

Confessions of a [beta] user

Nathan Tallman, University of Cincinnati Libraries

Content Sources

- Digital Resource Commons
 - Dspace 1.8.2
- LUNA Image and Media Repository
 - LUNA 6.3.6.2
- Scholar@UC
 - Hydra
- SAN Filestore

Start with Dspace, but which export...

- Simple Archive Format
- **METS AIP**
- Replication Task Suite, Bag-it
 - Resets filesystem metadata dates to 1980-01-01...

The questions we ask ourselves

- How do we make a flat preservation repository work for our curated and collection-based organized content?
- How do we track the platform provenance of content?
- What content do we send? How do we appraise?
- Do we send master files only, or include derivatives?
- Should we encrypt secure or unknown content? Key management? Affect on preservability?

Confessions of a [beta] user (continued)

- Leverage the APTTrust community
 - Others are facing the same questions!
- APTTrust is not the total solution, it's part of an institution's approach to digital preservation
- Don't forget to test restoration!
