18876	ARTEMIS-8	We need to verify what are our boundaries for compatibility? going forward or back and forth. Should we have newer clients talking to older servers? We are intending to inclined to older clients talking to newer servers... if anyone thinks of any hard requirement for back compatiiblity on internal protocols (open-wire, core)... should raise a voice now. We will always have AMQP as an option for back and forth compatibility.	0	0	https://issues.apache.org/jira/browse/ARTEMIS-8
18877	ARTEMIS-6	The following third party deps have been identified as having Cat X licenses. Please take these into consideration when performing this task. CatX Licenses:. Artifact: org.jboss.jboss-transaction-spi License: LGPL Notes: Will be removed as part of: https://issues.apache.org/jira/browse/ACTIVEMQ6-6 Artifact: org.jboss.jbossts.jts.jbossjts-jacorb License: LGPL Notes: Will be removed as part of: https://issues.apache.org/jira/browse/ACTIVEMQ6-6 Artifact: org.jboss.ironjacamar.ironjacamar-core-api License: LGPL Notes: Will be removed as part of: https://issues.apache.org/jira/browse/ACTIVEMQ6-6 Artifact: jboss.jbossts.jbossts-common License: LGPL Notes: Apparently JMS Tests need this. Needs some investigation. Artifact: org.jboss.security.jbosssx Lisence: LGPL Notes; Both JMS Tests and JBoss Integration are dependent on this. Needs some work to pull out dependent tests and intvestigation into integration module. Do we want to keep this hanging around? Artifact:>org.jboss.security.boss-security-spi Lisence: LGPL Artifact: org.jboss.ejb3.jboss-ejb3-ext-api License: LGPL Notes: javaee examples require this. Do we want javaee examples to hang around here. These may be best suited outside of activemq repository as they appear to be somewhat Jboss specific.	1	0	https://issues.apache.org/jira/browse/ARTEMIS-6
18878	ARTEMIS-6	Isn't this done?	0	0	https://issues.apache.org/jira/browse/ARTEMIS-6
18879	ARTEMIS-4	just leave this task with me for now... there are a bunch of other things I'm having to touch to fix the native... (variable names.. paths on the poms... etc).	1	1	https://issues.apache.org/jira/browse/ARTEMIS-4
18880	AMQCPP-253	What does your Socket.h look like with the changes to TcpSocket.cpp? I keep getting the following error: Error 744: "decaf/net/TcpSocket.cpp", line 32 # The operand of a static_cast must be a pointer to or lvalue of a complete class; the actual type was apr_socket_t *. : socketHandle(static_cast< SocketHandle >((apr_socket_t*)INVALID_SOCKET_HANDLE)), I've tried it with and without the (apr_socket_t*) cast in TcpSocket.cpp. Also tried it with/wo the changes to Socket.h where INVALID_SOCKET_HANDLE was changed from int to apr_socket_t* and it's intialization is placed outside of the class declaration. My environment: bash-2.04$ uname -srvm HP-UX B.11.23 U ia64 bash-2.04$ aCC --version aCC: HP aC++/ANSI C B3910B A.05.52 [Sep 05 2003]	1	1	https://issues.apache.org/jira/browse/AMQCPP-253
18881	AMQCPP-253	Timothy, Compiler settings were the same for the examples and the the lib build. I was able to manually build the SimpleProducer.cpp example and run it, but it segfaults somewhere in pthread_create. Wolfgang, is there any more information about your environment that you could provide? For example: Is it PA-RISC, or IA-64? Are you building 32-bit or 64-bit versions of the libraries? What version of the apache portable runtime (APR) are you using? Also, are you able to run any of the example programs or "make check"?	1	1	https://issues.apache.org/jira/browse/AMQCPP-253
18882	AMQCPP-253	Brian, Is there any particular reason why you use so ancient version of the aCC compiler? I wonder if these changes are necessary to compile using the latest version of aCC. $ uname -srvm HP-UX B.11.23 U ia64 $ aCC --version aCC: HP C/aC++ B3910B A.06.23 [May 18, 2009]	1	0	https://issues.apache.org/jira/browse/AMQCPP-253
18883	AMQCPP-250	I've checked in the complete but not very well tested InactivityMonitor class along with changes to enable its usage. Unit testing looks good so far, however more tests need to be added and some real testing with cable pulls etc needs to be done. Users are welcome to check out SVN rev. 881016 and give it a try. Test reports welcome.	0	0	https://issues.apache.org/jira/browse/AMQCPP-250
18884	AMQCPP-214	Can you please tell me the time line of 3.0 release? When shall it happen? We can organize ourselves based on that release. Thanks, Sahay	1	0	https://issues.apache.org/jira/browse/AMQCPP-214
18885	AMQCPP-203	Timothy, Your patch differs from my working copy only in "if (buffer) delete [] buffer, buffer = NULL", i.e. in the freeing of the buffer during destruction. I wonder how will this prevent other threads (recv) from writing into an already unallocated memory (which is, if I understood you well, what seems to be going on)... (Scratching head)	1	1	https://issues.apache.org/jira/browse/AMQCPP-203
18886	AMQCPP-202	Would you agree that we have resolved this by starting / stopping the broker between each test cycle? You've not seen any other hangs since then correct?	1	1	https://issues.apache.org/jira/browse/AMQCPP-202
18887	AMQCPP-202	Morning! The night test is still running (on #657 now) (without CMSTemplate) !! I'll let it a few hours more to be sure that the problem relies on this particular test; btw, there were no segmentation faults either. On the other hand, AMQCPP-199 stopped on the 75th pass - I'll connect gdb now to see what's going on there, and post the log file at AMQCPP-199. For the double thread, I'll have to take a deeper look at the code to figure out a way to detect it and break the execution. BTW, which APR version are you running? We should be seeing the same locks...	1	1	https://issues.apache.org/jira/browse/AMQCPP-202
18888	AMQCPP-189	Are there any consumers running to get the messages from the broker?	1	1	https://issues.apache.org/jira/browse/AMQCPP-189
18889	AMQCPP-177	This sounds fine, why don't you go ahead and make the changes to the studio projects and commit them for 2.2	1	1	https://issues.apache.org/jira/browse/AMQCPP-177
18890	AMQCPP-177	Can you raise this issue on the developer list so we can see if we can get that sorted out.	0	0	https://issues.apache.org/jira/browse/AMQCPP-177
18891	AMQCPP-140	Patch looks promising. Might want to think a bit about these warnings when building on Windows though: 1>..\src\main\activemq\network\SSLSocket.cpp(58) : warning C4244: 'argument' : conversion from 'activemq::network::Socket::SocketHandle' to 'int', possible loss of data 1>..\src\main\activemq\network\SSLSocket.cpp(95) : warning C4244: 'argument' : conversion from 'activemq::network::Socket::SocketHandle' to 'int', possible loss of data The offending lines look like this: SSL_set_fd(ssl, socketHandle); On Windows, SocketHandle is a Winsock2 SOCKET, which seems to be a typedef of UINT_PTR, which I don't think can safely be cast to an int (if it even makes sense to cast it). Can OpenSSL work with Winsock2 sockets? Maybe there's an alternative function to SSL_set_fd that should be called in this case?	0	0	https://issues.apache.org/jira/browse/AMQCPP-140
18892	AMQCPP-140	OpenSSL support implemented in trunk. Tested on Redhat and Windows. Hopefully others with access to different platforms will report their results. Notes: * SSL transport in ActiveMQ-CPP is specified using the transport URI prefix 'ssl' * The key and trust store are set as System properties using the decaf library methods as follows. To set the location of the client key file (Must be in PEM format) call: decaf::lang::System::setProperty("decaf.net.ssl.keyStore", "<path/filename>"); optionally a password can be provided as: decaf::lang::System::setProperty("decaf.net.ssl.keyStorePassword", "password"); To set the location of the trusted certificate for the broker, or the trusted root certificate for all your brokers the location of the file (again in PEM format) is set via: decaf::lang::System::setProperty("decaf.net.ssl.trustStore", "<path/filename>"); These methods should be called before you create your first ConnectionFactory.	0	0	https://issues.apache.org/jira/browse/AMQCPP-140

#	Requirement	Questions	Answered	Successfully Answered	URL
18893	AMQCPP-124	I'm not sure that the Major and Minor versions should come from the client build versions. I was thinking they would just be protocol-specific version info. For example, if a connection is using openwire v2, the major version would be 2. So basically, the connector would hard-code the version info for whatever it supports. Does this make sense?	1	0	https://issues.apache.org/jira/browse/AMQCPP-124
18894	AMQCPP-124	I'm fine with that. I'm not quite sure what the motivation was for this particular part of the JMS API anyway. Does anyone else want to chime in? Albert?	1	0	https://issues.apache.org/jira/browse/AMQCPP-124
18895	AMQCPP-115	Looks like the only place that Properties is used in CMS is in the Destination API, where it is read-only. Perhaps we could change the getProperties method to simply return a std::vector< std::pair< std::string, std::string > >? It might not be as nice from the user perspective, but it might be an easy way to eliminate Properties as a dependency of CMS. What do u guys think?	1	1	https://issues.apache.org/jira/browse/AMQCPP-115
18896	AMQCPP-115	I'll contact the author. Is the ASF's policy on this stuff written up somewhere? As far as I can tell, this macro being licensed under the GPL has no implications for the licensing of the rest of AMQCPP.	0	0	https://issues.apache.org/jira/browse/AMQCPP-115
18897	AMQCPP-115	Still trying to contact the ax_cflags_option author. One more thing to think about with regards to DLLs and shared libraries: we have some code in header files. Could this cause problems? Here I'm thinking along the lines of some internal structure changing without affecting the DLL/shared library "interface", but the user then has some AMQCPP code linked into their executable that expects the old structure. If I have this right, one should simply be able to upgrade the shared library in this case, without requiring the user to recompile their program. Meanwhile, I've been testing pyactivemq with the shared library on Linux and it seems to work without problems.	0	0	https://issues.apache.org/jira/browse/AMQCPP-115
18898	AMQCPP-115	I've got a visibility macro in trunk that seems to be working. I've moved both this macro and the addrinfo check into separate .m4 files in an attempt to clean up the configure.ac file. Is there anything else to be done for this issue, or can we finally put it to rest?	1	1	https://issues.apache.org/jira/browse/AMQCPP-115
18899	AMQCPP-102	source bundle has been created and the vote has been called. Closing this issue.	0	0	https://issues.apache.org/jira/browse/AMQCPP-102
18900	AMQCPP-100	has any progress been made on this?	1	0	https://issues.apache.org/jira/browse/AMQCPP-100
18901	AMQCPP-93	I also have been doing some profiling of the activemq-cpp-2.0.1 tag and I am finding that the DataInputStream class is fairly inefficient and can be greatly improved upon. Most of the inefficiencies are in the readString and readFully methods. readString appends to the string object one character at a time, which is very inefficient. Also, most methods are calling readFully for one byte. It would be better to create a different method to read one byte which would then call the read method the returns the unsigned char. I can probably work on a patch but I have never work with an open source project before. How do I proceed?	1	1	https://issues.apache.org/jira/browse/AMQCPP-93
18902	AMQCPP-93	Gerald, very nice! Would it be possible for you to decouple your benchmark from any "private" code and attach it here?	1	1	https://issues.apache.org/jira/browse/AMQCPP-93
18903	AMQCPP-93	Timothy, I have carefully looked at BufferedInputStream and ByteArrayInputStream read(unsigned char*, size_t) and they have NO LOGIC to return -1. These methods currently always throw IOException which means that the contract is never followed in the first place. Since -1 is never returned and IOException is always thrown, DataInputStream::readFully can never throw a EOFException. The unit tests cases don't test these conditions. I have a small test program which can be walked through with the debugger if you wish. Where should we go from here? According to the current logic, unsigned char read() and size_t read(unsigned char*, size_t) act exactly the same for reading a single byte. We will always hit a major performance problem until we can stop calling a virtual function for each character in a string. The other unmarshalling read statements can probably be improved upon by calling readFully for more than 1 character, but the only way I can think of that we can improve string is to add a readString pure virtual function in the InputStream class which then all derived classes need to implement. Please research and comment.	1	1	https://issues.apache.org/jira/browse/AMQCPP-93
18904	AMQCPP-93	If I understand correctly, this was with Openwire? Did you perhaps try the test with Stomp? We're currently using Stomp due to Openwire's performance issues.	0	0	https://issues.apache.org/jira/browse/AMQCPP-93
18905	AMQCPP-40	Which standard specifies "unix" or "__unix__" as something that is defined on all UNIX systems? I'd like to read up on this. Thanks!	1	0	https://issues.apache.org/jira/browse/AMQCPP-40
18906	AMQCPP-36	> I don't follow this rule. Do you mind if the patches move member functions to .cpp files? As I see it, headers shouldn't include implementation details. > One person's extra whitespace is another persons useful code separation. What I meant by stray whitespace is that there are lines that have 3 or 4 spaces at the end where they serve no purpose. It's the kind of whitespace that Eclipse's "Remove trailing whitespace" removes and the kind that Checkstyle warns you about. I'll update the Linux build files in a new patch. Meanwhile, here's a signedness fix from StompFrame.h.	1	1	https://issues.apache.org/jira/browse/AMQCPP-36
18907	AMQCPP-36	Yes, I do mind. I prefer to leave small functions in the headers of little classes like this, if they get inlined by the compiler or not its fine by me. Simply by nature of C++ the headers have implementation detail, and for that matter most people shouldn't need to be in that code as the CMS interfaces define the core functionality that most users of AMQCPP will be using. The question to ask is does the code work, if yes is the answer, then making all these trivial changes is just pulling time away from implementing the current enhancement under development.	1	1	https://issues.apache.org/jira/browse/AMQCPP-36
18908	AMQCPP-31	Would a better solution be to use the autoconf-style #ifdefs for headers and methods, like we've done elsewhere in the code?	1	0	https://issues.apache.org/jira/browse/AMQCPP-31
18909	AMQCPP-16	1) has been implemented in trunk. This required changes to DataInput/OutputStreams and ByteArrayInput/OuptutStreams to facilitate the new BytesMessage API. I also update the InputStream and OutputStream APIs to remove "const" where not necessary. Tim, give this a try in windows (regarding the const changes) ... gcc is very giving on this particular issue :) Also, could you comment on any of the others that you have implemented in trunk? Thanks.	1	1	https://issues.apache.org/jira/browse/AMQCPP-16
18910	AMQCPP-8	patch has been applied to trunk ... not sure if a Fix Version applies - are we including the activemq-cpp code in releases?	0	0	https://issues.apache.org/jira/browse/AMQCPP-8
18911	AIRAVATA-2384	Assigned this to you [~bharvadl]. Is this and https://issues.apache.org/jira/browse/AIRAVATA-2380 the same? If so close one of them as its a duplicate.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-2384
18912	AIRAVATA-2370	[~eroma_a], This should be fixed now. Can you test again?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-2370
18913	AIRAVATA-2369	[~marcuschristie] and [~tilaks26] Why have we removed User settings from gateway provider ? It would have been useful for them in case of needing email change, etc.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-2369
18914	AIRAVATA-2340	Hello [~eroma_a] , I am interested in Ticket about Airavata Data Management . As my imagine , this should be a website to share the resource between users. How can I discuss further about the idea ? Please nicely let me know. Thank you. Regards, Minh	0	0	https://issues.apache.org/jira/browse/AIRAVATA-2340

#	Requirement	Questions	Answered	Successfully Answered	URL
18915	AIRAVATA-2335	Sent following email to [~scnakandala] {quote} Supun, I'm installing Airavata on Jetstream and ran into a problem when the sharing registry gets initialized. I'm getting this exception in the logs 2017-03-06 22:11:43 \[main] ERROR o.a.a.a.s.h.AiravataServerHandler - Error occured while reading airavata-server proper org.apache.thrift.TApplicationException: getDomain failed: unknown result at org.apache.airavata.sharing.registry.service.cpi.SharingRegistryService$Client.recv_getDomain(SharingRegistr at org.apache.airavata.sharing.registry.service.cpi.SharingRegistryService$Client.getDomain(SharingRegistryServ at org.apache.airavata.api.server.handler.AiravataServerHandler.initSharingRegistry(AiravataServerHandler.java: at org.apache.airavata.api.server.handler.AiravataServerHandler.<init>(AiravataServerHandler.java:120) I think the problem is that the domain default gateway domain doesn't exist and getDomain returns null, but Thrift doesn't support null returning methods. This explains why I get a thrift exception but there is no logged exception from the sharing registry itself. The problem starts at this line \[1]. What would be the best way to go about fixing this? My first thought was to add a method like 'doesDomainExist' to the sharing registry. Another, probably quicker idea would be to use getDomains() and check if it is empty or doesn't contain the default gateway domain. Thanks, Marcus \[1] https://github.com/apache/airavata/blob/a700073d6fddd9407cb3ed49ab31c5e9465291b4/airavata-api/airavata-api-server/src/main/java/org/apache/airavata/api/server/handler/AiravataServerHandler.java#L133-L133 {quote}	1	1	https://issues.apache.org/jira/browse/AIRAVATA-2335
18916	AIRAVATA-2318	[~smarru] how can we implement this with little time ? Can we do something with defining it as a output file to bring back in App interface but as a optional output? meaning it exists bring back if not existing ignore.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-2318

18919	AIRAVATA-2225	[~smarru], Why do we even need to expose this feature in the UI? Why not just always set 'Enable Auto Scheduling' to true and hide it from the user? I'd really like to not even expose 'Enable Auto Scheduling' to the user. My guess is the user will have no idea what it means.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-2225
18920	AIRAVATA-2225	[~smarru], Does this feature need application support? Wouldn't the application need to be resumable to be autoscheduled? Maybe whether to autoschedule should be in application configuration. I'm thinking we can * not show 'Enable Auto Scheduling' to user * in Orchestrator, check if application supports auto scheduling and if it does just automatically enable auto scheduling I'm just trying to figure out where in the system this knowledge should be kept.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-2225
18921	AIRAVATA-2178	[~shameera], I'm working on changing the experiment creation page in PGA to allow a user to select their own compute resource account for running the job. Have you thought about what changes we need to make to the data models so that PGA can convey that the user wants to use their own compute resource account? I'm not sure where it would best go, but I'm thinking some sort of flag on the ComputationalResourceSchedulingModel.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-2178
18922	AIRAVATA-2174	[~eroma_a], I've updated dev seagrid. I've done some testing, but can you also test the experiment sharing? It should allow you to share during execution and after execution.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-2174
18923	AIRAVATA-2170	[~scnakandala], Looks like whenever a user saves a shared project, that user becomes the owner of the project. Is that by design?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-2170

#	Requirement	Questions	Answered	Successfully Answered	URL
18924	AIRAVATA-2164	Pull request for code changes: https://github.com/apache/airavata-php-gateway/pull/23 Supun, can you review the pull request when you have a chance?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-2164
18925	AIRAVATA-2158	[~anujbhan], I also need some way to set the description on a credential when creating it. That is, where the current API allows {noformat} string generateAndRegisterSSHKeys (1: required security_model.AuthzToken authzToken, 2: required string gatewayId, 3: required string userName) {noformat} I need instead something like {noformat} string generateAndRegisterSSHKeys (1: required security_model.AuthzToken authzToken, 2: required string gatewayId, 3: required string userName, 4: optional string description) {noformat} Can you add that on to this issue or would you prefer I create a separate issue for it?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-2158
18926	AIRAVATA-2117	Here is the discussion summary: * Is this user story a direct descendant to Use-Case "Resource & job management for user's with third party Allocations" in https://issues.apache.org/jira/browse/AIRAVATA-2108?focusedCommentId=15512194&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-15512194 * Will the user be given the privilege to update this preferences or the gateway admin does that ? * What Data will the Gateway need ? username, password, sshURL * Who will configure the SSH key, user or the Gateway ? * In order to provide this feature, An optional endpoint will be exposed out of Airavata API, which will update the Userprofile data modal and respective changes to Gfac and PGA User Interface.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-2117
18927	AIRAVATA-2117	[~anujbhan], For the UserResourceProfile model, what is the userId? Is it the username, email address, or something else?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-2117
18928	AIRAVATA-2117	Thanks Anuj. I have another question. In PGA, I tried to query to see if a user has an existing UserResourceProfile {code} public static function get_or_create_user_resource_profile() { $userId = Session::get('user-profile')['username']; $gatewayId = Session::get('gateway_id'); $userResourceProfile = Airavata::getUserResourceProfile(Session::get('authz-token'), $userId, $gatewayId); return $userResourceProfile; } {code} However when I try this I get {noformat} Airavata \ API \ Error \ AiravataSystemException HELP Error while retrieving user resource profile. More info : Error while retrieving user resource profile. More info : javax.persistence.NoResultException: Query "SELECT p FROM UserResourceProfile p WHERE p.userId =:param0 AND p.gatewayID =:param1" selected no result, but expected unique result. {noformat} I think this is because [the backend code calls getSingleResult()|https://github.com/apache/airavata/blob/50cf71e44431e1dce3653df25790443d4a77ec0f/modules/registry/registry-core/src/main/java/org/apache/airavata/registry/core/app/catalog/resources/UserResourceProfileResource.java#L161-L161]. Is there a better method to use to figure out if a UserResourceProfile already exists?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-2117
18929	AIRAVATA-2117	[~anujbhan], Should getUserResourceProfile return null if there is no record instead of throwing an exception? The alternative I guess is that I catch the AiravataSystemException, but I don't like that because then the code would be assuming that the AiravataSystemException was thrown because a UserResourceProfile doesn't exist.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-2117
18930	AIRAVATA-2100	Hi Lahiru, How many instances do you recommend to setup only for log analysis in production with enabling HA?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-2100
18931	AIRAVATA-2070	Hi Lahiru, Could you please explain, reason for this approach instead of sending directly to logstash?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-2070
18932	AIRAVATA-2068	Could you explain how airavata instances publish messages, it is for one partition or different partitions? Do we have different partitions for gfac, orchestrator ,api .... components? Is there any diagram explain your approach?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-2068
18933	AIRAVATA-2011	The fix here seems to be disabling edit capabilities for users with read permission only, is that correct?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-2011
18934	AIRAVATA-1987	Hi Gourav, can you send a pull request by adding this into airavata code base?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1987
18935	AIRAVATA-1987	Hi Suresh, can you direct me where to insert this module?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-1987
18936	AIRAVATA-1956	I think now is a good time to do the upgrade, if it is quick. I'm looking at the documentation and the latest Laravel is 5.4: https://laravel.com/docs/master/upgrade However, [starting in Laravel 5.3, PHP 5.6.4 or higher is required|https://laravel.com/docs/master/upgrade#upgrade-5.3.0]. I'm wondering how easily or not we'll be able to upgrade our servers where PGA runs to PHP 5.6.4 or higher.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1956
18937	AIRAVATA-1956	I can log in to PGA but now I get this error: {noformat} TSocket: Could not connect to tls://gw56.iu.xsede.org:9930 {noformat}	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1956
18938	AIRAVATA-1956	[~marcuschristie], most likely its SSL related. Did you try to connect to a non-secure Airavata and test it?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1956
18939	AIRAVATA-1948	When Summary and Detail were initally thought of, they were based on which user role is looking at it. A Gateway Admin gets to see Experiment Details/Summary. All users get to see only Experiment Summary. Are we moving away from this and deciding to show Details to everyone? Then taking this action would make sense, otherwise not.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1948
18940	AIRAVATA-1948	So in Experiments' context, do we want all user types be able to see a detailed view?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-1948
18941	AIRAVATA-1894	Do we need to make a front end web UI for workflows editor using front-end technologies like javascript, html or css for adding drag and drop features? And we can use Google's GSON library for JSON implementation in workflow.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1894
18942	AIRAVATA-1893	Hi Anuj, Can you create a child page under https://cwiki.apache.org/confluence/display/AIRAVATA/GSoC+2016 and add your proposal there? * You will need create an account first on wiki and tell us the user name so we can give you required permissions. * Can you also start the proposal in gsoc dashboard and choose external link for the draft?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1893
18943	AIRAVATA-1880	tested and verified in PGA (http://149.165.156.11/) in JS Can set read only flag to true or false in application interface. When this flag is set for URI, no difference at the experiment create, edit and clone. When this is set to true for String, Integer or float user cannot change the value given by the gateway admin at creation, edit or clone of an experiment	0	0	https://issues.apache.org/jira/browse/AIRAVATA-1880
18944	AIRAVATA-1847	In the first look - - Like Eroma, I also like the previous simpler single-headed elephant's logo more over the three-headed versions because of simplicity. - i am not inclined towards having black color on the logo, mainly because to me it doesn't represent an opensource foundationn. It suits more to a stylish/classy brand like a car or a watch company, but that is just my opinion. - I like the use of font in 'APACHE AIRAVATA' in the three-headed RED logo. - I don't know why, but the three-headed logos with trunks in the same direction do not resonate with me. Can we get an explanation behind the making of the logos to get a deeper understanding about them of why they are the way they are? ---------- I'm not a graphic designer and I understand very little about philosophy of logo design, but I have a couple of suggestions that I would like to add with examples that we can try if we have time - We could try flat colors used now-a-days like - http://www.flatuicolorpicker.com/ We could try giving a material feel to the logo like this one - https://cdn.colorlib.com/wp/wp-content/uploads/sites/2/2013/10/hudddle-logo.png ----------	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1847

#	Requirement	Questions	Answered	Successfully Answered	URL
18945	AIRAVATA-1847	[~eroma_a] [~ndoshi] How about you consult with Suresh and you can come back with some concise feedback. I would be willing to do any of this but I feel like you all should align your opinions and then I can make changes. I used types of flat colors on the logo. What explanation is needed for the logos? I want to emphasize Airavata and the elephant. What do you mean by material feel? Thanks, Blair Carlisle	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1847
18946	AIRAVATA-1847	Nipurn, Shivika, Its greatly impressive the way you are able to embed the gateways concept into the logo. It will be better to frame Airavata as a general purpose distributed systems framework and not constrain it to one use case. Since distributed is hard to illustrate beyond few connected things like [1] [2] [3], can you also make one attempt on not worrying any of these and suggest a logo and branding which just helps to promote the words Apache Airavata (or only Airavata) without necessarily have a thoughtful meaning? [1] - http://www-fp.pearsonhighered.com/assets/hip/images/bigcovers/0321263545.jpg [2] - https://openit.com/wp-content/uploads/2015/01/network-concept-600x450.jpg [3] - http://www.igi-global.com/Images/Covers/9781466626478.png	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1847
18947	AIRAVATA-1792	Github user machristie commented on the issue: https://github.com/apache/airavata-php-gateway/pull/52 @scnakandala when you have a chance, can you please review and merge this PR? Thanks.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1792
18948	AIRAVATA-1716	What you mean by duplicate with other jobs? We are not storing the sub-stringed job id. We are just doing it when we run the query. I tested it with all the resources and it works fine. Please pass the example where its not working and I am happy to test.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1716
18949	AIRAVATA-1663	Chathuri, just curious, how are we going to start all services in one go?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1663
18950	AIRAVATA-1649	Hi Abhishek, the proposal is reasonable with details. Can you immediately submit it in melange - https://www.google-melange.com/gsoc/homepage/google/gsoc2015, make it public and send a link on this JIRA? We could suggest improvements there.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1649
18951	AIRAVATA-1649	Hi Abhishek, Yes I can view your proposal now. This is a comment to both you and [~priyanshu-patra]. Both your proposals are looking identical and I had to spend time to get the differences out. Can you both in your respective proposals clearly distinguish your deliverables. Thrift is a polygot framework and you can see the full list of supported languages at - http://thrift.apache.org/lib/ Airavata currently supports a subset of these as client SDK's (Java, PHP, C++, Python). Can you make sure you have the initial deliverable of contributing good examples to register applications, create and monitor executions into Airavata Client SDK repo? Once you understand Airavata well enough through these examples, then you can integrate these into GenApp.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1649
18952	AIRAVATA-1649	All right sir, and as you suggested in the second part of earlier comment- we will modify our proposals by adding an initial deliverable of making some examples which will be added to the Airavata Client SDK repo by writing a simple program,getting to run via Airavata,defining it to genapp and then encoding the steps required to run any program via airavata and put that in genapp. Does that sound good?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1649
18953	AIRAVATA-1649	Hello Sir, I didn't actually understand your last comment. Can you please explain me.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1649
18954	AIRAVATA-1646	In regards to this project, I would like to understand the scope of the work. I am interested in identifying what are the best ways to incorporate Cassandra into the project. Here are some questions I have particularly towards metadata and provenance: - Do we have access to the apache thrift data model currently in use by Airavata? If so, can we modify this model? - What other object store technologies are you interested in (Cassandra and MongoDB)? - How will the metadata be used? Depending on metadata usage it can affect which technologies and which features of that specific technology we should enable. - What are some examples of meta data is being stored? Is the data structured or unstructured? - What kind of provenance data is being stored? - What kind of queries would you expect to be run on the provenance data? - Do we need look into Apache Storm for querying streaming data? - Will we receive accounts on NSF XSEDE clusters for this project? Thanks, Doug	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1646
18955	AIRAVATA-1646	I am really enthusiastic about the option to explore big data technologies (concepts and implementations) for Airavata Data Management needs. I have some questions: Is information such as Application Characteristics available? For example, are applications Read/Write/IO/CPU/memory intensive? Also, is one of the outcomes of this project a recommendation for a software pipeline that shows which big data technologies should be combined? Do we need look into Apache Storm for querying streaming data? And, what is the data size and how many nodes can we run data on? Finally, where will these experiments be run? Locally on my own machine? Pankaj	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1646
18956	AIRAVATA-1646	Hi Doug, Please see the responses embedded below: Do we have access to the apache thrift data model currently in use by Airavata? If so, can we modify this model? --I consider this project as a exploratory, so yes we could branch the master and have you modify the thrift data models. You can look at them here - https://github.com/apache/airavata/tree/master/airavata-api/thrift-interface-descriptions What other object store technologies are you interested in (Cassandra and MongoDB)? --It will be premature to state a preference. The key thing here is to understand the problem well enough and make a recommendation if relational databases are good, or if key-value or column, document or graph databases can better address Airavata metadata needs. How will the metadata be used? Depending on metadata usage it can affect which technologies and which features of that specific technology we should enable. --This is a very open ended question. I will hope you can propose a project keeping in mind you will need to explore this answer in interactions with airavata community. What are some examples of meta data is being stored? Is the data structured or unstructured? --Currently all the metadata is very structured. An example would be to look the experiment model. User requests an experiment which will get executed on remote resources, in the process transforms data. The metadata capture also included states of simulation or data analysis tasks. Once you run sample experiments, this will be more clearer. What kind of provenance data is being stored? --Currently very minimal to none. Basic information like user provided metadata, resources used to compute, job dimensions. A big missing piece is to collate provenance of input data and augment provenance of generated data with application details and simulation/analysis configurations. What kind of queries would you expect to be run on the provenance data? --this will be very subjective to the data domain. An example could be, query for all radar assimilation data which have a quality score of 5. We could find more concrete pointers. Do we need look into Apache Storm for querying streaming data? -- Not right away, but I could foresee some usage. For instance, if we have to process metadata extraction from all the archived data, I could see storm helping to run such a topology. We could also employ a storm cluster to shred deep data from all input requests. Again, we need to adapt with the usecases a bit here. Will we receive accounts on NSF XSEDE clusters for this project? --Yes we could get you access to various clusters including XSEDE if absolutely needed by the project.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1646

#	Requirement	Questions	Answered	Successfully Answered	URL
18957	AIRAVATA-1646	Hi Pankaj, Yes we could application characteristics. Typically (or currently) airavata executed applications are one or more of CPU/Memory/IO intensive. Most of the time they are CPU intensive. I am not sure what you mean by pipeline in this context. Can you elaborate? The goal is to explore if big data tools can solve/enhance airavata usecases. So this could lead to some open ended nature of this project. But to concretely help you started, may be you should consider the following usecase: Assume Airavata is populated with lots of previously run simulations. analyze the data and when a scientist is configuring a new application, can we help guide it based on previous success/failures?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1646
18958	AIRAVATA-1646	Hi Chris, I fully agree we need to bring this to surface again. There were couple of academic projects (one undergraduate team, one masters student) who explored using OODT for Airavata data management needs, need to check on that. Rishi Verma and few of us also discussed some synergies [1]. How about we find time at ApacheCon and make plans so we can pursue either GSoC, or summer of code or other opportunities to make progress? [1] - http://airavata.markmail.org/thread/5uabiaceuj2eqayl	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1646
18959	AIRAVATA-1636	Hello, I've got several questions about implementing a benchmark framework. First, as Airavata is available for installation on private machines / clusters rather than being centralized to one global installation, does it have a mechanism built in to record data from all experiments that it has executed? For example, if an organization is using Airavata to manage and run experiments, will any future benchmark framework be able to access all previous records (including things like experiment type, input size, computation resource, and run time) to prime its decision engine? Or do users have to manually record this data until the benchmark framework is installed and able to record it? Are all the computation resources running a uniform scheduler? Or is there some common API to access their scheduling queue? If the benchmark framework predicts that resource A will execute an experiment in 3 hours while resource B will compute it in 6 hours, but resource A is allocated for the next 6 hours, it would be ideal to schedule the experiment for resource B instead. I'm wondering if this can be used to help inform the decision. All execution on the resources is *not* performed through Airavata, correct? For example, other users may choose to run their experiments through a terminal or other applications? If all scheduling is done through Airavata, information relevant to the previous question could be provided by the benchmark framework itself. My first idea for such a framework is to provide a set of known parameters and historic execution data to a machine learning algorithm or framework and provide extra information to the user as they schedule an experiment. If this has been discussed as a possibility already, is there a link to the discussion? Thanks, John	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1636
18960	AIRAVATA-1635	1. Is there any documentation that describes about the API functions of Middleware Service [2] and Airavata SDK? 2. Do I have to setup a local SCiGap (Airavata) instance or is there a existing setup?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1635
18961	AIRAVATA-1635	In GridChem-Client [1] build and bin folders also have pushed to the repository. Is it necessary to have them in repo? This will lead to huge list of changes once the project is built locally. [1] https://github.com/SciGaP/sha2-GridChem-client	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1635
18962	AIRAVATA-1635	Hi all, Suresh : Ok. I removed previous forks in my repo and these are new forks https://github.com/DImuthuUpe/GridChem-Client https://github.com/DImuthuUpe/GridChem-Middleware-Service I will be working on my forks until I improve builds. Hopefully we may be able to convert ant builds to maven builds. Then I'll send you a pull request. I tried to run GridChem-2.0.0.jar using java -jar GridChem-2.0.0.jar but it gave following error. How can I resolve this? It seems like some libraries are not added to the classpath. Exception in thread "main" java.lang.NoClassDefFoundError: org/apache/commons/cli/CommandLineParser at java.lang.Class.getDeclaredMethods0(Native Method) at java.lang.Class.privateGetDeclaredMethods(Class.java:2451) at java.lang.Class.getMethod0(Class.java:2694) at java.lang.Class.getMethod(Class.java:1622) at sun.launcher.LauncherHelper.getMainMethod(LauncherHelper.java:494) at sun.launcher.LauncherHelper.checkAndLoadMain(LauncherHelper.java:486) Caused by: java.lang.ClassNotFoundException: org.apache.commons.cli.CommandLineParser at java.net.URLClassLoader$1.run(URLClassLoader.java:366) at java.net.URLClassLoader$1.run(URLClassLoader.java:355) at java.security.AccessController.doPrivileged(Native Method) at java.net.URLClassLoader.findClass(URLClassLoader.java:354) at java.lang.ClassLoader.loadClass(ClassLoader.java:423) at sun.misc.Launcher$AppClassLoader.loadClass(Launcher.java:308) at java.lang.ClassLoader.loadClass(ClassLoader.java:356) ... 6 more Sudhakar: Thank you. I'll look into that and let you know in case of issue. I may need some details of how to build and start GridChem-Middleware-Service. I can see some targets in build.xml but couldn't figure out which target to invoke. There are some shell scripts inside the project (restart_tomcat7.sh, restart.sh, run_make.sh, startup_tomcat7.sh, startup.sh, test.FTD.sh). What is the correct script(s) that are needed to start the server?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1635
18963	AIRAVATA-1635	What is the method to run GridChem client? Is it just running GridChem-2.0.0.jar in bin folder or is there a specific way to run it? And there are several targets in build file that can be invoked. What is the target I need to invoke in order to build this again?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1635
18964	AIRAVATA-1635	Suresh/Sudhakar, Can I have access to a working system of GridChem as we have discussed earlier? Then I'll be able to get familiar with its use cases.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1635
18965	AIRAVATA-1635	I tried GridChem client by putting some jobs on the servers and getting outputs. Input files that we push has a format like this. %chk=water.chk %nprocshared=1 %mem=500MB #P RHF/6-31g* opt pop=reg gfinput gfprint iop(6/7=3) SCF=direct Gaussian Test Job 00 Water with archiving 0 1 O H 1 0.96 H 1 0.96 2 109.471221 Is this format some standard way of passing jobs or specific format for GridChem? Does client directly pass this file to middleware or parse this and pass only necessary data?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1635
18966	AIRAVATA-1635	Hi Suresh, I have almost finished porting Create/Edit Experiment interface of GridChem client. I need to test it with applications like Gaussian or GAMESS. Some resources can be found form [1] and [2] but they do not explain how to register those applications in locally deployed Airavata Server. What are the steps I need to follow in order to install them in my local machine? Or can I get an already hosted server with these applications registered for my testing purposes? [1] https://cwiki.apache.org/confluence/display/AIRAVATA/Script+Example+-+GridChem+Gaussian [2] https://cwiki.apache.org/confluence/display/AIRAVATA/Gaussian+Input+examples	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1635
18967	AIRAVATA-1624	Hi Hasini, Please refer to [1] for some brief discussion on this topic. In Scenario 2 of your document (figure 3) does wso2IS currently have such user store extension or will it have to be written? What will be the requirement of Gateway User Store? I am assuming most of these include a custom mysql user management or some use bundled postgre database like with drupal/wordpress. Suresh [1] - http://markmail.org/thread/vveb33oefxdbecxq	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1624
18968	AIRAVATA-1624	Hi Hasini, Some of your points in the discussion seem to indicate you assume Airavata will be deployed as a stand alone. But we are intending for it to be deployed as a tenanted platform. Will your design change if a single deployment has to serve all three use cases (gateways with diverse user management scenarios)? Suresh	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1624

#	Requirement	Questions	Answered	Successfully Answered	URL
18969	AIRAVATA-1624	Hi Hasini, Can we also consider a scenario 4 (which is a slight variation of Scenario 2 and 3) where gateway and Airavata needs to communicate via a persistent token (instead of a per user OAuth token)? Typically in a OAuth approach user id hand holding the trust and allowing Gateway and Airavata to trust his credentials. In this scenario, the gateway takes care of user authentication (either with custom user store or through federated identity) and performs some actions on the gateway portal. Subsequently, some user actions will require Airavata interactions at which point gateways send user information after authenticating and authorizing through a one time pre-issued gateway API token (similar to the developer tokens widely used). Airavata also supports Desktop applications (and in future mobile apps) in addition to the Web based gateways. Since your proposed implementation is OAuth centric, will all scenarios work for desktop and mobile apps?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1624
18970	AIRAVATA-1624	Hi Suresh, I was trying to edit the wiki page you have linked above, however it seems that I do not have permission to edit that. Can you please grant me the permission to edit the wiki page of the proposal at https://cwiki.apache.org/confluence/display/AIRAVATA/%5BGSoC+Proposal%5D+Securing+Airavata+API? My username for wiki is: hasinig. Thanks & Best Regards, Hasini.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1624
18971	AIRAVATA-1624	Hi Hasini, Thanks for the clarifications. I am planning to implement secure airavata client using PHP for the php gateway. Can you give me the instructions on how to develop the php client to use the IS OAuth services. Are there any existing client libraries available that I can use and what is your recommendation? Thanks Supun	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1624
18972	AIRAVATA-1421	What's the status of this? There have been some commits. Please assign yourself and update the status.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1421
18973	AIRAVATA-1420	Supun, the patch seems dubious because of its size (53MB). Can you only submit a patch with source code, also, make sure to remove .idea directories and all their contents? Also, remove all binaries (classes, jars..) and log files. Lastly, did you make sure the code has a maven build and all dependencies are coming from maven central? (make sure you did not add any custom repositories in the pom file).	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1420
18974	AIRAVATA-1415	Is this fixed? We have commits.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-1415
18975	AIRAVATA-1397	Why is there a 'server-allowed-file-size' variable in pga_config.php? Is this just supposed to be the same as 'upload_max_filesize' in php.ini? If so, we don't need that since we can get the value from php.ini. Currently we have a bit of JavaScript that checks to see if files selected for upload are greater than the minimum of post_max_size and 'server-allowed-file-size'. However, * I would propose getting right of 'server-allowed-file-size' and instead look at the minimum of upload_max_filesize and post_max_size * it wasn't set up for the optional input files but I've fixed that locally That catches this problem earlier, client side. Here are some other improvements that I think can be made # Display the max upload file size in the form so that users (and administrators) have some clue as to what the max file size is. # Determine server side if the upload_max_filesize has been exceeded and redisplay the experiment creation form with an error message. # Determine server side if the post_max_size has been exceeded. Not sure what can be done in this case since it looks like $_POST is empty. We can redisplay the form with an error but the values provided by the user will be completely empty. #* See also http://stackoverflow.com/a/2133726 With the client side detection, I'm not sure how important #2 and #3 are. Since there isn't much that can be really be done with #3, I don't think it is worth it. I think #2 is worth it however, since you can't always rely on client side JavaScript.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1397
18976	AIRAVATA-1389	Can someone take this on?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-1389
18977	AIRAVATA-1380	Currently the web browser back button works fine in most scenarios. Only place it does work is when the user tries to navigate through experiment creation, cloning and editing with browser back button user can navigate to browse experiments and browse projects respectively from experiment summary and Project summary. Shall we leave it as it is?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-1380
18978	AIRAVATA-1380	Going back from experiment summary page to create experiment seem to be creating issues. The CPU, node related infromation is missing. Can we disable this button? [~scnakandala] lets discuss this issues and if possible we can push it to next version since we are going to do a next gen PGA anyway	0	0	https://issues.apache.org/jira/browse/AIRAVATA-1380
18979	AIRAVATA-1374	Hi Nipun, These patches did not get applied before. Can you please retake these patches with latest code and re-submit?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-1374
18980	AIRAVATA-1361	In Experiment -->Browse gave time to and from and also state COMPLETED. Only 3 experiments got retrieved. where as there should be 100+ Time given 01/15/2016 9:20 AM - 01/15/2016 3:20 AM	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1361
18981	AIRAVATA-1257	Here is the data model struct ExperimentSummary { 1: required string experimentID, 2: required string projectID, 3: optional i64 creationTime, 4: required string userName, 5: required string name, 6: optional string description, 7: optional ExperimentStatus experimentStatus, 8: optional list<ErrorDetails> errors } Is this ok to go forward ?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1257
18982	AIRAVATA-1190	We need to know the limits of input validation. How much validation will the Thrift clients do? What happens if the client gets unexpected values (string instead of int, for example)? Does the client throw an exception?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1190
18983	AIRAVATA-1176	Is this working correctly after the recent SDK updates?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1176
18984	AIRAVATA-1176	Experiment ID is now passed in via the command line. Works properly with updated SDK. Only updates the experiment's name - is that OK for the tutorial?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-1176
18985	AIRAVATA-1171	Added command-line arguments for user and experiment name. Is this sufficient for the tutorial?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1171
18986	AIRAVATA-1160	Did this get applied?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1160
18987	AIRAVATA-1159	Was this patch applied?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1159
18988	AIRAVATA-1140	What is the status of this?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-1140
18989	AIRAVATA-1043	Commit 8a615ec049d4c4f8421cf8ac20046e3a6744da9d in airavata's branch refs/heads/master from [~raminder] [https://git-wip-us.apache.org/repos/asf?p=airavata.git;h=8a615ec] Save JobDetails and use task details. AIRAVATA-1043, AIRAVATA-1042	1	1	https://issues.apache.org/jira/browse/AIRAVATA-1043
18990	AIRAVATA-1008	This is relating to current GFac interface : org.apache.airavata.gfac.cpi.GFac IMO it would make sense to change, public boolean submitJob(String experimentID) throws... to public void submitTask(String TaskID) throws... Functions to add cancelTask(...) But do we need a restartTask(...)? Do we have a realtime notification on GFacTask status changes? This is important for the workflow interpreter since it is inefficient for the interpreter to poll the registry and wait for status changes to trigger its node executions.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1008
18991	AIRAVATA-1006	Hi Marlon, Suresh, Please give feedback to [1]. Will this be too abstract ? Someone who programs against this should only know about the thrift data models. He does not have to know about the registry structure. [1] https://git-wip-us.apache.org/repos/asf?p=airavata.git;a=blob;f=modules/registry/registry-cpi/src/main/java/org/apache/airavata/registry/cpi/Registry.java;hb=25cc2514	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1006

#	Requirement	Questions	Answered	Successfully Answered	URL
18992	AIRAVATA-1006	Hi Chathuri, This is indeed very intuitive. One a flip side we can look at critically and say its too abstract and high level, but I find the abstraction very simple and neat. When data models change adding removing fields, this CPI will almost require no changes what so ever. Now this will burden all components to focus on airavata thrift data models and adapt to changes. But that may anyway require and it alleviates form changes to registry cpi as well. Its also very clean in the sense that internal organization of the data and the relations between them, whether structured, unstructured or semi-structured is now a registry implementation detail. + 1 for moving foreword. How will the update work? lets say if there are some optional values filled in and a request comes to update the object with a values for new parameters and for some previously set parameters, will all of them be updated? How will the transactions be enforced when two non co-ordinating components are trying to update the same obejct? Suresh	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1006
18993	AIRAVATA-1006	Also, will it be useful to have a getSupportedRegistryDataTypes? I like the isExist, but wondering if it will be useful to get a fill list.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-1006
18994	AIRAVATA-1005	As the CPI's are evolving, integrating them into various components is warranting initiating the components, setting the constructors and especially non-blocking calls creating lot of objects in memory. How about we let the thrift services penetrate to these components and move foreword with CPI level thrift service? I will assume lazy consensus and prototype the registry CPI as a service, meanwhile lets please discuss the alternatives.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-1005
18995	AIRAVATA-994	Thanks for the feedback Raman. How about adding these two table to keep workflow inputs and outputs ? CREATE TABLE WORKFLOW_INPUTS (EXPERIMENT_ID VARCHAR(255) NOT NULL, KEY VARCHAR (255) NOT NULL, VALUE VARCHAR (255), PRIMARY KEY (EXPERIMENT_ID, KEY), FOREIGN KEY (EXPERIMENT_ID) REFERENCES EXPERIMENT_METADATA(EXPERIMENT_ID) ON DELETE CASCADE) CREATE TABLE WORKFLOW_OUTPUTS (EXPERIMENT_ID VARCHAR(255) NOT NULL, KEY VARCHAR (255) NOT NULL, VALUE VARCHAR (255), PRIMARY KEY (EXPERIMENT_ID, KEY), FOREIGN KEY (EXPERIMENT_ID) REFERENCES EXPERIMENT_METADATA(EXPERIMENT_ID) ON DELETE CASCADE)	1	1	https://issues.apache.org/jira/browse/AIRAVATA-994
18996	AIRAVATA-994	Thanks Chathuri. The new model look good to me. Should we call it WORKFLOW_* or EXPERIMENT_*. We need to record, which workflow/application to invoke in one of the models.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-994
18997	AIRAVATA-992	What are the intended functionalities from this API? The JIRA AIRAVATA-991 says "Provides access to client queriable Airavata configuration data". What I'm interested is what client applicable Airavata configurations are we going to expose via this?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-992
18998	AIRAVATA-992	Saminda, this is a good question and I thought about a need other day but could recollect now. I was intending some configurations like what type of resources for Airavata service communicate to? as an example this will return the providers from gfac like EC2, GRAM and so on. Do you have any concrete needs from this block of API? As a general rule, it will be better for us not to add too many api methods and data we foresee, but do not have concrete use now. Its better to base all of API based on what we know now. I agree with API community thats its a API development is an art and not an engineering (hence the title craft and not design) and I am myself a bad artists. So please crtique and change liberally.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-992
18999	AIRAVATA-991	Hi Suresh, Currently we have data models inside airavata-api-stubs and airavata-data-models which leads to redundancy and confusion. From airavata components, we use data models inside airavata-data-models project. Instead of having two places, can we have all the generated data models in airavata-data-models ?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-991
19000	AIRAVATA-985	Thanks, Sachith for the contributions. The wiki pages look good. The sample code is constructed as unit tests, however, which may make it hard for new developers easily adapt to their usage. Is there a better way to present this? Also one other cleanup is needed: the patch includes an ItelliJ file (gateway-developer-guide.iml) that you should delete.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-985
19001	AIRAVATA-965	I guess one of the reasons to have 2.1 is to set the bouncycastle 1.49 as a dependency. How much time do you think it is required to test the jglobus release? and when do you want to release jglobus 2.1?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-965
19002	AIRAVATA-965	Can i create a branch with Jglobus and unicore changes and then rollback the version of Jglobus? We can continue to test both the provider and can request a jglobus release after enough testing. It will be easy to merge changes to trunk is this case.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-965
19003	AIRAVATA-963	Nice work Sachith. What new integration tests are you planning to add?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-963
19004	AIRAVATA-963	Hi Sachith, How should I apply the patch ? Do I have to apply all the three files or do I have to only apply integration_tests_refactor_update3.patch ?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-963
19005	AIRAVATA-949	for Sha validation for file in `find . -type f -not -name '*.asc' -not -name '*.md5' -not -name '*.sh' -not -name '*.sha`` do gpg --print-md SHA512 ${file} \| diff - "${file}"".sha" | echo "testing : $file"".sha" done For MD5 validation gpg --print-md md5 ${file} \| diff - "${file}"".md5" | echo "testing : $file"".md5" I can't access the page So I posted the code here. By adding them all together we can automate the whole process with one script.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-949
19006	AIRAVATA-944	Hi Saminda, Shall I create a document which depicts how to use Airavata API to create and use gateways to submit a simple job? It's not mentioned anywhere and it is very useful. We need How-to complete documentation on how we can do the above.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-944
19007	AIRAVATA-921	Hi Vijeyendra, This is a big patch and I see too many directories and files within the root directory. This is first time I am seeing the monitoring contribution and unable to review it. Can you please explain this patch a bit?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-921
19008	AIRAVATA-921	Hi Vijayendra, I committed this path, but did not know how to use it. Can you please add a README and also wiki documentation about this module? -- Suresh	1	0	https://issues.apache.org/jira/browse/AIRAVATA-921
19009	AIRAVATA-916	I did(apply Shameera's patch), but that doesnt seem to fix it. I am kind of confused here. Why does the client side of this API need to show all these methods to build SOAP headers. From how I understand it, this should just show the methods which the user will directly interact with (the get/list and set methods).	1	1	https://issues.apache.org/jira/browse/AIRAVATA-916
19010	AIRAVATA-916	Hi [~shameera] No , even I was having the same issue ! [~subho] I didn't see any service change in this patch, where have you added the file?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-916
19011	AIRAVATA-906	Hi Shameera, Thanks for this patch. I am wondering why some schemas are using draft-03 and some draft-04, is there any compatibility reason? I see some of the optional values are not explicitly called out for. So should we make sure we add "required": false for all optional values? Lastly, what is the json schema equivalent of unbounded arrays?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-906
19012	AIRAVATA-899	Saminda, can you please take a look at how to make it work on 0.8? I am attaching the patch and i tried to make most of the changes but still not working.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-899
19013	AIRAVATA-899	Hi Raman, Can you check the attached patch ("patch-0.8.diff") with the 0.8 release tag?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-899

#	Requirement	Questions	Answered	Successfully Answered	URL
19014	AIRAVATA-898	well. 19015	AIRAVATA-897	Hi, Here i have attached patch for this, please review and commit. Thanks, Shameera.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-897
19016	AIRAVATA-894	Hi devs, I have attached patch for this, Please review and commit. Thanks, Shameera.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-894
19017	AIRAVATA-894	Hi Shameera, I am sorry, I missed to apply this patch and proceed with others and it now conflicts. Can you please re-take the patch from latest sandbox area? Suresh	1	1	https://issues.apache.org/jira/browse/AIRAVATA-894
19018	AIRAVATA-893	Sanjaya, thank you for paying attention to this lingering issue. The patch looks good. One concern I have is duplication of the schema files in the distribution. Any time we duplicate the schemas, we risk keeping them in sync. Can you instead copy these files as a assembly task from the commons location? Let me know if you need help with. You can look at the distribution module on how the config files are copied, you can use similar ant tasks to do the same here.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-893
19019	AIRAVATA-893	Hi Sanjaya, Thanks for taking initiative to fix this. Nice work on preparing the patch. I have some suggestions which you can improve on it. Apart from the improvement Suresh has mentioned do you think you can update the patch to have a order of preference of selecting online/offline automatically? The reason is that unless we educate users of this setting in the property file ("offlineModeEnabled") users may not know that they are required to update it when they loose or gain Internet connectivity. So my suggestion is let, offlineModeEnabled=auto|false|true and when "offlineModeEnabled" is "auto" (or null) check if the schema url is accessible over Internet and if not use the local schema files which you've setup. Also inorder to dynamically copy the schema files during the build time use the maven dependency plugin to retrieve the "airavata-gfac-schema-utils" jar (which will be built before any of the distributions) and extract it to a temporary location and copy the schema files using an ant task in the maven ant plugin. (Let me know if you need any help doing this) Notice that the "modules/rest/webapp" and "modules/integration-tests" will also require the schema files.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-893
19020	AIRAVATA-893	Thanks Saminda! It is a great and convenient improvement to support auto. Following is my understanding about auto implementation. Please clarify if your understanding is different. Each time when a request comes, application tries to connect to online schema. If it fails to connect online schema, validates schema using offline. It's a combination of both online and offline validation where it falls back to offline validation in case of connection failure in online validation. I have modified the build to copy the schema from resources/schema in commons/gfac-schema module. I think "airavata-gfac-schema-utils" also copied the schema from the same location. Is there any particular reason such as possible post processing to copy it from the jar file ? I'll update the "modules/rest/webapp" and "modules/integration-tests" to use the same mechanism. I might need some help to test these modules. I have tested the solution only with XBaya and Airavata Server modules.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-893
19021	AIRAVATA-891	changed scaffolding to allow for bootstrap 3 [~sanchitagarwal108@gmail.com] : I have changed most of your code to conform to bootstrap3 except for globusFileTransfer.html and launchWorkflow.html. Could you make the changes for these files?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-891
19022	AIRAVATA-889	Sanchit, Can you please submit a svn patch? Based on the svn client you are using comand line or eclipse you will be able to google and find instructions how to take a patch.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-889
19023	AIRAVATA-889	Sanchit, index.html has a conflict, can you do a svn update, resolve conflicts and take a patch again?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-889
19024	AIRAVATA-889	Hi suresh I think due to the zero byte file, index file got corrupted, can you please apply EI_indexfile.patch to correct this.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-889
19025	AIRAVATA-889	Sanchit, can you please do a svn update and retake the patch? It conflicts after I committed Subho's patch.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-889
19026	AIRAVATA-889	Sanchit, this is much better now, but still has a conflict in app/views/exec.launchWorkflow.html. Can you do a svn up on this file and retake the patch?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-889

#	Requirement	Questions	Answered	Successfully Answered	URL
19027	AIRAVATA-889	Sanchit, I applied this patch now, but it complained on app/scripts/controllers/executionInterfaceCntl.js and app/scripts/controllers/HostDescriptor.js. Can you take an svn up and add any missing files into a new patch.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-889
19028	AIRAVATA-889	Sanchit, Can you please submit an updated patch for views taken from latest gsoc13 folder?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-889
19029	AIRAVATA-889	Sanchit, I applied the patch, but looks like the HostDescriptor.js is missing in svn. Can you add take an svn update and verify again? I have seen the RegistryDescriptors and HostDescriptor.js is being toggled back and forth, which is the one you intend to use? The controllers have RegistryDescriptors.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-889
19030	AIRAVATA-880	Hi Viknes, The patch looks good for the current requirements you have. Do you identify a notion of user roles or groups in your requiremnets?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-880
19031	AIRAVATA-880	That is correct. Right now we assume the user is admin and they can do everything (authoring descriptors/workflows/experiments). But as I understand you are not trying to retrieve a list of users who has "admin rights" right? Just all the users or the users who can run experiments? Could you breifly define the portal users who can access your dashboard and what users a portal user can querie to get data in the current design? And if you have any future directions to the design that would also be helpful if anyone wants to do follow up developement of your work.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-880
19032	AIRAVATA-870	Sry I do not understand the CORS filter to review this. Chathuri/Amila, can you please review this patch?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-870
19033	AIRAVATA-859	i noticed data is still going to Gram_Data table. Its not getting recorded to GFac_Job_Data. Do i need to change any configuration?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-859
19034	AIRAVATA-858	Hi Saminda, Can you please explain bit more about this issue. Regards Lahiru	1	0	https://issues.apache.org/jira/browse/AIRAVATA-858
19035	AIRAVATA-819	Heshan I agree this is a needed capability. For API usage, this will be trivial, because the client which calls the API can read such kind of a file and pass the comma seeprated values. How do you propose this XBaya? Add a new helper component?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-819
19036	AIRAVATA-814	What is needed to be done here? [~smarru]	0	0	https://issues.apache.org/jira/browse/AIRAVATA-814
19037	AIRAVATA-803	Are you still getting this error in the trunk?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-803
19038	AIRAVATA-798	Hi Suresh, Thank you for the clarification. I will look at the frameworks which you have highlights. Also I worked in this kind of UI related thing in my internship, so this will be a interesting task for me. BTW I have another small problem. As I understand XBaya communicates with Airavata Server in the back-end while we do UI related tasks. Do we have to concentrate on those functionality while implementing the UI composer? Thanks AndunSLG	1	0	https://issues.apache.org/jira/browse/AIRAVATA-798
19039	AIRAVATA-798	Hi, I have been studying this topic (in view of making a proposal at GSoC'13) and peeking into some of the Airavata code that might be relevant. I see a solution to the problem as decomposed into the following - 1. An interpreter for WSDL, so the code which we write integrates directly with the API which XBaya is using right now. There is freedom to choose to do this either purely in Javascript(frontend) or with a Java/Scala based backend built with something similar to the http://www.playframework.com/. 2. The actual HTML5 based frontend which is used to design and deploy workflows. As Andun pointed out, there are some nice alternatives to pick from (jQueryUI and jsPlumb seems a good alternative), or maybe something that uses the HTML5 Canvas itself like RaphaelJS (http://raphaeljs.com/) 3. Add any new calls to the Airavata API as required by the new frontend. Also side - by - side look at methods of expressing the workflow slightly differently from what it is now using a series of messages based off WSDL. To maybe a more abstract(JSON/REST maybe?) which makes design of the frontend a little easier. So, the backend from (1) can probably translate from the WSDL representation to the new one and back again. Am I missing something here? Or can some more features be added to this?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-798
19040	AIRAVATA-798	Hi, I think the purely JavaScript based implementation of Workflow designer will be good since we can maintain it without adding other complex dependencies. In my internship I have worked in WSO2(www.wso2.com). I have specially worked in there ESB which is built on top of Synapse. That ESB have a nice UI with this kind of a implementation which is built using purely jQuery. All the enterprises service integrations, message flows are designed using this sophisticated UI. This is a sample of that UI http://docs.wso2.org/wiki/download/attachments/16846268/31.png?version=1&modificationDate=1349302422000. They have the same approach Airavata Server and XBaya GUI communicates. Front-end UI communicate using API provided by back-end. So because of that exposure I think the approach is good. Using RapahelJS or KineticJS or YUI will be a handy choice to make our life easy. Suresh what do you think? What will be the long term plan to move the UI of Airavata to web based version? Thanks AndunSLG	1	0	https://issues.apache.org/jira/browse/AIRAVATA-798
19041	AIRAVATA-798	Hi Suresh, I have digged deep in to the source code via debugging to see how the XBaya create Workflows, persists them local file system, persists them in registry. I understood following things, - All the workflow design happens on top of the org.apache.airavata.xbaya.ui.graph.GraphCanvas - The workflow data represented via the org.apache.airavata.workflow.model.wf.Workflow (I think this is the DAG representation which you are talking about in Airavata Workflow Architecture in [1]) - Local file system persistences, retrieving done via org.apache.airavata.xbaya.core.generators.WorkflowFiler - Registry based persistence, retrieving has done via the REST client org.apache.airavata.rest.clientUserWorkflowResourceClient So If I focus on the task of implementing Web based Workflow Composer for Airavata, IMO we can reuse all three other than 1st one. 1st one have to be replace with a JavaScript based implementation. When that handles design part all the other things related to workflow can be done reusing the others. Since WorkflowFiler is a XBaya class, we have to refactor it to bring inside this web based implementation Is that approach is appropriate or do we have to come from the scratch for this web based implementation ? (Because you have mentioned that we are in the initial step to move to a web based UI for Airavata) Thanks AndunSLG [1] - http://people.apache.org/~smarru/papers/airavata-gce11.pdf	1	0	https://issues.apache.org/jira/browse/AIRAVATA-798

#	Requirement	Questions	Answered	Successfully Answered	URL
19042	AIRAVATA-770	I tried the patch and following are the challenges. 1. BESProvider is dependent on cog-jglobus-1.8.0-bc146 which is not the released version of JGlobus. GramProvider is dependent on cog-jglobus-1.8.0 and if i change the dependency to bc146 version then the logs are not coming for GramProvider. Strange part is BESProvider logs are fine. 2. To test BESProvider, i left the build to use cog-jglobus-1.8.0-bc146,. a). There is a dependency on CA certificate. Shahbaz can you provide location to download the CA certificate for Test and Juelich Unicore server. b). After adding the CA cert, i am able to submit the job fine but the job failed. 2013-02-26 07:07:28,066 [main] INFO BESProvider - Job https://zam1161v01.zam.kfa-juelich.de:8002/INTEROP1/services/BESActivity?res=1ec91f99-599c-4762-8cfb-30ed0b3cca71 is Failed. It would be great if the provider provide more details on the failure cause. 3. I tried to remove the dependency on specific version of cog and use the released version. I used cog-jglobus-1.8.0 version. Doing that i am getting following error. I tried to add dependency on released versions of bouncycastle but that did not help. Can you share the changes made to cog? That will help us to discuss solution to solve version problem. Caused by: java.io.IOException: Can not load the PEM private key: java.io.IOException: Can not load the PEM private key: no input data (empty source?) at eu.emi.security.authn.x509.impl.CertificateUtils.internalLoadPK(CertificateUtils.java:229) at eu.emi.security.authn.x509.impl.CertificateUtils.parsePEMPrivateKey(CertificateUtils.java:210) at eu.emi.security.authn.x509.impl.CertificateUtils.loadPEMKeystore(CertificateUtils.java:363) at eu.emi.security.authn.x509.impl.PEMCredential.<init>(PEMCredential.java:110) at eu.emi.security.authn.x509.impl.PEMCredential.<init>(PEMCredential.java:93) at org.apache.airavata.gfac.provider.impl.BESProvider.initSecurityProperties(BESProvider.java:201) ... 28 more	1	1	https://issues.apache.org/jira/browse/AIRAVATA-770
19043	AIRAVATA-770	Shahbaz, I tried to apply the patch but the provider failed while executing initSecurityProperties(jobExecutionContext) method. Attached the error logs file. I tried to remove the hadoop dependencies to see of this is ssl library issue but i am still getting the same error. Can you please take a look?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-770
19044	AIRAVATA-770	Hi Shahbaz, Does unicore submission really need all the extensions in eu.unicore.jsdl.extensions. can we use the build time generated jsdl beans and not use any unicore extensions? We probably should add the jsdl SMPD extension and get away right? - Thanks Suresh.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-770
19045	AIRAVATA-759	NOTICE and LICENSE files exist in the META-INF of the gsissh library jar. Do i need to add anything else?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-759
19046	AIRAVATA-716	I thought you need to have configuration for mysql in the authenticator.xml. I resolved the issues by adding mysql configuration to the authenticator.xml. Sorry for misunderstanding. Hence re-opening the issue.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-716
19047	AIRAVATA-657	Hi Shahbaz, thank you very much for the contribution, this is very useful. Can you please change the package name of the client only to org.apache.airavata.sample.bes or something like that and resubmit the patch? Thanks, Suresh	1	1	https://issues.apache.org/jira/browse/AIRAVATA-657
19048	AIRAVATA-657	Hi Shahbaz, Can we integrate this with jglobus 2.0 key store style GSI proxies and trusted certificates? Also, can we remove dependencies to - de.fzj.unicore.* packages? Since the goal for Airavata will be add standard BES/JSDL, unicore specific implementations will hinder with other BES providers. Is there any reason you will need to use the security package from eu.unicore.security instead of jaav X509?? We can eliminate lot of dependencies if we align these proxy generation (and key store style authentication) with standard java security. Thanks, Suresh	1	1	https://issues.apache.org/jira/browse/AIRAVATA-657
19049	AIRAVATA-656	Thanks for the pointer Shahbaz. I am planning to change the airavata sample to use xmlbeans as well. Can you please attach some sample JSDL's which will help to make sure I get them right? Please include MPI job samples as well.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-656
19050	AIRAVATA-656	Hi Shahbaz, I removed dependencies to jsdl-xmlbeans-2.1.0.jar and wsag4j-jsdl-types and directly added the OGF schemas of jsdl, jsdl-posix, jsdl-hpcpa and jsdl-spmd to airavata xmlbeans generation. This will ease us from adding a third party repo and associated license requirements. We still need to verify the legal rules of adding OGF schemas to the source repo, and I asked Apache Legal for verification - https://issues.apache.org/jira/browse/LEGAL-166. I understand from a practical stand point you mention Precommands, Postcommands, ResourceRequests will require custom extensions to JSDL. May be at a later point, we will revisit this. But for now, do we need any of these extensions? Can we get away with requiring attributes from - https://unicore.svn.sourceforge.net/svnroot/unicore/jsdl-xmlbeans/trunk/src/main/schema/jsdl-unicore.xsd and work straight of JSDL? This will help Airavata as it can create a generic BES/JSDL client. Thanks, Suresh	1	1	https://issues.apache.org/jira/browse/AIRAVATA-656
19051	AIRAVATA-651	Hi Suresh, Is this still valid issue? , As i can see, workflow interpreter module has been removed from build. Thanks, Shameera.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-651
19052	AIRAVATA-649	Patch applied.. thanks amila for the contribution. Lahiru	1	0	https://issues.apache.org/jira/browse/AIRAVATA-649
19053	AIRAVATA-630	It's working on Firefox, but not in Chrome. I applied the patch to trunk. Thanks for the contribution Viknes.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-630
19054	AIRAVATA-599	Can you explain a bit more about this.. right now users cna configure which registry they want tot connect by configuring repository.properties file inside bin directory and start xbaya again. Since this is a temporary solution until we comeup with registry service where you don't have to touch registry database credentials in XBaya GUI level.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-599
19055	AIRAVATA-599	I was looking how can i connect to remote server registry from the Xbaya interface as in 0.4. I can live with property file for now. A suggestion i have is in current case, we can connect to registry while loading Xbaya and load the objects to avoid user confusion.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-599
19056	AIRAVATA-599	How is the DB connection handled in case of JNLP? i need to add the connection parameters in JNLP file?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-599
19057	AIRAVATA-568	What happens if two clients send the same topic? This will be a bad feature to support, rather we should recommend the clients to query the server to return a topic id. More over, the API should discourage having a separate topic id, the experiment id should be unique across a deployment and for all tracking purposes including event topic, we should start using the experiment id.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-568
19058	AIRAVATA-568	I would say thats too complicated to support interoperability with external execution systems. I would even argue, two airavata instances should also not check for uniqueness across them. Its not about default vs advanced option. My concerns are mainly, this is a bad design choice to let the clients send a unique id to a server which has serious implications if the id is not unique.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-568
19059	AIRAVATA-568	What you are talking about should be handled using workflow instance id and that need to be unique for every run but not the topic id? Topic belongs to messaging system and we should not use that to provide uniqueness in orchestration system.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-568
19060	AIRAVATA-562	The sql script should be auto generated by JPA provider. It does not make sense to use JPA otherwise. We want to build REST service interface over these service and may have web interface also in future. Why not we use Spring Framework to configure JPA and REST services?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-562

#	Requirement	Questions	Answered	Successfully Answered	URL
19061	AIRAVATA-562	Sorry I didn't notice the patch much earlier. I created a new module to incorparate the new AiravataRegistry API JPA implementation @ [1]. Can you please resubmit the patch for that module? Code that goes in to [2] will become obsolete once we have the jpa implementation of the AiravataRegistry. (The [2] was created to provide a jpa provenance registry for the existing jackrabbit registry). Again, sorry for all the rework involved. 1. https://svn.apache.org/repos/asf/incubator/airavata/trunk/modules/registry/airavata-jpa-registry/ 2. https://svn.apache.org/repos/asf/incubator/airavata/trunk/modules/commons/provenance-registry/	1	1	https://issues.apache.org/jira/browse/AIRAVATA-562
19062	AIRAVATA-562	Saminda, Can you remove mysql driver dependency from the pom?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-562
19063	AIRAVATA-562	Chathuri, Thanks for the contribution, I was just reviewing this patch, it looks good and now aligns well with modules Saminda suggested. Just one change, within src you have redundant java folders, can you get rid of one and move everything up? Its like this - src/main/java/java/org instead of src/main/java/org.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-562
19064	AIRAVATA-561	Hi Amila, Did you intend the patch to be applied to trunk? Since the trunk is on the verge of a release preparation, I only added it to the sandbox area [1]. Also I had to skip the pom since there is a no master pom for sandbox. I also did not add in any h2 binary files, can you point them in the zip files so I can add them manually. Thanks, Suresh [1] - https://svn.apache.org/repos/asf/incubator/airavata/sandbox/airavata-registry-rest	1	0	https://issues.apache.org/jira/browse/AIRAVATA-561
19065	AIRAVATA-561	Patch applied.. thanks amila for the contribution.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-561
19066	AIRAVATA-560	Hi Amila, thanks for the contribution. Do you intend this to be applied in the trunk? I haven't seen a feature list yet for next release (0.5), but unless you plan to incorporate this into next release, I suggest to first having this in a sandbox and integrate it with trunk right after the release. I will let the 0.5 RM Saminda make a call on this though.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-560
19067	AIRAVATA-546	I skimmed through the code, its very nice. Currently the provenance (workflow produced data) is bottlenecking, so having this persistent solution will be great. Do you intend to test this with both Derby and mysql?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-546
19068	AIRAVATA-541	Hi Bhathiya, After the patch was applied there is a test failure in the registry-api module. It seems the following change causes the issue, Index: commons/registry-api/src/main/java/org/apache/airavata/registry/api/impl/AiravataJCRRegistry.java ========== --- commons/registry-api/src/main/java/org/apache/airavata/registry/api/impl/AiravataJCRRegistry.java (revision 1373906) +++ commons/registry-api/src/main/java/org/apache/airavata/registry/api/impl/AiravataJCRRegistry.java (working copy) @@ -177,7 +177,9 @@ Node node = serviceNode.getNode(serviceId); Property prop = node.getProperty(XML_PROPERTY_NAME); result = ServiceDescription.fromXML(prop.getString()); - } catch (Exception e) { + } catch (PathNotFoundException e) { + return null; + } catch (Exception e) { throw new ServiceDescriptionRetrieveException(e); I suppose you wanted to sync the two methods to be the same before you got rid of the "getServiceDesc" method? I managed to run the tests successfully after reverting the above change only. Can you verify the issue & give another patch to the existing code please.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-541
19069	AIRAVATA-541	The logic of returning null seems to be to point out that the requested service description is not available in the registry... IMO this is primitive... It is much cleaner to throw an Exception. Users can catch it and figure-out the reason why the service description was not retrieved (inner exception can give the exact reason). WDYT?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-541
19070	AIRAVATA-531	Milinda, Could you please update this jira once the patch from gsoc is applied to the trunk (after the 0.5 release).	1	0	https://issues.apache.org/jira/browse/AIRAVATA-531
19071	AIRAVATA-518	Hi Marlon, I would like to try on this task. There are few things i wanted to clarify. 1. Since Airavata now uses Git for version control i am bit unclear how to use svn checkin numbers in order to get versions. 2. I can see that Airavata.Client exposes API method getAPIVersion() which can be used to get version. Also there is a class called airavataAPIConstants in airavata-api-stubs package which also contains AIRAVATA_API_VERSION. Can't we utilize one of these two in displaying the version number? Thank you very much! Ishara	1	0	https://issues.apache.org/jira/browse/AIRAVATA-518
19072	AIRAVATA-517	Heshan, Looks like the jars are not being signed. com.sun.deploy.net.JARSigningException: Found unsigned entry in resource: http://localhost/~smarru/lib/xpp3_xpath-1.1.4c.jar at com.sun.javaws.security.SigningInfo.getCommonCodeSignersForJar(SigningInfo.java:411) at com.sun.javaws.security.SigningInfo.check(SigningInfo.java:276) at com.sun.javaws.LaunchDownload.checkSignedResourcesHelper(LaunchDownload.java:1741) at com.sun.javaws.LaunchDownload.checkSignedResources(LaunchDownload.java:1505) at com.sun.javaws.Launcher.prepareResources(Launcher.java:1281) at com.sun.javaws.Launcher.prepareAllResources(Launcher.java:634) at com.sun.javaws.Launcher.prepareToLaunch(Launcher.java:336) at com.sun.javaws.Launcher.prepareToLaunch(Launcher.java:208) at com.sun.javaws.Launcher.launch(Launcher.java:125) at com.sun.javaws.Main.launchApp(Main.java:451) at com.sun.javaws.Main.continueInSecureThread(Main.java:283) at com.sun.javaws.Main$1.run(Main.java:116) at java.lang.Thread.run(Thread.java:680) Suresh	1	0	https://issues.apache.org/jira/browse/AIRAVATA-517
19073	AIRAVATA-513	I have created a sample workflow to test "if-condition" and attached it here. But It is not working properly. Can anyone help me to correct the mistake I have done when designing this workflow. ?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-513
19074	AIRAVATA-513	Hasitha, not sure if I followed your question. Did you mean how to verify the T/F within the code or visually? The control connection (indicated with dotted line as opposed to data path solid lines) is the true path, and the bottom edge is connected to the false path. The config allows you to control the number of input edges and specify a expression using xpath.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-513
19075	AIRAVATA-477	Have these been addressed in separate Jiras? If so, we should link and close.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-477
19076	AIRAVATA-473	HI Raminder, What do you mean by this issue. Can you please tell how to reproduce this. Regards Lahiru	1	0	https://issues.apache.org/jira/browse/AIRAVATA-473
19077	AIRAVATA-473	Can you try to test adding a local provider in for-each loop? This was while back and i think generic provider was not able to call local provider service.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-473
19078	AIRAVATA-440	Did this get fixed?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-440
19079	AIRAVATA-372	Does this still happen? Since jackrabbit is not being used now?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-372
19080	AIRAVATA-371	commit #1328989 should fix the problem. It works fine on my machine: Windows 7 SP1 without Cygwin. Ross, could you verify it. Thanks,	1	0	https://issues.apache.org/jira/browse/AIRAVATA-371

#	Requirement	Questions	Answered	Successfully Answered	URL
19081	AIRAVATA-357	Exploration of Apache Whirr based Hadoop deployment on clouds in the first phase will provide us with the required knowledge about the complexity of the task and problem associated with moving from local clusters to cloud platforms. I think as the next phase we should consider about moving part of the job to cloud based on the increasing computing resource requirements. This will allow us to understand overhead introduced by this approach and complexities involved like resuming partially completed jobs. Finally we could explorer the area of bursting the computation into computational grids. I think that there will be a requirement for some heuristics based algorithm for selecting which computing resource to choose and when to burst into cloud. But I think we should implement the simplest case first and then go for the complex scenarios. I would like to know where this component will reside in Airavata architecture? Will this be a activity in a workflow or workflow activity + some daemon which handles provisioning of cloud resources and job? I'm bias towards the later approach, but I would like to know what is the most natural way when compared with the other Airavata components?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-357
19082	AIRAVATA-357	That sounds good and I'm impressed about the GSoc proposal you submitted.. Following are couple of comments regarding the steps you proposed in the proposal, that you would have to think through.. 1. What's the complexity of partial migration of Hadoop jobs and in what level are you planning on doing it (eg: adding cloud worker instance to the existing Hadoop cluster vs starting a new master in the cloud to migrate part of the data as a separate job vs ....)? 2. What kind of complexity/sophistication you are aiming with of the heuristics based resource selection algorithms? and how this needs to be different to the existing grid oriented solutions to cater for the clouds? What ideas/algorithms can we borrow from those existing systems? I'm bit optimistic about the step 3 you propose with regards to the limited time frame we have, but I'm fine with it given the research nature of that component. IMHO any contributions for step 3 would be very valuable, even if we weren't able to finish implementing that step completely during the GSOC.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-357
19083	AIRAVATA-356	Good patch Pulasthi. We haven't been actively maintaining WS-Notification, I quickly ran the test case but did not look deep enough. Will review it further and apply it over the weekend. I understand other samples of messenger are still using ant build so you went might have followed it with ant as well. Can you consider contributing a maven build for this sample so we can have a samples profile in ws messenger build?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-356
19084	AIRAVATA-345	hi, Im Sujan. I need to send proposal for gsoc 2012 for AIRAVATA-345. how can i do it? please let me know the steps what should i do ? Thank u email: hardsujan@gmail.com	1	0	https://issues.apache.org/jira/browse/AIRAVATA-345
19085	AIRAVATA-345	Here I wanted to tell u what I understand about requirements. In this dash board there are many jobs has to do as a sequential flow . there is expecting a automatic work flow to do this jobs as a flow. It need build.xml files ,ant , web server to share resources like zip files and etc. we need to create automatic system for send data via that web server and those data we can send as zip file . in the zip files there should be xml files with data. then we can make a tool for doing this job as a work flow . I need to send a proposal for this event. is it posible let me knw . here my Email address : hardsujan@gmail.com	1	0	https://issues.apache.org/jira/browse/AIRAVATA-345
19086	AIRAVATA-345	Thank you suresh for your email. according to AIRAVATA-345, what i understood is We have to create a tool to get the daily information about workflow of the application. say for an example If we consider there is a workflow to get the project details from each project of a company. These each project have daily updates , defects, redundancies , line of codes per class and etc. we can get these details by creating a tool. And also Using DBUnit testing we can check whether is this work flow running correctly. I would like to join Gsoc 2013 jira group. Let me know more information about project or tool. Im with my finla year in University of Moratuwa. Thank you.	1	0	https://issues.apache.org/jira/browse/AIRAVATA-345

19090	AIRAVATA-345	Hi Sanchit, As you can see there was a port in use error - "Could not listen on port 1527 on host 0.0.0.0: java.net.BindException: Address already in use", so the registry did not get started. Can you free up the port and restart? Please take this to the mailing list so we do not clutter this JIRA. -- Suresh	1	1	https://issues.apache.org/jira/browse/AIRAVATA-345
19091	AIRAVATA-345	Hi Sanchit, It seems port 1527 is not available when the airavata server is starting. Can you make the default derby port (1527) available and start airavata server again. Also if you change the port information in airavata-server.properties for the database configuration, you will be able to run derby in a different port. Once the database is ready, you should be able to log in using XBaya without any issues. Let us know if you get more issues. Regards, Chathuri	1	0	https://issues.apache.org/jira/browse/AIRAVATA-345
19092	AIRAVATA-343	I went through your description and things mentioned by Surresh in mailing list. I have couple of questions regarding the scope of this feature. 1) is this feature targeting on a debugging module that integrated in backend of Airavata (in Workflow Interpreter) or debugging module in XBaya GUI ? According to my understanding it should contains both of them to provide better debugging framework. 2) This feature covers lots of debugging functionalities and I feel, time constraints will be a problem to address all these things. So what would be the initial requirements that fit for a GSOC project? So we can set a milestone plan. Any suggestions are very much appreciated.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-343
19093	AIRAVATA-343	Hasitha, Until my request for becoming a mentor for ASF was approved through GSoC Melange site please consider the following as few comments on the proposal [1] you've submitted. i. There are a few spelling & grammar mistakes ii. While I know what you meant, I feel some of the following areas are a little unclear. Perhaps consider revising those a little? a. it is not clear why current XBaya debugging cannot be directly associated with a backend execution of the workflow with a simple RMI mechanism. b. Might be a good idea to mention what you plan do to if you do not have enough time to implement the all the tasks you've mentioned. (Note that it's not crucial for all the tasks you've mentioned to be implemented) c. How do you plan to carry out the testing phase. A brief description would do. d. When reading the proposal I see several paragraphs that could have a subheading (for clarity purposes). iii. If you have time, a simple box diagram would be helpful to others to understand the architecture you are proposing. Overall I think the proposal looks good. Saminda 1. http://www.google-melange.com/gsoc/proposal/review/google/gsoc2012/hasithaaravinda/1	1	1	https://issues.apache.org/jira/browse/AIRAVATA-343

#	Requirement	Questions	Answered	Successfully Answered	URL
19094	AIRAVATA-343	Suresh April 6, 2012, 12:23 p.m. Hi Hasitha, I echo with Chris, great proposal but a bit ambitious. If you are motivated enough and have good time, you will be able to do all of it, but as you can see from the OODT jira, these can easliy result in half a dozen significant sub-tasks. I do not want to discourage you, but caution you to scope your project well enough. Even you can finish the phase 1, that by itself will be very helpful for the airavata user community. Airavata workflows are typically very long running in nature and tapping into existing executions not only assit the workflow debugging but opens up venue for other exhilerating opportunities like providing deferred (or just in time binding) of workflow inputs, provide workflow adaptability and so on. Very encouraging to see you are thinking beyond the current project. Few questions and comments: Why do you propose new debugging server as opposed to enhancing the workflow interpreter itself? You have a very elaborative development plan but a week testing plan, please try and elaborate on your test cases as well. You have a good granular details in the implementation section, but your schedule section is very course grained. Can you submit a more fine grained schedule? Over all, good proposal and an important topic. These capabilities not only improve airavata, but also saves valuable computational time on lage super computers and should have a very broad impact. Me and others in airavata community will be happy to guide you through out the project. Good luck with the proposal, Suresh	1	0	https://issues.apache.org/jira/browse/AIRAVATA-343
19095	AIRAVATA-340	Hello. I am interested in this topic as my GSoC project and currently I study Amazon SWF to understand how it works. As I see it now, the main goal of this project is to create set of tools allowing transportation of DAG Model of the workflow between XBaya and Amazon SWF (may include development of new pluggable compiler module or use one of already existing) and access to the resources. Plus it will need message exchange to monitor workflow execution. Is it correct, or I missed something? Best regards	1	0	https://issues.apache.org/jira/browse/AIRAVATA-340
19096	AIRAVATA-340	Hi Yaroslav, Sorry for the late reply. You got the requirement very correctly. As you already figured it out, there are two tasks for this project, first one is a Airavata XWF format to SWF compiler. Airavata has already XWF to BPEL, XWF to python (jython) compilers. So you can look into implementing XSF compilers. Second challenge is the monitoring progress. Airavata workflow monitoring schema is reasonably well defined and the WS Messenger client publish and subscribe API's have good examples bundled with. You should be able to easily figure out Amazon SWF monitoring information and translate into to equivalent Airavata messages. If it helps, we can provide a definition for the Airavata workflow format XWF. Also, this project has elastic goals which could be easily extended if you accomplish your goals early. Are you planning to submit a proposal on this task? Do you have any further questions?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-340
19097	AIRAVATA-339	For tracking purposes, please keep this jira updated. Suresh April 6, 2012, 5:36 a.m. Hi Pulasthi, A very well written proposal. Glad to see you put so much thought into implementation. You have nicely uncovered the layers in ws messenger where you need to make changes. Your time line is very comprehensive and reasonable. Few suggestions to further improve: WS Messenger is heavily used for topic based subscriptions right now and it was seamless to support it in both eventing and notification specs. Also, we had XPath based subscriptions which we are not actviely supporting. Can you write some details on how you would like to integrate AMQP in terms of topic vs content based subscriptions? Based on your initial exploration, which AMQP implementations you would like to evaluate this against? You have good number of testing time allocated which is very nice. Can you discuss some rough test plans and how you will validate existing functionality works the same. Can you squeeze into your time frames tasks to evaluate performance over head (if any)caused by adding an additional protocol support? Over all good proposal, keep it going, Suresh pulasthi April 6, 2012, 6:35 a.m. Hi Suresh I updated the proposal with your feedback. I am not able to provide a detailed answer to topic based and content based subscription because of the time limit to the deadline. i will have to do further reading to answer that accurately. thanks for the feedback. Thanks Pulasthi. Suresh April 6, 2012, 11:23 a.m. Pulashi, Your changes looks good. Glad to see you have the right insights into the problems, you should be able to figure out the implementation details as work on the project. The airavata dev community is very knowledgable on this topic and will provide guidance. Good luck with your proposal, Suresh	1	1	https://issues.apache.org/jira/browse/AIRAVATA-339
19098	AIRAVATA-339	Harsha: to my knowledge Airavata does not have a stand alone server in debugging mode for either services or for xbaya. That may be a topic for a project, post an email after you think a little more deeper on how you can accomplish it. Danushaka: Can you please look up a bit on if other apache projects have used RabbitMQ? MPL in general seem to be acceptable but you may want to verify emailing to legal-discuss@a.o. Also, can you propose your thoughts on which layers within Airavata or at API level should employ AMQP?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-339
19099	AIRAVATA-338	Hi Bhathiya, Can you attach the patches you mentioned in [1] to this jira. You should give your consent to be released those patches under Apache. You will agree to this when you attach the patch to the jira. [1] - http://summerwithairavata.blogspot.com/2012/08/how-to-run-airavata-with-new-sling.html	1	1	https://issues.apache.org/jira/browse/AIRAVATA-338

19101	AIRAVATA-338	Hi Heshan, I attached 2 patches. Patch-1 contains only new files and new dependencies. Patch-2 contains all content of Patch-1 and, all the modifications to references of registry class. So, for now I think adding Patch-1 to the trunk will be enough, because we have 2 more methods to implement (as mentioned in a previous comment). What's your idea of that? Can you please let me know what instructions are missing in the blog? Thank you.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-338
19102	AIRAVATA-338	Hi Bhathiya, There were some changes in the trunk during last Friday and I'm getting a compilation error when building with Patch-1. Can you resubmit the patch again with the required changes. If the build does not break with the "not implemented" methods, I'd say you go ahead and include it to the patch too. Let's move those changes to the trunk and then try to move on from there. So add everything that you done so far to a single patch and attach it to the jira. Furthermore, I noticed that you changed the XRegistryMigrator as well. You don't have to do the changes to the XRegistryMigrator now. Just focus on the basic functionality first. We'll update the tool later for Sling migration. In the "Step 3 (Configure External Repository)" of your post, you have not mentioned where to find such a file. I had to run the jackrabbit.sh to startup the jackrabbit instance and then use the generated configuration file for it (I did the modifications after shutting down the jackrabbit server started by the above mentioned script.)	1	1	https://issues.apache.org/jira/browse/AIRAVATA-338
19103	AIRAVATA-329	Hi Raman, When I'm migrating the applications, I'm saving an application to the Airavata registry if there aren't any applications with the same name in the Airavata registry. So, if there are multiple applications with the same name, I am only migrating the just the first application. In case of migrating applications with same name (with different namespaces) to Airavata registry, do you have any idea on how we should do this? Should we rename them? WDYT?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-329
19104	AIRAVATA-321	Hi Ye, Did you do an online build (mvn clean install) ? I do not see this error in my machine. Anyway I'm running a build with a clean repo to verify this. I will give you an update as soon as my build finishes.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-321
19105	AIRAVATA-315	Is there any authorization process to restrict / access on the basis of client type (user or admin)?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-315
19106	AIRAVATA-309	Can anybody please provide some documents regarding how to port entries in the old XRegistry to the new registry? (Where is the tool and how to use it)	1	0	https://issues.apache.org/jira/browse/AIRAVATA-309

#	Requirement	Questions	Answered	Successfully Answered	URL
19107	AIRAVATA-260	I ran the build with tests enabled and all the tests passed. I was able to successfully run all 3 tutorials but had a minor issue with the 10 minute tutorial. When the jce jar is removed I am getting the following exception. One thing we could do is to update the 10 minute tutorial to have the Temporary Directory location as a directory path (eg: /home/heshan/temp) instead of 'tmp' directory. Then the 10 minute tutorial will work fine. WDYT? org.apache.airavata.core.gfac.exception.ProviderException: Cannot make directory at org.apache.airavata.core.gfac.provider.impl.LocalProvider.makeFileSystemDir(LocalProvider.java:101) at org.apache.airavata.core.gfac.provider.impl.LocalProvider.makeDirectory(LocalProvider.java:111) at org.apache.airavata.core.gfac.provider.AbstractProvider.initialize(AbstractProvider.java:48) at org.apache.airavata.core.gfac.services.impl.AbstractSimpleService.execute(AbstractSimpleService.java:103) at org.apache.airavata.services.gfac.axis2.reciever.GFacMessageReciever.invokeApplication(GFacMessageReciever.java:300) at org.apache.airavata.services.gfac.axis2.reciever.GFacMessageReciever.access$000(GFacMessageReciever.java:92) at org.apache.airavata.services.gfac.axis2.reciever.GFacMessageReciever$1.run(GFacMessageReciever.java:160) 598602 [Thread-15] ERROR org.apache.airavata.services.gfac.axis2.reciever.GFacMessageReciever - Error invoking GFac Service org.apache.airavata.core.gfac.exception.ProviderException: Cannot make directory at org.apache.airavata.core.gfac.provider.impl.LocalProvider.makeFileSystemDir(LocalProvider.java:101) at org.apache.airavata.core.gfac.provider.impl.LocalProvider.makeDirectory(LocalProvider.java:111) at org.apache.airavata.core.gfac.provider.AbstractProvider.initialize(AbstractProvider.java:48) at org.apache.airavata.core.gfac.services.impl.AbstractSimpleService.execute(AbstractSimpleService.java:103) at org.apache.airavata.services.gfac.axis2.reciever.GFacMessageReciever.invokeApplication(GFacMessageReciever.java:300) at org.apache.airavata.services.gfac.axis2.reciever.GFacMessageReciever.access$000(GFacMessageReciever.java:92) at org.apache.airavata.services.gfac.axis2.reciever.GFacMessageReciever$1.run(GFacMessageReciever.java:160)	1	1	https://issues.apache.org/jira/browse/AIRAVATA-260
19108	AIRAVATA-173	Patch applied .. thanks saminda for the contribution.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-173
19109	AIRAVATA-166	Patch applied .. thanks heshan for the contribution. Regards Lahiru	1	0	https://issues.apache.org/jira/browse/AIRAVATA-166
19110	AIRAVATA-148	add the image files in AIRAVATA-148-patch-images-2.zip to "trunk/modules/xbaya-gui/src/main/resources/images" add the patch file "AIRAVATA-148-2.patch" to "trunk/modules". this patch adds the workflows to the browser & capability of refreshing a node in the tree.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-148
19111	AIRAVATA-143	Thanks Heshan for the contribution. The patch seems to have problem with spaces in front, can you retry creating the patch? I get the following: patch: **** malformed patch at line 17: Index: modules/xbaya-gui/src/main/java/org/apache/airavata/xbaya/globus/FileTransferConstants.java	1	0	https://issues.apache.org/jira/browse/AIRAVATA-143
19112	AIRAVATA-143	Hi Suresh, I am reattaching the patch herewith. This patch contains the fix for AIRAVATA-146 as well. Since, there was no publicly hosted jar for Transfer API, I moved the code of TransferAPI during testing. Therefore, this patch contains source for TransferAPI as well. If we manage to host the jar somewhere, I might be able to add it as a dependency in the build and use it. WDYT?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-143
19113	AIRAVATA-143	I uploaded the jar to maven repo: <dependency> <groupId>globus</groupId> <artifactId>transfer-api-client</artifactId> <version>0.10</version> </dependency> can you please submit one more patch without the source of the transferapi?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-143
19114	AIRAVATA-138	Hi Patanachai, Are you still working on this? I am trying to make a RC, if you want to add more test cases, can you please change the FixRelease to 0.2? if not resolve and close this issue? Suresh	1	1	https://issues.apache.org/jira/browse/AIRAVATA-138
19115	AIRAVATA-123	Thanks Saminda for contribution.. Patch applied ! Lahiru	1	0	https://issues.apache.org/jira/browse/AIRAVATA-123
19116	AIRAVATA-105	Heshan, Sorry we have not applied your patch in a while. Can you please sync the code and resubmit the patch?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-105
19117	AIRAVATA-104	Hi Saminda, I have applied AIRAVATA-104-UM-API-JackRabbit-Impl.patch but when I try to apply AIRAVATA-104-UM-API.patch I can see its not updated with latest code. Can you please take an svn update and provide a patch wiht latest code. Thank you saminda for the contribution. Lahiru	1	1	https://issues.apache.org/jira/browse/AIRAVATA-104
19118	AIRAVATA-104	Hi Lahiru, Does this mean I dont have to re-submit the patches?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-104
19119	AIRAVATA-102	This is really awesome .. why don't you send this to dev list ? Lahiru	1	0	https://issues.apache.org/jira/browse/AIRAVATA-102
19120	AIRAVATA-56	Thanks patanachai for reporting the problem. From your description, it looks like you already fixed the build, can you please contribute a patch?	1	0	https://issues.apache.org/jira/browse/AIRAVATA-56
19121	AIRAVATA-52	Hi, I am University Of Moratuwa student who is currently involved in research of creating Geo Science gateway for the Apache AIRAVATA. Since this is inline with our research area I am interested in this project to do as my GSOC 2013 project. AFAIK apache OODT is consisted of Product server/client, Query server/client and Catalog and Archive Server. Is this project directly involve with Gfac core? Or this extension is relevant to Xbaya too?. I would like to discuss more about this project. Any previous implementations of OODT CAS will be really helpful. Thank You !	1	0	https://issues.apache.org/jira/browse/AIRAVATA-52
19122	AIRAVATA-38	Can we add a parent pom at trunk? Advantage is to import all the project as single step using Eclipse M2 plugin.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-38
19123	AIRAVATA-38	What exactly needs to be done? (I do not know enough about Eclipse M2 plugin.)	0	0	https://issues.apache.org/jira/browse/AIRAVATA-38
19124	AIRAVATA-38	Could you update build instructions in website? Does it work for all versions of Eclipse, not just 3.7? I would like to test it.	0	0	https://issues.apache.org/jira/browse/AIRAVATA-38
19125	AIRAVATA-38	If the eclipse support and documentation is good enough for now, can we resolve this issue? Otherwise, can we explicitly state what more needs to be done?	0	0	https://issues.apache.org/jira/browse/AIRAVATA-38
19126	AIRAVATA-27	Also it looks like your patch adds/move/delete some files. Can you please give a list of the files that are deleting and a list of files that needs to be added.. thanks, Thilina	1	1	https://issues.apache.org/jira/browse/AIRAVATA-27
19127	AIRAVATA-27	Yes I had a look, please remove that, it's my IDE issue. Since this patch is kind of big I prefer committing it at this point, since thing are getting complex if we keep lengthy patches. Please remove messagebox/resources directory and commit. I have moved it some how my patch doesn't reflect that change it seems. WDYT ? Regards Lahiru	1	1	https://issues.apache.org/jira/browse/AIRAVATA-27
19128	AIRAVATA-11	Thans Patanachai for the patch. Can you also specify with the patches which directory that has to be applied? the main trunk or gfac. In general it will help us to review the patches if you can specify the location.	1	1	https://issues.apache.org/jira/browse/AIRAVATA-11
19129	AIRAVATA-6	The mockup looks good to me too. Can we shrink the size of the banner height without loosing clarity of the image?	1	1	https://issues.apache.org/jira/browse/AIRAVATA-6

19142	AMBARI-21191	[~wangjianfei], thanks, {{ServicePropertiesTest}} is fine with the new patch. Now there are some Python test failures in {{ambari-server/src/test/python/stacks/2.0.6/FLUME/test_flume.py}}: {noformat} Total run:1168 Total errors:0 Total failures:7 {noformat} You can run Python tests only with: {noformat} mvn -am -pl ambari-server -DskipSurefireTests clean test {noformat} Can you please check?	1	1	https://issues.apache.org/jira/browse/AMBARI-21191
19143	AMBARI-21145	Hello Oliver, While processing the *_"path"_* of _*"input"*_ parameter from a <service>-logsearch-conf.xml file, is it possible to select multiple files matching the regex provided in the "path" or just the first match from the many options matching the regex gets selected for Logfeeder input? In my analysis only the 1st match from the "path" regex gets picked up. There is existing logic to check for wildcards, but this code is executed only for those files in the "notReadyList" of the InputManager class. Files in this list are put when no matching file is found for the "path" regex during config loading stage. However, for a regex that matches with at least one of the files in the location, the 1st match gets added to the "inputList" of InputManager class. Please share your input on my understanding of how this logic works. Thank you, Keta	1	0	https://issues.apache.org/jira/browse/AMBARI-21145

#	Requirement	Questions	Answered	Successfully Answered	URL
19144	AMBARI-21145	About the problem in the description: In fact Log Feeder doesn't support wild card characters in the log folder names. Our assumption was that if there are log files in separate folders the users would surely don't want to load them under the same log id (called type in the input configuration). So you can create a separate input elements for each one of them, and they will be loaded each under their own log id. Please confirm if you really want to load input files from different folders under the same log id, and then we can take a look at the issue, but consider the suggestions above. About the problem in comment #1: if the "tail" parameter is "true", then Log Feeder loads only the first file found for a path with wildcard characters in it. If you set the "tail" parameter to "false", then it will load all of them, but will also stop after it loaded them i.e. it won't wait for new entries to come. We are planning to modify this behavior, and make it possible to load all the files and follow the first one. This is good for rolled over log files, where the user wants to load all the previous parts, but only follow the actual one. However if you still want to load log files from different directories, or specify a path with wild card in it in order to track multiple active log files, and follow all of them then it is not good.	0	0	https://issues.apache.org/jira/browse/AMBARI-21145
19145	AMBARI-21123	Hi [~rzang], Would you please commit this patch to trunk(3.0.0) or whether need more +1 on review board ? Thanks.	1	1	https://issues.apache.org/jira/browse/AMBARI-21123

[UnusedImports] Audit done. {noformat}	1	1	https://issues.apache.org/jira/browse/AMBARI-21057
19150	AMBARI-21035	Minor tweaks: * wrap request object in {{"Clusters"}} * document {{"health_report"}} structure [~bsari], can you please review?	1	0	https://issues.apache.org/jira/browse/AMBARI-21035
19151	AMBARI-21016	[~yaolei], I do not think your solution covers all cases. Did you try the case where you give the user more permissions or try using direct REST API calls using cookies. The changes in [^AMBARI-21016.patch] only seem to cover the case in an Ambari UI scenario where the user is given less permissions. This causes the UI to hide operations that the user is no longer supposed to have. However I believe due to the stored session information, the backend still thinks the user has the removed permissions. This can be tested by giving the user more permissions, allowing your patch to show more options for the user. But I believe that the backend will return errors since the user is not authorized to perform the operations because the _old_ permission set is stored in session. I don't necessarily think that this is an issue since changing roles/groups/permissions for a user when they are logged in usually requires the user to log out and the log back in to realize the changes. I believe that UNIX and Linux works this way. So, I was not concerted about this _issue_. I wonder what other team members feel about this. [~u39kun], [~ncole@hortonworks.com], [~jonathan.hurley], [~stoader]	1	1	https://issues.apache.org/jira/browse/AMBARI-21016
19152	AMBARI-21016	Is there a way to invalidate where the session information is bound to the permissions so that you don't need to logout to see the changes take effect?	1	1	https://issues.apache.org/jira/browse/AMBARI-21016
19153	AMBARI-21016	I don't think you want to invalidate the entire session, however I am not entirely sure what else is stored in session. [~u39kun], do you know what is stored in session? i think the frequency at which this will occur is small enough that we can require the user to log out and then back in to get the changes. Else we will use a bunch of cycles trying to determine whether to refresh the user's authentication information or not for no reason.	1	1	https://issues.apache.org/jira/browse/AMBARI-21016
19154	AMBARI-21016	If the frequency is not very often, then why not just invalidate it and force a logout? Isn't that better than having a bunch of HTTP exceptions for unauthorized actions from the backend?	1	1	https://issues.apache.org/jira/browse/AMBARI-21016
19155	AMBARI-21016	Hi [~rlevas] Sorry to trouble you again. I happen to find the subclasses of BaseManagementHandler will return 403 if catching AuthorizationException, i wonder whether we can return 401. Are there some reasonse to do so? Thanks.	1	1	https://issues.apache.org/jira/browse/AMBARI-21016
19156	AMBARI-21016	[~yaolei] {quote} I happen to find the subclasses of BaseManagementHandler will return 403 if catching AuthorizationException, i wonder whether we can return 401. Are there some reasonse to do so? {quote} I am not sure why we would need to change this? I believe that technically, if no user is authenticated we should return a 401 status with an appropriate {{WWW-Authenticate}} header; however, I believe the accepted standard on the web is to return a 403 status.	1	1	https://issues.apache.org/jira/browse/AMBARI-21016
19157	AMBARI-20994	[~bsari], the addendum patch addresses NPE when processing URI: {{/api/v1/services/AMBARI/components/AMBARI_AGENT}}. Can you please review?	1	0	https://issues.apache.org/jira/browse/AMBARI-20994
19158	AMBARI-20977	Hi [~afernandez] , Thank you so much for reviewing my patch on reviewboard, and could you be so kind as to commit the patch for me please? Thanks in advance	1	0	https://issues.apache.org/jira/browse/AMBARI-20977
19159	AMBARI-20951	[~bsari], the addendum patch is needed to prevent an NPE due to an accidentally removed line. Can you please review?	1	0	https://issues.apache.org/jira/browse/AMBARI-20951
19160	AMBARI-20827	Hi [~jonathan.hurley] and [~adoroszlai], would you push this to appropriate branches?	1	1	https://issues.apache.org/jira/browse/AMBARI-20827
19161	AMBARI-20813	SUCCESS: Integrated in Jenkins build Ambari-branch-2.5 #1423 (See [https://builds.apache.org/job/Ambari-branch-2.5/1423/]) AMBARI-20813. Convert ambari-web build process to use yarn package (yusaku: [http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=c80dc4db10e50b3b668188601d183226ca95f91d]) * (add) ambari-web/yarn.lock	1	0	https://issues.apache.org/jira/browse/AMBARI-20813
19162	AMBARI-20813	FAILURE: Integrated in Jenkins build Ambari-trunk-Commit #7328 (See [https://builds.apache.org/job/Ambari-trunk-Commit/7328/]) AMBARI-20813. Convert ambari-web build process to use yarn package (yusaku: [http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=2075f52e327e6bc624ec043dc87ea74672bcc7f5]) * (add) ambari-web/yarn.lock	1	0	https://issues.apache.org/jira/browse/AMBARI-20813
19163	AMBARI-20777	[~swagle] , [~dsen] Can you please take a look at addendum patch?	1	1	https://issues.apache.org/jira/browse/AMBARI-20777
19164	AMBARI-20739	Hi [~jonathan.hurley] Sorry to bother you again. If we can configure the script path for script-based dispatchers on web client, whether there are some security factors need to be take into accout. ex.the location of script,etc. Do you think we should limit the location of dispatch script?	1	1	https://issues.apache.org/jira/browse/AMBARI-20739

#	Requirement	Questions	Answered	Successfully Answered	URL
19165	AMBARI-20739	I don't think that limiting the location is a bad idea. It might be overkill, but I'm OK with it. Why don't we do something like this: - Add a new configuration property to ambari.properties which indicates the directory where alert scripts can live. Default it to /var/lib/ambari-server/resources/scripts (or something like that). - Any new script alert being created would need to exist in this location. - As an admin, I can change this if I really want to something like /net/share/ambari-server/scripts.	1	1	https://issues.apache.org/jira/browse/AMBARI-20739
19166	AMBARI-20739	Besides, if we can configure the dispatch script filename(location) in alert target, i think we will don't need ambari.dispatch-property.script anymore. Do you think so?	1	1	https://issues.apache.org/jira/browse/AMBARI-20739
19167	AMBARI-20727	[~mgergely], could you please fix this checkstyle error? {noformat} [ERROR] /home/jenkins/jenkins-slave/workspace/Ambari-trunk-Commit/ambari-server/src/main/java/org/apache/ambari/server/upgrade/UpgradeCatalog300.java:27: Wrong order for 'java.util.Collections' import. [ImportOrder] {noformat}	1	1	https://issues.apache.org/jira/browse/AMBARI-20727
19168	AMBARI-20549	frontend-maven-plugin 1.3 requires at least Maven 3.1. Could you please update the recommended version in the [wiki|https://cwiki.apache.org/confluence/display/AMBARI/Ambari+Development#AmbariDevelopment-ToolsneededtobuildAmbari]? Thanks.	1	0	https://issues.apache.org/jira/browse/AMBARI-20549
19169	AMBARI-20534	+1 for the patch. Can you retrigger the Hadoop QA run to see if it passes.	1	0	https://issues.apache.org/jira/browse/AMBARI-20534
19170	AMBARI-20534	[~jluniya] sure. would you mind if I combine this with the patch for AMBARI-20686 ? Technical you need both to build in a clean environment for ARM64 and PPC	1	0	https://issues.apache.org/jira/browse/AMBARI-20534
19171	AMBARI-20534	This doesn't appear to be committed. Can someone please help?	1	0	https://issues.apache.org/jira/browse/AMBARI-20534
19172	AMBARI-20356	Hi [~afernandez] Thank you so much for reviewing my patch on reviewboard, and could you commit the patch ? Thanks	1	0	https://issues.apache.org/jira/browse/AMBARI-20356
19173	AMBARI-20290	[~ncole@hortonworks.com]Thank you so much for reviewing my patch on reviewboard, and could you commit the patch ? Thanks a lot.	0	0	https://issues.apache.org/jira/browse/AMBARI-20290
19174	AMBARI-20220	Hello @Jonathan Hurley, can you tell me the exact location of the files to patch? I have a hard time finding them on my server.	1	0	https://issues.apache.org/jira/browse/AMBARI-20220
19175	AMBARI-20220	Hello, Can you give me the links of all the file to patch? I sent you a screenshot to show you where I am stuck.	1	0	https://issues.apache.org/jira/browse/AMBARI-20220
19176	AMBARI-20220	I don't think you can attach screenshots here... But aside from the one file I pointed out, the other file is a Java file which is build into the JAR, so you wouldn't be able to replace it. Why are you trying to take this as a patch on top of an install? If that's what you're doing then you only need to change ambari_server_main.py until you can do an official ambari-server upgrade.	1	0	https://issues.apache.org/jira/browse/AMBARI-20220
19177	AMBARI-20220	Thanks for the time you give me .. I'm new to HDP, I downloaded the virtual machine on VMware Fusion. I am a computer security student, and I am French. I try to set up KnoxSSO and when I restart the server with the command "ambari-server restart" I encounter the famous error. So I did some research that led me to you and your patch. I will try to update ambari-server. Otherwise can you tell me what I need to change on the file "ambari_server_main.py" or I have to apply the patch on it? Sorry for my English…	0	0	https://issues.apache.org/jira/browse/AMBARI-20220
19178	AMBARI-19996	{color:red}-1 overall{color}. Here are the results of testing the latest attachment http://issues.apache.org/jira/secure/attachment/12852624/AMBARI-19996.PATCH against trunk revision . {color:green}+1 @author{color}. The patch does not contain any @author tags. {color:red}-1 tests included{color}. The patch doesn't appear to include any new or modified tests. Please justify why no new tests are needed for this patch. Also please list what manual steps were performed to verify this patch. {color:green}+1 javac{color}. The applied patch does not increase the total number of javac compiler warnings. {color:green}+1 release audit{color}. The applied patch does not increase the total number of release audit warnings. {color:green}+1 core tests{color}. The patch passed unit tests in ambari-server. Test results: https://builds.apache.org/job/Ambari-trunk-test-patch/10576//testReport/ Console output: https://builds.apache.org/job/Ambari-trunk-test-patch/10576//console This message is automatically generated.	0	0	https://issues.apache.org/jira/browse/AMBARI-19996
19179	AMBARI-19928	[~vivekratnavel] / [~avijayan], can you guys review this?	1	1	https://issues.apache.org/jira/browse/AMBARI-19928
19180	AMBARI-19906	[~jmarron], this is a very useful feature. Will the tar file also be compressed?	1	0	https://issues.apache.org/jira/browse/AMBARI-19906
19181	AMBARI-19906	Sorry for the late reply. Thanks [~afernandez],[~mgergely][~oleewere] for the comments and suggestions. [~oleewere] I love the idea of having a separate component (infra-solr-manager) to schedule jobs and keep track of files in HDFS. Is there a jira regarding this. If so I would love to be part of this and collaborate to create the component. Meanwhile, would it be a good idea to use my proposed system as a temporary solution to download multiple logs?I understand Log Search is stateless. So when the log download is initiated, the UI can wait for the download to get completed (Show the progress of the task). Like Mike suggested, if the number of log messages is limited, can this be used?	1	1	https://issues.apache.org/jira/browse/AMBARI-19906
19182	AMBARI-19886	Should this be reverted when "llap" is disabled? {{putCapSchedProperty("yarn.scheduler.capacity.root.ordering-policy", "priority-utilization"}}	0	0	https://issues.apache.org/jira/browse/AMBARI-19886
19183	AMBARI-19805	[~odiachenko] -- (is / does it need to be) the addition of extra parameter backward-compatible to previous PXF releases ?	1	0	https://issues.apache.org/jira/browse/AMBARI-19805
19184	AMBARI-19719	[~sumitmohanty] - upgradeCatalog250 has been modified. Do I need to change something else?	1	1	https://issues.apache.org/jira/browse/AMBARI-19719
19185	AMBARI-19702	[~daijy], [~afernandez], this prevents Ambari Server start, and also causes unit test failures: {noformat} ERROR [main] ModuleFileUnmarshaller:141 - Cannot parse /var/lib/ambari-server/resources/stacks/HDP/2.5/upgrades/upgrade-2.6.xml ERROR [main] ModuleFileUnmarshaller:143 - Upgrade pack must contain pre-downgrade elements if pre-upgrade exists for processing component PIG/PIG {noformat} Could you please check?	1	0	https://issues.apache.org/jira/browse/AMBARI-19702
19186	AMBARI-19702	Sorry about this. Attach AMBARI-19702.3.patch. Can you check if this fixes the issue? Or if you want me to create a separate Jira, let me know.	1	0	https://issues.apache.org/jira/browse/AMBARI-19702
19187	AMBARI-19702	[~afernandez], could you please commit [^AMBARI-19702.3.patch], too, to resolve this issue? Thanks.	1	0	https://issues.apache.org/jira/browse/AMBARI-19702
19188	AMBARI-19702	Thanks - [~afernandez] Can you commit this on behalf of Daniel?	0	0	https://issues.apache.org/jira/browse/AMBARI-19702
19189	AMBARI-19702	Ping [~afernandez] Can we commit this on Daniel's behalf?	1	1	https://issues.apache.org/jira/browse/AMBARI-19702
19190	AMBARI-19702	[~avijayan], [~afernandez], can you help commit to 2.5.0 branch? Otherwise, we leave it in a half done status.	0	0	https://issues.apache.org/jira/browse/AMBARI-19702
19191	AMBARI-19557	Hi, [~afernandez] [~jluniya]. Thank you so much for reviewing my patch on reviewboard, and could you be so kind as to commit the patch for me please? Thanks in advance	1	1	https://issues.apache.org/jira/browse/AMBARI-19557
19192	AMBARI-19557	[~alicezhangxiao], is this also intended for branches 2.5 and trunk? I don't believe we're planning additional minor releases of Ambari 2.4	1	1	https://issues.apache.org/jira/browse/AMBARI-19557
19193	AMBARI-19449	[~sumitmohanty] How can I assign this jira to myself? Also would you mind giving it a review? Thanks!	1	1	https://issues.apache.org/jira/browse/AMBARI-19449

19195	AMBARI-19429	Is it too late to push this into 2.5 as well? Not sure how close we are to a 2.5 release but this shouldn't have any negative impacts.	1	0	https://issues.apache.org/jira/browse/AMBARI-19429
19196	AMBARI-19429	[~jluniya] I really like your idea of turning this into a management pack so we can have independent release cycles from Ambari. Can you, please, take a first pass at turning the stack into the pack (since I'm sure it'll take less time for you than it would for me). I can most definitely help with testing it, etc.	1	0	https://issues.apache.org/jira/browse/AMBARI-19429
19197	AMBARI-19429	[~rshaposhnik] Please can you apply the patch https://issues.apache.org/jira/secure/attachment/12858833/AMBARI-19429-mpack_trunk.patch, build the ODPi mpack and try to install ODPi with the built ODPi stack Instructions to build and deploy ODPi mpack: *Building ODPi Management Pack* {code} 1. cd contrib/management-packs/odpi-ambari-mpack 2. mvn clean package 3. ls -lh target/odpi-ambari-mpack-1.0.0.0-SNAPSHOT.tar.gz {code} The ODPi Mpack is built at target/odpi-ambari-mpack-1.0.0.0-SNAPSHOT.tar.gz *Installing ODPi Managment Pack* {code} 1. yum install ambari-server 2. ambari-server install-mpack --mpack=/path/to/odpi-ambari-mpack-1.0.0.0-SNAPSHOT.tar.gz --purge --verbose 3. ambari-server setup 4. ambari-server start {code} Installing the ODPi mpack with --purge flag will remove the HDP stack definition and slipstream in the ODPi stack definition. When you log into Ambari Web you will only see ODPi 2.0 stack as an option.	1	1	https://issues.apache.org/jira/browse/AMBARI-19429
19198	AMBARI-19429	[~jluniya] thanks for providing the patch! It seems to be working for the service that rely on common services definitions (HDFS and ZOOKEEPER) but fails for the custom services (like YARN and HIVE). The failure seems to have to do with agents not being synchronized with the stack definition. E.g. here's how the YARN fails: {noformat} Caught an exception while executing custom service command: <class 'ambari_agent.AgentException.AgentException'>: 'Script /var/lib/ambari-agent/cache/stacks/ODPi/2.0/services/YARN/package/scripts/nodemanager.py does not exist'; 'Script /var/lib/ambari-agent/cache/stacks/ODPi/2.0/services/YARN/package/scripts/nodemanager.py does not exist' Command failed after 1 tries {noformat} and indeed that script is missing. In fact, on agent side all of services are missing. E.g. {noformat} $ ls -l /var/lib/ambari-agent/cache/stacks/ODPi/2.0 total 4 drwxr-xr-x. 7 root root 4096 Mar 17 01:02 hooks {noformat} As you can see there are no services subdirectory there -- just hooks. Can you help figure out what's going on here?	1	0	https://issues.apache.org/jira/browse/AMBARI-19429
19199	AMBARI-19429	[~rshaposhnik] Did you start/restart ambari-server after installing the mpack? Can you delete the following and restart ambari-server and see if the issue goes away? In my patch, I accidentally had a .hash file, I am wondering if it could have caused an issue. {code} /var/lib/ambari-server/resources/stacks/ODPi/2.0/services/YARN/package/.hash /var/lib/ambari-server/resources/stacks/ODPi/2.0/services/YARN/package/archive.zip /var/lib/ambari-server/resources/stacks/ODPi/2.0/services/HIVE/package/.hash /var/lib/ambari-server/resources/stacks/ODPi/2.0/services/HIVE/package/archive.zip {code} If you still see this problem, can you share the ambari agent logs?	1	1	https://issues.apache.org/jira/browse/AMBARI-19429
19200	AMBARI-19429	[~jluniya] I followed the steps in your previous comments (which means I didn't have to restart the ambari server -- it was never started to begin with). But I restarted it just in case and it didn't help. I also though that the .hash and archive.zip would be a problem, but since I used latest patch from [~mradhakrishnan] I don't see them in the localtions you provided. E.g.: {noformat} $ rm /var/lib/ambari-server/resources/stacks/ODPi/2.0/services/YARN/package/.hash rm: cannot remove `/var/lib/ambari-server/resources/stacks/ODPi/2.0/services/YARN/package/.hash': No such file or directory $ rm /var/lib/ambari-server/resources/stacks/ODPi/2.0/services/YARN/package/archive.zip rm: cannot remove `/var/lib/ambari-server/resources/stacks/ODPi/2.0/services/YARN/package/archive.zip': No such file or directory $ rm /var/lib/ambari-server/resources/stacks/ODPi/2.0/services/HIVE/package/.hash rm: cannot remove `/var/lib/ambari-server/resources/stacks/ODPi/2.0/services/HIVE/package/.hash': No such file or directory $ rm /var/lib/ambari-server/resources/stacks/ODPi/2.0/services/HIVE/package/archive.zip rm: cannot remove `/var/lib/ambari-server/resources/stacks/ODPi/2.0/services/HIVE/package/archive.zip': No such file or directory {noformat} Attaching log files from an agent. Look for 'Script /var/lib/ambari-agent/cache/stacks/ODPi/2.0/services/YARN/package/scripts/application_timeline_server.py does not exist'	1	0	https://issues.apache.org/jira/browse/AMBARI-19429

19204	AMBARI-19369	[~qinliu] I committed the patch to trunk (for Ambari 3.0.0): {noformat} commit 4aaf259e191344076a88391f5853da4bf85b8a80 Author: Qin Liu <qinliu5678@gmail.com> Date: Thu Jun 8 16:23:34 2017 -0400 {noformat} However, the patch fails to apply to branch-2.5: {noformat} error: ambari-server/src/main/resources/common-services/HBASE/2.0.0.3.0/configuration/hbase-env.xml: No such file or directory error: ambari-server/src/main/resources/common-services/HBASE/2.0.0.3.0/package/templates/hbase_master_jaas.conf.j2: No such file or directory error: ambari-server/src/main/resources/common-services/HBASE/2.0.0.3.0/package/templates/hbase_regionserver_jaas.conf.j2: No such file or directory error: ambari-server/src/main/resources/common-services/HDFS/3.0.0.3.0/package/scripts/hdfs.py: No such file or directory error: patch failed: ambari-server/src/main/resources/common-services/YARN/2.1.0.2.0/package/scripts/yarn.py:192 error: ambari-server/src/main/resources/common-services/YARN/2.1.0.2.0/package/scripts/yarn.py: patch does not apply error: ambari-server/src/main/resources/common-services/YARN/3.0.0.3.0/configuration-mapred/mapred-env.xml: No such file or directory error: ambari-server/src/main/resources/common-services/YARN/3.0.0.3.0/configuration/yarn-env.xml: No such file or directory error: ambari-server/src/main/resources/common-services/YARN/3.0.0.3.0/package/scripts/params_linux.py: No such file or directory error: ambari-server/src/main/resources/common-services/YARN/3.0.0.3.0/package/scripts/yarn.py: No such file or directory error: ambari-server/src/main/resources/common-services/YARN/3.0.0.3.0/package/templates/yarn_jaas.conf.j2: No such file or directory error: ambari-server/src/main/resources/stacks/HDP/3.0/services/HDFS/configuration/hadoop-env.xml: No such file or directory error: ambari-server/src/main/resources/stacks/HDP/3.0/services/YARN/configuration-mapred/mapred-env.xml: No such file or directory error: patch failed: ambari-server/src/test/python/stacks/2.0.6/HDFS/test_zkfc.py:381 error: ambari-server/src/test/python/stacks/2.0.6/HDFS/test_zkfc.py: patch does not apply {noformat} Can you update the patch for branch-2.5?	1	1	https://issues.apache.org/jira/browse/AMBARI-19369
19205	AMBARI-19249	Hi akovalenko, can you please provide me the information for handling the below scenario: I have added the below code at "/opt/apache-ambari-2.2.2-src/ambari-web/public/javascripts/app.js" under: "var hdp2properties = " section, like below: { "name": "ldap_ad_authentication", "value": "", "recommendedValue": "system", "options": [{ displayName: 'system', hidden: false }, { displayName: 'LDAP', hidden: false }, { displayName: 'AD', hidden: false },], "displayType": "radio button", "radioName": "ldap-ad-authentication", "serviceName": "AUTHSERVER", "filename": "ldap-ad-auth.xml", "category": "Advanced ldap-ad-auth", "index": 2 }, { "name": "content", "serviceName": "AUTHSERVER", "filename": "ldap-ad-auth.xml", "category": "Advanced ldap-ad-auth", "index": 3 }, I want to select the "system" radio option as default. How to set the default value? Also, if i try to select the radio options manually, i see the below error in the console: app.js:180958 Uncaught TypeError: Cannot read property '0' of null(…) Which is pointing to the "handleDBConnectionProperty" Also i need the test connection button to get enabled when we select the LDAP or AD radio options. The test connection should ideally take values from he config fields and should validate the connection to ldap server. Your inputs are highly appreciated.	1	0	https://issues.apache.org/jira/browse/AMBARI-19249
19206	AMBARI-19149	I think it's easier to review if the cleanup is done in steps, grouped by the type of change. [^AMBARI-19149-1.patch] is the first patch, which cleans up imports: * Remove unused imports * Get rid of {{*}} imports * Rearrange imports according to specified order * Add Checkstyle check for build-time validation Testing done: * ran Java unit tests {noformat} Tests run: 4797, Failures: 0, Errors: 0, Skipped: 37 {noformat} * ran checkstyle check: {noformat} [INFO] --- maven-checkstyle-plugin:2.17:check (checkstyle) @ ambari-server --- [INFO] Starting audit... Audit done. {noformat} (Note: RAT check fails on 2 files added for AMBARI-19137.) [~jonathan.hurley], [~ncole], [~lpuskas] This patch is too big for ReviewBoard (got HTTP 502). Could you please review here?	1	1	https://issues.apache.org/jira/browse/AMBARI-19149
19207	AMBARI-19149	[~jonathan.hurley], [~ncole]: * {{utility}} was introduced for AMBARI-14439 in non-{{org.apache.ambari}} group. It was also surprising to me, but didn't want to change that now. * The two separate {{dependency}} sections for {{com.puppycrawl.tools}} have different {{type}} and {{scope}}. We need the {{test-jar}} to be able to use {{BaseCheckTestSupport}} from the Checkstyle project. This is not distributed with their regular {{jar}}, since it's needed only for compiling and running custom checks (eg. {{AvoidTransactionalOnPrivateMethodsCheckTest}} in our case). * {{$checkstyle.version}} for the {{checkstyle/test-jar}} dependency, and {{<version>}} for the regular {{checkstyle}} dependency are inherited from the parent pom, ie. {{ambari-project/pom.xml}}. * There is no need to always compile the whole root project. However, when working with a single module (eg. {{ambari-server}}), one needs to get the dependencies in one of two ways: ** Always make dependencies, too, with the {{-am}} Maven flag. Note that Ambari Web, Logsearch, etc. are skipped, since those are not required for the building the server. ** Get the dependencies from some repository. In our case this means having to install {{utility}}, its parents, and some other Ambari projects in a local repository once. One needs to re-install them if the dependencies themselves are updated. * Now I've noticed that running {{mvn checkstyle:check}} performs the default checks instead of our custom list, because the configuration was done only for the execution tied to the test phase, not for the plugin itself. This is being fixed in AMBARI-19158. {noformat:title=Always making dependencies} $ mvn -am -pl ambari-server clean compile ... [INFO] Reactor Build Order: [INFO] [INFO] Ambari Main [INFO] Apache Ambari Project POM [INFO] Ambari Views [INFO] utility [INFO] ambari-metrics [INFO] Ambari Metrics Common [INFO] Ambari Server {noformat} {noformat:title=Installing once} $ mvn -am -pl ambari-server -DskipTests clean install $ cd ambari-server $ mvn -DskipTest clean test $ mvn checkstyle:check {noformat}	1	1	https://issues.apache.org/jira/browse/AMBARI-19149
19208	AMBARI-19149	So, where are we at with this? I think we wanted to: - Have the {{test}} phase fail if these style checks fail. - Allow developers to very easily run the checks directly (ie {{mvn checkstyle:check}} from {{ambari-server}}) and just have it work.	1	1	https://issues.apache.org/jira/browse/AMBARI-19149
19209	AMBARI-19149	Yep, I confirmed that AMBARI-19158 fixes the issues we were seeing running checkstyle. Thanks Attila! What are your thoughts about creating a new Jira to track moving the {{utility}} project under {{org.apache.ambari}} ?	1	1	https://issues.apache.org/jira/browse/AMBARI-19149
19210	AMBARI-19126	Hi [~rkamath], the patch causes build failure due to missing Apache license in {{ambari-server/src/main/resources/common-services/ZEPPELIN/0.6.0.2.5/package/scripts/spark2_config_template.py}}. Can you please check?	1	0	https://issues.apache.org/jira/browse/AMBARI-19126
19211	AMBARI-19079	[~forestsissi]... {quote} if we use the ibm jdk,it should use the jdk's kinit {quote} I disagree with this. Ambari will install the MIT krb5 client libs (ie, krb5-workstation) on the hosts, so it will be available for use when needed. Why do you think Ambari should ignore the {{kinit}} provided by this package and use one provided by a JVM that may or may not be supported?	1	0	https://issues.apache.org/jira/browse/AMBARI-19079
19212	AMBARI-19079	Has it ever be considered that supporting Ambari deployment on IBM PPC?	1	1	https://issues.apache.org/jira/browse/AMBARI-19079

#	Requirement	Questions	Answered	Successfully Answered	URL
19213	AMBARI-19079	[~forestsissi]... I am not sure if the IBM PPC platform is supported by Ambari. As far as I know, the following platforms are supported by Ambari 2.4.2: * Red Hat Enterprise Linux (RHEL) v7.x * Red Hat Enterprise Linux (RHEL) v6.x * CentOS v7.x * CentOS v6.x * Debian v7.x * Oracle Linux v7.x * Oracle Linux v6.x * SUSE Linux Enterprise Server (SLES) v12 SP1 (HDP 2.5) * SUSE Linux Enterprise Server (SLES) v11 SP4 (HDP 2.2 and later) * SUSE Linux Enterprise Server (SLES) v11 SP3 (HDP 2.2 and later) * SUSE Linux Enterprise Server (SLES) v11 SP1 (HDP 2.2) * Ubuntu Precise v12.04 * Ubuntu Trusty v14.04 In any case, if the MIT Kerberos client packages are available on the IBM PPC platform all should be good. Else there may be issues other than just the arguments passed to kinit. What kerberos packages are available for this platform?	1	0	https://issues.apache.org/jira/browse/AMBARI-19079
19214	AMBARI-19079	[~forestsissi]... What is the OS being run on the IBM PPC platform? Is it IBM LinuxONE? bq. HDP must provide versions that support PPC machine, in other words, HDP needs repack within JDK environment on PPC machine; HDP does not package a JVM. It is a set of binaries that get installed expecting certain requirement to be met - one if which is a compatible JVM being installed. bq. Several configurations of service components need to be edited, such as HBase, Metrics. For example, kind of com.sun needs to be edited as com.ibm. Wow.. this seems to be an issue. Can you use OpenJDK instead? bq. Kinit's path in Ambari needs to be set as configurable, because IBM JDK contains self-matching Kinit,applying Kinit of Kerberos will cause conflict. However, for x86 PC, it is fine to keep using Kinit under Kerberos path. The path to kinit and the other Kerberos command line utilities are configurable. Just the options passed to them are not. I think your issue is becoming a bit more clear to me and maybe we should provide a way to customize calls to the Kerberos utilities - kinit, klist, kadmin. However it will take some work to determine the best way to do this. Can you provide _help_/_usage_ info for kinit, klist, and kadmin? For example: {noformat} Usage: kinit [-V] [-l lifetime] [-s start_time] [-r renewable_life] [-f | -F] [-p | -P] -n [-a | -A] [-C] [-E] [-v] [-R] [-k [-t keytab_file]] [-c cachename] [-S service_name] [-T ticket_armor_cache] [-X <attribute>[=<value>]] [principal] options: -V verbose -l lifetime -s start time -r renewable lifetime -f forwardable -F not forwardable -p proxiable -P not proxiable -n anonymous -a include addresses -A do not include addresses -v validate -R renew -C canonicalize -E client is enterprise principal name -k use keytab -t filename of keytab to use -c Kerberos 5 cache name -S service -T armor credential cache -X <attribute>[=<value>] {noformat}	1	0	https://issues.apache.org/jira/browse/AMBARI-19079
19215	AMBARI-19038	[~ghugare], I believe that this JIRA has been orphaned. However the topic has been restarted and I have a patch that contains much of the code from the original patch, plus changes for Ambari 2.5. Do you mind if I take this JIRA over?	1	1	https://issues.apache.org/jira/browse/AMBARI-19038
19216	AMBARI-19019	[~jeffreyr97] What is the status of this JIRA? Can this be moved to 3.0.0 if it still needs some work?	0	0	https://issues.apache.org/jira/browse/AMBARI-19019
19217	AMBARI-18944	Hi [~oleewere] ,[~rlevas] [~adoroszlai] [~jonathan.hurley], Thank you so much for reviewing my patch on reviewboard, and could you be so kind as to commit the patch for me please? Thanks in advance.	1	0	https://issues.apache.org/jira/browse/AMBARI-18944
19218	AMBARI-18892	Hi [~rlevas] Thank you so much for reviewing my patch on reviewboard, and could you commit the patch ? Thanks	1	0	https://issues.apache.org/jira/browse/AMBARI-18892

19249	AMBARI-17457	FAILURE: Integrated in Jenkins build Ambari-trunk-Commit #5700 (See [https://builds.apache.org/job/Ambari-trunk-Commit/5700/]) AMBARI-17457 : Modify the AMS stack scripts to support distributed (avijayan: [http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=875f1efb63cbbe81259a79c0b1530eba7ef2a3ec]) * (edit) ambari-server/src/main/resources/common-services/AMBARI_METRICS/0.1.0/package/scripts/service_check.py * (edit) ambari-server/src/main/resources/common-services/AMBARI_METRICS/0.1.0/package/scripts/metrics_grafana_util.py * (edit) ambari-server/src/main/resources/common-services/AMBARI_METRICS/0.1.0/package/templates/metrics_grafana_datasource.json.j2 * (edit) ambari-server/src/main/resources/common-services/AMBARI_METRICS/0.1.0/package/scripts/params.py * (add) ambari-common/src/main/python/ambari_commons/parallel_processing.py * (edit) ambari-common/src/main/python/ambari_commons/ambari_metrics_helper.py	0	0	https://issues.apache.org/jira/browse/AMBARI-17457
19250	AMBARI-17241	Thanks for your suggestions [~tctruong213] From your suggestion I infer that you would only show a button to the user saying 'Apply Configuration Changes'. (i) if all configs that were changed does not require restart ... show no warning, apply changes (ii) if configs that were changed contains configs requiring restart and configs not requiring restart ... show warning, restart service (iii) if all configs that were changed requires restart ... show warning, restart service Please confirm if my understanding described above is correct. It would need only some minor UI changes to the prototype I presented, to make it work that way. Just putting my thoughts on scenario (ii) above, where user changes some configs, which need restart and some which don't. Would there be a situation where user wants to apply the configurations, which do not require restart, immediately, without affecting running jobs? And later restart the service to apply other configs which were not applied before, after the running jobs have been completed? This action would apply the configs 'partially' - apply changes which do not require restart first. From implementation perspective, this would be challenging to implement - tracking if each config was applied or not is more complex. Any thoughts on this [~tctruong213] whether users/customers require this partial way of applying configs? This can also be an enhancement for this JIRA, if required.	1	1	https://issues.apache.org/jira/browse/AMBARI-17241
19251	AMBARI-17241	Hi [~mithmatt] I like the idea of Ambari supporting restart-less configuration changes. This may be a naive question but how will Ambari communicate the configuration change to the service when restart is not required? I missed that from a quick look at the doc. Also is the supports-reload or restart-required parameter expected to be configured by the administrator? That could be error prone.	1	0	https://issues.apache.org/jira/browse/AMBARI-17241
19252	AMBARI-17241	{color:blue}*This may be a naive question but how will Ambari communicate the configuration change to the service when restart is not required?*{color} In the prototype I implemented, I added a new method *reload* in Script.py. The service components has its own .py file, which implements the *reload* method overriding the implementation from Script.py. When the reload button was clicked on the UI, a RELOAD command was POSTed on the REST API (similar to how START, STOP of individual host components are done) for all the host components of the service. The versioning of configs were handled by existing code. Code snippet I introduced in ajax.js: {code} 'reload.hostComponents': { 'real': '/clusters/{clusterName}/requests', 'mock': '', 'format': function (data) { return { type: 'POST', data: JSON.stringify({{ "RequestInfo": { "command": "RELOAD", "context": data.context, "operation_level": data.operation_level }, "Requests/resource_filters": data.resource_filters }) } } } {code} {color:blue}*Also is the supports-reload or restart-required parameter expected to be configured by the administrator?*{color} I do not expect admins to go change the config files. Once this feature is in, any service can use the feature by specifying that additional property <supports-reload> or <require-restart>false<require-restart> for the config, in addition to the command that has to be run on the component host for reload. I've added an example on the last page of the design proposal, in case you missed it. Think of it as something similar as supporting final properties, or editable-only-at-install properties.	1	1	https://issues.apache.org/jira/browse/AMBARI-17241
19253	AMBARI-17241	[~swagle] [~arpitagarwal] Considering that each service component might have its own way to refresh its configs (similar to how each component has start and stop), in my prototype I made RELOAD a command similar to CONFIGURE, START or STOP that is recognized by the REST API and runs the reload method on each host component. Code snippet from ambari-server/src/main/java/org/apache/ambari/server/metadata/ActionMetadata.java: {code} private void fillHostComponentCommands() { //Standart commands for any host component defaultHostComponentCommands.add("RESTART"); defaultHostComponentCommands.add("START"); ... defaultHostComponentCommands.add("RELOAD"); defaultHostComponentCommands.add("CONFIGURE"); ... } {code} Code snippet from ambari-common/src/main/python/resource_management/libraries/script/script.py: {code} def reload(self, env): """ To be overridden by subclasses """ pass {code} Code snippet from ambari-server/src/main/java/org/apache/ambari/server/agent/HeartbeatProcessor.java: {code} if (report.getCustomCommand() != null && "RELOAD".equals(report.getCustomCommand())){ ... scHost.updateActualConfigs(report.getConfigurationTags()); ... } {code} [~swagle] Having an endpoint which would support querying configs which do not require restart, is nice :) - something that I never thought about. Is there a specific use case that you have in mind, where this would be beneficial?	1	1	https://issues.apache.org/jira/browse/AMBARI-17241
19254	AMBARI-17129	[~elserj], Can you fix the merge issues? {noformat} error: patch failed: ambari-server/src/main/java/org/apache/ambari/server/upgrade/UpgradeCatalog240.java:361 error: ambari-server/src/main/java/org/apache/ambari/server/upgrade/UpgradeCatalog240.java: patch does not apply error: patch failed: ambari-server/src/test/java/org/apache/ambari/server/upgrade/UpgradeCatalog240Test.java:498 error: ambari-server/src/test/java/org/apache/ambari/server/upgrade/UpgradeCatalog240Test.java: patch does not apply {noformat} Please fix for the trunk and branch-2.4 since they may have diverged significantly by now.	1	1	https://issues.apache.org/jira/browse/AMBARI-17129
19255	AMBARI-17129	bq. Can you fix the merge issues? Sure thing. Will rebase and check both branches.	1	1	https://issues.apache.org/jira/browse/AMBARI-17129
19256	AMBARI-17126	[~bergenholtz] Can you explain, how this is already possible today? Do you refer to an active-active setup with both Ambari's configured exactly the same way and accessible via a load-balancer?	0	0	https://issues.apache.org/jira/browse/AMBARI-17126
19257	AMBARI-17126	I have two questions: 1.) Is this actively being looked at for 2.5? (Is there an estimated release date for 2.5?) 2.) Also, why exactly was AMBARI-7896 closed and being tracked here? Active-Passive fault tolerance/redundancy isn't necessarily the same concept as high availability.	1	0	https://issues.apache.org/jira/browse/AMBARI-17126

#	Requirement	Questions	Answered	Successfully Answered	URL
19258	AMBARI-17126	[~allmusic76] {quote} 1.) Is this actively being looked at for 2.5? (Is there an estimated release date for 2.5?) {quote} - It is not for Ambari-2.5. {quote} 2.) Also, why exactly was AMBARI-7896 closed and being tracked here? Active-Passive fault tolerance/redundancy isn't necessarily the same concept as high availability. {quote} - Here also, we are working on having one Ambari server active at one point of time and other passive/non-active, and we are not doing the load balancing part as part of this JIRA.	0	0	https://issues.apache.org/jira/browse/AMBARI-17126
19259	AMBARI-17074	[~srimanth.gunturi] The patch has been updated based on the review comments. Could you help to review it again? Thanks.	1	0	https://issues.apache.org/jira/browse/AMBARI-17074
19260	AMBARI-17074	[~mahadev] [~srimanth.gunturi] Patch has been updated. Could you help to review it again? Thanks.	1	0	https://issues.apache.org/jira/browse/AMBARI-17074
19261	AMBARI-17041	[~tctruong213] According to this JIRA, it is assumed that all property-types are mutually exclusive. Would there be a scenario where a property is of multiple types?	1	0	https://issues.apache.org/jira/browse/AMBARI-17041
19262	AMBARI-17041	[~patelket@us.ibm.com] saw this just now : "if (Em.get(property,'propertyType') != null) {" why we are checking Em.get(property,'propertyType') against null ? not simply if(Em.get(property,'propertyType'))	1	1	https://issues.apache.org/jira/browse/AMBARI-17041
19263	AMBARI-17006	Hi [~Sandeep Nemuri] Can I write a patch to resolve this issue?	0	0	https://issues.apache.org/jira/browse/AMBARI-17006
19264	AMBARI-16864	Hi [~jluniya], two questions about unit test: 1. How do I verify the unit test locally? 2. How to get the config file like "configs/default.json" which has Spark2 definitions? Thanks a lot.	1	1	https://issues.apache.org/jira/browse/AMBARI-16864
19265	AMBARI-16864	[~jerryshao] Sorry dropped the ball on this. Can you please resubmit a new patch with the latest?	1	0	https://issues.apache.org/jira/browse/AMBARI-16864
19266	AMBARI-16864	[~jerryshao] I still see the reviewboard has older patch. Can you cross check?	1	0	https://issues.apache.org/jira/browse/AMBARI-16864
19267	AMBARI-16755	Hi, [~zjffdu] I want to submit the patch. Could you assign this jira to me? Thanks.	1	1	https://issues.apache.org/jira/browse/AMBARI-16755
19268	AMBARI-16630	[~dgergely] can we add taskId as there are parallel execution so logs may intersperse. Rest of the changes look good. e.g. {code} logger.info("Command execution metadata - taskId = {taskId}, retry enabled = {retryAble}, max retry duration (sec) = {retryDuration}". format(taskId=taskId, retryAble=retryAble, retryDuration=retryDuration)) {code}	1	1	https://issues.apache.org/jira/browse/AMBARI-16630
19269	AMBARI-16362	Hi Alejandro, Sorry for that. It was not captured on the UTs, fresh installation, and service_check tests I am missing this import : from resource_management.libraries.functions.check_process_status import check_process_status in /ambari/ambari-server/src/main/resources/common-services/HDFS/2.1.0.2.0/package/scripts/hdfs_snamenode.py Should I create a new patch just with this fix or recreate the original patch adding this change?	1	1	https://issues.apache.org/jira/browse/AMBARI-16362
19270	AMBARI-16272	[~masatana], what is the branch and mvn/JDK versions you are using? I ran tests on branch-2.4 and trunk, and they were all green.	1	1	https://issues.apache.org/jira/browse/AMBARI-16272
19271	AMBARI-16171	{code} /** * Update Phoenix Query Server Kerberos configurations. 2.4 will move the Phoenix Query Server to * supporting SPNEGO authentication which requires that the "HTTP/_HOST" principal and corresponding * keytab file instead of the generic HBase service keytab it previously had. */ protected void updatePhoenixConfigs() throws AmbariException { AmbariManagementController controller = injector.getInstance(AmbariManagementController.class); Clusters clusters = controller.getClusters(); if (null != clusters) { Map<String, Cluster> clusterMap = clusters.getClusters(); if (null != clusterMap && !clusterMap.isEmpty()) { for (final Cluster cluster : clusterMap.values()) { Set<String> installedServices = cluster.getServices().keySet(); // HBase and Kerberos are both installed/enabled if (installedServices.contains("HBASE") && installedServices.contains("KERBEROS")) { Config hbaseSite = cluster.getDesiredConfigByType(HBASE_SITE_CONFIG); if (null != hbaseSite) { Map<String, String> hbaseSiteProperties = hbaseSite.getProperties(); // Get Phoenix Query Server kerberos config properties String pqsKrbPrincipal = hbaseSiteProperties.get(PHOENIX_QUERY_SERVER_PRINCIPAL_KEY); String pqsKrbKeytab = hbaseSiteProperties.get(PHOENIX_QUERY_SERVER_KEYTAB_KEY); // Principal and Keytab are set if (null != pqsKrbPrincipal && null != pqsKrbKeytab) { Map<String, String> updatedKerberosProperties = new HashMap<>(); // TODO Values? updatedKerberosProperties.put(PHOENIX_QUERY_SERVER_PRINCIPAL_KEY, "HTTP/_HOST@REALM"); updatedKerberosProperties.put(PHOENIX_QUERY_SERVER_KEYTAB_KEY, "/etc/security/keytabs/spnego.service.keytab"); updateConfigurationProperties(HBASE_SITE_CONFIG, updatedKerberosProperties, true, false); } } } } } } } {code} [~rlevas] the above is what I presently have worked out. The only confusion I have is how to determine what values should be placed in {{updatedKerberosProperties}} (by the TODO). Can you point me at some examples of how to get the location of the spnego keytab and how to get the proper principal name (I could probably just modify the existing principal, but I'm not sure if that would work as I'd hope).	1	1	https://issues.apache.org/jira/browse/AMBARI-16171
19272	AMBARI-16171	.003 is just rebased on top of origin/trunk. Nothing else changed. I couldn't get a real test to work -- the express upgrade dialog wouldn't let me proceed, claiming that the last status check was run days prior. I figured out where that was being stored in postgres, tried to update them, but even that wasn't working (so obviously I was missing something). So, apologies in advance if something isn't 100% correct in the upgrade path, but I think we should get this in now and deal with any upgrade problems later :). Can you commit for me [~rlevas]?	1	1	https://issues.apache.org/jira/browse/AMBARI-16171
19273	AMBARI-16171	.003 is just rebased on top of origin/trunk. Nothing else changed. 19282	AMBARI-15436	Hi [~jwang], the patch does not apply on branch-2.2. Can you upload a branch-2.2 patch?	1	1	https://issues.apache.org/jira/browse/AMBARI-15436
19283	AMBARI-15412	Hello Robert, Could you please apply the trunk patch(AMBARI-15412-trunk.patch) on branch-2.2? It is working on branch-2.2. I was mistakenly looking at different branch when I developed patch for branch-2.2. Thank you,	1	0	https://issues.apache.org/jira/browse/AMBARI-15412
19284	AMBARI-15412	[~arborkar] I am sorry but I guess I missed you last message. Do you still need to patch applied to branch-2.2? If so, unfortunately we missed the boat for the Ambari 2.2.2 release. If I apply it to branch-2.2 now, it may get into future Ambari 2.2.x releases. Please make sure that the patch will apply to the branch.	0	0	https://issues.apache.org/jira/browse/AMBARI-15412

#	Requirement	Questions	Answered	Successfully Answered	URL
19285	AMBARI-15388	How is <order> being maintained? The <order> element is key to indicate dependencies for upgrading, and is not random. Oozie must go before Falcon (at the service level). Datanodes must be upgraded before RegionServers before NodeManagers within the same host. The CLIENTS group spans multiple services. What about pre-requisite checks? Order there also may be important. ClusterGrouping definitely has order - you can't execute Save Database State before HDFS Finalization occurs. <priority> within a service check group is also important. It's difficult to see all the changes based on just a plain text diff, can you add Review Board review or create a feature branch? This is a really large commit. We also have to balance stability here, especially when trying to maintain upgrade packs. It's already hard enough maintaining the source->target upgrade packs, but if we now need one per service as well, that increases the number of files as a multiple of the number of services.	0	0	https://issues.apache.org/jira/browse/AMBARI-15388
19286	AMBARI-15388	I agree about the priority/ordering. If you're going to break up the files, then you still need some sort of master XML to define ordering. The idea of adding new services on your own to be a part of upgrade is an interesting proposal. But it comes with a lot of questions: - Are other stack services affected by this service's upgrade? - When does the new service upgrade? - Does the service upgrade all together, or broken apart (things like clients/slaves/masters) I suppose you could always argue that the "master" XML file defines ordering for the stack as it ships. And then you can tack on the to end of it services which define their own upgrade. But now you hit issues with services that are already part of the main upgrade overriding their parent and so on. I think that: - At the very least, this needs a design sent out the community - especially before any code is written - A feature branch is a great starting point too; allows iterative development and smaller, more understandable reviews. The sheer size of this review makes it very difficult to find problems - ReviewBoard use is a must	0	0	https://issues.apache.org/jira/browse/AMBARI-15388

19288	AMBARI-15256	Tested on trunk as well and it works fine. [~aantonenko] -- can you please provide details on how to reproduce the issue you saw (branch-2.2 or trunk, cluster topology, stack version, machine in topology that is missing components). I could not reproduce the issue neither on branch-2.2 nor or trunk in my environments. All hosts have their components listed properly -- see the attached screenshots.	1	1	https://issues.apache.org/jira/browse/AMBARI-15256
19289	AMBARI-15256	[~aantonenko] I looked into this issue myself out of curiosity. I built Ambari branch-2.2 from this [commit|https://github.com/apache/ambari/commit/7abb79cc6b390db189345339a196a766a977a817] and trunk from this [commit|https://github.com/apache/ambari/commit/f6ecddf69f615d800a0146b730a44ba075013760] (both before you reverted the commit of AMBARI-15256) With these Ambari builds, I deployed HDP 2.4 stack with a bunch of services: HDFS, YARN, MAPREDUCE2, HBASE, HIVE, PIG, TEZ, AMBARI METRICS and ZOOKEEPER. The host details page was showing all the host components that I had installed (through manual wizard installation). I was checking the console log at the same time, and there was no instance where commandMap was undefined. Do you remember which service's host component caused the issue? Possibly, a service component which I hadn't deployed caused the issue. The *if* condition introduced by [~adenissov] in the new set of patches should solve the issue you might have seen. I've seen that the new patches work on HDP cluster without any host components disappearing. I'm committing the new patches to trunk and branch-2.2. If the commit breaks something again, it should be because of some nasty edge case (which doesn't happen with the main/core services) - you may log a bug and I'd be happy to drill down the root cause and fix it.	1	1	https://issues.apache.org/jira/browse/AMBARI-15256
19290	AMBARI-15226	[~Tim Thorpe] Can you update the ReviewBoard with the latest patch? It would be easier to review and comment. Also can you add me to the reviewers list so that it gets on my reviews dashboard?	1	1	https://issues.apache.org/jira/browse/AMBARI-15226
19291	AMBARI-15226	[~Tim Thorpe] Doesnt look like the review https://reviews.apache.org/r/44210/ got updated. Did you hit the Publish button?	1	1	https://issues.apache.org/jira/browse/AMBARI-15226
19292	AMBARI-15172	[~adenisso], could you please add a reviewboard for especially the trunk patch. It is bigger because I believe it includes some unit tests as trunk has some unit tests for HAWQ.	1	1	https://issues.apache.org/jira/browse/AMBARI-15172
19293	AMBARI-15133	Looks like this was committed to trunk and branch-2.2. Is there a ReviewBoard for this? If so, please link it from this JIRA. Also, I reverted the changes from branch-2.2, because it was causing a rat failure (mvn clean apache-rat:check failed).	1	1	https://issues.apache.org/jira/browse/AMBARI-15133
19294	AMBARI-15083	Is there a default recommendation for hawq_global_rm_type when YARN is available, besides the validation that is covered here?	0	0	https://issues.apache.org/jira/browse/AMBARI-15083

19302	AMBARI-14854	Management Packs also need to consider other "pluggable" assets of Ambari beyond full-stack definitions. Custom Services and Views for example.	1	1	https://issues.apache.org/jira/browse/AMBARI-14854
19303	AMBARI-14822	ABORTED: Integrated in Ambari-trunk-Commit #4246 (See [https://builds.apache.org/job/Ambari-trunk-Commit/4246/]) AMBARI-14822 Combo Search: Create auto suggest for Host attribute (rzang: [http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=5e09053deb0700b09ced4f8f12902ff2ea60154a]) * ambari-web/app/utils/ajax/ajax.js * ambari-web/app/templates/main/admin/stack_upgrade/stack_upgrade_wizard.hbs * ambari-web/app/messages.js * ambari-web/app/controllers/main/admin/stack_and_upgrade_controller.js Revert "AMBARI-14822 Combo Search: Create auto suggest for Host (rzang: [http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=cad69e6132b554386e82d45950fc1b302f689af7]) * ambari-web/app/utils/ajax/ajax.js * ambari-web/app/templates/main/admin/stack_upgrade/stack_upgrade_wizard.hbs * ambari-web/app/messages.js * ambari-web/app/controllers/main/admin/stack_and_upgrade_controller.js AMBARI-14822 Combo Search: Create auto suggest for Host attribute (rzang: [http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=b037ef5cfc9cfd72126818cf8c5c5e7c3525dc52]) * ambari-web/app/utils/ajax/ajax.js * ambari-web/vendor/scripts/visualsearch.js * ambari-web/app/controllers/main/host/combo_search_box.js * ambari-web/app/views/main/host/combo_search_box.js	0	0	https://issues.apache.org/jira/browse/AMBARI-14822
19304	AMBARI-14820	[~jaimin] [~u39kun] Can you review this patch?	1	0	https://issues.apache.org/jira/browse/AMBARI-14820
19305	AMBARI-14820	The new patches provided by [~bhuvnesh2703] is due to missing modifications in his original patch, which has been committed already. What it means; 1. Some HAWQ functionality is broken currently (only HAWQ HA activation part, but nothing else) 2. The new patch only has what were missing from the original. I wait a few more hours to see if anybody has something to say, but will commit as it is a broker to our use case and won't affect any other part of Ambari.	1	1	https://issues.apache.org/jira/browse/AMBARI-14820
19306	AMBARI-14776	WDYT, [~billie.rinaldi]? Should this also go to some of the older maintenance release branches?	1	0	https://issues.apache.org/jira/browse/AMBARI-14776
19307	AMBARI-14776	Can anyone look at this, please? Let me know if I need to rebase it by now.	0	0	https://issues.apache.org/jira/browse/AMBARI-14776
19308	AMBARI-14746	cc: [~bikassaha] I believe this is a stale JIRA. Can you confirm?	1	0	https://issues.apache.org/jira/browse/AMBARI-14746
19309	AMBARI-14731	Joe, did you mean the failure is NOT related to the patch?	1	0	https://issues.apache.org/jira/browse/AMBARI-14731

#	Requirement	Questions	Answered	Successfully Answered	URL
19310	AMBARI-14690	Hi [~oleewere] - Vinod, Sid and I had a discussion today. We came up with a solution which needs to be provided in 2 phases - one short term and the second long term. \\ Now let me provide a list of 3 different solutions (we have already discussed 1 and 2 above) - *Solution 1*: system resource properties in ambari-agent.ini (current patch you provided) *Solution 2*: system resource properties in an external file, whose path is hard coded in ambari-agent.ini *Solution 3*: system resource properties spread across multiple files located in an external directory (say D1), whose path is hard coded in ambari-agent.ini. A property say _*system_resource_dir*_ could be added to the _*agent*_ section of ambari-agent.ini with value set to D1. \\ A little bit of background: the resource-limits file that Yarn will generate, will be created when the container comes up. Since ambari-agent.ini file will not exist at this point, the current patch with solution (1) will not work. Now solution (2) will work, but we do not want to restrict it to just 1 file. Hence we are proposing solution (3). \\ In solution (3) all json files under D1 will be read by ambari agent and the properties will override the default system values. If a property (say K1) is specified across 2 or more json files under D1, then ambari agent should not bother about which value should prevail. Ambari agent will read the files in any random order. The value of K1 will be set to whichever file is read last. The onus is on the creator of files under D1 to ensure that property K1 is specified in one and only one json file. In this case the onus will be on yarn. \\ Phases of solution: *Phase A - short term*: solution (3) above where the external directory (D1) is hard coded to this path - {{/yarn-private/ambari}} *Phase B - long term*: solution (3) above where the external directory (D1) can be set to a configurable value from the Ambari Server side \\ Do you think you can provide Solution (3) as per Phase (A) in a reasonable time? We can have a chat to clear any doubts on confusion on Friday Jan 22.	1	0	https://issues.apache.org/jira/browse/AMBARI-14690
19311	AMBARI-14690	[~oleewere], [~sumitmohanty] if we have +1 from reviewers can we merge this patch to the 2.2 line?	0	0	https://issues.apache.org/jira/browse/AMBARI-14690
19312	AMBARI-14529	Committed to trunk. 215c21cf08185908f82139477d2e12a66b2d8203 [~mithmatt], could you please attach a patch for branch-2.2.	1	1	https://issues.apache.org/jira/browse/AMBARI-14529
19313	AMBARI-14512	I check the service check script for other component and would like to add similar script for spark. But don't know details about the python api. Could anyone guide me on that ? Or I can collaborate with someone else who's familiar with the python api, I can help on what needs to be checked for spark	1	0	https://issues.apache.org/jira/browse/AMBARI-14512
19314	AMBARI-14512	[~u39kun] Why is it reverted ?	1	0	https://issues.apache.org/jira/browse/AMBARI-14512
19315	AMBARI-14459	[~sumitmohanty] I'll make the changes in the recommendation to reflect dfs.replication=[No. of DATANODEs] if (No. of hosts < 3). Is the validation required for dfs.replication property? In this case, check if dfs.replication < 3 if (No. of hosts < 3)?	1	1	https://issues.apache.org/jira/browse/AMBARI-14459
19316	AMBARI-14459	[~zjffdu] https://reviews.apache.org/r/41795/ has the discussion. In summary, the problem is that if its not a test cluster then at least three DNs are expected. Also, if someone started with one DN and then added more but forgot to modify the replication value then HDFS will not create replicas. So the risk out-weighs the advantages. Also, did you run into any problem with replication being 3 and number of DNs being 1. There are a few scenarios where I can see it to be an issue but largely its a non-issue.	1	0	https://issues.apache.org/jira/browse/AMBARI-14459
19317	AMBARI-14459	I have not encountered this issue ever - as in HDFS restart failing because number of DNs are less than number of replica. Could it be because of any other config settings?	0	0	https://issues.apache.org/jira/browse/AMBARI-14459
19318	AMBARI-14427	Hi [~atkach], could you please fix this to branch 2.2 as well?	1	1	https://issues.apache.org/jira/browse/AMBARI-14427
19319	AMBARI-14384	Hi Dmytro, Are you actively working on this jira? Do you have an ETA on it? Thanks!	1	1	https://issues.apache.org/jira/browse/AMBARI-14384
19320	AMBARI-14375	Hi [~mpapirkovskyy] We would like to fix the user name conflict issues. Can you please let us know if any work is going on for this jira?	0	0	https://issues.apache.org/jira/browse/AMBARI-14375
19321	AMBARI-14301	Hi [~jaimin] Could you please take a look at the new implementation https://reviews.apache.org/r/41835/ (uses recommendation from stack_advisor)? I reverted the javascript changes made in https://reviews.apache.org/r/41151/.	1	1	https://issues.apache.org/jira/browse/AMBARI-14301
19322	AMBARI-14301	Committed to trunk fe8a8d1e1626a5a2f294622174f34cb0f65543fe [~lavjain], are you going to make a patch for branch-2.2 as well?	1	1	https://issues.apache.org/jira/browse/AMBARI-14301
19323	AMBARI-14132	This has been bugging me for a while too. Why not just set it to 9092 like the Apache Kafka docs? I can't see anything else using that port - what was the reasoning behind changing it from the default set in Apache?	0	0	https://issues.apache.org/jira/browse/AMBARI-14132
19324	AMBARI-14029	Hi [~mithmatt], for some reasons I can not apply AMBARI-14029-branch-2-2.patch to branch 2.2 I have 2338b7564b97d83c1d15fa31a8c83076bd29c8a3 on my work copy that seems to me the right branch 2.2 HEAD at this point. Am I mistaken something? {code} jaoki@junubuntu:~/coding/ref/ambari-oss$ git apply AMBARI-14029-branch-2-2.patch error: patch failed: ambari-server/src/main/resources/common-services/HAWQ/2.0.0/package/scripts/params.py:34 error: ambari-server/src/main/resources/common-services/HAWQ/2.0.0/package/scripts/params.py: patch does not apply jaoki@junubuntu:~/coding/ref/ambari-oss$ git log -1 commit 2338b7564b97d83c1d15fa31a8c83076bd29c8a3 Author: Andrew Onishuk <aonishuk@hortonworks.com> Date: Fri Dec 25 15:57:52 2015 +0200 AMBARI-14454. File Permission is not applied properly while using fast-hdfs-resource.jar (aonishuk) {code}	1	1	https://issues.apache.org/jira/browse/AMBARI-14029
19325	AMBARI-14023	[~ndimiduk] Has this patch been committed? Can we have the patch file attached on this JIRA?	1	0	https://issues.apache.org/jira/browse/AMBARI-14023
19326	AMBARI-13903	[~natefalkibm] Hello Nathan, For example, if you look under Advanced core-site section, the Ambari web UI allows property "hadoop.security.key.provider.path" to be left blank (empty value). This is controlled on the core-site.xml level as shown below.... <property> <name>hadoop.security.key.provider.path</name> <value></value> <value-attributes> <empty-value-valid>true</empty-value-valid> </value-attributes> Have you tried specifying properties to allow empty values to meet your requirement? It's of course up to component's Python script to handle what it means for a prop to have an empty value... Di	1	0	https://issues.apache.org/jira/browse/AMBARI-13903
19327	AMBARI-13894	Exception on downgrade: {code} java.lang.IllegalArgumentException: Cannot merge an entity that has been removed: org.apache.ambari.server.orm.entities.ClusterConfigEntity@85f5a9eb {code}	1	1	https://issues.apache.org/jira/browse/AMBARI-13894
19328	AMBARI-13721	[~smnaha], it will be a good addition to the test suite. Can you provide some general idea of how these can be run - assuming these tests are different than the unit tests.	0	0	https://issues.apache.org/jira/browse/AMBARI-13721
19329	AMBARI-13689	So [~PankajSingh], what's the proposal here? Are you suggesting to validate, check and prevent the instance creation if the same named one already exists? I would personally prefer to check and prevent duplicate instances with same display name (or whatever the identifier we use). Let me know if you have any other proposal here. Thanks, Rajendra	1	0	https://issues.apache.org/jira/browse/AMBARI-13689
19330	AMBARI-13665	Hi Ambari community, Could you please take a look into the patch? Hadoop QA failures are due to its attempt to apply it to trunk but the patch is meant to branch-2.1. as [~mithmatt] [mentioned|https://issues.apache.org/jira/browse/AMBARI-13665?focusedCommentId=14983679&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-14983679], this is a patch that are consolidated from some patches that have been already reviewed and committed to trunk. We internally tested and observed the patch does not affect HDP package.	1	1	https://issues.apache.org/jira/browse/AMBARI-13665

#	Requirement	Questions	Answered	Successfully Answered	URL
19331	AMBARI-13665	[~mithmatt] [~adenisso] What was the testing done to ensure the changes (esp to stackadvisor, ambari-web) do not regress HDP deployments?	1	1	https://issues.apache.org/jira/browse/AMBARI-13665
19332	AMBARI-13665	Hi [~jluniya], do you really insist on adding those checks ? These lines are based on the patch committed to trunk 3 weeks ago as part of https://issues.apache.org/jira/browse/AMBARI-13442 and the changes you propose now were not proposed then. The way I see it, these lines add a few metadata entries, do not cause any performance impact and should not cause any issues if the services are not part of the stack. In fact, it might not even be possible to learn which services are actually available in this place in code and making the relevant data available might cause more widespread changes.	1	0	https://issues.apache.org/jira/browse/AMBARI-13665
19333	AMBARI-13665	[~jaoki] Disabling failing unit tests makes me much more nervous. What is the reason behind having to disable the unit test? [~jaimin] can you review the UI changes.	1	1	https://issues.apache.org/jira/browse/AMBARI-13665

19340	AMBARI-13364	Hi [~afernandez], [~jluniya], [~eyang], hope you all have a good Thanksgiving break. Can one of you help create the branch so we can proceed with this work?	1	0	https://issues.apache.org/jira/browse/AMBARI-13364
19341	AMBARI-13364	Hi [~jluniya], Juanjo and I just quickly scanned thru the patch you submitted, and we both agree that this is a good improvement on our original design. We are very happy that you are able to spend bandwidth on this. Juanjo is actively working on this feature. If Alex and other committers support your proposal, Juanjo can proceed refactoring the other services based on this new design. Thanks again for your help. We are looking forward for you leadership on this effort. [~afernandez], do you have any comment on Jayush's approach before Juanjo start refactoring?	1	0	https://issues.apache.org/jira/browse/AMBARI-13364
19342	AMBARI-13364	[~tctruong] Sure, I would be happy to guide on this. Can we have a quick chat on this and spec this out a bit more? I am free this afternoon.	1	0	https://issues.apache.org/jira/browse/AMBARI-13364
19343	AMBARI-13364	Attached patch (AMBARI-14435.patch) implementing the new parametrization approach for Zookeeper: https://issues.apache.org/jira/browse/AMBARI-14435 [~jluniya] [~afernandez] Per our last conversation, this patch removes the hardcoded stack versions in ZK common-services code (centralized version and parameterized stack configurations will be faced in other JIRAS) stack_features is now a property in .json format in configuration/cluster-env.xml for each stack version. With the structure: { "stack_features": [{ "name": "feature1", "description" : "Feature1 support", "min_version" : "Y.Y.Y.Y" , "max_version" : "X.X.X.X"} , ...] } where min_version/max_version are optional constraints. New resource_management/libraries/functions/stack_fetaures.py has been introduced to parse the json file and called from service code to check if the stack supports the required feature. Zookeeper fresh installation has been tested using HDP stack 2.3 and AMBARI-13364 branch code. Please, can you review when you have the chance and validate if it is the expected behavior? Would it fit in the other set of changes you are planning to do? Thanks	1	1	https://issues.apache.org/jira/browse/AMBARI-13364
19344	AMBARI-13364	[~jmarron] Can you submit the patch to the review board?	1	0	https://issues.apache.org/jira/browse/AMBARI-13364
19345	AMBARI-13205	This scripts run snmp command for v2 . Does this command works for SNMPv3?	0	0	https://issues.apache.org/jira/browse/AMBARI-13205
19346	AMBARI-12916	[~nitiraj.rathore], can you comment on this one?	0	0	https://issues.apache.org/jira/browse/AMBARI-12916
19347	AMBARI-12916	[~jimbobhickville]. I am concerned with _faking_ the Ambari server's hostname. There is lots of code that relies on the FQDN of the host that the Ambari server executes on and if we allow for an additional name to be used, than we will wind up with some interesting scenarios. My main concern is with Kerberos-related tasks where the _discovered_ FQDN of the host is used for many things. However the effects on other parts of Ambari may take a while to uncover. For example each view. Who will be tasked with testing each view to make sure nothing breaks when an alternate host name is used to access the API? Can you describe a valid use case for this?	1	0	https://issues.apache.org/jira/browse/AMBARI-12916
19348	AMBARI-12916	[~jimbobhickville]... I now have a better understanding of your issue and the need for your change. You are correct in that the name of the variable ({{masterHostname}}) is confusing. One thing that is still unclear to me is why this change is only relevant for Views. Doesn't SSL certificate verification come into play for Ambari agents as well? Shouldn't they use the a specific hostname when communicating with the Ambari server? If so, we need to make sure that when Ambari is bootstrapping the agents, it properly configures them with the _correct_ Ambari sever hostname.	1	0	https://issues.apache.org/jira/browse/AMBARI-12916

#	Requirement	Questions	Answered	Successfully Answered	URL
19349	AMBARI-12915	Hi Greg. For the record, can you are more details? What JVM were you using when you were trying suggestion? Not all version of JVM have fixed this issue. and the JDK workaround adding only apply to sun/openjdk releases that added this. You can still check DH length using openssl are suggested.	0	0	https://issues.apache.org/jira/browse/AMBARI-12915
19350	AMBARI-12885	[~Tim Thorpe] Can you please add some steps on how to install a custom service as an extension? I would like to try this out from a build of your patch and see if I can install a custom service on it seamlessly.	1	0	https://issues.apache.org/jira/browse/AMBARI-12885

19352	AMBARI-12860	Does OpenStack set resource constraint on the docker containers or is it default to use host resource limit?	0	0	https://issues.apache.org/jira/browse/AMBARI-12860
19353	AMBARI-12767	Hi [~pgunasekaran], are you still working on this issue? I have some ideas about implement this. Here is my concern: when a component die, ambari-agent should know it first through its monitoring behavior and it restart it with given number of retries which can be configurable.	0	0	https://issues.apache.org/jira/browse/AMBARI-12767
19354	AMBARI-12701	Can someone review [^AMBARI-12701.additional.fix.patch] ?	1	1	https://issues.apache.org/jira/browse/AMBARI-12701
19355	AMBARI-12556	Hi [~ncole], is there a design doc for this work that you can attach to the JIRA? I am interested in the details. Thank you..	0	0	https://issues.apache.org/jira/browse/AMBARI-12556
19356	AMBARI-12488	[~ncole], [~jonathan.hurley], can you review [^AMBARI-12488.v2.patch]? I tested it on an RU from HDP 2.2.x -> 2.2.y and forgot to add this.	1	1	https://issues.apache.org/jira/browse/AMBARI-12488
19357	AMBARI-12263	[~swagle], [~u39kun], can you comment on the more integrated LDAP/AD support for Ambari user management? I recalled Yusaku mentioned at the HackFest what there is a plan to synch group with LDAP then grant permission to group. When users log in, use LDAP/AD to get the user's group, and enable privileges base on the group. I am not seeing any other JIRA for that work. This JIRA is sort of related to the more integrated LDAP feature.	0	0	https://issues.apache.org/jira/browse/AMBARI-12263
19358	AMBARI-12263	Patch looks good. Thanks! We were able to successfully port it to current Ambari 2.4.0.1 Something we noticed is that in a secured cluster we have issues with the views, getting the following exception for the Hive view as an example: {code} Struct:TOpenSessionResp(status:TStatus(statusCode:ERROR_STATUS, infoMessages:[*org.apache.hive.service.cli.HiveSQLException:Failed to validate proxy privilege of ambari for org.apache.ambari.server.security.authorization.AmbariPamAuthenticationProvider$1@34511119:33:32, ... sqlState:08S01, errorCode:0, errorMessage:Failed to validate proxy privilege of ambari for org.apache.ambari.server.security.authorization.AmbariPamAuthenticationProvider$1@34511119), serverProtocolVersion:null) {code} As you can see it tries to impersonte {{"org.apache.ambari.server.security.authorization.AmbariPamAuthenticationProvider$1@34511119:33:32"}}. Changing the {{UsernamePasswordAuthenticationToken}} from {{Principal}} to username fixes this. So instead of : {code} UsernamePasswordAuthenticationToken token = new UsernamePasswordAuthenticationToken(principal, null, userAuthorities); {code} We use: {code} UsernamePasswordAuthenticationToken token = new UsernamePasswordAuthenticationToken(user.getUserName(), null, userAuthorities); {code} What could potential also work is, overriding {{toString}} of the principal like: {code} Principal principal = new Principal() { @Override public String getName() { return user.getUserName(); } @Override public String toString(){ return user.getUserName().toString(); } }; {code} We did not test this! As a little side note, I notices you are using String concatenation in your error logging like this: {{LOG.error("Message"+ ex.getMessage())}} I think the {{public void error(String msg, Throwable t);}} interface would be preferable in such scenarios, so: {{LOG.error("Message", ex)}}	1	0	https://issues.apache.org/jira/browse/AMBARI-12263
19359	AMBARI-12263	[~ghugare] I had issues merging the patch into trunk. Can you fix? {noformat} git apply ~/Downloads/AMBARI-12263.patch ... error: patch failed: ambari-server/pom.xml:1436 error: ambari-server/pom.xml: patch does not apply error: patch failed: ambari-server/src/main/java/org/apache/ambari/server/configuration/Configuration.java:2355 error: ambari-server/src/main/java/org/apache/ambari/server/configuration/Configuration.java: patch does not apply error: patch failed: ambari-server/src/main/java/org/apache/ambari/server/controller/internal/UserPrivilegeResourceProvider.java:196 error: ambari-server/src/main/java/org/apache/ambari/server/controller/internal/UserPrivilegeResourceProvider.java: patch does not apply error: patch failed: ambari-server/src/main/java/org/apache/ambari/server/upgrade/UpgradeCatalog250.java:27 error: ambari-server/src/main/java/org/apache/ambari/server/upgrade/UpgradeCatalog250.java: patch does not apply error: patch failed: ambari-server/src/test/java/org/apache/ambari/server/security/authorization/TestUsers.java:216 error: ambari-server/src/test/java/org/apache/ambari/server/security/authorization/TestUsers.java: patch does not apply error: patch failed: ambari-server/src/test/java/org/apache/ambari/server/upgrade/UpgradeCatalog250Test.java:30 error: ambari-server/src/test/java/org/apache/ambari/server/upgrade/UpgradeCatalog250Test.java: patch does not apply {noformat}	1	1	https://issues.apache.org/jira/browse/AMBARI-12263

19360	AMBARI-12263	[~ghugare], The latest patch looks good, but fails to apply to the trunk {noformat} error: patch failed: ambari-server/src/main/java/org/apache/ambari/server/configuration/Configuration.java:2459 error: ambari-server/src/main/java/org/apache/ambari/server/configuration/Configuration.java: patch does not apply {noformat} Can you rebase and resubmit the patch to this JIRA and the review?	1	1	https://issues.apache.org/jira/browse/AMBARI-12263
19361	AMBARI-12263	Hello Henning, Can you please provide me steps/details to reproduce the hive view issue?	0	0	https://issues.apache.org/jira/browse/AMBARI-12263
19362	AMBARI-11601	[~tedyu], do you know if "/apps/hbase/staging" will be created by HBase and available?	1	1	https://issues.apache.org/jira/browse/AMBARI-11601
19363	AMBARI-11573	[~tedyu], is this change applicable to all versions of HBase (e.g. ones used by HDP-2.1 to 2.3)?	1	1	https://issues.apache.org/jira/browse/AMBARI-11573
19364	AMBARI-11480	FAILURE: Integrated in Ambari-trunk-Commit #2739 (See [https://builds.apache.org/job/Ambari-trunk-Commit/2739/]) AMBARI-11480 - Do not use ranger related configs until Ranger is installed (abaranchuk: http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=869709914977e5671cf7207dc5da18fe65bf2ad7) * ambari-server/src/main/resources/common-services/HBASE/0.96.0.2.0/package/scripts/params_linux.py * ambari-server/src/main/resources/common-services/HIVE/0.12.0.2.0/package/scripts/params_linux.py * ambari-server/src/main/resources/common-services/YARN/2.1.0.2.0/package/scripts/resourcemanager.py * ambari-server/src/main/resources/common-services/YARN/2.1.0.2.0/package/scripts/params_linux.py	0	0	https://issues.apache.org/jira/browse/AMBARI-11480
19365	AMBARI-11350	[~sposetti], [~rlevas], with the latest update, the admin and operator roles are still reversed. Is this intentional? This seems to be inconsistent with IT standard.	1	0	https://issues.apache.org/jira/browse/AMBARI-11350
19366	AMBARI-11350	[~rlevas] In the description, the table has no mention of the "View User" role. This role is there in the attached PDF file. Can you clarify on the use-case for this role. Also, it seems that non-"View User" roles do not have access to use view per the table info. Can you clarify this? I would think that cluster level users should be able to use the view if the admin grant them access to the view.	1	0	https://issues.apache.org/jira/browse/AMBARI-11350
19367	AMBARI-11314	A little late to comment myself. Patch 2 looks good. Should address make sure that the tabletserver will have sufficient memory after index+data block cache and sort buffers during log recovery. Thanks for making the change, Billie!	0	0	https://issues.apache.org/jira/browse/AMBARI-11314
19368	AMBARI-11290	In that case, should we bump up the multiplier in (5 * # of RS) ? Threshold for Warning is 150 and Critical is currently set to 250, so for 1 node HBase it starts up with Critical.	0	0	https://issues.apache.org/jira/browse/AMBARI-11290
19369	AMBARI-11268	Di Li, Thanks for doing this work! I've tried to review the design and the patch to see if it meets all of the needs of a custom service. I don't know all of the internals of Ambari well enough to claim that I understand all of the changes, but I would like to ask one question... One of the changes I've had to make to add a quick link for a custom service was to update the requiredSiteNames list in ambari-web/app/views/common/quick_view_link_view.js. If the custom service specifies "site": "custom-site" in its quicklinks.json, will the Ambari GUI know to load custom-site?	0	0	https://issues.apache.org/jira/browse/AMBARI-11268
19370	AMBARI-11246	[~mahadev], [~u39kun], [~afernandez] Can you review the attached patch? This is to update pom.xml version in 2.0.maint branch.	1	1	https://issues.apache.org/jira/browse/AMBARI-11246
19371	AMBARI-11049	[~ncole@hortonworks.com], this change removed the hadoop_prefix property from Accumulo's params.py (previously set to /usr/hdp/current/hadoop-client). Accumulo needs this property. The conf_select utility does not seem to have a method that returns the hadoop home directory. Do you have any suggestions for the best way to obtain this directory?	1	1	https://issues.apache.org/jira/browse/AMBARI-11049
19372	AMBARI-11003	Tested on live cluster. Tests pass. Failing tests are not related to this JIRA's work {noformat} Results : Tests in error: testCreateResources(org.apache.ambari.server.controller.internal.RepositoryVersionResourceProviderTest) testCreateResources(org.apache.ambari.server.controller.internal.RepositoryVersionResourceProviderTest) testGetResources(org.apache.ambari.server.controller.internal.RepositoryVersionResourceProviderTest): Could not initialize class org.apache.ambari.server.controller.internal.ActiveWidgetLayoutResourceProvider testGetResources(org.apache.ambari.server.controller.internal.RepositoryVersionResourceProviderTest) testValidateRepositoryVersion(org.apache.ambari.server.controller.internal.RepositoryVersionResourceProviderTest): Could not initialize class org.apache.ambari.server.controller.internal.ActiveWidgetLayoutResourceProvider testValidateRepositoryVersion(org.apache.ambari.server.controller.internal.RepositoryVersionResourceProviderTest) testDeleteResources(org.apache.ambari.server.controller.internal.RepositoryVersionResourceProviderTest): Could not initialize class org.apache.ambari.server.controller.internal.ActiveWidgetLayoutResourceProvider testDeleteResources(org.apache.ambari.server.controller.internal.RepositoryVersionResourceProviderTest) testUpdateResources(org.apache.ambari.server.controller.internal.RepositoryVersionResourceProviderTest): Could not initialize class org.apache.ambari.server.controller.internal.ActiveWidgetLayoutResourceProvider testUpdateResources(org.apache.ambari.server.controller.internal.RepositoryVersionResourceProviderTest) Tests run: 2966, Failures: 0, Errors: 10, Skipped: 20 [INFO] -- [INFO] BUILD FAILURE [INFO] -- [INFO] Total time: 42:34.351s [INFO] Finished at: Thu May 07 14:13:27 PDT 2015 [INFO] Final Memory: 29M/332M [INFO] -- [ERROR] Failed to execute goal org.apache.maven.plugins:maven-surefire-plugin:2.12:test (default-test) on project ambari-server: There are test failures. 19373	AMBARI-10992	Resolving this. Everything planned for 2.1 is done now (overall it included 10 jiras). There are some other things we can do, but they are bit risky, I plan them for 2.2. The time of *start of all services reduced for me from ~27minutes to ~13minutes* Also install tasks reduced time much as well (don't the benchmarks for that).	0	0	https://issues.apache.org/jira/browse/AMBARI-10992
19374	AMBARI-10873	[~fbarca], [~afernandez] [~sumitmohanty] Can one of you review the attached patch? Its a one line change?	1	1	https://issues.apache.org/jira/browse/AMBARI-10873
19375	AMBARI-10873	{{hadoop-distcp}} was taken out. Is that OK?	0	0	https://issues.apache.org/jira/browse/AMBARI-10873
19376	AMBARI-10848	[~lazurinke], Why do you think that Ambari does not support integration with Active Directory? Have you seen the featured added via AMBARI-7204?	1	1	https://issues.apache.org/jira/browse/AMBARI-10848

#	Requirement	Questions	Answered	Successfully Answered	URL
19377	AMBARI-10848	Hi Robert. Actually I have not seen this JIRA beforehand. and therefore i believed that active directory was not supported . Looks good. Can this jira create the required scripts and other artificats required in order set up kerberos correctly "offline" , based on the client's topology ? If the answer is no. i think this JIRA (AMBARI-10709), could be a good match to support this effort . The resources and scripts were tested with various customers and seem to be quite mature .	1	1	https://issues.apache.org/jira/browse/AMBARI-10848
19378	AMBARI-10777	Since this patch is shipping with IOP 4.1, when do you think you can share it?	0	0	https://issues.apache.org/jira/browse/AMBARI-10777
19379	AMBARI-10709	[~lazurinke], Does AMBARI-9783 address any of your issues with enabled Kerberos via Ambari?	1	0	https://issues.apache.org/jira/browse/AMBARI-10709
19380	AMBARI-10675	[~srimanth.gunturi], can you take a look?	1	0	https://issues.apache.org/jira/browse/AMBARI-10675
19381	AMBARI-10675	[~tedyu], {{hbase.regionserver.wal.codec}} has already been added to HDP-2.2 stack - [https://github.com/apache/ambari/blob/trunk/ambari-server/src/main/resources/stacks/HDP/2.2/services/HBASE/configuration/hbase-site.xml#L110]. Its default value is {{org.apache.hadoop.hbase.regionserver.wal.WALCellCodec}}, which will change to {{org.apache.hadoop.hbase.regionserver.wal.IndexedWALEditCodec}} when Phoenix is enabled. Can this config be removed from the patch?	1	1	https://issues.apache.org/jira/browse/AMBARI-10675
19382	AMBARI-10645	Could any expert please help assign this jira to me? I already made a patch and did necessary tests to ensure it works as expectation. So I attach the patch here and also opened a review request: #33428 . Thanks!	1	0	https://issues.apache.org/jira/browse/AMBARI-10645
19383	AMBARI-10645	Hi Experts, It's really weird that this patch could be applied to trunk in my local env, but always failed on Apache jira system which said(https://builds.apache.org/job/Ambari-trunk-test-patch/2758//console): error: src/main/resources/stacks/HDP/2.2/services/stack_advisor.py: No such file or directory PATCH APPLICATION FAILED However, current patch plans to change file 'ambari-server/src/main/resources/stacks/HDP/2.2/services/stack_advisor.py', not 'src/main/resources/stacks/HDP/2.2/services/stack_advisor.py', as it includes following sentences: --- ambari-server/src/main/resources/stacks/HDP/2.2/services/stack_advisor.py +++ ambari-server/src/main/resources/stacks/HDP/2.2/services/stack_advisor.py This patch can be applied to trunk branch in my local env and works well. Could any expert please help take a review on this issue? Thanks in advance!	1	0	https://issues.apache.org/jira/browse/AMBARI-10645
19384	AMBARI-10490	[~afernandez], can you push to dist as well?	1	0	https://issues.apache.org/jira/browse/AMBARI-10490
19385	AMBARI-10472	Hi Nate, Ambari repositories are distinct versions, such as HDP/2.0, and HDP/2.1. This has certain user experience issues associated with updating ambari.repo to point to the correct repository to install Ambari and stack of software. Wouldn't it be better if we manage RPMs more like Redhat, where there is a Major release repository, and all minor releases are just symlinks to the major version repositories? Any compatible changes are actually put in "updates" directory for incremental updates. This will reduce the tight coupling of stack definition and compatible stacks for upgrade purposes. In CentOS, they can simply replace the URL to migrate from Redhat owned repository to their own CentOS stack of software. This removes the need for Ambari to manage yum repository metadata. Ambari only tracks dependencies to be satisified cross node dependencies, which yum repository doesn't track. Stack compatibility can be tracked using RPM signing key package metadata. This will ensure that future version can track what version that they are backward compatible with without having software dependency logic in Ambari.	1	1	https://issues.apache.org/jira/browse/AMBARI-10472
19386	AMBARI-10457	[~u39kun] [~jaimin] It looks like the builds for components went fine. [INFO] Ambari Main ..... SUCCESS [4.166 s] [INFO] Apache Ambari Project POM ..... 19387	AMBARI-10457	[~sriharsha] The failure is not related to this patch. However, can you post the patch in ReviewBoard so that we can post feedback?	1	1	https://issues.apache.org/jira/browse/AMBARI-10457
19388	AMBARI-10385	Is this feature usable ?What's more to be done here ? Why is this still "Unresolved"?	0	0	https://issues.apache.org/jira/browse/AMBARI-10385
19389	AMBARI-10253	Are there any more details on this JIRA? What is the content of this JIRA and what has been done? I am asking to find out what and how Ambari supports SSL in many of the stack components.	0	0	https://issues.apache.org/jira/browse/AMBARI-10253
19390	AMBARI-10196	+1 LGTM What does the endpoint and sample output look like?	0	0	https://issues.apache.org/jira/browse/AMBARI-10196
19391	AMBARI-10106	Is the title on this JIRA correct? The patch looks like it addresses HBase master and not YARN RM HA.	0	0	https://issues.apache.org/jira/browse/AMBARI-10106
19392	AMBARI-10029	Is any documentation going to be added around this? I didn't see any in the Ambari Confluence or on the Ambari website. The only documentation that seems to exist is the PDF that is attached to this JIRA.	0	0	https://issues.apache.org/jira/browse/AMBARI-10029
19393	AMBARI-10023	[~vijikarthi] I've reviewed the proposal and it looks good to me, how far along are you with the development of this? Are you targeting for 2.1 release of Ambari? When you have a working patch available, let me know and I can assist in testing and flushing out any potential issues.	1	0	https://issues.apache.org/jira/browse/AMBARI-10023
19394	AMBARI-9998	Hi, any progress on this activity? What is the timeline? Thank you	0	0	https://issues.apache.org/jira/browse/AMBARI-9998
19395	AMBARI-9993	Here's a patch that introduces basic service info for Phoenix query server. How do I test it? Are there build instructions for Ambari someplace? I see nothing obvious in the repository root (ie, BUILD.txt).	1	1	https://issues.apache.org/jira/browse/AMBARI-9993
19396	AMBARI-9993	[~ndimiduk], thank you for your contribution. Can you upload the patch to reviews.apache.org so others can comment? A couple of comments, daemon_script = format('/usr/hdp/current/phoenix/bin/queryserver.py') doesn't seen format since it's just a string Are the packages already available on the various OS'es? Your service will likely also need start/stop/status to be functional. Can you confirm these work. Lastly, we typically also add unit tests for new services, take a look at ambari-server/src/test/python/stacks/2.3/MAHOUT/test_mahout_service_check.py as an example.	1	1	https://issues.apache.org/jira/browse/AMBARI-9993
19397	AMBARI-9993	I noticed in my debugging that the PQS is now automatically selected by default on the "slaves and clients select" step when HBase is installed. I think the intention is that this is not selected by default. How can this behavior be modified?	1	1	https://issues.apache.org/jira/browse/AMBARI-9993

#	Requirement	Questions	Answered	Successfully Answered	URL
19398	AMBARI-9993	Good discussion happening over on the RB [~afernandez], [~jluniya]. Can you please confirm what additional changes I need to make to the addendum posted here? It seems I also need to merge the contents of stacks/HDP/2.2/services/HBASE/configuration into stacks/HDP/2.3/services/HBASE/configuration -- is this correct? Please confirm. Thanks.	1	1	https://issues.apache.org/jira/browse/AMBARI-9993
19399	AMBARI-9993	[~ndimiduk] Can you create a review board for the addendum patch?	1	0	https://issues.apache.org/jira/browse/AMBARI-9993
19400	AMBARI-9993	[~jluniya] have you looked at the addendum patch? Did I handle the config files properly? The file hbase-site.xml has diverged between 2.2 and 2.3; how should these changes be resolved? Thanks.	1	1	https://issues.apache.org/jira/browse/AMBARI-9993
19401	AMBARI-9993	[~aonishuk] I see you committed AMBARI-10626 which undoes much of this patch. Can you ensure my addendum changes are integrated correctly?	1	1	https://issues.apache.org/jira/browse/AMBARI-9993
19402	AMBARI-9908	[~aantonenko], could you take a look at AMBARI-9908-test-fix.1.patch and see if that is an acceptable fix for the test?	1	1	https://issues.apache.org/jira/browse/AMBARI-9908
19403	AMBARI-9687	{code} org.apache.ambari.server.controller.AmbariManagementControllerTest.testUpdateRepoUrlController Failing for the past 1 build (Since Failed#1799) Took 15 sec. #	Requirement	Questions	Answered	Successfully Answered	URL
19410	AMBARI-9439	SUCCESS: Integrated in Ambari-trunk-Commit #1727 (See [https://builds.apache.org/job/Ambari-trunk-Commit/1727/]) AMBARI-9439. Kerberos: Do not validate host health or maintenance state when enabling Kerberos (rlevas) (rlevas: http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=c775c60710095259f9c089378d7cd960393ea49f) * ambari-server/src/main/java/org/apache/ambari/server/orm/entities/KerberosPrincipalHostEntityPK.java * ambari-server/src/main/resources/common-services/KERBEROS/1.10.3-10/package/scripts/params.py * ambari-server/src/main/java/org/apache/ambari/server/serveraction/kerberos/DestroyPrincipalsServerAction.java * ambari-server/src/main/resources/common-services/KERBEROS/1.10.3-10/package/scripts/kerberos_common.py * ambari-server/src/main/java/org/apache/ambari/server/upgrade/UpgradeCatalog200.java * ambari-server/src/test/java/org/apache/ambari/server/controller/KerberosHelperTest.java * ambari-server/src/main/resources/Ambari-DDL-Postgres-EMBEDDED-CREATE.sql * ambari-server/src/main/resources/Ambari-DDL-Postgres-CREATE.sql * ambari-server/src/main/resources/Ambari-DDL-Oracle-CREATE.sql * ambari-server/src/test/java/org/apache/ambari/server/agent/HeartBeatHandlerInjectKeytabTest.java * ambari-server/src/main/java/org/apache/ambari/server/orm/entities/KerberosPrincipalHostEntity.java * ambari-server/src/main/java/org/apache/ambari/server/controller/KerberosHelper.java * ambari-server/src/main/resources/Ambari-DDL-MySQL-CREATE.sql * ambari-server/src/main/java/org/apache/ambari/server/serveraction/kerberos/CreatePrincipalsServerAction.java * ambari-server/src/main/resources/META-INF/persistence.xml * ambari-server/src/main/java/org/apache/ambari/server/orm/dao/KerberosPrincipalDAO.java * ambari-server/src/test/java/org/apache/ambari/server/upgrade/UpgradeCatalog200Test.java * ambari-server/src/main/java/org/apache/ambari/server/serveraction/kerberos/KerberosServerAction.java * ambari-server/src/test/java/org/apache/ambari/server/agent/TestHeartbeatHandler.java * ambari-server/src/main/resources/Ambari-DDL-SQLServer-CREATE.sql * ambari-server/src/main/java/org/apache/ambari/server/orm/dao/KerberosPrincipalHostDAO.java * ambari-server/src/main/resources/common-services/KERBEROS/1.10.3-10/package/scripts/status_params.py * ambari-server/src/main/java/org/apache/ambari/server/agent/HeartBeatHandler.java * ambari-server/src/main/java/org/apache/ambari/server/orm/entities/KerberosPrincipalEntity.java * ambari-server/src/main/java/org/apache/ambari/server/serveraction/kerberos/CreateKeytabFilesServerAction.java * ambari-server/src/main/resources/common-services/KERBEROS/1.10.3-10/package/scripts/kerberos_client.py	0	0	https://issues.apache.org/jira/browse/AMBARI-9439
19411	AMBARI-9363	Thanks for your contribution [~Tim Thorpe]. Will you be doing further refactoring of the RCO?	1	0	https://issues.apache.org/jira/browse/AMBARI-9363
19412	AMBARI-9255	Hi, Can you post a screen shot? Any errors in your browser JavaScript console?	0	0	https://issues.apache.org/jira/browse/AMBARI-9255
19413	AMBARI-9224	[~brandonli], can you please make sure that the tests pass. Doing a {{mvn clean test}} in {{ambari/}} should succeed.	1	1	https://issues.apache.org/jira/browse/AMBARI-9224
19414	AMBARI-9224	[~brandonli] Patch looks good, can you add unit tests for your changes? Unit tests will guarantee that unwarranted future changes will be caught in dev cycle.	1	0	https://issues.apache.org/jira/browse/AMBARI-9224
19415	AMBARI-9224	[~swagle], thanks for the review! Is there any example I use as a reference to add the unit test?	1	1	https://issues.apache.org/jira/browse/AMBARI-9224
19416	AMBARI-9100	This is still a problem - did any work get done, or was this abandoned?	0	0	https://issues.apache.org/jira/browse/AMBARI-9100
19417	AMBARI-9029	[~jaimin] Can we move this to 2.1.0? cc: [~rlevas]	1	1	https://issues.apache.org/jira/browse/AMBARI-9029
19418	AMBARI-9021	[~atkach], you have been working on this feature. Can you link appropriate JIRAs and mark this as a dup?	0	0	https://issues.apache.org/jira/browse/AMBARI-9021
19419	AMBARI-9014	[~rlevas] Is there a ReviewBoard for this JIRA? If so, please create a link to it.	1	1	https://issues.apache.org/jira/browse/AMBARI-9014
19420	AMBARI-8997	[~ncole], Review Board will not allow me to upload the attached patch for some reason. If you have some time, could you review the patch attached to this Jira? Thanks.	1	0	https://issues.apache.org/jira/browse/AMBARI-8997
19421	AMBARI-8995	ReviewBoard is still not working for me, [~ncole], [~yshylov], [~jonathan.hurley], can you review [http://reviews.llvm.org/D6860]?	1	1	https://issues.apache.org/jira/browse/AMBARI-8995
19422	AMBARI-8878	[~fbarca], [~mahadev], [~jspeidel], [~u39kun] Can you +1 on the attached patch? This change is refactoring of YARN service. Testing Done: 1. Installed HDP stacks on Linux 2. Installed HDPWIN stacks on Windows mvn clean test	1	1	https://issues.apache.org/jira/browse/AMBARI-8878
19423	AMBARI-8804	Did an HDP 2.2 install with all services except AMS after applying patches for AMBARI-8804, AMBARI-8779, AMBARI-8782 and verified that all services install without issues and all alert definitions come up green.	1	1	https://issues.apache.org/jira/browse/AMBARI-8804
19424	AMBARI-8775	[~jspeidel] Can you provide ETA for resolving this JIRA and AMBARI-9143 and whether it will be done as part of AMBARI 2.0.0 release?	1	0	https://issues.apache.org/jira/browse/AMBARI-8775
19425	AMBARI-8724	+1 - I have comments b/c I'm confused and don't fully understand the system yet and want to make sure what I'm seeing isn't a boog. {noformat} - <task xsi:type="execute"> + <task xsi:type="execute" hosts="master"> {noformat} - Can this be hosts="active" maybe? It's a little confusing; makes it seem like you're saying "Run it on all masters" when I think we're saying "Run it only on the main master (ignoring others in standby". {noformat} // !!! revisit if needed if (hostsType.master != null && hostsType.secondary != null) { {noformat} - Should this be secondary? I would think that a secondary master (like Secondary NN) would not affect this task, but another standby master would {noformat} if (execwrappers.size() > 0) { results.addAll(execwrappers); {noformat} - Change to !isEmpty() to appease the anti-size() gods?	1	0	https://issues.apache.org/jira/browse/AMBARI-8724
19426	AMBARI-8695	[~jspeidel], [~ncole], [~mahadev], [~rlevas], [~swagle], [~u39kun] I have attached the patch for the JIRA as reviewboard is having issues. Can you review the latest patch? I would like to get this committed today as this blocks refactoring of other services in the HDP and HDPWIN stacks.	1	1	https://issues.apache.org/jira/browse/AMBARI-8695
19427	AMBARI-8695	Hi [~jluniya] Excited to see the progress on Common Service! Are we taking 2 steps (in 2 tickets), just like 1) Taking services out from resources/stacks/STACK_A/n.n.n/services/SERVICE_B to to resources/common-services/SERVICE_B/n.n.n (which still has the vendor specific hard code values [~adenisso] mentioned previously) 2) Then get rid of the vendor specific hard code from resources/common-services/SERVICE_B/n.n.n to make it more abstract, less vendor-specific. Is this ticket tacking care of only 1) and do we have another ticket to take care of 2) ?	1	0	https://issues.apache.org/jira/browse/AMBARI-8695
19428	AMBARI-8695	[~jluniya], if I can break down your previous comment to [2 steps that I referred earlier|https://issues.apache.org/jira/browse/AMBARI-8695?focusedCommentId=14250434&page=com.atlassian.jira.plugin.system.issuetabpanels:comment-tabpanel#comment-14250434], You are focusing 1) and moving some services configured specific to HDP under common-service. Then you (or anyone from the community) will focus on 2) and removing HDP specific logic from common-services to make it abstract. Is that right?	0	0	https://issues.apache.org/jira/browse/AMBARI-8695

#	Requirement	Questions	Answered	Successfully Answered	URL
19429	AMBARI-8648	[~mpapirkovskyy] [~swagle] Was the additional patch for phoenix tests committed? Can you resolve the JIRA if it was?	0	0	https://issues.apache.org/jira/browse/AMBARI-8648
19430	AMBARI-8610	Robert instead of requiring the user to use a REST API to retrieve the CSV of principals - can this instead be a download button in the add hosts/services wizard menu as is done when initially kerberizing a new cluster? That seems like it would be much more practical and user friendly.	1	0	https://issues.apache.org/jira/browse/AMBARI-8610
19431	AMBARI-8452	[~rlevas] [~bergenholtz] Is this JIRA still valid and required for 2.0.0? Can you update the fix version accordingly?	1	0	https://issues.apache.org/jira/browse/AMBARI-8452
19432	AMBARI-8447	[~rlevas], I'm trying to understand the requirements for this better. Could you provide a more concrete use case that I could step through? Thanks.	1	0	https://issues.apache.org/jira/browse/AMBARI-8447
19433	AMBARI-8447	Add API support to allow for session attributes to be set for a cluster. Expose the {{session_attributes}} property on a cluster resource. To add session attributes for a cluster the {{session_attributes}} property can be set on a cluster resource. The value of the {{session_attributes}} should be a collection of name value pairs, as follows ... {code} PUT api/v1/clusters/c1 [{ "session_attributes" : { "attr1" : "v1", "attr2" : "v2", "attr3" : {"sub1" : "v31", "sub2" : "v32"} } }] {code} The above example would add the following attributes to the session for cluster c1: ||attribute||value |attr1 | v1 |attr2 | v2 |attr3/sub1 | v31 |attr3/sub2 | v32 The cluster session attribute property is not available to read through the REST API. The map of cluster session attribute properties is available to resource providers on the Ambari server through the following method on the {{org.apache.ambari.server.state.Clusters}} singleton... {code} /** * Get the map of session attributes for the cluster identified by the given name. * * @param name the cluster name * * @return the map of session attributes for the cluster */ public Map<String, Object> getSessionAttributes(String name); {code} All session attributes set through the above API are scoped by cluster name and session. When the session dies, so do the attribute values for that session. [~rlevas], [~jspeidel], Could you review the above the above?	1	0	https://issues.apache.org/jira/browse/AMBARI-8447
19434	AMBARI-8435	[~xiwang0309] [~u39kun] Is this JIRA still valid and take action accordingly?	0	0	https://issues.apache.org/jira/browse/AMBARI-8435
19435	AMBARI-8426	[~rlevas], If we expose the following on AmbariSessionManager ... * setAttribute(String key, Object attribute) * getAttribute(String key) * removeAttribute(String key) Does that meet your requirements? The AmbariSessionManager could be injected into any ResourceProvider instance.	1	0	https://issues.apache.org/jira/browse/AMBARI-8426
19436	AMBARI-8420	SUCCESS: Integrated in Ambari-trunk-Commit #1165 (See [https://builds.apache.org/job/Ambari-trunk-Commit/1165/]) AMBARI-8420. Add Amabri Metric Provider to get metrics from AMS. Check liveliness. (swagle) (swagle: http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=d2bc0ac8193e13988879bde4078a7406bacd0935) * ambari-server/src/main/java/org/apache/ambari/server/controller/metrics/timeline/AMSPropertyProvider.java	0	0	https://issues.apache.org/jira/browse/AMBARI-8420
19437	AMBARI-8357	[~rlevas] [~darumugam] [~bergenholtz] Is this JIRA still relevant?	1	0	https://issues.apache.org/jira/browse/AMBARI-8357
19438	AMBARI-8279	SUCCESS: Integrated in Ambari-trunk-Commit #910 (See [https://builds.apache.org/job/Ambari-trunk-Commit/910/]) AMBARI-8279. Slider View: "+ Create App" button effect is disabled, but is clickable (alexantonenko) (hiveww: http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=6b98cfc084e9194ff4df578796953d1f8e93d642) * contrib/views/slider/src/main/resources/ui/app/styles/app.less	0	0	https://issues.apache.org/jira/browse/AMBARI-8279
19439	AMBARI-8279	FAILURE: Integrated in Ambari-trunk-Commit-docker #201 (See [https://builds.apache.org/job/Ambari-trunk-Commit-docker/201/]) AMBARI-8279. Slider View: "+ Create App" button effect is disabled, but is clickable (alexantonenko) (hiveww: http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=6b98cfc084e9194ff4df578796953d1f8e93d642) * contrib/views/slider/src/main/resources/ui/app/styles/app.less	0	0	https://issues.apache.org/jira/browse/AMBARI-8279
19440	AMBARI-8269	[~fbarca], [~u39kun], [~mahadev] Can you review the patch on the JIRA itself as ReviewBoard fails to load a large patch?	1	0	https://issues.apache.org/jira/browse/AMBARI-8269
19441	AMBARI-8269	Thanks [~jluniya] Can you break up this big patch into several pieces, like by subproject or other chunks so that it's easier for reviewers to review and make comments?	1	1	https://issues.apache.org/jira/browse/AMBARI-8269
19442	AMBARI-8269	[~fbarca] Can you look at these unit test failures? They don't fail on Mac.	0	0	https://issues.apache.org/jira/browse/AMBARI-8269
19443	AMBARI-8250	[~rnettleton] [~bergenholtz] Can we close this JIRA if all Blueprint HA functionality has been committed?	1	0	https://issues.apache.org/jira/browse/AMBARI-8250
19444	AMBARI-8247	[~jspeidel], {quote} The descriptor is quite lengthy and it seems that it should have it's own resource. {quote} Good point, but where would the descriptor resource live? Are you suggesting that the descriptors be sub-resources of root or cluster (or something else) and just referenced from the stack service?	1	0	https://issues.apache.org/jira/browse/AMBARI-8247
19445	AMBARI-8247	[~rlevas] This ticket does not add necessary kerberos.json to all stack services. Stacks API won't expose kerberos related information until this patch along with necessary kerberos.json files are committed. Any particular reason for not committing kerberos.json to all services along with this work? Is that being tracked as different ticket for some reason ?	1	0	https://issues.apache.org/jira/browse/AMBARI-8247
19446	AMBARI-8225	Thanks [~nalex]. This is a great start! A few things: 1) When showing sync status on the services summary area, if a subset of hosts are out of sync, what will it display? Think a red icon with "X of Y hosts out of sync" 2) I think that text would link to hosts page so users can find the out of sync hosts 3) Would need to think about how this is shown and filtered per host on the Hosts page so a user can find host(s) that have out of sync config status 4) And on the Host details page, show sync icon info with each component (i.e. my DataNode component might be out of sync but not the NodeManager on a given host) 5) Also will need a phase 3: on save config, if configs are out of sync, how will the flow go. Should prompt user to proceed + overwrite or merge?	1	0	https://issues.apache.org/jira/browse/AMBARI-8225

#	Requirement	Questions	Answered	Successfully Answered	URL
19447	AMBARI-8225	Thanks [~sposetti] 1) When showing sync status on the services summary area, if a subset of hosts are out of sync, what will it display? Think a red icon with "X of Y hosts out of sync" Newton> Sounds like a good idea. Was initially thinking about just a yes/no like solution. 2) I think that text would link to hosts page so users can find the out of sync hosts Newton> Thats correct. I briefly mentioned about it in the Web UI section. The new page will have the details provided in the "JSON structures" section of the doc 3) Would need to think about how this is shown and filtered per host on the Hosts page so a user can find host(s) that have out of sync config status Newton> Thanks, I missed this one. I'll add a section for the Hosts screen too. I'm thinking of this one to be similar to the Service screen summary. When the user clicks on the link, it could take them to a details page that only shows the differences for that host. 4) And on the Host details page, show sync icon info with each component (i.e. my DataNode component might be out of sync but not the NodeManager on a given host) Newton> In the current design proposed, the JSON structure deals at the level of files. So in order to implement this requirement, we will have to map the config files back to components. I guess this can be done as an improvement? 5) Also will need a phase 3: on save config, if configs are out of sync, how will the flow go. Should prompt user to proceed + overwrite or merge? Newton> Sure, will add a phase 3 to the doc. Prompting user to proceed with overwrite should be easy and straight forward but auto-merging might be a bit complicated. For example, if the user has done similar changes on a bunch of nodes, we will have to find all nodes with similar changes, group them into the same config groups and deploy them. Unless, we do some more intelligent diff'ing at the agent side, it might be difficult.	1	0	https://issues.apache.org/jira/browse/AMBARI-8225
19448	AMBARI-8211	[~dmitriusan], can you please commit this? The patch has two +1 in code review.	1	0	https://issues.apache.org/jira/browse/AMBARI-8211
19449	AMBARI-8189	Hi [~aonishuk], parallel execution is disabled by default, so this patch shouldn't have changed anything, it must be something else. When was the last time you measured?	1	0	https://issues.apache.org/jira/browse/AMBARI-8189
19450	AMBARI-8189	Thanks Dmitry. Hm... I am not sure I understand, if parallel execution is disabled, all commands are executed serially, same way as before. There are no threads being created based on what I can tell... can you please check the patch and let us know which piece causes parallel execution? {code} + if self.parallel_execution == 0: + command = self.commandQueue.get(True, self.EXECUTION_COMMAND_WAIT_TIME) + self.process_command(command) {code}	1	0	https://issues.apache.org/jira/browse/AMBARI-8189
19451	AMBARI-8189	[~ivanmi] Which version of AMbari has this been merged to ? Is this available trough some Ambari properties? A quick answer will be appreciated.	0	0	https://issues.apache.org/jira/browse/AMBARI-8189
19452	AMBARI-8189	[~ivanmi] I also see that this patch is already in Ambari 2.2.2. I could set parallel_execution=1 in ambari. I am yet to see the test results. Can you please confirm/share your test results and any pitfall of enabling this? Another parallel question: The default concurrency is set to 5 in Ambari code. Can this be exposed through ambari-agent.ini property?	0	0	https://issues.apache.org/jira/browse/AMBARI-8189
19453	AMBARI-8166	There are 2 checks mentioned here. - One from Ambari Server where you will do connectivity check (and potentially credential check). - Second from Cluster hosts (in Ambari agent) where you will do connectivity check. My understanding is Ambari server validates that Server can reach out to KDC and do any administrative actions it needs to perform on KDC/AD with the provided credentials. The agent checks are to ensure that there are no connection issues between cluster host and KDC server as it has to reach out to KDC server for cluster operation. Are we saying check in agent is not necessary and we will assume (pretty safe, in my opinion) that if Ambari Server can reach KDC (IP/hostname + port), then so can all the cluster nodes?	1	1	https://issues.apache.org/jira/browse/AMBARI-8166
19454	AMBARI-8166	[~rpidva], I think we are saying that a check on the agent side _is_ necessary. It is may be possible (though probably rare) for the Ambari server to reach the KDC, but one or more hosts in the cluster to be blocked - firewall, host configuration, etc... Regarding authenticating with the KDC, that will (according to [~jaimin]) be a step later in the process - after the Kerberos client is installed.	1	1	https://issues.apache.org/jira/browse/AMBARI-8166
19455	AMBARI-8166	[~jaimin], [~rlevas] -- a follow-up question. In terms of workflow, is our assumption that this point KDC server has already been setup and it's up and running (i.e. listening on KDC port)? If yes, why do we have external AD/KDC details on this screen? Are we going to modify the configuration of that KDC? If no, then cluster hosts will not be able to connect to specified KDC host on specified port.	1	1	https://issues.apache.org/jira/browse/AMBARI-8166
19456	AMBARI-8166	[~rlevas], external KDC is fine but I am asking about internal KDC or Ambari-managed KDC. Do you mean it will also be set at this point?	1	1	https://issues.apache.org/jira/browse/AMBARI-8166

19458	AMBARI-8166	[~jaimin], do you have a local KDC running on your machine? If yes, that would explain it. The test which failed in your local environment makes an assumption that nothing is listening on port 88 (stated in comments). We can change the port to something which is typically not used by any service like 11111.	1	1	https://issues.apache.org/jira/browse/AMBARI-8166
19459	AMBARI-8156	SUCCESS: Integrated in Ambari-trunk-Commit #863 (See [https://builds.apache.org/job/Ambari-trunk-Commit/863/]) AMBARI-8156. Usability: Do not force a mysql restart to apply Hive changes (via ncole) (ncole: http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=af31f3ec343043bb39e54175e7deb3f6950fa481) * ambari-server/src/main/resources/stacks/HDP/2.0.6/services/HIVE/metainfo.xml * ambari-server/src/test/resources/stacks/HDP/2.0.5/services/HIVE/metainfo.xml * ambari-server/src/main/resources/stacks/HDP/2.1/services/HIVE/metainfo.xml	0	0	https://issues.apache.org/jira/browse/AMBARI-8156
19460	AMBARI-8156	SUCCESS: Integrated in Ambari-trunk-Commit-docker #157 (See [https://builds.apache.org/job/Ambari-trunk-Commit-docker/157/]) AMBARI-8156. Usability: Do not force a mysql restart to apply Hive changes (via ncole) (ncole: http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=af31f3ec343043bb39e54175e7deb3f6950fa481) * ambari-server/src/test/resources/stacks/HDP/2.0.5/services/HIVE/metainfo.xml * ambari-server/src/main/resources/stacks/HDP/2.1/services/HIVE/metainfo.xml * ambari-server/src/main/resources/stacks/HDP/2.0.6/services/HIVE/metainfo.xml	0	0	https://issues.apache.org/jira/browse/AMBARI-8156
19461	AMBARI-8150	[~afernandez] Is this JIRA going to fixed as part of 2.0.0, if not can you update the fix version?	1	0	https://issues.apache.org/jira/browse/AMBARI-8150
19462	AMBARI-8147	[~afernandez] Is AMBARI-8150 going to be part of 2.0.0? If so can you provide ETA for resolving AMBARI-8150 and AMBARI-8147. Else can we update the JIRAs to 2.1.0?	1	0	https://issues.apache.org/jira/browse/AMBARI-8147
19463	AMBARI-8120	[~abaranchuk] Can you update the description to summarize the issues?	0	0	https://issues.apache.org/jira/browse/AMBARI-8120
19464	AMBARI-8022	[~tedyu@apache.org] / [~devaraj] There's v1 and v2 posted. Which one do we want? v1 says to remove "hbase.hstore.flush.retries.number", while v2 does not have this entry. From the description, we do want to remove it, correct? Also, if we want 4GB as the default heapsize, shouldn't the value be 4096? Is 4196 intentional?	1	1	https://issues.apache.org/jira/browse/AMBARI-8022
19465	AMBARI-7998	[~ncole@hortonworks.com], how does one trigger this event via the API? I am interested in this because it is more an an action call versus a call to update a resource and I may need to do something similar in the near future.	0	0	https://issues.apache.org/jira/browse/AMBARI-7998
19466	AMBARI-7985	- _Server-side commands should be specified as a task in a stage_ Does this mean a server action is a part of Role Command order, and if it is, since all server actions have the same role AMBARI_SERVER_ACTION, how can it be specified in the ordering. - _each server-side task should be executed in its own thread_ A stage in Ambari is a way of grouping tasks that can be executed in parallel (one command per host), if server action follows max one action per stage, it would be executed serially by the Action Scheduler. I am not sure I understand, why the need for separate thread to execute server actions, could you explain the need for this ?	1	0	https://issues.apache.org/jira/browse/AMBARI-7985

#	Requirement	Questions	Answered	Successfully Answered	URL
19467	AMBARI-7985	[~swagle], {{quote}} Server-side commands should be specified as a task in a stage Does this mean a server action is a part of Role Command order, and if it is, since all server actions have the same role AMBARI_SERVER_ACTION, how can it be specified in the ordering {{quote} I guess this does mean that a server action is part of a Role Command order and thus will have the role {{AMBARI_SERVER_ACTION}}. Thinking about this more, I believe that a role can be specified only once within a stage, so multiple stages will need to be created to handle multiple server-side actions. With this, aren't stages ordered and guaranteed not to start unless the previous stage completes successfully? {{quote}} {{quote}} each server-side task should be executed in its own thread A stage in Ambari is a way of grouping tasks that can be executed in parallel (one command per host), if server action follows max one action per stage, it would be executed serially by the Action Scheduler. I am not sure I understand, why the need for separate thread to execute server actions, could you explain the need for this ? {{quote}} It appeared to me that the Action Scheduler pulled tasks from the queue and processed them by simply updating their states so that another process could come by and pick them up - somewhere in the Heartbeat monitor code. This is a quick task and could be done inline without causing a perceivable delay. However if we allow the server-side task to be handled in this thread, it could take some time and delay the queue processing. It may be that case that this is ok, especially since each server-side task may be handled in its own stage. However, are stages created by different request ordered? If not, then we may not want to hold the Action Scheduler hostage while we process our server-side task.	1	0	https://issues.apache.org/jira/browse/AMBARI-7985
19468	AMBARI-7985	_With this, aren't stages ordered and guaranteed not to start unless the previous stage completes successfully?_ Yes that will be guaranteed by the Action Execution framework. - There is a ServiceActionManager which is invoked from ActionScehduler, I don't think we should create separate ActionScheduler for server actions. - Another thing that is unclear to me is, if the server action is a Host Role Command (HRC), then this is basically something queued up to be executed by the agent running on Ambari server? Or is it a java class that is a part of a jar file and in the class path of AmabriServer? - If it is a conventional HRC, it should be a part of the Action queue for the server host. (There is 1 queue of actions per host). *Note*: In certain Ambari deployments the Amabri server might not have an agent running on the same host as the server. - The ActionScehduler, is non-blocking it reads stages from DB and queues up actions, the delay is that heartbeats are resposible for dequeue and heartbeat happen every 6 seconds. Currently there is no delay for server actions, I see the point of spawning a thread because this is a synchronous op.	1	0	https://issues.apache.org/jira/browse/AMBARI-7985
19469	AMBARI-7985	Would there ever be a case where a server action and a host action would be grouped together and need to be run in serial? If not, then I would that we'd want a different scheduler handling the server-side tasks. Reimplementing the ServerActionManager to handle this might be the cleanest way to go.	1	0	https://issues.apache.org/jira/browse/AMBARI-7985
19470	AMBARI-7985	[~rlevas] - It looks like your patch increased the test time from 35 minutes to over 47 minutes causing the builds to timeout. How many tests did you add? Are they spinning up a database - that's usually what adds time to the test suite. I've actually never seen a patch increase the test time this much.	1	0	https://issues.apache.org/jira/browse/AMBARI-7985
19471	AMBARI-7985	Can this feature be Stack driven? I can define a service level customized action that can be invoked in Ambari Server.	1	1	https://issues.apache.org/jira/browse/AMBARI-7985
19472	AMBARI-7985	[~cloneman], Currenly this is not stack driven and required server-side code to setup and invoked the command. Ideally this can be made to be more dynamic. What sort of stack-driven commands do you have in mind?	1	0	https://issues.apache.org/jira/browse/AMBARI-7985
19473	AMBARI-7890	[~kminder] [~sumit.gupta] The description of this ticket is taken from the link: http://knox.apache.org/books/knox-0-5-0/knox-0-5-0.html#Secure+Clusters Most of the properties that needs to be changed has *knox* in it's name. For example {{hadoop.proxyuser.knox.groups}} *What does knox part in the property name signify over here ?* I want to make sure that when user customizes the service name for knox service or primary name of the knox principal (knox@EXAMPLE.COM) stated in the Jaas file, the new configs that are injected in other service's site.xml holds true	0	0	https://issues.apache.org/jira/browse/AMBARI-7890
19474	AMBARI-7811	All 3 integration as independent services would be better idea I guess. With HDP 2.4 log search preview is already made with ambari infra and it uses solr so definitely ELK is not coming for default log analysis server. But elastic search integration definitely make sense. My team is already working on it since we are integrating predictionio which needs elastic search for meta store so it make sense for us to integrate.	1	1	https://issues.apache.org/jira/browse/AMBARI-7811
19475	AMBARI-7811	May I ask how did you integrate elasticsearch to Ambari? Did you use any public Ambari's elasticsearch services on Github?	1	1	https://issues.apache.org/jira/browse/AMBARI-7811
19476	AMBARI-7807	[~jaimin] can you please assign this to me	1	0	https://issues.apache.org/jira/browse/AMBARI-7807
19477	AMBARI-7804	What about an upgrade using a custom rpm? Would this be supported. I was just thinking for a patch delivered for a customer, it might be nice to allow the user to select the rpms instead of only repos.	0	0	https://issues.apache.org/jira/browse/AMBARI-7804
19478	AMBARI-7804	[~ncole@hortonworks.com] The mockups and designs mostly revolve around the availability of versioned rpms. Not sure if you have thought through screens for non-versioned distributions like BIGTOP ? Features like Downgrade might not work for non-versioned rpms. Will there be provisions to disable such features based on the stack?	1	0	https://issues.apache.org/jira/browse/AMBARI-7804
19479	AMBARI-7799	[~sumit.gupta] The [doc link|http://knox.apache.org/books/knox-0-5-0/knox-0-5-0.html#Secure+Clusters] asks to update krb5.conf at */etc/knox/conf/krb5.conf* on Knox host. The default location for krb5.conf is /etc/krb5.conf. Does knox overrides KRB5_CONFIG environment variable to */etc/knox/conf/krb5.conf* ?	1	1	https://issues.apache.org/jira/browse/AMBARI-7799
19480	AMBARI-7767	[~chliu] Thanks for submitting the patch. Could you write up concrete use cases that you have in mind that will be addressed by this new feature?	1	0	https://issues.apache.org/jira/browse/AMBARI-7767
19481	AMBARI-7767	[~chuanliu], can you take a look at the updated patch.	1	0	https://issues.apache.org/jira/browse/AMBARI-7767
19482	AMBARI-7681	Shouldn't the title should be add metrics service to HDP stack instead of common services stack?	0	0	https://issues.apache.org/jira/browse/AMBARI-7681
19483	AMBARI-7679	SUCCESS: Integrated in Ambari-trunk-Commit #1184 (See [https://builds.apache.org/job/Ambari-trunk-Commit/1184/]) AMBARI-7679. Add psutil based resource monitoring to collect host metrics. Unitests.py python version. (swagle) (swagle: http://git-wip-us.apache.org/repos/asf?p=ambari.git&a=commit&h=8235e7d63fbb0fb4f30ba209e3ac7f95bf3bf76f) * ambari-metrics/ambari-metrics-host-monitoring/src/test/python/unitTests.py	0	0	https://issues.apache.org/jira/browse/AMBARI-7679
19484	AMBARI-7656	Hi, [~267ada9d] Do you mean to let Ambari manage the start and stop of HBase Rest Gateway servers? Do you have any update on this? Thanks,	1	1	https://issues.apache.org/jira/browse/AMBARI-7656
19485	AMBARI-7656	Hi, I have upload the patch for this feature. could you please help me to take a look at ? Because REST api is a native api for hbase, so I add this changes in common-services.	1	1	https://issues.apache.org/jira/browse/AMBARI-7656

19508	AMBARI-7209	Patch available! I'm drawing the whole solution right here. There is a job to detect all Ambari Patch Available tickets. https://builds.apache.org/view/A-D/view/Ambari/job/Ambari-trunk-find-patches-available/ This currently points to one of files in the patch on my github account, and it is based upon oozie project's https://github.com/apache/oozie/blob/master/bin/test-patch-find-new-patch-available-jiras Once detected, each detected Jira number will be sent to the Ambari test-patch job. https://builds.apache.org/view/A-D/view/Ambari/job/Ambari-trunk-test-patch/ This will run a set of tests on the latest trunk with the patch applied. The script is based upon hadoop-common https://github.com/apache/hadoop-common/blob/trunk/dev-support/test-patch.sh What these jobs generate is Hadoop QA comments here https://issues.apache.org/jira/browse/AMBARI-7397 Once this whole solution is set in place, the committers can only focus on reviewing jiras that get +1 from Hadoop QA.	1	1	https://issues.apache.org/jira/browse/AMBARI-7209
19509	AMBARI-7209	[~jaoki] So we commit these scripts under "dev-support" and then update the repo pointer from your personal one to that of Ambari's in the Jenkins jobs? How do we activate it so that this runs automatically when "Submit Patch" is clicked?	1	0	https://issues.apache.org/jira/browse/AMBARI-7209
19510	AMBARI-7209	[~u39kun], thank you for looking into it. {quote} So we commit these scripts under "dev-support" and then update the repo pointer from your personal one to that of Ambari's in the Jenkins jobs? {quote} That's correct. {quote} How do we activate it so that this runs automatically when "Submit Patch" is clicked? {quote} This is not a hook on Jira, but rather we can let [the find patch available job|https://builds.apache.org/view/A-D/view/Ambari/job/Ambari-trunk-find-patches-available/] run periodically. That's what [oozie team does |https://builds.apache.org/job/oozie-trunk-find-patches-available/], I believe for every 10 mins	1	1	https://issues.apache.org/jira/browse/AMBARI-7209

#	Requirement	Questions	Answered	Successfully Answered	URL
19511	AMBARI-7209	[~jaoki] Once this feature is enabled, we need to formalize the dev process around this. Do you want to come up with a proposal so we can discuss on the dev mailing list?	1	0	https://issues.apache.org/jira/browse/AMBARI-7209
19512	AMBARI-7209	{quote} Do you want to come up with a proposal so we can discuss on the dev mailing list? {quote} Sure thing [~u39kun]. I will make a Google document to draw a proposal and will post it for discussion. {quote} Please update the Jenkins build jobs as needed. {quote} Will do. Thank you for taking care of the patch.	1	1	https://issues.apache.org/jira/browse/AMBARI-7209
19513	AMBARI-7204	Some review comments: 1. Support numerous cross-realm trusts. The cluster's home realm may require trust relationships with numerous other realms, both northward (trusted) and southward (trusting) of the cluster realm. For example, users from numerous AD realms may communicate with the cluster. The cluster may in turn communicate with numerous backend storage systems (each in an independent realm). 2. Improve the organization of the KDC information within the plan. The terms 'managed' and 'unmanaged' appear to serve numerous purposes and are overloaded. For example, in the current schema, how would one define an unmanaged KDC for the cluster plus a trust relationship with another (umanaged) realm? The term 'unmanaged' cannot be used twice as a key. My suggestion is to provide three sections: a. "cluster", defining the KDC for the Hadoop cluster itself, with either a 'managed' or 'unmanaged' section within. b. "trusted", defining a +list+ of realms that are to be trusted, each with a 'trust_password' (if the cluster KDC is managed). c. "trusting", defining a +list+ of realms that are to be trusting, each with a 'trust_password' (if the cluster KDC is managed). 3. Forwardable tickets. Please ensure that any managed KDC is configured to generate forwardable tickets. 4. Clarify whether 'trust' principals are automatically created in the 'unmanaged' cluster KDC scenario. I think it is clear that keytabs are created in every scenario. But the cross-realm trust principal for a given trust relationship, in what cases is it created by Ambari? My vote is, only in the managed scenario. 5. Provide a user extension point. For settings not contemplated in the proposal, perhaps the user may provide snippets to be included in krb5.conf.	1	0	https://issues.apache.org/jira/browse/AMBARI-7204
19514	AMBARI-7204	[~rlevas], well documented! Not knowing the Kerberos's best practice, I have a comment on the 2.1 Use Cases. To simplify, how about we implement only 2.1.1, 2.1.2 and 2.1.3? Clusters managed by Ambari always talk to the internal KDC, (basically 2.1.1 only as far as clusters and nodes can see) and if an organization has an existing KDC or active directory, we also provide a plugin or middleware to support 2.1.2 and 2.1.3 (one way trust to external source) This may not be needed if one way trust is a part of KDC. For use case 2.1.4 and 2.1.5 Ambari still set up a mandatory local KDC, we can simply apply an idea of 2.1.2 and 2.1.3 to let it connect to the existing ones.	1	0	https://issues.apache.org/jira/browse/AMBARI-7204
19515	AMBARI-7204	[~eronwright], thanks for your comments.... I will take them inconsideration while building this. Some comments on your comments.... {quote} 1. Support numerous cross-realm trusts. The cluster's home realm may require trust relationships with numerous other realms, both northward (trusted) and southward (trusting) of the cluster realm. For example, users from numerous AD realms may communicate with the cluster. The cluster may in turn communicate with numerous backend storage systems (each in an independent realm). {quote} I thought about this, however I could not seem to find a valid use case for any of these. I could imagine in a large enterprise that there may be multiple AD realms, and setting up the (one-way) cross-domain trusts for these will not be that difficult. My guess is that initially Ambari will not support such a case but it should not be that hard to add it later, if deemed necessary. {quote} 2. Improve the organization of the KDC information within the plan. The terms 'managed' and 'unmanaged' appear to serve numerous purposes and are overloaded. For example, in the current schema, how would one define an unmanaged KDC for the cluster plus a trust relationship with another (umanaged) realm? The term 'unmanaged' cannot be used twice as a key. My suggestion is to provide three sections: {quote} I will need to re-read the document. I didn't notice this issue. Essentially, there are two main cases with some sub-cases: # Managed KDC ## Stand-alone ## Cross-domain trust with unmanaged KDC # Unmanaged KDC ## KDC ## Active Directory I hope this clears it up a bit. {quote} 3. Forwardable tickets. Please ensure that any managed KDC is configured to generate forwardable tickets. {quote} This is the plan, thanks for pointing out that it wasn't clear in the design. {quote} 4. Clarify whether 'trust' principals are automatically created in the 'unmanaged' cluster KDC scenario. I think it is clear that keytabs are created in every scenario. But the cross-realm trust principal for a given trust relationship, in what cases is it created by Ambari? My vote is, only in the managed scenario. {quote} It should be assumed that whether the KDC is managed or unmanaged, principals for the Hadoop services will be created by Ambari. It think that it would be much easier if Ambari didn't have to create the principals in the unmanaged scenario; however that would defeat one of the purposes of this exercise which is to simplify he process of setting up Kerberos. {quote} 5. Provide a user extension point. For settings not contemplated in the proposal, perhaps the user may provide snippets to be included in krb5.conf. {quote} Let me think on this a while. I am not sure how "dangerous" it would be to let the user add their own configuration data to the krb5.conf file. However maybe the user is more educated on Kerberos than I assume. :)	1	1	https://issues.apache.org/jira/browse/AMBARI-7204
19516	AMBARI-7204	[~eronwright], I am in the process of updating the technical document. In it, I have an updated description of the API and will add a section on configuring the KDCs (single KDC, multiple cross-realm trusts, etc...). I know that JCE is needed the larger bit encryption algorithms like AES-256, however I am not aware of any JCE configuration requirements. Can you elaborate? In any case, I believe that the initial take on this feature will require JCE to be installed manually if needed.	1	1	https://issues.apache.org/jira/browse/AMBARI-7204
19517	AMBARI-7204	Thanks for incorporating much of the feedback. The introduction of the "kdc-<unique identifier>" configuration block seems to allow a multitude of realms to be defined in krb5.conf. Accordingly a use case should be defined. Seems we are now able to satisfy the use case I mentioned earlier, where the managed KDC is the 'trusted' party to some external KDC. But we must clarify how the cross-realm trust principals are specified. Would it be correct to define 'identity-' blocks for the trust principals? At minimum a password must be specified. Here is an example to illustrate the use case. A user in USER realm submits a job to a cluster in HADOOP realm, which reads data from a data storage system in DATABASE realm. The HADOOP realm is managed. Keep in mind that trust principals are defined as "krbtgt/TRUSTING_REALM@TRUSTED_REALM". {code} "configurations": [{ "cluster-env": { "kerberos_domain": "HADOOP.EXAMPLE.COM" } }, { "kdc--users": { "realm": "USERS.EXAMPLE.COM", "kdc_server": "kdc.users.example.com", "admin_server": "kdc.users.example.com" } }, { "kdc-hadoop": { "realm": "HADOOP.EXAMPLE.COM" } }, { "kdc--database": { "realm": "DATABASE.EXAMPLE.COM", "kdc_server": "kdc.database.example.com", "admin_server": "kdc.database.example.com" } }, { "identity--user-trust": { "realm": "HADOOP.EXAMPLE.COM", "principal": "krbtgt/HADOOP.EXAMPLE.COM@USERS.EXAMPLE.COM", "password": "hadoop" } }, { "identity--database-trust": { "realm": "HADOOP.EXAMPLE.COM", "principal": "krbtgt/DATABASE.EXAMPLE.COM@HADOOP.EXAMPLE.COM", "password": "hadoop" } }] {code} Thanks	1	0	https://issues.apache.org/jira/browse/AMBARI-7204

#	Requirement	Questions	Answered	Successfully Answered	URL
19518	AMBARI-7204	Since it is likely that any user-supplied KDC/AD administrator principals will not be properly secured due to the way Ambari handles (request) data, would it be unacceptable to declare that any KDC/AD administrative credentials are to be temporary and should be reset after any Ambari-related activity? What I mean by "declare" is via documentation and the UI.	0	0	https://issues.apache.org/jira/browse/AMBARI-7204
19519	AMBARI-7201	Nicely written document! Here are some comments from my side: 1) What would be the common service definitions tested against? Are we looking at Bigtop rpms? 2) Minor fix: On Page 3, in the directory tree: | | | | |- {Base: common-services/1.0.0/SERVICEA} should be | | | | |- {Base: common-services/SERVICEA/1.0.0} 3) I have some comments on the versioning of the service definitions. We are dealing with two variables here: i. The versions of the services. e.g. HDFS-2.4, HDFS-2.6 ii. The versions of the service definitions themselves e.g. 1.0.0, 1.0.1 Consider a scenario where we release the service definitions for HDFS-2.4 and call it HDFS-1.0.0. After some time we release the service definition for HDFS-2.5 and call it HDFS-1.1.0. Now if for some reason we need to patch the service definition for the older HDFS-2.4, what would the version number for such a fix look like? Do we call it 1.0.0.1, 1.0.1 or 1.1.1? Basically we will have to establish some guidelines on how we version the service definitions. Versioning the common services will help avoid vendor stack breakages. I can think of two approaches here: I> Establish a policy on how to increment the version numbers for the service definitions We can probably bump up the first digit for newer versions of services. E.g. HDFS-2.4 can be in common-services/HDFS/1.0.0 HDFS-2.5 can be in common-services/HDFS/2.0.0 And bump up the second digit for all patches or revisions to the service definition. E.g.: Version 2 of the service definition for HDFS-2.4 would be common-services/HDFS/1.1.0 Version 2 of the service definition for HDFS-2.5 would be common-services/HDFS/2.1.0 Pros: a. Compact representation Cons: a. The version numbers might not linearly increase. What if one vendor chooses to ship HDFS 2.5 but an another doesn't? How do we ensure that the versioning doesn't get messed up? II> Second option to have explicit versioning like the following: common-services/HDFS/{service_version}/version/{service_definition_version} E.g.: common-services/HDFS/2.4.1/versions/1.0 common-services/HDFS/2.4.1/versions/1.1 common-services/HDFS/2.6/versions/1.0 Pros: a. Natural/Easy to read service version hierarchy b. Avoid the necessity for internal version mapping between service and service-definition versions (inside the metainfo.xml files I guess?) c. If we don't end up supporting HDFS 2.5, then we can simply leave it empty. I personally lean towards the second approach. Let me know if any of the above approaches will work for us or if there is anything better? Thanks	1	1	https://issues.apache.org/jira/browse/AMBARI-7201
19520	AMBARI-7201	Sorry about the auto linking. Rewording to make it slightly better: "Consider a scenario where we release the service definitions for HDFS-2.4 and call it common-services/hdfs/1.0.0. After some time we release the service definition for HDFS-2.5 and call it common-services/hdfs/. Now if for some reason we need to patch the service definition for the older HDFS-2.4, what would the version number for such a fix look like? Do we call it common-services/hdfs/1.0.0.1, common-services/hdfs/1.0.1 or common-services/hdfs/1.1.1? "	1	1	https://issues.apache.org/jira/browse/AMBARI-7201
19521	AMBARI-7201	[~nalex], Thanks! bq. 1) What would be the common service definitions tested against? Are we looking at Bigtop rpms? I am not too sure. I was hoping the community will join together and ensure that we have a good place for that. bq. 2) Minor fix: I appreciate the fix for my documentation issue. I will correct it and upload a new PDF. bq. 3) I have some comments on the versioning of the service definitions. We are dealing with two variables here: I really like your ideas on versioning... thanks for pointing out the lack of details on this in the specification. You obviously put a lot of thought into this and I think that both schemas are great. My need to be explicit favors flavor II... even if it is a bit wordy. I will add one of these conventions to the document, but I want to see if anyone chimes in against or for either of those scenarios.	1	1	https://issues.apache.org/jira/browse/AMBARI-7201
19522	AMBARI-7201	[~nalex], Sorry for the delay on this... after discussing a bit with [~jspeidel], it seems like the 2 levels of version numbers may be overkill. I was trying to come up with a use case for multiple versions of a service declaration for a particular service version and failed to do so. Could you help with that. For example, why would we have {quote} common-services/HDFS/2.4.1/versions/1.0 common-services/HDFS/2.4.1/versions/1.1 common-services/HDFS/2.6/versions/1.0 {quote} Maybe we only really need to worry about one version of each {quote} common-services/HDFS/2.4.1 common-services/HDFS/2.6 {quote} My inclination is to be the most flexible, but maybe I was trying to be too flexible. Thoughts?	1	1	https://issues.apache.org/jira/browse/AMBARI-7201
19523	AMBARI-7201	[~rlevas] Here is what I had in mind while proposing the second set of versions. Imagine a scenario, where we release the service definitions for HDFS/2.4.1 and may be HDP and PHD inherit from it. At a later point of time we identify a bug in the HDFS service definition and we amend it. HDP might decide to skip the newer version but PHD might want to adopt the fix. If we don't have the version numbers for the service definitions itself, how would we identify the two different service definitions for HDFS/2.4.1 available now? I don't think retro-fixing any bugs on a already published version will be a good idea as it might break dependent stacks. Let me know if this sounds reasonable. Thanks	1	1	https://issues.apache.org/jira/browse/AMBARI-7201
19524	AMBARI-7201	[~nalex] Regarding your proposal for second set of versioning in common services, it would lead to more complications and versioning confusion as if common-services/HDFS/2.6 needs to inherit from common-services/HDFS/2.4.1, if 2.4.1 has 2 versions which version will the new 2.6 version inherit from or will we create new versions in the child service for each version of the parent service. Also this kinda defeats the purpose of common services if different stacks inherit from different versions of the same service version. Further, for the example you mentioned in which PHD stack needs a bug fix, we can always fix that bug in the PHD stack by overriding for example the default config property in the PHD stack. To keep things simple we will go without support for the second set of versioning. Let us know if you have any concerns.	1	1	https://issues.apache.org/jira/browse/AMBARI-7201

#	Requirement	Questions	Answered	Successfully Answered	URL
19525	AMBARI-7192	Retrieving which host components are installed to a specific host is already provided by the `clusters/<clustername>/hosts/<hostname>/host_components` resource. Retrieving the other way around is "sort of" provided with one small modification. The `clusters/<clustername>/host_components/<hostcomponent>` would be able to retrieve, but it is not allowed not to specify the <hostname> [here](https://github.com/apache/ambari/blob/trunk/ambari-server/src/main/java/org/apache/ambari/server/api/services/HostComponentService.java#L78) probably, because you can get the same result by the `/clusters/<clustername>/hosts/<hostname>/host_components/<hostcomponent>`. If I remove the check whether the <hostname> is provided or not I'll get back all the host responses where the components is installed to, but the json serializer messes up the response, e.g invalid response (response of 3 hosts): { "href" : "http://172.24.0.21:8080/api/v1/clusters/multi-node-hdfs-yarn/hosts/amb1.mycorp.kom/host_components/DATANODE", "HostRoles" : { "cluster_name" : "multi-node-hdfs-yarn", "component_name" : "DATANODE", "desired_admin_state" : "INSERVICE", "desired_stack_id" : "HDP-2.1", "desired_state" : "STARTED", "host_name" : "amb1.mycorp.kom", "maintenance_state" : "OFF", "service_name" : "HDFS", "stack_id" : "HDP-2.1", "stale_configs" : false, "state" : "INSTALL_FAILED", "actual_configs" : { } }, "host" : { "href" : "http://172.24.0.21:8080/api/v1/clusters/multi-node-hdfs-yarn/hosts/amb1.mycorp.kom" }, "processes" : [ ], "component" : [{ "href" : "http://172.24.0.21:8080/api/v1/clusters/multi-node-hdfs-yarn/services/HDFS/components/DATANODE", "ServiceComponentInfo" : { "cluster_name" : "multi-node-hdfs-yarn", "component_name" : "DATANODE", "service_name" : "HDFS" } }] }{ "href" : "http://172.24.0.21:8080/api/v1/clusters/multi-node-hdfs-yarn/hosts/amb2.mycorp.kom/host_components/DATANODE", "HostRoles" : { "cluster_name" : "multi-node-hdfs-yarn", "component_name" : "DATANODE", "desired_admin_state" : "INSERVICE", "desired_stack_id" : "HDP-2.1", "desired_state" : "STARTED", "host_name" : "amb2.mycorp.kom", "maintenance_state" : "OFF", "service_name" : "HDFS", "stack_id" : "HDP-2.1", "stale_configs" : false, "state" : "INSTALL_FAILED", "actual_configs" : { } }, "host" : { "href" : "http://172.24.0.21:8080/api/v1/clusters/multi-node-hdfs-yarn/hosts/amb2.mycorp.kom" }, "processes" : [ ], "component" : [{ "href" : "http://172.24.0.21:8080/api/v1/clusters/multi-node-hdfs-yarn/services/HDFS/components/DATANODE", "ServiceComponentInfo" : { "cluster_name" : "multi-node-hdfs-yarn", "component_name" : "DATANODE", "service_name" : "HDFS" } }] }{ "href" : "http://172.24.0.21:8080/api/v1/clusters/multi-node-hdfs-yarn/hosts/amb3.mycorp.kom/host_components/DATANODE", "HostRoles" : { "cluster_name" : "multi-node-hdfs-yarn", "component_name" : "DATANODE", "desired_admin_state" : "INSERVICE", "desired_stack_id" : "HDP-2.1", "desired_state" : "STARTED", "host_name" : "amb3.mycorp.kom", "maintenance_state" : "OFF", "service_name" : "HDFS", "stack_id" : "HDP-2.1", "stale_configs" : false, "state" : "INSTALL_FAILED", "actual_configs" : { } }, "host" : { "href" : "http://172.24.0.21:8080/api/v1/clusters/multi-node-hdfs-yarn/hosts/amb3.mycorp.kom" }, "processes" : [ ], "component" : [{ "href" : "http://172.24.0.21:8080/api/v1/clusters/multi-node-hdfs-yarn/services/HDFS/components/DATANODE", "ServiceComponentInfo" : { "cluster_name" : "multi-node-hdfs-yarn", "component_name" : "DATANODE", "service_name" : "HDFS" } }] } Is it a bug in the serializer or it os absolutely not recommended to remove that <hostname> check I mentioned above for some reason (in below) layers it is handled perfectly. Could any of you advise how should I proceed, please? [~u39kun][~swagle][~jspeidel] Thank you.	0	0	https://issues.apache.org/jira/browse/AMBARI-7192

19539	AMBARI-6461	[~dballar1] Could you upload a patch?	1	1	https://issues.apache.org/jira/browse/AMBARI-6461
19540	AMBARI-6432	I have implemented IPA support in my fork at https://github.com/bolkedebruin/ambari. It implements it as a separate kerberos service (ie like MIT, AD). On a couple of things I need some feedback or help: * Where do I need to place (ie. which stack) the additional parameters "admin_keytab" and "group"? * It seems that not everything is picked up for the ui (like description or location) for these additional parameters. What am I doing wrong? Caveats: * Some idiosyncracies of IPA and Ambari are difficult to match. For example Ambari likes to create its key tabs programmatically, but this is incompatible with IPA as additional encryption types are generated only after a key tab is requested (and generated in IPA 4) on the server. This means that, in my implementation, the Ambari generated password is ignored for user principals or service principals that get a key tab generated. * Also, due to the fact IPA requires a password change on first use for user principals. Also if a key tab is generated for this user (which is a bit weird and I will need to ask to the IPA guys). Therefore, the user administrator (the principal in admin_keytab) requires additional permissions to be able to write to krbPasswordExpiration (ipa permission-add “Set Password Expiry” –permissions=write –type=user –attrs=krbPasswordExpiration, ipa privilege-add-permission “User Administrators” –permission=”Set Password Expiry”). Question: is this the right way to go or should an "expect" utility be implemented so that the password can be set? * Tests still need to be written.	1	1	https://issues.apache.org/jira/browse/AMBARI-6432
19541	AMBARI-6432	Unfortunately I'm neither an Ambari nor an IPA expert . Can someone on the security/identity side of things reveiew this with thoughts. Possibly some red hatters might be interested also, [~subin11] [~erinaboyd] [~screeley] , since it is FreeIPA after all :)	0	0	https://issues.apache.org/jira/browse/AMBARI-6432
19542	AMBARI-6432	[~u39kun], [~jaimin]... Can you take a look at this patch and review the UI updates? Or suggest someone that could do it?	1	1	https://issues.apache.org/jira/browse/AMBARI-6432
19543	AMBARI-6432	Can someone help out to get builds running? I am not sure what is off and I'd like to get this merged.	1	1	https://issues.apache.org/jira/browse/AMBARI-6432
19544	AMBARI-6432	[~bolke]... I think we wanted to ask you to add a _feature flag_ to the UI portion of your code. [~u39kun] should have the details on what this means. After that and if the review board has enough +1's I will be happy to commit the patch. BTW: I just too a look at the review and it appear to be closed as submitted. Was the patch already committed?	1	1	https://issues.apache.org/jira/browse/AMBARI-6432
19545	AMBARI-6432	[~u39kun] Thanks that will help. In the meantime I also hit a bug on which I need some guidance how to fix it. FreeIPA does not support uppercase user principal names. If the cluster name is in uppercase a test identity will be generated with "myname@REALM" . For the tests to pass I need it to be "myname@REALM". What would be the best way to fix this? 1) Generate the test identity in lowercase (where is this generated? I could not find it yet) 2) Ask the user at step 1 to verify the cluster name is in lower case 3) adjust service_check.py to convert to lowercase if a user principal is encountered 4) use auth_to_local rules and apply these to the test identity In my opinion option 1 seems the best option. It would affect other Kerberos providers as well, but as it is only the test identity I would say it would not matter. Please advice	1	1	https://issues.apache.org/jira/browse/AMBARI-6432
19546	AMBARI-6432	[~rlevas] [~u39kun] v6 patch should address all issues mentioned. I would like to consider it Final if it passes the tests (can someone kicks those off, it does not seem to run on uploading a patch?). * FreeIPA 3 should work * Marked experimental by 'enableIpa' at the experimental page * Tested on 10+2 node system * toLower Function implemented in VariableReplacementHelper and applied where needed Note: * There seems to be a bug in how Ambari handles adding and removing principals: it gets called multiple times for these operations. By turning on debugging output for the Kerberos classes (and use IPA as the other classes dont log enough) you can see this. I haven't been able to look at this.	1	1	https://issues.apache.org/jira/browse/AMBARI-6432
19547	AMBARI-6432	How is the testing going? I almost off to holidays and it would be really nice to have this in before that ;-)	1	1	https://issues.apache.org/jira/browse/AMBARI-6432
19548	AMBARI-6416	I know there is also a python client that [~subin11] is working on. do the groovy and python clients overlap functionality?	1	0	https://issues.apache.org/jira/browse/AMBARI-6416
19549	AMBARI-6363	[~subin11] Is this JIRA still valid.	0	0	https://issues.apache.org/jira/browse/AMBARI-6363

#	Requirement	Questions	Answered	Successfully Answered	URL
19550	AMBARI-6354	Nate, thanks for sharing the design of alert monitoring in Ambari. Here are some review comments and questions about the design, -- For various reasons, It is very important for Ambari to support Alert monitoring through an inbuilt mechanism via ambari agents and not solely relying on the external monitoring services like Nagios. So thanks for initiating the efforts! -- Although having a pluggable interface for Ambari to work with many existing monitoring systems like Nagios/Zabbix etc. would be really important for some users who has already invested in those monitoring systems for their other infrastructure components. Looking at current design, the approach is to have Ambari do the alert monitoring via its agents and then dispatch these alerts to other monitoring systems. This may not be ideal for some users(see some examples below). ** Users familiar with existing Monitoring systems may want to configure all the alerts including Hadoop services, all in one place. ** Advance alerts management features such as alert aggregation, correlation, mitigation etc. can be done uniformly across various alerts with their existing monitoring system as opposed to partly in Ambari. ** Etc. -- So I was wondering, if we make Ambari server internally communicate with existing monitoring systems with standard pluggable interface? This design point is orthogonal to current Ambari alert monitoring design. Ambari's alert monitoring would be one of the implementations of the pluggable monitoring interface and serve as out-of-box default implementation for Ambari managed services. Although advantage is that, it would also facilitate other users to add the implementation for their existing monitoring system. I can propose the initial draft of the interface for alert monitoring and see how we can get the existing Ambari alert monitoring to plug in under that interface.. Let me know what you think?	0	0	https://issues.apache.org/jira/browse/AMBARI-6354
19551	AMBARI-6354	I think by design it would be good to have Ambari collection of alerts be default but optional i.e. if I choose to go with Nagios, I may not want Ambari's default alert monitoring. i.e. Ambari's inbuilt alert monitoring can be treated as optional pluggable service. Is this achievable after refactor work? Again current refactor work to remove Nagios dependency is good but at the same time I wanted to see how can we make it pluggable design and wanted to help out along those lines. I am reviewing the design and code and will propose some specific changes w/ minimal disruption to exiting work as possible..	0	0	https://issues.apache.org/jira/browse/AMBARI-6354
19552	AMBARI-6354	Thanks for the quick reply. I see. Is there a JIRA for web notifications or it is not planned at all? Our use case is to scale the cluster based on different type of metrics.	1	1	https://issues.apache.org/jira/browse/AMBARI-6354
19553	AMBARI-6354	I'm not clear on exactly what you're asking about. Can you explain a bit more what you mean when you say "web notifications"?	1	1	https://issues.apache.org/jira/browse/AMBARI-6354
19554	AMBARI-6275	[~jspeidel] Thanks for posting the proposal. Are these new API endpoints meant to be idempotent so that we can easily recover from failures/partial failures? That's one issue with our current blueprint cluster creation API (you can't simply retry by issuing the same call so it's hard to recover when failures occur).	1	1	https://issues.apache.org/jira/browse/AMBARI-6275
19555	AMBARI-6275	[~jspeidel] Ok, thanks for clarifying. > Failure tolerance and retry behavior are really important to any long running asynchronous request so any solution would likely augment the current lower level request model. Do we have a JIRA for this already? If not, can you open one?	1	1	https://issues.apache.org/jira/browse/AMBARI-6275
19556	AMBARI-6275	I like John's approach. A REST end point should ideally do only one thing. So doing the post-add tasks should not be tied to the add-hosts REST end point. It should be the UI's job to make it easier for user. The REST APIs are targeted mostly for machines or developers. Some questions: 1. In case of reference node approach, what would be the response if there are master roles and slave roles on the node. E.g. Zookeeper nodes (master) and Datanodes (slaves)? 2. Will agents have to be pre-installed on the newly added nodes? 3. Should this API be aware of cluster security? How does Ambari add security to newly added nodes today? Are there separate APIs for doing that? BTW, is there a plan for removing nodes too (may be in a different ticket)? Thanks	1	0	https://issues.apache.org/jira/browse/AMBARI-6275
19557	AMBARI-6275	[~jspeidel] Questions: 1. Is it possible to use the inline host_group format to add hosts to a cluster that was not created via a blueprint? 2. Is it possible to have this API perform in a transactional manner? Say I'm adding a host and 5 host components are to be added. If 2 host components fail to install, then I want to roll back the whole thing. Or say I'm adding 5 hosts and 2 hosts failed to install, etc. 3. Once you add a host by specifying a host group, is the meta info about the added host belonging to the specified host group made available via the API?	1	1	https://issues.apache.org/jira/browse/AMBARI-6275
19558	AMBARI-6275	[~jspeidel] Based on issues in EPIC looks like only documentation work is remaining in this EPIC. Can you address the documentation work and resolve the EPIC since this is part of 2.0.0 release?	1	0	https://issues.apache.org/jira/browse/AMBARI-6275
19559	AMBARI-6148	Hi [~erinaboyd], I wonder if you are still working on this. I'd like to add a set of service definition for Spark so that spark can be installed through Ambari. Please let me know if you can give me this ticket. I have started investigating a little bit and found a challenge; Which stack (PHD, BIGTOP and PHD) to add the spark definition first? HDP went ahead on trunk with versioned rpm so it should be a preferable option but their yum repo does not provide spark. BIGTOP does but is not versioned rpm yet. HDP {code} bash-4.1# repoquery --repofrompath=AA,http://s3.amazonaws.com/dev.hortonworks.com/HDP/centos6/2.x/BUILDS/2.2.1.0-2048/ -qa | grep spark python-sparklines-0:0.9-2.el6.noarch # spark-core is not included {code} BIGTOP http://bigtop01.cloudera.org:8080/job/Bigtop-trunk-Repository/label=centos6/lastSuccessfulBuild/artifact/repo/RPMS/	0	0	https://issues.apache.org/jira/browse/AMBARI-6148
19560	AMBARI-6125	new: addHost - adds a registered host to the cluster removeHost - gracefully decommission and remove the host from the cluster (synchronous) waitForRequestsToFinish - waits for any given request to finish, used to synchronize rest calls decommissionDataNode - decommissions the datanode on a given host decommissionNodeManager - decommissions the nodemanager on a given host decommission - can decommission any given components which supports decommission deleteHostComponents - deletes the given components from a host deleteHost - deletes the host from the cluster installComponentsToHost - can install components from either blueprint or from the specified component list restartServiceComponents - restarts the given services components on all hosts startComponentsOnHost - starts the provided components on a host stopComponentsOnHost - stops the provided components on a host validateBlueprint - can validate the blueprint for recommendAssignments modifyConfiguration - can modify any services configuration (the whole config must be provided) getHostNamesByState - retrieves the hosts by state getPublicHostNames - returns the public host names which the provided host components are installed to getInternalHostNames - returns the internal host names which the provided host components are installed to getClusterHosts - returns only the hosts which are part of the cluster resolveInternalHostName - can resolve a host's internal name to the public one modified: recommendAssignments - host group and host recommendation changed: - at least host group number of host is required - if there are more hosts than host groups in the blueprint all host group get a single node and the leftover hosts are distributed among all the slave_X host groups getInstallProgress - renamed to getRequestProgress startAllServices - return type changed stopAllServices - return type changed blueprints: HDP single/multi node blueprints added to defaults dependencies: commons-io added	1	0	https://issues.apache.org/jira/browse/AMBARI-6125
19561	AMBARI-6125	Hi [~u39kun], Could you please take a look at the patch? Thank you.	1	0	https://issues.apache.org/jira/browse/AMBARI-6125

#	Requirement	Questions	Answered	Successfully Answered	URL
19562	AMBARI-6086	[~u39kun] in AMBARI-4447 [~jaimin] enabled the ability for globals to be defined for multiple services (as we did with the hadoop_heapsize for HDFS & GlusterFS) So, why can we not do the same with the namenode_heapsize? If it's defined in the global props with the service being GLUSTERFS, I don't understand how it breaks HDFS. We are having multiple issues with various services not starting up (Nagios, HBASE, because of these global paratemeters not being defined). The error looking like this (configuration parameters vary) File "/var/lib/ambari-agent/cache/stacks/HDP/2.0.6/services/NAGIOS/package/scripts/params.py", line 137, in <module> nn_ha_host_port_map[config['clusterHostInfo']['namenode_host'][0]] = namenode_metadata_port File "/usr/lib/python2.6/site-packages/resource_management/libraries/script/config_dictionary.py", line 75, in __getattr__ raise Fail("Configuration parameter '"+self.name+"' was not found in configurations dictionary!") Fail: Configuration parameter 'namenode_host' was not found in configurations dictionary! Please advise...	1	1	https://issues.apache.org/jira/browse/AMBARI-6086
19563	AMBARI-6086	Hi [~jaimin] & [~u39kun]The property we are looking at is namenode_host which I assume will be mutually exclusive as we would only use this prop in gluster when HDFS isn't installed. Can we add this back into the config then as well for trunk and 1.6.1? Also, we are struggling with HBASE not starting because of slave_hosts is not in the config dictionary. (Same error as above). However, this value doesn't appear to be set as a configuration value. I see it checking it on serveral services, Nagios, HDFS, Ganglia, but perhaps it's set in the params.py on the before-INSTALL script in the hooks directory?? If so, how can we default this to something else as this is done before install you don't have a list of what you are installing, therefore, we can't do a conditional for isGluster....Thoughts?	0	0	https://issues.apache.org/jira/browse/AMBARI-6086
19564	AMBARI-5980	[~xiwang0309] 1. Please convert the code from making a synchronous AJAX call to asynchronous (we should not be using "async: false"). 2. self.set('javaHome', property.split("")[3]); <- This code is mysterious and also possibly error prone. Why 3? What's the expected API response? What if after splitting, the length of the array is less than 4? We should document the actual expected response from the server (ideally, we should put the mock file as we do for many other AJAX calls)	1	1	https://issues.apache.org/jira/browse/AMBARI-5980
19565	AMBARI-5980	[~xiwang0309] It looks like AMBARI-5998 changed the format for structured_out. This is now a stringified JSON, so we don't need to do split magic anymore. We can simply use the JSON parser. Can you go ahead and make the change?	1	1	https://issues.apache.org/jira/browse/AMBARI-5980
19566	AMBARI-5811	[~rlevas] [~vbrodetskyi] Is this JIRA still valid and take necessary steps accordingly?	1	0	https://issues.apache.org/jira/browse/AMBARI-5811
19567	AMBARI-5707	+1 for this ,fantastic proposal .Something I had always wanted. Considering the conflicting ganglia/nagios versions on existing customer setups.This would help a lot. Will this daemon be coded in python? I am suggesting something in C/scala/erlang (C best) to capture data and dump it out as json. And agent itself can also have a webui(disabled by default) which can show the metrics. But OpenTSDB is already has python tcollector and a LGPL .So would we be inspired from it ,and rewrite it ? One last question I have is regarding whether you are considering to get the visualization as good/similar as in ganglia Ganglia uses RRDTool(i guess) which is again GPL. So does the plan also include improving the server side to render the data in a different way.	0	0	https://issues.apache.org/jira/browse/AMBARI-5707
19568	AMBARI-5707	It would be a good result but --- at first thought: Im a little wary of this: If Ambari re-builds alot of components in the stack, it might wind up being to hard to maintain as a open source project. One of the better ways maybe is reach out to ganglia community about the problems we face. Is a combination of custom JMX hooks + Ganglia not enough to accomplish the above bullets.	0	0	https://issues.apache.org/jira/browse/AMBARI-5707
19569	AMBARI-5613	[~simon.zhangsm@hotmail.com] Is this JIRA still valid?	0	0	https://issues.apache.org/jira/browse/AMBARI-5613
19570	AMBARI-5482	Thanks Yusaku, How should we proceed further? We already have some awesome new features and improvements. Should we create a new JIRA issue for each and submit patches or just create one issue and put everything there?	1	0	https://issues.apache.org/jira/browse/AMBARI-5482
19571	AMBARI-5465	[~swagle] Is this JIRA still valid?	0	0	https://issues.apache.org/jira/browse/AMBARI-5465
19572	AMBARI-5463	Hi [~simon.zhangsm@hotmail.com]. Can you submit a patch for this? Some info here on the review process: https://cwiki.apache.org/confluence/display/AMBARI/How+to+Contribute	1	0	https://issues.apache.org/jira/browse/AMBARI-5463
19573	AMBARI-5445	With some input from [~mahadev] how about a more generic solution: * Introduce the concept of a "monitoring" service ** Nagios and Ganglia are two such services * A monitoring service, by definition, needs to be restarted when host components are added/removed ** Restart is indicated by setting a flag (if we can user stale_config = true that will be great) on all service host components * The indicator itself is reset when a host component starts [~dsen], can you check if the above steps fit and provide a detailed proposal	1	0	https://issues.apache.org/jira/browse/AMBARI-5445
19574	AMBARI-5194	HostInfo.py path with mvn clean test results: Results : Failed tests: testNoNagiosServerCompoonent(org.apache.ambari.server.controller.nagios.NagiosPropertyProviderTest): Expected no alerts Tests in error: testDeleteUsers(org.apache.ambari.server.controller.AmbariManagementControllerTest): Could not remove user user1. 19575	AMBARI-5194	[~screeley] thats part of agent unit tests. What I meant was would you be able to add more unit tests to TestHostInfo.py? You can run the ambari-agent unit tests by doing: cd ambari-agent mvn clean test. That should run all he unit testso n the ambari agent side.	1	1	https://issues.apache.org/jira/browse/AMBARI-5194

#	Requirement	Questions	Answered	Successfully Answered	URL
19576	AMBARI-5194	[~mahadev] - thanks for the tips... So, here is the successful unit test: ============= specific line: ============= test_checkIptables (TestHostInfo.TestHostInfo) ... ok ============= All HostInfo tests ============= test_analyze_yum_output (TestHostInfo.TestHostInfo) ... ok test_analyze_yum_output_err (TestHostInfo.TestHostInfo) ... ok test_analyze_zypper_out (TestHostInfo.TestHostInfo) ... ok test_checkFolders (TestHostInfo.TestHostInfo) ... ok test_checkIptables (TestHostInfo.TestHostInfo) ... ok test_checkLiveServices (TestHostInfo.TestHostInfo) ... ok test_checkUsers (TestHostInfo.TestHostInfo) ... ok test_dirType (TestHostInfo.TestHostInfo) ... ok test_etcAlternativesConf (TestHostInfo.TestHostInfo) ... ok test_getReposToRemove (TestHostInfo.TestHostInfo) ... ok test_hadoopVarLogCount (TestHostInfo.TestHostInfo) ... ok test_hadoopVarRunCount (TestHostInfo.TestHostInfo) ... ok test_hostinfo_register (TestHostInfo.TestHostInfo) ... ok test_hostinfo_register_suse (TestHostInfo.TestHostInfo) ... ok test_javaProcs (TestHostInfo.TestHostInfo) ... ok test_osdiskAvailableSpace (TestHostInfo.TestHostInfo) ... ok test_perform_package_analysis (TestHostInfo.TestHostInfo) ... ok so it passed, but I had to modify the TestHostInfo.py for that particular test, as it was still expecting the values from the old method. So what is the process for that, do I now need a separate JIRA so I can update the TestHostInfo.py as well? Below is what I changed (old routine used faulty returncode, new routine uses boolean values) result = hostInfo.checkIptables() self.assertTrue(result == True) result = hostInfo.checkIptables() self.assertFalse(result == False)	1	1	https://issues.apache.org/jira/browse/AMBARI-5194
19577	AMBARI-5181	It appears at some point in time there was a generic HCFS integration that got ported back to GlusterFS specific one (AMBARI-3167, AMBARI-2721). Do we know why this got moved (sorry JIRA comments are not really helpful) It looks like the GlusterFS integration is not just handled only at the stack level (inheritence model) but also touches many core components (ambari-server, ambari-web, ambari-client modules etc.,). It appears there is no clean way of extending the framework to add new services (HCFS). If we need to introduce new HCFS support to Ambari, should we need to follow same approach as adopted for GlusterFS (extending stack and also modifying core Ambari components - read hardcoded) or is there a generic way of introducing new HCFS stack support. I am planning to post my findings and propose new JIRA task but wanted to find if there is something on the radar already.	1	1	https://issues.apache.org/jira/browse/AMBARI-5181
19578	AMBARI-5181	[~vijikarthi] You are right, hcfs JIRAs may be related to various components, eg. AMBARI-8658 is clearly a stack related, while there are issues related to multiple components as well: eg. AMBARI-8468. On the other hand, there are issues without component (eg. AMBARI-8505) as it's not immediatelly clear which is the right one (from the reporter perspective). And since I needed some easy way to track hcfs related issues, I created [hcfs label|https://issues.apache.org/jira/browse/AMBARI-8658?jql=labels%20%3D%20hcfs] some time ago. What do you think about this approach? The downside is that me and [~dahorak] are the only ones currently using it so far.	1	0	https://issues.apache.org/jira/browse/AMBARI-5181
19579	AMBARI-5116	[~xiwang0309], can we take care of the CRIT and WARN scenarios with time 0?	1	1	https://issues.apache.org/jira/browse/AMBARI-5116
19580	AMBARI-5116	[~xiwang0309], we need to externalize all static strings, including "for ", "Last Checked:", etc. Can you go ahead and do that?	1	1	https://issues.apache.org/jira/browse/AMBARI-5116
19581	AMBARI-5044	Thans [~xiwang0309]. Can we change it so that "OK" button says "Confirm Add" and "Confirm Delete" respectively?	1	1	https://issues.apache.org/jira/browse/AMBARI-5044
19582	AMBARI-4908	Thank you for your answer Jeff. I cant wait to see this new version 1.5.0 of Ambari released ;-). Any idea when it will be ? Best regards. Gwenael Le Barzic	1	1	https://issues.apache.org/jira/browse/AMBARI-4908
19583	AMBARI-4881	Unrelated - if we have a choice can we rename STORM_REST_API to something else such as STORM_REST_WEB_SERVICE. {noformat} "properties": { "default_port": "8745" # Storm port is always hardcoded, so we will just use the default value "relevant_config": "storm-site" # Just example, not needed for Storm "port_property": "storm.port" # Just example, not needed for Storm } {noformat} Can the above be consumed by AbstractProviderModule (modify JMXHostProvider into Generic HostProvider that provided host, port, protocol) and we can slowly move port related details for the jmx providers to the metrics.json file? APM can then make it available to JMXPropertyProvider as well as RESTPropertyProvider. Instead of "relevant_config" and "port_property" I would suggest "port_config_type" and "port_property_name". I am thinking the eventually we can have "some_other_default", "some_other_config_type" and "some_other_property_name". Little confused by {noformat} "metrics": { "metrics/api/cluster/summary/nimbus.uptime": { "metric": "nimbus.uptime", "pointInTime": true, "temporal": true } {noformat} Should we try to maintain similarity with the jmx/ganglia metrics? {noformat} "metrics": { "metrics/nimbus/nimbus.uptime": { <== URL part from Ambari Resource "metric": "api/cluster/summary/nimbus.uptime", <== selector/filter for the JSON received from Storm "pointInTime": true, "temporal": true } {noformat}	1	0	https://issues.apache.org/jira/browse/AMBARI-4881
19584	AMBARI-4798	In service_configs.js: {noformat} case 'yarn.ahs.webapp.address': var hsHost = masterComponentHostsInDB.findProperty('component', 'HISTORYSERVER').hostName; this.setDefaultValue("(0.0.0.0)(?=:)", hsHost); break; case 'yarn.timeline-service.webapp.https.address': var hsHost = masterComponentHostsInDB.findProperty('component', 'HISTORYSERVER').hostName; this.setDefaultValue("(0.0.0.0)(?=:)", hsHost); break; {noformat} 1. Should yarn.ahs.webapp.address be renamed to yarn.timeline-service.webapp.address? 2. Should HISTORYSERVER should be APP_TIMELINE_SERVER?	1	1	https://issues.apache.org/jira/browse/AMBARI-4798
19585	AMBARI-4786	Hi [~jspeidel], I can see that the output consist of "name" : "AMBARI_SERVER" Is there a special meaning to that? I wonder if it was because we exported the blueprint via a HTTP URL fired to the Ambari Server Host? Thanks!	0	0	https://issues.apache.org/jira/browse/AMBARI-4786
19586	AMBARI-4782	This change will impact the API spec so we need to follow the needed procedure. This is an additive change anyway. Some clarifications: * Will we see "state", "desired_state", "current_state" as three items in the response? * Query will then support filtering based on any of the three.	1	1	https://issues.apache.org/jira/browse/AMBARI-4782

#	Requirement	Questions	Answered	Successfully Answered	URL
19587	AMBARI-4782	[~mahadev] / [~sumitmohanty] / [~u39kun] I think it would be good to change the desired solution. Currently we have an inconsistency in our API: "state" parameter has a different meaning in request and in responce. Talked to UI folks regarding that, they agree that it is an issue, but are not sure how much the proposed fix will affect the UI. h2. What is wrong: HostComponentResourceProvider has two properties defined: "state" and "desired_state". When we issue a read request like http://vm-3.vm:8080/api/v1/clusters/cc/host_components?HostRoles/state=INSTALL_FAILED , the "state" parameter is mapped to "desired_state". At the same time, "state" property meaning at responce json is a live service state (so-called current state). {code} { href: "http://vm-3.vm:8080/api/v1/clusters/cc/hosts/vm-3.vm/host_components/HDFS_CLIENT", HostRoles: { cluster_name: "cc", component_name: "HDFS_CLIENT", host_name: "vm-3.vm", state: "INSTALLED" }, host: { href: "http://vm-3.vm:8080/api/v1/clusters/cc/hosts/vm-3.vm" } }, {code} This inconsistency is not obvious and may lead to various issues like state=INSTALL_FAILED issue mentioned above. So I believe that the right thing would be to remap "state" parameter to service live state both in requests and responses (and adjust appropriately web-UI and any third-party tools if needed). I assume that most party tools will not even notice a difference because they use "state" parameter as "live state". "current_state" property should not be added as it will only introduce more confusion.	1	0	https://issues.apache.org/jira/browse/AMBARI-4782
19588	AMBARI-4782	Published a new patch. The updated patch seems to implement all requested things. If the approach is appropriate, I'll add unit test coverage. Also, I'm considering fixing also Service resource (we have the same issue here, state is mapped to desired_state), but I'm not sure if it is needed. [~sumitmohanty], can you please your feedback regarding modifying Service resource as well?	1	0	https://issues.apache.org/jira/browse/AMBARI-4782
19589	AMBARI-4782	[~dmitriusan], I'm looking at another issue related to the host state, https://hortonworks.jira.com/browse/BUG-20676 Could these 2 Jiras be related?	0	0	https://issues.apache.org/jira/browse/AMBARI-4782
19590	AMBARI-4782	Is this JIRA still valid?	0	0	https://issues.apache.org/jira/browse/AMBARI-4782
19591	AMBARI-4770	[~xiwang0309], the patch is installing TEZ_CLIENT on NAGIOS_SERVER. Shouldn't that be HIVE_CLIENT?	1	1	https://issues.apache.org/jira/browse/AMBARI-4770
19592	AMBARI-4504	[~mahadev]/[~sumitmohanty], can you please take a look on implementation proposal?	0	0	https://issues.apache.org/jira/browse/AMBARI-4504
19593	AMBARI-4481	[~mahadev]/[~swagle], can you please take a look on proposal?	1	1	https://issues.apache.org/jira/browse/AMBARI-4481
19594	AMBARI-4481	[~swagle], I've reverted your change of Jetty servlet handler for resources/* introduced at revision 60f3e6e. Now servlet handler at /org/apache/ambari/server/controller/AmbariServer.java:294 looks like: {code} ServletHolder resources = new ServletHolder(ServletContainer.class); resources.setInitParameter("com.sun.jersey.config.property.resourceConfigClass", "com.sun.jersey.api.core.PackagesResourceConfig"); resources.setInitParameter("com.sun.jersey.config.property.packages", "org.apache.ambari.server.resources.api.rest;"); root.addServlet(resources, "/resources/*"); resources.setInitOrder(6); {code} Is it ok? Otherwise, resources requests any url starting with http://vm-0.vm:8080/resources/stacks/ return JSON responces (the same responces as API at "/api/v1/stacks" returns)	0	0	https://issues.apache.org/jira/browse/AMBARI-4481
19595	AMBARI-4358	[~dmitriusan] Some questions/comments: - When would the scripts that create symlinks run ? - How would upgrade scenario be handled with existing symlinks? - Is there an alternative to creating symlinks which could be fragile: meaning an accidental symlink delete leads to broken agent? - Is it possible to consider an approach where scripts, hooks and templates are written for a service say HDFS without tie up to a specific stack version and then in the definition of a stack say 2.1.1, we declaratively pin point with script to use for that version. This way it becomes easy to develop a inheritance chain of python classes and unit test changes as stack is added.	1	0	https://issues.apache.org/jira/browse/AMBARI-4358
19596	AMBARI-4324	h1. Implementation proposal: 1. Add new command type CANCEL_COMMAND to agent-server protocol. CANCEL_COMMAND contains identifier (task_id + stage_id) of an exact command for cancellation. 2. At the server side, commands of this type are issued when tasks are considered timed out. I'm going to do that here: org.apache.ambari.server.actionmanager.ActionScheduler#processInProgressStage. 3. At the agent side, CANCEL_COMMANDs are executed inside Controller.py right after arrival (they are not put into ActionQueue). If command mentioned by the CANCEL_COMMAND is not present in ActionQueue (it is already in progress or completed), CANCEL_COMMAND is silently ignored. 4. Also, agent clears entire action queue when it can not continue exchanging heartbeats with the server (disconnect or registration requested). I'm going to add an appropriate logic to src.main.python.ambari_agent.Controller.Controller#registerAndHeartbeat. The motivation is to make recovery from network/server fail more reliable and fast (agent will have an empty ActionQueue and can start executing new EXECUTION_COMMANDS and STATUS_COMMANDS right after registration). 5. In both cases described above (executing a single CANCEL_COMMAND or clearing entire ActionQueue) EXECUTION_COMMANDS are considered transactional-like. I mean that EXECUTION_COMMANDs that are already IN_PROGRESS are never interrupted. Thus we decrease chanses of leaving system in misconfigured/unpredictable state. Also, I'm going to fix a bug at org.apache.ambari.server.actionmanager.ActionScheduler#processInProgressStage . Here, we pass stage timeout instead of task timeout as a parameter of org.apache.ambari.server.actionmanager.ActionScheduler#timeOutActionNeeded . After bugfix, task timeout + some small time will be passed as a parameter value. Additional smal time (10-30 seconds) is needed to avoid sending CANCEL_COMMAND without absolute necessary (task will timeout at agent automatically in most cases). This implementation should also solve another related jira AMBARI-4324 [~mahadev] and/or [~sumitmohanty], can you please take a look on this proposal?	1	0	https://issues.apache.org/jira/browse/AMBARI-4324
19597	AMBARI-4324	[~dmitriusan], this is a good feature. We will also need to support cancel for request or request/task through API. I am working on a proposal for that. Can you ensure there are hooks to add Cancel commands when it is initiated through a API call. Typically, agents do not have a long queue of pending tasks. Just wondering if Controller.py should process it cancel synchronously. Perhaps it is OK. We should have the ability to interrupt INPROGRESS tasks as well. I am thinking run-away tasks or misconfigured timeouts. What would it take to have this ability? What is the other JIRA ID? The current link is to this JIRA. {quote} This implementation should also solve another related jira AMBARI-4324 {quote}	1	1	https://issues.apache.org/jira/browse/AMBARI-4324

#	Requirement	Questions	Answered	Successfully Answered	URL
19598	AMBARI-4324	[~sumitmohanty], {quote} We will also need to support cancel for request or request/task through API. I am working on a proposal for that. Can you ensure there are hooks to add Cancel commands when it is initiated through a API call. {quote} I'll add a relevant hook addCancelCommandAction() to /org/apache/ambari/server/controller/AmbariCustomCommandExecutionHelper.java {quote} Typically, agents do not have a long queue of pending tasks. Just wondering if Controller.py should process it cancel synchronously. Perhaps it is OK. {quote} during cluster install, queue may contain 5-10 pending tasks (all tasks for stage) + 20 status commands, so it takes a long time to execute. Also, if we process "cancel" request synchronously, it will be placed to queue after task we are trying to cancel {quote} We should have the ability to interrupt INPROGRESS tasks as well. I am thinking run-away tasks or misconfigured timeouts. What would it take to have this ability? {quote} Cancelling command in progress is possible (we may invoke kill-on-timeout callback method manually, effectively killing all subprocesses), but may occasionally leave system configuration in a broken state. {quote} What is the other JIRA ID? The current link is to this JIRA. This implementation should also solve another related jira AMBARI-4324 {quote} Implementation proposal was intended for AMBARI-4323, I've posted it to current (related) jira by mistake.	1	0	https://issues.apache.org/jira/browse/AMBARI-4324
19599	AMBARI-4323	Looks good. Few points to think about: * Agree that we do not need a new status, FAILED is OK. Somehow using STDOUT/STDERR does not seem right but it is better than adding yet another column. * I assume when a CANCEL is issued for a task the state of the task in the server side is IN_PROGRESS. Only, when the agent returns the command status that the server will update the state to FAILED. * Are we also implementing canceling of IN_PROGRESS commands? Just wanted to confirm. * _clears entire action queue on every registration_: When expected and received heartbeat ids are not the same the server asks agents to re-register. I do not know if in this case server assumes that in progress commands are aborted. If server does not assumes that commands are aborted then agent should not clear the action queue. Can you verify the behavior here? * _we pass a stage timeout instead of task timeout as a parameter_: That part of the ActionScheduler always seems more complex than needed. Anyway, I have a question. Today stage timeout is the largest "sum of task timeouts on a single host". One a one node, during install the last_attempt_time is basically the same for all install tasks. So if we pass "task timeout + some small time" while checking timeOutActionNeeded() for the later tasks - ones in the end of the queue in Agent - will we not have a problem?	1	0	https://issues.apache.org/jira/browse/AMBARI-4323
19600	AMBARI-4323	Is the purpose of the cancel command only to remove from the Queue? What about those items that are IN_PROGRESS - how do you actually stop them? For example, pretend you issue a START command, and the backing OS command (could be, say, some hdfs command) blocks. Will you issue a kill -9 on the command? Or are we just removing the "monitoring" for that request/task combination?	1	0	https://issues.apache.org/jira/browse/AMBARI-4323
19601	AMBARI-4323	[~ncole@hortonworks.com], yes, we perform the same action as for commands that timed out: we kill the process and all child subprocesses. [~sumitmohanty], {quote} I assume when a CANCEL is issued for a task the state of the task in the server side is IN_PROGRESS. Only, when the agent returns the command status that the server will update the state to FAILED. {quote} CANCEL command may be issued for any task id (both IN_PROGRESS or just scheduled) {quote} Are we also implementing canceling of IN_PROGRESS commands? Just wanted to confirm. {quote} yes, we may cancel even in_progress commands. If command has been already successfully finished by the moment when agent receives relevant CANCEL command, we display command as COMPLETED (cancellation has not effect) {quote} clears entire action queue on every registration: When expected and received heartbeat ids are not the same the server asks agents to re-register. I do not know if in this case server assumes that in progress commands are aborted. If server does not assumes that commands are aborted then agent should not clear the action queue. Can you verify the behavior here? {quote} According to code /org/apache/ambari/server/agent/HeartbeatMonitor.java:144 , we clear queue server-side queue on heartbeat lost {code} //Purge action queue actionQueue.dequeueAll(host); //notify action manager actionManager.handleLostHost(host); {code} But I'll recheck that when implementing the jira {quote} we pass a stage timeout instead of task timeout as a parameter: That part of the ActionScheduler always seems more complex than needed. Anyway, I have a question. Today stage timeout is the largest "sum of task timeouts on a single host". One a one node, during install the last_attempt_time is basically the same for all install tasks. So if we pass "task timeout + some small time" while checking timeOutActionNeeded() for the later tasks - ones in the end of the queue in Agent - will we not have a problem? {quote} Good point. Actually, we currently are passing stage timeout value, but it is named taskTimeout. So the fix is just to rename a variable.	0	0	https://issues.apache.org/jira/browse/AMBARI-4323
19602	AMBARI-4320	Discussed this question with [~dsen]. Actually, we already have support of issuing CONFIGURE command via api. Exact call looks like {code} curl -X POST 'http://localhost:8080/api/v1/clusters/cc/requests' -u admin:admin -H "X-Requested-By:anything" --data '{"RequestInfo":{"context":"Zookeeper server CONFIGURE", "command":"CONFIGURE","service_name":"ZOOKEEPER", "component_name":"ZOOKEEPER_SERVER", "hosts" : "vm-0.vm"}}' {code} Command is actually issued and sent to an agent. There are few minor troubles (at few service scripts, relevant method is called "config" instead of "configure"), but everything else seems to work well. I see two possible ways of issuing this command: 1) issue command directly from the UI during cluster deployment and also when needed afterwards (prefered). 2) during cluster deployment, issue this command authomatically at ambari-server during stage creation (like we do with service checks). That means that we have some internal flag like "unconfigured" for every service component host. This flag is stored at DB and defaults to "true". If this flag value is true for some STARTING component during stage creation process, additional CONFIGURE command is issued. After cluster deployment is finished, CONFIGURE command is issued manually by UI when configuration is updated. This way seems to be counter-intuitive. [~sumitmohanty], are we going to go the 1 way? In this case, I'll open a ticket for UI and close this jira.	1	1	https://issues.apache.org/jira/browse/AMBARI-4320
19603	AMBARI-4320	[~dmitriusan], how about wiring up START command to always do a configure and then start. This will also fix the RESTART issue where RESTART was not applying new configuration. That way we have CONFIGURE as a command available for scenarios that do not require START - e.g. client components. [~mahadev], what's your recommendation?	1	1	https://issues.apache.org/jira/browse/AMBARI-4320
19604	AMBARI-4320	Is this JIRA still valid. Please resolve if not.	0	0	https://issues.apache.org/jira/browse/AMBARI-4320
19605	AMBARI-4320	[~sumitmohanty] If start calls configure explicitly: * how do we deal with namenode starts which will be a low slower if they have to re-run configuration first * why bother having a separate configure command?	1	1	https://issues.apache.org/jira/browse/AMBARI-4320
19606	AMBARI-4283	[~mahadev], how are we planning to forward PUT and POST http requests (that have body): using http proxy protocol or as POST requests of some custom format? How will we deal with URL length limitation, or we ignore it?	1	1	https://issues.apache.org/jira/browse/AMBARI-4283

#	Requirement	Questions	Answered	Successfully Answered	URL
19607	AMBARI-4283	types, that we got from API call. And then, return back result, that we got after url execution. We can implement this functionality by API. But i think it's not correct. Because, to my mind, we can't map this functionality to our API architecture. In our API architecture, one of the main places, takes resources. But in our proxy, there are no resources, as i understand. At all, we need only service and provider, which will forward requests and responces. But if we need to implement it in API we can do the next. I'm not sure that names were choosen correctly(reason described before). We should create new resource type and resourcedefinition: {code} Resource.Type.Proxy {code} {code} public class ProxyResourceDefinition extends BaseResourceDefinition { public ProxyResourceDefinition () { super(Resource.Type.Proxy); } @Override public String getPluralName() { return "urls"; } @Override public String getSingularName() { return "url"; } @Override public Set<SubResourceDefinition> getSubResourceDefinitions() { return Collections.emptySet(); } } {code} After resource type and resourcedefinition were created, we need to add them to ResourceInstanceFactoryImpl.getResourceDefinition(...) It will look like: {code} case Proxy: resourceDefinition = new ProxyResourceDefinition(); break; {code} Then we can create new service class, something like ProxyService. It will look like: {code} @Path("/proxy/") public class ProxyService extends BaseService { @GET @Path("{url}") @Produces("text/plain") public Response proceedGetUrl(@Context HttpHeaders headers, @Context UriInfo ui, @PathParam("url") String url) { return handleRequest(headers, null, ui, Request.Type.GET, createProxyResource(url)); } @POST @Path("{url}") @Produces("text/plain") public Response proceedPostURL(String body, @Context HttpHeaders headers, @Context UriInfo ui, @PathParam("url") String url) { return handleRequest(headers, body, ui, Request.Type.POST, createProxyResource(url)); } @PUT @Path("{url}") @Produces("text/plain") public Response proceedPutURL(String body, @Context HttpHeaders headers, @Context UriInfo ui, @PathParam("url") String url) { return handleRequest(headers, body, ui, Request.Type.PUT, createProxyResource(url)); } @DELETE @Path("{url}") @Produces("text/plain") public Response proceedDeleteURL(@Context HttpHeaders headers, @Context UriInfo ui, @PathParam("url") String url) { return handleRequest(headers, null, ui, Request.Type.DELETE, createProxyResource(url)); } private ResourceInstance createProxyResource(String url) { return createResource(Resource.Type.Proxy, Collections.singletonMap(Resource.Type.Proxy, url)); } } {code} And now we can create provider class for our new resource. For example ProxyResourceProvider. Then we should add this provider to AbstractControllerResourceProvider.getResourceProvider(...) {code} case Proxy: return new ProxyResourceProvider(propertyIds, keyPropertyIds, managementController); {code} In ProxyPropertyProvider we should implement main functionality. Our main task is to execute URL request, which was sent for us by API, and return response for user. In our project we have URLStreamProvider class, which can help us to execute URL request. This class is used by Ganglia and Nagios to get some properties/info. Here are some code of the main method: {code} @Override public InputStream readFrom(String spec, String requestMethod, String params) throws IOException { if (LOG.isDebugEnabled()) { LOG.debug("readFrom spec:" + spec); } HttpURLConnection connection = spec.startsWith("https") ? (HttpURLConnection)getSSLConnection(spec) : (HttpURLConnection)getConnection(spec); String appCookie = appCookieManager.getCachedAppCookie(spec); if (appCookie != null) { LOG.debug("Using cached app cookie for URL:" + spec); connection.setRequestProperty(COOKIE, appCookie); } connection.setConnectTimeout(connTimeout); connection.setReadTimeout(readTimeout); connection.setDoOutput(true); connection.setRequestMethod(requestMethod); if (params != null) connection.getOutputStream().write(params.getBytes());	1	1	https://issues.apache.org/jira/browse/AMBARI-4283
19608	AMBARI-4205	Hi Michael, what branch is this patch for? I'd like to apply it and give it a try. I understand it is extremely hard to write tests for this, but if you have any please include them. Also, when you submit a patch, please use the "Submit Patch" button above - that will trigger a notice to be sent. Thanks!	0	0	https://issues.apache.org/jira/browse/AMBARI-4205
19609	AMBARI-4205	[~miharp], what is the status of the patch/JIRA on ReviewBoard?	1	0	https://issues.apache.org/jira/browse/AMBARI-4205
19610	AMBARI-4150	Overall looks good. Few comments and questions ... {quote} if (!isSchedulerAvailable()) { throw new AmbariException("Scheduler unavailable."); } {quote} The above check is there in few places. The check itself is good but what are the condition for scheduler not being available. If it is not available then can one still submit requests the do not have a schedule. * ambari-server/src/main/java/org/apache/ambari/server/scheduler/ExecutionScheduleManager.java ** If any exception is thrown in the method (scheduleBatch) then how does RequestExecution recover? As I understand, triggers are created when jobs are persisted and when ambari-server starts. So if an error is encountered while triggering a job then does it mean that till ambari-server restarted no new jobs for that RequestExecution will not be created ** Is there a validation somewhere to ensure that batch orderIds are unique within the batch? ** synchronized Long executeBatchRequest() - seems incomplete * ambari-server/src/main/java/org/apache/ambari/server/state/scheduler/BatchRequestResponse.java ** Is it intentionally empty? * ambari-server/src/main/resources/Ambari-DDL-MySQL-CREATE.sql ** Lets move the quartz related tables closer to rest of the tables in "ambari" db * ambari-server/src/test/java/org/apache/ambari/server/orm/InMemoryDefaultTestModule.java ** Do we need these changes? * ambari-server/src/test/java/org/apache/ambari/server/state/ConfigGroupTest.java ** Revert these changes	1	1	https://issues.apache.org/jira/browse/AMBARI-4150
19611	AMBARI-4150	Thanks for the feedback. Few concerns addressed below: - "Scheduler unavailable." This is a preemptive abort, since a scheduler instances that is shutdown cannot be started again, so server needs to be restarted. This ensures that we do not start creating jobs / triggers and then fail. Agree that exception message can be improved. - If any exception is thrown in the method (scheduleBatch) then how does RequestExecution recover? A chain of request will execute based on schedule even if the previous request failed or was aborted midway, the last_execution_status is meant to capture the status of the previous chain of requests. - Is there a validation somewhere to ensure that batch orderIds are unique within the batch? org.apache.ambari.server.controller.internal.RequestScheduleResourceProvider#validateRequest - synchronized Long executeBatchRequest() - seems incomplete This will be addressed in the followup Jira which enables request execution. - ambari-server/src/main/java/org/apache/ambari/server/state/scheduler/BatchRequestResponse.java Yes, same as above - ambari-server/src/main/resources/Ambari-DDL-MySQL-CREATE.sql Done - ambari-server/src/test/java/org/apache/ambari/server/orm/InMemoryDefaultTestModule.java Unnecessary imports added by previous patch reverted. - ambari-server/src/test/java/org/apache/ambari/server/state/ConfigGroupTest.java Formatting change.	1	1	https://issues.apache.org/jira/browse/AMBARI-4150
19612	AMBARI-4034	Looks good. Few comments: Can we rename classes with *RequestExecution* in name to *RequestSchedule*? * ambari-server/src/main/java/org/apache/ambari/server/state/cluster/ClusterImpl.java ** If we delete a RequestSchedule resource, what happens to the underlying Request that got spawned because of the one being deleted? For now, we could not delete RS instances as we also do not allow delete of Requests either. ** Can a RS be disabled? So that no new request execution instance get fired. * ambari-server/src/test/java/org/apache/ambari/server/orm/InMemoryDefaultTestModule.java ** No change in this file. * We need some unit test for the RequestSchedule API calls, and the changes to the JSON body parser	1	1	https://issues.apache.org/jira/browse/AMBARI-4034
19613	AMBARI-3909	Is the MySQL DDL missing from the patch? Ambari-DML-MySQL-INSERT_METAINFO.sql	1	1	https://issues.apache.org/jira/browse/AMBARI-3909

#	Requirement	Questions	Answered	Successfully Answered	URL
19614	AMBARI-3835	Reviewing the patch, and am thinking that instead of {code} {{bindAttr data-original-title="view.removeHostTooltip"...}} {code} it might be better to do this if it works {code} data-original-title={{t .....}} {code}	1	1	https://issues.apache.org/jira/browse/AMBARI-3835
19615	AMBARI-3786	Thanks [~BuzhorDenys]. +1 for the patch.	0	0	https://issues.apache.org/jira/browse/AMBARI-3786
19616	AMBARI-3762	+1 on the patch. [~odiachenko], could you add a comment to this Jira describing the fix?	1	0	https://issues.apache.org/jira/browse/AMBARI-3762
19617	AMBARI-3753	Hi Erin, The patch looks good - do you want to take a look at the new stack definition that add the new service pluggability to the stack definition? Though we can do that later. DO note that everythign will be moving to a new stack definition extensivbility. [~ncole@hortonworks.com] should have more info and can help - again that can be done later as well but we should keep track of that. Why is the patch for AMBARI-3167 needed for ambari server chages?	1	1	https://issues.apache.org/jira/browse/AMBARI-3753
19618	AMBARI-3753	THat sounds good Erin. The patch looks good to me. Can you please update the jira with mvn test output with htis patch? We can go ahead and commit thsi patch if the mvn test passes all fine.	1	1	https://issues.apache.org/jira/browse/AMBARI-3753
19619	AMBARI-3731	Comments: - public Stage getAction(String actionId); This should be renamed to getStage or getStageByActionId - if (!requestEntity.getIsCommand()) Is there a possibility for neither action nor command (in future), can this be simplified to: request.isAction() - validateCustomAction Is there a case for checking if a Service belongs to the cluster and not just the stack? - AmbariManagementControllerImpl.CLUSTER_DEFAULT_TAG Duplicate definition in ConfigHelper.java - Changes need to be replicated to other DDL scripts at ambari-server/src/main/resources For MySQL, Oracle and Pgsql remote.	0	0	https://issues.apache.org/jira/browse/AMBARI-3731
19620	AMBARI-3731	{quote} public Stage getAction(String actionId); This should be renamed to getStage or getStageByActionId {quote} Renamed. {quote} if (!requestEntity.getIsCommand()) Is there a possibility for neither action nor command (in future), can this be simplified to: request.isAction() {quote} Line refactored out. {quote} validateCustomAction Is there a case for checking if a Service belongs to the cluster and not just the stack? {quote} This is done when execution is scheduled. If the service does not belong to the stack then no hosts are identified as a target which is an error. {quote} AmbariManagementControllerImpl.CLUSTER_DEFAULT_TAG Duplicate definition in ConfigHelper.java {quote} Removed one. {quote} Changes need to be replicated to other DDL scripts at ambari-server/src/main/resources For MySQL, Oracle and Pgsql remote. {quote} Modified the upgrade script. Opened a JIRA for Oracle changes. MySQL is quite outdated and so is PgSQL remote. {quote} at ExecutionCommand.java, we already have 'String role' field that stores component name. Maybe it's better to rename it instead of adding new 'String componentName' field {quote} Role is being used as the name of the custom action or commands. We may need to revisit the structure after agent side changes are finalized for service pluggability.	1	0	https://issues.apache.org/jira/browse/AMBARI-3731
19621	AMBARI-3730	[~xiwang0309], thanks for the updated patch. There are AJAX calls with "async: false". Can we change the code to not use this option?	1	1	https://issues.apache.org/jira/browse/AMBARI-3730
19622	AMBARI-3698	Do we need the quotes around "users" option? If not, let's drop the quotes so that it's consistent with the description (and a little cleaner). Also, let's change "cleanup" to "clean up" in the description, as "cleanup" is not a verb.	1	1	https://issues.apache.org/jira/browse/AMBARI-3698
19623	AMBARI-3698	Uploaded patch does the fixes as suggested by [~u39kun]. Moves the note text as suggested by [~sposetti]. > 2) anyway to make the font one smaller so the whole code instruction line fits on a single line? host check.png image is just the pop-up box image. host checks-2.png is entire screen image with updated fixes. The font size for the code is already sufficiently small. Also doing copy of multiple lines of a command on the ui screen and pasting in the shell to run single command works as expected. Also apart from these suggested changes, replaced options -s with --silent and -k users with --skip=users as it's more narrative then short hand notations.	1	1	https://issues.apache.org/jira/browse/AMBARI-3698
19624	AMBARI-3672	Patch is looking good. One question though. Let's pretend you have a cluster, that has some config groups defined. But then, you have just one host, already part of a config group where you want to tweak, say, some heap settings. Do you create a completely new ConfigGroup for that one host, or do/can you override that one host directly?	1	1	https://issues.apache.org/jira/browse/AMBARI-3672
19625	AMBARI-3672	Few comments: == Not part of this patch but can you rename the input parameter? ambari-server/src/main/java/org/apache/ambari/server/agent/HeartbeatMonitor.java HeartbeatMonitor(Clusters fsm, <-- == ambari-server/src/main/java/org/apache/ambari/server/state/ConfigHelper.java getEffectiveDesiredTags() - Comments "override (1) with service-specific overrides" and "override (2) with host-specific overrides" are no longer applicable. And, the code now collects all tags and does not do any override. Line 280: if (serviceInfo.hasPropertyFor(type, keys) || !hasPropertyFor(stackId, type, keys)) For types that are not global why don't we just declare the SCH to be "stale" when actual does not contain the "type". I think the per property check sounds risky in two ways - too many properties to check and assumes that the stack definition is maintained correctly wrt. property mapping. Line 273: if (!serviceInfo.hasConfigType(type)) We should have a JIRA to make sure that the mapping of type to service is verified for 1.3.2, 1.3.3 and 2.0.6. Can you open one? Line 384: desiredSet.removeAll(actualSet); Isn't this only true if the size of the sets are the same? Line 294: Collection<String> changed = findChangedKeys(cluster, type, tags.values(), actualTags.values()); Should we do it only for "global"? == ambari-server/src/main/java/org/apache/ambari/server/controller/internal/ConfigGroupResourceProvider.java No change in this file. == asf-ambari/ambari-server/src/main/java/org/apache/ambari/server/state/host/HostImpl.java public Map<String, DesiredConfig> getDesiredConfigs(long clusterId) <-- this should be removed, is it being done through another JIRA? Do we have a unit test for agent returning actual config in the old form and it being handled by server? I am thinking upgrade.	1	1	https://issues.apache.org/jira/browse/AMBARI-3672

#	Requirement	Questions	Answered	Successfully Answered	URL
19626	AMBARI-3606	_Sorry for the delay. Let's open a separate JIRA for the ones needed to be incorporated._ * What happens when a host gets deleted? Does the ref from CG to host also get deleted? Is there a unit test for that? * (Minor nit) Javadoc missing for new methods on AmbariManagementController * ambari-server/src/main/java/org/apache/ambari/server/controller/internal/ConfigGroupResourceProvider.java ** Set<ConfigGroupResponse> getConfigGroups () - is it possible to have a request with more than one predicate, e.g. groupName and hostName? * These files can be reverted (unused imports or fields) ** ambari-server/src/main/java/org/apache/ambari/server/controller/internal/RequestStatusImpl.java ** ambari-server/src/main/java/org/apache/ambari/server/controller/internal/ResourceImpl.java ** ambari-server/src/main/java/org/apache/ambari/server/state/Clusters.java ** ambari-server/src/main/java/org/apache/ambari/server/state/cluster/ClustersImpl.java * ambari-server/src/main/resources/Ambari-DDL-Postgres-REMOTE-CREATE.sql' ** Should not there be a corresponding change to Ambari-DDL-Postgres-CREATE.sql Following unit tests fail: Tests in error: * agentRegistration(org.apache.ambari.server.agent.AgentResourceTest): Guice creation errors * agentHeartBeat(org.apache.ambari.server.agent.AgentResourceTest): Guice creation errors * agentHeartBeatWithEnv(org.apache.ambari.server.agent.AgentResourceTest): Guice creation errors * deserializeClasses(org.apache.ambari.server.agent.AgentResourceTest): Guice creation errors	0	0	https://issues.apache.org/jira/browse/AMBARI-3606
19627	AMBARI-3600	Overall changes look good. The actual staleness determination logic seem complex (probably necessary) and hence needs some more comments. Some comments and questions: * ConfigHelper.java ** isStaleConfigs() - I think we can add more details to this comment "Configs are considered stale when:". _It, as it stands today, is a little cryptic to me_ Also when we add support for ConfigGroup we need to update this comment. ** hasPropertyFor() - why is this required to determine if config is stale for a SCH? ** findChangedKeys() - We do a putAll() in this method. Does it assume that there are no over-lapping key names? Also, did we not need this only for "global" types? _In that case, we are OK as there are no over-lapping names in global_ ** It seems we need a ConfigHelperTest that is dedicated for this type. There are some *relatively-complex* comparison logic in this class. The tests can also have comments in them to layout the scenarios and why it should (or should not) result in stale config * StackServiceResponse.java ** How do we capture this relationship, TASKTRACKER/JOBTRACKER can be related to core-site and core-site change needs to result in these guys restart? * ambari-server/src/main/java/org/apache/ambari/server/state/ServiceInfo.java ** buildConfigLayout() - its probably not a concern but do we need a lock around populating "configLayout"? Or, at least create the layout on a temp variable and then assign it to "configLayout". * ambari-server/src/test/java/org/apache/ambari/server/state/svccomphost/ServiceComponentHostTest.java ** testStaleConfigs(). Can we use HDP-2.0.6 for test? This test probably covers my ask for dedicated test class for ConfigHelper.	1	1	https://issues.apache.org/jira/browse/AMBARI-3600
19628	AMBARI-3600	* ConfigHelper ** Will update comment to be more clear ** hasPropertyFor() - This is required because we need to check to see if a property is stale for ANY OTHER service than the SCH that we are checking, because the OTHER one will be considered stale. That check is designed to look forcustom properties that are assigned to a type but are not defined as part of the stack. For example, if you assign a value to core-site that is undefined in any stack, any service relying on core-site will be considered stale. ** findChangedKeys() - it's ok for overlap in this case, because even overlapping (two properties defined in two different services) means it's stale. ** The method is (more or less) directly tested in ServiceComponentHostTest.testStaleConfigs() as you mentioned. * StackServiceResponse ** TT/JT - the stack service response only indicates what configs a service defines, not the relationship of components to the config. Any stale config value will make both TT and JT stale. * ServiceInfo ** Will add synchronization to the method, but note that ServiceInfo is effectively singleton-per-stack, and no other synch activity happens around stacks as it is today. * testStaleConfigs() addresses the SCHTest you mentioned. Will switch to 2.0.6 and verify.	1	1	https://issues.apache.org/jira/browse/AMBARI-3600
19629	AMBARI-3600	LGTM, +1 One question: Is it expected that when there is a tag mismatch for global, then SCH restart must be done only if changed properties affect the SCH. E.g. if ZK properties change it should not restart other SCH	1	1	https://issues.apache.org/jira/browse/AMBARI-3600
19630	AMBARI-3585	Hmm, I am not convinced that the sqlite stuff is even used. Default seems to be derby and postgres. Do we need it at all? Should we remove JDBCProviderModule, DBHelper, and SQLiteConnectionFactory?	1	1	https://issues.apache.org/jira/browse/AMBARI-3585
19631	AMBARI-3567	committed to trunk. Do we need this on any existing branch?	1	0	https://issues.apache.org/jira/browse/AMBARI-3567
19632	AMBARI-3536	[~odiachenko] [~ncole] Is this JIRA still valid?	1	0	https://issues.apache.org/jira/browse/AMBARI-3536
19633	AMBARI-3524	why did this issue not assigned for so long a time?? Is there no one had concern on this issue?	0	0	https://issues.apache.org/jira/browse/AMBARI-3524
19634	AMBARI-3482	Chris, Want to upload it as a patch?	0	0	https://issues.apache.org/jira/browse/AMBARI-3482
19635	AMBARI-3482	Will this make it into the next version of Ambari?	1	0	https://issues.apache.org/jira/browse/AMBARI-3482
19636	AMBARI-3353	I think the best way here, is to convert the odd bootstrap response, to the usual format, so user and our postproccessing functions can work with that w/o troubles. [~subin11], could you review this please?	1	0	https://issues.apache.org/jira/browse/AMBARI-3353
19637	AMBARI-3317	Patch looks good, minor comments below: 1. Is this comment valid? + // two classes define the top-level element "metainfo", so we need 2 contexts. 2. Could we add a negative unit test case for the testing a JAXBException? Overall, LGTM +1	1	1	https://issues.apache.org/jira/browse/AMBARI-3317
19638	AMBARI-3266	[~mahadev], So the LICENSE file can be removed because the one at the Ambari project root applies? Are you saying that the text of MSPL-LICENSE file should be included in the NOTICE.txt file at the Ambari project root? Should the MSPL-LICENSE file stay under contrib/ambari-scom/ or be removed also? I thought that including the MSPL-LICENSE file in the project was sufficient. If this is true, should we add it to NOTICE.txt? From the Apache legal reference ... {quote} It is important to keep NOTICE as brief and simple as possible, as each addition places a burden on downstream consumers. Do not add anything to NOTICE which is not legally required. {quote}	1	1	https://issues.apache.org/jira/browse/AMBARI-3266
19639	AMBARI-3264	Will this we worked on?	1	0	https://issues.apache.org/jira/browse/AMBARI-3264
19640	AMBARI-3252	* setup_security(args). Could you use get_validated_string_input() to cover the prompt and choice selection. Something similar to: {code} idType = "0" idType = get_validated_string_input("Choose one of the following options:\n1 - " + "Enable HTTPS for Ambari server" + "\n2 - " + "Enable HTTPS for Ganglia service" + "\n3..... ", idType, "^[12345]$", "Invalid choice.", False) {code} Its a good change and will make the prompt clearer. LGTM, +1.	1	1	https://issues.apache.org/jira/browse/AMBARI-3252
19641	AMBARI-3211	LGTM, +1. Is there an unit test dependency on this change?	1	0	https://issues.apache.org/jira/browse/AMBARI-3211
19642	AMBARI-3201	subin, can you please review this?	1	0	https://issues.apache.org/jira/browse/AMBARI-3201
19643	AMBARI-3192	[~xiwang0309], actually this does not apply on the latest trunk code. Can you update the patch?	0	0	https://issues.apache.org/jira/browse/AMBARI-3192

#	Requirement	Questions	Answered	Successfully Answered	URL
19644	AMBARI-3167	Erin A Boyd, I am trying to understand why generic HCFS option was changed to GlusterFS? Are there any issues that you have noticed in supporting generic HCFS implementation?	0	0	https://issues.apache.org/jira/browse/AMBARI-3167
19645	AMBARI-3140	the patch looks good - can we add a unit test for this?	1	1	https://issues.apache.org/jira/browse/AMBARI-3140
19646	AMBARI-3130	There is a method in this patch that loads properties from new api. It is used in next patch that also uses new api. Should i make a new patch with this metod or this one can be commited?	1	1	https://issues.apache.org/jira/browse/AMBARI-3130
19647	AMBARI-3073	[~subin11] unfortunately [~aonishuk] has quite a few patches on client at: AMBARI-3078, AMBARI-3079, AMBARI-3080, AMBARI-3081, AMBARI-3082. It would be counter productive to have zip attachments for the client package. Can we do patches and diffs because it would not be possible to collaborate on the client library if the updates are as re writes?	1	0	https://issues.apache.org/jira/browse/AMBARI-3073
19648	AMBARI-3073	Hi Mahadev, unfortunately ever since Ambari code has moved away from svn ,I am unable to create proper patches with git. I had given the above code on 30/8/2013 to you in mail.As of now I have merged code from my branches into my trunk code and I cannot find it feasible to go back and recreate a git patch which matches with AUG-30 code. Here is what I propose after I looked at AMBARI-3078, AMBARI-3079, AMBARI-3080, AMBARI-3081, AMBARI-3082. 1)accept the zip code and checkin 2)I will update the architecture of client code, so that Andrew or anyone else can add the code at appropriate files. This will result in: 1)AMBARI-3080 issue becoming fixed. My next patch contains the code for create cluster.This will fix or help Andrew re-create his patches (1)AMBARI-3079 .AMBARI-3081 ,AMBARI-3082 , The above 3 issues are related to create hosts .here are few things which will come in the next patch. (1.a) /api/v1/hosts ...is done by ...myclient.create_hosts(host_ip_rack_tuple_list) /api/v1/clusters/c1/hosts..is done by...mycluster.create_hosts(host_ip_rack_tuple_list) (1.b) all the functions in a module are private. (1.c) all responses have to wrapped in a StatusModel object.(so 3082 has to re-written) 2)AMBARI-3078...this is available on my latest trunk.Anyways It is better if Andrew re-creates the patch once he plays with AUG_30 code In short .Of the 5 issues - 1 will become fixed.2-have to be recreated because they need further improvements.2 others can be postponed by few days. I dont see too much impact,Kindly accept the code before more issues are raised and this becomes unmanageable. The client code has lot of methods which I have not been merged properly due to my lack of time.But I have taken care by exposing only a certain number of methods in the ambari_api.py file.this file contains the entry point for accessing all the client code. Hope this clears the confusion Many thanks Subin	1	1	https://issues.apache.org/jira/browse/AMBARI-3073
19649	AMBARI-3073	Committed to trunk. Thanks a lot Subin!	0	0	https://issues.apache.org/jira/browse/AMBARI-3073
19650	AMBARI-3045	Looks like the patches were never committed properly. We added this because the new version of Ganglia was filling up disk and we didn't really know why. Since then the RRD config files have been fixed so this is not really an issue anymore. Marking this as Won't Fix.	0	0	https://issues.apache.org/jira/browse/AMBARI-3045
19651	AMBARI-2989	[~atkach], what was the issue with earlier patch?	0	0	https://issues.apache.org/jira/browse/AMBARI-2989
19652	AMBARI-2984	Dax, Good point. Want to upload a patch?	0	0	https://issues.apache.org/jira/browse/AMBARI-2984
19653	AMBARI-2954	[~ababiichuk], I see the following properties on the server side for HDP2 stack - {{mapreduce.cluster.local.dir}}, {{mapreduce.cluster.reducememory.mb}} in the file {{ambari-server/resources/stacks/HDP/2.0.5/services/MAPREDUCE2/configuration/mapred-site.xml}}. Did you test that these 2 properties did not end up after install? If they do end up in there, we might need cleaning up on server stack definition also.	1	1	https://issues.apache.org/jira/browse/AMBARI-2954
19654	AMBARI-2942	Hey guys, can anyone please tell why this was done?	0	0	https://issues.apache.org/jira/browse/AMBARI-2942
19655	AMBARI-2852	Any tentative date to get this fix? which version will have this feature?	0	0	https://issues.apache.org/jira/browse/AMBARI-2852
19656	AMBARI-2852	Does somebody has any feedback or updates on this issue? Thanks	0	0	https://issues.apache.org/jira/browse/AMBARI-2852
19657	AMBARI-2819	Nice. The code looks pretty good. Few minor comments. We need to add more unit tests - see below for suggested ones. Comments: *File*: ambari-server/src/main/java/org/apache/ambari/server/controller/StackVersionResponse.java * private String parentVersion; ** Why do we need to expose the parent version. Is this relevant to the API consumer? *File*: ambari-server/src/main/java/org/apache/ambari/server/controller/internal/StackVersionResourceProvider.java * public Set<Resource> getResources(Request request, Predicate predicate) ** Add back the @Override tag *Test related* * We should add tests for ** New configuration property being added to a service ** Similarly, removing a configuration and also throw in a check for configs that did not change ** Adding a component ** Also pick one test from AmbariManagementController unit tests and modify it to use 2.0.6 rather than 2.0.5. This will validate that unit tests can run with the inheritance model * Add some unit tests for key helper methods such as ** getParentStacksInOrder ** getAllApplicableServices	1	1	https://issues.apache.org/jira/browse/AMBARI-2819
19658	AMBARI-2819	*private String parentVersion;* Why do we need to expose the parent version. Is this relevant to the API consumer? - Since the only way to look at a deployed cluster and find out how the service definition is computed, is by following the parent version chain. This is for someone with access to API but not the server host with XML definitions. - Added \@Override tag - Unit tests added: # New config property # Property that did not change # AmbariManagementController.testReInstallClientComponent - 1.2.0 to 2.0.6 # Added test for getParentStacksInOrder # Added test for getAllApplicableServices	1	1	https://issues.apache.org/jira/browse/AMBARI-2819
19659	AMBARI-2738	{code} - if (newState == oldSchState) { + // Client component reinstall allowed + if (newState == oldSchState && !sc.isClientComponent()) { sch.setDesiredState(newState); {code} What happens we the new desired state is INIT, INSTALL_FAILED, MAINTENANCE for the client component?	1	1	https://issues.apache.org/jira/browse/AMBARI-2738
19660	AMBARI-2714	1) Would like to see concept of stack inheritance. A user can define a stack that extends another stack. The resulting stack can add a new service (Stack A is extended by Stack B, which is exactly the same except Stack B has N-new service) and/or turn off a service in the parent stack. 2) In the service/configurations/*, there should be a way to define how config files + properties show in the UI (including a way to group). For example, how would you describe the Configs tab on HDFS service via meta data (instead of having to code the JS page)? If you can define the UI in meta data, then the UI can read that info and be dynamic.	1	1	https://issues.apache.org/jira/browse/AMBARI-2714
19661	AMBARI-2714	Currently using Supervisor (http://supervisord.org/) to manage these types of processes. Perhaps a simple start to this activity would be to automatically configure Supervisor on each node, and deploy the necessary java and configuration files, etc. What do you think?	1	0	https://issues.apache.org/jira/browse/AMBARI-2714
19662	AMBARI-2714	Is the idea that the user configure all the xml/json files prior to loading the new service or will the UI provide a way to just load the new service and deploy it accordingly? Also, we need to consider what resources need to be loaded with the new service (rpms, tarball, etc..) to enable the new service. Might want to also consider the 'control' from Ambari to the new service. If it's just a 'viewer' or controller of the service itself.	1	0	https://issues.apache.org/jira/browse/AMBARI-2714

#	Requirement	Questions	Answered	Successfully Answered	URL
19663	AMBARI-2714	@Erin - initially it will be configuring XML and have the UI recognize it as an addable service. The capability exists to reload stack definitions already, so that's no big deal. Long term I agree - we want to be supply new services using the UI itself. You are also correct in that we want to be able to supply all the artifacts surrounding a new service including tarballs, scripts etc. To start with, at least, we'll probably focus on defining a service without modifying code. Then we can start adding real capability. @Abhishek - I think a great use-case will be to try to add Storm without modifying Ambari code. @K. Eric - I'm not too familiar with Supervisor - how would you envision that fitting with Ambari (it handles monitoring and control already)?	1	1	https://issues.apache.org/jira/browse/AMBARI-2714
19664	AMBARI-2714	@Nate - Supervisor is a daemon implemented in Python (https://pypi.python.org/pypi/supervisor) that we have been using to automatically start and manage services on Linux. If Ambari provides those capabilities so much the better. For the Supervisor configuration you specify the command line that invokes the service in a manner that will send the log to standard output. Supervisor confirms that records are being written to standard out and terminates the process if it hangs, then restarts using the command line. Primitive, but that is what we are using for example to have the Storm UI daemon running when the machine boots. Anyone who is using Supervisor should be able to migrate to Ambari if a similar configuration is expected. What do you think?	1	0	https://issues.apache.org/jira/browse/AMBARI-2714
19665	AMBARI-2714	These design docs seem to focus quite a bit on backend components and reporting - is there any thought going into modularizing the installation wizard GUI's at this point and what that would look like? Also, is there any prototyping going on for the designs yet? It seems like many aspects have been fairly well thought out. Would it be beneficial to start looking at the Java classes mentioned in the design docs and prototyping implementations of the spec?	1	0	https://issues.apache.org/jira/browse/AMBARI-2714
19666	AMBARI-2699	Does Ambari Server supoorts only one or multiple version of API at the same time? If multiple versions are supported how user will know to which version he sends requests? I assume for each version of Amabri we should have different version segment in the url. For instance: if one of supported version is "version3", url for sending requests should bi http://aaa:8080/api/v3/...., if version is "version5" url should be http://aaa:8080/api/v5/...	1	0	https://issues.apache.org/jira/browse/AMBARI-2699
19667	AMBARI-2699	[~brian_swan], I like the idea of getting the supported API versions through /api. I'm not sure about having the server resource at that level since it would be un-versioned, meaning we would never be able to change it. What do you think about adding an "api" resource as well as a "server" resource? Getting the "api" resource might look like ... {code} GET api/ { "href" : "http://aaa:8080/api", "API" : { "supported_versions" : "1,2,3" } }{code} The "server" resource would look something like what is described above and would be used to get the Ambari server/agent version and configuration.	1	1	https://issues.apache.org/jira/browse/AMBARI-2699
19668	AMBARI-2691	[~tbeerbower] the patch looks good but we will have to enable encrypt passwords for any password entries in ambari.properties so that the truststore is only readable by ambari-server [~swagle] can help with how to do (should be simple). Also what kind of trusstore can it be? Can we import multiple certs into the trusstore? Also can we run the setup nagios https multiple times? Also does removing the 2 properties disable the certs? Also what happens when ambari server is running as a different user. Will the trustore perms need ot be changed?	1	1	https://issues.apache.org/jira/browse/AMBARI-2691
19669	AMBARI-2691	Thanks [~mahadev], {quote} we will have to enable encrypt passwords {quote} Okay, I'll discuss it with [~swagle]. {quote} what kind of trusstore can it be? {quote} You can set the truststore type in ambari.properties. Should I prompt for that in the setup? {quote} Can we import multiple certs into the trusstore? {quote} Yes, I use the aliases 'ganglia_cert' and 'nagios_cert'. Others can be added as long as they have different aliases. {quote} Also can we run the setup nagios https multiple times? Also does removing the 2 properties disable the certs? {quote} It works like setup-https. The first time you run the setup it will prompt to make sure that you want to enable https, prompt for the truststore path and passord (if needed) and then prompt for the cert to be added. If you run setup when https for the component (ganglia or nagios) is already enabled, it will prompt to see if you want to disable https. If yes then the cert will be removed and https marked disabled (set ganglia.https=false or nagios.https=false in ambari.properties). You can set the properties directly in ambari.properties to disable https but the cert will not be removed from the truststore. {quote} Also what happens when ambari server is running as a different user. Will the trustore perms need ot be changed? {quote} I think ambari server will need read access. I don't know any way around that.	1	1	https://issues.apache.org/jira/browse/AMBARI-2691
19670	AMBARI-2691	Has the additions for encrypted password and truststore types made any changes in the set up procedure?	0	0	https://issues.apache.org/jira/browse/AMBARI-2691
19671	AMBARI-2562	Looks like there are some unnnecessary formatting changes. Can we upload a cleaner patch?	1	1	https://issues.apache.org/jira/browse/AMBARI-2562
19672	AMBARI-2555	Hi [~atkach], I applied the patch on top of r1499654 in trunk. This does not work in App.testMode. Can you make sure that this works in testMode?	1	1	https://issues.apache.org/jira/browse/AMBARI-2555
19673	AMBARI-2555	You are right, the patch failed to apply for some files. Can you upload a patch that works directly on top of the current latest trunk r1499654?	1	1	https://issues.apache.org/jira/browse/AMBARI-2555
19674	AMBARI-2555	[~atkach], can you do a clean checkout of trunk and apply AMBARI-2555.patch posted here? When I do that, it fails to apply on two files.	1	1	https://issues.apache.org/jira/browse/AMBARI-2555
19675	AMBARI-2541	[~atkach], the patch does not apply on trunk. Can you rebase it to the latest trunk (r1500106)?	1	1	https://issues.apache.org/jira/browse/AMBARI-2541
19676	AMBARI-2529	Tom, Can you please go aehad and commit the patch to trunk and 1.2.5 branch?	1	1	https://issues.apache.org/jira/browse/AMBARI-2529
19677	AMBARI-2487	[~jaimin], can you describe which dependencies are being removed? "Resolution of this ticket includes reducing agent's dependency on global" is a bit vague.	1	0	https://issues.apache.org/jira/browse/AMBARI-2487
19678	AMBARI-2487	"There are other globals that are sent by web-ui but not used by Agent. Also some globals that are sent to globals can be retrieved from site properties but agent uses globals like kerberos_domain, hbase_primary_name and hbase_regionserver_principal." Are you referring to what the web UI and agent do currently, and that upon resolution of this ticket, we will not be doing so?	0	0	https://issues.apache.org/jira/browse/AMBARI-2487
19679	AMBARI-2487	[~jaimin] Is this JIRA still valid? Can you update the JIRA accordingly?	0	0	https://issues.apache.org/jira/browse/AMBARI-2487

#	Requirement	Questions	Answered	Successfully Answered	URL
19680	AMBARI-2453	Most of the comments are minor - some are optional to incorporate. Let's add a black-list of items to avoid when erasing. Based on our experiments, we can figure out what needs to be in the list. ========== +HOST_CHECK_FILEPATH_DEFAULT = "/var/lib/ambari-agent/data/hostcheck.result" +OUTPUT_FILEPATH_DEFAULT = "/var/lib/ambari-agent/data/hostcleanup.result" ===== Let's read the "prefix" value from ambari-agent.ini and use that as the base path. ========== + if options.skip: + global SKIP_LIST + SKIP_LIST = options.skip.splt(',') ===== Let's by default skip the users. ========== + raise RuntimeError('HostCleanp needs to be run as root.') ===== Spelling - ...Cleanp ========== + if propMap: + h.do_cleanup(propMap) ===== Lets add some conclusion message. ========== + def do_erase_dir_silent(self, pathList): ... + else: + logger.info(path + " is a file and not a directory, deleting file") + try: + os.remove(path) ===== Let's call the do_erase_file_silent. That way it will be easier to maintain. ========== + def do_erase_packages(self, packageList): + packageStr = None + if packageList: + packageStr = ' '.join(packageList) ===== If erasing one package fails will this method remove remaining packages. Otherwise, we can erase then one by one. ========== + else: + logger.warn("Unsupported OS type, cannot get repository location.") + return [] ===== There are one or two places where we also check for OS type. We can report the same error on unsupported OS type. ========== + def find_repo_files_for_repos(self, repoNameList): ... + with open(filePath, 'r') as file: + contents = file.read() + for repoName in repoNameList: + if repoName and repoName in contents and filePath not in repoFiles: + repoFiles.append(filePath) ====== This I am a bit concerned about. We need to tighten the search to make sure that we are not accidentally removing repos that we need. Let's talk. ========== Can we add an unit test that fakes a host-check report and then makes the necessary calls?	1	1	https://issues.apache.org/jira/browse/AMBARI-2453
19681	AMBARI-2442	[~subin11] the patch looks good to me. Have you done any end to end testing with delete services?	0	0	https://issues.apache.org/jira/browse/AMBARI-2442
19682	AMBARI-2420	[~ncole@hortonworks.com], can you give us an example of how to batch update calls? For example, HDP-1.3.0 has 8 different operating system subresources. I want to be able to specify the base url for all 8 operating systems in one call.	1	1	https://issues.apache.org/jira/browse/AMBARI-2420
19683	AMBARI-2420	Also, how can we retrieve all the repo base URLs for a given stack-version in one call? Or better yet, how we can retrieve all base URLs for all stack versions in one call (preferred).	1	1	https://issues.apache.org/jira/browse/AMBARI-2420
19684	AMBARI-2420	To clarify: The following is currently set: "http://<server>/HDP/centos5/1.x/GA/1.3.0.0" Let's pretend someone wants to customize their repo. What would the base be? Suppose they use "http://<internal>/companyRepo/hadoop-repo" I think we can do this with a replace-token so if you specify a URL like "http://<internal>/companyRepo/{os_type}/myversion" then we can replace the OS when we save it. Would that be acceptable?	1	0	https://issues.apache.org/jira/browse/AMBARI-2420
19685	AMBARI-2420	But, that doesn't resolve the fact that we have multiple repos per OS. Do you want to set ALL base urls, including HDP-epel?	1	0	https://issues.apache.org/jira/browse/AMBARI-2420
19686	AMBARI-2373	Thanks [~xiwang0309]. A couple of things... 1. Can we externalize the Handlebar templates to a separate file, rather than embedding in the Views? For very simple templates, embedding is OK, but when it gets to a moderate size it's better to put on separate files so that the IDE can apply syntax highlighting, etc. 2. Instead of commenting out lines, we should just remove them.	1	1	https://issues.apache.org/jira/browse/AMBARI-2373
19687	AMBARI-2330	This was resolved in branch of tickets. Like AMBARI-14983, AMBARI-15194, AMBARI-15592 and other	1	1	https://issues.apache.org/jira/browse/AMBARI-2330
19688	AMBARI-2294	Is there an enumerated list of "rules" to follow for what each progress meter should be displaying? I think my original swing at this problem may have been off target because I wasn't aware of the overall expectations. Thanks.	1	1	https://issues.apache.org/jira/browse/AMBARI-2294

19690	AMBARI-2256	+1, LGTM. The title says 2.0.5, is that right?	1	0	https://issues.apache.org/jira/browse/AMBARI-2256
19691	AMBARI-2174	*ambari-server/conf/unix/ambari.properties* * ...isPersisted --> ...persisted (other true/false properties do not seem to use "is" *ambari-server/src/main/java/org/apache/ambari/server/configuration/Configuration.java* * sort the import statements * MASTER_KEY_FILENAME_DEFAULT - should we use a more descriptive name such as "master.key" or "ambari.master.key"? * credentialProvider (it will be initialized to null by default) * should loadCredentialProvider() use a lock around instantiating the provider? * getDatabasePassword() - use { } within the if-else - similar to readPasswordFromStore * isMasterKeyPersisted() - properties.getProperty(MASTER_KEY_PERSISTED, "true"); - this will return true if the property does not exist. Is this by design? * getMasterKeyLocation - Can you check the default value for MASTER_KEY_LOCATION - I was not sure if {code}properties.getProperty(SRVR_KSTR_DIR_KEY + File.separator + MASTER_KEY_FILENAME_DEFAULT, SRVR_KSTR_DIR_DEFAULT + File.separator + MASTER_KEY_FILENAME_DEFAULT){code} produces the desired default. *ambari-server/src/main/java/org/apache/ambari/server/controller/AmbariServer.java* * does not seem to have any changes. *ambari-server/src/main/java/org/apache/ambari/server/security/CertificateManager.java* * no change here either *ambari-server/src/main/python/ambari-server.py* * Could we have used "update_ambari_properties" instead of defining "update_properties" TBD: ambari-server/src/main/java/org/apache/ambari/server/security/encryption	0	0	https://issues.apache.org/jira/browse/AMBARI-2174
19692	AMBARI-2174	isPersisted --> more of a convention. http://stackoverflow.com/questions/3874350/naming-conventions-for-java-methods-that-return-booleanno-question-mark We should follow it other places. MASTER_KEY_FILENAME_DEFAULT - Path is /var/lib/ambari-server/keys/master (Maybe we should be able to take full path as param) should loadCredentialProvider() use a lock around instantiating the provider - Unnecessary since only read operation isMasterKeyPersisted() - Yes, this makes sure we look for the file and load it. If credential not in store we use what is in the file. Could we have used "update_ambari_properties" instead of defining "update_properties"? Cannot reuse, "update_ambari_properties" updates from old file to new file, "update_properties" is from live map to file.	1	1	https://issues.apache.org/jira/browse/AMBARI-2174
19693	AMBARI-2130	The patch looks good on a cursory look. Does mvn test pass on trunk with this patch?	1	1	https://issues.apache.org/jira/browse/AMBARI-2130
19694	AMBARI-2130	[~tmckay] was just reviewing the patch. Sorry about the delay. There are some changes in the patch for hadoop 2.0 stack: eq: {code} src/test/resources/stacks/HDP/2.0.1/services/MAPREDUCE2/configuration/container-executor.cfg {code} Is this accidental?	1	1	https://issues.apache.org/jira/browse/AMBARI-2130
19695	AMBARI-2130	[~erinaboyd] The patch looks good. Can you please post the result of mvn clean test on trunk?	1	1	https://issues.apache.org/jira/browse/AMBARI-2130
19696	AMBARI-2130	Erin, Looks like some issues with the test case. Can you please open a jira for this and if possible provide a patch so that it works in your environment? Since the patch doesnt change python code Ill go aehad and commit thsi.	1	1	https://issues.apache.org/jira/browse/AMBARI-2130

#	Requirement	Questions	Answered	Successfully Answered	URL
19697	AMBARI-2130	[~erinaboyd] just ran mvn test on the latest patch. {code} Results : Failed tests: testGetStackVersions(org.apache.ambari.server.controller.AmbariManagementControllerTest): expected:<3> but was:<5> Tests run: 1084, Failures: 1, Errors: 0, Skipped: 2 [INFO] ---------- [INFO] Reactor Summary: [INFO] {code} Can you please look into that?	1	1	https://issues.apache.org/jira/browse/AMBARI-2130
19698	AMBARI-2128	Can this be closed as 'fixed'? Any known gaps?	0	0	https://issues.apache.org/jira/browse/AMBARI-2128
19699	AMBARI-2118	Hello [~croberts], here's my feedback so far. Sorry for the delay: * /app/assets/data/wizard/deploy/5_hosts/poll_6.json: Please don't include the changes to this file, as this is used for testing scenarios where the server returns a response for the start API. It might be a good idea to introduce another set of mock data for which the step for start API is empty. * /app/controllers/wizard/step8_controller.js: {code} + case 'HCFS': + return {config: {'global': 'version1', 'core-site': 'version1'}}; {code} The above does not apply because getConfigForService function has been removed (this function is no longer used). * /app/controllers/wizard/step9_controller.js: This needs further review. This step needs to handle various edge cases (retry upon installation failure, page refreshes, etc). * /app/data/config_mapping.js: fs.default.name definition is duplicated. We should remove the redundant entry and manage the value in code (e.g., hdfs://namenode_host:8020 for HDFS and whatever is appropriate for glusterfs). * /app/data/config_properties.js: the newly added glusterfs properties have the "filename" attribute. These should be removed. * /app/data/service_configs.js: For the newly added HCFS object, "configs" should be an empty array, and "sites" should be added (see others) * /app/config.js: Skip this file from the patch * /app/messages/js: installer.step4.multileDFS.popup.header and installer.step4.multileDFS.popup.body are misspelled.	1	1	https://issues.apache.org/jira/browse/AMBARI-2118
19700	AMBARI-2115	Ximo, Can you add more details on the implmenetation? Sorry about the delay on the review. Also, lets say we have a delete hosts api would that satisfy the requirement? Removing a host from ambari server would mean getting all the host componenents in MAINTENANCE state and then remove all the host components and the host. Would that be an acceptable soln?	1	0	https://issues.apache.org/jira/browse/AMBARI-2115
19701	AMBARI-1930	[~andres_danter] did you test this patch out? Where did you get the accumulo RPM?	1	0	https://issues.apache.org/jira/browse/AMBARI-1930
19702	AMBARI-1930	The patch did not work. It is posted here as reference. The RPM used was created from Accumulo 1.4.3, but I had to slightly modify the POM to create an x86_64 RPM instead of an amd64 RPM. Version 1.4.4 of Accumulo already includes that fix.	1	1	https://issues.apache.org/jira/browse/AMBARI-1930
19703	AMBARI-1865	[~ncole@hortonworks.com], is it OK to leave the data in service config mapping as is? Any harm if we delete those? One question related to the feature itself. Earlier, we used to keep the mapping between service_name and config_type (in serviceconfigmapping). It seems, that in Condor we do not keep this information any more. How do we know the mapping that MAPREDUCE is associated with mapred-site, global, core-site?	1	1	https://issues.apache.org/jira/browse/AMBARI-1865
19704	AMBARI-1865	Will this be safe? {code} SELECT MAX(config_tag) {code} Is tag supposed to be ordered such that max is the correct one. I thought one can put arbitrary tags when using API directly. Is MAX of the timestamp more reliable? Rest looks good.	1	1	https://issues.apache.org/jira/browse/AMBARI-1865
19705	AMBARI-1843	Hi, Can you pls commit this, My other changes are pending because of this . Many thanks	1	0	https://issues.apache.org/jira/browse/AMBARI-1843
19706	AMBARI-1843	+1 for the patch [~subin11]. Sorry abt the delay in getting to the patch. Can you please make sure mvn clean apache-rat:check passes with the patch?	0	0	https://issues.apache.org/jira/browse/AMBARI-1843
19707	AMBARI-1843	Committed this to trunk. Thanks a lot Subin! Ill fix the apache rat check in another jira since we have a couple of more issues on that.	0	0	https://issues.apache.org/jira/browse/AMBARI-1843
19708	AMBARI-1790	Nice one Trevor. Can you also provide a patch for trunk?	0	0	https://issues.apache.org/jira/browse/AMBARI-1790
19709	AMBARI-1783	OpenJDK is not a service. It is a package instead of a service. Firewall could be an example of isManageable service. How about simplify the cluster blue print, software stack definition and host manifest? A cleaner version would be: Cluster blueprint: {code}{ "version": "1.3.0", "cluster": { "name": "example", "services": [{ "name": "filesystem", "components": ["hdfs"], }, { "name": "firewall", "components": ["iptables"], "isManageable": "false" }], "applications": [{ "name": "my hadoop killer app", "components": ["text-analytics"], "isManageable": "false" }], "environment": { "fs.default.name": "hdfs://localhost:50070/", "HADOOP_NAMENODE_OPTS": { "value": "-Xmx5G", "file": "hadoop-env.sh" } } } {code} Software stack example: {code}{ "software": { "repository": [{ "name": "local", "url": "file:///image" }], "platform": "x86_64", "osType": "el6", "components": [{ "name":"glusterfs", "conflicts": ["hdfs"], "provides" : "filesystem", "packages": [{ "name":"glusterfs", "version":"4.3", "filename":"gluster-4.3.el6.x86_64.rpm", "hostGroup": ["node"] }] }, { "name":"hdfs", "conflicts": ["glusterfs"], "provides" : "filesystem", "packages": [{ "name":"java", "version":"1.7", "filename":"java-1.7.el6.x86_64.rpm" }, { "name":"hadoop", "version":"1.2.0", "filename":"hadoop-1.2.0.el6.x86_64.rpm", "dependency":"java" "hostGroup": ["namenode", "secondarynamenode", "datanode"] }] }, { "name":"text-analytics", "packages": [{ "name":"hadoop", "version":"1.2.0", "text-analytics-1.2.0.el6.x86_64.rpm" "dependency":"filesystem" }] }] } {code} Host manifest: {code}{ "namenode": ["nn1"], "secondarynamenode": ["snn1"], "datanode": ["dn1", "dn2", "dn3"] } {code} Notice in cluster blueprint, the new addition section of applications is designed to deploy application in the hadoop environment (HDFS) or virtual environment, there is no local copy stored in local file system. The running environment is a flatten list of key value pairs, this is designed to make it easier for dev ops to manage the running environment more easily. The additional overwrite to environment allows to set a specific value for a particular config file. Host manifest is a flatten list of hostGroups for user friendliness for dev ops. Conflict, and provide syntax can support swappable component for Hadoop software stack.	1	1	https://issues.apache.org/jira/browse/AMBARI-1783
19710	AMBARI-1783	I saw Blueprints on the Hortonworks site, but see the ticket hasn't been updated since last year. Is there a newer ticket that should be followed?	1	0	https://issues.apache.org/jira/browse/AMBARI-1783
19711	AMBARI-1779	Trevor I am not sure I understand, why would a default of python2 work?	1	0	https://issues.apache.org/jira/browse/AMBARI-1779
19712	AMBARI-1779	Mahadev (is that right?) are you referring to my comment on AMBARI-1721 above? my understanding: that issue reported by Jeff occurs on Fedora 18 (for example) where the python2.6 executable does not exist. Instead, you've got /usr/bin/python2 linked to /usr/bin/python2.7. This results in the 'Cannot run program "python2.6"' If maven scripts invoke python2 instead of explicitly invoking python2.x to run tests, etc, it should work regardless of whether a platform has pyhon2.6 or python2.7 installed (or even some other python2.x but that's unlikely, I think). The /usr/bin/python2 link should be standard for python installs. I'll spin up an F18 box and confirm. Are we on the same page? Have I missed something? Thanks.	1	1	https://issues.apache.org/jira/browse/AMBARI-1779

#	Requirement	Questions	Answered	Successfully Answered	URL
19713	AMBARI-1779	[~tmckay] the issue is that a pyton2 executable is not standard. It might work on fedora 18. Instead of python2 why dont we just use python and just make sure its > 2.0. The patch attached will cause issues on different platforms (lets say on a mac, there is no python2). Does that make sense? Also for changing the structure, we will also have to do some post install changes wherein the prior configs that have some paths in there that reference old 2.6/site packages are upgraded to new ones when you upgrade the agent.	1	0	https://issues.apache.org/jira/browse/AMBARI-1779
19714	AMBARI-1778	Nice Suggestions Amit. Want to take some of these up? We can open specific subtasks for some of them if you want to work on these. Thanks.	0	0	https://issues.apache.org/jira/browse/AMBARI-1778
19715	AMBARI-1777	Mostly nits, LGTM, +1. Remove line - +// throw new AmbariException("Delete hosts not supported"); What will happen if a DELETE is invoked for a host that does not exist under api/v1/hosts? Looks like it may get added into the okToRemove list and clusters.deleteHost will get called. It might be OK as the method can handle this scenario but wanted to bring it up. + if (!component.isClientComponent() && So we now allow removal of client components. In that case, should we modify the error text as well? Something like - _To remove master or slave components they must be ..._. We can also modify the comment in the code. + public void removeAllHost(long clusterId, String hostName) { Should we rename it to removeHost (no All)	1	1	https://issues.apache.org/jira/browse/AMBARI-1777
19716	AMBARI-1769	Subin, Can you attach it as a patch? I think best would be to create a separate module for this, something like ambari-client and put the code in src/main/python. This way we can also add some unit tests for this and include it in the builds. Does that make sense?	1	0	https://issues.apache.org/jira/browse/AMBARI-1769
19717	AMBARI-1769	Subin, One quick thing, can you please remove the @author tags? Since the code gets owned/rewritten by lot of other folks, we like to avoid the @author tags in the code. Is that ok?	1	0	https://issues.apache.org/jira/browse/AMBARI-1769
19718	AMBARI-1769	Sure not a problem. That was added automatically by the IDE i was using. Can you pls give me all the changes you need so that i can do it all at once and submit the new patch? Thanks Subin	1	1	https://issues.apache.org/jira/browse/AMBARI-1769
19719	AMBARI-1769	Subin, Still not done with the review. Will probably be done by EOD today. Would that work?	1	0	https://issues.apache.org/jira/browse/AMBARI-1769
19720	AMBARI-1769	Subin, Just got the time to take a look at your patch. Nice work (specifically on the py docs)! The patch looks good. Some minor nits: - as metioned earlier the @ author tags and the created tags should be removed - http_utils.py has ^M characters in the file, not sure why (might want to do dos2unix on the files you have) - http_utils does not have an apache header and also says method copied from Django. If you copied the method, do you know what license/copyright it is? - main.py has ^M characters as well, same with init.py, cluster.py, paths.py, utils.py - the main.py does ganglia.stop() - i think that might be an oversight on having that in the main.py. Also why do we need a main.py? - the most important one is that to make it part of the main codebase (am sure lot of people will want to use this), we really need to make sure its maintained, which means unit tests (atleast testing main features of the client library). Can you please add some? You can also use the mock libary in ambari-common for python. - Also what about adding some help/examples into the codebase as well which will help folks who want to use the library?	1	0	https://issues.apache.org/jira/browse/AMBARI-1769
19721	AMBARI-1769	*??as metioned earlier the @ author tags and the created tags should be removed?? bq. I will remove this in the next patch *??http_utils.py has ^M characters in the file, not sure why (might want to do dos2unix on the files you have)?? bq. I will remove this in the next patch.Will do a dos2unix before i ship the code. *??http_utils does not have an apache header and also says method copied from Django. If you copied the method, do you know what license/copyright it is?? bq. I plan to remove this code in the next patch. I have found another way to do this. *??main.py has ^M characters as well, same with init.py, cluster.py, paths.py, utils.py?? bq. I will remove this in the next patch.Will do a dos2unix before i ship the code. *??the main.py does ganglia.stop() - i think that might be an oversight on having that in the main.py. Also why do we need a main.py?? bq. main.py was meant as a tutorial for python library. I will rename this as an example . *??the most important one is that to make it part of the main codebase (am sure lot of people will want to use this), we really need to make sure its maintained, which means unit tests (atleast testing main features of the client library). Can you please add some? You can also use the mock libary in ambari-common for python.?? bq. I have put about 2 months into this. Currently I support a lot more features than the features in the code i have given to you.I wanted to give the code in stages so that it can be reviewed and checked in and also hope it would be useful for future committers to understand the code.My plan is to give skeleton code in Phase1. Phase2 will contain some modifications for phase 1 and addition of new features ans also meet the ambari coding standards. Phase 3 onwards i would add the junits and some refactoring.Phase4 will contain all the features currently supported by me.Each phase would be 1 week long. Are you ok with my plan? I have few junits in place But i plan add them in phase 2. are you ok with this? *??Also what about adding some help/examples into the codebase as well which will help folks who want to use the library?? bq. main.py was meant as a tutorial for python library. I will rename this as a example . Please let me know if you have any concerns? Can you also tell me how to checkin this code into main codebase TRUNk ? Thanks Subin	1	1	https://issues.apache.org/jira/browse/AMBARI-1769
19722	AMBARI-1769	bq. I have put about 2 months into this. Currently I support a lot more features than the features in the code i have given to you.I wanted to give the code in stages so that it can be reviewed and checked in and also hope it would be useful for future committers to understand the code.My plan is to give skeleton code in Phase1. Phase2 will contain some modifications for phase 1 and addition of new features ans also meet the ambari coding standards. Phase 3 onwards i would add the junits and some refactoring.Phase4 will contain all the features currently supported by me.Each phase would be 1 week long. Subin, I can understand what you want to do here. I dont mind you creating another jira where units tests would be coming later. Can you create one related jira for unit tests and mention what/how you plan to add the unit tests? As long as we know when/how/what, I think we hsould be ok. Also, for committing to trunk, only committers can commit. Usually contributors become committers after working sometime with the community and help reviewing patches and getting other folks onboard. I am assuming this might be your first time on ASF. Take a look at: http://www.apache.org/foundation/how-it-works.html on how it works.	1	0	https://issues.apache.org/jira/browse/AMBARI-1769
19723	AMBARI-1769	Mahadev What i would like is to make my code meet your standards. I understand the meritocracy of the ASF. All i wanted to know was whether i would be allowed to do it or whether i would pass the code to you. both the options are fine for me.All izz well. So, I will add the junits and also take care of ^M ,main.py and the http_utils issue . I will give the phase1 patch to you.And you can do the further review and checkin the code. ok?	1	1	https://issues.apache.org/jira/browse/AMBARI-1769
19724	AMBARI-1769	Subin, Looks like we might need to rethink where to add the rpm or add install instructions to be able to install it as a python module so that it can be imported without changing python path. What do you think?	0	0	https://issues.apache.org/jira/browse/AMBARI-1769

#	Requirement	Questions	Answered	Successfully Answered	URL
19725	AMBARI-1769	+1 for the patch. I just committed this to trunk. Thanks Subin. Since this is just beginning of the work we will be doing for the client I just committed this as it is. Here are some improvements we need to make for this: - Add unit tests (whcih you have a jira for). - Make the client component part of the top level pom.xml (this will help in running unit tests/builds from a single place) - add some documentation on how/what of ambari-client that can be published with a release Subin, Can you please open a jira for the last 2. Again thanks a lot for your patience and contribution.	0	0	https://issues.apache.org/jira/browse/AMBARI-1769
19726	AMBARI-1760	Configurable on the command line during server setup? Modifying ambari.properties is less obvious and harder to automate.	1	0	https://issues.apache.org/jira/browse/AMBARI-1760
19727	AMBARI-1760	Good point Michael. Want to provide a patch? Should be simple to add a property to the config file while doing setup. Take a look at ambari-server.py.	1	1	https://issues.apache.org/jira/browse/AMBARI-1760
19728	AMBARI-1760	Michael, Thanks for the patch. The patch looks good. A couple of comments: - the indentation is 2 space (no tabs) for python code as well - can you provide a unit test for this as well? Take a look at the python unit tests in the ambari-server (src/test/python/TestAmbaryServer.py) to see how to add one. Other than that this looks good. Thanks a lot!	1	1	https://issues.apache.org/jira/browse/AMBARI-1760
19729	AMBARI-1760	mock is new to me but want to learn how to use it, any good resources to look at? Should I add the updated patch and unit test at the same time?	1	0	https://issues.apache.org/jira/browse/AMBARI-1760
19730	AMBARI-1703	+1 for the patch. One minor nit, can we write a unit test for this so that this does not break again?	1	0	https://issues.apache.org/jira/browse/AMBARI-1703
19731	AMBARI-1703	+1 on the patch. Thanks a lot Nate!	1	0	https://issues.apache.org/jira/browse/AMBARI-1703
19732	AMBARI-1639	My feedback: * This is a great feature to add and it was done really well! * app/controllers/global/update_controller.js's updateServiceMetric method used to ask for specific metrics (/services?fields=components/ServiceComponentInfo,components/host_components,components/host_components/HostRoles,components/host_components/metrics/jvm/memHeapUsedM,components/host_components/metrics/jvm/memHeapCommittedM,components/host_components/metrics/mapred/jobtracker/trackers_decommissioned). The patch is querying for /services?fields=components/ServiceComponentInfo,components/host_components,components/host_components/HostRoles,components/host_components/metrics. It seems that doing so would significantly increase the payload since it will grab all metrics available... We should explicitly list out all the metrics that we are asking for, like we were doing before. * app/models/service/hdfs.js and app/models/service/mapreduce.js have unnecessary comment tags. Please remove. * app/templates/main/service.hbs has an empty id attribute, like so: {code} {code} Please remove this id attribute. * ambari/ambari-web/app/messages.js - Change dashboard.customerWidgets.* to dashboard.widgets.*. Prefixing with "customer" does not make much sense. Change 'dashboard.customerWidgets': 'Customer Widgets' to 'dashboard.widgets': 'Cluster Status and Metrics'. * Replace "views/main/dashboard/customer_widgets/*" with "views/main/dashboard/widgets/*". Also, rename the directory views/main/dashboard/customer_widgets to widgets. * vendor/scripts/jquery.ui.sortable.js {{code}} this._delay(function() { if(counter == this.counter) this.refreshPositions(!hardRefresh); //Precompute after each DOM insertion, NOT on mousemove }); {{code}} The above code was commented out. Can you add a comment in this file as to why you did that? * General comment about code format. It does not conform to the guideline here: https://cwiki.apache.org/confluence/display/AMBARI/Coding+Guidelines+for+Ambari. Please correct it (but only for the lines you changed). * Certain features do not work in testMode (AMBARI-2306 was filed to track this).	0	0	https://issues.apache.org/jira/browse/AMBARI-1639
19733	AMBARI-1639	[~xiwang0309], can you address the comment regarding the change in vendor/scripts/jquery.ui.sortable.js?	0	0	https://issues.apache.org/jira/browse/AMBARI-1639
19734	AMBARI-1574	Hi Gunnar, thanks for your suggestion. What do you specifically have in mind? Creation of HDFS users and their home directories, quota management, etc?	1	1	https://issues.apache.org/jira/browse/AMBARI-1574
19735	AMBARI-1566	Good one Gunnar. Do you want to take a stab at parameterizing the JAVA_OPTS in the configurations for these services?	1	1	https://issues.apache.org/jira/browse/AMBARI-1566
19736	AMBARI-1562	Can you tell me where you saw this error message? Maybe in /var/log/ambari-server/ambari-server.log or /var/log/ambari-agent/ambari-agent.log? I suspect that I have met this issue but I'm not sure. Sometimes my install process goes wrong but I didn't found any exception in this log files.	1	0	https://issues.apache.org/jira/browse/AMBARI-1562
19737	AMBARI-1551	Jos, Here are a couple of pointers on how the monitoring of hadoop processes are done on the Ambari Agent side. Take a look at ambari-agent/src/main/python/ambari_agent/LiveStatus.py. What we can do is make LiveStatus.py pluggable and also as of now the server send commands to check for status of each component of the host. We can use that command to just send a list of components to check for on that host and send it just once in an hour or so. We can then do active live status checks on the agents itself using a pluggable module which could be a wrapper around daemon tools. Does that sound ok?	1	0	https://issues.apache.org/jira/browse/AMBARI-1551
19738	AMBARI-1551	[~mahadev] [~josb] Is this JIRA still relevant? If not can you resolve the JIRA?	0	0	https://issues.apache.org/jira/browse/AMBARI-1551
19739	AMBARI-1522	http://opentsdb.net/ Does it make sense to consider these features we'd like to build in conjunction with something like opentsb? It's not quite dumping things in HDFS, but opentsb is essentially built on hbase. There's a strange meta-loop going here.....where the logs of the platform itself should really be run through said platform in the same flow as one of the use cases the platform services.	0	0	https://issues.apache.org/jira/browse/AMBARI-1522
19740	AMBARI-1522	[~sposetti] Hello Jeff, I posted the first design doc draft for review. Could you please help take a look and provide feedback? Thank you. Di	1	0	https://issues.apache.org/jira/browse/AMBARI-1522
19741	AMBARI-1518	Does ambari server support this feature? As far as I know Ambari UI do not support it, but maybe the API yes. Do anybody tested it?	1	1	https://issues.apache.org/jira/browse/AMBARI-1518
19742	AMBARI-1518	Halacs, The server does have provision to support it. Its been a while since I tested it. You might find some issues when trying to do it via the api's. Want to give it a try and file issues based on your trials?	0	0	https://issues.apache.org/jira/browse/AMBARI-1518

19816	AMBARI-1201	Added new patch that covers missing rpm (thanks Mahadev!). When merging, use AMBARI-1201.patch.1	1	1	https://issues.apache.org/jira/browse/AMBARI-1201
19817	AMBARI-1065	Like to hear how to apply the patch. Been looking for awhile for this feature to come to ambari. Does only apply to only version 1.2?	1	0	https://issues.apache.org/jira/browse/AMBARI-1065
19818	AMBARI-1065	Thank you Gunturi, Does this include the Hortonworks 1.2 release ? -Charles ---------- Sent using BlackBerry	1	0	https://issues.apache.org/jira/browse/AMBARI-1065
19819	AMBARI-1065	Thank you Gunturi, Does this include the Hortonworks 1.2 release ? -Charles ---------- Sent using BlackBerry	1	0	https://issues.apache.org/jira/browse/AMBARI-1065
19820	AMBARI-1065	Thank you Gunturi, Does this include the Hortonworks 1.2 release ? -Charles ---------- Sent using BlackBerry	1	0	https://issues.apache.org/jira/browse/AMBARI-1065
19821	AMBARI-1065	Thank you Gunturi, Does this include the Hortonworks 1.2 release ? -Charles ---------- Sent using BlackBerry	1	0	https://issues.apache.org/jira/browse/AMBARI-1065
19822	AMBARI-1044	I don't see any related exceptions in the server log which means that either its not attempting to get the metrics for this host or they are just not being set on the host resource. I think that I see what is happening. One of the arguments that can be specified for the rrd query is the Ganglia cluster (HDPHBaseMaster, HDPJobTracker, HDPNameNode or HDPSlaves). The question is, for a host level query which Ganglia cluster should we specify? Its hard to say since a host isn't necessarily with any of the services related to those clusters... or maybe more than one. It turns out it doesn't really matter. In this case I can see the system level rrd files that we use for host level metrics for ip-10-224-42-108.ec2.internal under any of the Ganglia cluster folders. For example ... {code} [root@ip-10-40-91-121 rrds]# ls ./HDPHBaseMaster/ip-10-224-42-108.ec2.internal boottime.rrd bytes_out.rrd cpu_idle.rrd cpu_num.rrd cpu_system.rrd cpu_wio.rrd disk_total.rrd load_five.rrd mem_buffers.rrd mem_free.rrd mem_total.rrd pkts_in.rrd proc_run.rrd swap_free.rrd bytes_in.rrd cpu_aidle.rrd cpu_nice.rrd cpu_speed.rrd cpu_user.rrd disk_free.rrd load_fifteen.rrd load_one.rrd mem_cached.rrd mem_shared.rrd part_max_used.rrd pkts_out.rrd proc_total.rrd swap_total.rrd ... [root@ip-10-40-91-121 rrds]# ls HDPNameNode/ip-10-224-42-108.ec2.internal boottime.rrd bytes_out.rrd cpu_idle.rrd cpu_num.rrd cpu_system.rrd cpu_wio.rrd disk_total.rrd load_five.rrd mem_buffers.rrd mem_free.rrd mem_total.rrd pkts_in.rrd proc_run.rrd swap_free.rrd bytes_in.rrd cpu_aidle.rrd cpu_nice.rrd cpu_speed.rrd cpu_user.rrd disk_free.rrd load_fifteen.rrd load_one.rrd mem_cached.rrd mem_shared.rrd part_max_used.rrd pkts_out.rrd proc_total.rrd swap_total.rrd {code} The approach that I've been using is to look through the host components for the host that we are interested in and try to map one of its component names back to a Ganglia cluster. In this case it looks like the host with the missing metrics is not associated with any component that would map back given the mapping method that I am using. Given what I am currently seeing with the system level metrics, I think that it would be safe to simply use HDPSlaves as the Ganglia cluster for host level queries.	1	0	https://issues.apache.org/jira/browse/AMBARI-1044
19823	AMBARI-147	Good stuff. Could you please update the patch so that it applies in the current trunk.	1	0	https://issues.apache.org/jira/browse/AMBARI-147

#	Requirement	Questions	Answered	Successfully Answered	URL
19824	AMBARI-25	Should "Property" be "Properties" and "ConfigurationCategory" be "ConfigurationCategories". I would prefer plural. In Blueprint "Components" element it is referred as "Properties". Also what is a significance of "@" prefix? Should it be only be applied to keys in Configuration element or other places too, like in "Components" or "Roles" etc. ?	1	0	https://issues.apache.org/jira/browse/AMBARI-25
19825	AMBARI-25	In xml, it now looks like: {noformat} <Configuration> <ConfigurationCategory Name="mapred-site"> <Property name="mapred.system.dir" value="/mapred/mapredsystem" force="false"/> <Property name="mapred.local.dir" value="/tmp/mapred" force="false"/> </ConfigurationCategory> <ConfigurationCategory Name="hdfs-site"> <Property name="dfs.name.dir" value="/tmp/namenode" force="false"/> <Property name="dfs.data.dir" value="/tmp/datanode" force="false"/> </ConfigurationCategory> </Configuration> {noformat} in JSON, it looks like: {noformat} "Configuration": { "ConfigurationCategory": [{"@Name": "mapred-site", "Property": [{"@name": "mapred.system.dir", "@value": "/mapred/mapredsystem", "@force": "false"}, {"@name": "mapred.local.dir", "@value": "/tmp/mapred", "@force": "false"}]}, {"@Name": "hdfs-site", "Property": [{"@name": "dfs.name.dir", "@value": "/tmp/namenode", "@force": "false"}, {"@name": "dfs.data.dir", "@value": "/tmp/datanode", "@force": "false"}]}]} {noformat} In answer to the questions, the '@' is saying that it represents an attribute in XML. Is there a way to make the JSON use 'Properties' while the XML uses 'Property'?	0	0	https://issues.apache.org/jira/browse/AMBARI-25
19826	ACE-592	Your first few questions I don't quite understand what you are asking for (I'm not a native speaker, so that could well be my fault). I am guessing you are interested to learn what exactly the rules are for naming features and distributions? They should be given unique names. Can you try explaining your question again? To answer your question about the deployment not working, what set of bundles did you try to deploy? Are you sure those bundles all resolve (and start)? One thing to diagnose this issue is to add the "-v" option to the ace-launcher, which will make it a lot more verbose. Usually then you will be able to figure out what is going wrong. If not, paste the output here so we can have a look. If possible, then also share the bundles you were trying to deploy. Your other questions: (1) Again, not sure what you are asking here. In the ACE UI you can click on a target to see what distributions, features and artifacts it is linked to (or on any other entity). You cannot start/stop/uninstall a bundle on the target, but you can remove a bundle from a feature and store that new configuration to uninstall it from all targets that had that feature installed. (2) The ace-launcher basically is an instance of Apache Felix with a management agent. So it already is integrated. What are you looking for? Using the management agent with a specific version of Felix, or?	1	0	https://issues.apache.org/jira/browse/ACE-592
19827	ACE-592	Thank you very much for your reply! I installed ACE （apache-ace-2.1.0） ON C:/ace I installed felix ON C:/felix My goal is to copy the file: test2-1.0.0.201605281422.jar from C:\ace\server-allinone\store to C:\felix\plugins Is this possible? The realization of the process is? Thank you very much for the reply.	0	0	https://issues.apache.org/jira/browse/ACE-592
19828	ACE-532	As the bot already noticed, I've added a somewhat bigger PR that not only replaces the org.apache.ace.http.listener but also binds all Servlets registered by ACE to a custom ServletContext. This makes it possible to prefix all ACE servlets (and resources) with a single configuration option. This is a lot easier (and less error prone) than the per Servlet endpoint configuration. For example the RepositoryServlet, by default this is registered at {{http://my.host/repository}} by changing the context root for the {{AceServletContextHelper}} to {{/ace}} the repository servlet will be available at {{http://my.host/ace/repository}} (all other servlets will move to {{http://my.host/ace/.....}} aswel. Authentication is also handled in the {{AceServletContextHelper}} so enabling authentication is also in a single place, and the duplicated authentication code is removed from the Servlets. What isn't fixed (yet) in this PR is are the "where to find" configurations, there are a lot of configurations for example to configure the url of the repository servlet. Now you can move the complete application to another we can change this we just need a place to configure the location of the server and obr. What would be the best way to get this url to all components that need it? Should / can we use the {{Discovery}} interface for this?	1	0	https://issues.apache.org/jira/browse/ACE-532
19829	ACE-530	Can you elaborate a bit on what the issue exactly is? Are you referring to the web UI of Ace, or some other project? I'm not aware of any concept named "service desk", so I'm not sure where I could help you with.	1	1	https://issues.apache.org/jira/browse/ACE-530
19830	ACE-522	Applied in rev #1726789. Thanks for the patch!	0	0	https://issues.apache.org/jira/browse/ACE-522
19831	ACE-513	Given that gogo has alias support and it is just one client.. would it not be best to remove all gogo registration and command short-hands from the ace.client.workspace bundle altogether? I think we should prefer meaningful names on the core interfaces and move gogo support into the ace.gogo bundle.	1	1	https://issues.apache.org/jira/browse/ACE-513
19832	ACE-503	Committed the patch. Thanks for your contribution [~brampouwelse]!	0	0	https://issues.apache.org/jira/browse/ACE-503
19833	ACE-483	This patch was generated with, cd trunk svn up svn diff >ace-1.patch On 24 Sept 2014 at ~10:00 UTC.	1	1	https://issues.apache.org/jira/browse/ACE-483
19834	ACE-483	I modified the patch a bit: I left out the generics changes for Java 8/9 because we currently build for Java 7 and I feel we need to fix that in the whole project, and as a separate "patch". Changed the shutdown hook to explicitly wait for the framework to shut down. Not doing that made the JVM shutdown way before bundles were actually stopped. It will wait forever: if the framework hangs we depend on the script "killing the JVM after a while". Some typographical changes to the script. I like the way you split up the target into a "run-develop" and "run-target". I am even thinking about not providing the "run-develop" option in our binary distribution anymore, but I'd like to get some community feedback about that.	1	1	https://issues.apache.org/jira/browse/ACE-483
19835	ACE-459	I agree that it makes sense to display that information in the LogViewer. As you already mention, the audit log does log the BSN and version of the bundle, but only when it is installed. That was done on purpose, because after that event, BSN and version cannot change anymore, so we did not want to keep wasting bytes and just identify the installed bundle by its ID. That being said, I would rather see a solution where the BSN and version are looked up in the viewer, instead of adding them to each event. Does that make sense?	1	1	https://issues.apache.org/jira/browse/ACE-459
19836	ACE-459	So why not make a component that interprets the log data and provides the information you need? That could be a component that can be used anywhere (not bound to client or server) and provides a richer view.	0	0	https://issues.apache.org/jira/browse/ACE-459
19837	ACE-456	I'm all for promoting reuse, but have my doubts about creating a separate project just for this functionality. Isn't there another project that can expose this functionality as additional bundle? Why not create sub-bundles in o.a.a.client.rest?	0	0	https://issues.apache.org/jira/browse/ACE-456

#	Requirement	Questions	Answered	Successfully Answered	URL
19838	ACE-456	Jan Willem, if there's a better place to put it, that's perfectly fine with me, I can move it and resubmit a patch if you want. However, I don't think it should be a sub-bundle of o.a.a.client.rest specifically. I don't think it has anything to do with the REST-part of the ACE client. The way I look at it, the Workspace is generic client functionality that can be used (as a service) by different "manifestations" of the client (i.e. REST, script-based, even the Vaadin client could potentially re-use it to maintain its "dirty" state on the server side). Perhaps it could be combined with for example the o.a.a.client.automation services into o.a.a.client.services or something similar? What do you think?	0	0	https://issues.apache.org/jira/browse/ACE-456
19839	AMQ-6701	Thanks for the reply. Attaching the jstack. Do you think this is due to GC?	1	0	https://issues.apache.org/jira/browse/AMQ-6701
19840	AMQ-6695	thanks for the patch. Changes like this can be tricky (as in it will change behaviour for folks) - that code has not changed since 2007. I think there should always be a copy of the message because sending does change the metadata and of course the usage. From the comments on setCopyMessage it seems the intent is to set the forward destination on the copy, maybe that flags should just do that and there is always a copy. Can you add some unit tests to show the problem and that can protect this changes into the future. Also verify the few unit tests that exercise the mirror queue There is a related issue https://issues.apache.org/jira/browse/AMQ-3669 that seems to be in the same area and has a relevant test that can give inspiration.	1	1	https://issues.apache.org/jira/browse/AMQ-6695
19841	AMQ-6630	Commit 4bf3152fa99bd97f04845e69b8d442eeb2a39308 in activemq's branch refs/heads/master from [~tabish121] [https://git-wip-us.apache.org/repos/asf?p=activemq.git;h=4bf3152] https://issues.apache.org/jira/browse/AMQ-6630 Update to QpidJMS 0.22.0 and Netty 4.1.9.Final	1	1	https://issues.apache.org/jira/browse/AMQ-6630
19842	AMQNET-557	OK thanks. I tried to contact “sbohlen” …but was not successful yet. Btw. The STOMP library is also not released as normal download. The latest available version is 1.5.4. See: http://activemq.apache.org/nms/stomp-downloads.html Can you release the library as “normal” download? (Maybe this download is the source of the nugget package, and “sbohlen” cannot create a new version of the nugget package without this download.)	1	1	https://issues.apache.org/jira/browse/AMQNET-557
19843	AMQNET-517	Commit 1724526 from [~jgomes] in branch 'MSMQ/trunk' [https://svn.apache.org/r1724526] Applied patch from Stephane Ramet to implement QueueBrowser and DeleteDestination. Thanks Stephane! Fixes [AMQNET-517]. (See https://issues.apache.org/jira/browse/AMQNET-517)	1	1	https://issues.apache.org/jira/browse/AMQNET-517
19844	AMQNET-490	Thanks for the quick reply. I did some searching around but don't see anything on changing the destination name passing. Do you have an example you can point me to on how to do this for the clients?	1	0	https://issues.apache.org/jira/browse/AMQNET-490
19845	AMQNET-490	Is there a later released version of the Stomp Client that I could be using where it is configurable via the wire format. I am not married to version 1.5.4, that just seemed like the latest official version so that is what I went with.	1	0	https://issues.apache.org/jira/browse/AMQNET-490
19846	AMQNET-470	This doesn't really seem like the best idea. Can you elaborate on the use case a bit. The send method for a persistent message returns only after receiving an ack from the broker, where a send for a non-persistent message returns immediately. You can force sync sends always via configuration or async sends always as well.	1	1	https://issues.apache.org/jira/browse/AMQNET-470
19847	AMQNET-470	I use the send method in IMessageProducer, Will it have the delegate to invoke to? B.T.W - The exception type is NotSupportedException :)	1	0	https://issues.apache.org/jira/browse/AMQNET-470
19848	AMQNET-470	Timothy - Should I add the delegate (optional) parameter to the IMessageProducer interface too?	1	0	https://issues.apache.org/jira/browse/AMQNET-470
19849	AMQNET-470	Hi. This is too much changes for a little modification, I wonder if I can do something like this : * Add to the "ITransport" (From ActiveMQ dll) an OnewaySent event (That will raise every time that a Command is sent from the TcpTransport) * Implement the OnewaySent event for all the decorator ITransports easily. * In my project : Decorate the IMessage and use it from the that is raised. What do you think about it?	1	0	https://issues.apache.org/jira/browse/AMQNET-470
19850	AMQNET-464	isn't a big task for one developer ?	1	0	https://issues.apache.org/jira/browse/AMQNET-464
19851	AMQNET-464	Would it make more sense to create a new REST provider?	0	0	https://issues.apache.org/jira/browse/AMQNET-464
19852	AMQNET-454	Patch doesn't seem to want to apply for me, is your repo up to date with the latest changes?	1	1	https://issues.apache.org/jira/browse/AMQNET-454
19853	AMQNET-454	Hi Jim, Thanks for your attention to my checkins. Maybe you could advise me on how best to proceed with my unmanaged content. h4. Populating \lib with Apache Qpid vendor files There is an issue with copying the Apache Qpid vendor files from the local .nant repo into lib\net-2.0 or lib\net-4.0. For net-2.0 or net-4.0 the Qpid vendor files are delivered in debug and release sets. h5. Distinguishing debug from release * qpid library file names have a "d" suffix. * boost library file names have an extra "-gd" embedded in them. * The library binding org.apache.qpid.messaging.dll files have the *identical name* for debug and release. h5. Distingushing net-2.0 from net-4.0 * qpid library file names are the same net-2.0 and net-4.0 * boost library file names have the vc compiler version embedded in them: ** net-2.0 identified by "-vc90" ** net-4.0 identified by "-vc100" * The library binding org.apache.qpid.messaging.dll files have the *identical name* for net-2.0 and net-4.0 It would be best if the net-2.0/net-4.0 debug/release files could be kept in four directories in \lib. Without debug and release folders this isn't possible and the debug and release files wind up on top of each other. This isn't a huge issue until the release version of org.apache.qpid.messaging.dll overwrites the debug version. As soon as the debug version of code is rebuilt in the \build folder the release version of the dll is copied into the build debug folder and nothing works after that. The .NET runtime error messages are not helpful in diagnosing the issue: it says it can't load a dll but it does not explain why. h4. Populating \build with libraries from \lib Scripts must account for the file naming variations so that all the desired files wind up in the proper places in build. It does not hurt to have the unmanaged debug and release libraries both installed in the build folder but care must be taken not to install the wrong build variant of org.apache.qpid.messaging.dll. h4. How to proceed I notice that products like NUnit dodge this issue by having the same file in the \debug and \release in the .nant local repo. I believe that org.apache.qpid could do the same thing. If the same file set were in two places in the local repo then there would never be a conflict in the \lib folders nor in the \build folders. Release versions of products built on top of debug versions of the qpid unmanged code would still work correctly. There is still a conflict between the net-2.0 and the net-4.0 versions of boost file names but that can be solved by adding the other names to the file copy list added in http://svn.apache.org/r1617620 I'll give this a try before my next commit and see how it goes. Please reply if you have ideas on how to proceed.	1	1	https://issues.apache.org/jira/browse/AMQNET-454
19854	APLO-329	Can you post the stack trace? Can you try running on latest version of Apollo?	1	0	https://issues.apache.org/jira/browse/APLO-329
19855	APLO-327	Should be good to go on my private branch. Hiram, if you wanna review it, please go ahead. Since this requires Java 7, which Apollo release should we plan to include this jira?	0	0	https://issues.apache.org/jira/browse/APLO-327

#	Requirement	Questions	Answered	Successfully Answered	URL
19856	APLO-325	So I have a patch to fix this. It relies on setting the underlying websocket connection max text message size: WebSocket.Connection#setMaxTextMessageSize There is also a method for #setMaxBinaryMessageSize Think it's the same in ActiveMQ 5.x (see the WSTransportServer.java#doStart) Just getting the last of the unit tests to pass (having some issues with the WSS test of course, unrelated to this change... will hopefully have it ready by tomorrow and attach the patch to this JIRA if you want to review). This will all change when the Jetty 9 API is used, but will be similar (there is a websocket client factory on which you can make the same text/binary message size settings). Should we also make the change in the client JS libs?	1	0	https://issues.apache.org/jira/browse/APLO-325
19857	APLO-325	Cool! Oliver, can you give the latest snapshot a try? I've also updated the docs: http://activemq.apache.org/apollo/versions/99-trunk-SNAPSHOT/website/documentation/user-manual.html#WebSocket_Transports	0	0	https://issues.apache.org/jira/browse/APLO-325
19858	APLO-322	Apollo supports master/slave fault tolerance, but if you're looking for "network of brokers" the way activemq 5.x does it, that doesn't exist in Apollo *yet*. What sort of clustering are you looking for? What's your usecase?	1	1	https://issues.apache.org/jira/browse/APLO-322
19859	APLO-322	The usecase is that we use the apollo broker to realize the interaction in class.In addition ,is the total number of the apollo broker no limit ?	1	0	https://issues.apache.org/jira/browse/APLO-322
19860	ARTEMIS-1302	Github user clebertsuconic commented on the issue: https://github.com/apache/activemq-artemis/pull/1416 Is this just logging ?	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1302
19861	ARTEMIS-1276	Github user clebertsuconic commented on the issue: https://github.com/apache/activemq-artemis/pull/1407 it's probably an issue on the test. should I merge this already?	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1276
19862	ARTEMIS-1276	Github user jdanekrh commented on the issue: https://github.com/apache/activemq-artemis/pull/1407 > messages only expire on client on activemq5 while it's on server & client on artemis Did you mean expire on _server_ on activemq5? If it expired on client, how would it then get to DLQ queue on server? --- I think get it now. When the test receives for the first time (first `for` loop), the client gets first 10 messages sent, which are those with short expiration time. One of them is delivered ok, the 9 remaining expire on the client while it is in sleep(). That means these 9 never get into the DLQ, because for that they would have to expire on the server. Which explains the `actual: 90, expected: 99` result when it is then receiving from DLQ. I did not know about this difference between 5 and Artemis. From user point of view, the fact that prefetch changes behavior (and is not just performance optimization) and that it can cause what can be thought of as a message loss (these 9 messages have irrevocably disappeared, right?) could be considered a bug, I think. I guess there is nothing to be done about it here, so removing [wip].	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1276
19863	ARTEMIS-1276	Github user clebertsuconic commented on the issue: https://github.com/apache/activemq-artemis/pull/1407 >>> If it expired on client, how would it then get to DLQ queue on server? There's a special protocol on OpenWire to tell the server the message expired. On Artemis we would just reject the message and let the server deal with it again. Having said that, perhaps there's something wrong on treating that message..so it's worth to check if it's a bug on that area.. or just a test issue. I didn't look into the details specifically to this test BTW: I was just mentioning that I had cases like this where I had to tweak the test because of that semantic change.	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1276
19864	ARTEMIS-1270	Github user clebertsuconic commented on the issue: https://github.com/apache/activemq-artemis/pull/1385 just one request here.. don't leave master on an intermediate state this week.. I want to release before end of this week / early next week as I sent the heads up earlier. We can merge this now if we're sure it's ready.. otherwise lets wait till next week.	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1270
19865	ARTEMIS-1270	Github user michaelandrepearce commented on the issue: https://github.com/apache/activemq-artemis/pull/1385 @clebertsuconic i think I've address'ed now 1-9 on the list Dan gave. Only bit left is adding/updating artemis LICENSE/NOTICE. Whats the process on this. Is it manual or is it automated, who needs to verify it? After this the only last bit is aligning up the login (so don't have to bypass)	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1270
19866	ARTEMIS-1270	Github user michaelandrepearce commented on the issue: https://github.com/apache/activemq-artemis/pull/1385 From here: http://www.apache.org/legal/resolved.html#category-a We just have to list the components and the license and point to the location of the dependency in LICENSE It's seems there is no need to touch NOTICE file for these licenses. Can this be confirmed?	0	0	https://issues.apache.org/jira/browse/ARTEMIS-1270
19867	ARTEMIS-1270	Github user clebertsuconic commented on the issue: https://github.com/apache/activemq-artemis/pull/1385 You think it would be good on the release ? How much work to get the authentication working ? Or ready to merge but not release. We can talk on Monday. I'm not doing much coding this weekend.	0	0	https://issues.apache.org/jira/browse/ARTEMIS-1270
19868	ARTEMIS-1270	I find that it is a great feature that the Artemis server distribution doesn't include a advanced web console today. Not having a web console bundled reduces the distribution size, configuration and build complexity, limits the dependencies, reduces vulnerability exposure and limits the number of security updates required. I understand that a web console like Hawtio brings convenience and functionality to Artemis, and I understand that it can be attractive to new users. Would it be possible to offer two separate artifacts for the binary server distribution: One for just the Artemis Server binary as it is shipped today, and one that bundles both Artemis Server and the customized HawtIO console? I apologize if I've missed any relevant previous discussion about this on the mailing lists, I haven't had time to follow Artemis development closely for some time.	0	0	https://issues.apache.org/jira/browse/ARTEMIS-1270
19869	ARTEMIS-1270	Github user clebertsuconic commented on the issue: https://github.com/apache/activemq-artemis/pull/1385 @michaelandrepearce small tweak, can you add a link to the console on the main index? When you go to localhost you see this list: - API - User Manual - Hacking Guide - Examples - Apache ActiveMQ Artemis Website it would be useful having the webconsole as the first link here.	0	0	https://issues.apache.org/jira/browse/ARTEMIS-1270
19870	ARTEMIS-1265	Github user clebertsuconic commented on a diff in the pull request: https://github.com/apache/activemq-artemis/pull/1380#discussion_r125054051 --- Diff: docs/hacking-guide/en/code-coverage-report.md --- @@ -0,0 +1,37 @@ +# Code coverage report + +## Getting JaCoCo exec files + ++Before you can generate code coverage report by JaCoCo tool, +you need to get data about what lines of code were executed --- End diff -- You're not telling how to generate this information ^^ how to generate the data about what lines where executed?	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1265
19871	ARTEMIS-1263	What kind of back-end are you using for your user & role information? Can you not simply put all the required users into a single role and set the permission for that single role? Even if you're using a properties file it should be pretty simple.	0	0	https://issues.apache.org/jira/browse/ARTEMIS-1263

Shouldn't this be using Thread.currentThread().classLoader()? The previous call (inside the try... catch) was using this class classLoader.. if you catch an exception and try, I would expect to do somethng different.. like using the classLoader, not doing the same operation. it seems a typo to me... can you check?	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1252
19875	ARTEMIS-1248	Github user clebertsuconic commented on the issue: https://github.com/apache/activemq-artemis/pull/1361 @franz1981 I see.. you could still use a ThreadLocal there.. right? also: Why don't you use a PooledBuffer on the write?	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1248
19876	ARTEMIS-1248	Github user franz1981 commented on the issue: https://github.com/apache/activemq-artemis/pull/1361 @michaelandrepearce @clebertsuconic You're right: these are the results of a test writing 100 Pages of 10MB with messages of 100 bytes. Just 2 notes: - I've used the Artemis JVM default settings: -XX:+PrintClassHistogram -XX:+UseG1GC -XX:+AggressiveOpts -XX:+UseFastAccessorMethods -Xms512M -Xmx2G. With smaller HEAP the effect is even more pronounced. - I've forced a GC just at the beginning to have the HEAP clean. Old version: ![unpooled](https://user-images.githubusercontent.com/13125299/27471968-ee3e8036-57f9-11e7-962f-c8c5ae1f1276.png) ![unpooled_gc](https://user-images.githubusercontent.com/13125299/27471969-ee3f12a8-57f9-11e7-96f1-88103375c08d.png) New version: ![pooled](https://user-images.githubusercontent.com/13125299/27472080-59ff4fda-57fa-11e7-9645-34aac2446281.png) ![pooled_gc](https://user-images.githubusercontent.com/13125299/27472079-59fcd516-57fa-11e7-8d81-0d566e041c58.png) wdyt?	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1248
19877	ARTEMIS-1235	Github user mtaylor commented on the issue: https://github.com/apache/activemq-artemis/pull/1345 @michaelandrepearce Sure. I get the configuration management tool use case. Two comments: 1. Does it make sense to enable this at the address-settings level vs just a global wide param? 2. If this is switched on, do we want to disable other means of managing addresses? We have discussed in the past, making the XML configuration the single source of truth for queues and addresses. I think the original reason for not supporting address/queue deletes via configuration was to avoid message loss. In this scenario, I think dropping a queue with messages is appropriate. We just need to make that clear in the documentation. This topic has cropped up in the past, do you guys have any input? @andytaylor @clebertsuconic @jbertram. On the PR. It looks good, I did a few extra manual tests with wildcard addresses, it works as expected Thanks	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1235

19878	ARTEMIS-1235	Github user michaelandrepearce commented on the issue: https://github.com/apache/activemq-artemis/pull/1345 @andytaylor re: > My opinion removing queues should never be done automatically even if that is a configured flag. We actually would want to automatically remove the queue still when using tools like puppet/chef. Use case we need this for is that a durable subscription is being decom'd the app would need to be deployed (or underplayed) with the subscription gone, after which we remove the queue for that subscription. In this case there maybe build up of messages as message produce flow continues and other subscriptions (queues) would still exist. As such we'd want the queue removed still even if outstanding messages to deliver. Re: Removing bindings journal where would you put auto-created queues in this scenario, as we would only control in puppet persistent/durable queues typically. as such couldn't have these written to this file else puppet/chef would re-push the config file and remove the auto-created queues created for non-durable topic consumers.	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1235
19879	ARTEMIS-1235	Github user clebertsuconic commented on the issue: https://github.com/apache/activemq-artemis/pull/1345 @michaelandrepearce I'm just back from a 2 weeks vacations.. and I'm still slow... So, help me to understand.. you added a DeletionPolicy on Address Settings. if you set it to FORCE, you will delete the queue if it disappeared from the configuration? my only concern about this is on subscriptions... that is queues created from client APIs. This solves the case for the CLI creating queues.. but what about the client calling .createQueue from a client session or something equivalent from AMQP Clients, OpenWire.. etc? you wouldn't set it to FORCE on such addresses?	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1235
19880	ARTEMIS-1235	Github user clebertsuconic commented on a diff in the pull request: https://github.com/apache/activemq-artemis/pull/1345#discussion_r123343028 --- Diff: artemis-server/src/main/java/org/apache/activemq/artemis/core/server/impl/ActiveMQServerImpl.java --- @@ -2313,6 +2318,53 @@ private void deploySecurityFromConfiguration() { } } + private void undeployAddressesAndQueueNotInConfiguration() throws Exception { + undeployAddressesAndQueueNotInConfiguration(configuration); + } + + private void undeployAddressesAndQueueNotInConfiguration(Configuration configuration) throws Exception { + Set<String> addressesInConfig = configuration.getAddressConfigurations().stream() + .map(CoreAddressConfiguration::getName) + .collect(Collectors.toSet()); + + Set<String> queuesInConfig = configuration.getAddressConfigurations().stream() + .map(CoreAddressConfiguration::getQueueConfigurations) + .flatMap(List::stream).map(CoreQueueConfiguration::getName) + .collect(Collectors.toSet()); + + for (SimpleString addressName : listAddressNames()) { + AddressSettings addressSettings = getAddressSettingsRepository().getMatch(addressName.toString()); + + if (!addressesInConfig.contains(addressName.toString()) && addressSettings.getConfigDeleteAddresses() == DeletionPolicy.FORCE) { + for (Queue queue : listQueues(addressName)) { + ActiveMQServerLogger.LOGGER.undeployQueue(queue.getName()); + queue.deleteQueue(true); + } + ActiveMQServerLogger.LOGGER.undeployAddress(addressName); + removeAddressInfo(addressName, null); + } else if (addressSettings.getConfigDeleteQueues() == DeletionPolicy.FORCE) { + for (Queue queue : listConfiguredQueues(addressName)) { + if (!queuesInConfig.contains(queue.getName().toString())) { --- End diff -- a simplification wouldn't work for you? if auto-created.. it means.. it was meant to be created.. no delete... if you really need the semantic differentiation.. we would need to find a better name.. 19882	ARTEMIS-1230	Can you elaborate a bit more about what exactly you're looking for? I've used a Maven BOM, but never created one.	1	0	https://issues.apache.org/jira/browse/ARTEMIS-1230
19883	ARTEMIS-1214	Github user clebertsuconic commented on the issue: https://github.com/apache/activemq-artemis/pull/1324 I'm a bit concerned with isolation of concern on Page.. Why don't you bring your change to SequentialFile and use a method on SequentialFile to read it... if reading files through mmap is that faster than NIO, lets always read using mmap... even the load on libaio would speed up, as it's using (as far as I remember). is this the same on any env? lets just use that way always?	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1214
19884	ARTEMIS-1214	Github user clebertsuconic commented on the issue: https://github.com/apache/activemq-artemis/pull/1324 @franz1981 there are only two parts... paging/reading.. journal/loading.. journal/printdata (which is using the load.. so I'm not counting this one).. only two	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1214

#	Requirement	Questions	Answered	Successfully Answered	URL
19885	ARTEMIS-1214	Github user michaelandrepearce commented on the issue: https://github.com/apache/activemq-artemis/pull/1324 @franz1981 @clebertsuconic been going through this the last two days, one bit I'm unclear on is where or what logic flow are we intending this to improve things for? Journal Paging I ask as if its for the latter (paging), and we're doing it to use page caching as another layer of keeping as much as possible in memory (though not on heap), then i don't think AIO is an option there, as such should probably just scope the work to NIO and MAPPED. If its for Journal, i thought the journal was write heavy, as the read is only on broker restart, where do we really care, for the extra complexity it will cause if we had to deal with AIO? (i may have miss understood the read path for Journal btw) Cheers Mike	1	1	https://issues.apache.org/jira/browse/ARTEMIS-1214
19886	AMQCPP-606	Yep, aware of Qpid's library. However, that doesn't provide a standard programming API. How would adding AMQP to CMS be different than the current protocol support for openwire and stomp in CMS?	1	0	https://issues.apache.org/jira/browse/AMQCPP-606
19887	AMQCPP-564	I implemented following methods in the Threading namespace: // void Threading::releaseCurrentThreadHandle() { ThreadHandle* self = (ThreadHandle*)PlatformThread::getTlsValue(library->selfKey); if (self != NULL) { detachFromCurrentThread(self); } } // void Threading::detachFromCurrentThread(ThreadHandle* self) { PlatformThread::lockMutex(library->globalLock); // Destroy given Foreign Thread Facade that was created during runtime. std::vector<Thread*>::iterator iter = library->osThreads.begin(); bool isFound = false; for (; iter != library->osThreads.end(); ++iter) { if (self->parent == *iter) { isFound = true; break; } } if (isFound) { PlatformThread::setTlsValue(library->threadKey, NULL); PlatformThread::setTlsValue(library->selfKey, NULL); // Ensure all of this thread's local values are purged. threadExitTlsCleanup(self); // Destroy OS thread including self thread handle. delete *iter; // Remove thread form the global list. library->osThreads.erase(iter); } PlatformThread::unlockMutex(library->globalLock); } Both methods are static, the method void Threading::releaseCurrentThreadHandle() is public and I am using it in the destructor of my thread object. It seems that the code runs correctly at least on Windows. I will continue testing it on Linux and Solaris. I encountered no memory leaks, but it would be nice, if someone could check the correctness of the implementation. If it's correct, could you add these or similar methods to a future release of the library?	1	1	https://issues.apache.org/jira/browse/AMQCPP-564
19888	AMQCPP-543	Hi, I compare with the java client, and uploaded a patch that I think does pretty much what the java do. The java assume the latest version of the protocol by default and when it receives a wireFormatInfo command from the broker, saves the protocol version. this is done in an AtomicInteger. ActiveMQMessageProducer.java {code} // Enable producer window flow control if protocol > 3 and the window // size > 0 if (session.connection.getProtocolVersion() >= 3 && this.info.getWindowSize() > 0) { producerWindow = new MemoryUsage("Producer Window: " + producerId); producerWindow.setExecutor(session.getConnectionExecutor()); producerWindow.setLimit(this.info.getWindowSize()); producerWindow.start(); } {code} Can you explain why the comment says protocol > 3, but the code actually does >= 3? Perhaps you can also review the patch?	1	0	https://issues.apache.org/jira/browse/AMQCPP-543
19889	AMQCPP-517	Hi. Timothy Bish How are you? Could you help me?? I need to building ActiveMQ-CPP with C++. Do you have a clue or tip??? Tks. VIlmar Resende from Brazil 2013/10/9 Timothy Bish (JIRA) <jira@apache.org> -- *ViLMeR_**ReSeNDe* Vida é rsrsrsrsrs (risadas mesmo, não RS)	1	0	https://issues.apache.org/jira/browse/AMQCPP-517

19891	ADDR-38	Dasarath, which repo do you want me to put this in? please specify the full patch of the directory. -- dims	1	1	https://issues.apache.org/jira/browse/ADDR-38
19892	ADDR-38	Quoting "Davanum Srinivas (JIRA)" <jira@apache.org>: How about-- http://mirrors.ibiblio.org/maven/addressing/jars thanks, --dasarath page=com.atlassian.jira.plugin.system.issuetabpanels:comment- tabpanel#action_12474583	1	1	https://issues.apache.org/jira/browse/ADDR-38
19893	ADDR-21	Sorry I meant to create this issue in the Tuscany project instead, for some reason JIRA didn't point me to Tuscany as usual this time... Could you please cancel this issue. Thanks.	0	0	https://issues.apache.org/jira/browse/ADDR-21
19894	ADDR-20	Sorry I meant to create this issue in the Tuscany project instead, for some reason JIRA didn't point me to Tuscany as usual this time... Could you please cancel this issue. Thanks.	0	0	https://issues.apache.org/jira/browse/ADDR-20
19895	ADDR-10	Hi, the content of the patch looks good, but it's not in the correct format. Can you please regenerate it using "svn diff" (as described at http://logging.apache.org/log4net/contributing.html#patch)? Thanks, Ian	1	0	https://issues.apache.org/jira/browse/ADDR-10
19896	ADDR-10	Thomas, Do you really want us to check in the code with your copyright headers? Is it a bid deal to remove them? i think i'd prefer a clean patch w/o the copyright headers. thanks, dims	1	1	https://issues.apache.org/jira/browse/ADDR-10
19897	ADDR-10	Our policy is to require the copyright headers, as otherwise people won't know that we have copyright in the files. Without the extra header, it would say that Apache owns the complete copyright, whereas we are only granting you a license, as I understand it. I'm not a legal expert, and I'll have to check with the people here who are authorised to make these decisions. What is the normal way of handling this situation? Would it be acceptable if we just used a shorter header?	1	0	https://issues.apache.org/jira/browse/ADDR-10
19898	ADDR-10	I've had a talk with the managers here. I think we could shrink the header down a lot, if that's the issue. The main question they have is: who owns the copyright to code we submit? Presumably, we still own it (and are free to relicense it and use the code in other projects). If we don't have a header at all, the file would say that Apache owns it. Of course, this particular patch is rather trivial. However, we want to sort out a policy for future contributions, since we use several Apache libraries in our software (see http://www.gria.org/ for an LGPL example) and we have other patches we could submit too. Thanks,	1	0	https://issues.apache.org/jira/browse/ADDR-10
19899	AIRFLOW-1414	[~bolke] Any though on that this (the corresponding PR is https://github.com/apache/incubator-airflow/pull/2444) We are trying to switch from Oozie to Airflow at Booking.com and would really need this feature (or maybe there's already a way to achieve this) for us to go forward with the migration.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-1414
19900	AIRFLOW-1414	[~bolke] thanks for your feedback, would you have time to have a quick look at this ticket too: https://issues.apache.org/jira/browse/AIRFLOW-1398?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-1414
19901	AIRFLOW-1401	I'm particularly interested in thoughts from [~alexvanboxel], [~wwlian], and [~fenglu]	1	1	https://issues.apache.org/jira/browse/AIRFLOW-1401
19902	AIRFLOW-1401	SGTM, maybe we can include other standardization efforts on GCP operators as well (see https://issues.apache.org/jira/browse/AIRFLOW-820)? Let's also make sure to do it in a backwards-compatible way and not break any existing DAGs that depend on an older version of these operators.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-1401

19903	AIRFLOW-1398	[~bolke] Any though on that this (the corresponding PR is https://github.com/apache/incubator-airflow/pull/2431) We are trying to switch from Oozie to Airflow at Booking.com and would really need this feature (or maybe there's already a way to achieve this) for us to go forward with the migration.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-1398
19904	AIRFLOW-1398	[~bolke] I implemented your suggestion, would you mind reviewing?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-1398
19905	AIRFLOW-1325	To be clear, are you planning to REMOVE support for S3/GCS? We are heavy users of GCS for logging, and this would be a show stopper for us.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-1325
19906	AIRFLOW-1310	It was exactly the same sort of thinking on my side. Good point about the logs. It was sort of design decision as we capture all logs centrally in ELK so we had no need to stream the logs to airflow as such. It is not hard to add though. Also regarding your comment that it would be more powerful if you can supply a pod definition directly - thats another decision to hide the pod definition as such to make deployment of simple jobs simpler. I have a version where you can give a pod definition instead in case you need to do something complex, but for most jobs we have we just have an image (often with default command) and we dont want to force people to learn yet another library just to run a simple command. Do you mind collaborating to get out something nice and useful to everybody?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-1310
19907	AIRFLOW-1019	[~aoen], changing this to blocker for 1.8.1. LMK if you don't think we should block the release on it.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-1019
19908	AIRFLOW-983	Was this confirmed yet?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-983
19909	AIRFLOW-983	It seems like the commit was reverted but I'm not sure if testing was done: https://github.com/apache/incubator-airflow/pull/2195? If not I can try to take a look soon but just wanted to confirm first [~bolke]	0	0	https://issues.apache.org/jira/browse/AIRFLOW-983
19910	AIRFLOW-979	Please review my Pull Request #2149: https://github.com/apache/incubator-airflow/pull/2149	1	1	https://issues.apache.org/jira/browse/AIRFLOW-979
19911	AIRFLOW-932	verify_integrity in models.py is where you would like to look at. As mentioned it sets a state to REMOVED if a task instance does not have a corresponding task in a DAG. It is there for auditing and versioning reasons. Does it affect running anything? A changed DAG cannot have a dependency on a non existent task. Ie. please explain why this is a blocker.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-932

Can you try letting the scheduler run a dagrun, and then backfill the dagrun once it completes (same DAG)? so e.g. let it run for one dagrun via scheduler (might need to unpause it if it's paused) then airflow backfill teztg -t create_and_transfer_roster -s 2016-03-15 -e 2016-03-15	1	1	https://issues.apache.org/jira/browse/AIRFLOW-932

#	Requirement	Questions	Answered	Successfully Answered	URL
19915	AIRFLOW-932	Issue resides in cli.py and will only happen when a specific task is used: {code} if args.task_regex: dag = dag.sub_dag(task_regex=args.task_regex, include_upstream=not args.ignore_dependencies) {code} This creates a subset of the tasks from a dag_run, with the same name as the original. Hence it will set a task to removed if you verify the integrity of a dag run, cause that will consider the tree of the original (whole). get_task_instances picks up all instances, including "removed' ones from the original (whole) dag and this is not filtered in the backfill. Hence the lists mismatch and an AirflowException is thrown. The quick and dirty fix is to not mark removed if run from backfill and filter the list of "get_task_instances". However the functionality if sub_dag is awkward imho - and seems not to be tested, and might need a real fix. What do you think?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-932
19916	AIRFLOW-932	PR is available with unit tests [~aoen]. Please review	1	1	https://issues.apache.org/jira/browse/AIRFLOW-932
19917	AIRFLOW-931	[~bolke] I added a bunch of manual logging to verify this. What seems to happen (in my simple gist example) is DAG starts with 4 tasks. The multiple scheduler processes kick them off (the jobs.py:1095) because at that time they are all runnable (since none are yet running). That models.py:1291 does another check to make sure it is actually runnable (2 of them are, but then due to the dag concurrency of 2, the third and fourth one aren't). The 2 tasks stay marked as queued but never actually get picked up by the scheduler again (unless you restart it). Is there some other state that that models.py:1291 check could move the tasks to if that last minute check found they aren't actually runnable? (I found by making them State.NONE it worked, but that seems hackish as it keeps bouncing back and forth between QUEUED and NONE until it can actually run)	1	0	https://issues.apache.org/jira/browse/AIRFLOW-931
19918	AIRFLOW-920	[~aoen] It does propagate in its current form: if you mark success a "subdag" operator from its parent dag it will mark success all tasks part of that subdag. My PR just verifies the tree of the dag to make sure dag runs are created for any missing subdag dag runs. I consider this to be something of a hack as it is in my opinion the wrong place to do it (the webserver). BTW: Also the unit tests confirm propagation. So are we talking about the same thing?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-920
19919	AIRFLOW-908	Can i take this feature ?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-908
19920	AIRFLOW-908	[~aoen] Would you give me an instruction ?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-908
19921	AIRFLOW-891	Any reason why you are suggesting only adding the day like that? It isn't very intuitive to read and could be misunderstood as some time between 21:29 and 23:29. I would suggest keeping the same time format as we use everywhere else YYYY-MM-DD HH:MM:SS	0	0	https://issues.apache.org/jira/browse/AIRFLOW-891
19922	AIRFLOW-890	Are the example endpoints just the two in the docs? Specifically: /api/experimental/dags/<DAG_ID>/tasks/<TASK_ID> returns info for a task (GET). /api/experimental/dags/<DAG_ID>/dag_runs creates a dag_run for a given dag id (POST). Or is there a roadmap somewhere?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-890
19923	AIRFLOW-846	Hi, I see that 1.8 has finally been tagged, is there any plan to release it to pypi ? How is that automated/processed ? Cheers	1	0	https://issues.apache.org/jira/browse/AIRFLOW-846
19924	AIRFLOW-846	BTW [~artwr], would you please be kind enough to point me where this vote / release tracking is taking place ? Looks like I'm lost on JIRA...	1	0	https://issues.apache.org/jira/browse/AIRFLOW-846
19925	AIRFLOW-679	I see this has a closing PR. Is this ticket still relevant or can it be closed?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-679
19926	AIRFLOW-539	Not sure if you saw the note on the related issue, but perhaps this could be implemented via a kwargs passed through to the API, so that one-off feature changes don't require end-to-end plumbing in the future?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-539
19927	AIRFLOW-539	I agree re: kwargs, but I'd rather keep it as a separate thing from this just for simplicity's sake. Could you open a second JIRA to use kwargs for Google hook/operator params?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-539
19928	AIRFLOW-539	[~criccomini]: athough this ticket is closed (can you add a "gcp" label on this ticket), you're probably an admin. Thanks.	0	0	https://issues.apache.org/jira/browse/AIRFLOW-539
19929	AIRFLOW-513	What's wrong with workaround 2? The point of parallelism is to control how many processes are running. A sensor that's waiting is in a while loop eating processing time, so you don't really want to ignore them for parallelism's sake. Short timeout, with tuned retry delay, and retry counts, will work just fine.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-513
19930	AIRFLOW-513	Porting convo from gitter to ticket: {code} [kyuen] option 2 is a valid way of preventing the problem. Just created the issue to see what people think the sensors should do. Didn't want to make a pr before seeing how people feel about how the sensors should behave [George Leslie-Waksman] Sensor doesn't really give the best sense for how they work. I think @mistercrunch was talking about more complex operations in the scheduler as an alternative way of doing things, but I think that's still a work in progress. {code} Would love to hear more from others on how they'd like sensors to behave	1	1	https://issues.apache.org/jira/browse/AIRFLOW-513
19931	AIRFLOW-511	[~criccomini] any thoughts on this?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-511
19932	AIRFLOW-479	Can I take this issue?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-479
19933	AIRFLOW-461	This is for GCS to BQ operator, right?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-461
19934	AIRFLOW-454	Where in the docs would you place this? Submit a PR if you think this is a necessary feature. For example, if someone were to require this link in the natural process of reading through a getting-started guide, I'd say it makes sense. Otherwise, i'd expect folks who are working on PRs to use Google to look into Flask-Admin, SQLAlchemy, or someone other 3rd party framework that Airflow leverages.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-454
19935	AIRFLOW-445	[~jlowin][~criccomini] What do you think?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-445
19936	AIRFLOW-409	[~mtdewulf] I'm considering taking ownership of this issue since you mention on your PR: "Since I've posted this PR, my team has decided that Airflow is not appropriate for our use case, so I probably won't be able to spend any cycles updating it." I assume you're happy for me to assign this to myself and take it over?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-409
19937	AIRFLOW-382	+1 [~maxime.beauchemin@apache.org], {noformat} While we're [decreasingly] comfortable installing all sorts of packages (R packages, Python libs, related apt packages, ...) on Airflow workers, we clearly don't want any of that on the Yarn boxes directly.{noformat} It could be easier to implement once Docker on YARN infrastructure is complete? YARN-3611, YARN-4793 https://hadoop.apache.org/docs/r2.7.2/hadoop-yarn/hadoop-yarn-site/DockerContainerExecutor.html	0	0	https://issues.apache.org/jira/browse/AIRFLOW-382
19938	AIRFLOW-374	> The task can monitor the time since last heartbeat and kill itself to prevent such cases. In your example, if the task can't get access to the DB how does it know? Are you planning on keeping some local in-mem variable that tracks the last successful heartbeat write?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-374
19939	AIRFLOW-350	Could you add some more description to this ticket? I don't understand it.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-350
19940	AIRFLOW-340	Also, should I track other unreferenced dependencies? I'm sure there's a couple of others lying around. If so, should I open an another ticket/PR to cover this extended work?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-340
19941	AIRFLOW-331	Ah, nice catch. Can you send a pull request, please?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-331

#	Requirement	Questions	Answered	Successfully Answered	URL
19942	AIRFLOW-329	I'm a little concerned about performance. The dag runs page, for example, barely loads for us, since we have 100s of DAGs at a 15m interval. Perhaps recent DAG runs is better?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-329
19943	AIRFLOW-325	Isn't this possible with an ExternalTaskSensor(same_dag_id, previous_task_id, allowed_states=[State.SUCCESS, State.FAILED])?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-325
19944	AIRFLOW-312	Can you try running off of master? I'm wondering if my PR in AIRFLOW-200 fixes this.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-312
19945	AIRFLOW-288	Thoughts on support for this? It would be nice to see this at the DAG level so individual DAGs could be triggered in a timezone aware way by the the scheduler.	0	0	https://issues.apache.org/jira/browse/AIRFLOW-288
19946	AIRFLOW-276	Considering https://issues.apache.org/jira/browse/AIRFLOW-758, would it not be more straight forward to just revert back to execpv and run gunicorn with the --reload argument? Granted, this functionality is listed under the "Debugging" section of gunicorn's settings documentation, but it might be still be appropriate for this use case. Link to gunicorn docs: http://docs.gunicorn.org/en/19.0/settings.html#reload	0	0	https://issues.apache.org/jira/browse/AIRFLOW-276
19947	AIRFLOW-275	[~bolke], you committed the PR for this, right?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-275
19948	AIRFLOW-258	Makes sense to me. Want to send a PR?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-258
19949	AIRFLOW-258	Hey guys - this seems like the closest thing to an issue I'm seeing. I have a custom executor and a custom operator as a plugin. If I specify my custom executor in the config, airflow takes a different path than if I don't specify using the custom executor. If I'm configured with a built in executor like LocalExecutor, the plugin loads fine. If I'm configured to use my custom executor, then it loads the plugins which also loads the modules my custom operator is defined in, which is normal. I'm subclassing BaseSensorOperator and as its importing modules it throws an error about not being able to import BaseOperator from airflow.models from airflow/operators/__init__.py. Long story, any ideas on how to tackle this? Would be glad to work on a PR with a bit of guidance. Thanks!	0	0	https://issues.apache.org/jira/browse/AIRFLOW-258
19950	AIRFLOW-249	This is really awesome analysis. Can you send a PR? (unless I missed it)	0	0	https://issues.apache.org/jira/browse/AIRFLOW-249
19951	AIRFLOW-247	[~sanand], not sure what the protocol is for creating issues related to something I'd like to implement. Is what I've done here acceptable?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-247
19952	AIRFLOW-247	[~rfroetscher], are you still planning to work on this? If not, we can re-assign to [~gjreda].	1	0	https://issues.apache.org/jira/browse/AIRFLOW-247
19953	AIRFLOW-247	[~gjreda], want to have a look at the PR?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-247
19954	AIRFLOW-247	I'm searching for documentation related to how Airflow works with EMR. I'm struggling to find anything here: https://airflow.incubator.apache.org/integration.html#aws My main question is, can Airflow create an EMR cluster and bring it back down like AWS Data Pipeline? Thanks! EDIT: Found some information here: Spark, EMR: - https://github.com/apache/incubator-airflow/blob/master/airflow/contrib/example_dags/example_emr_job_flow_automatic_steps.py - https://github.com/apache/incubator-airflow/blob/master/airflow/contrib/example_dags/example_emr_job_flow_manual_steps.py - (uses emr hooks, operators) https://docs.google.com/presentation/d/1NG1P86HRlX43qTVucCTOsFqIbCvYdOhq_np90VlbVRc/edit#slide=id.gd40eeee67_1_0 - (uses shells scripts to launch and terminate emr clusters) https://www.agari.com/automated-model-building-emr-spark-airflow/ - (use shell script to spark-submit on a local spark installation) https://blog.insightdatascience.com/scheduling-spark-jobs-with-airflow-4c66f3144660 - (installs spark on each airflow worker node and runs local spark jobs without use of spark submit) https://medium.com/@calvertmg/airflow-integrating-with-apache-spark-50a7704dcebd - (alternative mozilla implementation for emr spark job) https://github.com/mozilla/telemetry-airflow/blob/master/dags/operators/emr_spark_operator.py EMR: - https://github.com/apache/incubator-airflow/blob/master/airflow/contrib/hooks/emr_hook.py - https://github.com/apache/incubator-airflow/blob/master/airflow/contrib/operators/emr_create_job_flow_operator.py - https://github.com/apache/incubator-airflow/blob/master/airflow/contrib/operators/emr_add_steps_operator.py - https://github.com/apache/incubator-airflow/blob/master/airflow/contrib/operators/emr_terminate_job_flow_operator.py Spark: - https://github.com/apache/incubator-airflow/blob/master/airflow/contrib/hooks/spark_submit_hook.py - https://github.com/apache/incubator-airflow/blob/master/airflow/contrib/operators/spark_submit_operator.py	1	0	https://issues.apache.org/jira/browse/AIRFLOW-247
19955	AIRFLOW-245	[~jlowin] Thanks for the feedback. But I don't quite get it. There's `BaseExecutor` class that all executors derived from, it has a field `queued_tasks` that's a dictionary of tasks where the key is the task key and the value is a tuple of `(command, priority, queue, task_instance)`. During heartbeat we already [retrieve the task from the db.	https://github.com/apache/incubator-airflow/blob/f4c44146cd38afe21c517230bff71d33ab041246/airflow/executors/base_executor.py#L110] We can pass to the `execute_async` method. I have a question then: I write a custom executor. How can I reuse available Operators and their fields in the executor. Say I write executor for Mesos, I want to have access to Docker operator fields from there and transform them to an HTTP call. What would be the preferable way to do that in Airflow?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-245
19956	AIRFLOW-245	The Scheduler is an object that decides what tasks to run; the Executor is an object that decides where to run those tasks. So the Scheduler hands a TaskInstance to the Executor and says "I want to run this task". That's why the Executor has access to the TaskInstance when tasks are being queued. The Executor then extracts the TI's "command" (for example: airflow run my_task) and its sole job is to decide how to run that command. execute_async() is where that decision is made. The important thing is that the thing being run is the string command, not the TI object, and the signature of execute_async should reflect that. The larger question here is why would an operator ever influence the executor? An Operator is a series of instructions that are designed to be run in a self-contained way, no matter what the executor is. An executor is a way of kicking off an Operator. There should be no dependency between them. To be explicit: an Operator must be able to run under any Executor. However, I am not familiar with Mesos so unfortunately I don't know exactly what you're trying to do -- but have you looked at the existing MesosExecutor in airflow.contrib.executors? Is it insufficient for your objectives? If your operator requires special handling, then it sounds like maybe you want a MesosOperator that runs your docker command?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-245
19957	AIRFLOW-199	This can be done via the tree view by clicking on the failed task(s), and clicking "clear" with "downstream". Is this what you're looking for? It will allow the DAG to resume.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-199
19958	AIRFLOW-177	[~criccomini] I was thinking that would it be helpful to have a cli support for that.. say {{ resume_dag }} which takes a execution_date as input and rerun only failed tasks?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-177
19959	AIRFLOW-169	What do you mean by expired schedules? You mean DagRuns that have finished? Which page in the UI are you referring to?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-169
19960	AIRFLOW-167	This sounds reasonable to me. Want to send a PR?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-167

#	Requirement	Questions	Answered	Successfully Answered	URL
19961	AIRFLOW-167	Specifically, the CLI solution sounds reasonable. The REST solution is better, but we haven't yet set up a REST API for Airflow yet. In the mean time, want to send a PR for the CLI {{dag_state}} command?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-167
19962	AIRFLOW-165	I think this is already done, right? https://pythonhosted.org/airflow/concepts.html#task-documentation-notes You can do: {code} t = BashOperator("foo", dag=dag) t.doc_md = """\ #Title" Here's a [url](www.airbnb.com) """ {code}	0	0	https://issues.apache.org/jira/browse/AIRFLOW-165
19963	AIRFLOW-161	What context is this under? You mean like you want to use the EmailOperator or SlackOperator to notify people to download a file that's been created as part of the DAG? We do this using XCom+EmailOperator. XCom variables can be accessed via templates. We store the file in a blob store (like S3). The file location is stored in XCom, which the EmailOperator references when it sends the email.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-161
19964	AIRFLOW-161	I don't think that we want to embed Quoble logic directly in Airflow. I'm a bit out of my element on the UI-front, though. Perhaps there's a way to achieve this through plugins, or by simply putting the link in the logs?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-161
19965	AIRFLOW-161	Sure, can you please cc top contributors to PR or here.	0	0	https://issues.apache.org/jira/browse/AIRFLOW-161
19966	AIRFLOW-135	I'm +1 on cutting branches for releases (instead of tags). I'm also +1 on deleting dead branches, but could you post a list of the proposed branches to delete so we can allow people time to notify if they have a branch that they don't want deleted?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-135
19967	AIRFLOW-129	[~maxime.beauchemin@apache.org], [~aoen], [~artwr], could one of you take a look at this? I think you guys are the big Celery users.	0	0	https://issues.apache.org/jira/browse/AIRFLOW-129
19968	AIRFLOW-128	[~bolke], OK to close this?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-128
19969	AIRFLOW-123	What exactly do you define as a timeout? # Task is killed because it's a zombie # A connection to some infrastructure times out # A task runs for longer than it should (1) seems to be the one that Airflow could do right now. (2) is hard--it requires cooperation from the operator to throw some kind of known TimeoutException (unless you want to use Python built-in TimeoutError). (3) I supposed could be handled as a task-level SLA.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-123
19970	AIRFLOW-121	Hello. I think you should file a new bug issue with an example DAG that triggers this bug. Please also specify which version you are running.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-121
19971	AIRFLOW-118	Was there a PR for this?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-118
19972	AIRFLOW-115	[~artwr] Are you working on this issue? I'm facing many errors when using the current `S3Hook` mostly caused by it using `boto` instead of `boto3` (e.g. https://github.com/boto/boto/issues/2836)	0	0	https://issues.apache.org/jira/browse/AIRFLOW-115
19973	AIRFLOW-113	[~Shenghu], can you: # Test this against master? # Post your DAG (or some equivalent) Python code so we can try and replicate	1	1	https://issues.apache.org/jira/browse/AIRFLOW-113
19974	AIRFLOW-113	Also, I wonder if perhaps you want max_active_runs instead of concurrency? From [FAQ|https://pythonhosted.org/airflow/faq.html]: {quote} concurency defines how many running task instances a DAG is allowed to have, beyond which point things get queued {quote} Whereas: {quote} Is the max_active_runs parameter of your DAG reached? max_active_runs defines how many running concurrent instances of a DAG there are allowed to be. {quote}	1	1	https://issues.apache.org/jira/browse/AIRFLOW-113
19975	AIRFLOW-111	Thanks [~criccomini]. I fixed the description by changing 'jobs' to 'task instances'. Can you please help on review the related PR: https://github.com/apache/incubator-airflow/pull/1579 ?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-111
19976	AIRFLOW-101	[~bolke], which PR was this part of?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-101
19977	AIRFLOW-93	[~underyx] I'm rapidly learning about ExternalTaskSensor but could you not create 6 ETS in your hourly DAG, one for each of the 10 minute tasks (so one with delta of 10 minutes, one with 20 minutes, one with 30 minutes, etc.) and then have your hourly task depend on all of those sensors completing successfully? See for example AIRFLOW-47.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-93
19978	AIRFLOW-91	ok i pushed new PR https://github.com/apache/incubator-airflow/pull/1497 but i really misunderstand (if i replace 'ssl_certfile': None, section) i got : {color:red} Traceback (most recent call last): File "/usr/local/bin/airflow", line 13, in <module> parser = get_parser() File "/usr/local/lib/python2.7/dist-packages/airflow/bin/cli.py", line 689, in get_parser default=configuration.get('webserver', 'ssl_keyfile'), File "/usr/local/lib/python2.7/dist-packages/airflow/configuration.py", line 520, in get return conf.get(section, key, **kwargs) File "/usr/local/lib/python2.7/dist-packages/airflow/configuration.py", line 428, in get "in config".format(**locals())) airflow.configuration.AirflowConfigException: section/key [webserver/ssl_keyfile] not found in config {color} so please check ones more my changes ? thanks !	0	0	https://issues.apache.org/jira/browse/AIRFLOW-91
19979	AIRFLOW-91	i update related issue, pls take a look ones more ?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-91
19980	AIRFLOW-91	hi for all, i already update PR, plz take a look on it? thanks !	1	0	https://issues.apache.org/jira/browse/AIRFLOW-91
19981	AIRFLOW-81	What do you think about writing a new sensor based off of the TimeSensor that blocks during the blackout period?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-81
19982	AIRFLOW-79	Is this dead in the water? I've been reading about it in the pull request and on the mailing list and on the Gitter channel...	1	0	https://issues.apache.org/jira/browse/AIRFLOW-79
19983	AIRFLOW-78	[~abridgett] Can you tell me more about your expectations of clear?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-78
19984	AIRFLOW-78	Assigning this to Norman. We can clear dag runs issued by clear in both the UI and CLI. [~bolke] [~jlowin][~maxime.beauchemin@apache.org] Do you see any issue with this idea?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-78
19985	AIRFLOW-78	[~abridgett]: Just to clarify, the issue here is still that the cleared dagruns get rerun without respecting the max_active_runs amount?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-78
19986	AIRFLOW-78	[~abridgett]Is max_active_runs in this scenario set to 1? Did you set it to depend on upstream? And nothing else is running?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-78
19987	AIRFLOW-71	[~asnir], can you describe what this is a bit more?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-71
19988	AIRFLOW-71	[~asnir], do you want add config to the DockerOperator, such that it can execute a `docker login` before it runs the Docker command?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-71
19989	AIRFLOW-71	Hi [~criccomini], I'm really needing it, and I think it's simple to do that... I was thinking in: Expose the Client (docker-py.client.Client) that is instantiated inside of DockerOperator.execute() method, changing it to instantiate in __init__(), so we will be able to execute the login passing username, password, and the specific registry too.... eg: d = DockerOperator(task_id='example_task_id', image='example/image-name', force_pull=True, owner='felipetancredo', command="./bi_jobs/etl/example.py {{ execution_date }} {{ execution_date }}") user = 'test' pwd='pwd' if d.cli: d.cli.login(username=user, password=pwd, registry='https://registry.example.com', reauth=True) Can I contribute to docker_operator? Do u see any problem? (sorry, I'm beginner in the open source projects)	1	0	https://issues.apache.org/jira/browse/AIRFLOW-71
19990	AIRFLOW-71	When will [~asnir]'s PR be approved? It's been 8 months.	0	0	https://issues.apache.org/jira/browse/AIRFLOW-71
19991	AIRFLOW-58	[~maxime.beauchemin@apache.org], any reason why this was closed?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-58
19992	AIRFLOW-58	[~sanand], did you mean to put a real external URL in? You just put the JIRA in. ;)	1	0	https://issues.apache.org/jira/browse/AIRFLOW-58
19993	AIRFLOW-55	Overall, this looks good to me. Given that it's in contrib, and basically can't be supported by the committers (unless one of us wants to use it?), I'm OK without tests. [~sanand], what's your take?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-55

#	Requirement	Questions	Answered	Successfully Answered	URL
19994	AIRFLOW-54	+1 for this feature as well. cc @jlowin (the original creator of xcom) [~amustafa] Would you like to take this on? The one case you need to think about is subdags. I think the relationships above translate across subdags, but please do test with subdags as well. Also, please change '@upstream' to '@parent'	1	0	https://issues.apache.org/jira/browse/AIRFLOW-54
19995	AIRFLOW-54	[~amustafa] Any PRs that we can look at?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-54
19996	AIRFLOW-52	[~criccomini] Can we do an 'airbnb' release for now then? Ie. not use the apache brand? Cause this release is long overdue and 1.7.0 is a bit buggy. Chasing licenses will cost at least another week or even more (with broken PRs to add)	1	1	https://issues.apache.org/jira/browse/AIRFLOW-52
19997	AIRFLOW-52	[~jghoman]/[~hitesh]/[~cnauroth] what's the best way to handle this? We basically had an RC in flight for like a month before Apache.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-52
19998	AIRFLOW-52	So, the release will be coordinated (and built from) github and github resources? I think Chris is right, but I'd be concerned about running the vote or whatever process was being used for the release on ASF resources. I'd want to avoid the appearance of trying to make an end-run around asf procedure (which I know isn't the case). I'm honestly not sure though; may be worth pinging general@incubator.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-52
19999	AIRFLOW-52	[~aoen], are you planning to burn in [~jlowin]'s fix before release?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-52
20000	AIRFLOW-52	This one right https://github.com/apache/incubator-airflow/pull/1473 ? In this case yes.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-52
20001	AIRFLOW-52	Should this be closed?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-52
20002	AIRFLOW-51	Shouldn't we support both, rather than deleting the `cpus` field? As I read it, it sounds like Docker supports both CPU count and cpu_shares percentage.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-51
20003	AIRFLOW-48	It's likely not implemented because no one is using it. Can you provide an example of your uri? Is it something like *postgresql://localhost:2345/your_db?sslmode=require*? What version of postgresql are you running? I'm not sure how well this parameter is supported for versions of postgresql before 9.2. Another alternative is to take control of this by implementing this logic in a PythonOperator's python callable. That could read this param and use psycopg2 to connect to your db. Of course, then you would not be using the Connection or Hook, but, you would be able to achieve your end goal. In the meantime, feel free to submit a PR for review -- we'd be happy to accept it.	0	0	https://issues.apache.org/jira/browse/AIRFLOW-48
20004	AIRFLOW-45	What do you think about defining a heuristic that variables would be hidden from the UI if they contain the text: hidden, password, secret	1	1	https://issues.apache.org/jira/browse/AIRFLOW-45
20005	AIRFLOW-45	{quote} I think we should have a configuration variable to hide/expose the encrypted values in the UI for both Variables and Connections. It should likely affect all Variables and/or Connections in a given Airflow installation and not be DAG specific. {quote} This seems OK to me. So, current proposal is: # Add a config param to airflow.cfg called hide_encrypted_ui_fields # Default hide_encrypted_ui_fields to true The hide_encrypted_ui_fields param would hide `passwords` and `extras` in the hooks view, as well as the `value` of variables in the variables view. Does that sound OK?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-45
20006	AIRFLOW-45	Sounds good. [~cheny258], would you like to try this?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-45
20007	AIRFLOW-45	[~cheny258] As part of this Variables work, there are currently 2 views. One is the edit view, the other a list view of all variables. Currently, the list view only shows the variables names, not the values. i'd like to display the values if we the configuration param proposed above is set to False. Can you add this feature? Currently, one must click edit to view a variable value.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-45
20008	AIRFLOW-45	[~sanand] will do that for the list view of variables. Also, for conn edit page, {{extra}} and {{password}} are already in a hidden_fields list. Do we want to make any changes in edit or list view for that?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-45
20009	AIRFLOW-45	Could we not handle this with a regexp of fields that should be hidden rather than a boolean?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-45
20010	AIRFLOW-45	{quote} I'd have to go change the config whenever I do this, which is kind of annoying {quote} (Yes, quoting myself :)). Perhaps not. As long as the regex was something like '.*secret.*', and I stuck to that as a naming convention, I'd be fine. Still, to limit burden on [~cheny258], I'd like to keep the regex to a separate ticket. I'll open it up after this one is closed off. [~withnale]/[~sanand], does that sounds OK?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-45
20011	AIRFLOW-39	Can you provide sample code?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-39
20012	AIRFLOW-39	Oh, so not version 1.7.0? What does 'git log | head' look like for you?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-39
20013	AIRFLOW-35	[~sanand], any particular reason you closed this?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-35
20014	AIRFLOW-31	I'm not sure where the best place to comment is... Wherever you're comfortable? Let me know if you discover anything -- in my experience getting objects to behave like modules is tricky (supporting full {{import}} syntax etc). Maybe some of what I did for plugins would be reusable?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-31
20015	AIRFLOW-30	Initially, this seemed fine to me, but it actually sounds a little tricky to me. The concern I have is what happens if the DAG fails half way through and the transaction is reverted? In such a case, Airflow will show prior operators as having successfully run, but their state mutation will not have taken place. This effectively means that the entire DAG needs to be re-run, even if some of the operators show a successfully executed view.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-30
20016	AIRFLOW-30	In your use cases, are the source and destination DBs part of the same DB cluster?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-30
20017	AIRFLOW-29	One thing to consider: what happens if the scheduler machine is overloaded, and imports are taking a long time because of that? (similar to a GC pause in Java).	1	1	https://issues.apache.org/jira/browse/AIRFLOW-29
20018	AIRFLOW-29	[~underyx], re (1), I wasn't suggesting GC would be an issue--was just saying it's a similar problem to timeouts in Java when GC occurs. Anyway, I agree, probably not worth worrying about. What default did you have in mind? 5s?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-29
20019	AIRFLOW-29	[~underyx] I'm not connecting the configuration suggestion to how such a change would resolve your problem. Do you mind providing a little more context on impact of such a change? If the import is actually only taking 1 second on your box and if you are not hitting a timeout, then why does the larger configured value have an impact on you?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-29
20020	AIRFLOW-28	Okay, but what's preventing someone else from implementing this? How come the issue was closed as won't fix?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-28
20021	AIRFLOW-23	Hey [~alexvanboxel], checking in to see how this and AIRFLOW-24 are coming.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-23
20022	AIRFLOW-22	Can public buckets/BQ datasets (thinking about GDELT) be used without a project?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-22
20023	AIRFLOW-22	What's GDELT? In the case of GCS, yes I believe we can use public buckets. I'm uncomfortable baking in someone's own buckets, though. It'd have to be public buckets that Google, themselves, provide. For BQ, unfortunately not. The problem with BQ is that it requires a project to run its queries on. Even if the datasets are public, you still need to have access to a whole project, and be a viewer for it, in order to execute any queries against the data.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-22
20024	AIRFLOW-21	Do you need some help? I could do it.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-21

#	Requirement	Questions	Answered	Successfully Answered	URL
20025	AIRFLOW-21	[~alexvanboxel], that would be awesome. Can you wait until AIRFLOW-16 goes in, though, to avoid merge conflicts? Should be today.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-21
20026	AIRFLOW-20	The DagRun.previous handling is used to connect previous related DagRuns in order to make depends_on_past work with a moving interval or an automatically aligned start_date. Imagine the following Use Case 1 Dag1 has an assigned start_date "2016-04-24 00:00:00" with a cron schedule of “10 1 * * *”, ie run every day at 1.10am. Depends_on_past is true. The current scheduler kicks off a run “2016-04-24 00:00:00” and then stops as the previous interval of “2016-04-24 01:10:00” is “2016-04-23 01:10:00”. This cannot be found as it has not taken place and thus the whole thing grinds to a halt and the TaskInstances refuse to run. What the user expects here is that the first run is “2016-04-24 01:10:00”, ie start_date + interval, unless the start_date is on the interval, ie. start_date is first interval. This is what I address by start_date normalization in the PR. However, the second issue then kicks in as the “previous” run can still not be found. Use Case 2 Dag2 has an assigned start_date "2016-04-24 01:10:00" with a cron schedule of “10 1 * * *”. Depends_on_past is true. The scheduler happily goes through a few runs, but then the dag is updated and the schedule adjusted. Because the previous interval cannot be found by the TaskInstance (emphasis), tasks get stuck again requiring an manual override. What the user expects here is that the scheduler is smart enough to figure out that we are still running the same dag and that it needs to look up the previous run for that dag and make sure dependencies are met with that previous dagrun in mind. I don’t think those two use cases are edge cases, considering the amount of questions we get on these subjects. To resolve the remaining issues (aside from start_date normalization) I first made DagRun aware of its predecessors. Then I strengthened the relationship between TaskInstances and DagRuns slightly, by optionally including a dagrun_id in the TaskInstance. Now a TaskInstance can lookup its predecessors in the previous DagRun and know for sure that it is either the first run or it has a predecessor somewhere in time instead of guessing. What I am unsure of is what to consider is the unit of work: 1) is a TaskInstance dependent on its past predecessor ignoring the outcome of the DagRun? (previous TaskInstance can be successful, but previous DagRun as a whole can fail) or 2) is it dependent on the outcome of the DagRun? 3) Can it be both? In case of 1 and 3 my logic needs to be updated slightly, but that should not be too much of a big deal. However I have difficulty imagining why you want to do that.	0	0	https://issues.apache.org/jira/browse/AIRFLOW-20
20027	AIRFLOW-20	Max I understand your concerns, I'm working with Jeremiah to see if I can remove the need for the dag run id in taskinstances. I would be happy to as it would simplify the change. Rigorous testing needs to take place before making it part of a release, current unit tests do not cover enough. Documentation is forthcoming but I will only assemble it when all assumptions have been worked out and discussions finished. Please also note that we (Jeremiah and I) are seeing this as the first step towards his bigger pr. Sort of paving the way. If you can regard it in that context and not just "making it easier for schedules that move". In that regard the more fundamental questions I have also asked on the list have not been answered yet: what do we consider the unit of work? Is it a DagRun or is it a taskinstance? We talk about dags, but we can run tasks without a DagRun. I consider taskinstances part of a DagRun. They should not be able to look beyond the borders of the containing DagRun. If they want to do so they should query the DagRun for this. If you do this backfills and so on become much easier to handle.	0	0	https://issues.apache.org/jira/browse/AIRFLOW-20
20028	AIRFLOW-20	I took the plunge and made the "dag_run_id" field for TaskInstances NOT NULL. This allowed me to catch places where TaskInstances are manipulated and to fix these. So indeed there are some strange places like the PythonOperator and views.py that create TaskInstances. That is really a refactor task towards the future (eg. dao principle would be smart maybe) The good news is these have all been fixed. All tests pass, including some additional ones I added. Now I can dive in to some other cases. Like what to do when a backfill has an execution_date that is equal to a previous scheduled run or backfill? 1. Do we update the tasks and run new ones and skip ones that were successful? If so do we connect old ones to the backfill run or do we leave them as is (ie connected to the old run). Think lineage here. How do we handle dependencies if the old tasks stay connected to their previous run? 2. Do we refuse to run? That would disallow you to "add tasks" in the past. I tend to lean towards no 1 and connect all tasks to the backfill and setting the state of the "old" dagrun to "SUPERSEDED" or "OVERRIDDEN". The same flexibility as today would exist but an audit trail is preserved.	0	0	https://issues.apache.org/jira/browse/AIRFLOW-20
20029	AIRFLOW-17	Got it. Is there any way to fix it?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-17
20030	AIRFLOW-16	Pull request up at: https://github.com/airbnb/airflow/pull/1452 This PR should also fix: https://github.com/airbnb/airflow/issues/1354 [~jlowin]/[~alexvanboxel], I could use a review from you.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-16
20031	AIRFLOW-16	> Got it working with the new hooks Did you find any bugs, or started up without incident? > GCP operations and hooks be prefixed with gcp ... Could be a ticket, I'll pick it up (after this is merged). Sounds good. Please do! Go ahead and open the JIRA.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-16
20032	AIRFLOW-15	Pull request: https://github.com/airbnb/airflow/pull/1448 [~jlowin], could use a review.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-15
20033	AIRFLOW-15	[~criccomini] is this issue resolved?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-15
20034	AIRFLOW-14	Overall, major +1 on this. One thing that I think is glossed over is what happens when a DagRunJob dies ({{kill -9}}, for example)? You mention heartbeats, but I don't see a mention of who is going to clean up/take over the execution of the wedged DagRuns when their job dies. I see this problem a lot with Airflow right now (DagRuns stuck in 'running' forever), so it'd be good to think through.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-14
20035	AIRFLOW-14	If I'm not mistaken, I think this work should solidify running multiple schedulers as a first-class citizen, right? We are not going to run Celery for distributed execution, so having a trustworthy way to run more than one scheduler is useful. /cc [~sanand]	1	0	https://issues.apache.org/jira/browse/AIRFLOW-14
20036	AIRFLOW-14	How does a DRJ grab a Dag to execute? It seems to me like there's a race condition where two DRJs could simultaneously see that a DAG needs to be run, and both could insert entries into the dag_run table simultaneously. Is this being enforced by a primary key/unique constraint in the DB?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-14
20037	AIRFLOW-14	> DRJ needs to make sure to refresh from the db to check for a lock immediately before running it Isn't there a race condition where two DRJs check the lock in the DB before running, both see it's unset, and both set it to themselves? Even if they then check to verify that they are the owners of the lock, it's not trustworthy. The only way I can see this working is if a real read/write lock is obtained. Is SQLAlchemy doing this?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-14
20038	AIRFLOW-14	The good news is that lock_id is already set to the job's id, so I just need to add the additional check that it matches (right now it just assumes if it was able to lock, then it owns the lock, which is not as strict). But I'm still curious about your point: > Even if they then check to verify that they are the owners of the lock, it's not trustworthy. Is that not still an issue?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-14
20039	AIRFLOW-14	To clarify, would different DagRuns be evaluated in the same process, or in different processes? In the current work-in-progress branch, I noticed that task scheduling is done by each dag run. However, with the current approach, pool limits may not be correctly respected?	0	0	https://issues.apache.org/jira/browse/AIRFLOW-14

#	Requirement	Questions	Answered	Successfully Answered	URL
20040	AIRFLOW-14	While I understand that for being truly distributed it would be great to have a distributed scheduler, are not not looking for a distributed executor instead [~criccomini]? Now the scheduler and the executor are coupled, but that does not need to be and does not even make sense imho.	1	1	https://issues.apache.org/jira/browse/AIRFLOW-14
20041	AIRFLOW-14	{quote} Now the scheduler and the executor are coupled {quote} Can you expand on this a bit? I know [~sanand] is running multiple LocalExecutor schedulers. We were planning to do this as well.	1	0	https://issues.apache.org/jira/browse/AIRFLOW-14
20042	AIRFLOW-14	Now the scheduler is, in case of using the LocalExecutor, tied to the executor: ie. both are same process. This is nor really required and maybe not even the best way forward. A scheduler should, imho, only schedule and an executor should execute. With celery you already get a kind of decoupling. The celery executor puts tasks on a queue and then celery workers pick these up. It is not so difficult to imagine that the local executor can do the same and pick up tasks for a queue that is either something like rabbitmq or just the db. In other words the scheduler should queue tasks in a certain order and the executor should pick these up from anuwhere. Ie. producer/consumer like. Does this make sense?	1	1	https://issues.apache.org/jira/browse/AIRFLOW-14
20043	AIRFLOW-14	Yea, I agree with this. I guess the two things that I'm worried about are: # Will this mean we can't safely run more than one LocalExecutor? # Will this break the CeleryExecutor?	1	0	https://issues.apache.org/jira/browse/AIRFLOW-14
20044	ANY23-297	GitHub user lewismc opened a pull request: https://github.com/apache/any23/pull/30 ANY23-297 Any23 doesn't build under JDK1.8 This issue addresses https://issues.apache.org/jira/browse/ANY23-297 @ansell can you please check how this affects your open pull request? Do you have any objections to merging this into master branch? Thanks You can merge this pull request into a Git repository by running: $ git pull https://github.com/lewismc/any23 ANY23-297 Alternatively you can review and apply these changes as the patch at: https://github.com/apache/any23/pull/30.patch To close this pull request, make a commit to your master/trunk branch with (at least) the following in the commit message: This closes #30 ---- commit bb55685859a26b36ca4a9893bb93aa9eb7687b8c Author: Lewis John McGibbney <lewis.mcgibbney@gmail.com> Date: 2016-11-25T21:33:57Z ANY23-297 Any23 doesn't build under JDK1.8 ----	1	1	https://issues.apache.org/jira/browse/ANY23-297
20045	ANY23-297	Github user lewismc commented on the issue: https://github.com/apache/any23/pull/30 Hi @ansell any objections to merging into master branch? Seems the like the semargl issues are progressing which is great, however I don't think that should block us here in Any23. I'll commit by CoB today unless there are objections. Thanks	1	1	https://issues.apache.org/jira/browse/ANY23-297
20046	ANY23-291	I agree [~thomas.francart], are you working off of master branch? If so, are you able to provide us with a patch and a test case if possible?	1	1	https://issues.apache.org/jira/browse/ANY23-291
20047	ANY23-280	Github user lewismc commented on the pull request: https://github.com/apache/any23/pull/24#issuecomment-212761670 Anyone get a chance to take a look at this? This is THE critical issue for Any23 to address right now IMHO.	0	0	https://issues.apache.org/jira/browse/ANY23-280
20048	ANY23-280	Github user ansell commented on the issue: https://github.com/apache/any23/pull/24 There are a large number of whitespace modifications to change from tabs to 2-space indentation. Is 2-space indentation what Any23 is aiming for, given that most java code is either tab or 4-space indentation.	0	0	https://issues.apache.org/jira/browse/ANY23-280
20049	ANY23-276	Github user ansell commented on the issue: https://github.com/apache/any23/pull/27 I rebased this to fix the conflicts. There are some test failures, some of which I @Ignore'd while other I left so far. Could you have a look in to see if you can figure out why the tests that have been ignored or still failing are broken?	1	1	https://issues.apache.org/jira/browse/ANY23-276
20050	ANY23-276	Github user lewismc commented on the issue: https://github.com/apache/any23/pull/27 Hi @ansell whats the current state of this patch? Thanks for merging in the PR.	1	1	https://issues.apache.org/jira/browse/ANY23-276
20051	ANY23-276	Github user lewismc commented on the issue: https://github.com/apache/any23/pull/27 Hi @ansell this is starting to look REALLY good. I've pulled your suggestions. I did notice that the appassembler is still generated in the core/target/appassembler. I think that this can be removed based upon the suggestion for CLI to be modularized as you've implemented. Is there anything else you want to add to this patch? If not then I suggest we merge into master.	1	1	https://issues.apache.org/jira/browse/ANY23-276
20052	ANY23-259	[~p_ansell] is this the issue which is leading to the unstable builds?	1	1	https://issues.apache.org/jira/browse/ANY23-259
20053	ANY23-259	bq. There also appear to be a changed (lower, unless the junit assertEquals was applied backwards) number of extractors than expected. Hi [~p_ansell] what do you mean by this :(	1	1	https://issues.apache.org/jira/browse/ANY23-259
20054	ANY23-257	I added implementations of Sesame RDFParser's for common OWL formats, including Manchester Syntax, Functional Syntax (using the obo to owl algorithm that is in owlapi), and OWL/XML to owlapi-rio:4. See the list at: https://github.com/owlcs/owlapi/blob/version4/rio/src/main/resources/META-INF/services/org.openrdf.rio.RDFParserFactory As OWL isn't an input format, per se, which particular format were you wanting to target?	1	1	https://issues.apache.org/jira/browse/ANY23-257
20055	ANY23-250	Github user lewismc commented on the pull request: https://github.com/apache/any23/pull/13#issuecomment-76448755 all tests pass locally. Would be appreciated if someone could confirm.	1	1	https://issues.apache.org/jira/browse/ANY23-250

META-INF/services/ or another method?	1	1	https://issues.apache.org/jira/browse/ANY23-247
20057	ANY23-247	Any ideas about this [~p_ansell]. Did you manage to debug where and when rules and/or fixes are invoked and when they are applied?	1	1	https://issues.apache.org/jira/browse/ANY23-247
20058	ANY23-247	Github user lewismc commented on the pull request: https://github.com/apache/any23/pull/17#issuecomment-201537723 hi @ansell OK I've added in the correct rule and fix as well as a test to verify that empty itemscope values are identified and fixed. Whilst debugging this however the core issue persists. Reasoning for this is that ```RDFa11Extractor extends BaseRDFExtractor``` which inherits the [parser function inputstream parameter](https://github.com/apache/any23/blob/63ba2fc82966cc056a2e475af849154d0dfdcf93/core/src/main/java/org/apache/any23/extractor/rdf/BaseRDFExtractor.java#L105). This input stream is not the 'fixed' steam but the raw document. The only way I can think around this is for us to * refactor the [RDFa1.1Extractor](https://github.com/apache/any23/blob/master/core/src/main/java/org/apache/any23/extractor/rdfa/RDFa11Extractor.java) such that it extends [TagSoupDomExtractor](https://github.com/apache/any23/blob/63ba2fc82966cc056a2e475af849154d0dfdcf93/api/src/main/java/org/apache/any23/extractor/Extractor.java#L60) as oppose to (eventually) the [ContentExtractor](https://github.com/apache/any23/blob/63ba2fc82966cc056a2e475af849154d0dfdcf93/api/src/main/java/org/apache/any23/extractor/Extractor.java#L44), or * undertake a mass refactoring which essentially removes the [ContentExtractor](https://github.com/apache/any23/blob/63ba2fc82966cc056a2e475af849154d0dfdcf93/api/src/main/java/org/apache/any23/extractor/Extractor.java#L44) altogether... this would provide us with a much more flexible and adaptable extraction framework IMHO. What do you think?	1	1	https://issues.apache.org/jira/browse/ANY23-247
20059	ANY23-247	Github user lewismc commented on the pull request: https://github.com/apache/any23/pull/17#issuecomment-201550510 I agree. Jumping through this in the debugged made me think the same. I think it is different if Any23 is to be a PURE implementation... But that is clearly not the case. Any23 fits in best when it can be used to extract semantics from any old crap input that it is fed. Parsers and extractors *should not* fail when there is a piece of crap input HTML. Currently, that's exactly what happens and it is extremely limiting. I would like to propose that this PR is committed to master as is, we then open a brand new issue which acts exactly your comments refactoring out content extractor and reusing the input stream which has been fixed, etc. Any thoughts Peter? Thanks fr quick response. On Friday, March 25, 2016, Peter Ansell <notifications@github.com> wrote: > The system does seem a little too complex for our purposes and isn't > usable because of that. > > > Removing generics would be the first step IMO as there are too many > rawtypes definitions which indicate generics are being used badly. > > > ContentExtractor may be able to be completely removed instead of being > refitted into the process after that and the parser should always be set to > parse as far as practical for our purposes. > > > It is a little strange that there isn't a buffered, markable, InputStream > provided for all of the steps to reuse as necessary rather than pushing a > raw InputStream or other source into different extractors. > > > — > You are receiving this because you authored the thread. > Reply to this email directly or view it on GitHub > <https://github.com/apache/any23/pull/17#issuecomment-201545776> > -- *Lewis*	1	1	https://issues.apache.org/jira/browse/ANY23-247
20060	ANY23-247	Github user lewismc commented on the pull request: https://github.com/apache/any23/pull/17#issuecomment-202702530 @ansell any further comments here? I will try to get to work on the larger issue this week.	1	1	https://issues.apache.org/jira/browse/ANY23-247
20061	ANY23-238	Github user lewismc commented on the pull request: https://github.com/apache/any23/pull/9#issuecomment-55443359 Hi @Timpy thank you so much fo this PR. I absolutely agree with you that this is a problem as I do not like the look of the BNode hash either, it is useless for many purposes. For the record, can you please post here what the new outout will look like. Thank you p.s. I posted https://issues.apache.org/jira/browse/ANY23-238 so that we can add this to our release report once we release Any23 1.0	1	0	https://issues.apache.org/jira/browse/ANY23-238
20062	ANY23-226	[~p_ansell], can you detail the current status of this over on jsonld-java? I feel that it would be best to bake in support in jsonld-java library which we wrap in Any23. Thanks in advance.	1	1	https://issues.apache.org/jira/browse/ANY23-226

20063	ANY23-226	Github user lewismc commented on the pull request: https://github.com/apache/any23/pull/16#issuecomment-84384643 Ok Peter thank you for looking. This is great. I have not seen the test failures. Can you please tell me if it is in Any23 or in jsonld-Java? We could upgrade the Jsonld-Java implementation as well. To the 0.5.1 release On Saturday, March 21, 2015, Peter Ansell <notifications@github.com> wrote: > The main bug was that the entire script node was being sent to > JSONLD-Java, and not just its content. > > However, I also made a few other changes while doing that testing. > > It turned out that the jsonld was invalid, but somehow the exception when > parses fail was changed to be silently swallowed, so the only indication > was that the count was 0. I turned on the exception propagation again (no > reason it should be swallowed outside of temporary testing). > > However, in addition to the 4 tests currently failing on the core tests, > there are now other tests failing due to an inability to parse " > " > > — > Reply to this email directly or view it on GitHub > <https://github.com/apache/any23/pull/16#issuecomment-84257478>. > -- *Lewis*	1	1	https://issues.apache.org/jira/browse/ANY23-226
20064	ANY23-207	Hi [~cuibonobo] I am VERY sorry for getting back to you so late. Right now we have a Microformats2 GSoC project underway so we can definitely sync. Are you up for that?	1	1	https://issues.apache.org/jira/browse/ANY23-207
20065	ANY23-207	Hi Folks, there is a PR for this now available at https://github.com/apache/any23/pull/18 Would be great if you guys could help us peer review the patch. Thanks.	1	1	https://issues.apache.org/jira/browse/ANY23-207
20066	ANY23-202	Do you want to do Tomcat monitoring? It would mean less code for us and more reuse of existing monitoring. We can automate this as well along with the nightly pull script. wdyt? I've classified this for 1.1 as it is certainly non-blocking as as the WebService at any23.org will be updated nightly there is no need for us to hold a 1.0 release for this.	1	0	https://issues.apache.org/jira/browse/ANY23-202
20067	ANY23-202	Does Apache have a privacy policy that details this collection of information by Google Analytics?	1	1	https://issues.apache.org/jira/browse/ANY23-202
20068	ANY23-202	[~p_ansell], I honestly do not know! I am not really too happy about Google Analytics being part of Any23 source or binary release. It means that everyone who deploys an Any23 server with the Google Analytics code embedded can be tracked! I am not really too happy with that. [~michele.mostarda], did you consider adding Tomcat logging metrics instead of Google ones? This would mean that it is down to whoever consumes Any23 to do their own log analysis, not for us to do it for them.	1	0	https://issues.apache.org/jira/browse/ANY23-202
20069	ANY23-202	Hi guys, I used Google Analytics because as you can easily verify other Apache projects already embed it within their landing pages (see for example http://hadoop.apache.org/). Any metrics provided by Tomcat is not comparable with the informations obtained by Google Analytics like geographic distribution and disambiguation of accesses. The tracker is embedded only in the demo front-end service page and anybody can customize (change the tracking ID) or remove it. Suggestions to make it less invasive: we could perhaps add the tracking ID within the POM so that it is more visible and left it empty in the distributions? we could add a disclaimer in the README? Suggestions? In general I suggest to keep a way to fine track user activity because we need to quantify the usage, the community and the distribution to better improve support.	1	1	https://issues.apache.org/jira/browse/ANY23-202
20070	ANY23-202	The fact that some other projects have it doesn't absolve the privacy issue. There are many questions that should have been asked before the tracker was added. Who is using the information other than yourself and Lewis now or in the future? Was this a request from your employer or just from personal interest? Why didn't you add a privacy policy when you added the tracker? Why doesn't the entire project team have access to the information? I am not sure what you mean by adding information to the POM, but this is certainly something that is never done by any other projects.	1	1	https://issues.apache.org/jira/browse/ANY23-202
20071	ANY23-198	Hi Norbert. Are you using the Any23 source code? Are you able to contribute a patch for this feature? It would be a nice contribution.	1	0	https://issues.apache.org/jira/browse/ANY23-198
20072	ANY23-189	what is the plan in this ticket? to integrate MO in any23 in some way?	1	0	https://issues.apache.org/jira/browse/ANY23-189
20073	ANY23-185	hi [~nisala12], nice patch :) Does it comply with the following ruleset "...Note that the global name has a specific semantic in the <meta> element and that the itemprop must not be set when one of the name, http-equiv or charset is already used."?	1	1	https://issues.apache.org/jira/browse/ANY23-185
20074	ANY23-185	Hi Lewis John McGibbney, One thing I have notice in the spec[1] itemprop is stated as "unimplemented", and I cant really find a reason behind this labeling. WDYT ? ---------- if the itemprop is set, a user-defined metadata, transparent for the user-agent as the semantics of the metadata is user-specific. Living Standard Unimplemented ---------- Also for the cases other cases name and http-quiv and charset (attribute type), this labeling has not been used and more information is given for these case where as for the itemprop case no any other information or sample case is provided. (see examples in the bottom of the the spec) So my patch is written considering these 3 cases except itemprop. I am more than happy to include this case of itemprop if more information is available. :) [1]https://developer.mozilla.org/en-US/docs/Web/HTML/Element/meta Regards Nisala	1	0	https://issues.apache.org/jira/browse/ANY23-185
20075	ANY23-185	Hi [~nisala12] bq. One thing I have notice in the spec[1] itemprop is stated as "unimplemented", and I cant really find a reason behind this labeling. WDYT ? Right now I also don't have an idea however id the spec states that it is unimplemented then we can ignore this attribute from the <meta> node for the time being. I have tested this patch against master branch and will commit.	1	1	https://issues.apache.org/jira/browse/ANY23-185
20076	ANY23-177	Hey [~lanthaler], do you have any interest in working on this issue? If so I can assign it to you.	1	1	https://issues.apache.org/jira/browse/ANY23-177
20077	ANY23-177	[~lewismc], it's been a couple of years since I programmed in Java the last time and I'm not familiar with the code of Any23 either. [~p_ansell], could you look into this please? I think you are quite familiar with both code bases and already have a quite good idea of what would be needed. I don't how much work it would be, but it would perhaps also be interesting to extract JSON-LD embedded in HTML. See http://www.w3.org/TR/json-ld/#embedding-json-ld-in-html-documents Thanks!	1	0	https://issues.apache.org/jira/browse/ANY23-177
20078	ANY23-177	[~p_ansell] integrating this into the extractor/rdf package was pretty straight forward. Is there anything else you would want to see implemented here?	1	1	https://issues.apache.org/jira/browse/ANY23-177
20079	ANY23-155	Hi Debmalya, can you submit a patch we can apply against trunk? Thanks for opening this issue.	1	1	https://issues.apache.org/jira/browse/ANY23-155
20080	ANY23-155	Hi, Thanks for your mail. I will feel happy to apply the patch and work for Any23. I am new to this project. Let me know how to apply patch. Is there any link to follow? Please give me some time. Is there any date line for this? Best Regards, Debmalya Jash On Tue, Apr 2, 2013 at 3:47 AM, Lewis John McGibbney (JIRA) <jira@apache.org	1	1	https://issues.apache.org/jira/browse/ANY23-155
20081	ANY23-155	The only test that is failing for me right now in the core module is testBlankNodesViaURL, so the RDFSchemaUtilsTest is working for me. Could you post your java and maven versions (mvn -version and java -version) here	1	1	https://issues.apache.org/jira/browse/ANY23-155

#	Requirement	Questions	Answered	Successfully Answered	URL
20082	ANY23-155	Could you also post the output of: core/target/surefire-reports/org.apache.any23.util.DiscoveryUtilsTest.txt After you revert your changes to RDFSchemaUtilsTest and post the output of: core/target/surefire-reports/org.apache.any23.vocab.RDFSchemaUtilsTest.txt	1	1	https://issues.apache.org/jira/browse/ANY23-155
20083	ANY23-155	So RDFSchemaUtilsTest is working now for you after you reverted your changes to it?	1	1	https://issues.apache.org/jira/browse/ANY23-155
20084	ANY23-147	http://purl.org/dc/terms/ doesn't look to be deprecated. Are you thinking of http://purl.org/dc/elements/1.1/ ?	1	1	https://issues.apache.org/jira/browse/ANY23-147
20085	ANY23-147	Well its a redirect right? Which URI so we use as the NS?	1	1	https://issues.apache.org/jira/browse/ANY23-147
20086	ANY23-147	I am not sure what you mean. Everyone I know is still using http://purl.org/dc/terms/ for current applications, although older applications may still support http://purl.org/dc/elements/1.1/. The DCTERMS vocabulary in Any23 has a small subset of the http://purl.org/dc/terms/ properties, but it could definitely be improved, particularly to include the classes. Most people refer to the dc/elements/1.1 namespace using the prefix "dc", with the newer dc/terms either being "dcterms" or "dct". Is that part of the confusion?	1	1	https://issues.apache.org/jira/browse/ANY23-147
20087	ANY23-144	What do you suggest then Peter? I am happy to go with a positive consensus on this one.	1	1	https://issues.apache.org/jira/browse/ANY23-144
20088	ANY23-144	{bq}My preference is for all uppercase vocabulary class names if the commonly used prefix is an acronym, and camel-case where it is not, however, in some cases that distinction is not necessarily clear.{bq} OK so in an attempt to move towards a more appropriate (partial) solution... the DOAP vocab would remain named as DOAP and LIKF-Core would be changed to CamelCase e.g. LKIFCoreAction, etc... Can you confirm? It appears that this was not so much of a pressing issue before Simo pointed it out and you commented. This being said I appreciate that and I think it is important to get it right :) {bq}To clear up the naming I would prefer if we avoided the getInstance() pattern.... like access to the properties without storing them in a local private field to get around the getInstance() call.{bq} Excuse me if I am wrong, but I see this as a fundamental different issue from renaming of classes. Can we address this more directly in a related but separate issue?	1	1	https://issues.apache.org/jira/browse/ANY23-144
20089	ANY23-144	patch for trunk which addresses comments and concerns. If someone can review we can sort this one out. Thank you	1	1	https://issues.apache.org/jira/browse/ANY23-144
20090	ANY23-144	I can't seem to apply either of the patches using "patch -p0 < ANY23-144.patch" or similar for ANY23-144-v2.patch. Do you need to apply both of the patches to get it to work, because that wasn't working for me either but I may just be doing something wrong? What command have you been using the apply the patches?	0	0	https://issues.apache.org/jira/browse/ANY23-144
20091	ANY23-141	Expected release date of Sesame 2.7.0 has been set for about 3 weeks time. Is it worth waiting until then to release 0.8.0 or should we still focus on 0.9.0?	1	1	https://issues.apache.org/jira/browse/ANY23-141
20092	ANY23-141	Sesame-2.7.0 is now available, and the Git repository is now writable. What should we do about this issue?	1	1	https://issues.apache.org/jira/browse/ANY23-141
20093	ANY23-138	Hi [~simone.tripodi], can you provide some guidance as to this one? Do you have any 'typical' steps or guidance which we could work on? Thanks	0	0	https://issues.apache.org/jira/browse/ANY23-138
20094	ANY23-137	Hi Lev. You've marked this issue as being related to a number of other issues. Can you please provide info on how many of these have been addressed within the scope of your proposal? Thank you.	1	1	https://issues.apache.org/jira/browse/ANY23-137
20095	ANY23-137	I think it would be great to push on with this RDFa proposal then make an interim release for Any23. Is anyone interested in working to get this done? This issue (with a few others) would IMO justify pushing an RC for 0.9.0. Any thought please?	1	1	https://issues.apache.org/jira/browse/ANY23-137
20096	ANY23-137	Is there still any glue code that needs to be written to achieve this? or is ready for testing? Are there any instructions somewhere on how to build any23 with this patch so I can test it?	1	0	https://issues.apache.org/jira/browse/ANY23-137
20097	ANY23-137	What's the status of this issue to merge semargl into Any23? Is there anything I can test to make progress?	1	0	https://issues.apache.org/jira/browse/ANY23-137
20098	ANY23-137	Hi! I've prepared pull request to fix RDFa related tests. See https://github.com/apache/any23/pull/2 . Are there any other things to do with this branch?	1	0	https://issues.apache.org/jira/browse/ANY23-137
20099	ANY23-137	Success. I tested https://github.com/apache/any23/pull/2 on ubuntu 13.04 and it worked with java 1.7.0_51 and mvn 3.0.4! Not sure why it's not working on Mac OS X, do I need java 7?	1	0	https://issues.apache.org/jira/browse/ANY23-137
20100	ANY23-137	Thanks, Stephane! Completely missed that RDFa was used as a part of extraction process in other tests. I've added related fixes. Brief description. *ServletTest* Old RDFa implementation produces {{<issue level="Warning" row="14" col="5">Error while processing node /HTML(1)/HEAD(1)/META(9) : 'Cannot map prefix 'fb''</issue>}} while {{<fb:app_id>}} is completely valid predicate which shouldn't be resolved against fb: prefix. *Any23Test* *RoverTest* Changed RDFXMLWriter to NTriplesWriter in some tests to improve precision (they basically check line count). Changed expected triples count. It was reduced in most cases, because old RDFa parsed produced a lot of invalid triples like: {quote} <http://host.com/service> <http://host.com/serviceexternal> <http://host.com/service/ambiente/> . <http://host.com/service> <http://host.com/serviceexternal> <http://host.com/service/salute/> . <http://host.com/service> <http://host.com/serviceexternal> <http://host.com/service/legalita/> . <http://host.com/service> <http://host.com/serviceexternal> <http://www.ansamed.info/> . <http://host.com/service> <http://host.com/serviceexternal> <http://host.com/service/web/notizie/regioni/lazio/provinciadiroma/> . {quote} Fixed markup in {{test-resources/src/test/resources/html/rdfa/ansa_2010-02-26_12645863.html}} to conform declared XHTML 1.0 Strict. Fixed RDFa markup in {{test-resources/src/test/resources/html/encoding-test.html}} otherwise it shouldn't produce any triples. Disabled second part of {{Any23Test.testExtractionParameters}}. Should it do anything after RDFa parser replacement? Also, ExtractionException thrown from BaseRDFExtractor is escalated in test suite. It leads to some failed tests in Any23Test. What's the correct behaviour for ANY23 parser in case it gets SAXException?	1	0	https://issues.apache.org/jira/browse/ANY23-137
20101	ANY23-134	Will you have time to work on this before the 0.8.0 release or is it okay to postpone it to 0.9.0?	1	0	https://issues.apache.org/jira/browse/ANY23-134
20102	ANY23-127	[~lewismc] I'm failing to understand the point of this story. The purpose of the Semantic Web is that parsing tools like any23 should be vocabulary agnostic. Baking support for a whole load of vocab is by design out dated as soon as it ships, given that vocabularies tend to evolve (e.g. schema.org). Maybe if you explaine what you are trying to achieve I will be better able to help...	1	1	https://issues.apache.org/jira/browse/ANY23-127

#	Requirement	Questions	Answered	Successfully Answered	URL
20103	ANY23-127	.bq The purpose of the Semantic Web is that parsing tools like any23 should be vocabulary agnostic. Yes of course. I take your point. However if we are not namespace (or more appropriately vocabulary) aware then do we just _expect_ to recognize some namespace declarations? .bq ...is by design out dated as soon as it ships, given that vocabularies tend to evolve (e.g. schema.org). I need to disagree here. I would agree if you had added "given that _some_ vocabularies..." Some vocab's do evolve you are right. You've picked probably the most dynamic of all as your example however this ignores the point that _some_ are not as dynamic. For example, I added some Legal vocab's for a specific project I was working on. These may or may not be useful to other people. I also know that the vocabularly has NOT changed, therefore they are as useful now as they were when I wrote the implementation. If you navigate to the BBC vocabularies you will also see that these are well established and are not as dynamic as you may indicate. Furthermore, by implementing other developers' vocabularies we are directly inviting those same developers to use Any23 as a tool for extracting triples from their markup. Personally I've reached out the DOAP and LKIF communities to state that we are now namespace aware. This is the wider goal. I hope this provides some justification behind my reasoning on this one.	0	0	https://issues.apache.org/jira/browse/ANY23-127
20104	ANY23-121	Has this got anything to do with Any23?	1	1	https://issues.apache.org/jira/browse/ANY23-121
20105	ANY23-110	I honestly didn't realise that this was committed. Have you verified it works Peter? I will try tomorrow	1	0	https://issues.apache.org/jira/browse/ANY23-110
20106	ANY23-105	One fix for this may be to create a Sesame Sail implementation that can talk to TDB. Has anyone looked into this before?	1	1	https://issues.apache.org/jira/browse/ANY23-105
20107	ANY23-105	[~andy.seaborne] [~rvesse] [~p_ansell] what do you think is the best implementation here? I am _thinking_ towards a more abstract interface which wouldn't just restrict us to TDB. Is there anything out there which I could use?	1	1	https://issues.apache.org/jira/browse/ANY23-105
20108	ANY23-103	So this has been addressed right? It doesn't quite look like what you implemented in your commit @ r1371537 is what you initially proposed, but all seems well anyway.	1	1	https://issues.apache.org/jira/browse/ANY23-103
20109	ANY23-83	Having had a browse of both o.a.a.vocab.RDFSchemaUtils, and o.a.a.rdf.RDFUtils respectively, I understand where you are coming from. I also notice that you propose a more generic factory type implementation similar to Tika which (based on some criteria) guesses the specific parser which should be used per situation. What other mimetypes would we encounter other than the ones mentioned in both of the above classes as specified within the hardcoded RDFParsers? I am interested to find out what you think. Thank you	1	1	https://issues.apache.org/jira/browse/ANY23-83
20110	ANY23-83	Hi Peter, {bq} I am not familiar enough with the rest of the codebase to know why the shortlist of supported parsers is in place [bq} Although I have tried to get to grips with as much of the codebase as I have a use-case for, I am sorry as I cannot provide insight into the original design considerations which you refer to... maybe one of the other guys could chime in here and clear the picture for us? I must admit though, I am in agreement with your overall analysis and think that the more extensible we can make the Any23 libraries the better. There was some discussion however over in ANY23-19 where the vision was to have an abstraction layer between Any23 and the underlying RDF API's. In my opinion, this would provide far greater potential for us to make Any23 a more flexible library... wdyt?	1	1	https://issues.apache.org/jira/browse/ANY23-83
20111	ANY23-83	I like these two patches and based on the conversation on any23-dev give the +1. Marking for 0.7.0 and happy to commit on behalf of Peter unless there are objections?	0	0	https://issues.apache.org/jira/browse/ANY23-83
20112	ANY23-83	I rebased my git repository onto a copy of the current trunk to check how many patches I still had in this area and noticed that RDFSchemaUtils still hardcodes the supported formats. I may not be seeing the significance of VocabularyFormat currently, but I assume that it could be generalised to any RDFFormat. Is it related to the ability to type in a human readable alias for the format in VocabPrinter? If so, have you tried using RDFFormat.valueOf(String) in the converter inside VocabPrinter which matches against registered formats using: format.getName().equalsIgnoreCase(formatName) These names may not exactly match the historical names for each format that were previously used, but they are extensible at runtime so it makes RDFSchemaUtils easier to maintain. This may also help with ANY23-3 as N3 would be available, although it would just be the Turtle subset in practice as we only hold RDF triples in memory.	1	0	https://issues.apache.org/jira/browse/ANY23-83
20113	ANY23-75	Setting for 0.7.0-incubating. Is it possible for you to explain a bit about the patch and the underlying reason as to why the existing parser implementation seems to clog up? Also this is really trivial but can you please have a look at the coding format if it differs or not. My initial thoughts of the patch are great, it's a nice one to have caught, but some additional explanation would really help us out. Thank you very much. Lewis	1	1	https://issues.apache.org/jira/browse/ANY23-75
20114	ANY23-70	Yep, unfortunately, as Lewis put it they are "horrible for searching". I usually end up doing searches elsewhere. Is there a way to search on the Apache mail archive?	0	0	https://issues.apache.org/jira/browse/ANY23-70
20115	ANY23-69	Does this duplicate ANY23-7 ?	1	0	https://issues.apache.org/jira/browse/ANY23-69
20116	ANY23-69	Yeah OK thnaks for clarification. The W3C guys that chimed in on the thread on any23-dev, stated that they would like us to produce this by the end of the month so we have plenty of time to cook something up. I had a look into the RDFa 1.1. spec, and subsequently into the EARL spec... unsurprisingly it's left me a bit puzzled as to how to pull this together so I was going to start a thread on our dev list. However this is as good a place as any I suppose. Have you any initial thoughts Michele?	1	0	https://issues.apache.org/jira/browse/ANY23-69

#	Requirement	Questions	Answered	Successfully Answered	URL
20117	ANY23-65	Well, last night I found that no, it isn't working flawlessly. I was just looking at the whole thing again to trace what is going wrong. I was about to send my XSLT file to the Sindice-dev mailing list, to bridge the period between now and the moment Sindice starts using Any23 0.7.0, when I thought of an edge case to test against. My stylesheet doesn't handle it well, and neither does my build from the SVN code. The case: when a prefix attribute contains "rnews:http://www.iptc.org/std/rNews/1.0: foaf:http://xmlns.com/foaf/0.1/ dbpedia:http://dbpedia.org/resource/" (no space between prefix name and prefix URI, but at least one prefix URI ending with a colon), my stylesheet wrongly assumes there are spaces between prefix name and prefix URI, because it tests whether the attribute contains ": ". The RDFa11Parser outputs warnings that it cannot map the foaf prefix when I test it on my 0.7.0 build. It is an edge test case because it is invalid content for a prefix attribute, but since I saw that Any23 is accepting / testing against no-space prefix definitions and I think namespace URIs with a colon are valid (e.g. <http://dbpedia.org/resource/Category:>), I figured it made an interesting test case. I sent the file anyway, with this test result too :) Another issue I have is that the RDFa11Parser doesn't infer the right triples from <link> elements with a @rel in the <head> section. I believe the @rel values "icon", "stylesheet", "bookmark" etc are to be treated specially. Sindice (Any23 0.6.1) produces URIs for these like <http://www.w3.org/1999/xhtml/vocab#icon> from my blog post. When I extract from my blog post locally, I get properties like <http://ben.companjen.name/2011/08/het-gezin-timmer-de-bruijn-in-amsterdam/icon>. The parser (also) complains my HTML doesn't declare 'xmlns="http://www.w3.org/1999/xhtml"'. I couldn't find the part of the HTML or RDFa specifications that says it should do so - as far as I can tell it's not necessary in HTML5. Looking at the code, I see some references to RDFa 1.0 in the comments in the processDocument method. This method seems to be the source for the complaint. Maybe the problem and complaint (well, warning actually) are linked? And maybe the incorrect handling of the @rel values is also linked to "// TODO: introduce support for RDFa profiles. (http://www.w3.org/TR/rdfa-core/#s_profiles)"? BTW, these profiles don't exist (anymore) in RDFa Core. I hope someone can shed more light on this, I'm too confused from reading all the RDFa related docs and drafts right now ;)	1	1	https://issues.apache.org/jira/browse/ANY23-65
20118	ANY23-61	The repo directory is a maven repository. Are the artifacts in this directory in another maven repository? We are currently deploying snapshots to the Apache Snapshots repository and new releases to the Apache staging server, based on the definitions in the apache-10.pom parent. http://svn.apache.org/repos/asf/maven/pom/tags/apache-10/pom.xml	1	0	https://issues.apache.org/jira/browse/ANY23-61
20119	ANY23-50	i had a look to the patch and it looks very nice. If the META-INF data is built at compile time and it is not necessary to package the plugins to annotate them I don't have any other concern about applying this simplification. How does it work /does it work the hot-loading with ServiceLoader?	0	0	https://issues.apache.org/jira/browse/ANY23-50
20120	ANY23-50	Hola! META-INF/services metadata are always generated at compile time, indeed plugins are annotated with [@MetaInfService|http://weblogs.java.net/blog/kohsuke/archive/2009/03/my_project_of_t.html] that is part of a provided-scope Annotation Processor wrote by Kohsuke (the Hudson/Jenkin's father) In Any23 the ServiceLoader is used inside the the Any23PluginManager, relying on the already managed dynamic ClassLoader, so when adding new jars/resources at runtime to the ClassLoader, SL queries it. I think that the same strategy can be applied to Extractors' factories as well, WDYT? Anyway, please double-ack if you agree I can commit the modification! TIA!	1	1	https://issues.apache.org/jira/browse/ANY23-50
20121	ANY23-50	I think this should definitely be commited? Once question, is there anything specific about the Any23 plugin system which make this issue only applicable to Any23? What I mean, is would it be possible to aplly this issue in a project elsewhere which relies heavily on plugins? (e.g. Nutch)	1	1	https://issues.apache.org/jira/browse/ANY23-50
20122	ANY23-48	OK so Committed @ revision 1303963 in site I also committed some changes to trunk but I can't remember which revision. If someone could please review where we are with this one, unless someone can point me to further improvement (which obviously I'm very open to) then I'd like to close this one off so we can focus on some of the other issues which lie between us and the 0.7.0-incubating release. Thanks	1	1	https://issues.apache.org/jira/browse/ANY23-48
20123	ANY23-46	Thanks Andy. Taking this forward, obviously we can copy in Any23-dev@ anyway, but do we wish to combine these resources requests to infra@, e.g. is there any way that we can share resources to limit the infra@ involvement if you were wanting to bring the SPARQL stuff to ASF as well?	1	1	https://issues.apache.org/jira/browse/ANY23-46
20124	ANY23-38	@Lewis, you mean org.apache.any23.util.LogUtils or what? That one is used to activate / deactivate the verbose mode of CLI tools by changing the log level programmatically.	1	1	https://issues.apache.org/jira/browse/ANY23-38
20125	ANY23-38	Upon closer inspection looks like your correct Michele. What about we re-factor this issue to address Simone's opinions? I'm a +1 for Slf4j	1	0	https://issues.apache.org/jira/browse/ANY23-38
20126	ANY23-36	I genuinely have not got a clue what has to be done to resolve this one. I've tried using the maven changes plugin but getting nowhere. Anyone else got a scooby?	0	0	https://issues.apache.org/jira/browse/ANY23-36
20127	ANY23-36	Isn't this issue related to Any23 history munging?	0	0	https://issues.apache.org/jira/browse/ANY23-36
20128	ANY23-33	I attempted to replace the classes with public implementations, but the once found within the classpath are marked as @deprecated. Ideas? {code} -import com.sun.org.apache.xml.internal.serialize.OutputFormat; -import com.sun.org.apache.xml.internal.serialize.XMLSerializer; +import org.apache.xml.serialize.OutputFormat; +import org.apache.xml.serialize.XMLSerializer; {code}	1	1	https://issues.apache.org/jira/browse/ANY23-33
20129	ANY23-33	Are you getting this from your compiler output? I've not tried to implement yet. We don't explicitly depend upon any xerces related stuff in the parent pom.xml, so I am curious where the imports are being pulled from for you to get this output.	0	0	https://issues.apache.org/jira/browse/ANY23-33
20130	ANY23-32	Thanks Mic for reporting! I need indeed doing more work on the service, my bad that I didn't notice! there is a specialized README in the produces distribution package that explains how to install&run, can you double chek please? TIA!	0	0	https://issues.apache.org/jira/browse/ANY23-32
20131	ANY23-26	Hi Peter. Regarding your edited comment above. Have you started/finished work on the Extractor factory patterns? I would like to get this issue integrated into trunk... therefore I need to test it. If the answer to the above is yes, are you able to produce a patch which I can apply to the SVN trunk HEAD? Thank you	1	1	https://issues.apache.org/jira/browse/ANY23-26
20132	ANY23-26	Has anyone else had the opportunity to test Peters patches? There are some trivial issues which we have discussed off list but generally speaking the spi and tika upgrades look dynamite to me. I also confirm that all tests pass locally for these patches.	1	1	https://issues.apache.org/jira/browse/ANY23-26
20133	ANY23-21	Is there an automated tool for doing this?	0	0	https://issues.apache.org/jira/browse/ANY23-21
20134	ANY23-19	Hey Paolo, with regards to Chris' recent comments on the dev list and the stub report he filed, how did you get on wrt moving away from the packages you've highlighted above and also with progressing with more collaboration between ASF RDF-type projects? I'm using this issue as a basis to kick the converation off and hopefully others will join in.	0	0	https://issues.apache.org/jira/browse/ANY23-19

#	Requirement	Questions	Answered	Successfully Answered	URL
20135	ANY23-19	Hi Max, the thing is: adding yet another dependency is going to make Any23 bigger and more complex. Can something simple be done without adding yet another dependency? As I said, an example of a small RDF distiller which does this is java-rdfa (https://github.com/shellac/java-rdfa). Third party RDF APIs become only an optional dependency and people are free to choose which one they want/need simply adding that to their classpath (in a very similar way to what SLF4j does for logging frameworks). The only thing tricky is "validation", but Any23 could chose not to validate URLs/IRIs, etc. and simply relay on the third party RDF APIs to do that.	1	1	https://issues.apache.org/jira/browse/ANY23-19
20136	ANY23-19	Hi Paolo, The example library that is continually being referred to here, java-rdfa, abstracts away from clerezza, sesame and jena interfaces by representing everything as strings. See https://github.com/shellac/java-rdfa/blob/master/core/src/main/java/net/rootdev/javardfa/StatementSink.java The java-rdfa library is also not being developed or used actively, so it isn't the best example of a successful library that doesn't use a type-safe RDF Statement/Value API. I worked on java-rdfa a little but there is no push behind it. Even its author refers to it as "The cruftiest RDFa parser in the world" Two of the three goals of Any23, command line utility, and web service, are completely ambivalent to the technology being used internally, as long as it is high quality, and the Sesame libraries are very high quality in my opinion and experience. The only goal that would be affected would be the use of Any23 as a library. How often is Any23 currently being used as a library? Could another project easily implement the same functionality using Jena with less effort than it would take to either create a custom string based solution, or move to another framework that may have just as many or more dependencies? In terms of the use of Any23 as a library, is there anything about the Sesame Model hierarchy (Value/Resource/Literal/BNode/URI) that would be better represented using a custom solution? As one example, I have been working with OWLAPI recently and its RDF handling is shocking, it merges URIs with Blank Nodes to form what it refers to as IRIs. It has a custom internal solution that only recognises two types of triples, those with an IRI in the object position (where IRI is not type-safely defined between URI and BlankNode) and those with Literals in the object position. I can't imagine Any23 going down this route, but it is the worst case scenario if the API is converted without a reason. In the simplest scenario, it may be possible to reuse the Sesame Model hierarchy to produce Values that work across all three libraries, using custom ValueImpl etc., implementations that actually implement the relevant interfaces from other libraries, along a custom ValueFactory to produce these multi-library-compatible Values (custom ValueFactories can be plugged into any Rio Parser using Rio.getParser(RDFFormat, ValueFactory), a functionality which I haven't seen in other libraries). In terms of the actual packages that are currently used, there are four basic packages sesame-model, sesame-rio-api, sesame-repository-api, sesame-sail-api, sesame-sail-memory. These base libraries are small dependencies. One other dependency is some small utilities, sesame-util that are used by sesame-model and other sesame libraries. 82K - sesame-model-2.6.5.jar 36K - sesame-repository-api-2.6.5.jar 22K - sesame-rio-api-2.6.5.jar 56K - sesame-sail-api-2.6.5.jar 54K - sesame-sail-memory-2.6.5.jar 53K - sesame-util-2.6.5.jar The value Impl classes should not be directly referenced. They should be accessed using a ValueFactory and used as their Interfaces. This doesn't change any of the libraries that are used, but it is better practice. The other libraries that pull in the Rio parsers can be linked in dynamically without compiling in the dependency, so the use of Any23 as a library would enable people to pull them in as needed. See Rio.getParser(RDFFormat, ValueFactory) and Rio.getWriter(RDFFormat) methods. It would be valuable if Any23 could dynamically pull in all of its parsers and writers using the Rio.* static methods. Then it could be used with the absolute minimum number of parsers and writers for the current user. 4.6K - sesame-rio-n3-2.6.5.jar 14K - sesame-rio-ntriples-2.6.5.jar 33K - sesame-rio-rdfxml-2.6.5.jar 17K - sesame-rio-turtle-2.6.5.jar Switching to another library may cause the bloat that you say you do not want. For example, Jena and its immediate dependencies is quite large compared to the modular sesame jar files, and that doesn't include the SPARQL parsing libraries from ARQ, as indeed the sesame libraries quote above do not include the sparql libraries. 1.7M - jena-core-2.7.0-incubating.jar 151K - jena-iri-0.9.0-incubating.jar 3.1M - icu4j-3.4.4.jar 1.4M - xercesImpl-2.10.0.jar	1	1	https://issues.apache.org/jira/browse/ANY23-19
20137	ANY23-18	Ciao Michele, what are the problems you found with java-rdfa? There is an open issue for java-rdfa to add RDFa 1.1 support (https://github.com/shellac/java-rdfa/issues/24). In any case, good to see the XSLT replaced by a new programmatic RDFa extractor.	1	0	https://issues.apache.org/jira/browse/ANY23-18
20138	ANY23-11	I've updated the w3c page above, but can't seem to create an account for the RDFizers!!! Is there anything else we wish to add to this issue? I think it goes to say that at any given opportunity make people aware of Any23.	1	1	https://issues.apache.org/jira/browse/ANY23-11
20139	ANY23-4	I think this certainly duplicates ANY23-69 ?	1	1	https://issues.apache.org/jira/browse/ANY23-4
20140	ANY23-3	Is this not addressed?	1	1	https://issues.apache.org/jira/browse/ANY23-3
20141	ANY23-3	Are there any full N3 implementations in Java? Sesame and Jena both parse the RDF subset, but not the full N3 grammar. In practice, the RDF subset amounts to Turtle. Is Any23 interested in the non-RDF components of N3?	1	1	https://issues.apache.org/jira/browse/ANY23-3
20142	ANY23-2	@Peter, Are you interested in committing this in line with thr new SPI Factory implementation you wrote?	1	1	https://issues.apache.org/jira/browse/ANY23-2
20143	APEXCORE-764	Could you please add some more description as to what the refactoring entails?	1	0	https://issues.apache.org/jira/browse/APEXCORE-764
20144	APEXCORE-735	Could you add the reason for the change.	0	0	https://issues.apache.org/jira/browse/APEXCORE-735

20146	APEXCORE-725	PR 624 is actually unrelated to this ticket; since PR 529 is now merged, shouldn't this ticket be resolved ?	0	0	https://issues.apache.org/jira/browse/APEXCORE-725
20147	APEXCORE-714	Thomas, My responses are inline.. On Tue, Apr 25, 2017 at 8:42 AM, Thomas Weise <thw@apache.org> wrote: Pramod, Sounds like some sort of alternative "processing mode" that from engine perspective allows potentially inconsistent state when there is a pipeline failure. This is of course only something the user can decide. >> Calling it an alternate processing mode is a good idea. Does the proposal assume that the operator state is immutable (or what is sometimes tagged with the stateless annotation)? For example an operator that has to load a large amount of state from another source before it can process the first tuple? >> Operator state can change, not necessarily stateless. Stateless may not automatically fall into this category as our current definition of stateless denotes window level stateless and not necessarily tuple level. Also, it would be an optimization but not something that will help with SLA if the operator still needs to be recovered when its own container fails. It might help to clarify that and also why there is a need to recover in the batch use case (vs. reprocess). >> Correct, as I mentioned in the last statement, if the container where the operator is running itself goes down then it is recovery from checkpoint and business as usual. I may have misspoken about batch, meant to say apps where operators have large state not necessarily batch, the use case we are dealing with is batch and restart is not practical as the run takes a long time. Thanks, Pramod	1	0	https://issues.apache.org/jira/browse/APEXCORE-714
20148	APEXCORE-712	I think you mean to have SSL_CONFIG as a more complex object like a POJO instead of a filename that refers to a file that contains all ssl related properties. That works for me in terms of more direct way to specifying these properties. Why would we need the long naming, using hadoop specific names, for the properties of that object. Why can't they be specified with regular field names like keystoreLocation, keystorePassord, keyPassword etc. This way the user does not need to be aware of the actual property names being used by hadoop and is more portable in case we support another runtime in the future. For convenience, for the user, the entire object with the field values can be specified as a single String property as defined by the StringCodec.Object2String class. I would prefer a more targeted name like MANAGEMENT_SSL_CONFIG as I am not sure if this would be enough to support any SSL configuration needed in future (like if this is used for encryption data flow itself). But, if you want to go with SSL_CONFIG I would be ok.	1	0	https://issues.apache.org/jira/browse/APEXCORE-712
20149	APEXCORE-711	[~sanjaypujare] There seems to be a strong dependency on Hadoop version where YARN-6457 will be fixed. As YARN-6457 by itself seems to depend on YARN-4562 that is only fixed in 2.9, will the fix require Hadoop 2.9 as well?	1	0	https://issues.apache.org/jira/browse/APEXCORE-711
20150	APEXCORE-711	[~sanjaypujare] While fix does not introduce a regression, it introduces an attribute that has no meaning unless a user upgrades to Hadoop 2.9. I'd like to see if there is a solution that does not depend on Hadoop upgrade. Additionally, how was it prototyped without YARN-6457 being fixed?	1	0	https://issues.apache.org/jira/browse/APEXCORE-711
20151	APEXCORE-711	I'd prefer not to rely on YARN-6457 and YARN-4562 be ported to older versions of hadoop-yarn-common. YARN-4562 is marked as resolved on 2.9 and 3.0, so it does not look that it will eventually make into 2.7.1. There is still no agreement on how YARN-6457 will be fixed. Instead of relying on YARN-6457, can we implement a class that extends org.apache.hadoop.yarn.webapp.WebApps or provides similar functionality and that does not have the same limitation as YARN-6457?	1	0	https://issues.apache.org/jira/browse/APEXCORE-711

#	Requirement	Questions	Answered	Successfully Answered	URL
20152	APEXCORE-711	Recapping my earlier analysis about eliminating dependencies on Hadoop/Yarn: - In org.apache.hadoop.yarn.webapp.WebApps.Builder<T> the start(WebApp) method does bulk of the work in creating the WebApp container object. The problematic line in this method currently is WebAppUtils.loadSslConfiguration(builder); which does not pass (honor) the config object passed to Builder.with(Configuration). The above line should be changed to WebAppUtils.loadSslConfiguration(builder, conf); which passes the required config object. Since a class static method (WebAppUtils.loadSslConfiguration) is being called there is no way to get the new behavior by subclassing a class and overriding a simple method. All of the code in org.apache.hadoop.yarn.webapp.WebApps.Builder.start(WebApp) will need to be copied in a new class on the Apex core side. BTW, precisely because of this, https://issues.apache.org/jira/browse/YARN-4562 was created and fixed (albeit in 2.9.x and not in any earlier version) - with this we still have an unresolved issue in the current Yarn. The current code in org.apache.hadoop.yarn.webapp.util.WebAppUtils.loadSslConfiguration(Builder, Configuration) is as follows (trimmed): public static HttpServer2.Builder loadSslConfiguration(HttpServer2.Builder builder, Configuration sslConf) { if (sslConf == null) { sslConf = new Configuration(false); } boolean needsClientAuth = YarnConfiguration.YARN_SSL_CLIENT_HTTPS_NEED_AUTH_DEFAULT; sslConf.addResource(YarnConfiguration.YARN_SSL_SERVER_RESOURCE_DEFAULT); return ... } which has 2 major issues: a) The caller can set SSL properties in the passed sslConf object but they are overridden by the default ssl-server.xml file because of the sslConf.addResource(...) call. There is no way to point to a different XML file (because it uses the hardcoded YARN_SSL_SERVER_RESOURCE_DEFAULT value and not the value of a property) which defeats the very purpose. b) the only way to solve (a) above is to mark the value final in the passed sslConf object in which case the default ssl-server.xml values won't be applied even if they are final there. Both of these are addressed by the changes in this JIRA.	1	0	https://issues.apache.org/jira/browse/APEXCORE-711
20153	APEXCORE-699	I guess that the proper way to support compatible Plugin interface modifications and versioning is to extend an existing interface. For example, if a new version of a Plugin introduces new method foo(), the new version should be defined as {code} interface PluginV2 extends Plugin { void foo(); } {code} On the other side, plugins should be able to check engine version and prevent the platform from loading plugin if the platform does not meet version requirements. Such information can be passed using PluginContext and does not require Plugin interface changes. With the proposed design, will it be OK to exclude Plugin versioning changes from 3.6.0 release?	1	0	https://issues.apache.org/jira/browse/APEXCORE-699
20154	APEXCORE-694	jsr305 is dormant, I see musings on the web that it never became a standard. Can you verify?	1	0	https://issues.apache.org/jira/browse/APEXCORE-694
20155	APEXCORE-673	Would this be to a public or some internal location? Don't you want to push to public location only on releases?	1	0	https://issues.apache.org/jira/browse/APEXCORE-673
20156	APEXCORE-670	Ah, of course the _target_ needs to be included in there as well. In my understanding, your cURL request would change the log level of the classes used by the stram? This would differ from setting the log levels in the operators, right? Example: {code} curl -H "Content-Type: application/json" -X POST \ -d '{"loggers":[{"target":"org.apache.apex.examples.pi.*","logLevel":"TRACE"}]}' \ http://apex-sandbox:9090/ws/v2/applications/application_1499808956620_0803/loggers {code} In this case, should we use two separate commands for setting the log levels in stram / operators?	1	1	https://issues.apache.org/jira/browse/APEXCORE-670
20157	APEXCORE-670	So an example for the new command in the CLI could be: {code}apex>set-log-level application_1499808956620_0873 org.apache.apex.examples.pi.PiCalculateOperator TRACE{code} OR {code}apex (application_1499808956620_0873) >set-log-level org.apache.apex.examples.pi.PiCalculateOperator TRACE{code} I will open a pull request with an exemplary implementation of this. Should the validation of the logLevel happen on the APEX CLI side? Currently it will just ignore any logLevel that is not valid	1	1	https://issues.apache.org/jira/browse/APEXCORE-670
20158	APEXCORE-670	Do other commands that interact with applications accept an application parameter? If not, then we should not introduce it here either.	1	0	https://issues.apache.org/jira/browse/APEXCORE-670
20159	APEXCORE-635	The end goal of the override BufferServerPublisher.write() in is not clear. Why is the override necessary? It is also not clear why Kryo (that is a library designed to do efficient serialization and de-serialization) will not match the proposed mechanism. If the goal is to serialize Collections (list in the example) using Kryo, Kryo has CollectionsSerializer and will (should?) do something similar to what is proposed. IMO, it will be much better not to even use Kryo when Tuples are strongly typed and implement StreamCodec without using Kryo. Default StreamCodec is provided to handle cases when Tuples are not strongly typed, in which case it is required to use reflection. The same will apply to unchecked Collections. (n) till all those issues are resolved.	1	0	https://issues.apache.org/jira/browse/APEXCORE-635
20160	APEXCORE-635	- Memory copy is required as it moves data from JVM heap to direct (off-heap) buffer. It is done prior to writing the buffer to a network channel. - Please benchmark copying one large block of memory in a single step and in multiple steps. What is the difference (in %)? Do the same for a direct buffer. - How will control tuples be injected into a continuous block of memory? - The current approach is fire and forget, the proposed requires some kind of an acknowledgment. I am not convinced that the design that requires an acknowledgment will be faster. - There is a plan to move to netty from netlet and netty provides buffer pool allocator that may better fit the proposed design. - The current format uses variable length (1, 2, 3 or 4 bytes) prefix and it is not possible to know offset where data needs to be written prior to the lenght of the serialized data is known.	1	0	https://issues.apache.org/jira/browse/APEXCORE-635

#	Requirement	Questions	Answered	Successfully Answered	URL
20161	APEXCORE-635	- If we use direct buffer, it seems ByteBuffer has no way to avoid memcopy. What I meant to avoid memcopy and garbage collection is explained as following by comparing details of current and new procedure(assume each tuple serialized to N bytes, and write M tuples in one time): current procedure(use kryo serde as example): 1) kryo serde: write data to buffer of kryo's output, assume the length of bytes is N 2) call Output.toBytes() to get bytes from kryo: need memcopy, copy N bytes 3) put message type and partition: need memcopy, copy N bytes, the total length become N+5; N bytes need to be garbage collected 4) repeat 1 to 3 M times, and generate M slices 5) copy the M slices to ByteBuffer: M*(N+5) bytes need to be garbage collected 6) write ByterBuffer to socket new procedure(use kryo serde as example): 1) write message type and partition to SerializationBuffer 2) kryo serde: serde to SerializationBuffer, assume the length of bytes is N 3) call SerializationBuffer.toSlice() to get the slice: return the wrapper instead copy the data 4) repeat 1 to 3 M times, and generate M slices 5) merge the M slices into one in most of case(if these slices in same block). If in different block, probably handle one block each time. 6) copy or wrapper the to ByteBuffer. Probably need copy if want to use direct mode. 7) write ByterBuffer to socket. reset the SerializationBuffer So, by comparing current and new procedure, current procedure need to copy around 3*N*M bytes and garbage collection of 2*N*M bytes, but new procedure only need copy N*M bytes and no need garbage collection. So new approach save 2*N*M memory copy and garbage collection. - The memory of different blocks is not continuous as we want dynamic allocate block, but the slices in same block are continuous. As the size of block is much large than slices. - The current fire and forget approach means no way to reuse the memory. That's why need to override write() method by walk around way. The new implementation of write() will reset the SerializationBuffer after wrote data to socket. The new approach don't need acknowledgement neither. - Yes, for variable length, it is not possible to reserve the space for length. But I doubled why we have to use variable length. It save at most 3 bytes for each message, but made parser harder. It's not common for protocols to use variable length. Even IP the fixed length. In worst case, even if we don't use the reserve feature of SerializationBuffer, we still can save 2*N*M memory copy and garbage collection.	1	1	https://issues.apache.org/jira/browse/APEXCORE-635
20162	APEXCORE-635	[~brightchen] What is the overhead of garbage collection? You can take the benchmark application in the Malhar for measurements.	1	0	https://issues.apache.org/jira/browse/APEXCORE-635
20163	APEXCORE-635	Hi Vald, - As I understand, array is a kind of object in java. Does java implemented differently? And how can JVM reuse allocated bytes without collection? Do you have any reference I can take a look? - I copied the implementation of kryo Output.toBytes() here (kryo-2.24.0.jar). From this implementation toBytes() do allocate new memory and copy. public byte[] toBytes () { byte[] newBuffer = new byte[position]; System.arraycopy(buffer, 0, newBuffer, 0, position); return newBuffer; } - I can get number, but that means need at least simply prototype. And based on my previous test for serialization string of 1000 ascii, The performance can gain 30% - Yes, it's pretty complex to implement all the proposal. But fortunately, most of memory manage stuff already implemented in Malhar. The things need to do is add some feature and integrate to BufferServer	1	1	https://issues.apache.org/jira/browse/APEXCORE-635
20164	APEXCORE-635	Hi Vlad, I think what you meant the issues I not addressed is a following: - Please benchmark copying one large block of memory in a single step and in multiple steps. What is the difference (in %)? Do the same for a direct buffer. - How will control tuples be injected into a continuous block of memory? my comments as following: - From my previous comments, we can the problem of current mechanism is waste 2 times memory copy and garbage collection. It's not the problem of copy one big bytes in one time or divided into multiple copies. - The control tuples also write to the same SerializationBuffer.	1	1	https://issues.apache.org/jira/browse/APEXCORE-635
20165	APEXCORE-635	bq. As I understand, array is a kind of object in java. Does java implemented differently? And how can JVM reuse allocated bytes without collection? Do you have any reference I can take a look? Yes, an array is an object in java that may hold either primitive types or other objects. When an array is GC, it is GC as a single object. If an array holds primitive types, the array's memory is reclaimed in a single step, there is no GC of individual bytes/int/long in the array. bq. I copied the implementation of kryo Output.toBytes() here (kryo-2.24.0.jar). From this implementation toBytes() do allocate new memory and copy. I was referring to Output.getBuffer() and DefaultKryoStreamCodec that uses Output.getBuffer(). You are right that Output.toBytes() allocates a new array and copies bytes from Output internal buffer to the newly allocated buffer. This is a bug in DefaultStatefulStreamCodec, it should use Output.getBuffer(). bq. I can get number, but that means need at least simply prototype. And based on my previous test for serialization string of 1000 ascii, The performance can gain 30% As I pointed to you, the prototype has a significant bug (reusing byte arrays that are not reusable due to fire and forget netlet behavior). What I would like to see is a series of small prototypes that prove that the approach provides significant performance gains. I don't see how without modifying the current definition of StreamCodec and StatefulStreamCodec the solution can be generalized. It may be possible to improve DefaultStatefulStreamCodec (concrete implementation of StatefulStreamCodec), but it seems to require a large amount of modifications to netlet and buffer server that other StreamCodec implementations will not benefit from. Additionally, the proposal seems to require netlet client to be aware of codec implementation and any changes to tuple format will require changes to serialization and de-serialization code.	1	0	https://issues.apache.org/jira/browse/APEXCORE-635

#	Requirement	Questions	Answered	Successfully Answered	URL
20166	APEXCORE-635	bq. Yes, Agree, One array of byte only treat as one object. But as the memory is relative big, it probably will not allocated in TLA(Thread Local Area), which means it need to get lock for each allocation, so the allocation is not a very light operation. Is your concern GC or allocating new byte array? From what I understand, it was GC. bq. Output.getBuffer() probably not work in our case. The getBuffer() returns the reference of Output's internal buffer, which was used for putting the serialized bytes. As we need to share one instance of Output for multiple tuples, the buffer was reused when serialize next tuple. Which cause problem no matter we set the output's position to zero or not. If set position to zero, which means clean the previous serialized data. If not changed position, then the serialized data of next tuple concat to the previous one, but we don't know the boundary of each tuple, and the buffer keeping on growing which means output have to keep on allocate new big memory and copy the old data(if the initial buffer size is not very big). Output.getBuffer() works. Tuples are serialized one at a time and after each serialization, bytes from the shared Output buffer are copied to the SerializedTuple that allocates a new buffer each time. It avoids extra copy that you refer to. bq. Yes, the original prototype reset the buffer when it should not. But as I pointed in this proposal, the buffer will be reset after the data sent to socket. That why need to override the write() method. The original prototype has a serious bug, so the results of benchmarking are not reliable. Prior to implementing the proposed approach, I suggest to implement a prototype in stages and have a prove that the approach will provide a significant performance improvement. Without such prove, the complexity of the proposal is not justifiable. bq. Yes, agree. But I think it was worthy to change StreamCode, as suggested in the proposal, it's not easy to implemented the customized reusable serialization without memory copy with the previous interface. And it doesn't compatible with kryo's interface. The current implementation(DefaultStatefulStreamCodec) of StatefulStreamCodec seems not natural for me. The pairs are cleared after first tuple. And for each other tuples, the pairs need to checked, and an instance of DataStatePair need to created to wrapper state(which is null except first tuple) and data. I agree that the interface is not optimal and needs to be changed, but it is not possible to change it without breaking backward compatibility. It means that new interface needs to be introduced and BufferServer will need to deal with 3 different codec interfaces. Before this is done, I'd like to have a prove that there is significant performance benefit that justifies the complexity. bq. The netlet client need to aware of the memory management mechanism in order to reset the memory. But the code is maintained in same class (current BufferServerPublisher; an extended class in proposal), so this should be ok. The serialization formation don't have to change. it can compatible with the previous one. But if we want to take advantage of reserve() function of SerializationBuffer to avoid another extra copy, the format need to be changed to avoid use variable length. Again, I'd like to see a staged prototype that proves that there is a performance benefit and that it is possible to avoid tight code coupling between Codec, Publisher and Tuple serialization format. Overall, I am still (n) on the approach and I think that it needs to be revisited when netlet->netty migration is done. Netty has it's own memory allocator and it will be necessary to see how it can be integrated with Kryo and other serializers.	1	0	https://issues.apache.org/jira/browse/APEXCORE-635
20167	APEXCORE-620	What is the proposed mechanism to resolve dependencies? Apex application developer should provide .apa file with all dependencies (except the one that will be provided at run-time) resolved.	1	0	https://issues.apache.org/jira/browse/APEXCORE-620
20168	APEXCORE-612	Can you please add more details to this? Are you saying you see Out of Sequence for endWindow Tuple?	1	0	https://issues.apache.org/jira/browse/APEXCORE-612
20169	APEXCORE-592	QUEUE_CAPACITY is an attribute and not a property of the port. Attributes are defined by the Apex platform and do not change across ports. What is the significance of providing the description for attributes?	1	1	https://issues.apache.org/jira/browse/APEXCORE-592
20170	APEXCORE-592	[~vrozov] The description in properties is required for displaying user the description of properties configurable by user. Would you suggest me filtering out this list so that we return description only for the operator properties?	1	1	https://issues.apache.org/jira/browse/APEXCORE-592
20171	APEXCORE-592	Have you looked at get-jar-operator-properties & get-jar-operator-classes commands in the CLI? They use OperatorDiscoverer (TypeGraph), which reads from the JavaDoc. It is better to explore that option.	1	0	https://issues.apache.org/jira/browse/APEXCORE-592
20172	APEXCORE-592	Ok, I am fine with keeping this simple. Why limit it to defaultProperties?	0	0	https://issues.apache.org/jira/browse/APEXCORE-592
20173	APEXCORE-587	Agree with both of you. But how about adding methods prepareDAG to launcher API and launchDAG that takes a prepared DAG and launches it, launchApp will be a combination of both. Also yes for making getDAG() part of AppHandler. Also thomas, the issue is current assigned, do you want to work on it? If so please go ahead otherwise I can work on it as well.	1	0	https://issues.apache.org/jira/browse/APEXCORE-587
20174	APEXCORE-581	Do the streams need to be control tuple aware? It is still a single stream isn't it and the nodes do the de-multiplexing isn't it?	1	0	https://issues.apache.org/jira/browse/APEXCORE-581
20175	APEXCORE-580	UserDefinedControlTuple is a long name for users to use. How about just calling it ControlTuple?	1	0	https://issues.apache.org/jira/browse/APEXCORE-580
20176	APEXCORE-577	Why specifically limit it to client side preparation of the DAG before the application is launched? Why not make it possible to have general hooks that can apply even when the application is running in the different distributed components of the application such as the containers and stram. The hooks could be registered to be asynchronous or synchronous. The asynchronous ones could be handled via a bus, we already have a bus called mbassador that we use today and it could potentially be used for this. The entire functionality is akin to something like dtrace without the dynamic part.	1	1	https://issues.apache.org/jira/browse/APEXCORE-577
20177	APEXCORE-576	As far as I understand then the main enhancement here is the "registry" and a process to pick items from the registry to merge into the main repository and we will be using the current git process of pull-requests and merging across forks. Are there existing models we can look at for the registry? A few things that need to be hammered out: - registry access control, and format - criteria for merging external contributions into the main repo (quality, unit tests, demand, licensing) - level of automation available, or otherwise the manual process used to merge contributions - dependency matrix management (e.g. an item depends on malhar 3.5.0 minimum) - guidelines for adding items to the registry to be followed by contributors	1	0	https://issues.apache.org/jira/browse/APEXCORE-576
20178	APEXCORE-576	I had the same concerns as [~ananthg.apex] and I agree that having this registry can dilute the quality and the Apex story as a rich ecosystem. Also the stated goal is to help/facilitate external contributions to Apex but how will the registry help with that goal?	0	0	https://issues.apache.org/jira/browse/APEXCORE-576
20179	APEXCORE-570	From the JIRA description, this sounds like a combination of backpressure with configurable limit on the queue. For the intra-process case the queue capacity can be set. For buffer server, it will spill over to disk, hence the upstream operator will produce at the speed of spooling. Are you thinking of a capacity limit here?	1	1	https://issues.apache.org/jira/browse/APEXCORE-570
20180	APEXCORE-570	If the spooling capacity limit is reached, would the operator just get blocked? If so, wouldn't that solve the back pressure problem at least partially?	1	1	https://issues.apache.org/jira/browse/APEXCORE-570

#	Requirement	Questions	Answered	Successfully Answered	URL
20181	APEXCORE-570	Let's first address the process issue (it may warrant a separate discussion and additions to the contributor guidelines also). If you think there was a conclusion then this may indicate that there was offline discussion that isn't captured here or anywhere else. Just by looking at this ticket it is everything but clear what lead to your PR. This is not how the community can work, discussion has to be in the open. Now back to the topic: I think this is a good approach. It will avoid the fast producing operator running ahead at the speed of writing to disk indefinitely. With this we will not need to limit the spooling at all? What about the case where you have two subscribers (and those could be different operators) where one can keep up with the rate at which data is published and the other one may be slow, albeit maybe temporarily? This will slow down the fast subscriber and introduce latency.	1	1	https://issues.apache.org/jira/browse/APEXCORE-570
20182	APEXCORE-570	I will go into the topic specific comments first and then address your concern about my approach with the process. "Now back to the topic: I think this is a good approach. It will avoid the fast producing operator running ahead at the speed of writing to disk indefinitely. With this we will not need to limit the spooling at all?" Correct, spooling limit is not needed. Spooling size limit as a mechanism for back pressure will not work because we do not know how much data will be generated between two commits (committed windows). Also since the checkpoint length is configurable we cannot set it to some "reasonable" high value. Hence, spooling size limit is something that would not be practical. "What about the case where you have two subscribers (and those could be different operators) where one can keep up with the rate at which data is published and the other one may be slow, albeit maybe temporarily? This will slow down the fast subscriber and introduce latency." Yes, you are correct, the slowest subscriber will slow down the publisher (unless it is parallel partition all the way through). But, this is expected isn't it with back pressure. "Let's first address the process issue (it may warrant a separate discussion and additions to the contributor guidelines also). If you think there was a conclusion then this may indicate that there was offline discussion that isn't captured here or anywhere else. Just by looking at this ticket it is everything but clear what lead to your PR. This is not how the community can work, discussion has to be in the open." I think you have misunderstood my approach. When I created the JIRA, that started the discussion, I was facing a problem with a production application and had proposed using window difference as the way to create the back pressure and block publisher. Limiting spooling was suggested as an approach by both you and David and in my comment on 02nd Nov 16th at 22:53 I mentioned that it won't work because it will cause a deadlock. David's had another comment on this approach about suspending publisher on spool limit till committed which is effectively the same deadlock problem as the commit will not happen till publisher moves forward. There were no other approaches suggested so I proceeded with attempting to solve the problem via the proposed window difference approach. As I got into the weeds of the implementation and figured out all the details of how the current implementation works, I figured that instead of a window difference using the block difference was a better way to accomplish this. To me, the fundamental approach I originally suggested of blocking publisher till subscriber caught up hadn't changed rather an implementation detail. Second, the majority of the time during the implementation was spent in how to accomplish the task with the original assumption of window difference and coming to the conclusion to use blocks instead of windows and the actual coding a day or two so what you see in the PR is a relatively new discovery. In your comments, you have made a couple of statements, first that there may have been offline discussions on the implementation. This has not happened, I assure you. You are all seeing the implementation at the same time including the reviewers. The second statement is stronger about this being detrimental to community and discussions have to be open. I take personal offense to this statement. I know you want the best for the community but suggest you ascertain the truth before making such strong statements.	1	1	https://issues.apache.org/jira/browse/APEXCORE-570
20183	APEXCORE-565	When will inactive operators be activated? Are there automation use cases where operators (and streams) will be activated based on a condition/event that happens in the application itself?	0	0	https://issues.apache.org/jira/browse/APEXCORE-565
20184	APEXCORE-536	So can we add anything that is new after 2.2 or we should stay backward compatible?	0	0	https://issues.apache.org/jira/browse/APEXCORE-536
20185	APEXCORE-536	When are we planning to upgrade? We can right away use, application tags feature. I think we don't have to worry about backward compatibility. If the users are still using Hadoop 2.2, then they should be happy with Apex 3.4 (or 3.5).	0	0	https://issues.apache.org/jira/browse/APEXCORE-536

20191	APEXCORE-526	What's missing ? After adding that option what should I look for ?	1	1	https://issues.apache.org/jira/browse/APEXCORE-526
20192	APEXCORE-518	Do you mean to change parent pom to use the newer version of Apache parent pom? IMO, upgrading parent pom to the newer Apache version should be done in a separate commit. Changes to the codestyle-config pom.xml are completely independent. Changes to shaded-ning will require publishing new shaded-ning version.	0	0	https://issues.apache.org/jira/browse/APEXCORE-518
20193	APEXCORE-518	I don't see why. Changing the code and releasing are separate. The whole reason I asked for a separate JIRA as that this Apex repository should not use different ASF parent poms for no obvious reason. It is the parent pom change (not the version) that has nothing to do with checkstyle and is not even needed to publish a new version of the code style artifact.	1	1	https://issues.apache.org/jira/browse/APEXCORE-518
20194	APEXCORE-514	[~thw] I agree with you.. Some more change as suggested by you are required. I also have some suggestions about website updates. Would it make sense to start a thread on dev@apex about this? Otherwise, I can provide my suggestions here too.	1	0	https://issues.apache.org/jira/browse/APEXCORE-514
20195	APEXCORE-510	What classes overwrite DefaultOutputPort.setup()?	1	1	https://issues.apache.org/jira/browse/APEXCORE-510
20196	APEXCORE-498	[~sandesh] this is a good feature to have, it enables reprocessing. Can you outline how it will work, without getting into code details for now. Specifically, there are different areas where state is tracked (master, buffer servers, operator state, external systems). How will this play with all of those? Please consider end-to-end exactly once and see if and how the proposed names checkpoints (also referred to as safepoints?) will fit in?	1	0	https://issues.apache.org/jira/browse/APEXCORE-498
20197	APEXCORE-498	Discussed this with [~davidyan] & [~PramodSSImmaneni]. There was a concern that to use this feature properly a lot of effort is required beyond this feature. Existing Operators that use WindowDataManager won't work properly with this feature, they have to be made SavePoint compatible. What is your take on this [~thomasWeise] ?	1	0	https://issues.apache.org/jira/browse/APEXCORE-498
20198	APEXCORE-498	I think this is an important feature that should be supported. It needs to be designed properly, so I was actually expecting a design level discussion that is visible to everyone. There will of course be changes needed to existing components and there will also be limitations that pertain to external systems that need to be understood and discussed. Why should operators that use WindowDataManager not work?	0	0	https://issues.apache.org/jira/browse/APEXCORE-498
20199	APEXCORE-496	We support shared stats listener, But user do not have any way to identify the operator for which the stat listener is called. The BatchedOperatorStats only provides operatorId, and there is no api available to use to get operator information from operatorId. Can we include operator name as part of BatchedOperatorStats? This will allow users to take decision based on which operator stats are being processed.	1	0	https://issues.apache.org/jira/browse/APEXCORE-496
20200	APEXCORE-496	Github user vrozov commented on a diff in the pull request: https://github.com/apache/apex-core/pull/361#discussion_r71943358 --- Diff: api/src/main/java/com/datatorrent/api/StatsListener.java --- @@ -113,6 +113,8 @@ long getLatencyMA(); List<OperatorResponse> getOperatorResponse(); + + String getOperatorName(); --- End diff -- Why operator name is part of BatchedOperatorStats when operator name does not change?	0	0	https://issues.apache.org/jira/browse/APEXCORE-496

20243	APEXCORE-448	Github user PramodSSImmaneni commented on the issue: https://github.com/apache/apex-core/pull/364 I second it, please reopen this PR and I will merge it. I think we have spent enough time on the tests and everyone's inputs have been valuable. There will be other opportunities in future to add more tests and refactor them. My only small concern is adding a dependency to OperatorDeployInfo in OperatorContext, can we completely justify that? I liked the earlier way where @chandnisingh was passing the extra name as well, null check or without works for me.	1	1	https://issues.apache.org/jira/browse/APEXCORE-448
20244	APEXCORE-426	Adding an answer to the question asked by [~PramodSSImmaneni] Q: Just for completeness can you explain on the JIRA what happens if there were plan changes that were saved but before stram could affect them it got shutdown. Will the new instance make those changes. A: When a Stram recovers, It will use the last checkpointed plan, if the running containers are any different from the expected plan, following things will happen 1. Containers unknown to Stram are killed/rejected 2. Containers which are not responding will be rescheduled.	1	1	https://issues.apache.org/jira/browse/APEXCORE-426

20267	APEXCORE-378	[Yogi] Hi, I studied source code, docs related to windowing for my presentation on "Windowing in Apex". After going through the phase of learning, teaching apex windowing concepts to others; I realized that attribute APPLICATION_WINDOW_COUNT from OperatorContext should have better name. Because: 1. From the name it looks like a attribute of the APPLICATION; but actually it is an Operator attribute. 2. It is very confusing to say that APPLICATION_WINDOW_COUNT can be different for different Operators within an Application. Can we have some better name for this attribute? Any suggestions for the new name? I propose following names: 1. OPERATOR_WINDOW_COUNT 2. OPERATOR_WINDOW_SPAN I understand that, introducing new name to the existing attribute might break backward compatibility. But, we can deal with that by deprecating the older name and keeping it alive till next major release. What is your opinion on this?	1	1	https://issues.apache.org/jira/browse/APEXCORE-378

20269	APEXCORE-354	Github user sashadt commented on the pull request: https://github.com/apache/incubator-apex-site/pull/14#issuecomment-194001421 @chinmaykolhatkar What makes something a forum is ability to discuss the topic. However, if this discussion never makes it back to dev@ or user@ mailing lists, then we have a problem. Are you saying Nabble takes care of sending the communication back via shared mailing lists? That's what I'm trying to confirm.	1	1	https://issues.apache.org/jira/browse/APEXCORE-354
20270	APEXCORE-348	Conversation from email Pramod Immaneni <pramod@datatorrent.com> Inline On Thu, Feb 11, 2016 at 4:32 PM, Timothy Farkas <tim@datatorrent.com> wrote: Comments inline +1 Overall as well provided Apex-339 is implemented first and it is documented that the mechanism should not be used with some stateful operators. On Thu, Feb 11, 2016 at 4:20 PM, Pramod Immaneni <pramod@datatorrent.com> wrote: > Comments inline > > > On Thu, Feb 11, 2016 at 4:13 PM, Timothy Farkas <tim@datatorrent.com> > wrote: > > > > Hey Pramod, > > > > I agree if APEX-339 is in place then it would work without redeploying > > containers for operators that are Stateless, or a subset of Stateful > > operators. > > > > Addressing your previous questions. > > > > - The StatsListener can be used to see how far behind operators are. You > > could determine what window the operator is on, or the number of tuples > > it's processed so far, or how long > > it takes it to complete a window. > > > > What if tuples are different sizes and number of tuples processed doesn't > reflect how far ahead or behind a downstream partition is? How is the > information from StatsListener made available to the upstream partition > codecs. > What is the information Buffer Server can provide that the StatsListener cannot? The stats information would have to be relayed down to the upstream operators. It's possible. The StatsListener can trigger a repartition. The information in the StatsListener can be shared with the partitioner by setting the same object for both in populate Dag. The partitioner can then compute the new Stream Codec. The mechanism by which the upstream would be updated with the new Stream Codec would have to be implemented as it's currently not there. > > > > > > - Some examples of Stateful operators that require repartitioning of > state > > are the following: > > - Deduper > > In this case after updating the stream codec the operator may > > allow a previously seen value to pass because the partition didn't > receive > > that value with the previous stream codec. > > - A key value store that holds aggregations for each key. > > In this case multiple partitions would hold partial > aggregations > > for a key, when they are expecting to hold the complete aggregation. > > > > Agreed for deduper. For the second case a unifier is a better approach so > that you are not affected by key skew in general. > This is not always possible. We can discuss this offline, since it won't add much to the discussion here to go into the details. Yes not always.	1	0	https://issues.apache.org/jira/browse/APEXCORE-348

20273	APEXCORE-347	Github user tweise commented on the pull request: https://github.com/apache/incubator-apex-core/pull/226#issuecomment-184961199 Looks good. How about waiting with this PR until semver option in the plugin is available?	1	1	https://issues.apache.org/jira/browse/APEXCORE-347
20274	APEXCORE-344	Shutdown takes a while to finish. Can you please file a jira with your observation?	0	0	https://issues.apache.org/jira/browse/APEXCORE-344
20275	APEXCORE-340	Besides the symlink, the proper name change would involve: - Change the name of DTCli class to ApexCli - Change the prompt from dt> to apex> - Change the initial greeting when running the CLI from something like "DT CLI 3.3.0-incubating ..." to "Apex CLI ...". Although the above will break existing 3rd party scripts that rely on the the string "DT", the existence of such scripts is unlikely. What do people think if we actually make those changes without waiting for the major version bump?	1	1	https://issues.apache.org/jira/browse/APEXCORE-340
20276	APEXCORE-340	Hmm. How will it break the yahoo benchmark if we retain dtcli as a symlink?	1	1	https://issues.apache.org/jira/browse/APEXCORE-340

#	Requirement	Questions	Answered	Successfully Answered	URL
20277	APEXCORE-340	Made following changes in my fork: https://github.com/chinmaykolhatkar/incubator-apex-core/tree/APEXCORE-340 1. Script name changed to apex. Created dtcli as symlink to apex 2. Class name changed to ApexCli from DTCli. Similar for test class. 3. Changed console prompt to "apex>" from "dt>" 4. Changed Welcome message to "Apex CLI ..." from "DT CLI ..." Commit link is: https://github.com/chinmaykolhatkar/incubator-apex-core/commit/5ef35e83323504027aef115dd01f7278c69cb1c1 Verified with unit test and launching pi demo. Before I create a PR, I have some questions: 1. [~sandesh] : Even though there is dtcli symlink to apex, the prompt of the cli will change to "apex>" from "dtcli>"... Would that cause any problem in yahoo streaming benchmark? 2. [~davidyan] [~thw] : We There are still traces of "dt" all over in this. For eg. ".dt" folder, DT_CLASSPATH and other such variables in script. Should those also be changed as a part of this?	1	1	https://issues.apache.org/jira/browse/APEXCORE-340

20282	APEXCORE-330	Github user PramodSSImmaneni commented on the pull request: https://github.com/apache/incubator-apex-core/pull/321#issuecomment-216398640 Can we provide the user a way to distinguish between threads directly related to the operators and user code vs system threads that are apex specific. It could be a flag in the json.	1	1	https://issues.apache.org/jira/browse/APEXCORE-330
20283	APEXCORE-330	I noticed that the individual containers are sending a JSON serialized string of the stack trace information to STRAM. The serialization is typically handled by RPC and the containers just send objects. Could you convert the Map<Thread, StackTraceElement[]> into an object that can be serialized, maybe into a Map<ThreadInfo, StackTraceElement[]>. Secondly the web service call results in a request flag to be set in the container agent which gets reset immediately after initiating a request to the container to send the stack trace. I believe this flag should be reset after receiving the stack trace from the container as there is a chance the request may not make it to the container if there are any intermittent network errors and the web service call is anyway waiting for a timeout period of 10s for the stack trace which is several heartbeats. I apologize I was not able to give these comments during the pull request review.	0	0	https://issues.apache.org/jira/browse/APEXCORE-330
20284	APEXCORE-328	Found the following message in the `screen.txt` that may explain why maven invocation from the unit test fails: {noformat} Error: Could not find or load main class org.codehaus.plexus.classworlds.launcher.Launcher {noformat}	1	0	https://issues.apache.org/jira/browse/APEXCORE-328
20285	APEXCORE-327	Can you please make the equivalent change for the release-3.3 branch? Also, is there a way to automate this, i.e. have it find out automatically based on the version number that modifications are not allowed (if the version is not X.Y.0, then enable the constraint)? Or is this an enhancement for the plugin?	0	0	https://issues.apache.org/jira/browse/APEXCORE-327

20293	APEXCORE-321	src/md/bylaws.md --- @@ -0,0 +1,381 @@ +#*** draft subject to top level project approval *** +##Apache Apex Project Bylaws + +This document defines the bylaws under which the Apache Apex project operates. It +defines the roles and responsibilities of the project, who may vote, how voting works, +how conflicts are resolved, etc. + +Apex is a project of the Apache Software Foundation. The Foundation +holds the copyright on Apache code including the code in the Apex codebase. The +Foundation +FAQ explains the operation and background of the foundation. + +Apex is typical of Apache projects in that it operates under a set of principles, +known collectively as the "Apache Way". If you are new to Apache +development, please refer to the Incubator project for more information on how Apache +projects operate. + +##Roles and Responsibilities + +Apache projects define a set of roles with +associated rights and responsibilities. These roles govern what tasks an individual +may perform within the project. The roles are defined in the following sections: + +###Users + +The most important participants in the project are people who use our software. +The majority of our developers start out as users and guide their development +efforts from the user’s perspective. + +Users contribute to the Apache projects by providing feedback to developers in +the form of bug reports and feature suggestions. As well, users participate in the +Apache community by helping other users on mailing lists and user support +forums. + +###Contributors + +All of the volunteers who are contributing time, code, documentation, or +resources to the Apex Project. A contributor that makes sustained, welcome +contributions to the project may be invited to become a Committer, though the exact +timing of such invitations depends on many factors. + +###Committers + +The project’s Committers are responsible for the project’s technical +management. All committers have write access to the project’s source +repositories. Committers may cast binding votes on any technical discussion +regarding the project. + +Committer access is by invitation only and must be approved by lazy consensus of +the active PMC members. A Committer may request removal of their commit privileges +by their own declaration. A committer will be considered +“emeritus/inactive” by not contributing in any form to the project for +over 1 year. An emeritus committer may request reinstatement of commit access from +the PMC. Such reinstatement is subject to lazy consensus of active PMC members + +Commit access can be revoked by a unanimous vote of all the active PMC members +(except the committer in question if they are also a PMC member). + +All Apache committers are required to have a signed Contributor License +Agreement (CLA) on file with the Apache Software +Foundation. 20299	APEXCORE-318	Chris if we follow a similar model like hadoop of using a separate email list is it ok to ask infra for an email list like security@apex.apache.org (without using incubator) or should we wait till the last possible moment before becoming top level to request this. Secondly since the nature of the groups like these would be to not announce issues to the public until the vulnerabilities are fixed, is it right to assume that the membership to this group is selective and may not be every committer. Also how do groups like these track issues before the vulnerabilities are fixed, can JIRA still be used without making the information public for these till the fix.	1	1	https://issues.apache.org/jira/browse/APEXCORE-318

20317	APEXCORE-304	Github user chinmaykolhatkar commented on a diff in the pull request: https://github.com/apache/incubator-apex-core/pull/311#discussion_r61535209 --- Diff: engine/src/main/java/com/datatorrent/stram/plan/logical/LogicalPlan.java --- @@ -2386,7 +2381,7 @@ public static void write(DAG dag, OutputStream os) throws IOException public static LogicalPlan read(InputStream is) throws IOException, ClassNotFoundException { - return (LogicalPlan)new ObjectInputStream(is).readObject(); + return (LogicalPlan)new ClassLoaderObjectInputStream(Thread.currentThread().getContextClassLoader(), is).readObject(); --- End diff -- This is required for Local Mode case. Lets say a jar path is set to LIBRARY_JARS and this jar contains a POJO that needs to be set to TUPLE_CLASS attr. Now, one can do that in populateDAG method, that would cause a problem in LocalMode as follows: 1. populateDAG sets TUPLE_CLASS attr with new POJO class - Works. 2. Local mode serializes the LogicalPlan - Works. 3. Local mode deserialized the LogicalPlan - Fails. 3rd step fails becuase The ObjectInputStream deserializer uses System ClassLoader which does that have that POJO. ClassLoaderObjectInputStream is an overridden version of ObjectInputStream which allows to set the custom classloader. By this time of callstack, Thread.currentThread().getClassLoader() will have a classloader which is super of all. As previously, there was no functionality of LIBRARY_JARS, I guess this was not tested and so did not surface as an issue. For cluster mode, there is no difference. i.e. There is only 1 classloader i.e. System.Classloader and that has new jars as well. i.e. For cluster mode, Thread.currentThread().getClassLoader() = System classloader i.e. ClassLoaderObjectInputStream will behave as if ObjectInputStream.	1	1	https://issues.apache.org/jira/browse/APEXCORE-304
20318	APEXCORE-294	What is the advantage of end stream tuple over ShutdownException?	0	0	https://issues.apache.org/jira/browse/APEXCORE-294
20319	APEXCORE-294	Is it that the shutdownException is controlled more by STRAM and the control tuple will flow naturally in the DAG? As I understand, when a ShutdownException is thrown by an operator, it propagates to its downstream operators via STRAM as shutdown requests for each container.	0	0	https://issues.apache.org/jira/browse/APEXCORE-294
20320	APEXCORE-294	What will be the trigger for this? Could you please provide some details?	0	0	https://issues.apache.org/jira/browse/APEXCORE-294

#	Requirement	Questions	Answered	Successfully Answered	URL
20321	APEXCORE-294	would sending END_STREAM tuple from all input operators partition will work. Is there any other complication with this approach? If this approach is fine I would start working on it. The flow would be - Master receives shutdown command from cli/rest api - Master set shutdown on each container and send it as part of heartbeat response to all containers - On receiving shutdown command StreamingContainer would mark alive false for all InputNode causing them to terminate with sending END_STREAM tuple downstream. same could be achieve using operatorRequest for all input operator partition and this request will be handled by StreamingContainer to shutdown the input operator thread.	1	1	https://issues.apache.org/jira/browse/APEXCORE-294
20322	APEXCORE-293	Documentation source code will be hosted in apex-core repository on ASF. Generated documentation can be hosted on apex.incubator.apache.org, but it involves more steps to process, generate, and deal with document deployments, when compared with solutions like readthedocs.org, readme.io, etc. I notice several other Apache projects host their docs outside ASF, including Apache Ignite (https://apacheignite.readme.io/docs), Apache Libcloud (https://libcloud.readthedocs.org/en/latest/), etc. Does ASF mandate that documentation be hosted on apache.org? And if ASF infrastructure is required, is there a simple solution similar to readthedocs for markdown docs, which supports multiple release versions, etc?	1	1	https://issues.apache.org/jira/browse/APEXCORE-293
20323	APEXCORE-293	Is the intention to completely remove any references to external documentation, or to add rel="nofollow" to external links?	1	1	https://issues.apache.org/jira/browse/APEXCORE-293
20324	APEXCORE-293	[~sasha] We should review the need for each of these links. It is not clear, for example, why we would point to RTS docs for configuration. [~ptgoetz] In those cases where external links are appropriate, is it a matter of adding rel="nofollow"?	1	1	https://issues.apache.org/jira/browse/APEXCORE-293

20342	APEXCORE-268	Github user vrozov commented on the pull request: https://github.com/apache/incubator-apex-core/pull/199#issuecomment-170134683 What is the reason to suppress warnings? Do we want them to be fixed over time? If not, should warning rule be disabled completely?	1	1	https://issues.apache.org/jira/browse/APEXCORE-268
20343	APEXCORE-268	Github user vrozov commented on the pull request: https://github.com/apache/incubator-apex-core/pull/199#issuecomment-170188868 @chandnisingh I don't think it is the question of importance. It is the question of convenience for developers. If compiler warnings don't clutter build log, checkstyle warnings also should not clutter. Will suppression of LineLength warnings be a workable solution? In this case you may add ``` <suppress checks="LineLength" files="" /> ``` to checkstyle-suppresions.xml	1	1	https://issues.apache.org/jira/browse/APEXCORE-268
20344	APEXCORE-268	Github user chandnisingh commented on the pull request: https://github.com/apache/incubator-apex-core/pull/199#issuecomment-170189818 There should be a separate discussion on that since now it is a debate. I don't think it is a problem to run just another command to see the exact violation. Don't the users already do that for license, etc?	1	1	https://issues.apache.org/jira/browse/APEXCORE-268
20345	APEXCORE-268	Github user chandnisingh commented on the pull request: https://github.com/apache/incubator-apex-core/pull/199#issuecomment-170200390 I don't agree with it. A lot of folks in the community wanted fixed line length which is why I added it as a warning. That pull request was merged without any objections. So why suppress the warnings on an unrelated change. With this change it's not that I am increasing the steps. They are same as what they were. This is a separate topic and the whole community should participate in making that decision	1	1	https://issues.apache.org/jira/browse/APEXCORE-268
20346	APEXCORE-259	Did you mean Buffer Server resides in the same node?	1	0	https://issues.apache.org/jira/browse/APEXCORE-259

20384	APEXCORE-103	Here are some comments I have about the design. These are repeated from the pull request. 1. DAG scoping currently is global for modules, each module's populateDAG sees the entire DAG. 2. The module has a populateDAG method with exact same syntax as in StreamingApplication. Is StreamingApplication also a module, should it extend that interface. 3. Setting properties for modules is too verbose. Module developer needs to repeat every property they want exposed with a setter and getter in JAVA. I don't disagree that module developer should be able to choose which properties from which operators need to be exposed but the current way seems to duplicate code. Here is a suggestion. a. Allow modules to specify which operators and properties can be accessible from outside. One way is in the "populateDAG" method of the module when adding the operator have the ability to specify if this operator can be accessible from outside and which or all properties can be accessible. b. Provide methods in ModuleMeta or elsewhere to set property values by specifying the operator name (friendly name) inside the module and property name. If this is allowed by a. above it is successful else it should fail. c. Allow a syntax in property files to specify the property in b. Example syntax dt.module.<modulename>.operator.<operatorname>.prop.<propname> 4. For attributes same mechanism as in 3 should apply for the operators that are exposed by the module. For property file, example syntax dt.module.<modulename>.operator.<operatorname>.attr.<attrname> 5. Module developers in addition to 3. and 4. above may choose to support module level properties and attributes. These should not be the default when 3. and 4. are possible but complementary in addition to them. In this case for properties they can implement setters and getters in the module. For attributes the user should still be able to set the attributes using the dag setAttribute method. You could introduce a method in the module to process attributes that can get called by the engine once everything is set. 6. For 5. above setting global properties and attributes for module is akin to ideas that have been proposed for the application as well. A consistent way must be possible for applications as well even if it is not implemented now. 7. For 5. or 6. above there should be a property file way of specifying the global module properties and attributes. Example syntax dt.module.<modulename>.prop.<propname>, dt.module.<modulename>.attr.<attrname>. Notice the difference with 3. c. and 4 above that there is no operator keyword here. 8. Partitioning needs to be consistent with what the user will expect when they see module as an entity. I will send an image of possible examples of how the user will expect the physical plan to look in certain cases.	0	0	https://issues.apache.org/jira/browse/APEXCORE-103
20385	APEXCORE-90	I've SSH'ed into people.apache.org and see where all the project websites are located, however the user:group ownership is all svnwc. I'm assuming this is the user that performs actions on behalf of the CMS, however since I can't get the "bookmarklet" thing to work, I'm not sure how to proceed. The relevant part of the guide actually says *THIS IS VERY OUTDATED AND NEEDS FIXING* and so I am not sure what to trust in that regard. I suppose I could simply create the necessary folder (/www/apex.apache.org) and add the files I want to that, then simply chown it to svnwc:svnwc, but something tells me I'm going down the wrong path with this tactic. [~cnauroth] or [~amolkekre], can you provide any guidance on this? I'll also send this out via dev@ update: just tried to create a folder in /www and it looks like I don't have permission to do that anyway so there you go...	0	0	https://issues.apache.org/jira/browse/APEXCORE-90

20386	APEXCORE-78	Why should this be changed?	1	1	https://issues.apache.org/jira/browse/APEXCORE-78
20387	APEXCORE-73	Hi Atri, That disk spooling should only happen when the memory used is getting close to configured limit. Are you seeing a different behavior. Thanks	1	0	https://issues.apache.org/jira/browse/APEXCORE-73
20388	APEXCORE-71	Given that this is really a workaround, can you please explain why we need to do this in first place? Should mention how it should work ideally (i.e. ability to pull the actual config values from the services).	1	0	https://issues.apache.org/jira/browse/APEXCORE-71
20389	APEXCORE-69	did you send an example on what the problem is? I cannot locate it... can you post it here? Thanks.	0	0	https://issues.apache.org/jira/browse/APEXCORE-69
20390	APEXCORE-69	my understanding is that Slowing down of the upstream should happen automatically as tcp is used for communication and tcp does the congestion control. So that is not working ?	0	0	https://issues.apache.org/jira/browse/APEXCORE-69

Can you please review this and see what I'm doing wrong?	1	1	https://issues.apache.org/jira/browse/APEXCORE-60
20417	APEXCORE-59	why is this minor priority?	1	0	https://issues.apache.org/jira/browse/APEXCORE-59
20418	APEXCORE-55	h1. Module support. h2. Introduction A module framework provides a way to use a group of operator as a single entity in a application. This will allow group of operator to implement a higher level functionality, which can be embedded in another streaming application. For example a module M1 is defined as following DAG. where M2 is also another module. {code} O3 | O1 -> O2 | M2 {code} and Module M2 as {code} O4 -> O5 {code} And application is defined as {code} A -> M1 -> B {code} Then during logical plan expansion module M1 will be replaced by its operator and resulting DAG will be exapnded again till no modules remain in the DAG. For example given application will expand as below. {code} O3 | A -> O1 -> O2 -> B | O4 -> O5 {code} h2. Goals Logically a Module will contain. * A List of input ports. * A list of output ports. * Configuration properties. ** Name of the property. ** Type of the property. * Attributes? (not decided which attribute make sense for a module). For most of the modules all internal component and their connection is already know. The other type of module will be populate the internal components based on properties set on the module. We will be targeting first type of modules with static sub-dag. h3. Properties A module will have its own properties. Module will hide properties of internal components, means user will only be able to set properties defined on module, and need not know the internal structure of module. Module will populate internal components properties as required based on its properties. Does it needs to have support for setting module property at runtime? This will require us to maintain runtime object for module. i.e module definition can not go away after logical plan expansion. Also any complex execution done my module inside setter needs to be tracked and sent to container running operators in the module. h3. Attributes partitions?? h3. Module Definition Languages User should be able to write modules in java. And other JVM compatible languages. We plan to provide compact api for defining module in javascript which are loaded in java using Javascript/Java bridge (JSR 292). A similar interface will be provided for python using Jython. The syntax will look like mostly like configuration description. h3. Application Builder Compatibility Another goal is that user should be able to define modules using application builder, where user will build a DAG for module and save it as a module. To support this functionality we will have support for defining module in json. As json does not support defining complex expressions, this will be applicable for simpler modules. h3. Port Type Checking We need to have type checking for the module ports. If Module is defined in java then we can have type check enforced by the compiler. In other cases we need to have a way to enforce type check during port connection time or logical dag validation time. h2. Implementation h3. API {code} public interface Module extends Component<ModuleContext> { /** * get list of input port exported by the module. */ public Map<String, Operator.InputPort> getInputPorts(); /** * get list of output ports exported by the module. */ public Map<String, Operator.OutputPort> getOutputPorts(); /** * This function will be called by engine to add operators/modules in the application DAG and connect them as per modules requirement. */ public void flattenDAG(DAG dag, Configuration conf); /** * return property of the module */ public Object getProperty(String key); /** * set property on the module */ public Object setProperty(String key, Object value); /** * return list of properties supported by the module. */ public Collection<String> getProperties(); } {code}	0	0	https://issues.apache.org/jira/browse/APEXCORE-55
20419	APEXCORE-55	What is the rationale to make ports on modules dynamic? Do you have an example use case? What is the runtime representation of a module? What drives the dynamic structure of a module? Can setting a property change ports and operators in it? If so, what happens when such properties are set at runtime? Full partitioning support for modules will require significant changes to the current physical plan translation. Has the impact been assessed? Or are you planning to have corresponding restrictions in the initial module implementation? How does this work converge with APEXCORE-3? This JIRA needs to be broken down into subtasks and the relationship to other parts of the engine more clearly called out.	1	0	https://issues.apache.org/jira/browse/APEXCORE-55
20420	APEXCORE-34	Did you confirm that after running the command all version strings have been replaced?	0	0	https://issues.apache.org/jira/browse/APEXCORE-34
20421	APEXCORE-34	Github user chinmaykolhatkar commented on the pull request: https://github.com/apache/incubator-apex-site/pull/10#issuecomment-181725435 Closing this PR.. Will reopen when changes in core gets in.	0	0	https://issues.apache.org/jira/browse/APEXCORE-34
20422	APEXCORE-31	Can we also evaluate akka, few projects are using it. http://www.slideshare.net/fhueske/flink-akka20150128	0	0	https://issues.apache.org/jira/browse/APEXCORE-31
20423	APEXCORE-22	Does this fix handle the below scenario? I have two different DAGs to run, I shall use A in one DAG and B in another. A extends B, I have declared output ports in A and B as well. When I use A in my DAG, it shows output port overridden error in 3.1.0 release. This requirement can be fulfilled with different implementation for the use case but I am just curious.	1	1	https://issues.apache.org/jira/browse/APEXCORE-22
20424	APEXCORE-19	can you list the a couple of use cases which need this?	0	0	https://issues.apache.org/jira/browse/APEXCORE-19
20425	APEXCORE-17	[~davidyan] in ClusterAppStats you have used @AppDataPushAgent.Metric on methods. Is that really needed? Do you extract the names of these metrics for the getterMethod. If yes, where is that being done?	1	0	https://issues.apache.org/jira/browse/APEXCORE-17
20426	APEXCORE-17	1. If this change is not included, then we know for sure that it needs to be changed. If there is a constant added to spell out that it can support phase, then may be we will need to change it may be we will not need to change it. which one is better? 2. I realize that there is not a lot of time left hence I recommended putting the stubs in and having the implementation later. You can defer even specifying various phases. The one which you have implemented, have it specified (or even defaulted to). -- Chetan	1	1	https://issues.apache.org/jira/browse/APEXCORE-17

#	Requirement	Questions	Answered	Successfully Answered	URL
20427	APEXCORE-17	I have created another ticket for phases. Can I resolve this?	1	0	https://issues.apache.org/jira/browse/APEXCORE-17
20428	APEXCORE-16	What is the agreement on white spaces for type cast? Should APEX use white space after the cast? Please see [http://www.oracle.com/technetwork/java/javase/documentation/codeconventions-141388.html]: Casts should be followed by a blank space. Examples: {noformat} myMethod((byte) aNum, (Object) x); myMethod((int) (cp + 5), ((int) (i + 3)) + 1); {noformat}	0	0	https://issues.apache.org/jira/browse/APEXCORE-16
20429	APEXCORE-13	Why cause unnecessarily additional HDFS operations in the master when the same is available for free in the container? The container should propagate the checkpoint only after it has been written (approach 1).	1	1	https://issues.apache.org/jira/browse/APEXCORE-13
20430	APEXCORE-10	this is a very important requirement, when can we have it	0	0	https://issues.apache.org/jira/browse/APEXCORE-10
20431	APEXCORE-10	There are two pieces to this: 1) how you express the constraint and 2) how you implement it using the RM API. 1) I understand you are proposing to define the operators that should not be on the same host as an attribute. How will this translate to the physical plan? How do we express that 2 partitions of the same operator are not on the same host? 2) Yes, we may run out of resources and launch time will increase of we sequence the sets. All containers that don't have the affinity constraint will still be allocated first? Why does the rest need to be sequential?	0	0	https://issues.apache.org/jira/browse/APEXCORE-10
20432	APEXCORE-10	As an additional note, is there any way that you could see specifying anti-affinity between partitions of an operator? At the moment we can specify affinity/anti-affinity between logical operators but it would be very useful to specify anti-affinity between partitions of a single logical operator (for the sake of durability, for example).	0	0	https://issues.apache.org/jira/browse/APEXCORE-10
20433	APEXCORE-10	A couple of questions - Would anti-affinity for partitions take precedence over the anti-affinity of operators? Can this be configured? Wouldn't there be a cascading effect of partitioning on the anti-affinity of operators? In case of clashes between anti-affinity and locality, what takes precedence? (For example, would the partitions be created across racks and different operators remain in the nodes on the same rack, or would all the partitions be within the same rack and the locality for operators will not be honored?) What would happen if a node crashes and YARN allocates a node on which another operator/partition is already active. YARN would not have any knowledge about the anti-affinity. So what would be our approach in this case? Ideally, if we get resources from YARN on a certain node, we shoul dbe able to run the instance/operator on the same node. However, is there a guarantee that YARN will allocate the exact resources we have asked for? Further even if it does, would we honour the "strict" policy and prevent the instance/operator from coming up or we bypass the same.	0	0	https://issues.apache.org/jira/browse/APEXCORE-10
20434	APEXCORE-10	In case of anti-affinity and host-locality set among partitions of operator, yes, we need to set precedence order. Another option is: should we check for such contradicting settings this in dag.validate phase itself?	1	1	https://issues.apache.org/jira/browse/APEXCORE-10
20435	APEXCORE-10	Github user tweise commented on the pull request: https://github.com/apache/incubator-apex-core/pull/250#issuecomment-201640472 @ishark there are merge conflicts, can you please rebase.	1	1	https://issues.apache.org/jira/browse/APEXCORE-10

20463	APEXMALHAR-2376	[~thw] : Could you please make Akshay contributor and assign this JIRA to him.	1	0	https://issues.apache.org/jira/browse/APEXMALHAR-2376
20464	APEXMALHAR-2366	As the number of elements increases, the probability of false positives increases; are we planning to recreate the filter with a larger bit vector or is this automatically done by the Hadoop implementation ?	0	0	https://issues.apache.org/jira/browse/APEXMALHAR-2366
20465	APEXMALHAR-2366	Hi [~brightchen] Sorry for commenting so late. A bloom filter implementation is already implemented by [~chaithu] in the Megh library. You can see it here: https://github.com/DataTorrent/Megh/blob/master/library/src/main/java/com/datatorrent/lib/bucket/bloomFilter/BloomFilter.java Can you please see if this implementation can be reused? I am asking this because the one in Megh is well tested as part of an earlier Deduper implementation.	1	0	https://issues.apache.org/jira/browse/APEXMALHAR-2366
20466	APEXMALHAR-2365	Hi, I am unable to assign this card to myself. Can someone please add my name to the contributor list?	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2365
20467	APEXMALHAR-2365	Can someone from PMC list assign this JIRA to Shraddha - jogshraddha . [~thw]: Could you please assign this and make Shraddha contributor.	0	0	https://issues.apache.org/jira/browse/APEXMALHAR-2365
20468	APEXMALHAR-2365	Couple of thoughts: 1. Some use cases why this is needed would be helpful. 2. Is the plan to convert the byte array to a String as a first step ? If so, the encoding for that conversion should be a parameter.	0	0	https://issues.apache.org/jira/browse/APEXMALHAR-2365
20469	APEXMALHAR-2352	- The insert to the map with item of ImmutablePair cost 2 to 3 times than item of com.datatorrent.common.util.Pair - Kyro serializer serialize cost 6 to 8 times than customized serializer. The tuple which to serialize is generated with code "new ImmutablePair(new Window.TimeWindow<>(now + random.nextInt(100), random.nextInt(100)), "" + random.nextInt(1000));"	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2352
20470	APEXMALHAR-2339	when use default AccumulationMode DISCARDING, it will have big impact for performance due to AbstractWindowedOperator.clearWindowData(Window)	0	0	https://issues.apache.org/jira/browse/APEXMALHAR-2339

#	Requirement	Questions	Answered	Successfully Answered	URL
20471	APEXMALHAR-2322	Shouldn't we fix the issues instead? I would prefer the CI fails when code with invalid javadoc syntax is submitted.	0	0	https://issues.apache.org/jira/browse/APEXMALHAR-2322
20472	APEXMALHAR-2321	I changed to use keyStream and valueStream to manage the memory. But as we can't enforce the caller to use keyStream and valueStream to manage the memory, So it is also need to cleanup the maps. [~csingh] How do you think? and I saw you also clear the fileCache and close readers in freeMemory(). Is it better to move to another function or rename this method into something like releaseResource?	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2321
20473	APEXMALHAR-2283	The exactly-once output logic is suspect. Why is it using the same key for all messages (appId+operatorId), why does it track extra window state in the operator and why does it rely on the hashcode of the object. In cases where the application can provide a unique message id, it should also be possible to use it for the key. It should be possible with the state stored in Kafka alone to do the dedup. The operator is also not easy to extend, we tried to implement output to topic depending on the tuple and found ourselves stuck with some private methods and unfriendly hooks. There is a need for redesign and good example.	0	0	https://issues.apache.org/jira/browse/APEXMALHAR-2283
20474	APEXMALHAR-2283	The hashCode() assumption isn't documented. It is also not sufficient, there should be control in the operator itself how the hash code is computed. I think we should revisit the options for tracking the state. Is there an example someone can start from for this operator? Documentation?	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2283
20475	APEXMALHAR-2283	There are couple of solutions to "exactly-once". To me they are all different and they all have different assumptions. First of all, if we assume there is unique message id, we can definitely use that for dedup, but that is not always the case, then we need appid and operatorid to do dedup. Then this information can be store in either key or extra topic, I wouldn't say either of them is better than the other, really depends on how user's requirement. And no matter what we do, as long as there are number of operators writes to same kafka partition, I'm afraid there is no way to do perfect dedup because we don't know the safe place to do dedup from or too late to do dedup(too much noise from the safe place if other operator instances are fully loaded) I don't remember hashcode, but I think hashcode will include some false positive? And there is other solution like, create topic and number of partitions automatically based on kafka operator instances, in this case, it is much easier, we are always use what messages needs to be dedup because one operator only write to one kafka partition. This solution, my understanding, is most reliable and some user might want it. But the metadata of that kafka topic is kind of automatic created and it's very hard to support dynamic partition in this case. That's the reason why I say there is no general solution for exactly-once kafka output operator. We may need to provide different solutions in "examples" for people to choose from. Anyways, Sandesh, can you wrap up the current solution, post and discuss it in mailing list?	1	0	https://issues.apache.org/jira/browse/APEXMALHAR-2283
20476	APEXMALHAR-2278	GitHub user ananthc opened a pull request: https://github.com/apache/apex-malhar/pull/486 APEXMALHAR-2278 Implement KuduNonTransactional Output Operator @tweise / @PramodSSImmaneni : Could you please review or suggest the right person who can complete this review for me? This class doesn't have any ports. --- End diff -- Add an overview here of what the operator does here, what parts need to be implemented by concrete subclasses and show code fragments for example from the LineByLine operator. Describe what the DirectoryScanner does. Some obvious questions that will come up in the reader's mind should be answered, for example: 1. What happens if a file that has already been processed has new data appended to it ? 2. What happens if a processed file is deleted ? 3. What happens if a separate actor is in the process of writing a new file in the monitored directory ? How will this operator know when the file is ready to be read ? 4. What if the number of files in the scanned directory grows over time to be very large -- what impact, if any, does it have on this operator ? 5. Can this operator be used to monitor multiple directories ? (Point people to the fileIO-multidir example) 6. This class already implements the Partitioner interface; can a custom partitioner be set on this operator ? More generally, since we are saying this operator supports dynamic partitioning, it is useful to describe (with a code fragment if possible) how to trigger it.	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2184

For eg. *prop1:val1,prop2:val2*	String				1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2153
20526	APEXMALHAR-2130	What's the use case? I think this needs a clearer explanation as to what the purpose of the proposed feature is. We do have managed state and on top of it abstractions to plug it into operators: https://github.com/apache/apex-malhar/tree/master/library/src/main/java/org/apache/apex/malhar/lib/state/	1	0	https://issues.apache.org/jira/browse/APEXMALHAR-2130
20527	APEXMALHAR-2130	Here are some thoughts to implement it based on state manager - Use one bucket only, use the Event Window and Key to generate key for the bucket, and use Stream Window as timeBucket. The problem of this approach is get the whole map of one Event window as it lack of key. Is possible the client code get value by Event Window and key instead of get whole map? - One Event window map to one bucket, and Stream window id as timeBucket. But the problem is the size of Event Window are variable and could be huge. and also the Event window size are vary. So this approach probably not doable. - One Streaming window map to a bucket. It will have problem to map Event window. And also have problem get whole map by Event Window, as we don't know which bucket to read the data.	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2130

20529	APEXMALHAR-2130	[~davidyan] As far I can tell what you have implemented ontop of spillable datastructures is 95% of the way there. I'm not sure what has changed. 1. SpillableByteMap already supports deleting a key by setting the value for a key to be an empty byte array. So that's there. This can easily be extended to delete all the values in SpillableArrayListMultimap. 2. The only missing piece is the ability to iterate over the set of keys in a map. This can be done with another SpillableByteMap let's call this map the linkedListMap. The key of the linkedListMap represents the current node, the value represents the next node. You then keep track of your "head" key and iterate by taking your current node, and getting the value. The value then becomes the current node and so on. When the value for the current node is null you are done traversing the list. You can take this and wrap it in an iterator.	1	0	https://issues.apache.org/jira/browse/APEXMALHAR-2130
20530	APEXMALHAR-2130	Which keys belong to which window can be seen as derived information when using a key in managed state that is <window><key>. We can then retrieve all keys for a given window by doing a prefix scan for <window>. This becomes difficult however when including the state that wasn't flushed to the data files yet (they are compacted asynchronously). Using another spillable datastructure to store the keys for each window is possible, but also comes with drawbacks, since it duplicates information. Once of them is obviously performance, since it is increasing the HDFS usage. It also needs to use the same store, as otherwise there is the situation of two resources that need to be updated atomically. Assuming that both collections can use the same store (key prefix) and share the same WAL and data files, then we need to see whether time based purging will still work as intended. David?	0	0	https://issues.apache.org/jira/browse/APEXMALHAR-2130
20531	APEXMALHAR-2129	Please explain the requirement and why is it needed? This helps with purging of data. How will you purge data?	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2129
20532	APEXMALHAR-2126	Why is it necessary to have Slice here? Slice allows referring to a portion of byte array without allocating individual byte arrays and creating many byte array objects. The example tries to solve a completely different problem - concatenate existing byte arrays into a single large byte array. There is no need for Slice here at all and Slice is misused in SpillableByteMapImpl. Instead of using Slice, it will be better to use Collection (for example ArrayList) of identifiers and serialized keys pairs and create byte array after all pairs are added to the collection.	0	0	https://issues.apache.org/jira/browse/APEXMALHAR-2126

20555	APEXMALHAR-2102	I've been looking into the code. It seems that a lot of the logic within the StatelessPartitioner would go away in a ClonePartitioner. Is there any issue with assigning an identical set of PartitionKeys to each input port / partition combination? Does there even need to be more than one key for other logic to work? Repartitioning logic becomes somewhat undefined. It doesn't make sense to partition based on load, I think the only function needed is the definePartitions() function which simply assigns an arbitrary key assignment to each partition, e.g. a 0 key. Is my understanding correct?	1	0	https://issues.apache.org/jira/browse/APEXMALHAR-2102
20556	APEXMALHAR-2102	GitHub user ilganeli opened a pull request: https://github.com/apache/incubator-apex-core/pull/344 [APEXCORE-146] Add ClonePartitioner * Created a Clone partitioner similar to the StatelessPartitioner that assigns all data to all partitions * Added a simple unit test suite to test scale up and scale down **Questions** Is there a good place/way to add a test to verify that data is partitioned appropriately? For example, the stateless partitioner assigns keys based on the nearest power of two - is that validated anywhere? How is the serialVersionUUID generated? Does the manual assignment of ports to PartitionKeys need to happen for each Partition? There is a comment in the Partition class that by default all data is sent to all partitions. However, digging into the implementation in depth doesn't show that behavior. Instead, it seems data is assigned based on the mask associated with each Partition. This references: https://issues.apache.org/jira/browse/APEXCORE-146 You can merge this pull request into a Git repository by running: $ git pull https://github.com/ilganeli/incubator-apex-core APEXCORE-146 Alternatively you can review and apply these changes as the patch at: https://github.com/apache/incubator-apex-core/pull/344.patch To close this pull request, make a commit to your master/trunk branch with (at least) the following in the commit message: This closes #344 ---- commit e2f50274ccf4e3d1cc515d9770ee9e46a0e2e57b Author: Ilya Ganelin <ilya.ganelin@capitalone.com> Date: 2016-05-25T16:59:55Z Started updates on clone partitioner. commit 92c1eb31521deff1e9314751cf41892e3ed6793c Author: Ilya Ganelin <ilya.ganelin@capitalone.com> Date: 2016-05-26T15:13:58Z Added a new partitioner that replicates data across all partitions by default. ----	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2102
20557	APEXMALHAR-2102	Github user gauravgopi123 commented on the pull request: https://github.com/apache/incubator-apex-core/pull/344#issuecomment-221932938 Should this be part of malhar under https://github.com/apache/incubator-apex-malhar/tree/master/library/src/main/java/com/datatorrent/lib/partitioner?	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2102
20558	APEXMALHAR-2102	Github user ilganeli commented on the pull request: https://github.com/apache/incubator-apex-core/pull/344#issuecomment-221936008 @gauravgopi123 Don't really know - the StatelessPartitioner lives in Apex Common. What is the intended structure?	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2102
20559	APEXMALHAR-2102	Github user tweise commented on the pull request: https://github.com/apache/incubator-apex-core/pull/344#issuecomment-221943349 @ilganeli I also think this should go into Malhar. The stateless partitioner is directly used by the engine, hence it is in common. Should I move the JIRA to APEXMALHAR?	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2102
20560	APEXMALHAR-2102	Github user ilganeli commented on the pull request: https://github.com/apache/incubator-apex-core/pull/344#issuecomment-221969005 @tweise Sure, let's move the JIRA to Malhar and I'll move the class to Malhar. Is the approach sound?	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2102

20575	APEXMALHAR-2099	The biggest lack we presently have seems to be GroupByKey. Implementing GroupByKey will need either a new operator (that emits a map of {Key -> List[Value]} on window boundaries) or a pairing with the ApexStream implementation (that an incoming stream is split up into multiple new streams) (Preferred). Implementing the flatten operator should be straightforward. In terms of windowing and triggering, I think Siyuan's present API which provides the "with" construct, should be more than sufficient for specifying windowing or trigger semantics that can then be translated by the ApexStream implementation. [~thw][~siyuan] Thoughts? Which route would you recommend?	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2099
20576	APEXMALHAR-2099	[~ilganeli] When we started working on high level API, we asked the question. We already have Operator API which supports a much greater variety of transformations, why do we need high-level API which would definitely sacrifice some sort of flexibility. Beam API is kind of in the middle of low level API like our Operator API and some high level API like Flink/Spark. A main reason is we want to make another API that is easy to start with and also easy to use in most cases. Flink, Spark and even JDK 8 pick same flavour for some reason. Think about some developer who's new to parallel stream processing. How can they find out which existing transformation library fit into their needs? By search for all sub classes of PTransform and use apply, apply, apply to chain them together or look at the first-order self-descriptive methods(map, filter, flatmap...) in one class? If I'm a beginner I definitely prefer the facade pattern. I'm not saying Beam API is ugly, if they can have only one API. They have no choice but the full flexibility to support Google Data Flow Model.	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2099

20582	APEXMALHAR-2094	Sandeep, are you planning to add more functionality based on the datasketches library? If so, would it make sense to create a separate module for it?	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2094
20583	APEXMALHAR-2094	Thomas Weise Thomas, I do intend to add more functionality. DataSketches includes algorithms like hyperloglog, and heavy hitters / frequent items and a "theta sketch" framework that will allow set operations on multiple streams, and I want to build Apex operators for each of these. By "module", do you mean a package like {{statistics}} or {{algo}} in the Malhar library? If so, yes, it might make sense to move this operator from {{statistics}} into a {{sketches}} package that will encapsulate all stream sketching algorithms.	1	0	https://issues.apache.org/jira/browse/APEXMALHAR-2094
20584	APEXMALHAR-2094	[~thw] Thomas, I created a new “sketches” module. However, working in this module, IntelliJ is unable to import com.datatorrent.lib.util.TestUtils even though the sketches pom.xml contains malhar-library as a dependency. Where should this be imported from?	1	0	https://issues.apache.org/jira/browse/APEXMALHAR-2094

What makes it exactly once, are there other restrictions or assumptions?	1	1	https://issues.apache.org/jira/browse/APEXMALHAR-2086
20602	APEXMALHAR-2085	[~siyuan] Hi, Siyuan - I would like to get the ball rolling on this work. Since you've spent a fair amount of time digging into this, what would you recommend as a starting point? I'm ready to kick it off immediately :)	1	0	https://issues.apache.org/jira/browse/APEXMALHAR-2085
20603	APEXMALHAR-2085	The windowed operator base will consist of multiple pluggable components. We will need a PoC to better demarcate those and ensure they fit the use cases (aggregation, inner/outer join, topN/sort etc.) Based on our learning with dimension computation, we should be able to fork off the pluggable storage fairly soon. This should be based on the spillable data structures with mock/in-memory (for testing), Managed state or HDHT as backend: - Review spillable DS interfaces - PoC with in-memory impl - Spillable implementation for HDHT - Spillable impl for ManagedState Windowed operator base class - identify components to cover the various scenarios - accumulating vs discarding - session windows - usage for count, join Further discussion: - watermark handling - should we use the Beam API windowing classes directly	0	0	https://issues.apache.org/jira/browse/APEXMALHAR-2085

#	Requirement	Questions	Answered	Successfully Answered	URL
20604	APEXMALHAR-2085	I'm in the process of designing the API. I would like to start a quick discussion on whether we should use API from other libraries for our API. We already know that we need interfaces for things like the window policy, the triggering policy, the storage, the aggregation, functions that extract timestamp and key, etc. There are interfaces from Beam, Guava, etc., that let you specify some of those things. Some of them are complex (like windowing policy) and some of them are simple (like the function interface). Should we mirror (or duplicate) their interfaces in our API or just use their interfaces directly? Please provide your feedback.	1	0	https://issues.apache.org/jira/browse/APEXMALHAR-2085
