBossTS be still usable for JDBC connections? In what would consist the migration? We're using JBossTS in a JTA infrastructure where database queries are done through JDBC. The client code just uses JDBC connections (obtained through the transactional driver), while the global JTA transaction is controlled using Spring JTA transaction manager. The JBossTS backend, through the transactional driver and some of our glue code, is obtaining JTA connections through XA data sources created using the DynamicClass mechanism. We're working outside JEE, just plain Tomcat + JBossTS + Spring. How will the scenario change with JCA?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-809">https://issues.jboss.org/browse/JBTM-809</a> |
| 13133 | JBTM-785    | Hi Paul, Is there any update on this one? Is it covered by any QS? Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-785">https://issues.jboss.org/browse/JBTM-785</a> |
| 13134 | JBTM-785    | Hi ["paul.robinson"], Is there any update on this? We can't understand what is needed here. What is a standalone client in this context? Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-785">https://issues.jboss.org/browse/JBTM-785</a> |
| 13135 | JBTM-747    | I have implemented draft 4 of the specification that resides at <a href="http://www.jboss.org/reststar/specifications/transactions.html">http://www.jboss.org/reststar/specifications/transactions.html</a> with some amendments (documented in the docs directory). What's left: - hook it into the build releases target of JBossTS; - port the "Night out" demo from the previous REST-tx prototype; - track updates to the specification                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-747">https://issues.jboss.org/browse/JBTM-747</a> |
| 13136 | JBTM-741    | ["tomjenkinson"], what would you think about postponing this issue until JBTM-2571 is resolved? I think it'd be too dangerous to remove public classes or methods without having code coverage from all available tests. What do you think?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-741">https://issues.jboss.org/browse/JBTM-741</a> |
| 13137 | JBTM-728    | Are you sure the remote tests are actually running? Looks to me like they are turned off, hence no coverage. <target name="run.tests"> ... <exclude name="**/remote/**"/> ... </target>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTM-728">https://issues.jboss.org/browse/JBTM-728</a> |
| 13138 | JBTM-713    | Marks description from the duplicate issue: {quote} We're working on WS-BA based compensation annotations. That's great, but can we refactor so that we can support compensations outside of WS-BA? ArjunaCore can support compensations without Web Services. Maybe the WS-BA annotations vanish entirely, or collapse down to a subset of what currently exists to support what is truly unique about WS-BA? {quote}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-713">https://issues.jboss.org/browse/JBTM-713</a> |
| 13139 | JBTM-700    | I looked at this from the perspective of EAP, i.e., what docs are needed there versus only needed in the community. TS docs outline for EAP distribution: In: 0..1 InstallGuide 1..1 ReleaseNodes (JIRA generated) FailureRecovery Guide Administration Guide (ArjunaCore as basis, with diffs from JTA and JTS) Programmers Guide (ArjunaCore with all TXOJ aspects removed; start with JTA) Separate Programmers guide for JTS and XTS (maybe separate Admin guides then?) Separate all JTS and XTS information into separate documents? JTS Quickstart Guide (should be expanded to cover JTA) Configuration guide (Administration Guide update) Out: Debugging documentation All TXOJ aspects from documentation Maybe: None. Duplicated: Tooling discussions Debugging discussions ObjectStore setup Errors                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-700">https://issues.jboss.org/browse/JBTM-700</a> |
| 13140 | JBTM-659    | Hi Mike, Trying to work out whether this is something we want to support on 4.16.x branch right now. Do you know if it is fixed in 4.16.x yet? e.g. hoping to put 4.16.1 out on Friday and hopefully that would be the last version for EAP6. Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-659">https://issues.jboss.org/browse/JBTM-659</a> |
| 13141 | JBTM-659    | When I come to release 4.16.1 it is going to ask me what to do with this bug, is it in a state that it can be closed or does it need to move to 4.16.2 (or ideally 5.0.0.M2)?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-659">https://issues.jboss.org/browse/JBTM-659</a> |
| 13142 | JBTM-659    | Is this bug resolved in 4.6.1.CP13?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-659">https://issues.jboss.org/browse/JBTM-659</a> |
| 13143 | JBTM-659    | I fixed it in a private branch of JBOSTS_4_6_1_GA_CP12. I am not aware of any CP13 branch. The details are in <a href="https://issues.jboss.org/browse/JBTM-522">https://issues.jboss.org/browse/JBTM-522</a> including a link to the hudson job that tests the functionality. Has there been a decision on whether the backport will go into a 4.6.1 release? When/if it does then we should ask QA to include it in there test plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-659">https://issues.jboss.org/browse/JBTM-659</a> |
| 13144 | JBTM-659    | Can we mark this as complete?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-659">https://issues.jboss.org/browse/JBTM-659</a> |
| 13145 | JBTM-608    | huh? we already do - the syncs records are ordered and you can register one even during beforeCompletion as long as the new one has a order later in the sequence that the current one.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTM-608">https://issues.jboss.org/browse/JBTM-608</a> |
| 13146 | JBTM-596    | Introduced a set of *EnvironmentBean classes and updated code to use them instead of accessing the property manager directly. The beans have hardcoded defaults that are overridden with values from the property manager (i.e. properties file / system properties) when the bean is instantiated. Thereafter the bean is independent of the property manager. A handful of property manager usage remains, esp. in the orb portability layer which uses dynamically named properties that are difficult to map to fixed beans. Needs some further thought. Some more thought also needed to: capturing running config, since it's not necessarily the same as what's in the properties file. Some sort of bean state dumper, similar to what the module Info classes do? even stronger type safety - e.g. some beans have hostnames vs. InetAddresses, lists of classnames vs lists of classes - consider impact on injection systems and JMX API. dynamic reconfig mechanism - should updating bean properties automatically restart relevant parts of the system e.g. rebind listeners to new port without requiring full restart? but that's all for the next cycle. For now the type safety improvements are enough progress. | <a href="https://issues.jboss.org/browse/JBTM-596">https://issues.jboss.org/browse/JBTM-596</a> |
| 13147 | JBTM-595    | LogFactoryInterface yields a AbstractLogInterface - how does one get from Log18n to AbstractLogInterface? I confess this logging infrastructure is pretty baffling to me                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-595">https://issues.jboss.org/browse/JBTM-595</a> |
| 13148 | JBTM-595    | I stuck with Log18n initially because it was unclear how LogFactory can receive resource bundle information. I guess the key to solving resource bundles will indeed be some kind of nifty subclassing as we are limited to a single resource bundle instance per category. Would you consider simply moving to java.util.logging wholesale, and removing all the facade stuff completely? And by "you" I guess I mean "me", since it's my dumb idea. The only practical difficulty I see would be that I'd have to add a Level class so that you have DEBUG/TRACE instead of JUL's FINE/FINER/FINEST, but that's not too big a deal. The upside would be removing the dep on commons-logging and deleting a bunch of classes. At first glance I think the resource generation stuff would work OK with JUL.                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-595">https://issues.jboss.org/browse/JBTM-595</a> |

| 13150 | JBTM-575    | Hi Richard This does not make much sense to me. JBAS-4238 and JBTM-66 are similar but not equivalent. The JBAS issue is addressed in both releases, but JBossAS 4.2.3 uses TS 4.2.3.SP7, which does not have the JBTM-66 changes. JBossTS AS 5.1.0.GA uses TS 4.6.1.GA , which does. So, you seem to be having problems due to a behaviour change that you requested in the first place?! Ah well, maybe I misunderstood what you wanted. Do you have any preference between the implementation alternatives I outline in <a href="http://community.jboss.org/message/515473">http://community.jboss.org/message/515473</a> assuming either will address your needs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-575">https://issues.jboss.org/browse/JBTM-575</a> |
| 13151 | JBTM-575    | though I understand JIRA seems to indicate it does. The fact remains that I (and others, by the look of it) are seeing transaction RollbackExceptions *that do not include their root cause* when using JBoss 5.1.0.GA. For example, I see: --- 08:48:35,468 http-127.0.0.1-8080-6 DEBUG [SQL] delete from Resource where id=? and version=? 08:48:35,484 http-127.0.0.1-8080-6 WARN [JDBCExceptionReporter] SQL Error: 1451, SQLState: 23000 08:48:35,484 http-127.0.0.1-8080-6 ERROR [JDBCExceptionReporter] Cannot delete or update a parent row: a foreign key constraint fails ('avant-ss-production/bug', CONSTRAINT 'FK106546DD208B6' FOREIGN KEY ('assignedTo_id') REFERENCES 'resource' ('id')) 08:48:35,484 http-127.0.0.1-8080-6 ERROR [AbstractFlushingEventListener] Could not synchronize database state with session org.hibernate.exception.ConstraintViolationException: could not delete: [com.avant.ss.ejb.entity.Staff#4028818126273479012627c550d60004] at org.hibernate.exception.SQLStateConverter.convert(SQLStateConverter.java:94) at org.hibernate.exception.JDBCExceptionHelper.convert(JDBCExceptionHelper.java:66) at org.hibernate.persister.entity.AbstractEntityPersister.delete(AbstractEntityPersister.java:2569) at org.hibernate.persister.entity.AbstractEntityPersister.delete(AbstractEntityPersister.java:2725) at org.hibernate.action.EntityDeleteAction.execute(EntityDeleteAction.java:97) at org.hibernate.engine.ActionQueue.execute(ActionQueue.java:279) at org.hibernate.engine.ActionQueue.executeActions(ActionQueue.java:263) at org.hibernate.engine.ActionQueue.executeActions(ActionQueue.java:172) at org.hibernate.event.def.AbstractFlushingEventListener.performExecutions(AbstractFlushingEventListener.java:321) at org.hibernate.event.def.DefaultFlushEventListener.onFlush(DefaultFlushEventListener.java:50) at org.hibernate.impl.SessionImpl.flush(SessionImpl.java:1027) at org.hibernate.impl.SessionImpl.managedFlush(SessionImpl.java:365) at org.hibernate.ejb.AbstractEntityManagerImpl\$1.beforeCompletion(AbstractEntityManagerImpl.java:504) at com.arjuna.ats.internal.jta.resources.arjunacore.SynchronizationImple.beforeCompletion(SynchronizationImple.java:101) at com.arjuna.ats.arjuna.coordinator.TwoPhaseCoordinator.beforeCompletion(TwoPhaseCoordinator.java:269) at com.arjuna.ats.arjuna.coordinator.TwoPhaseCoordinator.end(TwoPhaseCoordinator.java:89) at com.arjuna.ats.arjuna.AtomicAction.commit(AtomicAction.java:177) at com.arjuna.ats.internal.jta.transaction.arjunacore.TransactionImple.commitAndDisassociate(TransactionImple.java:1423) at com.arjuna.ats.internal.jta.transaction.arjunacore.BaseTransaction.commit(BaseTransaction.java:137) at com.arjuna.ats.jbosstx.BaseTransactionManagerDelegate.commit(BaseTransactionManagerDelegate.java:75) at org.jboss.aspects.tx.TxPolicy.endTransaction(TxPolicy.java:170) at org.jboss.aspects.tx.TxPolicy.invokeInOurTx(TxPolicy.java:87) at org.jboss.aspects.tx.TxInterceptor\$Required.invoke(TxInterceptor.java:190) at org.jboss.aop.joinpoint.MethodInvocation.invokeNext(MethodInvocation.java:102) at org.jboss.aspects.tx.TxPropagationInterceptor.invoke(TxPropagationInterceptor.java:76) at org.jboss.aop.joinpoint.MethodInvocation.invokeNext(MethodInvocation.java:102) at org.jboss.ejb3.security.RunAsSecurityInterceptorv2.invoke(RunAsSecurityInterceptorv2.java:94) at org.jboss.aop.joinpoint.MethodInvocation.invokeNext(MethodInvocation.java:102) at | <a href="https://issues.jboss.org/browse/JBTM-575">https://issues.jboss.org/browse/JBTM-575</a> |
| 13152 | JBTM-575    | at com.arjuna.ats.jbosstx.BaseTransactionManagerDelegate.setRollbackOnly(BaseTransactionManagerDelegate.java:123) at org.hibernate.ejb.AbstractEntityManagerImpl.markAsRollback(AbstractEntityManagerImpl.java:421) at org.hibernate.ejb.AbstractEntityManagerImpl.throwPersistenceException(AbstractEntityManagerImpl.java:576) at org.hibernate.ejb.AbstractEntityManagerImpl.throwPersistenceException(AbstractEntityManagerImpl.java:614) at org.hibernate.ejb.AbstractEntityManagerImpl\$1.beforeCompletion(AbstractEntityManagerImpl.java:513) What's key here is that, from the transaction manager's perspective, the setRollbackOnly call precedes the exception - hibernate sets the tx to rollback before throwing the exception. So, the setRollbackOnly call IS the root cause of the transaction rolling back. JBTM-66 is not only present but functioning exactly as designed. As mentioned in the forum thread, this is arguably misuse of the api by hibernate. Of the alternatives proposed in the forum thread, chaining the deferredThrowable to the rollbackOnly trace won't work, as there is no deferredThrowable at the point in time that the setRollbackOnly call is made. So the only viable alternative seems to be using the deferredThrowable as the initCause of the rollback in preference to the rollbackOnlyCallerStackTrace in cases where both are available. Will that meet your needs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-575">https://issues.jboss.org/browse/JBTM-575</a> |
| 13153 | JBTM-575    | Johathan, can I ask you another question on a related topic(one that does not involve the client at all). If a business method in EJB session bean throws a RuntimeException in the JBoss log I see only this line: 11:32:12,550 ERROR [TxPolicy] javax.ejb.EJBTransactionRolledbackException No cause, no message, no nothing - the RuntimeException is however successfully relayed to the client, but I remember that in older JBoss version I used to get I full stack trace with the javax.ejb.EJBTransactionRolledbackException. What might be causing this problem?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-575">https://issues.jboss.org/browse/JBTM-575</a> |
| 13154 | JBTM-575    | Jonathan, As you asked, I asked someone from the Hibernate team (Steve Ebersole) about causality. Steve has since responded, as have a couple other people. What is our next step to getting this resolved? Regards, Richard.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-575">https://issues.jboss.org/browse/JBTM-575</a> |
| 13155 | JBTM-575    | Was this fixed or not? I can't tell from the JIRA or the forum post. Assuming that it was, I will write this release note: Cause: In ArjunaCore which was included in JBoss Application Server 4.2 and previous, when a transaction rolled back, the <systemitem>RollbackException</systemitem> included the root cause of the exception. In JBoss Application Server 5.1, the exception no longer included this information, even though the information could still be found in a different area of the log file. Consequence: Developers who relied on the information included in the <systemitem>RollbackException</systemitem> in the older versions of JBoss Application Server found that their applications no longer worked as expected. Fix: The debugging information has been put back into the exception, so that it works as it did previously. Result: Developers can once again write code to take advantage of the debugging information found in the <systemitem>RollbackException</systemitem>.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-575">https://issues.jboss.org/browse/JBTM-575</a> |
| 13156 | JBTM-573    | This says "Done" but there is no information. Is it done or WONTFIX? If it is done, what is the command-line tool and what is the syntax for using it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-573">https://issues.jboss.org/browse/JBTM-573</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | URL                                                                                             |

| 13157 | JBTM-555    | Maybe running the test with the gc.log and analysing it afterwards would also be a sounded approach ? Basically what is to know of the test is : "Is there memory consumption below a certain threshold ?", this could be answer by a gc.log file... (However, this is rather tied to the Sun JVM implementation). Moreover, analysing the GC log also allow to see how the memory consumption progress, maybe spotting a memory consumption rising (even if it's stay beneath the appropriate threshold during the test) that wasn't rising in the previous version. That gain this sort of knowledge would requires you to either run test on previous tag release or keep previous GC.log on file, however doing the first one with Git is not really that complicated (in fact, it will be similar to using the 'bisect' command). On other "trick" that I know of is the Ant's for-each statement in the ant-contrib.jar, which will allow to do something like this: <for-each ...> <junit ....> <!-- run one particular test or test group --> <!-- Load memory configuration for an appropriate test from a properties file --> <property name="\${testid}-config.."/> <jvmarg value="-Xms\$(memory.start)"/> <jvmarg value="-Xmx\$(memory.max)"/> <!-- ... Hope that's help.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-555">https://issues.jboss.org/browse/JBTM-555</a> |
| 13158 | JBTM-535    | Another thought about the Listener.finalize() method: it is useless also because if the Listener is running, it can't be finalized, so finalize() will never be called. Viceversa, if finalize() is called it means that the listener has already been stopped, so its finalize() implementation is useless... am I wrong?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-535">https://issues.jboss.org/browse/JBTM-535</a> |
| 13159 | JBTM-535    | Could this be targetted for 4.7.0? Resolution should be quite straightforward... Thanks in advance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-535">https://issues.jboss.org/browse/JBTM-535</a> |
| 13160 | JBTM-522    | new Uid ("invalidString", true); should return cleanly with a Uid such that x.valid()== false. Instead it throws NPE. The exception handling probably needs a catch for that in addition to the existing exceptions it knows about.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-522">https://issues.jboss.org/browse/JBTM-522</a> |
| 13161 | JBTM-503    | Hi Andrew, any news on this? Could it be considered for 4.7.0?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTM-503">https://issues.jboss.org/browse/JBTM-503</a> |
| 13162 | JBTM-465    | I'm here again regarding this issue. As I wrote in the referenced forum topic, what I'm doing right now is to collect all the created connections (by my JDBCAccess implementation) and shut down them on webapp restart. However, there's a little issue when embedding JBossTS in a stand-alone application. In our case, this is happening when unit-testing our application code. I'm going to explain it better. In out unit testing framework, we do the following: --- for every test case: --- 1. in the setup phase, initialize JBossTS 2. in the test phase, run the tested code, which uses JBossTS 3. in the tear down phase, shutdown JBossTS Step 1. and 3. are almost the same that happen in our web application start and stop phases. In step 3. all the connections returned by our implementation of JDBCAccess are closed. Now, when more than one test case is executed (so, points 1. to 3. are reiterated), during the second, third, etc. iterations unfortunately in step 1. JBossTS does not re-create the Object Store, so at the first attempt to connect to it, connections in com.arjuna.ats.internal.arjuna.objectstore.JDBCImp._theConnection array are all closed (by step 3. of the previous iterations), so any attempt to setup and execute a prepared statement (for instance in com.arjuna.ats.internal.arjuna.objectstore.JDBCImp.write_state(Uid, String, OutputObjectState, int, String)) fails. This is not a big problem, because com.arjuna.ats.internal.arjuna.objectstore.JDBCImp.reconnect(int) is invoked to create a new connection, however if you consider for instance com.arjuna.ats.internal.arjuna.objectstore.jdbc.h2_driver.write_state(Uid, String, OutputObjectState, int, String), because the internal state of the class is not handled in a stack-way (to handle the recursive call in the catch clause), when the outer write_state calls terminates and calls com.arjuna.ats.internal.arjuna.objectstore.JDBCImp.freePool(int), a warning is logged (identified by "com.arjuna.ats.internal.arjuna.objectstore.JDBCImp_18") because the connection has been already freed by the inner call to write_state. As I said, this is not a real issue, but it is annoying in our use case. Anyway, all of this could be avoided if either JDBCImp or the Object Store correctly implemented a shutdown method. In fact, from one iteration to another the Object Store is recycled and not recreated because even if I correctly disable the TxControl in step 3., in step 1. of the following iteration the TxControl is re-enabled, the TransactionStatusManager is correctly recreated and it creates a new ActionStatusService. However, the latter keeps on using its static field com.arjuna.ats.arjuna.recovery.ActionStatusService._objectStore, which is initialized once (at step 1. of the first iteration) and never disposed. Saying it in a simple way: it would be useful to implement a correct lifecycle for the Object Store (and for its connections, of course), bound to the TxControl one. | <a href="https://issues.jboss.org/browse/JBTM-465">https://issues.jboss.org/browse/JBTM-465</a> |
| 13163 | JBTM-465    | Please can you review this in context of JBTM-1230, I think the changes we made there might have addressed your requirements                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-465">https://issues.jboss.org/browse/JBTM-465</a> |
| 13164 | JBTM-465    | Hi Tom, please let me understand something. From JBTM-1230 I understand that JDBC connections for the Object Store are now retrieved using JNDI, is this correct? If so, as I already stated already in other circumstances, this is a problem for us, since we're using JBoss TS embedded in an application which is meant to work outside a JEE environment. We would need to setup a fake JNDI repository with Spring to let the object store find JDBC connections. Do you confirm this? Or is there an alternative way to still provide connections without JNDI? If not, I personally consider this, together with the push towards the mandatory use of a JCA connector (in place of the plain JDBC implementation) in JBoss TS 5.x, a step backward. Please note that I've not followed this evolution so tightly, but this is what I understood based on the feedback I received on the bugs I opened myself (and for some of which I also contributed with patches that were never integrated). Thanks in advance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-465">https://issues.jboss.org/browse/JBTM-465</a> |
| 13165 | JBTM-437    | Jonathan, can you take this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-437">https://issues.jboss.org/browse/JBTM-437</a> |
| 13166 | JBTM-409    | This is now working for the 1.1 WS-AT implementation. Need to add support for WS-AT 1.0 next. There is now a new API class UserSubTransaction which subclasses the remote UserTransaction class. It can be used to create an AT UserTransaction when already inside an AT transaction by calling getTransaction. This can be suspended and resumed via the TransactionManager class like any other UserTransaction. Any participants enlisted in the subtransaction will be coordinated using the coordinator of the local host rather than the coordinator of the original TX. See the WSTX tests for details.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-409">https://issues.jboss.org/browse/JBTM-409</a> |
| 13167 | JBTM-400    | Done: JBTM-1472. Can you add some more detail to the description? As it stands, my understanding of this issue is that it's a duplicate of JBTM-1472.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-400">https://issues.jboss.org/browse/JBTM-400</a> |
| 13168 | JBTM-394    | Added getters and setter for addresses / ports to the jta and jts service mbean interfaces and implementations. Revised assorted jta/jts/core internals to remove knowledge of AS from things that don't need it - the TransactionManagerService puts the values from ServiceBindingManager (or SERVER_BIND_ADDRESS as a fallback) in to the arjuna config objects, so app server integration is transparent to the rest of the JBossTS codebase. Revised XTS AS integration to read same service bindings the AS webserver uses, making it more POJO and less JMX style integration. Whilst checking port bindings, discovered and fixed inconsistencies in various places where 4711 was stated as recovery manager port, rather than the correct 4712. Used 4713 for transaction status manager and 4714 for socketProcessId in the app server. Note that when running standalone these still use random ports - do we want to hardcode these defaults in the standalone version also?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-394">https://issues.jboss.org/browse/JBTM-394</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | URL                                                                                             |

| 13169 | JBTM-390    | Most JTS test now run locally. Some issues still exist: no JTA test coverage, no JDBC test coverage, excessive memory usage by ant/junit, excessive buffering of output (may be related to memory usage), occasional unexplained hanging of tests on hudson only (ORB shutdown blocking?). These are relatively low priority. Pushing to next release.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-390">https://issues.jboss.org/browse/JBTM-390</a> |
| 13170 | JBTM-389    | Which svn tag are your src changes based on?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBTM-389">https://issues.jboss.org/browse/JBTM-389</a> |
| 13171 | JBTM-387    | A prototype package has been added to the TS repository in workspace/adinn/orchestration which supports orchestration of different activities in multi-threaded test cases. The prototype works by injecting triggers for Event Condition Action (ECA) rules at arbitrary points in the code under test. The ECA rules include primitives which enable sequencing, synchronization, delay and abort of the threads executing the trigger class.. The prototype has been used to automate one of the test scenarios for XTS recovery and will be developed to cover other cases. However, the tool is independent of the TS code base and development and use of the tool for recovery testing will continue beyond the 4.4.0 GA release. So this JIRA is being rescheduled for completion after that date .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-387">https://issues.jboss.org/browse/JBTM-387</a> |
| 13172 | JBTM-369    | Can you give a use case for this? I'm not seeing any real advantage over just doing e.g. -Dcom.arjuna.ats.arjuna.xa.nodelentifier=foo ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBTM-369">https://issues.jboss.org/browse/JBTM-369</a> |
| 13173 | JBTM-369    | Jonathan, How to end-up with a "smooth" integration within the AS? I understand that the TM has its own configuration file when working inside some other runtime, but when running inside the AS, can't he use the JBoss config files (like jboss-services.xml file) or similar? If not, can we at least implement the same feature set as JBoss AS has, including the property replacer that Roland was suggesting to add? Thanks for your feedback. Cheers, sach                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-369">https://issues.jboss.org/browse/JBTM-369</a> |
| 13174 | JBTM-369    | Hi Sacha Please clearly define what you are trying to achieve. So far nobody has given me a convincing, specific real world use case for this feature. As far as I can tell the existing ability to override values from the config file by specifying system properties is equivalent to value substitution, except for cases where you may want to use the same value for multiple parameters. The only such case I can think of is the IP address, for which we have a separate solution anyhow. With the exceptions of the port bindings (which will be done via SBM), recovery (which will be done via the new tx integration API) and multiple 1PC (which is an horrifically bad idea anyhow), users should not need to change values in the tx properties file. I believe this feature will benefit only a small proportion of users. I agree it's better to have consistent behaviour for the properties files, it makes for a better user experience. But that's secondary to having a product that works. Because of these factors, I consider this issue a low priority. It will get done as and when we have time, but not until e.g. crash recovery and JTS integration are finished. That's why it's still not scheduled against any particular release. Perhaps I'm missing something though. If you feel it's worth taking time out from managing the division to comment on the issue, you must feel it's important. Can you say why? | <a href="https://issues.jboss.org/browse/JBTM-369">https://issues.jboss.org/browse/JBTM-369</a> |
| 13175 | JBTM-360    | When resolved the server manager jar should be included in the JBossTM build (and the server wrapper removed)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-360">https://issues.jboss.org/browse/JBTM-360</a> |
| 13176 | JBTM-355    | Can you please explain why the value of this timeout needs to be configured with a larger value and how this value relates to your transaction's 'size'? Also, by 'size' are you referring to the number of participants or the amount of work done by each participant? The transport timeout is only ever employed when dispatch of a WS-C/T protocol message must wait on receipt of a corresponding protocol message. For example, the WS-AT Coordinator engine responds to a prepare request by sending a PREPARE message to the participant and then waiting for a PREPARING message to be returned in response. Processing of the incoming message and dispatching the corresponding response will normally happen very quickly as it only involves a small amount of work on the part of the transaction system. The other variables in the equation are the communication transport delays and, in some cases, a certain amount of processing time added by the participant implementations (in the example above the participant's prepare method will be invoked). The participant may conceivably be delaying the response for more than 30 seconds. If so then this is likely to be due to an error in the participant.                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-355">https://issues.jboss.org/browse/JBTM-355</a> |
| 13177 | JBTM-355    | I'm still not convinced that configuring this timeout is the correct thing to do. Can you explain i) which database you are using and ii) what your code is doing in the prepare call? I am assuming that this problem arises because entities created in your subordinate TX only get flushed at prepare time due to the delegation involved in bridging. The persistence manager install a Synchronization to flush cached SQL updates to the database. This normally runs before the 2PC is entered but with bridging the flush cannot be performed (i.e. the Synchronization cannot be executed) until the delegated prepare arrives which stalls the parent TX. One possibility might be for you to manually flush changes inside your EJB code as you make them. This should leave little or no work to do at prepare time because the DB updates will already be out on disk. Can you try this? Another option might be to do break the create operations into lots of little transactions. Do you have to do this update all in one go? Anyway leaving these questions aside for the moment, if you want to reset the timeout you can easily do so by invoking TransportTimer.setTimeout(long) from your application code.                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBTM-355">https://issues.jboss.org/browse/JBTM-355</a> |
| 13178 | JBTM-345    | What happens if a module goes away between first and second passes, or during a recovery pass? Do we need blocking unregister calls for modules so that does not happen?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTM-345">https://issues.jboss.org/browse/JBTM-345</a> |
| 13179 | JBTM-334    | Just a clarification: this is not about deprecating what NORMAL does, just changing the name from NORMAL to PERIODIC. Correct?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-334">https://issues.jboss.org/browse/JBTM-334</a> |
| 13180 | JBTM-331    | See <a href="http://jira.jboss.com/jira/browse/JBTM-20?page=all">http://jira.jboss.com/jira/browse/JBTM-20?page=all</a> for the backstory on this. We already downgrade this stuff from INFO to DEBUG when running integrated with the AS. The arjuna level won't be changed, so the options are to change the global rewriting of arjuna messages in AS from INFO->DEBUG to INFO->TRACE which will impact other messages too, or install a filter in log4j. Why is AS even logging at DEBUG by default? It should be INFO, at least for production releases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBTM-331">https://issues.jboss.org/browse/JBTM-331</a> |
| 13181 | JBTM-319    | Yes, we definitely don't want to duplicate code from elsewhere. How about getting the ManagedConnectionFactory instance from JNDI, since that's what creates the WrapperDataSource in the first place?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-319">https://issues.jboss.org/browse/JBTM-319</a> |
| 13182 | JBTM-319    | Can you take any queries and discussion to the forums, where it's easier to track? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTM-319">https://issues.jboss.org/browse/JBTM-319</a> |
| 13183 | JBTM-312    | Would this work as a general design pattern if you wanted to implement a HA recovery coordinator? 1. Use the JDBC object store. 2. Configure a recovery coordinator (RC) on each node to recover all (*) nodes. You can only *start* one of these RC at any one time 3. Develop some "watchdog" process runs on every node and monitors the current RC process and if it fails, uses a group protocol to elects one of the other RC's to start 4. Rather than starting the RC on one of the nodes, start the watchdog processes and allow them to enable one of the RC's Would this work for JTS?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBTM-312">https://issues.jboss.org/browse/JBTM-312</a> |

| 13184 | JBTM-300    | Thank you for backporting. I put 4.2.3.SP5_CP07-brew jars into EAP 4.3.0 CP06 (SOA-P 4.3.0 CP02) and tested AtomicActionExpiryScanner. Then I found that expired tx-logs were copied to "Expired" directory but the original files were not removed. > find data/tx-object-store ... data/tx-object-store/HashedActionStore/defaultStore/StateManager/BasicAction/TwoPhaseCoordinator/AtomicAction/#197#/7f000001_9020_4b025a1e_2f9 data/tx-object-store/HashedActionStore/defaultStore/StateManager/BasicAction/TwoPhaseCoordinator/AtomicAction/Expired/#197#/7f000001_9020_4b025a1e_2f9 ... It's hitting JBTM-418. Could you take care of JBTM-418 for 4.2.3 branches too?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-300">https://issues.jboss.org/browse/JBTM-300</a>   |
| 13185 | JBTM-280    | Do you mean simply saving them as .odt files? I tried to check one in but got the following error : svn: CHECKOUT of '/lsvn/ver/15549/labs/jbosstm/trunk/ArjunaCore/docs/install_guide': 403 Forbidden (https://svn.labs.jboss.com) Am I using the wrong path or don't I have the correct permissions to commit perhaps. Thanks, Daniel                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTM-280">https://issues.jboss.org/browse/JBTM-280</a>   |
| 13186 | JBTM-265    | Ok, I have managed to modify XTS to run over JBossWS/CXF 3.1.0 but a few caveats apply I had to patch two bugs in CXF so we cannot go ahead with moving to CXF until JBossWS assimilates fixes for CXF-2161 and CXF-2167. I had to break XTS working on JBossWS/Native because of several incompatibilities. The most notable difference is that the AddressingProperties class and related classes reside in different packages but there are a couple of others: i) the RelatesTo field in CXF has only one entry whereas in JBoss it is an array of entries ii) when a JaxWS port is created from a W3CEndpoint JBossWS configures its request message properties with a MAP containing any WSA header values derived from the endpoint. this requires the XTS code to merge any extra headers into the existing MAP. CXF stashes the endpoint WSA header values in the port and so XTS has to create a MAP containing the extra headers and hang this off the request message properties. iii) CXF does not support JAX-RPC so the JaxRPC client handlers could not be compiled (the requisite headers are missing from the CXF libraries). This means the old version of the demo has to be dropped on CXF. Ignoring the JAX-RPC issue, it ought to be possible to hide these differences behind a wrapper class which managed the underlying MAP types and handled the task of configuring a JaxWS port. However, this would mean that the build process would have to be modified to build either a JBossWS/Native compatible version or a JBoss/CXF compatible version i.e. the XTS code would for all intents and purposes become dual binary (this is why we really need a fix in JBossWS). | <a href="https://issues.jboss.org/browse/JBTM-265">https://issues.jboss.org/browse/JBTM-265</a>   |
| 13187 | JBTM-264    | Is this resolved as part of the CLI work possibly? e.g. can the AS7 CLI be deployed externally?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBTM-264">https://issues.jboss.org/browse/JBTM-264</a>   |
| 13188 | JBTM-264    | Hi Mike, This issue was marked as "Resolved, Done" but there is no "Fix Version" specified. Please can you update the Jira with the version of the software where you fixed this? Also, can you then close the issue (assuming its not an in development version). Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-264">https://issues.jboss.org/browse/JBTM-264</a>   |
| 13189 | JBTM-252    | Daniel, would you please clarify the scope of the quantifiers 'some' and 'all' in your issue description? i.e. in which documents have you noticed the format problem? which other documents do you suspect are affected?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBTM-252">https://issues.jboss.org/browse/JBTM-252</a>   |
| 13190 | JBTM-144    | Mark The DTF QA tests have their own (JBoss internal) repo, due to different licencing for the DTF. Can we close this one?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-144">https://issues.jboss.org/browse/JBTM-144</a>   |
| 13191 | JBTM-116    | Which lower level? JBossTS understands -1. It means "transactions never time out".                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBTM-116">https://issues.jboss.org/browse/JBTM-116</a>   |
| 13192 | JBTM-103    | Mark I'm not clear on this one. The effective default timeout appears to be 0 regardless of which TransactionManagerImple is used. Am I missing something?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-103">https://issues.jboss.org/browse/JBTM-103</a>   |
| 13193 | JBTM-103    | In ArjunaJTA BaseTransaction.begin: Integer value = (Integer) _timeouts.get(ThreadUtil.getThreadId()); int v = 0; // if not set then assume 0. What else can we do? if (value != null) { v = value.intValue(); } // TODO set default timeout which doesn't exist in the JTAX BaseTransaction, because that relies on the JTS Current object to manage timeouts, which pulls the default from the JTS property and not the ArjunaCore property (check relevant Environment.java classes to see what I mean). The JTA and JTS implementations should both use the Core definition of default transaction timeout. At the moment, if someone wants to set a default timeout for JTA transactions, that should be used if no explicit timeout is defined, they can only do so via the JTS implementation. Plus, they'd need to make sure the JTS value is the same as the Core value if they want to mix and match transaction implementations (not likely in reality). We should have only a single place to set the default transaction timeout, and this value should be used when no timeout is explicitly defined. A value of 0 or -1 should be taken as "no timeout", i.e., infinite. JTS TransactionFactory does this already: int theTimeout = time_out; if (theTimeout == 0) theTimeout = TransactionFactoryImple._defaultTimeout; and _defaultTimeout could be 0.                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBTM-103">https://issues.jboss.org/browse/JBTM-103</a>   |
| 13194 | JBTM-98     | what is the setup of your test? If I have a single JBoss server talking to oracle then it works fine. When I try the following scenario is when I get the problem (both server 4.0.3 SP1 and JBossts 4.2): Server1 : starts the global distributed transaction, performs local oracle database operations and calls a server2Bean on server2 // this method has the tx "required" attribute in ejb-jar.xml performGlobalTx(){ doSomething(); // do oracle operations server2Bean.doSomething(); // call remote jboss Server2 } Server2: the bean on this server updates the same oracle database: doSomething(){ performDBOperations...; // here is where I get the exceptions reported in the forum <<<<-----here }                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBTM-98">https://issues.jboss.org/browse/JBTM-98</a>     |
| 13195 | JBTM-95     | We have such a thing in place now as far as I can see. Let's close this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBTM-95">https://issues.jboss.org/browse/JBTM-95</a>     |
| 13196 | JBTM-86     | Could you please increase the priority of this bug, or at least give it some sort of schedule? Defect analysis becomes a nightmare without any sort of exception chaining.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-86">https://issues.jboss.org/browse/JBTM-86</a>     |
| 13197 | JBTM-86     | Hi Andrew, hi Jonathan, what is the fix version that includes the whole fix? 4.14? Thanks in advance!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBTM-86">https://issues.jboss.org/browse/JBTM-86</a>     |
| 13198 | JBTM-49     | Does this still make sense? We should probably ensure our tooling is consistent with AS7 as much as anything.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBTM-49">https://issues.jboss.org/browse/JBTM-49</a>     |
| 13199 | JBTM-49     | Hi Mike, This issue was marked as "Resolved, Done" but there is no "Fix Version" specified. Please can you update the Jira with the version of the software where you fixed this? Also, can you then close the issue (assuming its not an in development version). Thanks, Tom                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBTM-49">https://issues.jboss.org/browse/JBTM-49</a>     |
| 13200 | JBTM-20     | Can you add something to the documentation (the section around application server integration)? If you want, send me text and I'll put it in place.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBTM-20">https://issues.jboss.org/browse/JBTM-20</a>     |
| 13201 | JBTM-5      | From Adrian Brock: "Adrian comment: "Will this also be integrated with the JBoss installer and the JBoss Network for "ease" of installation/choice? i.e. we include JBoss Transactions in the installer distribution and let them choose between the two implementations."                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBTM-5">https://issues.jboss.org/browse/JBTM-5</a>       |
| 13202 | JBVFS-194   | Aleš, would you mind fixing or removing these tests please? Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBVFS-194">https://issues.jboss.org/browse/JBVFS-194</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | URL                                                                                               |

| 13203 | JBVFS-161   | (10:39:27 AM) ALR: baileyje: Up yet? :) (10:39:48 AM) baileyje: Yeah :) (10:40:11 AM) ALR: baileyje: I'd like to get at a TempDir without a ScheduledExecutorService (10:40:21 AM) ALR: The service is just used for cleanup operations in close() (10:40:54 AM) ALR: http://pastebin.com/sBuqcbB2 (10:40:59 AM) baileyje: Yeah. Cleanup with some retry behavior to prevent locking. (10:41:05 AM) ALR: Yep. (10:41:12 AM) ALR: baileyje: Can that be optional? (10:41:32 AM) ALR: And instead go to some deleteOnExit logic if no SES was provided at construction? (10:42:41 AM) ALR: baileyje: I've a case where we shouldn't be flushing VirtualFiles to getPhysicalFile anyway (10:42:56 AM) ALR: So providing a SES is kind unnecessary in the first place. (10:42:57 AM) baileyje: ALR: hmmm. What is the issue with the executor? (10:43:03 AM) ALR: baileyje: I don't have one. (10:43:12 AM) baileyje: ok. You just want to avoid it.. (10:43:13 AM) ALR: baileyje: And in AS, most components are not allowed to make one. (10:43:15 AM) ALR: Yeah. (10:44:15 AM) ALR: baileyje: I'll be happy to make the patch/fix if we can agree on some alternate logic. (10:44:52 AM) baileyje: I will pull dmlloyd in on that. He was the originator of the TempFileProvider. (10:45:17 AM) ALR: baileyje: Cool, thanks. We'll see what he says in a bit. (10:45:44 AM) baileyje: I think if there is a legitimate reason to have a different cleanup strategy, something could be done. (10:46:02 AM) ALR: baileyje: Simplification / ease of ue. (10:46:04 AM) ALR: *use                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBVFS-161">https://issues.jboss.org/browse/JBVFS-161</a> |
| 13204 | JBVFS-12    | Is this fixed or not in Beta9? (JBCTS-747) When committing code in VFS, we need VFS jira tags, not JBCTS ones, otherwise, it's impossible to track. I want to mark Beta9 as released.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBVFS-12">https://issues.jboss.org/browse/JBVFS-12</a>   |
| 13205 | JBVFS-8     | Hi Scott, Can this one be closed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBVFS-8">https://issues.jboss.org/browse/JBVFS-8</a>     |
| 13206 | JBWEB-292   | Thanks for the hint Remy, I can see it now in the docs on [cipher-suite] http://docs.jboss.org/jbossweb/7.0.x/config/ssl.html]. Does it mean that the configuration syntax changed between {{jbossweb-7.3.0.Final}} and {{jbossweb-7.4.0.Beta4}} or that it has been so all along and the colon-delimited cypher-suite was simply ignored in {{jbossweb-7.3.0.Final}}? Anyhow, I tried it with: {{cipher-suite="AES128-SHA,ALL,IADH,ILOW,IMD5,ISSLV2,INULL"}} and I must say that the error persists: {{JBWEB002081: No cipher match}}.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWEB-292">https://issues.jboss.org/browse/JBWEB-292</a> |
| 13207 | JBWEB-292   | Yes, JSSE names did it, this works: {code} <subsystem xmlns="urn:jboss:domain:web:1.5" native="false"> <connector name="https" protocol="HTTP/1.1" socket-binding="https" scheme="https" enabled="true" secure="true"> <ssl name="https" ca-certificate-file="/proper/ca-cert.jks" certificate-key-file="/proper/client-cert-key.jks" certificate-file="/proper/client-cert-key.jks" password="tomcat" verify-client="false" key-alias="javaclient" cipher-suite="TLS_ECDHE_RSA_WITH_AES_256_GCM_SHA384,TLS_ECDHE_ECDSA_WITH_AES_256_GCM_SHA384,TLS_ECDH_RSA_WITH_AES_256_GCM_SHA384,TLS_ECDH_ECDSA_WITH_AES_256_GCM_SHA384,ITLS_ECDHE_RSA_WITH_AES_128_GCM_SHA256,ITLS_ECDH_ECDSA_WITH_AES_128_GCM_SHA256,ITLS_ECDH_ECDSA_WITH_AES_128_GCM_SHA256,TLS_DHE_RSA_WITH_AES_256_GCM_SHA384,ITLS_DHE_RSA_WITH_AES_128_GCM_SHA256,TLS_ECDHE_RSA_WITH_AES_256_CBC_SHA384,TLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA384,TLS_ECDH_RSA_WITH_AES_256_CBC_SHA,ITLS_ECDHE_ECDSA_WITH_AES_256_CBC_SHA,TLS_ECDH_ECDSA_WITH_AES_256_CBC_SHA384,TLS_ECDH_ECDSA_WITH_AES_256_CBC_SHA,ITLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256,ITLS_ECDSA_WITH_AES_128_CBC_SHA256,ITLS_ECDH_ECDSA_WITH_AES_128_CBC_SHA,ITLS_ECDH_ECDSA_WITH_AES_128_CBC_SHA,ITLS_ECDH_ECDSA_WITH_AES_128_CBC_SHA,ITLS_DHE_RSA_WITH_AES_128_CBC_SHA256,ITLS_DHE_RSA_WITH_AES_128_CBC_SHA,ITLS_ECDHE_ECDSA_WITH_3DES_EDE_CBC_SHA,ITLS_ECDHE_ECDSA_WITH_3DES_EDE_CBC_SHA,ITLS_ECDH_ECDSA_WITH_3DES_EDE_CBC_SHA,ITLS_ECDH_ECDSA_WITH_3DES_EDE_CBC_SHA,ITLS_DHE_RSA_WITH_3DES_EDE_CBC_SHA,ITLS_RSA_WITH_AES_256_GCM_SHA384,TLS_RSA_WITH_AES_256_CBC_SHA256,TLS_RSA_WITH_AES_256_CBC_SHA,ITLS_RSA_WITH_AES_128_GCM_SHA256,ITLS_RSA_WITH_AES_128_CBC_SHA256,ITLS_RSA_WITH_AES_128_CBC_SHA,ITLS_RSA_WITH_3DES_EDE_CBC_SHA" protocol="TLS"/> </connector> <virtual-server name="default-host" enable-welcome-root="true"> <alias name="localhost"/> <alias name="example.com"/> </virtual-server> </subsystem> {code} So, is this just a documentation issue then? | <a href="https://issues.jboss.org/browse/JBWEB-292">https://issues.jboss.org/browse/JBWEB-292</a> |
| 13208 | JBWEB-276   | This is a potential patch which adds a new error message (is using one past the last number correct?) and uses it when a RejectedExecutionException is caught instead of the normal message. It alters the NIO, APR and JIO endpoints                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWEB-276">https://issues.jboss.org/browse/JBWEB-276</a> |
| 13209 | JBWEB-276   | James Livingston <jlivings@redhat.com> made a comment on [bug 985191] https://bugzilla.redhat.com/show_bug.cgi?id=985191] For the default blocking thread pools, a RejectedExecutionException means a serious problem occurred, yes. If you switch the web container over to using a non-blocking thread pool however, so that it drops requests rather than blocking, it is expected that you would receive these. Currently if you want to make JBoss drop web requests when there are too many, it writes a large number of these errors out into the log, which would have performance implications reducing the usefulness of dropping request under excessive load. If you don't want to hide the message since it is serious for blocking thread pools, is there an alternative which would let people using non-blocking thread pools hide it? It would be possible to move it to a different logging category, which could be turned off, but adding a new logging category for one message seems excessive.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWEB-276">https://issues.jboss.org/browse/JBWEB-276</a> |
| 13210 | JBWEB-276   | Paul Gier <pgier@redhat.com> made a comment on [bug 985191] https://bugzilla.redhat.com/show_bug.cgi?id=985191] Can this issue be closed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBWEB-276">https://issues.jboss.org/browse/JBWEB-276</a> |
| 13211 | JBWEB-248   | where do you put the valve?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBWEB-248">https://issues.jboss.org/browse/JBWEB-248</a> |
| 13212 | JBWEB-241   | I have updated http://docs.jboss.org/jbossweb/7.0.x/sysprops.html. Was that what you were looking for?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWEB-241">https://issues.jboss.org/browse/JBWEB-241</a> |
| 13213 | JBWEB-241   | I guess that is OK. Thanks Jean-Fredric                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWEB-241">https://issues.jboss.org/browse/JBWEB-241</a> |
| 13214 | JBWEB-230   | Can you please point me at a source file or a doc page that shows how JSF integrates servlet filters?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWEB-230">https://issues.jboss.org/browse/JBWEB-230</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | URL                                                                                               |

| 13215 | JBWEB-228   | OK. I think I see your point. To summarize: your proposal would be to implement a JBoss AS 7 extension (subsystem) for loading the authenticator valve and adding it to the valve chain. Right? I personally think this is much better than configuring it per app in the jboss-web.xml file (because it would not need an additional configuration on application developer/deployer side, besides application developer/deployers don't have to care where to get the classes from). IMO I still think this approach would have 2 drawbacks (when comparing it with the possibility of the registration of the Authenticator in the file Authenticator.properties file): * Developer/Deployer cannot configure the Authenticator by means of web.xml. It's even not possible to see by means of the web.xml file which Authenticator is really in use. As far as I know if a custom Authenticator is configured as a valve, JBoss will always take the valve configuration and will ignore the configuration in the web.xml file. This could be tricky (somehow magic) in terms of support and maintenance * The valve cannot be enabled/disabled by means of a deployment. It will be either always enabled or disabled (if we control this by means of a system property). For instance it is not possible to have 2 different War files deployed in one JBoss where one needs my custom Authenticator and the other one needs a Java EE Standard Authenticator. -> Using the jboss-web.xml approach per deployment this requirement can be solved (coming along with the drawback of a more tricky configuration (and class loading). I don't understand why JBoss cannot just provide the possibility to plugin custom authenticators and the required configuration for them (including the mapping to a auth-method usable in the web.xml file) in the standard subsystem web. From my point of view a custom Authenticator is different from a normal valve in terms of it should support and act the same way as the standard Java EE authenticators. And I don't see a way to achieve that when just treating it like a normal valve (neither when using jboss-web.xml file to configure it, nor using a JBoss Extension subsystem). To detail the requirement - The authenticator should be made available globally (just like the standard Java EE Authenticators are made available by the container) - The authenticator should be configurable / enabled per deployment (the same way like it is for a standard Java EE Authenticator) - And best would be that the configuration mechanism in use is the same than it would be for Java EE standard authenticators (using a custom auth-method in the web.xml file) | <a href="https://issues.jboss.org/browse/JBWEB-228">https://issues.jboss.org/browse/JBWEB-228</a> |
| 13216 | JBWEB-178   | @Remy Maucherat Thank you for your very interesting answer. Can you add in Jboss Web FAQ at <a href="http://www.jboss.org/jbossweb/faq.html">http://www.jboss.org/jbossweb/faq.html</a> that : "Jboss Web, the web container in JBoss is no longer compatible with Tomcat. All application vendor that sell web app certified for Tomcat would have to include specific JBoss AS versions in their certification process." It is very important for customers that want that their software editor add new support for Jboss Web. And can you add some words that explain why now Jboss Web, the web container (JSP/Servlet) in JBoss, is no longer compatible with Tomcat. What are the big problems or changes for this compatibility problem ? There is only few information about Comet Advanced IO, Tomcat Versions, NIO but is not very detailed for IT professionnals. Can you update Jboss Web FAQ at <a href="http://www.jboss.org/jbossweb/faq.html">http://www.jboss.org/jbossweb/faq.html</a> because then now this line is not truth: "...The latest version of JBoss Web corresponds to the latest version of Tomcat for the patches and security fixes." Thanks for your help.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBWEB-178">https://issues.jboss.org/browse/JBWEB-178</a> |
| 13217 | JBWEB-178   | Can you add more information in the JBoss Web's FAQ. See <a href="https://jira.jboss.org/browse/JBWEB-178?focusedCommentId=12547642&amp;page=com.atlassian.jira.plugin.system.issuetabpanels%3Acomment-tabpanel#action_12547642">https://jira.jboss.org/browse/JBWEB-178?focusedCommentId=12547642&amp;page=com.atlassian.jira.plugin.system.issuetabpanels%3Acomment-tabpanel#action_12547642</a> Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWEB-178">https://issues.jboss.org/browse/JBWEB-178</a> |
| 13218 | JBWEB-164   | Jean-Frederic, So you are saying that this functionality exists in JBossWeb trunk, is that right? Any idea when the trunk code will make it into a JBoss release?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBWEB-164">https://issues.jboss.org/browse/JBWEB-164</a> |
| 13219 | JBWEB-164   | The link in the description is broken... My notes only tell about replaceProperties() in the TC7 repo. Could you please put the new link in a comment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBWEB-164">https://issues.jboss.org/browse/JBWEB-164</a> |
| 13220 | JBWEB-142   | Since Remy is on vacation, can you please apply this upstream?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBWEB-142">https://issues.jboss.org/browse/JBWEB-142</a> |
| 13221 | JBWEB-8     | Can someone review the article that is at: <a href="http://www.apache.org/~mturk/docs/article/ftwai.html">http://www.apache.org/~mturk/docs/article/ftwai.html</a> In the article I have focused on determining the best topology and determining the actual configuration to use. Would you like to see something else in the article? Thanks, Maden                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBWEB-8">https://issues.jboss.org/browse/JBWEB-8</a>     |

| 13223 | JBWEB-5     | Released jk-1.2.7-beta-2. This is the last beta release I hope. The next one will be 1.2.8                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWEB-5">https://issues.jboss.org/browse/JBWEB-5</a>     |
| 13224 | JWS-151     | [~fgoldefu], is there any specific configuration is required for monitoring mod_cluster connections? I was under the impression that monitoring apache through mod_bmx would suffice (I could be totally wrong though).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JWS-151">https://issues.jboss.org/browse/JWS-151</a>     |
| 13225 | JBWS-4056   | Sorry about that, I missed that usage since they are looked up by FQDN class name in String. Anyway I sent a proposal PR <a href="https://github.com/jbossws/jbossws-cxf/pull/23">https://github.com/jbossws/jbossws-cxf/pull/23</a> , could you have a look?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBWS-4056">https://issues.jboss.org/browse/JBWS-4056</a> |
| 13226 | JBWS-4000   | [~david.boeren], is it possible to see (privately is fine too) the code for WebPaymentInternal?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBWS-4000">https://issues.jboss.org/browse/JBWS-4000</a> |

| 13228 | JBWS-3916   | This is fixed in wildfly9.0.0.CR2. I exclude this test in wildfly 8.x containers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBWS-3916">https://issues.jboss.org/browse/JBWS-3916</a> |
| 13229 | JBWS-3878   | I built jbossws using JDK 1.8.0_40. I saw only 2 groups of deprecation WARNINGS. 1.) Logging annotations in org/jboss/wsf/stack/cxf/jaspi/log/Loggers.java I checked in a change for this (Committed revision 19595) 2) deprecated classes org.jboss.wsf.stack.cxf.client.configuration.JBossWSSpringConfigurer org.jboss.wsf.stack.cxf.client.configuration.JBossWSSpringBusFactory which I have not addresses yet. How did you generate the javadoc warnings?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBWS-3878">https://issues.jboss.org/browse/JBWS-3878</a> |

| 13231 | JBWS-3797   | Jim, can this be marked as solved?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBWS-3797">https://issues.jboss.org/browse/JBWS-3797</a> |
| 13232 | JBWS-3750   | <p>I don't think this enhancement is going to function the way you intend. The format for a URL/URI is [scheme:][//[host]:[port]][path][?query][#fragment] If I have the following services declared in a wsdl <a href="http://localhost:8080/jaxws-jbws2150/ValidURL">http://localhost:8080/jaxws-jbws2150/ValidURL</a> <a href="http://localhost:8080/jaxws-jbws2150/InvalidURL">http://localhost:8080/jaxws-jbws2150/InvalidURL</a> then there are 2 unique paths, "jaxws-jbws2150/ValidURL" and "jaxws-jbws2150/InvalidURL". This enhancement replaces each path with a single custom path. If I set the custom path to "/my-custom-path/foo/bar" the 2 addresses above become <a href="http://localhost:8080/my-custom-path/foo/bar">http://localhost:8080/my-custom-path/foo/bar</a> <a href="http://localhost:8080/my-custom-path/foo/bar">http://localhost:8080/my-custom-path/foo/bar</a> Is this what is intended?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-3750">https://issues.jboss.org/browse/JBWS-3750</a> |

Where is it desired to reside?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBWS-3738">https://issues.jboss.org/browse/JBWS-3738</a> |
| 13235 | JBWS-3724   | The option you mention was discarded because in HTTP 1.0 new connections are open for each request/response pair. And after each response the connection would be closed. This lead to some big efficiency problems. I asked to several people and they do not recommend do this. I disabled Chunked encoding in client side, over HTTP 1.1 and i was hoping to do the same in server side, keeping HTTP 1.1 because it means that chunked transfer encoding is an option in HTTP 1.1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBWS-3724">https://issues.jboss.org/browse/JBWS-3724</a> |
| 13236 | JBWS-3648   | Alessio, would you check this issues? <a href="https://community.jboss.org/thread/231657">https://community.jboss.org/thread/231657</a> Invoking @PolicySets-added Service Endpoint Interface is failed. I suggest to make another JIRA to solve this issues. I need your advice deperately                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBWS-3648">https://issues.jboss.org/browse/JBWS-3648</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | URL                                                                                               |

| 13237 | JBWS-3628   | Rebecca, sure, the client has power to change this specific value, as well as using a completely different wsdl contract. The JMS case here is probably also not a perfect fit for the new feature request, as for pure JMS endpoints the wsdl contract is actually not published at all (that's also why in the testcase you mentioned the client is retrieving the wsdl from a resource in the client jar). This said, it could still be useful to support a server side property expansion mechanism; the user could deploy a contract first endpoint with something like @foo@ in its wsdl, then the jbossws deployer would expand that by reading the value of the "foo" system property when publishing the endpoint wsdl. Do you see what I mean?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBWS-3628">https://issues.jboss.org/browse/JBWS-3628</a> |
| 13238 | JBWS-3628   | OK, I see. So we can't "fool" CXF into using a different location for the wsdl. Btw, I also remember that CXF has a wsdl cache mechanism that is based on the wsdl url, so playing with the wsdl location url might definitely be risky. The idea of running a filter at the time CXF parses the wsdl into the WSDL4J Definition model is interesting; something I've noticed in the patch is that it applies to the JMS wsdl extensibility element only. So we'd need to clarify in advance which elements actually support property expansion and which do not. Something I've been thinking about is why don't we run the filter directly at WSDL4J level? javax.wsdl.factory.WSDLFactory (which is used by CXF to parse the wsdl) lets us have a different implementation of WSDLFactory (see newInstance() and findFactoryImplName() methods). We could have a custom WSDLFactory impl that runs our filters and eventually delegates to the default WSDLFactory impl (or to what would have been resolved before, but that's an impl detail). The filtering could either be performed through pluggable filters as you did in your last patch for cxf, or (better, I think) be StAX / DOM based on the whole document (depends on which readWSDL method flavor is called). The advantage are no need to have changes in CXF and a solution that applies to any component relying on the WSDLReader. | <a href="https://issues.jboss.org/browse/JBWS-3628">https://issues.jboss.org/browse/JBWS-3628</a> |
| 13239 | JBWS-3628   | CXF would need only a minor modification in order for us to register a custom WSDLFactoryImpl through the bus for CXF's WSDLManager to reference. Our WSDLFactoryImpl class would override the newWSDLReader method and return a custom WSDLReaderImpl class. It would be most desirable to subclass com.ibm.wsdl.xml.WSDLReaderImpl and override select parsing methods, however is this not possible because the methods of interest are "protected". I see two solutions. One, copy the contents of com.ibm.wsdl.xml.WSDLReaderImpl into our WSDLReaderImpl class and make the desired modifications to the protected methods. Two, in our WSDLFactoryImpl override method newDefinition() and return a custom impl of DefinitionImpl and in DefinitionImpl override methods like createService() and return a custom ServiceImpl class (and the like) that does our bidding. This would allow com.ibm.wsdl.xml.WSDLReaderImpl to be used as is. Because of the nature of what we are currently customizing I am more in favor of option one. This provides us full access to the wsdl contents with the smallest number of classes that needs to be maintained. Option two seems like over kill and requires a larger number of custom classes to be maintained by us. What are your thoughts?                                                                                                        | <a href="https://issues.jboss.org/browse/JBWS-3628">https://issues.jboss.org/browse/JBWS-3628</a> |
| 13240 | JBWS-3573   | I re-executed Coverity analysis, there are 2 new defects detected: - JBossWS SPI - TRANSIENT_FIELD_NOT_RESTORED: probably design decision - http://station5.brq.redhat.com:8080/sourcebrowser.htm?projectId=10001#mergedDefectId=10219&defectInstanceId=1283&fileInstanceId=2332 - JBossWS Native - DM_DEFAULT_ENCODING: shouldn't be UTF-8 enforced? - http://station5.brq.redhat.com:8080/sourcebrowser.htm?projectId=10004#mergedDefectId=10220&defectInstanceId=1364&fileInstanceId=3078 JBossWS -- api and spi items updated based on Richard's comment - low priority items and tests marked as Intentional Overall Status: http://station5.brq.redhat.com:8080/projects/index.htm?tableKey=ProjectsTable Please could you check 2 new items? Are defects for JBossWS common and JBossWS CXF section intentional? I would like to add classification to this items to skip them in future reports.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBWS-3573">https://issues.jboss.org/browse/JBWS-3573</a> |
| 13241 | JBWS-3549   | Michael, sorry I've spotted this just now. Can you please provide more info? It's not clear how to reproduce given what you wrote above. Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWS-3549">https://issues.jboss.org/browse/JBWS-3549</a> |
| 13242 | JBWS-3435   | How appclient tests work? ----- 1) We're providing appclient-ws.xml configuration to configure JBoss remoting to allow for remote access to appclient JNDI env. 2) Our JAX-RPC proxies are de/serializable to be accessible remotely. 3) Our tests are always calling appclient.sh(.bat) scripts internally via java.lang.Process and passing --appclient-config=appclient-ws.xml parameter to use our custom config 4) Every appclient archive must be nested in ear, so we're using foo-appclient.ear#foo-appclient.jar syntax in our JBossWS test helper to specify which ear contains what appclient jar. 5) We're registering AppclientKiller for every appclient.jar that contains no main-class MANIFEST.MF entry. The goal of this class is to detect shutdown mark files and call System.exit when mark file is found.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWS-3435">https://issues.jboss.org/browse/JBWS-3435</a> |
| 13243 | JBWS-3409   | Are you able to reproduce this problem against 7.1.0.CR1? http://www.jboss.org/jbossas/downloads                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-3409">https://issues.jboss.org/browse/JBWS-3409</a> |
| 13244 | JBWS-3259   | Can you please provide the war that's being deployed when the exception is thrown?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBWS-3259">https://issues.jboss.org/browse/JBWS-3259</a> |
| 13245 | JBWS-3255   | I experience same using JBossAS-5.1.0.GA and JBossWS-native 3.4.0. I simply drop the @EndpointConfig(configName = "Standard WSSecurity Endpoint") annotation into my Port Impl class and I get the same errors. If I understand Marcus Moyses's comment above correctly this means I need to create my own version of org.jboss.ws.extensions.security.jaxws.WSSecurityHandlerServer since the one provided is tied to a JNDI name that is no longer valid as of 5.1.0 if not earlier. Is that right? Or is another workaround available on 5.1.0?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBWS-3255">https://issues.jboss.org/browse/JBWS-3255</a> |
| 13246 | JBWS-3255   | Thanks Alessio, but my point is that it DOESN'T work with Native 3.4.0 on top of AS 5.1.0 in spite of your assertions that it SHOULD. Have you actually tried it? For one thing, although the documentation included with the 3.4.0 Test Suite talks about a JBossWS-Security And Attachments Sample supposedly located in the org.jboss.test.ws.jaxws.samples.news package, this package does not in fact exist in the 3.4.0 Test Suite and there is no source code in the 3.4.0 Test Suite examples that contains the @EndpointConfig annotation, although you can find it in the included documentation, which, however, does not seem to pertain to 3.4.0. If 3.4.0 could do this, there should be a sample illustrating how. Maybe there needs to be a 3.4.0a? So I must ask: is it even possible to do WS Security with 3.4.0 over 5.1.0? And if so, how? And, as we know from http://community.jboss.org/wiki/JBossWS-SupportedTargetContainers, 3.4.1 is not compatible with 5.1.0.                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBWS-3255">https://issues.jboss.org/browse/JBWS-3255</a> |
| 13247 | JBWS-3185   | Jim, the CXF jiras mentioned above are fixed in the 2.3.4 version we're using, can you please verify this issue is fixed and mark it as resolved in that case? Thanks!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBWS-3185">https://issues.jboss.org/browse/JBWS-3185</a> |

| 13248 | JBWS-3115   | <p>This is my TODO list related to this issue: Our SPI have dependencies on jboss-logging, jbossxb and jboss-kernel, see:<br/> <code>[/home/opalka]/[home/opalka]/svn/jboss/ws/spi/trunk&gt;grep -r "import org.jboss" *   grep -v "\.svn"   grep -v "jboss\.\wsf"</code><br/> <code>src/main/java/org/jboss/wsf/spi/deployment/DeploymentAspect.java:import org.jboss.logging.Logger;</code><br/> <code>src/main/java/org/jboss/wsf/spi/metadata/j2ee/serviceref/UnifiedServiceRefMetaData.java:import org.jboss.logging.Logger;</code><br/> <code>src/main/java/org/jboss/wsf/spi/metadata/j2ee/serviceref/HandlerChainsObjectFactory.java:import org.jboss.logging.Logger;</code><br/> <code>src/main/java/org/jboss/wsf/spi/metadata/j2ee/serviceref/HandlerChainsObjectFactory.java:import org.jboss.xb.binding.ObjectModelFactory;</code><br/> <code>src/main/java/org/jboss/wsf/spi/metadata/j2ee/serviceref/HandlerChainsObjectFactory.java:import org.jboss.xb.binding.UnmarshallingContext;</code><br/> <code>src/main/java/org/jboss/wsf/spi/metadata/webservices/PortComponentMetaData.java:import org.jboss.logging.Logger;</code><br/> <code>src/main/java/org/jboss/wsf/spi/metadata/webservices/WebservicesFactory.java:import org.jboss.logging.Logger;</code><br/> <code>src/main/java/org/jboss/wsf/spi/metadata/webservices/WebservicesFactory.java:import org.jboss.xb.binding.ObjectModelFactory;</code><br/> <code>src/main/java/org/jboss/wsf/spi/metadata/webservices/WebservicesFactory.java:import org.jboss.xb.binding.Unmarshaller;</code><br/> <code>src/main/java/org/jboss/wsf/spi/metadata/webservices/WebservicesFactory.java:import org.jboss.xb.binding.UnmarshallerFactory;</code><br/> <code>src/main/java/org/jboss/wsf/spi/metadata/webservices/WebservicesFactory.java:import org.jboss.xb.binding.UnmarshallingContext;</code><br/> <code>src/main/java/org/jboss/wsf/spi/metadata/webservices/WebserviceDescriptionMetaData.java:import org.jboss.logging.Logger;</code><br/> <code>src/main/java/org/jboss/wsf/spi/annotation/AuthMethod.java:import org.jboss.logging.Logger;</code><br/> <code>src/main/java/org/jboss/wsf/spi/management/recording/RecordGroupAssociation.java:import org.jboss.logging.Logger;</code><br/> <code>src/main/java/org/jboss/wsf/spi/serviceref/ServiceRefHandler.java:import org.jboss.xb.binding.UnmarshallingContext;</code><br/> <code>src/main/java/org/jboss/wsf/spi/util/KernelLocator.java:import org.jboss.kernel.Kernel;</code> These dependencies must be removed! To help other J2EE servers developers implement our SPI. Kernel dependency have to be moved to AS IL. Remove dependency on logging + jbossxb = evaluate how! Refactor to AS IL? We should create logging SPI facade to delegate to concrete impl.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBWS-3115">https://issues.jboss.org/browse/JBWS-3115</a> |
| 13249 | JBWS-3084   | Is it possible to use <code>Dispatch&lt;SOAPMessage&gt;</code> instead of <code>SOAPConnection</code> ? The analysis shows that due to a number of restrictions in SAAJ API (not possible to get an access to the connection headers used by default <code>SOAPConnection</code> instances, even by relying on the custom <code>SOAPConnectionFactories</code> , explicitly added <code>Content-Length</code> header to <code>SOAPMessage.getMimeHeaders()</code> is ignored on the client side), as well as the disconnect between bare <code>SOAPConnections</code> and stack-specific chains, using <code>Dispatch&lt;SOAPMessage&gt;</code> and setting a property on the <code>SOAPMessage</code> which will be recognized by stack-specific HTTP transport modules is probably the only realistic approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWS-3084">https://issues.jboss.org/browse/JBWS-3084</a> |
| 13250 | JBWS-3084   | Thanks Sergey; can you please comment here with the jira number of the required CXF changes? That might be of use when we will need to port this fix to EAP branches. Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBWS-3084">https://issues.jboss.org/browse/JBWS-3084</a> |
| 13251 | JBWS-3011   | If a change is required that will affect all clients or all endpoint why not just edit the "Standard Client" or "Standard Endpoint" definitions directly? Why does a new configuration need to be added then a system property set to specify the new configuration is the new default leaving the existing defaults unused.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBWS-3011">https://issues.jboss.org/browse/JBWS-3011</a> |

| 13254 | JBWS-2782   | Maybe asking the helpdesk team would be enough to achieve that. Who other could handle this? I don't think each team configures it on its own.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBWS-2782">https://issues.jboss.org/browse/JBWS-2782</a> |
| 13255 | JBWS-2752   | Alessio, could you back port this issue fix to JBossWS EAP 5 branch, please? JBIDE-4257 depends on it and it's really critical for them to have it there (I discussed this issue with Denny via IRC)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWS-2752">https://issues.jboss.org/browse/JBWS-2752</a> |
| 13256 | JBWS-2751   | Hi Stefan, I've just committed changes taken from your sources. The project has already been "mavenized" by me in the mean time and you can find the artifacts on JBoss Maven repositories: <a href="http://repository.jboss.org/maven2/jboss/jaxbintros/">http://repository.jboss.org/maven2/jboss/jaxbintros/</a> <a href="http://snapshots.jboss.org/maven2/jboss/jaxbintros/">http://snapshots.jboss.org/maven2/jboss/jaxbintros/</a> This said, I'd really appreciate if you could give the latest snapshot (1.0.2-SNAPSHOT) a try, or better update sources and try if everything is working as expected. Btw, is there any other annotation missing that you want to add?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBWS-2751">https://issues.jboss.org/browse/JBWS-2751</a> |
| 13257 | JBWS-2741   | What have been done: * jbossws-native-jaxws.jar became manifest only file * some useless classes from jbossws-native-jaxws-ext.jar have been removed. * there were added jaxws-api.jar and jsr181-api.jar files to our distributions (APIs)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBWS-2741">https://issues.jboss.org/browse/JBWS-2741</a> |
| 13258 | JBWS-2724   | Thanks for the patch Hans. BTW, how is the interoperability testing going?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBWS-2724">https://issues.jboss.org/browse/JBWS-2724</a> |
| 13259 | JBWS-2723   | Thanks for the patch Hans. BTW, how is the interoperability testing going?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBWS-2723">https://issues.jboss.org/browse/JBWS-2723</a> |
| 13260 | JBWS-2694   | I've always seen that to disable chunking encoding is always related to client configuration. How can it be disabled from server side? What configuration file can be changed in JBoss or JBossWS to do that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBWS-2694">https://issues.jboss.org/browse/JBWS-2694</a> |
| 13261 | JBWS-2685   | I am able to run the tests and get the same results with both the Sun 1.6 JDK and OpenJDK: ===== Failed tests: test(org.jboss.test.ws.jaxws.samples.dar.JMSCClientTestCase) Tests in error: org.jboss.test.ws.jaxws.samples.dar.ClientTestCase Tests run: 28, Failures: 1, Errors: 1, Skipped: 0 ===== This is after BUILDING with Sun and RUNNING with Sun and OpenJDK. Alessio - can you recheck this? Thx...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBWS-2685">https://issues.jboss.org/browse/JBWS-2685</a> |
| 13262 | JBWS-2680   | Jim, your PR has been merged; is it possible to have the same fix applied to the 800 and 810 ASIL too?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-2680">https://issues.jboss.org/browse/JBWS-2680</a> |
| 13263 | JBWS-2679   | Is this issue meant to address compression at the transport level through "Content-Encoding: gzip"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBWS-2679">https://issues.jboss.org/browse/JBWS-2679</a> |
| 13264 | JBWS-2647   | Paul, what scripts do you actually refer to? Can you give further details? Currently the jboss-xml-binding.jar is referenced by the testsuite, the jbossws-client manifest and the ws tools scripts. This said, JBossWS Native uses the JBossXB jar provided by the AS. Currently that's jboss-xml-binding.jar. Are you saying there're plans for having jbosxb.jar in AS client dir instead of jboss-xml-binding.jar?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-2647">https://issues.jboss.org/browse/JBWS-2647</a> |
| 13265 | JBWS-2647   | OK, just created JBAS-7441 for fixing the AS build first, then we'll fix the WS stuff accordingly. Fine with you?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBWS-2647">https://issues.jboss.org/browse/JBWS-2647</a> |
| 13266 | JBWS-2647   | If I change the references in the AS build first, won't that break some tests? It seems like this issue should be resolved first, and then when AS updates to jbossws-native 3.3.2 the AS build scripts can be changed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBWS-2647">https://issues.jboss.org/browse/JBWS-2647</a> |
| 13267 | JBWS-2554   | Any news on this? Is Remoting 3 going to be included in AS 5.1.0.CR1? Which version should I start looking at exactly? And can I install that version to previous AS releases?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBWS-2554">https://issues.jboss.org/browse/JBWS-2554</a> |
| 13268 | JBWS-2554   | The community time-line has been reduced quite a bit, so remoting 2 will definitely remain since jbm 1.4 depends on it. This should definitely be updated to another http client impl though, since you have WAY more flexibility (can support things like NTLM auth etc)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBWS-2554">https://issues.jboss.org/browse/JBWS-2554</a> |
| 13269 | JBWS-2554   | Jason, should I read this as AS 5.1.0.GA will still have Remoting 2? Asking as this kind of change does not fit very well into a micro jbos release (3.1.1 we're working on) and we plan a 3.2.0 after that... Regarding feature and flexibility, I agree, perhaps we already have some of them with other stacks, but yes this is a chance for improvements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBWS-2554">https://issues.jboss.org/browse/JBWS-2554</a> |
| 13270 | JBWS-2510   | I wouldn't put any effort on this. AS doesn't care about it at all. Why have JBossWS internationalized and other AS parts not? Finally there should be i18n and i10n team inside RH that would take care of that IMHO.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-2510">https://issues.jboss.org/browse/JBWS-2510</a> |
| 13271 | JBWS-2424   | We're seeing some failures in jaxr TCK5 gui at the moment. There are listed jaxr tests that doesn't exist in commandline version. Note that commandline version of jaxr passes on 100%. I wrote to javaeetck@jboss.org mailing list and I'm waiting for response how is it possible nonexistent tests are displayed in TCK5 GUI version.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBWS-2424">https://issues.jboss.org/browse/JBWS-2424</a> |
| 13272 | JBWS-2397   | The test have been removed: --- <ropalka> asoldano, regarding <a href="https://issues.jboss.org/browse/JBWS-2397">https://issues.jboss.org/browse/JBWS-2397</a> <ropalka> asoldano, this test was using the following native config <ropalka> --- <ropalka> <context-param> <ropalka> <param-name>jbossws-config-name</param-name> <ropalka> <param-value>.NET friendly Endpoint</param-value> <ropalka> </context-param> <ropalka> --- <ropalka> asoldano, and I oversaw that so I thought it can run against CXF too. <ropalka> asoldano, Native contained a lot of hacky fixes to make this .NET friendly endpoints work <ropalka> asoldano, this is not going to work on Apache CXF <ropalka> asoldano, I'm going to delete this test from shared-testsuite <ropalka> asoldano, any complains? Do you want to implement this feature at Apache CXF in near future? <asoldano> ropalka, fine with removing the test. We actually never run it with metro or cxf stack <asoldano> ropalka, the problem would really be another though <asoldano> ropalka, ie. verifying .net compatibility, but I assume that nowadays cxf is tested elsewhere wrt this topic | <a href="https://issues.jboss.org/browse/JBWS-2397">https://issues.jboss.org/browse/JBWS-2397</a> |
| 13273 | JBWS-2337   | Is there any specification mandating single or double quoted attributes for being used in these cases?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-2337">https://issues.jboss.org/browse/JBWS-2337</a> |
| 13274 | JBWS-2324   | Why postpone this issue constantly? It is a major performance problem?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-2324">https://issues.jboss.org/browse/JBWS-2324</a> |

| 13278 | JBWS-2106   | <p>Hi Andrew, given the current jbossws-cxf leverages apache cxf 2.1.3, I've taken a look at its sources and think it has its own implementation of what you need. In particular I've successfully tried setting the FaultTo in an outgoing message with this: import static org.apache.cxf.ws.addressing.JAXWSAConstants.CLIENT_ADDRESSING_PROPERTIES; import org.apache.cxf.ws.addressing.AddressingProperties; import org.apache.cxf.ws.addressing.AddressingPropertiesImpl; import org.apache.cxf.wsdl.EndpointReferenceUtils; ... Service service = Service.create(wsdlURL, serviceName); proxy = (ServiceInterface).getPort(ServiceInterface.class); Map&lt;String, Object&gt; requestContext = ((BindingProvider)proxy).getRequestContext(); AddressingProperties maps = new AddressingPropertiesImpl(); maps.setFaultTo(EndpointReferenceUtils.getEndpointReference("http://localhost:9999/decoupled_endpoint")); requestContext.put(CLIENT_ADDRESSING_PROPERTIES, maps); proxy.sayHello(); Would this be fine for your usecase when using the cxf stack integration? Can you take a look? Thanks.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWS-2106">https://issues.jboss.org/browse/JBWS-2106</a> |
| 13279 | JBWS-2106   | <p>Hi Alessio, Yes, cxf does implement the required AddressingProperties class but in a different package to the one used by Native, as are the other types provided by CXF. I probably could use their implementation to get my code to run on the CXF stack -- it looked to be pretty complete when I used it. The problem is how to use it compatibly with the Native JBossWS implementation. A lot of the methods in my current XTS build are currently parameterised with AddressingProperties instances or employ local values of this type. The same applies for the various dependent types employed in conjunction with AddressingProperties as AddressingBuilder, AttributedURI, Relationship, etc.. I need to be able to manipulate these types in order to construct faultto, replyto etc addresses. I don't really see how to generalize the code so that my code can operate over both stacks. Do you have any ideas how to resolve this?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBWS-2106">https://issues.jboss.org/browse/JBWS-2106</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | URL                                                                                               |

| 13280 | JBWS-2106   | I have bypassed this problem by creating an abstraction layer in the XTS code which hides all uses of the AddressingProperties class and its close relatives. Alternative implementations for Native and CXF are included (it comprises only 5 classes in all). See: <a href="http://anonsvn.jboss.org/repos/labs/labs/jbosstm/trunk/XTS/WS-C/dev/src11-cxf/org/jboss/jbossts/xts/wsaddr/map/">http://anonsvn.jboss.org/repos/labs/labs/jbosstm/trunk/XTS/WS-C/dev/src11-cxf/org/jboss/jbossts/xts/wsaddr/map/</a> and <a href="http://anonsvn.jboss.org/repos/labs/labs/jbosstm/trunk/XTS/WS-C/dev/src11-native/org/jboss/jbossts/xts/wsaddr/map/">http://anonsvn.jboss.org/repos/labs/labs/jbosstm/trunk/XTS/WS-C/dev/src11-native/org/jboss/jbossts/xts/wsaddr/map/</a> A consequence of adopting this abstraction layer is that the XTS code is now dual source/binary. This complicates the build, deploy and test processes. It would be easier if this compatibility library was deployed by JBossWS. This would also provide a starting point for other JBossWS clients who wish to have a portable API for WSA. Perhaps you could look at the code and i) see if it could be extended with any missing capabilities or revised and cleaned up ii) advise on the feasibility of transferring it from TS to WS. I have not yet commented the API of MAP and its related classes so the way it works may not be entirely clear. Amongst the trickier details the following are especially noteworthy. I dealt with the RelatesTo problem by limiting the API to only allow one relationship to be managed. There is some trickery required when attempting to install the outbound AddressingProperties for a port derived from a W3CEndpointReference. In Native the AddressingProperties are pre-installed by the getPort call with To defined and with the ReferenceProperty elements stashed as a property of the AddressingContext. In CXF you get a port which has no AddressingProperties object on the request context. The To/ReferenceProperty values seem to have been stashed away somewhere else so they still get used. So, when you add other WSA properties the routine which fetches the outbound map creates an AddressingProperties object on the fly at first access. | <a href="https://issues.jboss.org/browse/JBWS-2106">https://issues.jboss.org/browse/JBWS-2106</a> |
| 13281 | JBWS-2106   | Hi Alessio, Thanks for this. It looks ok to me -- did you change any of my original API? (apart from adding getReferenceParameters, that is). I didn't spot any difference.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBWS-2106">https://issues.jboss.org/browse/JBWS-2106</a> |
| 13282 | JBWS-2102   | Well, that's maybe what the blog entry says but is it actually what the JaxWS committee have decided? Have you asked Thomas Diesler (since he is JBoss' representative) whether this is the official position of the committee? Personally, I think this decision makes provision of the WS Addressing capability in JaxWS utterly pointless. JaxWS might just as well not bother attaching WS Addressing headers to messages if there is no simple API for clients/SEIs to set/detect the header values. If they have to resort to installing SOAP handlers to do this then they might as well either i) implement WS Addressing themselves or ii) invent their own (simpler) custom header protocol. The latter is not an option for me as the WSTX specs I am working to require WS-Addressing headers with quite specific values. So, if this is a final decision then it means I will have to provide my own implementation of the JBossWS AddressingProperties class and associated handlers and ensure it runs on all 3 stacks -- a pointless fork of the code.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-2102">https://issues.jboss.org/browse/JBWS-2102</a> |
| 13283 | JBWS-2090   | Which mailing lists do you require? Usually for a project we have the following: <projectName>-announce <projectName>-commits <projectName>-dev <projectName>-issues <projectName>-users Mark                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBWS-2090">https://issues.jboss.org/browse/JBWS-2090</a> |

| 13285 | JBWS-2090   | Mark, could you please make the forum messages go to the above mentioned mailing lists? IOW we need what we currently have with jbossws-users collecting messages coming from <a href="http://www.jboss.org/index.html?module=bb&amp;op=viewforum&amp;f=200">http://www.jboss.org/index.html?module=bb&amp;op=viewforum&amp;f=200</a> Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBWS-2090">https://issues.jboss.org/browse/JBWS-2090</a> |
| 13286 | JBWS-2090   | Mark, it's a long time we're waiting for this issue to be solved. Can you please give us any update on this or reassign in case you're not the one supposed to work on this? thank you                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-2090">https://issues.jboss.org/browse/JBWS-2090</a> |
| 13287 | JBWS-2031   | I added a test for the addressing client. I am handing over to you because its currently failing. Could you please have a look? Similar tests should be added for the other clients.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWS-2031">https://issues.jboss.org/browse/JBWS-2031</a> |

| 13291 | JBWS-1982   | This need to be looked at again. * The knowledge of how to (un)deploy stack X should not leak into framework * If AS has stack X.0.0 deployed and you want to deploy stack Y.0.1, how can framework that comes with Y.0.1 know how to undeploy X.0.0? The changes need to be rolled back until we know how to do this properly.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBWS-1982">https://issues.jboss.org/browse/JBWS-1982</a> |
| 13292 | JBWS-1967   | Richard, as this is marked as depending on JBAS-5257 which you closed, could you please see what still needs to be done here?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBWS-1967">https://issues.jboss.org/browse/JBWS-1967</a> |
| 13293 | JBWS-1928   | Apart from * Integrate Metro (wsit+jaxws) into jbossws build * Provide a metro based community release is the required functionality all there? i.e. Is the exclude file clean? Are there no unwanted FIXMEs?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBWS-1928">https://issues.jboss.org/browse/JBWS-1928</a> |

| 13295 | JBWS-1842   | What exactly needs to be done here? I can find the above mentioned class in <a href="https://svn.jboss.org/repos/jbossas/projects/metadata/trunk">https://svn.jboss.org/repos/jbossas/projects/metadata/trunk</a> but it is not clear to me who the producer and consumer of instances for the metadata object is. Is it correct to assume that somehow an instance of ServiceReferenceMetaData will be available through the DeploymentUnit and that [code] public interface ServiceRefHandler { final String BEAN_NAME = "WSServiceRefHandler"; enum Type {JAXRPC, JAXWS}; ServiceRefMeta newServiceRefMetaData(); Object newChild(ServiceRefElement ref, UnmarshallingContext navigator, String namespaceURI, String localName, Attributes attrs); void setValue(ServiceRefElement ref, UnmarshallingContext navigator, String namespaceURI, String localName, String value); void bindServiceRef(Context encCtx, String encName, UnifiedVirtualFile vfsRoot, ClassLoader loader, ServiceRefMetaData sref) throws NamingException; } [/code] needs to be extended to consume instances of ServiceReferenceMetaData?       | <a href="https://issues.jboss.org/browse/IBWS-1842">https://issues.jboss.org/browse/IBWS-1842</a> |
| 13296 | JBWS-1814   | Hi Alessio, This still has a bug wherein sometimes it throws an error saying: Cannot get the certificate for message encryption! Verify the keystore contents, considering the certificate is obtained through the alias specified in the encrypt configuration element or (server side only) through a single key used to sign the incoming This error is generated randomly i.e. sometimes it works but sometime it doesn't. Any help with this would be highly appreciated! Thanks in advance! Regards, Pratik Pai                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/IBWS-1814">https://issues.jboss.org/browse/IBWS-1814</a> |

| 13298 | JBWS-1777   | Alessio, I remember you did some progress here. What's the state of this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/IBWS-1777">https://issues.jboss.org/browse/IBWS-1777</a> |
| 13299 | JBWS-1707   | Do you guys mind if I tweak the status of some of those resolved bugs, to see what's going on? I'll put everything back how I found it before I'm done.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/IBWS-1707">https://issues.jboss.org/browse/IBWS-1707</a> |
| 13300 | JBWS-1670   | I've just done some tests, this could be easily fixed resurrecting the InvocationExceptionHandler stuff I committed last month (just need a little modification to well fit into the latest deployment architecture). However, I suspect there might be something wrong with the InvocationExceptionHandler idea, since it has been deleted... am I missing something? Would you like me to take care of this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/IBWS-1670">https://issues.jboss.org/browse/IBWS-1670</a> |
| 13301 | JBWS-1655   | Hi Thomas, could you please provide more details about this issue, how to reproduce etc, or is there any existing test case? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/IBWS-1655">https://issues.jboss.org/browse/IBWS-1655</a> |
| 13302 | JBWS-1612   | Tom Fennelly says: I'm interested in it from a JBossESB perspective i.e. being able to expose JBossWS endpoints through the ESB => making the endpoints consumable over any channel supported by the ESB (HTTP, JMS, FTP etc). I had some success. However, it involved using some JBossWS classes that I'm not sure are part of its public API => meaning they could change in the future, breaking integration with the ESB. The ESB class of most interest is (specifically, the "process" and "getServiceEndpoint" methods): <a href="http://anonsvn.labs.jboss.com/labs/jbossesb/trunk/product/core/listeners/src/org/jboss/soa/esb/actions/soap/JBossWSAdapter.java">http://anonsvn.labs.jboss.com/labs/jbossesb/trunk/product/core/listeners/src/org/jboss/soa/esb/actions/soap/JBossWSAdapter.java</a> Was just wondering if you could throw an eye over this and let us know what you think. Mark (Little) said that one of your customers has done something like this in the past and ran into issues with it re API changes. If so, what are the possibilities of making the relevant code part of a public API? | <a href="https://issues.jboss.org/browse/IBWS-1612">https://issues.jboss.org/browse/IBWS-1612</a> |
| 13303 | JBWS-1552   | OK, so "rpc/encoded" is supported ... as is", but if you use it, it throws a WSEException... I'm confused??? Can it be used or not? And if so, how can we use it without getting an exception thrown? Thanks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/IBWS-1552">https://issues.jboss.org/browse/IBWS-1552</a> |
| 13304 | JBWS-1527   | Thomas, Did you verify the ejb21 ws tests as part of your TCK testing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/IBWS-1527">https://issues.jboss.org/browse/IBWS-1527</a> |
| 13305 | JBWS-1526   | How come the interop tests pass with JDK6? All interop tests should run against the public endpoints. <a href="http://jbws.dyndns.org:8180/hudson/view/Native%20Tests/">http://jbws.dyndns.org:8180/hudson/view/Native%20Tests/</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/IBWS-1526">https://issues.jboss.org/browse/IBWS-1526</a> |
| 13306 | JBWS-1525   | Jason, could you please have a look if this is critical for 1.2.0? If not please reschedule for 1.2.1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/IBWS-1525">https://issues.jboss.org/browse/IBWS-1525</a> |
| 13307 | JBWS-1525   | I fixed JBWS-1529, however the test still fails because the service and client are referring to differing WSDL definitions. The service is using two namespaces, and the service name ends with "Service". The client is using one namespace without the "Service". What should the test be testing. Are you attempting to test the same WSDL that we published with the previous JSR-181 implementation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/IBWS-1525">https://issues.jboss.org/browse/IBWS-1525</a> |
| 13308 | JBWS-1508   | Could you please incude those pictures that you generated from the schema? This issues is relevant for <a href="http://tdell.dyndns.org/mediawiki/index.php/JAX-RPC_User_Guide">http://tdell.dyndns.org/mediawiki/index.php/JAX-RPC_User_Guide</a> as well                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/IBWS-1508">https://issues.jboss.org/browse/IBWS-1508</a> |
| 13309 | JBWS-1506   | Are you sure you want to maintain the BPEL docu in two locations? <a href="http://tdell.dyndns.org/mediawiki/index.php/JAX-RPC_User_Guide#WS-BPEL">http://tdell.dyndns.org/mediawiki/index.php/JAX-RPC_User_Guide#WS-BPEL</a> <a href="http://tdell.dyndns.org/mediawiki/index.php/JAX-WS_User_Guide#WS-BPEL">http://tdell.dyndns.org/mediawiki/index.php/JAX-WS_User_Guide#WS-BPEL</a> There should be no duplication of content between th JAX-RPC, JAX-WS user guide                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/IBWS-1506">https://issues.jboss.org/browse/IBWS-1506</a> |
| 13310 | JBWS-1496   | I ran the test three times in a row, restarted app server, then ran test three more times. I could not reproduce the test failure. prepare: [echo] -----<br>[echo] jboss.home = C:/dev/jbossas/branches/Branch_4_2/build/output/jboss-4.2.0.CR1-ejb3 [echo] tomcat.home = \${tomcat.home} [echo] java.home = C:/dev/jdk1.5.0_10/jre [echo] endorsed = C:/dev/jbossas/branches/Branch_4_2/build/output/jboss-4.2.0.CR1-ejb3/lib/endorsed [echo] excludesfile = tests-jboss42-excludes.txt [echo] ----- one-test: [junit] Running org.jboss.test.ws.jaxrpc.samples.wsbpel.hello.BpelHelloTestCase [junit] Tests run: 2, Failures: 0, Errors: 0, Time elapsed: 5.641 sec I do see the JobExecutorThread error. The problem is the thread starts before the data source inside jbpmp-bpel.sar is deployed. Despite the stack trace, the error is harmless as the thread tries again later. This issue will be addressed as part of BPEL-229. What are the steps to reproduce the problem?                                                                                                                                        | <a href="https://issues.jboss.org/browse/IBWS-1496">https://issues.jboss.org/browse/IBWS-1496</a> |
| 13311 | JBWS-1474   | AFAIC, 1.2.0 is production ready for all included pieces. Isn't it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/IBWS-1474">https://issues.jboss.org/browse/IBWS-1474</a> |
| 13312 | JBWS-1469   | Will JBossWS-1.2.0 be made available with JBossAS-4.0.5.SP1 or 4.0.6?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/IBWS-1469">https://issues.jboss.org/browse/IBWS-1469</a> |
| 13313 | JBWS-1449   | This feature request is not clear to me. What does the user want? I can understand it two ways: * Either user wants WSDL to be generated in the form WSDL + external file schema imports (schema is not inlined in WSDL but imported instead) * Or user wants Java2Schema command line tool                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/IBWS-1449">https://issues.jboss.org/browse/IBWS-1449</a> |
| 13314 | JBWS-1443   | Carlo says: I've made an implementation which passes the test: <a href="http://jira.jboss.com/jira/browse/EJBTHREE-757?page=com.cenqua.fisheye.jira:fisheye-tabpanel">http://jira.jboss.com/jira/browse/EJBTHREE-757?page=com.cenqua.fisheye.jira:fisheye-tabpanel</a> I turned the tables by pulling in the message context via MessageContextAssociation. Do you see any problems with this? The one thing I don't like is the circular dependencies between ejb3 and ws.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/IBWS-1443">https://issues.jboss.org/browse/IBWS-1443</a> |

| 13315 | JBWS-1443   | This approach is probably not the right way to go. How about: <code>WebServiceContextCallback callback = new WebServiceContextCallback() { public MessageContext getMessageContext() { ... } public WebServiceContext getWebServiceContext() { ... } }; sessionContext.registerWebServiceContextCallback(callback);</code> The <code>WebServiceContextCallback</code> interface would live in the <code>ejb3</code> code base. The dependency would be unidirectional, as it is now already.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWS-1443">https://issues.jboss.org/browse/JBWS-1443</a> |
| 13316 | JBWS-1443   | Ok, works on jboss50. Are you planning to backport this to jboss40, jboss42?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWS-1443">https://issues.jboss.org/browse/JBWS-1443</a> |
| 13317 | JBWS-1443   | what is your target platform? Have a look at <a href="http://jbws.dyndns.org:8180/hudson/">http://jbws.dyndns.org:8180/hudson/</a> for tests that have passed QA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBWS-1443">https://issues.jboss.org/browse/JBWS-1443</a> |
| 13318 | JBWS-1442   | trunk Branch 4_0jdk1.4 cannot compile. Does java need additional libs from these required by 1.0 branch?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBWS-1442">https://issues.jboss.org/browse/JBWS-1442</a> |
| 13319 | JBWS-1442   | Can you provide a summary of problem?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBWS-1442">https://issues.jboss.org/browse/JBWS-1442</a> |
| 13320 | JBWS-1442   | I followed the instructions in the wiki. When I try compile the testsuite it fails just the same way as the cc build (see build artifacts for details ;) Prabhat, is testsuite compiling by you?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBWS-1442">https://issues.jboss.org/browse/JBWS-1442</a> |
| 13321 | JBWS-1442   | Thanks for telling me about JBWS-1458 Do you see any problem with jdk15 builds? They seem to me fine.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBWS-1442">https://issues.jboss.org/browse/JBWS-1442</a> |
| 13322 | JBWS-1442   | Should I remove cruisecontrol builds then? btw I don't see the hudson instance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-1442">https://issues.jboss.org/browse/JBWS-1442</a> |
| 13323 | JBWS-1433   | Darran, I believe you implemented this. Is this code in trunk?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-1433">https://issues.jboss.org/browse/JBWS-1433</a> |
| 13324 | JBWS-1402   | What is the relation of this bug to bug <a href="http://jira.jboss.org/jira/browse/JBWS-1911">http://jira.jboss.org/jira/browse/JBWS-1911</a> ? Isn't it fixed already?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBWS-1402">https://issues.jboss.org/browse/JBWS-1402</a> |
| 13325 | JBWS-1397   | Thomas, Does this affect all TestCases written for JBoss-5.0.x?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBWS-1397">https://issues.jboss.org/browse/JBWS-1397</a> |
| 13326 | JBWS-1381   | Remy, could you please comment and reassign?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWS-1381">https://issues.jboss.org/browse/JBWS-1381</a> |
| 13327 | JBWS-1330   | <code>http://www.jboss.com/index.html?module=bb&amp;op=viewtopic&amp;p=4041299#4041299</code> My test clients have code like this <code>Code: InitialContext iniCtx = getInitialContext(); OrganizationHome home = (OrganizationHome)iniCtx.lookup("/ejb/RoleSecuredLSB"); OrganizationRemote bean = null; try { bean = home.create(); fail("Security exception expected"); } catch (Exception e) { // all cool, now try again with valid credentials SecurityAssociation.setPrincipal(new SimplePrincipal(USERNAME)); SecurityAssociation.setCredential(PASSWORD); bean = home.create(); } This no longer works. How is the client now supposed to provide valid principal/credential</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWS-1330">https://issues.jboss.org/browse/JBWS-1330</a> |
| 13328 | JBWS-1309   | There @WebContext annotation seems to not be fully-covered in the EJB3 deployment descriptor. Please see the discussion on <a href="http://www.jboss.com/index.html?module=bb&amp;op=viewtopic&amp;t=140182">http://www.jboss.com/index.html?module=bb&amp;op=viewtopic&amp;t=140182</a> this thread[url] of the JBossWS forum regarding the issue. Could you re-open this issue so that the security-overrides that are missing can be addressed? Evidently the stuff we require                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBWS-1309">https://issues.jboss.org/browse/JBWS-1309</a> |

Thanks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWS-1308">https://issues.jboss.org/browse/JBWS-1308</a> |
| 13330 | JBWS-1307   | is there any way we can get access to this documentation? I can not seem to access <a href="http://jbws.dyndns.org">jbws.dyndns.org</a> . I can access all the documentation for other projects since they are hosted on <a href="http://labs.jboss.org">labs.jboss.org</a> or <a href="http://docs.jboss.org">docs.jboss.org</a> . Thanks, Gary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBWS-1307">https://issues.jboss.org/browse/JBWS-1307</a> |
| 13331 | JBWS-1297   | How to obtain the fault bean: 1.a If the exception class has a <code>getFaultInfo</code> method <code>**and**</code> WebFault annotation: (note: how to interpret the "and" above? an exception having a WebFault annotation but not a <code>getFaultInfo</code> method does not comply with the semantics of the annotation. should we bomb?) 1.a.1 invoke <code>getFaultInfo</code> on the exception object; the return instance goes to JAXB 2.b Otherwise 2.b.1 retrieve the bean class from the fault metadata 2.b.2 instantiate the bean class 2.c.2 copy the non-excluded properties from the exception instance to the bean instance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWS-1297">https://issues.jboss.org/browse/JBWS-1297</a> |
| 13332 | JBWS-1297   | Marshalling is done. The outgoing SOAP messages look good, although the tests still fail because unmarshalling is not done yet. I modified <code>JSR181MetaBuilder</code> to populate the XML type for the fault bean. Currently, I copy the properties using low-level reflection. Can you point me to the accessor API you are referring to? I'll commit what I have and work on unmarshalling the rest of the evening.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBWS-1297">https://issues.jboss.org/browse/JBWS-1297</a> |
| 13333 | JBWS-1296   | This thing seems to be really trivial to do. Also this is apparently used frequently and quite critical as for full blown WS-Security stack. Please consider implementing it in 2.0.3 or something. All Metro, Axis2 and CXF does support this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBWS-1296">https://issues.jboss.org/browse/JBWS-1296</a> |
| 13334 | JBWS-1194   | This is the build.properties file I use to run the test script: <code>jboss.jdk14.src.url=http://anonsvn.jboss.org/repos/jbossas/tags/JBoss_4_0_5_GA_jdk14.distro.name=jboss-4.0.5.GA</code> #only set this if you need to overwrite the one from <code>jdk14.src.url</code> #provide the absolute dir location <code>#jboss.jdk14.home=jboss.jdk15.src.url=http://anonsvn.jboss.org/repos/jbossas/branches/Branch_4_2_jdk15.distro.name=jboss-4.2.0.CR1-ejb3</code> #only set this if you need to overwrite the one from <code>jdk15.src.url</code> #provide the absolute dir location <code>#jboss.jdk15.home= tomcat.url=http://archive.apache.org/dist/tomcat/tomcat-5/v5.5.17/bin tomcat.zip.file=apache-tomcat-5.5.17.zip tomcat.home.name=apache-tomcat-5.5.17</code> #Tomcat home. This is required to run samples test eventhough target server is JBoss. #Will ask WS team to fix this. Only when needs to be overwritten with your tomcat <code>#tomcat.home= #jboss webservices svn repository url jbossws.svn.url=https://svn.jboss.org/repos/jbossws/branches/jbossws-1.0/</code> #This is needed for logging purpose <code>jbossws.version=1.0.4.GA</code> #jboss-head location <code>jboss-head= #JDK1.5 home java15=/opt/jdk1.5.0_05 #JDK 1.4. Home. This jdk should have BouncyCastle security provider jar. #See the WIKI http://wiki.jboss.org/wiki/Wiki.jsp?page=JBWSFAQBuildAndInstallJBoss40x java14=/home/pjha/j2sdk1.4.2_09</code> #Ant Home. WS needs some specific jars in Ant. The best way is to #point ant home to <code>jboss-head/tools</code> . You need to copy <code>log4j.jar</code> to <code>#jboss-head/tools/lib</code> though. No need to change this. <code>ant-ws=-/ws-tools jdk14.deploy=deploy-jbossws14 jdk15.deploy=deploy-jbossws</code> | <a href="https://issues.jboss.org/browse/JBWS-1194">https://issues.jboss.org/browse/JBWS-1194</a> |
| 13335 | JBWS-1178   | Where did you find the source code for jbossws 1.0.3? It is not available at the download page (only binary, source for newer versions only) and I couldn't find it in SVN either. This is a break of JBoss own licence...                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBWS-1178">https://issues.jboss.org/browse/JBWS-1178</a> |
| 13336 | JBWS-1172   | I cannot find any test for the @SchemaValidation annotation on a webservice, is this already supported ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBWS-1172">https://issues.jboss.org/browse/JBWS-1172</a> |
| 13337 | JBWS-1172   | Also, when I add this to my webservice: <code>@SchemaValidation( enabled=true, errorHandler=nl.kb.hrd.dd.karakterisering.impls.ValidationErrorHandler.class, schemaLocation="ergens")</code> and send an invalid request, nothing happens. The request just gets passed, the handler is not called, and I see no error message about the invalid schemaLocation. A related question: in the jax-ws RI, it is not necessary to specify the schema location. Why is it needed here ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBWS-1172">https://issues.jboss.org/browse/JBWS-1172</a> |

| 13339 | JBWS-1162   | The recent email conversations are an indication that this issue is not resolved properly. As I suggested before, we need a web application that any team member can access and initiate a testrun in a non-conflicting manner. Can this be done?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBWS-1162">https://issues.jboss.org/browse/JBWS-1162</a> |

| 13341 | JBWS-1136   | Will this JIRA allow POJO WAR JSEs to be both authenticated with the configured JBossSX login module and allow them to be authorized with the standard declarative WAR web.xml <security-constraint> tag structure? rjb                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBWS-1136">https://issues.jboss.org/browse/JBWS-1136</a> |
| 13342 | JBWS-1136   | Given I agree with you about what you say on POJO endpoints, we could nevertheless do what the issue title says i.e. allowing a username element in the require list of the wsse configuration the same way we have for the timestamp, for example. This way we could reject requests that do not have a Username Token. What do you think about?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBWS-1136">https://issues.jboss.org/browse/JBWS-1136</a> |
| 13343 | JBWS-1119   | Hi Jason, was this actually merged to the trunk and eventually removed later? I'm asking this because I can't find this in the trunk and somebody is asking for this feature on the forum. I can work on this and port from tag 1.0.3 to the trunk of course, just want to know if it was not done or was reverted because of some problems discovered later and not mentioned here. Thank you.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBWS-1119">https://issues.jboss.org/browse/JBWS-1119</a> |
| 13344 | JBWS-1119   | Will this issue be included in the JBoss.native-2.0.4 then? /Michael                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-1119">https://issues.jboss.org/browse/JBWS-1119</a> |
| 13345 | JBWS-1090   | As of <a href="https://svn.jboss.org/repos/jbossws/trunk@938">https://svn.jboss.org/repos/jbossws/trunk@938</a> this test is not yet available in trunk, or is it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWS-1090">https://issues.jboss.org/browse/JBWS-1090</a> |
| 13346 | JBWS-1086   | Why should this being resolved "Out of Date"?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBWS-1086">https://issues.jboss.org/browse/JBWS-1086</a> |
| 13347 | JBWS-1077   | Does this include updating the WS-Security documentation?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBWS-1077">https://issues.jboss.org/browse/JBWS-1077</a> |
| 13348 | JBWS-1065   | Is there a way to let the build scripts check the Xerces version?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBWS-1065">https://issues.jboss.org/browse/JBWS-1065</a> |
| 13349 | JBWS-937    | What is the purpose of supporting wscompile options? The old axis based stack jboss-ws4ee is deprecated and will no longer be worked on. All soapui integration efforts should focus on jbossws                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBWS-937">https://issues.jboss.org/browse/JBWS-937</a>   |
| 13350 | JBWS-925    | The referenced document ( <a href="http://java.sun.com/developer/technicalArticles/xml/fastinfoset/">http://java.sun.com/developer/technicalArticles/xml/fastinfoset/</a> ) is over four years old. Since the time it was published several of your open source competitors have integrated Fast Infoset into their stacks. This includes Apache's Axis2 ( <a href="http://wso2.org/library/2686">http://wso2.org/library/2686</a> ) which is used by Geronimo ( <a href="http://geronimo.apache.org/">http://geronimo.apache.org/</a> ) and Jonas ( <a href="http://jonas.objectweb.org/">http://jonas.objectweb.org/</a> ). It also includes Sun's reference implementation of JAX-WS ( <a href="https://jax-ws.dev.java.net/">https://jax-ws.dev.java.net/</a> ) which is the basis of the Metro Web Service Stack ( <a href="https://metro.dev.java.net/">https://metro.dev.java.net/</a> ) used by Glassfish ( <a href="https://glassfish.dev.java.net/">https://glassfish.dev.java.net/</a> ). I don't know anything about commercial vendors, but I assume coverage is good there as well. The reason I bring this up is because I am endeavoring to write the highest performing web service possible with open source software. Right now, we have standardized on JBoss, but the benefits of Fast Infoset look large enough that they might justify changing application servers. Is there any possibility Fast Infoset could be integrated into the 2.0.x codebase rather than the 2.1.x codebase? | <a href="https://issues.jboss.org/browse/JBWS-925">https://issues.jboss.org/browse/JBWS-925</a>   |
| 13351 | JBWS-925    | I see that this ticket was changed to "Provide initial support for FastInfoset." What does "initial support" entail?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-925">https://issues.jboss.org/browse/JBWS-925</a>   |
| 13352 | JBWS-922    | is there a webservice to remotely list deployed webservices or should we start by parsing the html returned by /jbossws/services?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBWS-922">https://issues.jboss.org/browse/JBWS-922</a>   |
| 13353 | JBWS-914    | > > How is the download count managed? This is probably not setup to work > with the jbossws download area. Yes, you need to enable counters for your project as defined in this wiki: <a href="http://labs.jboss.org/wiki/DownloadCounters">http://labs.jboss.org/wiki/DownloadCounters</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBWS-914">https://issues.jboss.org/browse/JBWS-914</a>   |
| 13354 | JBWS-871    | According to the schema <complexType name='IntegerArray'> <sequence> <element name='value' nillable='true' maxOccurs='unbounded' minOccurs='0' type='int'/> </sequence> </complexType> A null array can only be expressed like this <Integer_1 xmlns:xsi='http://www.w3.org/2001/XMLSchema-instance'> <ns:value xmlns:ns='http://jbws871.ws.test.jboss.org/jaws' xsi:nil='1'/> </Integer_1> which is no different to an array with a single null value. Is it true that the endpoint must be able to deal with that ambiguity?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBWS-871">https://issues.jboss.org/browse/JBWS-871</a>   |
| 13355 | JBWS-871    | "which is no different to an array with a single null value. Is it true that the endpoint must be able to deal with that ambiguity?" Yes, when an array is represented as a single element definition, in other words no wrapping complex type, then a null value is semantically equivalent to inserting a single null value. Endpoints should use empty arrays instead of null to prevent the obvious problems that come from this. -Jason                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBWS-871">https://issues.jboss.org/browse/JBWS-871</a>   |
| 13356 | JBWS-868    | I got some questions: - where are the user guide docbook sources? - what do I have to do for the existing bpel tests to get packaged in the sample archive?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBWS-868">https://issues.jboss.org/browse/JBWS-868</a>   |
| 13357 | JBWS-868    | Can you elaborate?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWS-868">https://issues.jboss.org/browse/JBWS-868</a>   |
| 13358 | JBWS-868    | BPEL does not explicitly depend on AS, but it requires JMS. Does Messaging run on plain Tomcat? The question is, where do I take bpel.sar from? Do I include it in the resources of the sample (1.4MB!) or get it from the repository? Is there a sample with similar requirements?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWS-868">https://issues.jboss.org/browse/JBWS-868</a>   |

| 13360 | JBWS-868    | <p>Aren't samples intended to be run after (a) the sample suite is built and (b) the sample jars are packaged? It looks like you are trying to run them as a normal unit test.</p> <p>jbpm-bpel.sar is fetched from the remote repository as part of the samples build process. Once you build the samples, please change to the jaxrpc/wsbpel directory and execute the "tests" target there: C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\jaxrpc\wsbpel&gt;ant tests Buildfile: build.xml init: [echo] jboss.home = C:/dev/jboss/Branch_4_0/build/output/jboss-4.0.5.GA-ejb3 [echo] tomcat.home = \$(tomcat.home) [echo] java.home = C:/dev/jdk1.5.0_07\jre [echo] node0 = AGUIZAR compile: [javac] Compiling 1 source file to C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\output\classes copy-resources: zip-processes: check-jpbmpbel: install-jpbmpbel: [mkdir] Created dir: C:\dev\jboss\Branch_4_0\build\output\jboss-4.0.5.GA-ejb3\server\default\deploy\jbpm-bpel.sar [unjar] Expanding: C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\lib\jbpm-bpel.sar into C:\dev\jboss\Branch_4_0\build\output\jboss-4.0.5.GA-ejb3\server\default\deploy\jbpm-bpel.sar generate-sources: [move] Moving 2 files to C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\output\wstools\java compile-generated: [javac] Compiling 2 source files to C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\output\classes copy-generated: [copy] Copying 4 files to C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\output\resources jars: [war] Building war: C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\output\libs\jaxrpc-samples-wsbpel- hello.war [jar] Building jar: C:\dev\jbossws\jbossws-1.0\output\jbossws-samples-1.0.4.DEV\output\libs\jaxrpc-samples-wsbpel- hello-client.jar store-processes: [storeprocess] target url: http://localhost:8080/jbpm-bpel/deploy?processfile=file%3A%2FC%3A%2Fdev%2Fjbossws%2Fjbossws-1.0%2Foutput%2Fjbossws-samples-1.0.4.DEV%2Foutput%2Flibs%2Fjaxrpc-samples-wsbpel- hello-process.zip [storeprocess] got response code: 200 tests: init: [echo] jboss.home = C:/dev/jboss/Branch_4_0/build/output/jboss-4.0.5.GA-ejb3 [echo] tomcat.home = \$(tomcat.home) [echo] java.home = C:/dev/jdk1.5.0_07\jre [echo] node0 = AGUIZAR test: [junit] Running org.jboss.test.ws.jaxrpc.samples.wsbpel.hello.BpelHelloTestCase [junit] Tests run: 2, Failures: 0, Errors: 0, Time elapsed: 5.015 sec</p> | <a href="https://issues.jboss.org/browse/JBWS-868">https://issues.jboss.org/browse/JBWS-868</a> |
| 13361 | JBWS-865    | Since this fix is slated for JBossWS 1.0.1, will there be a workaround that I can do for the JBoss AS 4.0.4 GA release to get around this issue until JBossWS 1.0.1 is released?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/JBWS-865">https://issues.jboss.org/browse/JBWS-865</a> |
| 13362 | JBWS-839    | Could you please write a wiki about the bouncy castle issue? Can we automate this for our testruns?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWS-839">https://issues.jboss.org/browse/JBWS-839</a> |
| 13363 | JBWS-803    | <p>JBossEntityResolver How to apply the patch (jboss-entity-resolver-V3-patch.zip): 1) Apply the patch-common.txt in your common project (HEAD). (If you are using Eclipse, you can apply the patch: right mouse click to the commons project&gt; team &gt; apply patch) 2) Apply the patch-server.txt in your server project (HEAD). The current implementation of the JBossEntityResolver distinguishes between an in-server mode and a client-mode. In-server-mode: When used inside the application server the jax-ws-catalog.xml is loaded from the \$(jboss.server.conf.dir). This catalog references entities located in \$(jboss.server.conf.dir)/catalog/[dtd schema]. In-client-mode: When used from a remote client, all catalog files located in [META-INF/jax-ws-catalog.xml]and [client-resources/jax-ws-catalog.xml] are considered (class path resources). The jboss-all-client.jar contains a folder (client-resources[dtd  schema]) where client-side resources are located and referenced from the client-resources/jax-ws-catalog.xml (also included in this jar file) Potential discussion topics: I) Currently the schema/dtd files are located: a) In the server project for the in-server mode -&gt; the build process copy this files to the \$(jboss.server.conf.dir) b) In the common project for the client access -&gt; this build process copy this files to the jboss-common.jar and later to the jboss-all-client.jar Someone who knows the build process better than me should unify this. II) To distinguish between the in-server/ client mode the System.getProperty("jboss.home.dir") is used. If this property is not null, then the resolver is running in the in-server mode. Maybe there is a better way to find out if the JBossEntityResolver is used inside the application server or not.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBWS-803">https://issues.jboss.org/browse/JBWS-803</a> |

| 13369 | JBWS-678    | How to apply the patch: The solution is mainly realized in the common project. A new global JBoss oasis catalog file (jax-ws-catalog.xml) is located in the server project. This file is copied during the installation to the conf directory. It contains the references to the entities (located in /docs/dtd, and /docs/schema/). Before, the references were hard coded in the JBossEntityResolver class. The new JUnit tests are located in the testsuite project. 1) Apply the patch-common.txt in your common project (HEAD). (If you are using Eclipse, you can apply the patch: right mouse click to the commons project? team ? apply patch) 2) Apply the patch-server.txt in your server project (HEAD). 3) Apply the patch-testsuite.txt in your testsuite project (HEAD).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBWS-678">https://issues.jboss.org/browse/JBWS-678</a> |
| 13370 | JBWS-678    | Reopen The JBossEntityResolver is not only used by server components, but also in remote clients. (i.e. many of the web service tests use application clients to connect to a remote server) From what I can see web service tests fail because entities cannot be loaded on the client side. How is this supposed to work? Also, I suggest that entities are configured on a per server basis and not loaded from a global location like /docs/[dtd schema]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBWS-678">https://issues.jboss.org/browse/JBWS-678</a> |
| 13371 | JBWS-678    | !! New patch available> attached to the task: <a href="http://jira.jboss.org/jira/browse/JBWS-803">http://jira.jboss.org/jira/browse/JBWS-803</a> !! How to apply the patch (jboss-entity-resolver-V3-patch.zip): 1) Apply the patch-common.txt in your common project (HEAD). (If you are using Eclipse, you can apply the patch: right mouse click to the commons project> team > apply patch) 2) Apply the patch-server.txt in your server project (HEAD). The current implementation of the JBossEntityResolver distinguishes between an in-server mode and a client-mode. In-server-mode: When used inside the application server the jax-ws-catalog.xml is loaded from the \$(jboss.server.conf.dir). This catalog references entities located in \$(jboss.server.conf.dir)/catalog/[dtd schema]. In-client-mode: When used from a remote client, all catalog files located in [META-INF/jax-ws-catalog.xml] and (client-resources/jax-ws-catalog.xml) are considered (class path resources). The jboss-all-client.jar contains a folder (client-resources\[dtd schema]) where client-side resources are located and referenced from the client-resources/jax-ws-catalog.xml (also included in this jar file) Potential discussion topics: I) Currently the schema/dtd files are located: a) In the server project for the in-server mode -> the build process copy this files to the \$(jboss.server.conf.dir) b) In the common project for the client access -> this build process copy this files to the jboss-common.jar and later to the jboss-all-client.jar Someone who knows the build process better than me, should unify this. II) To distinguish between the in-server/ client mode the System.getProperty("jboss.home.dir") is used. If this property is not null, then the resolver is running in the in-server mode. Maybe there is a better way to find out if the JBossEntityResolver is used inside the application server or not.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBWS-678">https://issues.jboss.org/browse/JBWS-678</a> |
| 13372 | JBWS-669    | While you look at this, could you pls explore the possibilities of exposing MBeans as WS endpoints?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWS-669">https://issues.jboss.org/browse/JBWS-669</a> |
| 13373 | JBWS-669    | Have you tried the depends clause in jboss-web?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBWS-669">https://issues.jboss.org/browse/JBWS-669</a> |
| 13374 | JBWS-652    | What about JSR-196 (JASPI) which does talk about securing/validating SOAP messages?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWS-652">https://issues.jboss.org/browse/JBWS-652</a> |

| 13376 | JBWS-522    | Tom, is it possible to get at the HTTP return code? The 404 is not available from the HTTP headers. 2005-12-13 20:56:19,071 DEBUG<br>[org.jboss.remoting.transport.http.HTTPClientInvoker] connect called for: org.jboss.remoting.transport.http.HTTPClientInvoker@191f801 2005-12-13 20:56:19,071 DEBUG<br>[org.jboss.remoting.transport.http.HTTPClientInvoker] Setting request header with SOAPAction : " 2005-12-13 20:56:19,071 DEBUG<br>[org.jboss.remoting.transport.http.HTTPClientInvoker] Setting request header with Content-Type : text/xml 2005-12-13 20:56:19,081 DEBUG<br>[org.jboss.ws.binding.soap.SOAPMessageUnmarshaller] Got HTTP Header name=[Content-Length] value=[960] 2005-12-13 20:56:19,081 DEBUG<br>[org.jboss.ws.binding.soap.SOAPMessageUnmarshaller] Got HTTP Header name=[Date] value=[Tue, 13 Dec 2005 19:56:19 GMT] 2005-12-13 20:56:19,081 DEBUG<br>[org.jboss.ws.binding.soap.SOAPMessageUnmarshaller] Got HTTP Header name=[Server] value=[Apache-Coyote/1.1] 2005-12-13 20:56:19,081 DEBUG<br>[org.jboss.ws.binding.soap.SOAPMessageUnmarshaller] Got HTTP Header name=[Content-Type] value=[text/html;charset=utf-8] 2005-12-13 20:56:19,081 DEBUG<br>[org.jboss.ws.binding.soap.SOAPMessageUnmarshaller] Got HTTP Header name=[WWW-Authenticate] value=[Basic realm="EJBServiceEndpointServlet Realm"] 2005-12-13 20:56:19,141 DEBUG [org.jboss.ws.soap.MessageFactoryImpl] createMessage: [contentType=text/html; charset=utf-8] 2005-12-13 20:56:19,141 ERROR<br>[org.jboss.ws.binding.soap.SOAPMessageUnmarshaller] Cannot unmarshall SOAPMessage javax.xml.soap.SOAPException: Unsupported content type: text/html; charset=utf-8                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBWS-522">https://issues.jboss.org/browse/JBWS-522</a> |
| 13377 | JBWS-522    | I see this key=value pair in metadata null=[HTTP/1.1 200 OK] Is the null key value intended? Maybe it should be something more descriptive, like org.jboss.remoting.http-header-line                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBWS-522">https://issues.jboss.org/browse/JBWS-522</a> |
| 13378 | JBWS-515    | may I ask what version of the spec this is?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWS-515">https://issues.jboss.org/browse/JBWS-515</a> |
| 13379 | JBWS-454    | Jason, can we (a support customer) count on this issue being fixed in 4.0.4?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-454">https://issues.jboss.org/browse/JBWS-454</a> |
| 13380 | JBWS-434    | Hi Alexey, can you give me an estimate on this issue? I did take a look myself, but it seems to be a fairly complex problem that requires changes at the marshalling and unmarshalling components. The eventing implementation depends on it, and I think about an intermediate solution to keep my subproject moving. Regards, Heiko                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBWS-434">https://issues.jboss.org/browse/JBWS-434</a> |

| 13382 | JBWS-374    | How are we going to address org.jboss.xb.binding.JBossXBRuntimeExcepion: Global type definition is not found: {http://org.jboss.ws/anonymous/types}>root My initial thought was, that the JBossXSModel should support these types of lookup and return the XSModel object that represents the anonymous type associated with the global element {http://org.jboss.ws/anonymous/types}root. If that is what we agree upon, JBWS-374 is not (yet) your issue. Anil, looking at the debug log, I see that the anonymous types are not serialized correctly (they are missing). If this is a serialization problem this issue is minor. If they are indeed missing from the model, it would be serious. Jason, if Alex delegates this back to us and demands JBossXSModel lookup for anonymous type names, could you take care of that? All cases defined by the JSR-109 spec should be supported. See org.jboss.test.ws.anonymous.AnonymousTypesTestCase                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBWS-374">https://issues.jboss.org/browse/JBWS-374</a> |
| 13383 | JBWS-374    | Alexey, Since the jaxrpc-mapping data is passed to jbosssxb (via jbosssxb specific mappings), and the JBossXSModel is just a schema model, is it possible for you to add support for the anonymous type expressions that are defined in jsr109? Basically it amounts to using expression based qnames such as typeNS:>>root>inside to specify which anonymous type to map to which field. -Jason                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBWS-374">https://issues.jboss.org/browse/JBWS-374</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | URL                                                                                             |

| 13384 | JBWS-374    | I have implemented this in JBossXSModel, and marshalling seems to work properly now. However, unmarshalling fails because JBossXB works off special object heirarchy that is copied from JBossXSModel. Since anonymous types are not true types, and thus not registered under their names the type binding skips them. We need the ability to add type definitions to an existing JBossXB schema binding, perhaps by modifying XsdBinder to expose some of its private methods. If there was a way to add XSTypeDefinitions and XSElementDeclarations, then I could modify JAXBUnmarshaller to scroll through the anonymous types and add them. Alexey, What are your thoughts on this? All anonymous types and elements can be retrieved from JBossXSModel as maps by calling getAnonymousElements() and getAnonymousTypes(). -Jason                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBWS-374">https://issues.jboss.org/browse/JBWS-374</a> |
| 13385 | JBWS-374    | I've added a couple of methods to the XsdBinder. Is this enough?<br>/** * @deprecated * * <i>This method is added temporary to get anonymous type binding working in JBossWS. * It will be removed when anonymous type binding in JBossWS is implemented properly. * No one else should use this method.</i> * * <p>This method binds a type definition and adds it as a global type to the passed in schema binding. * * @param schema schema binding the type should be added to * @param type type definition to be bound */ public static void bindType(SchemaBinding schema, XSTypeDefinition type) /** * @deprecated * * <i>This method is added temporary to get anonymous type binding working in JBossWS. * It will be removed when anonymous type binding in JBossWS is implemented properly. * No one else should use this method.</i> * * <p>This method binds an element declaration and adds it as a global element to the passed in schema binding. * * @param schema schema binding the type should be added to * @param element element declaration to be bound * @param minOccurs * @param maxOccurs * @param maxOccursUnbounded */ public static void bindElement(SchemaBinding schema, XSElementDeclaration element, int minOccurs, int maxOccurs, boolean maxOccursUnbounded) | <a href="https://issues.jboss.org/browse/JBWS-374">https://issues.jboss.org/browse/JBWS-374</a> |
| 13386 | JBWS-355    | I'll ask this question again... Why are we writing to "private" Xerces API inside the webservice implementation? This needs to be abstracted away through JBossXB.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBWS-355">https://issues.jboss.org/browse/JBWS-355</a> |
| 13387 | JBWS-355    | Some of this could be abstracted and moved to JBossXB. I believe the reason for its current location is that currently schema generation is only needed by the webservice module. Since wsdl generation/processing is webservice specific, and since it is based heavily off of schema, the webservice module needs to use a full schema api. There is no current standard API for this, but there is a W3C submission that xerces implements. http://www.w3.org/Submission/2004/SUBM-xmlschema-api-20040309/ This could be abstracted in JBossXB, but it would require moving schema generation into JBossXB since the schema api is a read-only API and webservices requires the ability to modify the schema (for example if someone manipulates a Call object). Migrating this codebase would be a fairly involved amount of work, and could affect the timelines of both the webservice and JBossXB projects. Alexey and Thomas may have additional reasons that I didn't think of, so I will defer to them. -Jason an the                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBWS-355">https://issues.jboss.org/browse/JBWS-355</a> |
| 13388 | JBWS-314    | For the above solution, what happens when you have more than one mapping file needed (more than one service...)? Does the above account for that?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBWS-314">https://issues.jboss.org/browse/JBWS-314</a> |
| 13389 | JBWS-299    | I am looking at using this option now. We currently have JBoss.NET WS running in production (3.2.6), and some calls return arrays of 50K instances. Axis serialisation just dies for 10 - 15 seconds with these requests (the .NET client on a trader desktop is much faster parsing it). We are looking at migrating the app to JBoss 4 and J2EE 1.4 WS, and nodatabinding will allow us to cache the SOAP response (since the underlying data is static) which should make the call much faster. Are we saying this wscompile is not supported in JBoss 4?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBWS-299">https://issues.jboss.org/browse/JBWS-299</a> |
| 13390 | JBWS-286    | Jason says to my earlier comment: "it sort of is, ssl actually does asym key exchange with negotiated sym keys for transport" Right, because of the negotiated sym keys for transport, can a claim for non repudiation be made?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBWS-286">https://issues.jboss.org/browse/JBWS-286</a> |
| 13391 | JBWS-271    | Does that mean all methods in the SEI that have a void return will be one-way? JSR-181 handles this at the method level @WebService public class PingService { @WebMethod @Oneway public void ping() { } }; Resulting WSDL: <definitions> <message name="ping"/> <portType name="PingService"> <operation name="ping"> <input message="ping"/> </operation> </portType> </definitions>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBWS-271">https://issues.jboss.org/browse/JBWS-271</a> |
| 13392 | JBWS-268    | Thomas, this is just one of the vagaries of wscompile. Array handling by wscompile has infact given a lot of headache to the tools project. I have an issue for it at JBWS-227 and spent a lot of time in April trying to match wscompile array handling. This also is related to my comments (item b) on why we cannot make Xerces schema parser strict[JBWS-244]. Schema generated by wscompile is not liked by xerces sometimes. I have had a question on this for few days now, as to how wscompile equates the namespace defined by prefix "ns2" in the first namespace to the targetnamespace in the second. Internally, wscompile does use Xerces for schema parsing. Analyzing the schema generated by wscompile, this is valid schema, I think. In this case, it seems to be a bug with the Xerces schema implementation. Its just that the Xerces schema implementation requires schema elements to be in separate files. Just as a test, can we try changing the order of the schema elements? In that case the type "HelloObj" will be read into the Xerces parser before it starts handling the second schema with the array type. If it fails, we should file a bug on the Xerces website.                                                                                           | <a href="https://issues.jboss.org/browse/JBWS-268">https://issues.jboss.org/browse/JBWS-268</a> |

| 13396 | JBWS-219    | The annotations that WS is interested in are JSR-181 annotations that will be given at the bean class. My point remains, would it be possible to have the bean class available in the create step?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/JBWS-219">https://issues.iboss.org/browse/JBWS-219</a> |
| 13397 | JBWS-218    | The new build will do it "automagically" and should be extensible to other IDEs?<br><a href="http://cvs.sourceforge.net/viewcvs.py/jboss/jbossbuild/src/main/org/jboss/ant/tasks/component/IDETask.java?rev=1.1.1.1&amp;view=markup">http://cvs.sourceforge.net/viewcvs.py/jboss/jbossbuild/src/main/org/jboss/ant/tasks/component/IDETask.java?rev=1.1.1.1&amp;view=markup</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/JBWS-218">https://issues.iboss.org/browse/JBWS-218</a> |
| 13398 | JBWS-211    | Does this list cover all we need in both WS testsuites? If not, what is missing?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.iboss.org/browse/JBWS-211">https://issues.iboss.org/browse/JBWS-211</a> |
| 13399 | JBWS-158    | The parsing is part of the marshalling layer. Alex could you have a look at integrating StAX into JBossXB or comment appropriately?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.iboss.org/browse/JBWS-158">https://issues.iboss.org/browse/JBWS-158</a> |
| 13400 | JBWS-157    | Can this perhaps be resolved by establishing a convention that <soap:address> entries that contain a valid URL with a valid protocol part will not be modified? An additional boolean switch in jboss-service.xml can help not break existing deployments. <attribute name="ModifySOAPAddress">true</attribute>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/JBWS-157">https://issues.iboss.org/browse/JBWS-157</a> |
| 13401 | JBWS-157    | This sounds good to me. Can you also add the <virtual-host></virtual-host> element to the jboss-web.xml element that gets created so that it can be synced to virtual hosts within Tomcat?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.iboss.org/browse/JBWS-157">https://issues.iboss.org/browse/JBWS-157</a> |
| 13402 | JBWS-154    | Note from Thomas: if ("element".equals(localName)) { QName xmlName = navigator.resolveQName(attrs.getValue("name")); QName xmlType = navigator.resolveQName(attrs.getValue("type")); return wsdlTypes.addSchemaElement(xmlName, xmlType); } An element is never the child of WSDLTypes, it is the child of a schema element. How would this code cope with multiple schemas with different namespaces? I don't see a class that abstracts the schema element in WSDLTypes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JBWS-154">https://issues.iboss.org/browse/JBWS-154</a> |
| 13403 | JBWS-147    | I reviewed the tests and seperated the XSDToJavaTestCase into * AnonymousTypesTestCase * ComplexTypesTestCase * NillableTypesTestCase * ReferencesTestCase * SimpleTypesTestCase A) There are a few more directories with xsd files in cvs that I assume to be input for more tests. These are * annotations * schemaimport * schemainclude Are they not covered by tests yet? If this is the case, please provide the tests and the associated test fixtures generated with wscompile. That these additional tests would fail is not a problem. Test failures can be assigned individual JIRA tasks. JBWS-147 is only about generating a comprehensive test suite and *not* about providing the implementation that make it work. B) The xsd2java implementation should be separated from WSDL concerns. The API that it used by the tests seems not logical SchemaBuilder builder = new SchemaBuilder(); XSDSchema schema = new XSDSchema(); schema = builder.parseSchema(xsdFile.toURL(), schema); WSDLToJava wsdl2java = new WSDLToJava(); wsdl2java.generateSEI(schema, dir, packagename, true); Can we clean this up and provide a simple xsd2java API that is well documented in javadoc? This becomes more important as we will potentially fork out some of this work to partners (e.g. Novell) C) The tests generate java code in cvs locations. This should be moved to the output directory. D) Some tests exist in two versions, one set uses an internal xsd object representation the other set uses the xerces xsd parser. What is the situation here? Have we decided to go with xerces for the reading and our own implementation that extends xerces for writing? Thanks for the effort                                                                                                                  | <a href="https://issues.iboss.org/browse/JBWS-147">https://issues.iboss.org/browse/JBWS-147</a> |
| 13404 | JBWS-137    | I presume this issue also has dependency on JBWS-644. ( <a href="http://jira.jboss.com/jira/browse/JBWS-644">http://jira.jboss.com/jira/browse/JBWS-644</a> ) Since the JAX-RPC 2.0 implementation is still not there should i work on this issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.iboss.org/browse/JBWS-137">https://issues.iboss.org/browse/JBWS-137</a> |
| 13405 | JBWS-136    | I am writing test cases for this conformance. The jaxrpc api classes dont seem to be there for versio 2.0 For example i am not able to find javax.xml.jaxrpc.BindingProvider And javax.xml.jaxrpc.Call interface must extend javax.xml.jaxrpc.BindingProvider... Please let me know if i am missing out something. How do i add jaxrpc2.0 apis to check the conformance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/JBWS-136">https://issues.iboss.org/browse/JBWS-136</a> |
| 13406 | JBWS-116    | Is this going to be fixed? Obviously the work around is a solution but surely it would be better if it was correctly generated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.iboss.org/browse/JBWS-116">https://issues.iboss.org/browse/JBWS-116</a> |
| 13407 | JBWS-104    | A month down the line, did you hava a chance to get any progress on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.iboss.org/browse/JBWS-104">https://issues.iboss.org/browse/JBWS-104</a> |
| 13408 | JBWS-75     | Thanks for getting started on JBWS-75. The performance and benchmark tests should run in an automated fashion as part of an ant task. This is important because they will run as part of the jboss-labs performance regression tests. Unfortunately, we cannot have any dependencies on third party software that we cannot distribute. What I am initially looking for is a set of ws deployments that cover common ws processing use cases. What immediately jumps to mind are use cases like: 1) trivial soap messages 2) complex user types 3) array types I would assume that we are not the first who think about measuring ws performance. So ideally, there is a set of wsdl available somewhere that form the basis of good performance tests. If this fails, maybe there is a paper available that allows us to derive the needed set of wsdl files. From the wsdl files we derive the deployments and the test cases. Initially we would have a build for jbossws deployments. Later we would add corresponding deployments for JWSDP, Axis, etc to actually do a comparison.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.iboss.org/browse/JBWS-75">https://issues.iboss.org/browse/JBWS-75</a>   |
| 13409 | JBWS-72     | I reviewed the matrix version 1.0, here is some feedback. Chapter 4 Generally I don't like the disconnect of command line options and config file. For example this forces me to include the command line options that I use with a particular config.xml as an xml comment to be able to reproduce the same results. jbossws should opt for a configfile with as little command line options as necessary. options 2) why do we need -cp and -classpath 4) what does -define do 5) why are -f:features not supported 10) what is -gen:wsdl needed for 13) what does -import do features 3) donotoverride is useful 7) do we even generate stubs? otherwise what does nodatabinding do? 9) what is nomultirefs 11) is duplicated 16) what is serializeinterfaces 17) strict vs. lenient ? 19) how does useonewayoperations ----- The matrix could be split up in server and client side. Server side takes SEI as input and generates wsdl, schema, jaxrpc-mapping. This is of higher importance than client side. Client side takes wsdl as input and generates SEI, SI, complex types, holders. One of my biggest questions is: Do we need generated stubs or can we get away with dynamic proxies. Could you please create fine grained jira tasks and associate them with the features you like to support. Java2WsdI * primitive types, no schema * complex types + schema * rpc/literal * doc/literal * INOUT, OUT paramters * bound and unbound headers * bound and unbound attachments * one way operations * jaxrpc-mapping * what else? wsdl2Java * primitive types, no schema * complex types + schema * schema with anonymous types * service interface * rpc/literal * doc/literal * INOUT, OUT paramters * bound and unbound headers * bound and unbound attachments * one way operations * what else? cheers | <a href="https://issues.iboss.org/browse/JBWS-72">https://issues.iboss.org/browse/JBWS-72</a>   |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | URL                                                                                           |

| 13410 | JBWS-72     | Thomas: Generally I don't like the disconnect of command line options and config file. For example this forces me to include the command line options that I use with a particular config.xml as an xml comment to be able to reproduce the same results. jbossws should opt for a configfile with as little command line options as necessary. Anil: JbossWSTools will use an xml config file just the way wscompile uses. Thomas: 2) why do we need -cp and -classpath 4) what does -define do 5) why are -f:features not supported 10) what is -gen:wSDL needed for 13) what does -import do Anil: -import reads the WSDL file, generates SEI and a template implementation of the SEI. -gen:wSDL is a jbosswstool option to generate wsdl (that is the only server side artifact that we can generate given a SEI) -define allows you to read a SEI and define a javax.xml.rpc.Service interface for the SEI. -cp and -classpath allow u to locate the SEI compiled classes. Thomas: 3) donotoverride is useful 7) do we even generate stubs? otherwise what does nodatabinding do? 9) what is nomultirefs 11) is duplicated 16) what is serializeinterfaces 17) strict vs. lenient ? 19) how does useonewayoperations Anil: First phase of tools, we will always regenerate the SEI. (Regarding donotoverride) Thomas: One of my biggest questions is: Do we need generated stubs or can we get away with dynamic proxies. Anil: I have been having the same question. Generated stubs are not portable (The easiest way for the users to use JBossWS, though.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWS-72">https://issues.jboss.org/browse/JBWS-72</a> |
| 13411 | JBWS-72     | Thomas, can you review the JBossWS Tools document to see if I need to add anything to the feature matrix.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBWS-72">https://issues.jboss.org/browse/JBWS-72</a> |
| 13412 | JBWS-72     | I reviewed the doc, here is some feedback: 1. This issue asks you to backup each feature by a corresponding JIRA task. This still needs to be done. The created tasks should be linked to this issue. 2. The document should reflect the intended usage of the jbossws tools for the first release, not the current state. Otherwise you will have a hard time to keep the documentation in sync. 3. Table 2.1 states command line options for jbossws. AFAIK, we agreed on removing the disconnect between the command line options and the config file. What is the minimal set of cmd line options we need? 4. Use multiple digit serial numbers, so we can refer to them uniquely across the document 5. Table 2.3 sn-4: explain the benefit and usage of 'define' (This is repeated feedback from 11/Feb) 6. Table 2.3 sn-8: explain the benefit and usage of 'import' (This is repeated feedback from 11/Feb) 7. Table 2.4 sn-5: explain the benefit and usage of 'explicitcontext' 8. Table 2.4 sn-6: explain the benefit and usage of 'jaxbenumtype' 9. Table 2.4 sn-5: explain the benefit and usage of 'nodatabinding' 10. Table 2.4 sn-10: explain the benefit and usage of 'norpcstructures' 11. Table 2.4 sn-11: is duplicated, should this be another feature? 12. Table 2.4 sn-12: change to NOT SUPPORTED 13. Table 2.4 sn-13: explain the benefit and usage of 'resolveidref' 14. Table 2.4 sn-16: explain the benefit and usage of 'serializeinterfaces' 15. Table 2.4 sn-18: lets make wrapped the default 16. Table 2.4 sn-19: how do intend to support 'useonewayoperations'? 17. Generally, all supported features should be explained, the description column is often not meaningful enough 18. Replace the examples using wscompile with how one uses jbossws. Show the typical use cases. 19. Table 2.6 Do we support CustomType Inheritance, Enumerations 20. Configuring jbossws.sh: There should be a set of tool jars. Remove dependency on JBOS_HOME 21. Running jbossws.sh: Replace by intended xml configuration 22. 4.1.2 Remove API documentation. This is covered by javadoc. Avoid duplicate/redundant documentation sets Please update the document version and have a date at the front page. I suggest you create JIRA tasks for features that you describe in the document, but are not implemented yet. Then you can reference them from the document, allowing us to continuously have up to date information. The relevant comments from the JIRA tasks can then be incorporated in the document and references can be removed with the next revision.                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWS-72">https://issues.jboss.org/browse/JBWS-72</a> |
| 13413 | JBWS-72     | Anil wrote: Hi Thomas, here are the minutes of our meeting. Took me sometime to format it. Main goal: Previous exercise was to generate a feature matrix of jbossws against wscompile (JBWS-72). Now it is time to generate a document that just talks of jbossws features and how to use it. (JBWS-321) - Need to get a schema written for the tools configuration. - the attributes in the configuration file should be of mixed case (AND not all lower case). Section 2.1.1.2 jbossws configuration * interface is a bad name. * packagename should be removed. * wsdldest: bad attribute. Should be removed and all directory related attributes should be removed. - assume a sub directory called "jbossws" and generate the artifacts there. * includetypesinwsdl: should be renamed to includeSchemainWSDL * wsxml element - remove the directory related attribute. - add an attribute for servetlink. Section 2.1.2 Question from Thomas: Is the Service Interface being generated? Answer from Anil: It is being generated but I forgot to mention it in the document. - remove packagename and seidir attribute. Section 2.1.3: WS-I Compliance Remove this section as jbossws will be ws-i compliant. Section 2.1.4: wscompile features section should be completely replaced with jbossws features. Notes on Document Style Web Services:- * jbossws should not doublewrap classes (wscompile does wrapping of wrapped classes). - there should be an option for user to tell jbossws that it is using wrapped classes. - jbossws should validate that the wrapped request structure is valid. * Document/Literal Wrapped is Microsoft technology which is deprecated and no support should be available. For WSDL-> Java * User should be allowed to inform jbossws whether to unwrap the document request/response structures or not. Unwrap should be the default. 2.1.4.10 nodatabinding feature is not required. Section 2.3 JSR-181 Annotations Support * Support should be for both interfaces and implementation classes. If the implementation class has the @interface annotation, then jbossws should read the interface for the methods to expose. * Oneway operations - JSR181 refers to oneway capabilities at the method level. - For unannotated interfaces, there should be a way to specify which methods are oneway. Section 2.3.,4 SoapBinding Annotation - Support custom jbossws annotations to take in the jboss.xml attributes like port-component-uri, context root etc. Section 4: Java To WSDL/XSD Focus on annotated types in the examples. - Remove all the API details. Section 5: Architecture should be removed. First Release should include the following: 1) Documented Schema. 2) User Guide. 3) Annotated endpoint support + oldstyle J2EE 1.4 artifacts. | <a href="https://issues.jboss.org/browse/JBWS-72">https://issues.jboss.org/browse/JBWS-72</a> |
| 13414 | JBWS-67     | I will start contributing to the WSDL Validators project of Eclipse Web Tools. They are working on WSDL 2.0 validators (in cooperation with the W3C). Why reinvent the wheel?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/JBWS-67">https://issues.jboss.org/browse/JBWS-67</a> |
| 13415 | JBWS-35     | should we promote this issue to resolved status rather than a voting status? We need support for the following : a) Support for SAML Token Profile (Higher Priority). b) Support for Kerberos Token Profile (Low Low Priority). This is important in intranets that hosts windows-centric systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWS-35">https://issues.jboss.org/browse/JBWS-35</a> |
| 13416 | JBWS-31     | I'll take this one, though I currently don't have permission to assign it to myself. Could someone give me JIRA rights? Thanks, Jason                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBWS-31">https://issues.jboss.org/browse/JBWS-31</a> |
| 13417 | JBWS-28     | Is the generated schema going to be stored on disc somewhere? I would wait for the implementation of XSD generation (by Anil?) first.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/JBWS-28">https://issues.jboss.org/browse/JBWS-28</a> |
| 13418 | JBWS-24     | Alex says: As I understand, we are given *.wsdl, webservices.xml and jaxrpc-mapping.xml (optional?). What happens then? We generate marshaller/unmarshaller for jaxrpc parameters? Is there any other source of Java - XML binding info except for jaxrpc-mapping.xml?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBWS-24">https://issues.jboss.org/browse/JBWS-24</a> |

| #     | Requirement | Questions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | URL                                                                                             |

| 13419 | JBWS-24     | It seems logical to have the same tool generate Java classes and their mapping to XML elements. Is the mapping file going to be optional? If so, let's first try w/o it. So the client will use the same tool to generate Java classes, serializers/deserializers, mapping file as the one used on the server side? It seems to be a weakness to me, since how can you be sure the client has this same tool? Assuming there is no standard for these tools' output.                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBWS-24">https://issues.jboss.org/browse/JBWS-24</a>   |
| 13420 | JBWS-24     | Is Anil working on Java classes generation? If so I will focus on default Java to XML names mapping support.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBWS-24">https://issues.jboss.org/browse/JBWS-24</a>   |
| 13421 | JBWS-24     | Ok, then I will work on that. What do we use right now for code generation? wscmple? Some Axis tool?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBWS-24">https://issues.jboss.org/browse/JBWS-24</a>   |
| 13422 | JBWS-24     | So right now we some Axis tool for generation? In what case do we need to generate Java classes from XSD? When a client deploys a web-service into JBoss, we need to generate only serializers/deserializers, right?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBWS-24">https://issues.jboss.org/browse/JBWS-24</a>   |
| 13423 | JBWS-11     | This task is completed. wsdl4j does not handle XML Schema ie. <types> in wsdl. A collaboration with JBossXB, which will deal with XSD Types to Java, will handle it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBWS-11">https://issues.jboss.org/browse/JBWS-11</a>   |
| 13424 | JBWS-1      | All the CTS tests in jaxrpc, saaj, webservicess have one ore more SEI. Generating a valid wsdl comes in two parts: 1. generate wsdl definition 2. generate contained xsd types Checkout if XMLBeans can help with generating XMLSchema from java. Are there other tools? Xerces is supposed to have a schema parser. Julien sais: don't try to write your own xsd parser!                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBWS-1">https://issues.jboss.org/browse/JBWS-1</a>     |
| 13425 | WFK2-755    | one-off patch                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/WFK2-755">https://issues.jboss.org/browse/WFK2-755</a> |
| 13426 | WFK2-755    | [~ivassile], according to workflow, this issue should be now in "QA in progress" state. Can you please update it?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/WFK2-755">https://issues.jboss.org/browse/WFK2-755</a> |
| 13427 | WFK2-755    | [~ppitonak]: Hold on the testing on this patch. I just received information from the customer, that they are using a patched version of RF 4.3.5 which includes issues RF-13719 and RF-13733. Both issues are not included in RF 4.3.7 and this patch will roll-back the changes. The client prefers a 4.3.5 (WFK 2.5) patch. I'm going to build cumulative patch based on [1]. [1] <a href="https://access.redhat.com/jbossnetwork/restricted/softwareDetail.html?softwareId=32893&amp;product=web.framework.kit&amp;version=2.5.0&amp;downloadType=patches">https://access.redhat.com/jbossnetwork/restricted/softwareDetail.html?softwareId=32893&amp;product=web.framework.kit&amp;version=2.5.0&amp;downloadType=patches</a>                                                                        | <a href="https://issues.jboss.org/browse/WFK2-755">https://issues.jboss.org/browse/WFK2-755</a> |
| 13428 | WFK2-755    | RF-13719 is an issue for RichFaces in portal environment. Can you confirm that the customer uses portal and therefore we need to test this patch in portal?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/WFK2-755">https://issues.jboss.org/browse/WFK2-755</a> |
| 13429 | WFK2-755    | Verified, both *RF-13640 : Autocomplete with custom layout: cant select item by mouse* and *RF-13733 : dataTable built-in sorting and filtering* work with this patch. No regressions have been found. Verified on IE 10, IE 11, Firefox 24, Firefox 31, latest Chrome, on EAP 6.2.4.GA. [~pmensik], please, could you check the Portal issue: RF-13719 : rich.fileUpload breaks form action in portal ?                                                                                                                                                                                                                                                                                                                                                                                                 | <a href="https://issues.jboss.org/browse/WFK2-755">https://issues.jboss.org/browse/WFK2-755</a> |
| 13430 | WFK2-396    | Added to WFKDOC-16 jira tracking update of supported configs page for WFK 2.5 by docs team.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/WFK2-396">https://issues.jboss.org/browse/WFK2-396</a> |
| 13431 | WFK2-396    | What is the purpose of this upgrade? an issue?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/WFK2-396">https://issues.jboss.org/browse/WFK2-396</a> |

| 13433 | WFK2-326    | [~mmurray] not sure if this task is solved/reviewed. Could you please process it till the end - closing ;-). Thanks in advance!                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/WFK2-326">https://issues.jboss.org/browse/WFK2-326</a> |
| 13434 | WFK2-324    | Is it ready to release? please provide staging repository for QE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/WFK2-324">https://issues.jboss.org/browse/WFK2-324</a> |
| 13435 | WFK2-324    | [~jowilson] Based on Pete's comments: <a href="https://issues.jboss.org/browse/WFK2-321?focusedCommentId=12925810&amp;page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12925810">https://issues.jboss.org/browse/WFK2-321?focusedCommentId=12925810&amp;page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-12925810</a> Shouldn't we change to 1.0.3.GA instead ?                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/WFK2-324">https://issues.jboss.org/browse/WFK2-324</a> |
| 13436 | WFK2-323    | Is it ready to release? please provide staging repository for QE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/WFK2-323">https://issues.jboss.org/browse/WFK2-323</a> |
| 13437 | WFK2-321    | Where these Archetypes should be released ? maven.repository.redhat.com or Maven Central ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/WFK2-321">https://issues.jboss.org/browse/WFK2-321</a> |
| 13438 | WFK2-321    | The version used on HTML5 Archetypes is 2.4.0.Final. Should we change it to 2.4.0.GA or 2.4.0-redhat-x ? Will Spring and Richfaces Archetype also follow the WFK version ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/WFK2-321">https://issues.jboss.org/browse/WFK2-321</a> |
| 13439 | WFK2-168    | [~bursutter], I'd like one clarification - should this be considered complete only if TiMo uses a native API? i.e. should your second comment also be fulfilled? The first comment (import TiMo sources into JBDS 7.1) can be done, but with a minor concern - we'd have to load cordova.js without using Require.js. Currently in TiMo, a version and platform specific {{cordova.js}} file is loaded through require.js based on the runtime platform. We'll instead have to create a separate HTML page for cordova apps (like app.html instead of index.html) which * references cordova.js that is managed by the tooling, and * is referenced in the config.xml file as the initial page for the app. I don't see how we can 'fix' this in the tooling to support require.js alongside cordova.js. | <a href="https://issues.jboss.org/browse/WFK2-168">https://issues.jboss.org/browse/WFK2-168</a> |
| 13440 | WFK2-153    | Hi Sanne, do you plan to finish this issue into wfk 2.5.0, or will it be postponed?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/WFK2-153">https://issues.jboss.org/browse/WFK2-153</a> |
| 13441 | WFK2-152    | Can we change the title of this jira to lose the word "integration"? It always throws me off - it is just Spring + Websockets, not "Spring Integration"                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/WFK2-152">https://issues.jboss.org/browse/WFK2-152</a> |
| 13442 | WFK2-152    | [~emil.cervenak] awesome - can you publish an eample/quickstart formatted out to github some place so other parties could look at your setup?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/WFK2-152">https://issues.jboss.org/browse/WFK2-152</a> |

| 13443 | WFK2-152    | I tried your example on JBoss EAP 6.3.0.Alpha1 (AS 7.4.0.Final), but that one doesn't seem to support websockets yet: 16:26:24,654 ERROR [org.jboss.msc.service.fail] (MSC service thread 1-7) MSC000001: Failed to start service jboss.deployment.unit."spring-websockets.war".PARSE: org.jboss.msc.service.StartException in service jboss.deployment.unit."spring-websockets.war".PARSE: JBAS018733: Failed to process phase PARSE of deployment "spring-websockets.war" at org.jboss.as.server.deployment.DeploymentUnitPhaseService.start(DeploymentUnitPhaseService.java:166) [jboss-as-server-7.4.0.Final.jar:7.4.0.Final] at org.jboss.msc.service.ServiceControllerImpl\$StartTask.startService(ServiceControllerImpl.java:1980) [jboss-msc-1.1.5.Final.jar:1.1.5.Final] at org.jboss.msc.service.ServiceControllerImpl\$StartTask.run(ServiceControllerImpl.java:1913) [jboss-msc-1.1.5.Final.jar:1.1.5.Final] at java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1145) [rt.jar:1.7.0_45] at java.util.concurrent.ThreadPoolExecutor\$Worker.run(ThreadPoolExecutor.java:615) [rt.jar:1.7.0_45] at java.lang.Thread.run(Thread.java:744) [rt.jar:1.7.0_45] Caused by: org.jboss.as.server.deployment.DeploymentUnitProcessingException: JBAS018014: Failed to parse XML descriptor "/C:/repos/3rdparty/jboss/jboss-wfk-quickstarts/spring-websockets/content/spring-websockets.war/WEB-INF/jboss-web.xml" at [20,3] at org.jboss.as.web.deployment.JBossWebParsingDeploymentProcessor.deploy(JBossWebParsingDeploymentProcessor.java:79) at org.jboss.as.server.deployment.DeploymentUnitPhaseService.start(DeploymentUnitPhaseService.java:159) [jboss-as-server-7.4.0.Final.jar:7.4.0.Final] ... 5 more Caused by: javax.xml.stream.XMLStreamException: ParseError at [row,col]:[20,3] Message: Unexpected element 'enable-websockets' encountered Where can I find EAP 6.3.0.ER3? Thanks in advance, Geert. | <a href="https://issues.jboss.org/browse/WFK2-152">https://issues.jboss.org/browse/WFK2-152</a> |
| 13444 | WFK2-152    | [~manaRH], [~treple]: currently the WFK Spring Guide states "Support for Spring 4 as a tested framework is limited to the features supported by Red Hat JBoss Enterprise Application Platform. Specifically, support is not provided for the new features in Spring 4 related to Java 8, Java EE 7, and WebSockets." Does this needs to be updated in light of this jira?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/WFK2-152">https://issues.jboss.org/browse/WFK2-152</a> |
| 13445 | WFK2-152    | [~treple], [~manaRH] - I will fix the text in the Spring doc. To make it obvious to users, let include an RN text to state that WebSockets is supported. Can one of you complete the RN text please.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/WFK2-152">https://issues.jboss.org/browse/WFK2-152</a> |
| 13446 | WFK2-138    | How will we handle BOMs in product repository? I assume they still will be delivered in shipped WFK 2.7.0 product repository and not through jboss-developer ways or deployment process - so they will accessible on developer pages as today. Do I understand it correctly?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/WFK2-138">https://issues.jboss.org/browse/WFK2-138</a> |
| 13447 | WFK2-138    | As far as I know, all BOMS ship with their respective product maven repository .zip - they should also land at maven.repository.redhat.com. Is there anything special about the WFK BOMs that require Nexus (other than Staging) which is actually now being architected outside of the Nexus environment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/WFK2-138">https://issues.jboss.org/browse/WFK2-138</a> |
| 13448 | WFK2-123    | Also, @burrsutter, we don't currently have Topcoat at any tier. Do you think we should add it to tier 4 because of this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/WFK2-123">https://issues.jboss.org/browse/WFK2-123</a> |
| 13449 | WFK2-121    | Apparently I looked at the wrong Backbone-based Kitchensink. :-) What is the URL to the sources you are looking at? [~vineet.reynolds] Do you think there would be value in removing the responsive aspect so that it is mobile all the time? The reason I ask is...concern for learning curve as well as ease of support in the tooling.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/WFK2-121">https://issues.jboss.org/browse/WFK2-121</a> |
| 13450 | WFK2-115    | [~alrubinger]what is the approximate timeframe for this item? Mid-2014? or mid-2015?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/WFK2-115">https://issues.jboss.org/browse/WFK2-115</a> |
| 13451 | WFK2-113    | [~burrsutter], concerning your statement about no "responsive design", what specifically are you asking for here. Some of RWD covers "resizing" based on the viewing area so that it will fit on desktops to mobiles. Is this what you are referring to? Because RWD also refers to the use of JavaScript and JS libs. As you have already asked for jQuery Mobile, I am thinking that you are not talking about building a site without JS. So can you please clarify the 'no "responsive design"' request?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/WFK2-113">https://issues.jboss.org/browse/WFK2-113</a> |
| 13452 | WFK2-113    | [~pmuir] I have started working on this as a "contacts" app as [~burrsutter] requested. Should I continue under a different JIRA or stop work on this?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/WFK2-113">https://issues.jboss.org/browse/WFK2-113</a> |
| 13453 | WFK2-113    | It would be good to have a non-Angular and with-Angular option - so people can compare apples to apples. If we only have time for the with-Angular option that demonstrates create, read, update and delete operations, ideally with the additional fields/properties (e.g. birthdate) then that would work for now.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/WFK2-113">https://issues.jboss.org/browse/WFK2-113</a> |
| 13454 | WFK2-113    | The app I created was tasks based. So if we want to create a non-angular option, we could clone it's UI? To keep them v similar.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/WFK2-113">https://issues.jboss.org/browse/WFK2-113</a> |
| 13455 | WFK2-113    | [~pmuir] & [~burrsutter] do you want to keep this Jira focused on a "contacts" app? Or do you want a modified version of Pete's "task" app that doesn't have AngularJS? If the later, who will build it? I have the time now to do either.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/WFK2-113">https://issues.jboss.org/browse/WFK2-113</a> |
| 13456 | WFK2-108    | Do you know if there are any plans for that Pete?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/WFK2-108">https://issues.jboss.org/browse/WFK2-108</a> |
| 13457 | WFK2-108    | [~petemuir], there seems to be little progress on this jira and it's subtasks. Will it make it for 2.5? Also, how is 'online delivery of BOMs' related to the current tech preview online red hat/jboss maven repo?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/WFK2-108">https://issues.jboss.org/browse/WFK2-108</a> |
| 13458 | WFK2-108    | Hi [~petemuir], will the pages appear in the new design soon enough to make this feature work in WFK 2.6?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/WFK2-108">https://issues.jboss.org/browse/WFK2-108</a> |
| 13459 | WFK2-108    | There is already some WFK 2.5 content on the new Developer site, so it would make sense to update those to WFK 2.6 eventually. Can we update those after WFK 2.6 GA then?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/WFK2-108">https://issues.jboss.org/browse/WFK2-108</a> |
| 13460 | WFK2-108    | [~manaRH], can you clarify what this will look like for 2.7 please? * Quickstarts - from jboss-developer website, github and WFK quickstarts zip on customer portal * TiMo - from jboss-developer website (as for 2.6), github (as for 2.6) and WFK TiMo zip on customer portal * BOMs - from jboss-developer maven repo and WFK maven zip on customer portal Will the RF, HSearch, and Snowdrop demo.zip files continue to be distributed from the customer portal? will these also be available from jboss-developer in some way?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/WFK2-108">https://issues.jboss.org/browse/WFK2-108</a> |
| 13461 | WFK2-72     | [~maschmid] when do you need the release complete by in order for it to make WFK 2.4?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/WFK2-72">https://issues.jboss.org/browse/WFK2-72</a>   |
| 13462 | WFK2-48     | Hey Andrew, do you know if that is something that is being/will be worked on?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/WFK2-48">https://issues.jboss.org/browse/WFK2-48</a>   |
| 13463 | WFK2-46     | Yes, of course. Do we have due dates for the Use Case documents?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/WFK2-46">https://issues.jboss.org/browse/WFK2-46</a>   |
| 13464 | WFK2-46     | Why the reassign, [~rruss]? You'd still like use-case docs from me for this, yes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/WFK2-46">https://issues.jboss.org/browse/WFK2-46</a>   |
| 13465 | WFK2-45     | Same comment as in WFK2-6: what is the work to be done to get this included?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/WFK2-45">https://issues.jboss.org/browse/WFK2-45</a>   |
| 13466 | WFK2-45     | These are two separate tasks; for your tracking as well, [~pmuir], do you mind if I split this issue into one each for Persistence and Tx?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <a href="https://issues.jboss.org/browse/WFK2-45">https://issues.jboss.org/browse/WFK2-45</a>   |
| 13467 | WFK2-45     | [~maschmid] when do you need the release complete by in order for it to make WFK 2.4?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <a href="https://issues.jboss.org/browse/WFK2-45">https://issues.jboss.org/browse/WFK2-45</a>   |

| 13468 | WFK2-25     | [~alrubinger]What is the customer impact of this item? At this time, the wildfly/upstream adapter seems to work fine with EAP, at least in the quickstarts/archetypes that leverage Arquillian. Should we continue with reusing the same adapter or is now the time to fork?                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/WFK2-25">https://issues.jboss.org/browse/WFK2-25</a>       |
| 13469 | WFK2-25     | [~kpiwko]thank you [~alrubinger] what will it take to get this scheduled?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/WFK2-25">https://issues.jboss.org/browse/WFK2-25</a>       |
| 13470 | WFK2-25     | Do we have a team in place for maintenance of this component? Also, shipment is via Maven Central or mave.repository.redhat.com? (it should not ship as part of the WFK distribution)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/WFK2-25">https://issues.jboss.org/browse/WFK2-25</a>       |
| 13471 | WFK2-16     | I read the doc and wanted to know what you saw that needs to be changed. We are going to changed the directory structure to align with an add-on. And provide a version of the standalone.xml so that no one needs to modify it. What else?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/WFK2-16">https://issues.jboss.org/browse/WFK2-16</a>       |
| 13472 | WFK2-15     | Should that certification include also Seam (Seam examples) ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/WFK2-15">https://issues.jboss.org/browse/WFK2-15</a>       |
| 13473 | WFK2-15     | Could Openshift access internal maven repository or extracted zipped maven repository? This probably needs a discussion with openshift team.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/WFK2-15">https://issues.jboss.org/browse/WFK2-15</a>       |
| 13474 | WFK2-15     | Can we use OpenShift Enterprise for the testing? I don't see how you intend to get OpenShift online to access something behind the VPN, nor what the OpenShift team could do about this.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/WFK2-15">https://issues.jboss.org/browse/WFK2-15</a>       |
| 13475 | WFK2-15     | [~burrstutter] WDYT? Can we claim that this is done if we are missing the necessary instructions in the readmes?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/WFK2-15">https://issues.jboss.org/browse/WFK2-15</a>       |
| 13476 | JBWIKI-106  | Is there a reason for which the two packages that you mentioned are not in the repo?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWIKI-106">https://issues.jboss.org/browse/JBWIKI-106</a> |
| 13477 | JBWIKI-94   | Do i have to add this also to binaries released before acquisition ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBWIKI-94">https://issues.jboss.org/browse/JBWIKI-94</a>   |
| 13478 | JBWIKI-76   | what is standard diff output ?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <a href="https://issues.jboss.org/browse/JBWIKI-76">https://issues.jboss.org/browse/JBWIKI-76</a>   |
| 13479 | JBWIKI-17   | Tomek, is this finished? I thought that roles aren't included until 1.0 Final. Am I wrong?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <a href="https://issues.jboss.org/browse/JBWIKI-17">https://issues.jboss.org/browse/JBWIKI-17</a>   |
| 13480 | JBWIKI-2    | What exactly do we need here ? (you wrote sth. about spliting this up)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBWIKI-2">https://issues.jboss.org/browse/JBWIKI-2</a>     |
| 13481 | JBWIKI-2    | There should be a link... in every wiki page... (or above.. next to history).. that allows people to subscribe to all changes.. in a wiki page... which gives: 1. The new wiki page 2. The changes made via the 'diff' format. .... as a blog entry in rss/atom/rdif.                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBWIKI-2">https://issues.jboss.org/browse/JBWIKI-2</a>     |
| 13482 | JBXB-246    | Thanks for doing this. But, could you give an example of what the output should look like now, and which part is the fileName (is it "URI")?. I'm get the following message which I'm having a heck of time interpreting enough to diagnose: "Failed to resolve schema nsURI= location=web-fragment" What is "ns"? why no URI? If it had a URI, what would that be indicating (the filename?)? etc Thanks in advance for any more info that can be provided.                                                                                                                                                                                                                                                                    | <a href="https://issues.jboss.org/browse/JBXB-246">https://issues.jboss.org/browse/JBXB-246</a>     |
| 13483 | JBXB-246    | In fact...the message I'm seeing is the same as the one noted in the referenced conversation that prompted this change. I'm running with the 6.0 M4 - why am I not getting the updated format? Should I be?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <a href="https://issues.jboss.org/browse/JBXB-246">https://issues.jboss.org/browse/JBXB-246</a>     |
| 13484 | JBXB-244    | Yes, that's exactly what David is asking for. Should we switch AllBinding implementation to UnorderedSequenceBinding?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <a href="https://issues.jboss.org/browse/JBXB-244">https://issues.jboss.org/browse/JBXB-244</a>     |
| 13485 | JBXB-206    | What I meant is that the issue is probably the resolver is not configured properly. It's not enough to just instantiate it. What namespace is resolved with XsdBinder?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <a href="https://issues.jboss.org/browse/JBXB-206">https://issues.jboss.org/browse/JBXB-206</a>     |
| 13486 | JBXB-194    | How would that be different from SchemaBinding.setNormalizeSpace() which is false by default and SchemaBinding.setIgnoreWhitespacesInMixedContent() which is true by default?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <a href="https://issues.jboss.org/browse/JBXB-194">https://issues.jboss.org/browse/JBXB-194</a>     |
| 13487 | JBXB-100    | AFAICS, just Source won't be more efficient. Since it gives access only to the systemId of the source. Or am I missing something?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBXB-100">https://issues.jboss.org/browse/JBXB-100</a>     |
| 13488 | JBXB-100    | So what are you asking for? To add unmarshal(javax.xml.transform.Source)? Then its implementation will be unmarshal(Source s) { return unmarshal(s.getSystemId()); } Or unmarshal(DOMSource ds) and navigate through the Nodes producing SAX-like events?                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBXB-100">https://issues.jboss.org/browse/JBXB-100</a>     |
| 13489 | JBXB-100    | How about: unmarshal(Source source) { if (source instanceof DOMSource) { Node node = ((DOMSource)source).getNode(); ... // process node } else throw new UnsupportedOperationException(); } Or you prefer to use DOMSource class directly in your method signatures?                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <a href="https://issues.jboss.org/browse/JBXB-100">https://issues.jboss.org/browse/JBXB-100</a>     |
| 13490 | JBXB-87     | Thanks, Alex. Right in time ;) Still I would need a quick explanation. Could we have a quick skype session this afternoon? /Heiko                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <a href="https://issues.jboss.org/browse/JBXB-87">https://issues.jboss.org/browse/JBXB-87</a>       |
| 13491 | JBXB-65     | Sorry, I didn't mentioned it before ... There is called 'content.get(index)' also on other methods in this class. That's why I did't simple used Iterator in my test (I have used ArrayList). The other occurences are more complicated to rewrite to iterator. Are you sure, that it will not slowdown other processes?                                                                                                                                                                                                                                                                                                                                                                                                        | <a href="https://issues.jboss.org/browse/JBXB-65">https://issues.jboss.org/browse/JBXB-65</a>       |
| 13492 | JBXB-65     | What's the reason to stick with the linked list? Compared to the ArrayList replacement, the Iterator approach doesn't really have an impact on performance: Without any changes: testCase resultValue dataFile 3 Items 2983.500 data/po.xml 20 Items 1013.800 data/po-20.xml 50 Items 454.800 data/po-50.xml 100 Items 219.200 data/po-100.xml With the Iterator change: testCase resultValue dataFile 3 Items 3410.600 data/po.xml 20 Items 1074.900 data/po-20.xml 50 Items 489.700 data/po-50.xml 100 Items 257.400 data/po-100.xml With the ArrayList change: testCase resultValue dataFile 3 Items 4250.000 data/po.xml 20 Items 1415.100 data/po-20.xml 50 Items 650.200 data/po-50.xml 100 Items 342.100 data/po-100.xml | <a href="https://issues.jboss.org/browse/JBXB-65">https://issues.jboss.org/browse/JBXB-65</a>       |
| 13493 | JBXB-42     | Thomas. Can you please discuss things on public mailing lists before scheduling work to others! Otherwise this is a feature request not a task! I'm going to add some of the related "productization" issues. There are others. Which probably makes this task redundant.                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBXB-42">https://issues.jboss.org/browse/JBXB-42</a>       |
| 13494 | JBXB-40     | Alex, Why is this closed without comment?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <a href="https://issues.jboss.org/browse/JBXB-40">https://issues.jboss.org/browse/JBXB-40</a>       |
| 13495 | JBXB-33     | You proposed to add SchemaBindingErrorHandler to not depend on Xerces API? I agree it's a good idea. But then I would also get rid of org.apache.xerces.xml.StringList. Is that ok for you? How do you create an instance of that? Anonymous class?                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <a href="https://issues.jboss.org/browse/JBXB-33">https://issues.jboss.org/browse/JBXB-33</a>       |
| 13496 | JBXB-33     | Doesn't the Xerces parser need a StringList to parse a set of Schema files? If there is a way in which you will be ok with a List of schema locations (List<String> or List<URL>), I am fine. The parsing is all yours. All I care about is passing a SchemaBindingResolver and an ErrorHandler to the Util method. :-) We have a RW based Xerces model and I do have a way of constructing a StringList via JBossStringList class. But as you said, lets not tie the util method to StringList.                                                                                                                                                                                                                                | <a href="https://issues.jboss.org/browse/JBXB-33">https://issues.jboss.org/browse/JBXB-33</a>       |
